Part II

March 2023

ISBN: 978-93-85657-40-5

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Predicting Alzheimer Disease via Classification and Regression Methods Ann Mariya Rajan ² , Jinsi Jose ² , Jes Maria Shoji ^{1*} , Almie K Joseph ^{1*} & Sneha C.S ^{1*}	01
2.	Corporate Social Responsibility of Banks Tisha Tomy ^{1*}	05
3.	Impact of Emotional Intelligence on Leadership Effectiveness: A Critical Analysis Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Ms. Geethu Jose ^{1*} & Dr. Sharon Lee Jose ^{1*}	08
4.	The Transformative Teaching of Swami Vivekananda Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Sr. Sijo Francis ^{1*} & Ms. Meera R Nair ^{1*}	10
5.	Awareness and Utilization of Internet-Based Banking Services Eswara Sarma S G ^{1*} , Jothilakshmi Baburaj [*] , Anu Saju [*] , Amal Joseph & Shaiju S	12
6.	Customer Satisfaction and Services of SBI Bank Albin Francis [*] , Akhilesh R [*] , Shibu K R ^{1*} , Mr. Shaiju S ^{1*} & Eswara Srama S.G ^{1*}	15
7.	Satisfaction with Online Food Delivery Applications among Customers Neethumol Shaji ^{1*} , Kanjana K P [*] , Sreekutty M M [*] , Mr. Shaiju S ^{1*} & Shibu K.R ^{1*}	18
8.	Effect of Labor Welfare Measures on Employee Morale Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Shoniya V.V ^{1*} , Abin Jose ^{1*} & Jovana Pramod ^{1*}	21
9.	Effectiveness of Public Distribution System after Implementation of E-POS Machine Eswara Sarma S G ^{1*} , Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Anu Saju ^{1*} & Shaiju S ^{1*}	24
10.	Farmers Perceptions towards Agricultural Loans Neethumol Shaji ^{1*} , Haritha Rajeev [*] , Sincy Siby [*] , Mr. Shaiju S ^{1*} & Abin Jose ^{1*}	27
11.	Investors Perception towards Mutual Funds as an Investment Option Sunitha M. T ^{1*} , Athira Balachandran ^{1*} , Amal Joseph ^{1*} , Abin Jose ^{1*} & Eswarasarma S.G ^{1*}	30
12.	Perceptions towards Online Shopping among College Students Elizabeth Joseph [*] , Anu Saju ^{1*} , Amal Joseph ^{1*} , Shoniya V.V ^{1*} & Ashly Jose ^{1*}	33
13.	Quality of Work Life and Occupational Stress of Self-Financing College Teachers Anu Saju ^{1*} , Achu Abraham ^{1*} , Aleena K.S ^{1*} , Ashly Jose ^{1*} & Jovana Pramod ^{1*}	36
14.	Scope of Artificial Intelligence in Business Abin Jose ^{1*} , Grincy M. Kurian ^{1*} , Ashly Kurian ^{1*} , Neethumol Shaji ^{1*} & Eswara Sarma S.G ^{1*}	39
15.	The Study on the Awareness of Banking Services among College Students Athul Vinay [*] , Arun Rajesh [*] , Shibu K R ^{1*} , Neethumol Shaji ^{1*} & Abin Jose ^{1*}	42

16. Dyadic Adjustment and Resilience among Spouses of Individuals Having Chronic Diseases **45**
Sijo Francis^{1*}, Juliet P Thomas^{*}, Manu Kurian^{1*}, Anu Antony^{1*} & Dr. Mathew Kanamala^{1*}
17. Exploring the Synergistic Influence of Rice Husk Reinforcement on the Curing Process and Mechanical Characteristics of Natural Rubber Vulcanizates **48**
Sijo Francis^{1*}, Amala Abraham^{1*}, Jayafar T², Jose James^{1*} & Anu Antony^{1*}
18. A Study of Raney Nickel Catalyst and its use in the Hydrogenation Reactions **50**
Sijo Francis^{1*}, Ebin Raphael E S^{1*}, M.D. Sreekumar², Jose James^{1*} & Anu Antony^{1*}
19. Determination of Iron Content in Vegetables **53**
Dhanusree Dhaneesh^{1*}, Sheena Kuriakose², Sijo Francis^{1*}, Anu Antony^{1*} & Jose James^{1*}
20. Need of the Hour for Knowledge HumanResource Accounting for Success of an Organisation **55**
Tisha Tomy^{1*2}
21. Words of Survival: Delving into Trauma, Resilience and Identity in *Sold* **58**
Blessy Boban^{*}, Dr. Salini L R^{1*}, Mr. Roby Mathew^{1*}, Ms. Roopa Jose^{1*} & Dr. Aparna Prasad^{1*}
22. Myth in Nadia Hashmi's *One Half from the East*: On a Cultural Perspective **60**
Alex E.R^{1*}, Sherlin Suji S^{*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
23. Ethnic Violence in Nayomi Munaweera's *Island of a Thousand Mirrors*: A Statement on the Sri Lankan Civil War **63**
S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Roby Mathew^{1*}, Dr. Alex E.R^{1*} & Salini L.R^{1*}
24. Navigating Cultural Complexities in V.S. Naipaul's *A House for Mr. Biswas* **65**
Sunitha Mathew^{1*}, Roopa Jose^{1*}, Salini L.R^{1*}, Shintu Dennis^{1*} & Christy Joseph^{1*}
25. Disability and Performing Arts: A Study on Padma Venkatraman's *A Time to Dance* **67**
Divya Chandran^{*}, Dr. Shintu Dennis^{1*}, Dr. Salini L.R^{1*}, Ms. Sunitha Mathew^{1*} & Ms. Christy Joseph^{1*}
26. Liberal Feminism in Louisa May Alcott's *Little Women*: A Feminist Reading **69**
Minnu Thomas^{*}, Dr. Shintu Dennis^{1*}, Dr. Alex E.R^{1*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
27. A Review on the Politics in *Jawan*, and its Invisible Vigilante **71**
Dr. Aparna Prasad^{1*}, Sethulekshmi P.S.^{1*}, Christy Joseph^{1*}, Roopa Jose^{1*} & S. Abhilash Mathew^{1*}
28. The Representation of Dalit Self: Valkmiki's *Joothan* in a Dissident Space **73**
Stephena Fredy^{*}, Dr. Aparna Prasad^{1*}, Sethulekshmi P. S.^{1*}, Christy Joseph^{1*} & Roopa Jose^{1*}
29. Ultrafast Magnetisation Dynamics for Studying Fast Processes in Magnetism **75**
Robin John^{1*}, Mevin Mathew², Anju P Mathews^{1*} & Praveen Joseph^{1*}
30. Colourful Carbon Nanotubes **78**
Robin John^{1*}, Sijo Francis², Subin Thomas^{1*} & Ms. Deena Paul^{1*}
31. Attitude towards Drugs and Alcohol among Middle People **80**
Alan Jorly^{*}, Dr. Mathew Kanamala^{1*}, Ms. Droupathy Devi C G^{1*} & Dr. Jobi K V^{1*}

32. Library & Information Centers in the Society	82
Ms. Droupathy Devi C G ^{1*} , Dr. Jose James ^{1*} , Dr. Robin John ^{1*} & Ms. Anu Saju ^{1*}	
33. Self-confidence among Single Adolescents	84
Mr. Shiyon Sebastian ^{1*} , Dr. Justin Joseph ^{1*} , Ms. Droupathy Devi C G ^{1*} & Ms. Joice Mary Vincent ^{1*}	
34. Farm Stress of Small-Scale Farmers in Idukki District	86
Teenu Shaji ² , Dr. Praveen Joseph ^{1*} , Mr. Pramod Joseph ^{1*} , Manu Kurian ^{1*} & Dr. Justin Joseph	
35. Peer Pressure and Emotional Expressivity among Adolescents	89
Amitha Alex [*] , Manu Kurian ^{1*} , Dr. Joseph George ^{1*} , Mr. Kuriachan Jose ^{1*} & Dr. Mathew Kanamala ^{1*}	
36. The Lifelong Benefits of Positive Social Interactions and Close Friendships for College Students' Happiness	92
Dr. Jose James ^{1*} , Jimmy George ^{1*} , Amal Joseph ^{1*} & Shibu K R ^{1*}	
37. Unveiling the Enigma: The Power of the Subconscious Mind	95
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} & Mr. Biju Scaria ^{1*}	
38. Social Intelligence: Understanding and Navigating Human Relations	97
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} , Mr. Biju Scaria ^{1*} & Sijo John	
39. Navigating Uncertain Futures: Transformative Competencies for Education 2030	100
Dr. Sr.Sijo Francis ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Mr. Abin Jose ^{1*} & Mr. Eswarasarma ^{1*}	
40. Understanding Empathy and Stress Management: Keys to Emotional Well-Being	103
Dr. Sr.Sijo Francis ^{1*} , Dr. Mathew Kanamala ^{1*} , Ms. Neethumol Shaji ^{1*} & Mr. Shiju S ^{1*}	
41. College Life: A Journey to Well-Being and Happiness through Exercise, Sports, and Balanced Diet	106
Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Mathews Emmanuel	
42. Turbulent Waters of Adolescence: A Comprehensive Exploration	108
Dr.Jose James ^{1*} , Mr.Roby Mathew ^{1*} , Mr. Michael Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Silvanos P Thomas	
43. Life Satisfaction and Loneliness in Elderly: Exploration of the Connection	111
Alwin Jose Alex [*] , Dr. Mathew Kanamala ^{1*} , Dr. Jomon Kottarathil ^{1*} , Ms. Anu Saju ^{1*} & Mr. Eswarasarma ^{1*}	
44. Business Intelligence in the Aviation Sector	113
Asby O S [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Dr, Sharon Lee Jose ^{1*} & Ms. Geethu Jose ^{1*}	
45. Case Study on Online Food Delivery in Business Intelligence	116
Krishnadas Biju [*] , Jilu Jose ² , Dr. Jomon Kottarathil ^{1*} , Dr. Joseph George ^{1*} & Mr, Shiju S	

46. An Analysis and Prediction of Lung Cancer 119
 Haritha H*, Dr. Sabukkutty MG^{1*}, Jinsi Jose², Aneesh N^{1*}, Ms. Neethumol Shaji & Ms Meera R Nair^{1*}

47. Marital Attitude among PG Students based on their Religion 124
 Albin Binoy*, Dr. Justin Joseph^{1*}, Dr. Jomon Kottarathil^{1*}, Mr. Manu Kurian^{1*} & Ms. Anu Saju^{1*}

48. Business Analytics in the Agrarian Field 126
 Merin Shibu*, Aneesh N^{1*}, Almie Joseph K^{1*}, Ms. Sneha C S^{1*} & Mr. Pramod Joseph^{1*}

49. Attitude towards Drugs among Adolescents 130
 Sachin Jose*, Manu Kurian^{1*}, Dr. Jomon Kottarathil^{1*}, Dr. Mathew Kanamala^{1*} & Mr. Paul. C. Abraham^{1*}

50. Covid-19's Effect on Students 132
 Varsha B Mariya*, Dr. Sabukkutty M G^{1*}, Sruthy Sebastian^{1*}, Mr. Jimmy George^{1*} & Pramod Joseph^{1*}

51. അത്ഭുതങ്ങൾ ഉണ്ടാകുന്നത് 137
 ജോമോൻ കൊട്ടാരത്തിൽ^{1*}, ഡോ. തോമസ് ജോർജ്ജ് വെങ്ങാലുവക്കേൽ സി.എം.ഐ^{1*}, ഡോ. സി. സിജോ ഫ്രാൻസിസ്^{1*}, സി. ബെറ്റ്സി കളപ്പുരയ്ക്കൽ^{1*}

52. നമുക്കും സെഹിയോൻ ഉത്സൃശാലയിലേക്കു പോകാം... 140

60. Business Intelligence within E-Learning Environments	165
Jose Sebastian [*] , Sruthy Sebastian ^{1*} , Aneesh N ^{1*} , Dr. Jomon Kottarathil ^{1*} & Mr. Silvanos P Thomas ^{1*}	
61. Real-Life Application of Business Intelligence in Transportation & Logistics	169
Sneha C S ^{1*} , Aneesh N ^{1*} , Jinsi Jose ² , Ms. Meera R Nair ^{1*} & Ms. Almie Joseph ^{1*}	
62. Business Intelligence: Retail and Wholesale Marketing Case Study	171
Tony Joshy [*] , Ance Denny [*] Dr. Jomon Kottarathil ^{1*} , Sneha CS ^{1*} , Almie Joseph ^{1*} , & Mr. Aneesh N ^{1*}	
63. Business Intelligence Implementation in the Travel and Tourism Sector	174
Abhinand UK [*] , Ance Denny [*] , Jinsi Jose ² , Mr. Aneesh N ^{1*} , Ms. Sneha C.S ^{1*} , Ms. Almie Joseph ^{1*} & Jomon Kottarathil ^{1*}	
64. Business Intelligence Application in Banking and Financial Sector	177
Liana S [*] , Ance Denny [*] , Sruthy Sebastian ^{1*} , Jimmy George ^{1*} , Abin Jose ^{1*} & Ms. Anu Saju ^{1*}	
65. E-Commerce and Business Intelligence	180
Gopika Suresh [*] , Ance Denny [*] , Jinsi Jose ² , Aneesh N ^{1*} , Snehaa C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil	
66. Sports Business Intelligence	183
Joel Jaison [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	
67. Hazards to Maternal Health	187
Anu Anish [*] , Dr. Jomon Kottarathil ^{1*} , Aneesh N ^{1*} , Almie Joseph K ^{1*} & Sneha C S ^{1*}	
68. Decision Tree-Based Prediction of Heart Failure	191
Augustine Shaji [*] , Jomon K Sebastian [*] , Jinsi Jose ² , Aneesh N ^{1*} , Sneha C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	
69. The COVID-19 Impact on Airport Traffic	195
Joeyal Kurian [*] , Almie Joseph K ^{1*} , Jomon K Sebastian [*] Aneesh N ^{1*} , Snehaa C S ^{1*} , & Dr. Jomon Kottarathil ^{1*}	
70. Prediction and Visualisation of Used Car Price	200
Joeyal Kurian [*] , Jinsi Jose ² , Jomon K Sebastian [*] Aneesh N ^{1*} , Snehaa C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	

71. Multi-Dimensional Health Locus of Control in Cancer Patients	204
Aby Benny [*] , Dr. Justin Joseph ^{1*} , Dr. Jomon K Sebastian ^{1*} , Dr. Mathew Kanamala ^{1*} & Manau Kurian ^{1*}	
72. Business Analytics for Rail and Metro Services	207
Ann Mariya Rajan ² , Ance Denny [*] , Jinsi Jose ² , Aneesh N ^{1*} , Ms. Meera R Nair ^{1*} & Ms. Sneha C S ^{1*}	
73. A Predictive Study of Vehicle Insurance Purchases	211
Thejus T Reji [*] , Jilu Jose ² , Almie Joseph K ^{1*} , Ms. Sneha C S ^{1*} , Dr. Jomon Kottarathil ^{1*}	
74. Academic Effect on Students' Mental Health	216
Nandana Unni [*] , Jomon K Sebastian ^{1*} , Sruthy Sebastian ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Jose James ^{1*}	
75. Predicting the Status of Cirrhosis Disease through Logistic Regression	220
Jisny Johnson [*] , Jes Maria Shoji ^{1*} , Jinsi Jose ² , Ms. Almie Joseph ^{1*} , Dr. Joby Makolil ^{1*}	
76. Loan Eligibility Category	224
Steffymol Sunny ^{1*} , Jomon K Sebastian ^{1*} , Sneha C S ^{1*} & Aneesh N ^{1*}	
77. Reducing Staff Attrition using Gradient Boosting	228
Jilu Jose ² , Aneesh N ^{1*} , Sruthy Sebastian ^{1*} , Dr. Sabukkutty M G ^{1*} & Ms. Meera R Nair ^{1*}	
78. Healthcare Business Intelligence	232
Sona Binu [*] , Jomon K Sebastian [*] , Almie Joseph ^{1*} , Dr. Alex E R ^{1*} , Mr. Shiju ^{1*} & Shibu K R ^{1*}	
79. Wind Speed Prediction using Machine Learning Algorithms	235
Aida Vinoy [*] , Jomon K Sebastian ^{1*} , Jinsi Jose ² , Ms. Almie Joseph ^{1*} & Aneesh N ^{1*}	
80. Synthesis and Characterization of Thermoplastic	239
Pooja Parvathy P [*] , Dr. Jose James ^{1*} , Dr. Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} & Dr. Joby K V ^{1*}	
81. Enhancing Green Chemistry Learning Through Art	241
Kavitha Jacob ² , Sijo Francis ^{1*} & Dr. Jose James ^{1*}	
82. Nanotechnology in Cancer Diagnosis	243
Manasy KS [*] , Sijo Francis ^{1*} , Dr. Jose James ^{1*} , Dr. Anu Antony ^{1*} & Dr. Joby K V ^{1*}	
83. Cancer Treatment through Nano science	245
Manasy KS [*] , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*} ,	
84. Preparation and Characterisation of Potassium Tris (Oxalato) Chromate (III)	247
Mirsana C S [*] , Ebey P. Koshy ^{1*} , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
85. Preparation of Zinc Oxide Nanoparticles and Synthesis of Zinc Oxide Nano Composites by Green Routes	249
Athmitha K Jiji [*] and Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ¹	
86. Timing and Spectral Analysis of Thermonuclear X-ray Burst from Atoll Source 4U 1636-536	251
Marykutty James ² , Juris N.J ² , Riya ² , Fathima K ² & Sr. Sijo Francis ^{1*}	

87. Study of Oxalate Content in Tomato	255
Remya Vijayan [*] , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
88. Impact of National Education Policy on Brain Drain in India	257
Ebby Joseph Idicula ² & Sijo Francis ^{1*}	
89. Recycling of PET Bottles	260
Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
90. Examining the Impact of Number of Children on Teacher's Social Emotional Competency	263
Akhil Thankachan [*] , Mr Manu Kurian ^{1*} , Blessy Devasia Jacob ² , Dr Mathew Kanamala ^{1*} , Mr. Roby Mathew ^{1*} & Dr. Justine Joseph ^{1*}	
91. Attitude of College Lectures towards Educational Administration	266
Jerin Joseph [*] , Dr. Mathew Kanamala ^{1*} , Dr. Rickey Sara Kurian ² , Jomon K Sebastian ^{1*} , Sneha C S ^{1*} & Aneesh N ^{1*}	
92. Career Conflict among Adolescents	268
Sandra Mol Augustine [*] , Renjitha E [*] , Mr. Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
93. Emotional Maturity among Young Adults	271
Swetha Joy [*] , Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} , Dr. Justin Joseph ^{1*} & Aneesh N ^{1*}	
94. Maximizing Team Performance through Effective Management	273
Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Dr. Sharon Lee Jose ^{1*} , Ms. Geethu Jose ^{1*}	
95. Resilience in Management: Thriving in Challenging Times	276
Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Dr. Sharon Lee Jose ^{1*} , Ms. Geethu Jose ^{1*}	
96. Influencing Factors of Stress Vulnerability among Middle-Aged People	278
Alan Jorly [*] , Dr. Mathew Kanamala ^{1*} , Sneha Santhosh [*] , Dr. Justin Joseph ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Sabukkutty M G ^{1*}	
97. Social Relationship among Young Adults	280
Swetha Joy [*] , Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} , Dr. Justin Joseph ^{1*} , Mr. Manu Kurian ^{1*} & Mr. Prince J Mathew	
98. Self-confidence among Single Adolescents	282
Shiyon Sebastian [*] , Swetha Joy [*] , Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Sr. Sijo Francis ^{1*}	
99. Role of Residential Area in Self-Concept and Emotional Competence among Adolescents	284
Arjun K. R [*] , Dr. Justin Joseph ^{1*} , Alen Kurian Mathew [*] , Dr. Mathew Kanamala ^{1*} , Mr. Manu Kurian ^{1*} & Fr. Nixen Mathew Enamattathu ^{1*}	
100. Role of Gender in Self-Concept and Emotional Competence among Adolescents	287

Arjun K. R^{*}, Dr. Justin Joseph^{1*}, Alen Kurian Mathew^{*}, Dr. Mathew Kanamala^{1*}, Mr. Manu Kurian^{1*} & Mr. Sijo John^{1*}

101. Emotional Maturity among Young Adults **290**

Shilpa Mohan^{*}, Dr. Justin Joseph^{1*}, Malavika P R^{*}, Dr. Mathew Kanamala^{1*}, Mr. Manu Kurian^{1*} & Mr. Biju Scaria^{1*}

102. Mathematical Problem-Solving Ability among Single Adolescents **292**

Shiyon Sebastian^{*}, Swetha Joy^{*}, Dr. Justin Joseph^{1*}, Dr. Mathew Kanamala^{1*}, Mr. Manu Kurian^{1*} & Mr. Aneesh N^{1*}

പ്രബന്ധസംഗ്രഹം

ജീവിതമെന്ന കടലിൽ രാത്രികളെ പകലുകളാക്കി അന്നന്നത്തെ അന്നമാകുന്ന ഒരു പിടി മീനിയായി വലയെറിയുന്ന ഒരു ക്രിസ്ത്യാനിയുടെ ഏറ്റവും വലിയ പ്രതീക്ഷ ഉത്ഥിതനോടൊപ്പമുള്ള ഒരു പ്രാതൽ തന്നെയാണ്. ലെയനാർദോ ബോഫ് എന്ന ബ്രസീലിയൻ തത്വശാസ്ത്രജ്ഞൻ രചിച്ച ജീവിതത്തിന്റെ കൂദാശകളും കൂദാശകളുടെ ജീവിതവും എന്ന കൃതിയുടെ വെളിച്ചത്തിൽ ഈസ്റ്റർ ആഘോഷത്തെ ഇവിടെ വിലയിരുത്തുന്നു.

കീലപദങ്ങൾ: കുടുംബം, ജീവിതം, കൂദാശ, ഈസ്റ്റർ, ഹല്ലെലൂയ്യ.

ലെയനാർദോ ബോഫ് എന്ന ബ്രസീലിയൻ തത്വശാസ്ത്രജ്ഞൻ രചിച്ച ജീവിതത്തിന്റെ കൂദാശകളും കൂദാശകളുടെ ജീവിതവും (Sacraments of Life, Life of the Sacraments) എന്ന കൃതിയിൽ തന്റെ വീട്ടിലുള്ള പഴയ ഒരു അലൂമിനിയം കോപ്പയെക്കുറിച്ചു ഓർമ്മിയ്ക്കുന്നുണ്ട്. പാരമ്പര്യമായി ലഭിച്ച, കൈപിടി തകർന്ന, പഴകിയ കോപ്പ ആ കുടുംബം നാട്ടിൻപുറത്തായിരുന്നപ്പോഴും അവിടെനിന്നു നഗരങ്ങളിലേക്ക് ചേക്കേറിയപ്പോഴുമെല്ലാം അവരോടൊപ്പം സഞ്ചരിച്ചു. കുടുംബത്തിലെ പതിനൊന്നു കുട്ടികളും അതിൽനിന്നാണ് കുടിച്ചു വളർന്നത്. ആ കോപ്പയിൽനിന്നു വെള്ളം മാത്രമല്ല അവർ കുടിച്ചത്; കുടുംബസംസ്കാരം, കുടുംബമഹിമ, കുടുംബചരിത്രം, ഇവയെല്ലാം ആ കോപ്പയിലെ ജലത്തോടൊപ്പം ശരീരത്തിലേക്കും മനസ്സിലേക്കും സാംശീകരിക്കപ്പെട്ടു. തങ്ങൾക്കു കിട്ടുന്ന വെള്ളം മലിനമായ നദിയിലെ ജലമായിരുന്നാലും ക്ലോറിൻ കലർന്നതായാലും ആ കോപ്പയിൽനിന്നു കുടിക്കുമ്പോൾ ഉന്മേഷകരവും ആരോഗ്യദായകവുമായി അനുഭവപ്പെട്ടിരുന്നു. ലോകത്തിന്റെ വിവിധ ഭാഗങ്ങളിൽ യാത്ര ചെയ്തപ്പോഴും ഒത്തിരി നീരുറവകളിൽനിന്നുള്ള വൈവിധ്യമാർന്ന തെളിനീരുകൾ രുചിച്ചപ്പോഴും ഈ കോപ്പയിലെ വെള്ളത്തിന്റെ മാധുര്യം അവിടെയൊന്നും ലഭിച്ചില്ല. തന്നെയും തന്റെ കുടുംബത്തെയും സംബന്ധിച്ചിടത്തോളം ആ കോപ്പയുമായുള്ള അഭേദ്യമായ ബന്ധം അതിനെ ഒരമൂല്യവസ്തുവായി മാറ്റിയിരിക്കുന്നു. ഇപ്പോൾ ആ കോപ്പ കുടുംബത്തിലെ ഒരു കുഞ്ഞിനെപ്പോലെ ഏവരുടെയും സ്നേഹവാത്സല്യഭാജനമായി വിരാജിക്കുന്നു.

ഈസ്റ്റർ അഥവാ ഉയിർപ്പുതിരുനാൾ എന്നത് ഓരോ ക്രൈസ്തവനെയും സംബന്ധിച്ചിടത്തോളം ഈ കോപ്പ പോലെയാണ്. അവന്റെ രക്തത്തിൽ അലിഞ്ഞുചേർന്നിരിക്കുന്ന വിശ്വാസകണികയുടെ പ്രതീകമാണത്. ജീവിതത്തിന്റെ ഗതിവിഗതിക്കൾക്കിടയിൽ പലപ്പോഴും ഉന്മേഷം നഷ്ടപ്പെടുമ്പോഴും ജീവിതത്തിന്റെ മാറ്റ് കുറയുമ്പോഴും പ്രതികൂലസാഹചര്യങ്ങൾ മനസ്സ് പതറിക്കുമ്പോഴും പുനരുത്ഥാനത്തെക്കുറിച്ചുള്ള ചിന്തകൾ വീണ്ടും വീണ്ടും മനസ്സിനെ തണുപ്പിക്കുന്നു. ക്രൈസ്തവവിശ്വാസത്തിന്റെ ആണിക്കല്ലും ഉത്ഥാനത്തിരുനാൾ ആണ്.വി. പൗലോസ് കോറിന്തോസുകാർക്കെഴുതിയ ലേഖനത്തിൽ ഇപ്രകാരം പറയുന്നു:"ക്രിസ്തു ഉയിർപ്പിക്കപ്പെട്ടിട്ടില്ലെങ്കിൽ ഞങ്ങളുടെ പ്രസംഗം വ്യർത്ഥമാണ്, നിങ്ങളുടെ വിശ്വാസവും വ്യർത്ഥം" (1 കോറി.15:14). ലോകചരിത്രത്തിൽ ക്രിസ്തുവിന്റെ ഉയിർപ്പുപോലെ ഇത്രമാത്രം വ്യതിരിക്തമായ ദൈവാനുഭവത്തിന്റെ അനുസ്മരണം മറ്റൊന്നില്ല. തീർത്തും ദുരിതപ്പെരുമഴയുടെ കാലത്തും പ്രത്യാശയുടെ കിരണങ്ങൾ വീശുന്ന ഉത്ഥാനത്തിരുനാൾ നമ്മുടെ പൂർവികരുടെ ത്യാഗപൂർണ്ണവും വീരോചിതവുമായ വിശ്വാസജീവിതത്തിന്റെയും ദൈവാശ്രയബോധത്തിന്റെയും ഒരു നേർക്കാഴ്ചയാണ്. പഴകി തേഞ്ഞതുപോലെ തോന്നുമെങ്കിലും നിരവധി ഓർമ്മകളുടെ മണിച്ചെപ്പാണത്. പ്രശ്നകലുഷിതമായ ഈ ലോകജീവിതത്തിനിടയിലും മധുരം പകരുന്ന സ്മരണകളാണ് അവിടെ നാം നുകരുന്നത്. ജീവിതമെന്ന കടലിൽ രാത്രികളെ പകലുകളാക്കി അന്നനത്തെ അന്നമാകുന്ന ഒരു പിടി മീനിയായി വലയെറിയുന്ന ഒരു ക്രിസ്ത്യാനിയുടെ ഏറ്റവും വലിയ പ്രതീക്ഷ ഉത്ഥിതനോടൊപ്പമുള്ള ഒരു പ്രാതൽ തന്നെയാണ്. കുഞ്ഞുങ്ങളെ, നിങ്ങളുടെ പക്കൽ മീൻ വല്ലതും ഉണ്ടോ എന്ന് ചോദിച്ചുകൊണ്ട് വലവീശി തഴമ്പിച്ച കൈകളെ വലയെറിയാനുള്ള പാങ്ങ് പഠിപ്പിക്കുകയും, തളർന്നവശനായി കടന്നുവരുന്നവനായി അപ്പവും മീനും ഒരുക്കി വയ്ക്കുകയും ചെയ്യുന്ന ക്രിസ്തുവെന്ന മഹാമുക്കുവന്റെ മഹാപ്രാതലിലേക്കുള്ള സ്വാഗതഗാനത്തിനു ആമ്മേൻ പറയാൻ ആരാണ് വിസമ്മതിക്കുക? അതുകൊണ്ടുതന്നെ ക്രിസ്തുസമൂഹത്തെ വീണ്ടുപോകാതെ പിടിച്ചു നിർത്തുന്ന സംരക്ഷണമതിലാണ് ഉയിർപ്പുതിരുനാൾ.

ക്രിസ്തുസമൂഹത്തിന്റെ സത്വവും സത്തയും ഉത്ഥാനമാണ്. ഇത്തരൂണത്തിൽ പുണ്യശ്ലോകനായ വി. ജോൺ പോൾ രണ്ടാമൻ മാർപാപ്പ 1986 നവംബർ 30 നു ആസ്ട്രേലിയയിലെ അപ്പസ്തോലിക പര്യടനത്തിനിടയിൽ അഡലെയ്ഡ് എന്ന സ്ഥലം സന്ദർശിച്ച അവസരത്തിൽ ഞായറാഴ്ച ദിവ്യബലിക്കുശേഷം നടത്തിയ ത്രിസന്യാജപത്തിനുള്ള മുന്നോടിയായി ധ്യാനചിന്തകൾ പങ്കുവെച്ചപ്പോൾ നൽകിയ സന്ദേശം വളരെ അർത്ഥവത്താണ്: "ജീവിതം മുഴുവൻ

അതിസുന്ദരമാണെന്നു നാം ധരിക്കേണ്ട, നമുക്കുചുറ്റുമുള്ള അന്ധകാരത്തെയും പാപത്തെയും പട്ടിണിയെയും പരിവട്ടത്തെയും കുറിച്ച് നാം ബോധവാന്മാരാണ്. പക്ഷേ ക്രിസ്തു പാപത്തെ കീഴടക്കിയെന്നും തന്റെ യാതനകളിലൂടെ ഉത്ഥാനത്തിന്റെ മഹത്വത്തിലേക്കു പ്രവേശിച്ചെന്നും നമുക്കറിയാം. നാം അവിടുത്തെ പെസഹാഹൃദയങ്ങളുടെ വെളിച്ചത്തിലാണ് ജീവിക്കുന്നത്-അവിടുത്തെ മരണോത്ഥാനങ്ങളുടെ രഹസ്യത്തിൽ! 'നാം ഉത്ഥിത ജനമാണ് ഹല്ലെലൂയ്യയാണ് നമ്മുടെ ഗീതം!' (We are an Easter People and Alleluia is our Song!). നാം പൊള്ളയായ സന്തോഷങ്ങളിൽ രമിക്കുന്നവരല്ല, പിന്നെയോ നിസ്വാർത്ഥസന്തോഷത്തിൽ വിരിയുന്ന വിശ്വാസത്തിൽനിന്നു ലഭിക്കുന്ന ആനന്ദമാണ് നമ്മുടേത്. എന്റെ അയൽക്കാരനെ സ്നേഹിക്കാനുള്ള മൗലികകർത്തവ്യത്തിൽനിന്നു വ്യതിചലിച്ചാൽ ഈ ആനന്ദത്തെക്കുറിച്ചു സംസാരിക്കാൻ ഞാൻ അപ്രാപ്യനാകുന്നു".

" നാം ഉത്ഥിത ജനമാണ് ഹല്ലെലൂയ്യയാണ് നമ്മുടെ ഗീതം" എന്ന വാക്കുകൾ ഹിപ്പോയിലെ വി. അഗസ്റ്റിന്റെ രചനയിൽനിന്നുള്ള ഉദ്ധരണിയാണ്. ഒരുവീഥത്തിൽ ഓരോ ക്രിസ്ത്യാനിയുടെയും ആപ്തവാക്യമാണിത്. ഭാവിയിലേക്ക് പ്രത്യാശയോടെ കണ്ണും നട്ടിരിക്കുന്ന ഒരു ജനമാണ് നാം. അതിനാൽ, ഈസ്റ്റർ നമ്മുടെ പ്രതീക്ഷയുടെ തിരുനാളാണ്; വേദനയുടെയും ദുരിതത്തിന്റെയും ഈ കാലവും കടന്നുപോകുമെന്നും ശാന്തിയുടെയും സമാധാനത്തിന്റെയും പുലരിപ്രഭ നമ്മുടെ ഹൃദയങ്ങളിലും വീശുമെന്ന പ്രതീക്ഷ നമ്മുടെ ഉൾക്കണ്ണുകൾക്കു പ്രദാനം ചെയ്യുന്ന തിരുനാൾ! പൗരസ്ത്യ സഭകളിൽ ഉപയോഗിക്കുന്ന പുഷ്പിത കുരിശുരൂപം (മാർത്തോമ്മാ സ്ലീവാ) ഈ പ്രതീക്ഷയുടെ അടയാളമാണ്. കുരിശാണ് രക്ഷ, കുരിശിലാണ് രക്ഷ എന്ന് നാം പ്രഘോഷിക്കുമ്പോൾ ക്രൂശിതനിൽനിന്നു ഉത്ഥിതനിലേക്ക് അധികദൂരമില്ല എന്നുള്ള ഓർമ്മപ്പെടുത്തലാണത്. എന്റെ ജീവിതത്തിലെ കുരിശുകളെ എന്നു മുതൽ പുഷ്പങ്ങളായി കാണാനും സ്നേഹിക്കാനും തുടങ്ങുന്നുവോ അന്നുമുതൽ ഞാനും ഉത്ഥാനത്തിന്റെ പാതയിൽ ചരിക്കുവാൻ തുടങ്ങുന്നു എന്നതിന്റെ ബിംബമാണ് ഈ പുഷ്പിത കുരിശുരൂപം. അതിനാൽ ക്രിസ്തുവിനെപ്പോലെ അകാരണമായി കുരിശിലേറ്റപ്പെടുമ്പോഴും കർത്താവിൽ ആനന്ദിച്ചാഹ്ളാദിക്കുന്ന, അവിടുത്തെക്ക് അവിരാമം സ്തുതികളാലപിക്കുന്ന, അനന്തനന്ദയും അനന്തസ്നേഹവുമായിരിക്കുന്ന ദൈവത്തിനു അനവരതം ഹല്ലെലൂയ്യ പാടുന്ന ജനമാണ് ക്രിസ്തുവിന്റേത് എന്ന ഓർമ്മപ്പെടുത്തലാണ് ഓരോ ഉയിർപ്പുതിരുനാളും.

സഹായകഗ്രന്ഥസൂചി
 ലെയനാർദോ ബോഫ്. ജീവിതത്തിന്റെ കൂദാശകളും കൂദാശകളുടെ ജീവിതവും. ജീവൻ ബുക്ക്സ്, കോട്ടയം.

പ്രബന്ധസംഗ്രഹം

ഗണിതശാസ്ത്രത്തിൽ അപരിമിതമാനങ്ങൾ പറയുമ്പോൾ അതിനു സദൃശ്യമായി ജീവലോകത്തിലും ദ്വിമാനവും ത്രിമാനവും പരിമിതമാനവും മാത്രമല്ല അപരിമിതമാനവും സാധ്യതകളാണ്. പരിമിതമാനങ്ങൾക്കപ്പുറം അപരിമിതമായ, അനന്തമായ മാനങ്ങളുള്ള മറ്റു ശക്തികളുമുണ്ടാകാം. ഇത്തരൂണത്തിൽ നമുക്ക് അദ്യശ്യനായ ദൈവത്തെയും അനന്തമാനങ്ങളുള്ള ജീവനുള്ള അസ്തിത്വമായി സങ്കല്പിക്കുന്നത് തീർത്തും സാംഗത്യമാണ്.

കീലപദങ്ങൾ: ദൈവം, ഗണിതശാസ്ത്രം, പരിമിതമാനങ്ങൾ, അപരിമിതമാനങ്ങൾ.

ഗണിതശാസ്ത്രത്തിൽ ഒരു ബിന്ദുവിൻറെ മാനം (dimension) പൂജ്യമാണ് . ആ ബിന്ദുവിൽനിന്നു രണ്ടുവശത്തേക്കും നീട്ടിയാൽ ഒരു രേഖ ലഭിക്കും. അത് ഏകമാനമാണ്; നീളമെന്നു നാമതിനെ വിളിക്കും. ആ ബിന്ദുവിൽ നിന്ന് ആദ്യത്തെ രേഖക്ക് ലംബമായി മറ്റൊരു രേഖ വരച്ചാൽ കിട്ടുന്നത് ഒരു കാർട്ടീഷ്യൻ പ്രതലമാണ് (plane). നീളവും വീതിയുമുള്ള അത് ദ്വിമാനമാണ്. ആദ്യമെടുത്ത ബിന്ദുവിലൂടെ ഈ പ്രതലത്തിനു മറ്റൊരു ലംബം വരച്ചാൽ നമുക്ക് ലഭിക്കുന്നത് ത്രിമാനമായ മറ്റൊരു തലമാണ് (space). അവിടെ നീളവും വീതിയും ഉയരവും നമുക്ക് സംവേദ്യമാകും. ഇങ്ങനെ തുടർന്നുകൊണ്ട് ചതുർമാനവും പഞ്ചമാനവും പരിമിതമാനങ്ങളും (finite dimensions) അപരിമിതമാനങ്ങളുമെല്ലാം (infinite dimensions) ഗണിതശാസ്ത്രത്തിൻറെ ചിന്താവിഷയങ്ങളാണ്. ഏതൊരു മാനത്തിനും അതിനു താഴെയുള്ള മാനങ്ങളുടെ സവിശേഷതകൾ സംലഭ്യമാണെങ്കിലും ഒരേണ്ണത്തിൽനിന്നു അതിനു താഴെയുള്ള മാനങ്ങൾ നോക്കിക്കാണുമ്പോൾ അവ നിസ്സാരമായാണ് അനുഭവപ്പെടുക. രേഖയിൽ ഒരു ബിന്ദു എന്നത് എത്രമാത്രം നിസ്സാരമാണോ അത്രമാത്രം നിസ്സാരമാണ് ദ്വിമാനപ്രതലത്തിൽ ഒരു രേഖയും ത്രിമാനതലത്തിൽ ഒരു പ്രതലവും. അപ്പോൾ ത്രിമാനതലത്തിൽനിന്നുകൊണ്ട് ഒരു രേഖയോ ബിന്ദുവോ നോക്കിക്കാണുമ്പോൾ അവ എത്ര അതിനിസ്സാരമെന്ന് നമുക്ക് ഊഹിക്കാനാകും.

ഈ ഗണിതശാസ്ത്ര അളവുകോലിനെ നമ്മുടെ ജീവപ്രപഞ്ചവുമായി താരതമ്യം ചെയ്യുന്നത് സാധാരണമാണ്. ഊമ്പിനു പ്രതലങ്ങൾ മാത്രമേ കാണാൻ സാധിക്കൂ എന്ന് പറയാറുണ്ട് (Ant is said to be two-dimensional).

മനുഷ്യൻ ത്രിമാനതലങ്ങൾ ദർശിക്കാനാകും. നാം ഒരു കണ്ണടച്ചു മറുകണ്ണ കൊണ്ടുമാത്രം നോക്കിയാൽ വസ്തുക്കൾ പൂർണ്ണമായും ത്രിമാനത്തിൽ കാണാനാകില്ലല്ലോ? ഇതുപോലെ ഏതൊരു മാനത്തിലുമുള്ള ജീവജാലങ്ങൾക്ക് അതിലോ അതിനു താഴെയുള്ള തലങ്ങളിലോ ഉള്ള ജീവജാലങ്ങളെയാണ് കാണാൻ സാധിക്കുക. മുകളിലുള്ളവയെ സങ്കല്പിക്കാൻപോലും സാധിക്കണമെന്നില്ല; സങ്കല്പിച്ചാലും ശരിയാകണമെന്നുമില്ല. ത്രിമാനത്തിൽ ജീവിക്കുന്നവർ മുന്നോട്ടും പുറകോട്ടും നീങ്ങാം; ഇടത്തേക്കും വലത്തേക്കും പോകാം; മുകളിലേക്കും താഴേക്കും സഞ്ചരിക്കാം. ഈ ത്രിമാനത്തിനപ്പുറത്തേക്കു സമയവും കൂട്ടിച്ചേർത്തുകൊണ്ടു ചതുർമാനത്തെക്കുറിച്ചും നാം സംസാരിക്കാറുണ്ട്. അപ്പോൾ ചതുർമാനജീവികൾക്ക് വർത്തമാന സമയത്തിൽനിന്ന് ഭാവിയലേക്കും ഭൂതകാലത്തിലേക്കും സഞ്ചരിക്കാൻ സാധിച്ചേക്കും. സമയയന്ത്രത്തെക്കുറിച്ചു നാം പലപ്പോഴും കേൾക്കാറുള്ളത് ഇത്തരൂണത്തിൽ സ്മരണീയമാണ്. ഇതുപോലെ നാം ജീവിക്കുന്ന ഈ പ്രപഞ്ചം ഒരു ഹേതുവായി പരിഗണിച്ചുകൊണ്ട് അതിനപ്പുറത്തും ഇപ്പുറത്തുമുള്ള മറ്റു പ്രപഞ്ചങ്ങളിലൂടെ സഞ്ചരിക്കുന്ന ജീവനുകളുമുണ്ടാകാം. ഇത്തരത്തിൽ അപരിമിതമാനങ്ങളുള്ള ജീവനുകളുടെ പ്രപഞ്ചത്തിലെ സാന്നിധ്യം നമുക്കൊരിക്കലും നിഷേധിക്കാനാകില്ല.

ഗണിതശാസ്ത്രത്തിൽ അപരിമിതമാനങ്ങൾ പറയുമ്പോൾ അതിനു സദൃശ്യമായി ജീവലോകത്തിലും ദ്വിമാനവും ത്രിമാനവും പരിമിതമാനവും മാത്രമല്ല അപരിമിതമാനവും സാധ്യതകളാണ്. പരിമിതമാനങ്ങൾക്കപ്പുറം അപരിമിതമായ, അനന്തമായ മാനങ്ങളുള്ള മറ്റു ശക്തികളുമുണ്ടാകാം. ഇത്തരൂണത്തിൽ നമുക്ക് അദ്യശ്യനായ ദൈവത്തെയും അനന്തമാനങ്ങളുള്ള ജീവനുള്ള അസ്തിത്വമായി സങ്കല്പിക്കുന്നത് തീർത്തും സാംഗത്യമാണ്. നാം കാണുന്നതിനപ്പുറമുള്ളതെല്ലാം മിഥ്യയെന്നു വിചാരിക്കുന്നത്, ഒരുറുന്ന് മനുഷ്യനെക്കുറിച്ചു നീളവും വീതിയും മാത്രമുള്ള ദ്വിമാന ജീവിയാണ് മനുഷ്യൻ എന്ന് സങ്കല്പിക്കുന്നതിനു തുല്യമല്ലേ? ത്രിമാനംവരെയുള്ള വസ്തുക്കൾ കാണാനും അനുഭവിക്കാനും സാധിക്കുന്ന മർത്യൻ അനന്തമാനമുള്ള ദൈവത്തെക്കുറിച്ചു കൂലക്ഷമായി ചിന്തിക്കുകയും ഇല്ല എന്ന് സ്ഥാപിക്കാൻ വ്യഗ്രതപ്പെടുകയും ചെയ്യുന്നത് പലപ്പോഴും കണ്ടുകിണറ്റിലെ തവളയുടെ മനോഭാവം തന്നെല്ലേ?

"അനന്തമജ്ഞാതമവർണ്ണനീയം
 ഈ ലോകഗോളം തിരിയുന്ന മാർഗ്ഗം
 അതികലങ്ങളാണൊരിടത്തിരുന്നു
 നോക്കുന്നമർത്യൻ കഥയെന്തറിഞ്ഞു"
 നാലപ്പാട്ടു നാരായണമേനോൻ(കണ്ണൂർനീർത്തുള്ളി)

ISBN: 978-93-85657-40-5

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Predicting Alzheimer Disease via Classification and Regression Methods Ann Mariya Rajan ² , Jinsi Jose ² , Jes Maria Shoji ^{1*} , Almie K Joseph ^{1*} & Sneha C.S ^{1*}	01
2.	Corporate Social Responsibility of Banks Tisha Tomy ^{1*}	05
3.	Impact of Emotional Intelligence on Leadership Effectiveness: A Critical Analysis Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Ms. Geethu Jose ^{1*} & Dr. Sharon Lee Jose ^{1*}	08
4.	The Transformative Teaching of Swami Vivekananda Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Sr. Sijo Francis ^{1*} & Ms. Meera R Nair ^{1*}	10
5.	Awareness and Utilization of Internet-Based Banking Services Eswara Sarma S G ^{1*} , Jothilakshmi Baburaj [*] , Anu Saju [*] , Amal Joseph & Shaiju S	12
6.	Customer Satisfaction and Services of SBI Bank Albin Francis [*] , Akhilesh R [*] , Shibu K R ^{1*} , Mr. Shaiju S ^{1*} & Eswara Srama S.G ^{1*}	15
7.	Satisfaction with Online Food Delivery Applications among Customers Neethumol Shaji ^{1*} , Kanjana K P [*] , Sreekutty M M [*] , Mr. Shaiju S ^{1*} & Shibu K.R ^{1*}	18
8.	Effect of Labor Welfare Measures on Employee Morale Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Shoniya V.V ^{1*} , Abin Jose ^{1*} & Jovana Pramod ^{1*}	21
9.	Effectiveness of Public Distribution System after Implementation of E-POS Machine Eswara Sarma S G ^{1*} , Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Anu Saju ^{1*} & Shaiju S ^{1*}	24
10.	Farmers Perceptions towards Agricultural Loans Neethumol Shaji ^{1*} , Haritha Rajeev [*] , Sincy Siby [*] , Mr. Shaiju S ^{1*} & Abin Jose ^{1*}	27
11.	Investors Perception towards Mutual Funds as an Investment Option Sunitha M. T ^{1*} , Athira Balachandran ^{1*} , Amal Joseph ^{1*} , Abin Jose ^{1*} & Eswarasarma S.G ^{1*}	30
12.	Perceptions towards Online Shopping among College Students Elizabeth Joseph [*] , Anu Saju ^{1*} , Amal Joseph ^{1*} , Shoniya V.V ^{1*} & Ashly Jose ^{1*}	33
13.	Quality of Work Life and Occupational Stress of Self-Financing College Teachers Anu Saju ^{1*} , Achu Abraham ^{1*} , Aleena K.S ^{1*} , Ashly Jose ^{1*} & Jovana Pramod ^{1*}	36
14.	Scope of Artificial Intelligence in Business Abin Jose ^{1*} , Grincy M. Kurian ^{1*} , Ashly Kurian ^{1*} , Neethumol Shaji ^{1*} & Eswara Sarma S.G ^{1*}	39
15.	The Study on the Awareness of Banking Services among College Students Athul Vinay [*] , Arun Rajesh [*] , Shibu K R ^{1*} , Neethumol Shaji ^{1*} & Abin Jose ^{1*}	42

16. Dyadic Adjustment and Resilience among Spouses of Individuals Having Chronic Diseases **45**
Sijo Francis^{1*}, Juliet P Thomas^{*}, Manu Kurian^{1*}, Anu Antony^{1*} & Dr. Mathew Kanamala^{1*}
17. Exploring the Synergistic Influence of Rice Husk Reinforcement on the Curing Process and Mechanical Characteristics of Natural Rubber Vulcanizates **48**
Sijo Francis^{1*}, Amala Abraham^{1*}, Jayafar T², Jose James^{1*} & Anu Antony^{1*}
18. A Study of Raney Nickel Catalyst and its use in the Hydrogenation Reactions **50**
Sijo Francis^{1*}, Ebin Raphael E S^{1*}, M.D. Sreekumar², Jose James^{1*} & Anu Antony^{1*}
19. Determination of Iron Content in Vegetables **53**
Dhanusree Dhaneesh^{1*}, Sheena Kuriakose², Sijo Francis^{1*}, Anu Antony^{1*} & Jose James^{1*}
20. Need of the Hour for Knowledge HumanResource Accounting for Success of an Organisation **55**
Tisha Tomy^{1*2}
21. Words of Survival: Delving into Trauma, Resilience and Identity in *Sold* **58**
Blessy Boban^{*}, Dr. Salini L R^{1*}, Mr. Roby Mathew^{1*}, Ms. Roopa Jose^{1*} & Dr. Aparna Prasad^{1*}
22. Myth in Nadia Hashmi's *One Half from the East*: On a Cultural Perspective **60**
Alex E.R^{1*}, Sherlin Suji S^{*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
23. Ethnic Violence in Nayomi Munaweera's *Island of a Thousand Mirrors*: A Statement on the Sri Lankan Civil War **63**
S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Roby Mathew^{1*}, Dr. Alex E.R^{1*} & Salini L.R^{1*}
24. Navigating Cultural Complexities in V.S. Naipaul's *A House for Mr. Biswas* **65**
Sunitha Mathew^{1*}, Roopa Jose^{1*}, Salini L.R^{1*}, Shintu Dennis^{1*} & Christy Joseph^{1*}
25. Disability and Performing Arts: A Study on Padma Venkatraman's *A Time to Dance* **67**
Divya Chandran^{*}, Dr. Shintu Dennis^{1*}, Dr. Salini L.R^{1*}, Ms. Sunitha Mathew^{1*} & Ms. Christy Joseph^{1*}
26. Liberal Feminism in Louisa May Alcott's *Little Women*: A Feminist Reading **69**
Minnu Thomas^{*}, Dr. Shintu Dennis^{1*}, Dr. Alex E.R^{1*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
27. A Review on the Politics in *Jawan*, and its Invisible Vigilante **71**
Dr. Aparna Prasad^{1*}, Sethulekshmi P.S.^{1*}, Christy Joseph^{1*}, Roopa Jose^{1*} & S. Abhilash Mathew^{1*}
28. The Representation of Dalit Self: Valkmiki's *Joothan* in a Dissident Space **73**
Stephena Fredy^{*}, Dr. Aparna Prasad^{1*}, Sethulekshmi P. S.^{1*}, Christy Joseph^{1*} & Roopa Jose^{1*}
29. Ultrafast Magnetisation Dynamics for Studying Fast Processes in Magnetism **75**
Robin John^{1*}, Mevin Mathew², Anju P Mathews^{1*} & Praveen Joseph^{1*}
30. Colourful Carbon Nanotubes **78**
Robin John^{1*}, Sijo Francis², Subin Thomas^{1*} & Ms. Deena Paul^{1*}
31. Attitude towards Drugs and Alcohol among Middle People **80**
Alan Jorly^{*}, Dr. Mathew Kanamala^{1*}, Ms. Droupathy Devi C G^{1*} & Dr. Jobi K V^{1*}

32. Library & Information Centers in the Society	82
Ms. Droupathy Devi C G ^{1*} , Dr. Jose James ^{1*} , Dr. Robin John ^{1*} & Ms. Anu Saju ^{1*}	
33. Self-confidence among Single Adolescents	84
Mr. Shiyon Sebastian ^{1*} , Dr. Justin Joseph ^{1*} , Ms. Droupathy Devi C G ^{1*} & Ms. Joice Mary Vincent ^{1*}	
34. Farm Stress of Small-Scale Farmers in Idukki District	86
Teenu Shaji ² , Dr. Praveen Joseph ^{1*} , Mr. Pramod Joseph ^{1*} , Manu Kurian ^{1*} & Dr. Justin Joseph	
35. Peer Pressure and Emotional Expressivity among Adolescents	89
Amitha Alex [*] , Manu Kurian ^{1*} , Dr. Joseph George ^{1*} , Mr. Kuriachan Jose ^{1*} & Dr. Mathew Kanamala ^{1*}	
36. The Lifelong Benefits of Positive Social Interactions and Close Friendships for College Students' Happiness	92
Dr. Jose James ^{1*} , Jimmy George ^{1*} , Amal Joseph ^{1*} & Shibu K R ^{1*}	
37. Unveiling the Enigma: The Power of the Subconscious Mind	95
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} & Mr. Biju Scaria ^{1*}	
38. Social Intelligence: Understanding and Navigating Human Relations	97
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} , Mr. Biju Scaria ^{1*} & Sijo John	
39. Navigating Uncertain Futures: Transformative Competencies for Education 2030	100
Dr. Sr.Sijo Francis ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Mr. Abin Jose ^{1*} & Mr. Eswarasarma ^{1*}	
40. Understanding Empathy and Stress Management: Keys to Emotional Well-Being	103
Dr. Sr.Sijo Francis ^{1*} , Dr. Mathew Kanamala ^{1*} , Ms. Neethumol Shaji ^{1*} & Mr. Shiju S ^{1*}	
41. College Life: A Journey to Well-Being and Happiness through Exercise, Sports, and Balanced Diet	106
Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Mathews Emmanuel	
42. Turbulent Waters of Adolescence: A Comprehensive Exploration	108
Dr.Jose James ^{1*} , Mr.Roby Mathew ^{1*} , Mr. Michael Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Silvanos P Thomas	
43. Life Satisfaction and Loneliness in Elderly: Exploration of the Connection	111
Alwin Jose Alex [*] , Dr. Mathew Kanamala ^{1*} , Dr. Jomon Kottarathil ^{1*} , Ms. Anu Saju ^{1*} & Mr. Eswarasarma ^{1*}	
44. Business Intelligence in the Aviation Sector	113
Asby O S [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Dr, Sharon Lee Jose ^{1*} & Ms. Geethu Jose ^{1*}	
45. Case Study on Online Food Delivery in Business Intelligence	116
Krishnadas Biju [*] , Jilu Jose ² , Dr. Jomon Kottarathil ^{1*} , Dr. Joseph George ^{1*} & Mr, Shiju S	

46. An Analysis and Prediction of Lung Cancer 119
 Haritha H*, Dr. Sabukkutty MG^{1*}, Jinsi Jose², Aneesh N^{1*}, Ms. Neethumol Shaji & Ms Meera R Nair^{1*}

47. Marital Attitude among PG Students based on their Religion 124
 Albin Binoy*, Dr. Justin Joseph^{1*}, Dr. Jomon Kottarathil^{1*}, Mr. Manu Kurian^{1*} & Ms. Anu Saju^{1*}

48. Business Analytics in the Agrarian Field 126
 Merin Shibu*, Aneesh N^{1*}, Almie Joseph K^{1*}, Ms. Sneha C S^{1*} & Mr. Pramod Joseph^{1*}

49. Attitude towards Drugs among Adolescents 130
 Sachin Jose*, Manu Kurian^{1*}, Dr. Jomon Kottarathil^{1*}, Dr. Mathew Kanamala^{1*} & Mr. Paul. C. Abraham^{1*}

50. Covid-19's Effect on Students 132
 Varsha B Mariya*, Dr. Sabukkutty M G^{1*}, Sruthy Sebastian^{1*}, Mr. Jimmy George^{1*} & Pramod Joseph^{1*}

60. Business Intelligence within E-Learning Environments	165
Jose Sebastian [*] , Sruthy Sebastian ^{1*} , Aneesh N ^{1*} , Dr. Jomon Kottarathil ^{1*} & Mr. Silvanos P Thomas ^{1*}	
61. Real-Life Application of Business Intelligence in Transportation & Logistics	169
Sneha C S ^{1*} , Aneesh N ^{1*} , Jinsi Jose ² , Ms. Meera R Nair ^{1*} & Ms. Almie Joseph ^{1*}	
62. Business Intelligence: Retail and Wholesale Marketing Case Study	171
Tony Joshy [*] , Ance Denny [*] Dr. Jomon Kottarathil ^{1*} , Sneha CS ^{1*} , Almie Joseph ^{1*} , & Mr. Aneesh N ^{1*}	
63. Business Intelligence Implementation in the Travel and Tourism Sector	174
Abhinand UK [*] , Ance Denny [*] , Jinsi Jose ² , Mr. Aneesh N ^{1*} , Ms. Sneha C.S ^{1*} , Ms. Almie Joseph ^{1*} & Jomon Kottarathil ^{1*}	
64. Business Intelligence Application in Banking and Financial Sector	177
Liana S [*] , Ance Denny [*] , Sruthy Sebastian ^{1*} , Jimmy George ^{1*} , Abin Jose ^{1*} & Ms. Anu Saju ^{1*}	
65. E-Commerce and Business Intelligence	180
Gopika Suresh [*] , Ance Denny [*] , Jinsi Jose ² , Aneesh N ^{1*} , Snehaa C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil	
66. Sports Business Intelligence	183
Joel Jaison [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	
67. Hazards to Maternal Health	187
Anu Anish [*] , Dr. Jomon Kottarathil ^{1*} , Aneesh N ^{1*} , Almie Joseph K ^{1*} & Sneha C S ^{1*}	
68. Decision Tree-Based Prediction of Heart Failure	191
Augustine Shaji [*] , Jomon K Sebastian [*] , Jinsi Jose ² , Aneesh N ^{1*} , Sneha C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	
69. The COVID-19 Impact on Airport Traffic	195
Joeyal Kurian [*] , Almie Joseph K ^{1*} , Jomon K Sebastian [*] Aneesh N ^{1*} , Snehaa C S ^{1*} , & Dr. Jomon Kottarathil ^{1*}	
70. Prediction and Visualisation of Used Car Price	200
Joeyal Kurian [*] , Jinsi Jose ² , Jomon K Sebastian [*] Aneesh N ^{1*} , Snehaa C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	

71. Multi-Dimensional Health Locus of Control in Cancer Patients	204
Aby Benny [*] , Dr. Justin Joseph ^{1*} , Dr. Jomon K Sebastian ^{1*} , Dr. Mathew Kanamala ^{1*} & Manau Kurian ^{1*}	
72. Business Analytics for Rail and Metro Services	207
Ann Mariya Rajan ² , Ance Denny [*] , Jinsi Jose ² , Aneesh N ^{1*} , Ms. Meera R Nair ^{1*} & Ms. Sneha C S ^{1*}	
73. A Predictive Study of Vehicle Insurance Purchases	211
Thejus T Reji [*] , Jilu Jose ² , Almie Joseph K ^{1*} , Ms. Sneha C S ^{1*} , Dr. Jomon Kottarathil ^{1*}	
74. Academic Effect on Students' Mental Health	216
Nandana Unni [*] , Jomon K Sebastian ^{1*} , Sruthy Sebastian ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Jose James ^{1*}	
75. Predicting the Status of Cirrhosis Disease through Logistic Regression	220
Jisny Johnson [*] , Jes Maria Shoji ^{1*} , Jinsi Jose ² , Ms. Almie Joseph ^{1*} , Dr. Joby Makolil ^{1*}	
76. Loan Eligibility Category	224
Steffymol Sunny ^{1*} , Jomon K Sebastian ^{1*} , Sneha C S ^{1*} & Aneesh N ^{1*}	
77. Reducing Staff Attrition using Gradient Boosting	228
Jilu Jose ² , Aneesh N ^{1*} , Sruthy Sebastian ^{1*} , Dr. Sabukkutty M G ^{1*} & Ms. Meera R Nair ^{1*}	
78. Healthcare Business Intelligence	232
Sona Binu [*] , Jomon K Sebastian [*] , Almie Joseph ^{1*} , Dr. Alex E R ^{1*} , Mr. Shiju ^{1*} & Shibu K R ^{1*}	
79. Wind Speed Prediction using Machine Learning Algorithms	235
Aida Vinoy [*] , Jomon K Sebastian ^{1*} , Jinsi Jose ² , Ms. Almie Joseph ^{1*} & Aneesh N ^{1*}	
80. Synthesis and Characterization of Thermoplastic	239
Pooja Parvathy P [*] , Dr. Jose James ^{1*} , Dr. Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} & Dr. Joby K V ^{1*}	
81. Enhancing Green Chemistry Learning Through Art	241
Kavitha Jacob ² , Sijo Francis ^{1*} & Dr. Jose James ^{1*}	
82. Nanotechnology in Cancer Diagnosis	243
Manasy KS [*] , Sijo Francis ^{1*} , Dr. Jose James ^{1*} , Dr. Anu Antony ^{1*} & Dr. Joby K V ^{1*}	
83. Cancer Treatment through Nano science	245
Manasy KS [*] , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*} ,	
84. Preparation and Characterisation of Potassium Tris (Oxalato) Chromate (III)	247
Mirsana C S [*] , Ebey P. Koshy ^{1*} , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
85. Preparation of Zinc Oxide Nanoparticles and Synthesis of Zinc Oxide Nano Composites by Green Routes	249
Athmitha K Jiji [*] and Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
86. Timing and Spectral Analysis of Thermonuclear X-ray Burst from Atoll Source 4U 1636-536	251
Marykutty James ² , Juris N.J ² , Riya ² , Fathima K ² & Sr. Sijo Francis ^{1*}	

87. Study of Oxalate Content in Tomato	255
Remya Vijayan [*] , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
88. Impact of National Education Policy on Brain Drain in India	257
Ebby Joseph Idicula ² & Sijo Francis ^{1*}	
89. Recycling of PET Bottles	260
Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
90. Examining the Impact of Number of Children on Teacher's Social Emotional Competency	263
Akhil Thankachan [*] , Mr Manu Kurian ^{1*} , Blessy Devasia Jacob ² , Dr Mathew Kanamala ^{1*} , Mr. Roby Mathew ^{1*} & Dr. Justine Joseph ^{1*}	
91. Attitude of College Lectures towards Educational Administration	266
Jerin Joseph [*] , Dr. Mathew Kanamala ^{1*} , Dr. Rickey Sara Kurian ² , Jomon K Sebastian ^{1*} , Sneha C S ^{1*} & Aneesh N ^{1*}	
92. Career Conflict among Adolescents	268
Sandra Mol Augustine [*] , Renjitha E [*] , Mr. Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
93. Emotional Maturity among Young Adults	271
Swetha Joy [*] , Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} , Dr. Justin Joseph ^{1*} & Aneesh N ^{1*}	
94. Maximizing Team Performance through Effective Management	273
Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Dr. Sharon Lee Jose ^{1*} , Ms. Geethu Jose ^{1*}	
95. Resilience in Management: Thriving in Challenging Times	276
Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Dr. Sharon Lee Jose ^{1*} , Ms. Geethu Jose ^{1*}	
96. Influencing Factors of Stress Vulnerability among Middle-Aged People	278
Alan Jorly [*] , Dr. Mathew Kanamala ^{1*} , Sneha Santhosh [*] , Dr. Justin Joseph ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Sabukkutty M G ^{1*}	
97. Social Relationship among Young Adults	280
Swetha Joy [*] , Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} , Dr. Justin Joseph ^{1*} , Mr. Manu Kurian ^{1*} & Mr. Prince J Mathew	
98. Self-confidence among Single Adolescents	282
Shiyon Sebastian [*] , Swetha Joy [*] , Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Sr. Sijo Francis ^{1*}	
99. Role of Residential Area in Self-Concept and Emotional Competence among Adolescents	284
Arjun K. R [*] , Dr. Justin Joseph ^{1*} , Alen Kurian Mathew [*] , Dr. Mathew Kanamala ^{1*} , Mr. Manu Kurian ^{1*} & Fr. Nixen Mathew Enamattathu ^{1*}	
100. Role of Gender in Self-Concept and Emotional Competence among Adolescents	287

Arjun K. R^{*}, Dr. Justin Joseph^{1*}, Alen Kurian Mathew^{*}, Dr. Mathew Kanamala^{1*}, Mr. Manu Kurian^{1*} & Mr. Sijo John^{1*}

101. Emotional Maturity among Young Adults **290**

Shilpa Mohan^{*}, Dr. Justin Joseph^{1*}, Malavika P R^{*}, Dr. Mathew Kanamala^{1*}, Mr. Manu Kurian^{1*} & Mr. Biju Scaria^{1*}

102. Mathematical Problem-Solving Ability among Single Adolescents **292**

Shiyon Sebastian^{*}, Swetha Joy^{*}, Dr. Justin Joseph^{1*}, Dr. Mathew Kanamala^{1*}, Mr. Manu Kurian^{1*} & Mr. Aneesh N^{1*}

അപരിഹാര്യമായ പ്രശ്നങ്ങളില്ല!

പ്രബന്ധസംഗ്രഹം

ജീവിതത്തിൽ ഉണ്ടാകുന്ന പ്രശ്നങ്ങൾക്ക് പരിഹാരം കാണാനാകാതെ നിരാശയിലേക്കും ആത്മഹത്യയിലേക്കും തങ്ങളെത്തന്നെ തള്ളിവിടുന്ന ഒത്തിരിയേറെ ആളുകൾ നമുക്ക് ചുറ്റുമുണ്ട്. ജീവിതത്തിൽ അപരിഹാര്യമായ ഒന്നുമില്ല എന്നതാണ് ചെറുപ്പത്തിൽ പഠിച്ച ഗണിതം അവരോട് പറയുന്നത്. പ്രശ്നങ്ങളെല്ലാം പരിഹരിക്കാനുള്ളതാണെന്നും പരിഹരിക്കാനാവാത്ത പ്രശ്നങ്ങളില്ലെന്നുമാണ് നാം പഠിച്ച ഗണിതശാസ്ത്രം ഓരോ ദിവസവും നമ്മോട് ഉരുവിടുന്നത്.

കീലപദങ്ങൾ: ജീവിതപ്രശ്നങ്ങൾ, കണക്കുകൂട്ടലുകൾ, ഗണിതശാസ്ത്രം.

എന്തിനാ കണക്കു പഠിക്കുന്നത്? നാമൊക്കെ ചെറുപ്പത്തിൽ ചോദിച്ചിട്ടുള്ള ചോദ്യമാണ് ഇത്. ചിലരെങ്കിലും ഇപ്പോഴും ഈ ചോദ്യം തുടർന്നുകൊണ്ടേയിരിക്കുന്നു. യഥാർത്ഥത്തിൽ എന്തിനാണ് നാമിവയൊക്കെ പഠിച്ചത്? 'കുറെ കണക്കുകൾ ചെയ്യാൻ', 'ടീച്ചറിന് എന്തെങ്കിലുമൊക്കെ പഠിപ്പിക്കണ്ടേ, അതിനാണ്'; ഇതൊക്കെയായിരിക്കും പലരുടെയും ഉത്തരങ്ങൾ. ഒരർത്ഥത്തിൽ അവ തന്നെയാണുത്തരം! പക്ഷേ, കുറച്ചുകൂടി വിശാലമായ രീതിയിൽ ആ ഉത്തരത്തെ അപഗ്രഥിക്കണമെന്നുമാത്രം. നാമൊക്കെ സ്കൂളിൽ പഠിക്കുമ്പോൾ ഒത്തിരി കണക്കുകൾ ചെയ്തുകൂട്ടിയിട്ടുണ്ട്. ഒത്തിരിയേറെ തരത്തിലുള്ള കണക്കുകൾ പഠിച്ചിട്ടുമുണ്ട്. വളരെയേറെ സമയം അതിനായി വിനിയോഗിച്ചിട്ടുമുണ്ട്. ചിലർക്കെങ്കിലും കണക്കുകൾ ചെയ്യാത്തതിനു തല്പം ഇമ്പോസിഷനും കിട്ടിയിട്ടുമുണ്ടാകാം. ഒന്നോർത്തുനോക്കിയാൽ ചെയ്ത കണക്കുകൾക്കൊക്കെ എന്തെങ്കിലും ഉത്തരങ്ങൾ നമുക്ക് കിട്ടിയിട്ടുണ്ട്. ഉത്തരം കിട്ടാത്ത ഒരു കണക്കും നാം ചെയ്തിട്ടില്ല എന്നതാണ് സത്യം!

കണക്കു പഠിക്കുമ്പോൾ കണക്കിനുള്ളിലെ കണക്കുകൂട്ടലുകളുടെ അർത്ഥവ്യാപ്തിയുംകൂടി കണക്കിലെടുക്കുമ്പോൾ മാത്രമേ നമ്മുടെ പഠനം പൂർണ്ണമാവൂ. ഗണിതശാസ്ത്രത്തിൽ നമുക്ക് ചെയ്യാൻ കിട്ടുന്ന കണക്കുകളെ പ്രശ്നങ്ങൾ (problems) എന്നും അവയ്ക്കു കിട്ടുന്ന ഉത്തരങ്ങളെ പരിഹാരങ്ങൾ (solutions) എന്നും വഴികളെ പരിഹാരമാർഗ്ഗങ്ങളെന്നുമാണ് (steps) വിളിക്കുന്നത്. ഒരർത്ഥത്തിൽ ഏതുതരത്തിലുമുള്ള പ്രശ്നങ്ങളെ അഭിമുഖീകരിക്കാനും അവയെ തന്മയത്വത്തോടെ പരിഹരിക്കാനും നമ്മെ പ്രാപ്തരാക്കുക എന്നതാണ്

ഗണിതധർമ്മം. അതായത്, നമ്മുടെ പ്രശ്നങ്ങൾക്കെല്ലാം പരിഹാരങ്ങളുണ്ട് എന്ന ചിന്തയാണ് ഗണിതപഠനം നമ്മുടെ ഉപബോധമനസ്സിൽ അടിവരയിട്ടുറപ്പിക്കേണ്ടത്. പഠിച്ച കണക്കുകൾ നമ്മെ പഠിപ്പിക്കുന്ന ചില ജീവിതമൂല്യങ്ങളിൽ ഒന്നാണിത്. നാം കണക്കു പഠിച്ചത് ടീച്ചറിന് എന്തെങ്കിലുമൊക്കെ നമ്മെ പഠിപ്പിയ്ക്കാനല്ല, പിന്നെയോ ജീവിതത്തെക്കുറിച്ചു നമ്മെ പഠിപ്പിക്കുന്നതിനുവേണ്ടിത്തന്നെയാണ്!

നമ്മുടെ ജീവിതം ഒരു കണക്കു പുസ്തകമായി പലരും സങ്കല്പിക്കാറുണ്ട്. അവിടെ പക്ഷെ, ലാഭനഷ്ടക്കണക്കുകളുടെ പട്ടികയാണ് നാം പലപ്പോഴും തയ്യാറാക്കുന്നത്. അതിനു പകരം ജീവിത പാഠങ്ങൾ പഠിക്കാനും ജീവിത പ്രശ്നങ്ങളെ പരിഹരിക്കാനുമുള്ള പാഠപുസ്തകമായി നമുക്കതിനെ കാണാനാകണം. അങ്ങിനെ കാണുമ്പോൾ ജീവിതത്തിലെ പ്രതിസന്ധികളെപ്പോലും ഒരു ഗണിതശാസ്ത്രപ്രശ്നം പരിഹരിക്കുന്ന മനോഭാവത്തോടെ പരിഹരിക്കാനുള്ള ആത്മവിശ്വാസം നമുക്ക് സ്വായത്തമാക്കാനാകും. പഠനകാലഘട്ടത്തിൽ നാം അഭിമുഖീകരിച്ച നിരവധി ഗണിത പ്രശ്നങ്ങൾക്കും ജീവിതത്തിൽ നാം അഭിമുഖീകരിക്കുന്ന ജീവിതപ്രശ്നങ്ങൾക്കും ധാരാളം സാമ്യം കാണാനാകും. ഗണിതപ്രശ്നങ്ങളും ഗണിത ക്രിയകളുമില്ലാതെ ഗണിതമെന്ന വിഷയമില്ലാത്തതുപോലെ പ്രശ്നരഹിതമായ ജീവിതവുമില്ല. പ്രശ്നങ്ങളെയും പ്രതിബന്ധങ്ങളെയും സൗമ്യതയോടെ നേരിടുകയും അവയെ അതിജീവിക്കുകയും ചെയ്യുന്നവരാണ് വിജയം നേടുന്നത്.

ജീവിതത്തിൽ ഉണ്ടാകുന്ന പ്രശ്നങ്ങൾക്ക് പരിഹാരം കാണാനാകാതെ നിരാശയിലേക്കും ആത്മഹത്യയിലേക്കും തങ്ങളെത്തന്നെ തള്ളിവിടുന്ന ഒത്തിരിയേറെ ആളുകൾ നമുക്ക് ചുറ്റുമുണ്ട്. ജീവിതത്തിൽ അപരിഹാര്യമായ ഒന്നുമില്ല എന്നതാണ് ചെറുപ്പത്തിൽ പഠിച്ച ഗണിതം അവരോട് പറയുന്നത്. ഏതൊരു പ്രശ്നത്തിനും ഉത്തരം കണ്ടെത്താനാകും. അതിനാൽ പ്രതീക്ഷാനിർഭരതയോടെ നമുക്ക് ജീവിതത്തെ സമീപിക്കാം. ഓർക്കുക, പ്രശ്നങ്ങളെല്ലാം പരിഹരിക്കാനുള്ളതാണെന്നും പരിഹരിക്കാനാവാത്ത പ്രശ്നങ്ങളില്ലെന്നുമാണ് നാം പഠിച്ച ഗണിതശാസ്ത്രം ഓരോ ദിവസവും നമ്മോട് ഉരുവിടുന്നത്.

ഈ കാലവും കടന്നു പോകും
 ഈ ശിശിരവും പെയ്തൊഴിയും
 ഈ ഗതിവിഗതികൾക്കതീതനായി
 നീ നീതന്നെയായുണ്ടായിരുന്നെങ്കിൽ!

March 2023

ISBN: 978-93-85657-40-5

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Predicting Alzheimer Disease via Classification and Regression Methods Ann Mariya Rajan ² , Jinsi Jose ² , Jes Maria Shoji ^{1*} , Almie K Joseph ^{1*} & Sneha C.S ^{1*}	01
2.	Corporate Social Responsibility of Banks Tisha Tomy ^{1*}	05
3.	Impact of Emotional Intelligence on Leadership Effectiveness: A Critical Analysis Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Ms. Geethu Jose ^{1*} & Dr. Sharon Lee Jose ^{1*}	08
4.	The Transformative Teaching of Swami Vivekananda Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Sr. Sijo Francis ^{1*} & Ms. Meera R Nair ^{1*}	10
5.	Awareness and Utilization of Internet-Based Banking Services Eswara Sarma S G ^{1*} , Jothilakshmi Baburaj [*] , Anu Saju [*] , Amal Joseph & Shaiju S	12
6.	Customer Satisfaction and Services of SBI Bank Albin Francis [*] , Akhilesh R [*] , Shibu K R ^{1*} , Mr. Shaiju S ^{1*} & Eswara Srama S.G ^{1*}	15
7.	Satisfaction with Online Food Delivery Applications among Customers Neethumol Shaji ^{1*} , Kanjana K P [*] , Sreekutty M M [*] , Mr. Shaiju S ^{1*} & Shibu K.R ^{1*}	18
8.	Effect of Labor Welfare Measures on Employee Morale Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Shoniya V.V ^{1*} , Abin Jose ^{1*} & Jovana Pramod ^{1*}	21
9.	Effectiveness of Public Distribution System after Implementation of E-POS Machine Eswara Sarma S G ^{1*} , Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Anu Saju ^{1*} & Shaiju S ^{1*}	24
10.	Farmers Perceptions towards Agricultural Loans Neethumol Shaji ^{1*} , Haritha Rajeev [*] , Sincy Siby [*] , Mr. Shaiju S ^{1*} & Abin Jose ^{1*}	27
11.	Investors Perception towards Mutual Funds as an Investment Option Sunitha M. T ^{1*} , Athira Balachandran ^{1*} , Amal Joseph ^{1*} , Abin Jose ^{1*} & Eswarasarma S.G ^{1*}	30
12.	Perceptions towards Online Shopping among College Students Elizabeth Joseph [*] , Anu Saju ^{1*} , Amal Joseph ^{1*} , Shoniya V.V ^{1*} & Ashly Jose ^{1*}	33
13.	Quality of Work Life and Occupational Stress of Self-Financing College Teachers Anu Saju ^{1*} , Achu Abraham ^{1*} , Aleena K.S ^{1*} , Ashly Jose ^{1*} & Jovana Pramod ^{1*}	36
14.	Scope of Artificial Intelligence in Business Abin Jose ^{1*} , Grincy M. Kurian ^{1*} , Ashly Kurian ^{1*} , Neethumol Shaji ^{1*} & Eswara Sarma S.G ^{1*}	39
15.	The Study on the Awareness of Banking Services among College Students Athul Vinay [*] , Arun Rajesh [*] , Shibu K R ^{1*} , Neethumol Shaji ^{1*} & Abin Jose ^{1*}	42

16. Dyadic Adjustment and Resilience among Spouses of Individuals Having Chronic Diseases **45**
Sijo Francis^{1*}, Juliet P Thomas^{*}, Manu Kurian^{1*}, Anu Antony^{1*} & Dr. Mathew Kanamala^{1*}
17. Exploring the Synergistic Influence of Rice Husk Reinforcement on the Curing Process and Mechanical Characteristics of Natural Rubber Vulcanizates **48**
Sijo Francis^{1*}, Amala Abraham^{1*}, Jayafar T², Jose James^{1*} & Anu Antony^{1*}
18. A Study of Raney Nickel Catalyst and its use in the Hydrogenation Reactions **50**
Sijo Francis^{1*}, Ebin Raphael E S^{1*}, M.D. Sreekumar², Jose James^{1*} & Anu Antony^{1*}
19. Determination of Iron Content in Vegetables **53**
Dhanusree Dhaneesh^{1*}, Sheena Kuriakose², Sijo Francis^{1*}, Anu Antony^{1*} & Jose James^{1*}
20. Need of the Hour for Knowledge Human Resource Accounting for Success of an Organisation **55**
Tisha Tomy^{1*2}
21. Words of Survival: Delving into Trauma, Resilience and Identity in *Sold* **58**
Blessy Boban^{*}, Dr. Salini L R^{1*}, Mr. Roby Mathew^{1*}, Ms. Roopa Jose^{1*} & Dr. Aparna Prasad^{1*}
22. Myth in Nadia Hashmi's *One Half from the East*: On a Cultural Perspective **60**
Alex E.R^{1*}, Sherlin Suji S^{*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
23. Ethnic Violence in Nayomi Munaweera's *Island of a Thousand Mirrors*: A Statement on the Sri Lankan Civil War **63**
S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Roby Mathew^{1*}, Dr. Alex E.R^{1*} & Salini L.R^{1*}
24. Navigating Cultural Complexities in V.S. Naipaul's *A House for Mr. Biswas* **65**
Sunitha Mathew^{1*}, Roopa Jose^{1*}, Salini L.R^{1*}, Shintu Dennis^{1*} & Christy Joseph^{1*}
25. Disability and Performing Arts: A Study on Padma Venkatraman's *A Time to Dance* **67**
Divya Chandran^{*}, Dr. Shintu Dennis^{1*}, Dr. Salini L.R^{1*}, Ms. Sunitha Mathew^{1*} & Ms. Christy Joseph^{1*}
26. Liberal Feminism in Louisa May Alcott's *Little Women*: A Feminist Reading **69**
Minnu Thomas^{*}, Dr. Shintu Dennis^{1*}, Dr. Alex E.R^{1*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
27. A Review on the Politics in *Jawan*, and its Invisible Vigilante **71**
Dr. Aparna Prasad^{1*}, Sethulekshmi P.S.^{1*}, Christy Joseph^{1*}, Roopa Jose^{1*} & S. Abhilash Mathew^{1*}
28. The Representation of Dalit Self: Valkmiki's *Joothan* in a Dissident Space **73**
Stephena Fredy^{*}, Dr. Aparna Prasad^{1*}, Sethulekshmi P. S.^{1*}, Christy Joseph^{1*} & Roopa Jose^{1*}
29. Ultrafast Magnetisation Dynamics for Studying Fast Processes in Magnetism **75**
Robin John^{1*}, Mevin Mathew², Anju P Mathews^{1*} & Praveen Joseph^{1*}
30. Colourful Carbon Nanotubes **78**
Robin John^{1*}, Sijo Francis², Subin Thomas^{1*} & Ms. Deena Paul^{1*}
31. Attitude towards Drugs and Alcohol among Middle People **80**
Alan Jorly^{*}, Dr. Mathew Kanamala^{1*}, Ms. Droupathy Devi C G^{1*} & Dr. Jobi K V^{1*}

32. Library & Information Centers in the Society	82
Ms. Droupathy Devi C G ^{1*} , Dr. Jose James ^{1*} , Dr. Robin John ^{1*} & Ms. Anu Saju ^{1*}	
33. Self-confidence among Single Adolescents	84
Mr. Shiyon Sebastian ^{1*} , Dr. Justin Joseph ^{1*} , Ms. Droupathy Devi C G ^{1*} & Ms. Joice Mary Vincent ^{1*}	
34. Farm Stress of Small-Scale Farmers in Idukki District	86
Teenu Shaji ² , Dr. Praveen Joseph ^{1*} , Mr. Pramod Joseph ^{1*} , Manu Kurian ^{1*} & Dr. Justin Joseph	
35. Peer Pressure and Emotional Expressivity among Adolescents	89
Amitha Alex [*] , Manu Kurian ^{1*} , Dr. Joseph George ^{1*} , Mr. Kuriachan Jose ^{1*} & Dr. Mathew Kanamala ^{1*}	
36. The Lifelong Benefits of Positive Social Interactions and Close Friendships for College Students' Happiness	92
Dr. Jose James ^{1*} , Jimmy George ^{1*} , Amal Joseph ^{1*} & Shibu K R ^{1*}	
37. Unveiling the Enigma: The Power of the Subconscious Mind	95
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} & Mr. Biju Scaria ^{1*}	
38. Social Intelligence: Understanding and Navigating Human Relations	97
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} , Mr. Biju Scaria ^{1*} & Sijo John	
39. Navigating Uncertain Futures: Transformative Competencies for Education 2030	100
Dr. Sr.Sijo Francis ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Mr. Abin Jose ^{1*} & Mr. Eswarasarma ^{1*}	
40. Understanding Empathy and Stress Management: Keys to Emotional Well-Being	103
Dr. Sr.Sijo Francis ^{1*} , Dr. Mathew Kanamala ^{1*} , Ms. Neethumol Shaji ^{1*} & Mr. Shiju S ^{1*}	
41. College Life: A Journey to Well-Being and Happiness through Exercise, Sports, and Balanced Diet	106
Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Mathews Emmanuel	
42. Turbulent Waters of Adolescence: A Comprehensive Exploration	108
Dr.Jose James ^{1*} , Mr.Roby Mathew ^{1*} , Mr. Michael Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Silvanos P Thomas	
43. Life Satisfaction and Loneliness in Elderly: Exploration of the Connection	111
Alwin Jose Alex [*] , Dr. Mathew Kanamala ^{1*} , Dr. Jomon Kottarathil ^{1*} , Ms. Anu Saju ^{1*} & Mr. Eswarasarma ^{1*}	
44. Business Intelligence in the Aviation Sector	113
Asby O S [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Dr, Sharon Lee Jose ^{1*} & Ms. Geethu Jose ^{1*}	
45. Case Study on Online Food Delivery in Business Intelligence	116
Krishnadas Biju [*] , Jilu Jose ² , Dr. Jomon Kottarathil ^{1*} , Dr. Joseph George ^{1*} & Mr, Shiju S	

46. An Analysis and Prediction of Lung Cancer 119
 Haritha H*, Dr. Sabukkutty MG^{1*}, Jinsi Jose², Aneesh N^{1*}, Ms. Neethumol Shaji & Ms Meera R Nair^{1*}

47. Marital Attitude among PG Students based on their Religion 124
 Albin Binoy*, Dr. Justin Joseph^{1*}, Dr. Jomon Kottarathil^{1*}, Mr. Manu Kurian^{1*} & Ms. Anu Saju^{1*}

48. Business Analytics in the Agrarian Field 126

പ്രബന്ധസംഗ്രഹം

ഉത്തരം കിട്ടാത്ത ചോദ്യങ്ങൾക്കു ഉത്തരം കണ്ടുപിടിക്കുക; പുതിയ പുതിയ ചോദ്യങ്ങൾ കണ്ടുപിടിക്കുകയും അവയുടെ ഉത്തരങ്ങൾ തേടുകയും ചെയ്യുക. ഇങ്ങനെ പ്രശ്നങ്ങളുണ്ടാക്കി അവയെ നിർധാരണം ചെയ്യുന്നത് ഗണിതശാസ്ത്രത്തിന്റെ വലിയൊരു ഹോബിയാണ്! പരിഹാരമില്ല എന്ന് തോന്നുന്ന പ്രശ്നങ്ങൾ സാധ്യതകളുടെ വലിയൊരു വാതായനമായിരിക്കാം നമ്മുടെ മുൻപിൽ തുറന്നിടുന്നത്. പ്രശ്നങ്ങൾ പെരുകുംതോറും ഗണിതശാസ്ത്രത്തിന്റെ വലിയൊരു കൂട്ടുന്നുണ്ട് എന്നപോലെ പ്രതിസന്ധികൾ നമ്മുടെ ജീവിതത്തിന്റെ മൂല്യവും കാച്ചിയുറപ്പിക്കുന്നു. എന്ന് ഗണിതശാസ്ത്ര പശ്ചാത്തലത്തിൽ നിന്നുകൊണ്ട് വിവക്ഷിക്കുന്നു.

കീലപദങ്ങൾ: പ്രശ്നങ്ങൾ, സാധ്യതകൾ, നിർധാരണം, ഗണിതശാസ്ത്രം, ഗ്രാഫ് തിയറി.

ഓരോ ഗണിതശാസ്ത്രശാഖയും മനുഷ്യന്റെ നിരവധിയായ ആവശ്യങ്ങൾ നിറവേറ്റുവാനായോ അവന്റെ സംശയങ്ങൾ നിവർത്തിക്കുവാനായോ കാലക്രമേണ ആവിർഭവിച്ചവയാണ്. ചരിത്രാതീതകാലം മുതലിങ്ങോട്ട് ഓരോരോ കാലഘട്ടങ്ങളിൽ മനുഷ്യന്റെ ആവശ്യങ്ങളും സംശയങ്ങളും വ്യത്യസ്തമാകുന്നതനുസരിച്ചു അതിനു പുതുനാനുകൾ തളിരിടുകയും ശക്തിയാർജ്ജിക്കുകയും കൂടുതൽ വികാസം പ്രാപിക്കുകയും ചെയ്തുകൊണ്ടിരിക്കുന്നു. ഇവയിൽ ഇളംതലമുറയിൽപ്പെട്ട ഗണിതശാസ്ത്രശാഖയാണ് ഗ്രാഫ് തിയറി (Graph Theory). അതുകൊണ്ടുതന്നെ ജനനത്തീയതി ഉള്ള ശാഖയായി ഇതിനെ വിശേഷിപ്പിക്കാറുണ്ട്. പരിഷ്കൃത ലോകത്തിലെ കമ്പ്യൂട്ടർ പരിജ്ഞാനവും സാങ്കേതികജ്ഞാനവും ആവശ്യമായ എല്ലാ മേഖലകളിലും ഈ ഇത്തിരിക്കുത്തന്റെ നിരസാന്നിദ്ധ്യം ഒരവിഭാജ്യഘടകമാണിത്. ഏതൊരു സങ്കീർണ്ണ പ്രശ്നത്തെയും ലഘുതരമാക്കി പരിഹരിക്കാൻ സഹായകമാകുന്ന ഗ്രാഫ് തിയറിയുടെ ഉത്ഭവം 1736 ൽ ആണ്. ലിയോണാർഡ് ഓയിലെർ എന്ന ഗണിതശാസ്ത്രജ്ഞനാണ് ഇതിന്റെ പിതൃത്വം അവകാശപ്പെടാവുന്നത്. അതിനു പിന്നിലെ കഥ ഇപ്രകാരമാണ്. പ്രഷ്യയിലെ കോണിഗ്സ്ബർഗ് എന്ന നഗരം (ഇപ്പോഴത്തെ റഷ്യയിലെ കലിനിൻഗ്രാഡ്) പ്രേഗൽ നദിയുടെ

ഈ കരകളിലുമായാണ് സ്ഥിതി ചെയ്യുന്നത്. പലവുരു കിലോമീറ്ററുകളോളം രണ്ടായി പിരിഞ്ഞും കൂടിച്ചേർന്നും ഒഴുകുന്ന പ്രേഗൽ നദി കോണിഗ്സ്ബർഗ് നഗരത്തെ രണ്ടു വലിയ ദ്വീപുകൾ ഉൾപ്പെടുന്ന നാലു കരകളായി ഭാഗിച്ചിരുന്നു. ഈ നാലു കരകളെ ബന്ധിപ്പിച്ചുകൊണ്ട് ഏഴു പാലങ്ങളുണ്ടായിരുന്നു. ഒരു കരയിൽനിന്നു തുടങ്ങി ഈ നാലു കരകളിലൂടെയും ഏഴു പാലങ്ങളിലൂടെയും ഒരൊറ്റത്തവണവീതം സഞ്ചരിക്കാനാവുമോ എന്നതും തുടങ്ങിയ കരയിൽത്തന്നെ തിരിച്ചെത്താനാവുമോ എന്നതും അവിടെയുള്ള ആളുകൾ ചിന്തിച്ചിരുന്ന ഒരു പ്രശ്നമായിരുന്നു. ഈ ചോദ്യത്തിന് നിഷേധാർത്ഥത്തിലുള്ള ഒരു ഉത്തരമായിരിക്കും ലഭിക്കുക എന്ന് 1736ൽ ഒയിലെർ ഒരു പ്രത്യേക വിധത്തിലുള്ള ഡയഗ്രാമങ്ങളുടെ സഹായത്തോടെ പ്രബന്ധരൂപത്തിൽ അവതരിപ്പിച്ചതാണ് പിന്നീട് ഗ്രാഫ് തിയറി എന്ന ഗണിതശാസ്ത്രശാഖയുടെ ഉത്ഭവത്തിനു നിദാനമായത്. ജ്യാമിതീയ രൂപങ്ങളുടെ സ്ഥാനങ്ങളുടെയും ഘടനയുടെയും സവിശേഷതകളുടെ സഹായത്തോടെയാണ് ഇദ്ദേഹം ഇത് തെളിയിച്ചത്. അതിനുശേഷം 200 വർഷങ്ങളോളം താരതമ്യേന നിർജീവമായിരുന്ന ഗ്രാഫ് തിയറി 1936ൽ ഡെനെസ് കോണിഗ് എന്ന ജർമൻ ഗണിതശാസ്ത്രജ്ഞൻ്റെ പുസ്തകത്തോടെ വീണ്ടും മുഖ്യധാരയിലേക്ക് വന്നു.

ഗണിതശാസ്ത്രത്തിൻ്റെ സ്വഭാവം പലപ്പോഴും ഇങ്ങനെയാണ്. ഉത്തരം കിട്ടാത്ത ചോദ്യങ്ങൾക്കു ഉത്തരം കണ്ടുപിടിക്കുക; പുതിയ പുതിയ ചോദ്യങ്ങൾ കണ്ടുപിടിക്കുകയും അവയുടെ ഉത്തരങ്ങൾ തേടുകയും ചെയ്യുക. ഇങ്ങനെ പ്രശ്നങ്ങളുണ്ടാക്കി അവയെ നിർധാരണം ചെയ്യുന്നത് ഗണിതശാസ്ത്രത്തിൻ്റെ വലിയൊരു ഹോബിയാണ്! വളരെ നിസ്സാരമെന്നു തോന്നുന്ന ഒരു വഴിക്കണക്ക് വിപ്ലവകരമായ പരിവർത്തനത്തിലേക്കു ലോകത്തെ നയിച്ചു. നമ്മുടെ ജീവിതത്തിലെയും നിസ്സാരമായ ചില പ്രശ്നങ്ങൾ ഒരു പക്ഷെ ജീവിതഗതിയെത്തന്നെ മാറ്റിമറിക്കാം. പരിഹാരമില്ല എന്ന് തോന്നുന്ന പ്രശ്നങ്ങൾ സാധ്യതകളുടെ വലിയൊരു വാതായനമായിരിക്കാം നമ്മുടെ മുൻപിൽ തുറന്നിടുന്നത്. പ്രശ്നങ്ങൾ പെരുകുംതോറും ഗണിതശാസ്ത്രത്തിൻ്റെ വലിയൊരു കൂട്ടുന്നുണ്ട് എന്നപോലെ പ്രതിസന്ധികൾ നമ്മുടെ ജീവിതത്തിൻ്റെ മുഖ്യവും കാച്ചിയുറപ്പിക്കുന്നു. എഡിസൺ ബൾബ് ഉണ്ടാക്കാൻ ശ്രമിച്ചു പലവട്ടം പരാജയപ്പെട്ടപ്പോൾ പറഞ്ഞതിപ്രകാരമാണ്: "ഞാൻ 1000 വട്ടം പരാജയപ്പെടുകയല്ല ചെയ്തത്, മറിച്ച്, എങ്ങനെ ബൾബ് ഉണ്ടാക്കാൻ കഴിയില്ല എന്നതിന് ഞാൻ 1000 വഴികൾ കണ്ടുപിടിക്കുകയാണ് ചെയ്തത്."

ഗ്രാഫ് തിയറിയുടെ മറ്റൊരു സവിശേഷത, അത് പിറവിയെടുത്തശേഷം 200 വർഷങ്ങളോളം അതിനു കാര്യമായ ചലനങ്ങൾ ഉണ്ടാകാനായില്ലെങ്കിലും പിന്നീട് ഏറ്റവും ശക്തി തെളിയിച്ചുകൊണ്ടിരിക്കുന്ന ഗണിതശാസ്ത്രശാഖയായി അത് മാറി

എന്നതാണ്. ഇതുപോലെ ഒരുവേള എഴുതിത്തള്ളപ്പെട്ടവരായിരിക്കാം അത്യന്താപേക്ഷിതരായി മാറുന്നത്. വിശുദ്ധവാരത്തിലൂടെ കടന്നുപോകുന്ന നമുക്ക് ഈശോയുടെ ജീവിതം ഇത്തരൂണത്തിൽ ധ്യാനവിഷയമാക്കാവുന്നതാണ്. തച്ചൻ്റെ മകനെന്ന് എഴുതിത്തള്ളപ്പെട്ടവൻ, അടിമയെപ്പോലെ കുരിശിലേറ്റപ്പെട്ടവൻ ഇതാ ത്രിലോകങ്ങളുടെയും അധിപനായി ഉയർത്തെഴുന്നേറ്റിരിക്കുന്നു. അതിനാൽ എഴുതിത്തള്ളപ്പെടുമ്പോൾ ശക്തമായ തിരിച്ചുവരവിൻറെ മുന്നോടിയായി അതിനെ കണ്ടുകൊണ്ടു പതിന്മടങ്ങു ബലവാന്മാരായി തിരിച്ചുവരാം.

ഒരുവഴിയടയുമ്പോൾ മറ്റൊന്നു തുറന്നീടിലും
 അടഞ്ഞതിൽത്തന്നെ മനമുടക്കി നിൽപ്പൂ
 തുറന്നവയൊന്നും മനതാരിൽ തുറക്കപ്പെടാതെ നിശ്ചലം:
 മനമിളക്കു മിഴിയനക്കു വഴികളൊരായിരം മുന്നിലുണ്ടേ.

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Predicting Alzheimer Disease via Classification and Regression Methods Ann Mariya Rajan ² , Jinsi Jose ² , Jes Maria Shoji ^{1*} , Almie K Joseph ^{1*} & Sneha C.S ^{1*}	01
2.	Corporate Social Responsibility of Banks Tisha Tomy ^{1*}	05
3.	Impact of Emotional Intelligence on Leadership Effectiveness: A Critical Analysis Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Ms. Geethu Jose ^{1*} & Dr. Sharon Lee Jose ^{1*}	08
4.	The Transformative Teaching of Swami Vivekananda Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Sr. Sijo Francis ^{1*} & Ms. Meera R Nair ^{1*}	10
5.	Awareness and Utilization of Internet-Based Banking Services Eswara Sarma S G ^{1*} , Jothilakshmi Baburaj [*] , Anu Saju [*] , Amal Joseph & Shaiju S	12
6.	Customer Satisfaction and Services of SBI Bank Albin Francis [*] , Akhilesh R [*] , Shibu K R ^{1*} , Mr. Shaiju S ^{1*} & Eswara Srama S.G ^{1*}	15
7.	Satisfaction with Online Food Delivery Applications among Customers Neethumol Shaji ^{1*} , Kanjana K P [*] , Sreekutty M M [*] , Mr. Shaiju S ^{1*} & Shibu K.R ^{1*}	18
8.	Effect of Labor Welfare Measures on Employee Morale Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Shoniya V.V ^{1*} , Abin Jose ^{1*} & Jovana Pramod ^{1*}	21
9.	Effectiveness of Public Distribution System after Implementation of E-POS Machine Eswara Sarma S G ^{1*} , Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Anu Saju ^{1*} & Shaiju S ^{1*}	24
10.	Farmers Perceptions towards Agricultural Loans Neethumol Shaji ^{1*} , Haritha Rajeev [*] , Sincy Siby [*] , Mr. Shaiju S ^{1*} & Abin Jose ^{1*}	27
11.	Investors Perception towards Mutual Funds as an Investment Option Sunitha M. T ^{1*} , Athira Balachandran ^{1*} , Amal Joseph ^{1*} , Abin Jose ^{1*} & Eswarasarma S.G ^{1*}	30
12.	Perceptions towards Online Shopping among College Students Elizabeth Joseph [*] , Anu Saju ^{1*} , Amal Joseph ^{1*} , Shoniya V.V ^{1*} & Ashly Jose ^{1*}	33
13.	Quality of Work Life and Occupational Stress of Self-Financing College Teachers Anu Saju ^{1*} , Achu Abraham ^{1*} , Aleena K.S ^{1*} , Ashly Jose ^{1*} & Jovana Pramod ^{1*}	36
14.	Scope of Artificial Intelligence in Business Abin Jose ^{1*} , Grincy M. Kurian ^{1*} , Ashly Kurian ^{1*} , Neethumol Shaji ^{1*} & Eswara Sarma S.G ^{1*}	39
15.	The Study on the Awareness of Banking Services among College Students Athul Vinay [*] , Arun Rajesh [*] , Shibu K R ^{1*} , Neethumol Shaji ^{1*} & Abin Jose ^{1*}	42

16. Dyadic Adjustment and Resilience among Spouses of Individuals Having Chronic Diseases **45**
Sijo Francis^{1*}, Juliet P Thomas^{*}, Manu Kurian^{1*}, Anu Antony^{1*} & Dr. Mathew Kanamala^{1*}
17. Exploring the Synergistic Influence of Rice Husk Reinforcement on the Curing Process and Mechanical Characteristics of Natural Rubber Vulcanizates **48**
Sijo Francis^{1*}, Amala Abraham^{1*}, Jayafar T², Jose James^{1*} & Anu Antony^{1*}
18. A Study of Raney Nickel Catalyst and its use in the Hydrogenation Reactions **50**
Sijo Francis^{1*}, Ebin Raphael E S^{1*}, M.D. Sreekumar², Jose James^{1*} & Anu Antony^{1*}
19. Determination of Iron Content in Vegetables **53**
Dhanusree Dhaneesh^{1*}, Sheena Kuriakose², Sijo Francis^{1*}, Anu Antony^{1*} & Jose James^{1*}
20. Need of the Hour for Knowledge HumanResource Accounting for Success of an Organisation **55**
Tisha Tomy^{1*2}
21. Words of Survival: Delving into Trauma, Resilience and Identity in *Sold* **58**
Blessy Boban^{*}, Dr. Salini L R^{1*}, Mr. Roby Mathew^{1*}, Ms. Roopa Jose^{1*} & Dr. Aparna Prasad^{1*}
22. Myth in Nadia Hashmi's *One Half from the East*: On a Cultural Perspective **60**
Alex E.R^{1*}, Sherlin Suji S^{*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
23. Ethnic Violence in Nayomi Munaweera's *Island of a Thousand Mirrors*: A Statement on the Sri Lankan Civil War **63**
S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Roby Mathew^{1*}, Dr. Alex E.R^{1*} & Salini L.R^{1*}
24. Navigating Cultural Complexities in V.S. Naipaul's *A House for Mr. Biswas* **65**
Sunitha Mathew^{1*}, Roopa Jose^{1*}, Salini L.R^{1*}, Shintu Dennis^{1*} & Christy Joseph^{1*}

പ്രബന്ധസംഗ്രഹം

വികസിച്ച് വികസിച്ച് ബഹുഭുജങ്ങൾ എത്തിച്ചേരുന്നത് വ്യുത്തത്തോട് സാമ്യമുള്ള ബഹുഭുജങ്ങളിലേക്കാണ്. വശങ്ങളും എണ്ണം കൂടുന്തോറും വ്യുത്തത്തോട് അവ അടുത്തടുത്തുവരുന്നു എന്ന് നാം പഠിച്ചിട്ടുണ്ട്. സാമൂഹിക പശ്ചാത്തലത്തിലേക്ക് നമുക്കിതിനെ പലതരത്തിൽ പുനരാവിഷ്കരിക്കാം. ചുരുങ്ങിയ ചിന്തകളും മനോഭാവങ്ങളുമായി ഒരുങ്ങിക്കൂടി ജീവിക്കുന്ന ആളുകളെ നാം കാണാറുണ്ട്. എന്നാൽ ബഹുഭുജത്തിന്റെ വശങ്ങളും മൂലകളും വർദ്ധിക്കുമ്പോൾ ക്ലിപ്തമായ വശങ്ങളും മൂലകളും മയപ്പെടുന്നതുപോലെ ചിന്തകളും മനോഭാവങ്ങളും വിപുലമാകുന്നതോറും ജീവിതം കൂടുതൽ വഴക്കമുള്ളതായി മാറുന്നു. അങ്ങനെ കൂടുതൽ വിശാലമായ അർത്ഥത്തിൽ ലോകത്തെ കാണാനും പ്രശ്നങ്ങളെ ആഴത്തിൽ ഗ്രഹിക്കാനുമുള്ള ഒരു ചുവടുവയ്പിന്റെ പ്രതീകമായി വ്യുത്തത്തെ കാണാം.

കീലപദങ്ങൾ: ത്രികോണം, ബഹുഭുജങ്ങൾ, സൂച്യഗ്രസ്തുപാകൃതി, വർത്തുളാകൃതം, സമൂഹജീവിതം, ചിന്തകൾ, മനോഭാവങ്ങൾ.

കേരളപാഠ്യപദ്ധതിയിലെ ഒൻപതാം ക്ലാസ്സിലെ ഗണിതപുസ്തകത്തിന്റെ ഒൻപതാം അധ്യായത്തിൽ വ്യുത്തങ്ങളുടെ അളവുകളെക്കുറിച്ച് പ്രതിപാദിക്കുന്നുണ്ട്. യുക്ലിഡിയൻ ജ്യാമിതി പ്രകാരം ഏറ്റവും ചെറിയതും അടിസ്ഥാനപരവുമായ ബഹുഭുജമെന്നത് ഒരു ത്രികോണമാണ്. ത്രികോണത്തിനു മൂന്നു കോണുകളും വശങ്ങളുമാണുള്ളതെന്ന് നമുക്കറിയാം. തുടർന്ന്, ചതുർഭുജങ്ങൾ, പഞ്ചഭുജങ്ങൾ,... അങ്ങനെ വശങ്ങളും കോണുകളും കൂട്ടുന്നതനുസരിച്ച് ബഹുഭുജങ്ങൾ വളർന്നുകൊണ്ടിരിക്കുന്നു. ഇപ്രകാരം വികസിച്ച് വികസിച്ച് ബഹുഭുജങ്ങൾ എത്തിച്ചേരുന്നത് വ്യുത്തത്തോട് സാമ്യമുള്ള ബഹുഭുജങ്ങളിലേക്കാണ്. വശങ്ങളും എണ്ണം കൂടുന്തോറും വ്യുത്തത്തോട് അവ അടുത്തടുത്തുവരുന്നു എന്ന് നാം പഠിച്ചിട്ടുണ്ട്. വ്യുത്തത്തെ ഒറ്റപ്പെട്ട ബഹുഭുജങ്ങളുമായി താരതമ്യം ചെയ്യുന്നതിനുപകരം ബഹുഭുജത്തിന്റെ വശങ്ങളുടെ എണ്ണം കൂട്ടിക്കൊണ്ടിരുന്നാൽ ക്രമേണ വ്യുത്തത്തിനോടു്കാണുന്ന ചിന്ത ഗ്രീസിലാണുണ്ടായത്. ബി. സി. അഞ്ചാം നൂറ്റാണ്ടിൽ ജീവിച്ചിരുന്ന ആൻറിഫോൺ അവതരിപ്പിച്ച ഈ ആശയം നാലാം നൂറ്റാണ്ടിൽ ജീവിച്ചിരുന്ന യുഡോക്സസ് കൂടുതൽ പ്രായോഗികമാക്കുകയും മൂന്നാം നൂറ്റാണ്ടിൽ ജീവിച്ചിരുന്ന

ആർക്കിമിഡീസ് വൃത്തത്തിന്റെ ചുറ്റളവ് കണ്ടുപിടിക്കാനുള്ള ഒരു ക്രിയാപദ്ധതി ആവിഷ്കരിക്കുകയും ചെയ്തു.

സാമൂഹിക പശ്ചാത്തലത്തിലേക്ക് നമുക്കിതിനെ പലതരത്തിൽ പുനരാവിഷ്കരിക്കാം. ചില ഉദാഹരണങ്ങൾ നമുക്കിവിടെ പരിശോധിക്കാം. ഒന്നാമതായി ത്രികോണത്തിന്റെ ഒരോവശവും മൂലയും നമ്മുടെ മനോഭാവങ്ങളായി സങ്കല്പിക്കുക. ചുരുങ്ങിയ ചിന്തകളും മനോഭാവങ്ങളുമായി ഒരുങ്ങിക്കൂടി ജീവിക്കുന്ന ആളുകളെ നാം കാണാറുണ്ട്. എന്നാൽ ബഹുഭുജത്തിന്റെ വശങ്ങളും മൂലകളും വർദ്ധിക്കുമ്പോൾ ക്ലിപ്തമായ വശങ്ങളും മൂലകളും മയപ്പെടുന്നതുപോലെ ചിന്തകളും മനോഭാവങ്ങളും വിപുലമാകുന്നതോറും ജീവിതം കൂടുതൽ വഴക്കമുള്ളതായി മാറുന്നു. അങ്ങനെ കൂടുതൽ വിശാലമായ അർത്ഥത്തിൽ ലോകത്തെ കാണാനും പ്രശ്നങ്ങളെ ആഴത്തിൽ ഗ്രഹിക്കാനുമുള്ള ഒരു ചുവടുവയ്പിന്റെ പ്രതീകമായി വൃത്തത്തെ കാണാം.

രണ്ടാമതൊരു ചിന്ത ഇപ്രകാരമാണ്: ത്രികോണം മുതലായ ഏതു ചെറിയ ബഹുഭുജത്തിനും നിയതമായ വശങ്ങളും കോണുകളുമുണ്ട്. മൂലക്കിരുത്താനും വശത്താക്കാനും വശംകെടുത്താനും അവിടെ സാധ്യതകളുണ്ട്. എന്നാൽ വൃത്തമാകട്ടെ അനന്തവശങ്ങളുള്ള ബഹുഭുജത്തോട് സദൃശ്യമാണ്. ഒരു ജ്യാമിതീയ രൂപത്തെ അതിന്റെ വിസ്തീർണ്ണവുമായി(പരപ്പളവ്) തട്ടിച്ചു നോക്കുമ്പോൾ ഏറ്റവും കുറഞ്ഞ പരിധി ഉള്ളത് വൃത്തത്തിനാണ്. വൃത്തകേന്ദ്രത്തിന്റെ പ്രത്യേകത അത് വൃത്തത്തിലെ എല്ലാ ബിന്ദുക്കളിൽനിന്നും തുല്യ അകലത്തിലാണ്. കൈയകലത്തിലുള്ളവരെ എല്ലാവരെയും ഒരുപോലെ കാണുകയും ചേർത്തുപിടിക്കുകയും അതോടൊപ്പം അവയുടെ ചാലകശക്തിയായി നിലകൊള്ളുകയും ചെയ്യുന്നതിന്റെ പ്രതീകം. ഇവിടെ ശ്രദ്ധിക്കേണ്ട പ്രധാനപ്പെട്ട ഒരു കാര്യം വൃത്തങ്ങൾ സൃഷ്ടിക്കുമ്പോൾ അവ നമുക്ക് ചുറ്റുമുള്ളവ മറച്ചു കളയുന്ന ഉപജാപകവൃന്ദങ്ങളായി പരിണമിക്കരുത് എന്നതാണ്.

മറ്റൊരു ആശയം സംഘടനാ സംവിധാനങ്ങളുമായി ബന്ധപ്പെട്ടതാണ്. പണ്ടുകാലങ്ങളിൽ സംഘടിത സംഘടനാ സംവിധാനങ്ങൾ സൂച്യഗ്രസ്തുപാകൃതി (pyramidal) ആയിരുന്നെങ്കിൽ ഇന്ന് പലതും വർത്തുളാകൃതമാവുകയാണ് (circular). ഒരു വ്യക്തിയുടെ നിലപാടുകളും ആശയങ്ങളും എന്നതിനപ്പുറം സംഘാതമായ തീരുമാനങ്ങൾക്കാണ് ഇപ്പോൾ മുൻതൂക്കം. വീടുകളിൽപ്പോലും കുടുംബനാഥന്റെ അഭിപ്രായങ്ങളാണ് കാര്യങ്ങൾ നിശ്ചയിച്ചിരുന്നതെങ്കിൽ ഇന്ന് കുടുംബത്തിലെ എല്ലാവരും ആശയങ്ങൾ പങ്കുവെച്ചു തീരുമാനമെടുക്കുന്ന ശൈലിയിലേക്ക് മാറിക്കൊണ്ടിരിക്കുന്നു. ഏകപക്ഷീയമായ തീർപ്പുകല്പിക്കലുകളിൽനിന്നു സംയോജിത

നിലപാടുകളിലേക്കുള്ള മാറ്റം അനിവാര്യമായിക്കൊണ്ടിരിക്കുന്നു. അതുപോലെ അണുകൂടുംബങ്ങളുടെ ന്യൂനതകൾ തിരിച്ചറിഞ്ഞുകൊണ്ട് ചെറിയ കുടുംബം സന്തുഷ്ടകുടുംബം എന്നതിൽനിന്നു വലിയ കുടുംബം സന്തുഷ്ടകുടുംബം എന്നതിലേക്ക് പല രാജ്യങ്ങളും മാറിക്കൊണ്ടിരിക്കുന്നു. നാമൊന്ന് നമുക്കൊന്ന് എന്ന് നാമൊന്ന് നമുക്കൊന്ന് എന്ന് മാറുന്നതും ഒരുവിധത്തിൽ ത്രികോണീകരണത്തിൽനിന്നു വൃത്താകാരതയിലേക്കുള്ള ഒരു ചുവടുമാറ്റമാണ്.

നമ്മുടെ മനസ്സും ശരീരത്തിനൊപ്പം വളരട്ടെ. ഇടുങ്ങിയ ത്രികോണത്തിൽനിന്നും വിശാലമായ വൃത്തങ്ങളിലേക്കു പടരട്ടെ. നമുക്ക് ചുറ്റും സ്നേഹത്തിന്റെയും കരുതലിന്റെയും വൃത്തങ്ങൾ സൃഷ്ടിക്കാം.

ത്രികോണമായി ഹോമിച്ചു തീരാതെ
 ഉയരട്ടെ വളരട്ടെ ഞാൻ പടരട്ടെ
 ത്രികോണസ്ഥരാകാതെ വൃത്തസ്ഥരാകാം
 നമുക്ക് വ്യത്യസ്തരാകാം, വ്യതിരിക്തരാകാം.

സഹായകഗ്രന്ഥസൂചി

Part II

March 2023

ISBN: 978-93-85657-40-5

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Predicting Alzheimer Disease via Classification and Regression Methods Ann Mariya Rajan ² , Jinsi Jose ² , Jes Maria Shoji ^{1*} , Almie K Joseph ^{1*} & Sneha C.S ^{1*}	01
2.	Corporate Social Responsibility of Banks Tisha Tomy ^{1*}	05
3.	Impact of Emotional Intelligence on Leadership Effectiveness: A Critical Analysis Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Ms. Geethu Jose ^{1*} & Dr. Sharon Lee Jose ^{1*}	08
4.	The Transformative Teaching of Swami Vivekananda Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Sr. Sijo Francis ^{1*} & Ms. Meera R Nair ^{1*}	10
5.	Awareness and Utilization of Internet-Based Banking Services Eswara Sarma S G ^{1*} , Jothilakshmi Baburaj [*] , Anu Saju [*] , Amal Joseph & Shaiju S	12
6.	Customer Satisfaction and Services of SBI Bank Albin Francis [*] , Akhilesh R [*] , Shibu K R ^{1*} , Mr. Shaiju S ^{1*} & Eswara Srama S.G ^{1*}	15
7.	Satisfaction with Online Food Delivery Applications among Customers Neethumol Shaji ^{1*} , Kanjana K P [*] , Sreekutty M M [*] , Mr. Shaiju S ^{1*} & Shibu K.R ^{1*}	18
8.	Effect of Labor Welfare Measures on Employee Morale Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Shoniya V.V ^{1*} , Abin Jose ^{1*} & Jovana Pramod ^{1*}	21
9.	Effectiveness of Public Distribution System after Implementation of E-POS Machine Eswara Sarma S G ^{1*} , Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Anu Saju ^{1*} & Shaiju S ^{1*}	24
10.	Farmers Perceptions towards Agricultural Loans Neethumol Shaji ^{1*} , Haritha Rajeev [*] , Sincy Siby [*] , Mr. Shaiju S ^{1*} & Abin Jose ^{1*}	27
11.	Investors Perception towards Mutual Funds as an Investment Option Sunitha M. T ^{1*} , Athira Balachandran ^{1*} , Amal Joseph ^{1*} , Abin Jose ^{1*} & Eswarasarma S.G ^{1*}	30
12.	Perceptions towards Online Shopping among College Students Elizabeth Joseph [*] , Anu Saju ^{1*} , Amal Joseph ^{1*} , Shoniya V.V ^{1*} & Ashly Jose ^{1*}	33
13.	Quality of Work Life and Occupational Stress of Self-Financing College Teachers Anu Saju ^{1*} , Achu Abraham ^{1*} , Aleena K.S ^{1*} , Ashly Jose ^{1*} & Jovana Pramod ^{1*}	36
14.	Scope of Artificial Intelligence in Business Abin Jose ^{1*} , Grincy M. Kurian ^{1*} , Ashly Kurian ^{1*} , Neethumol Shaji ^{1*} & Eswara Sarma S.G ^{1*}	39
15.	The Study on the Awareness of Banking Services among College Students Athul Vinay [*] , Arun Rajesh [*] , Shibu K R ^{1*} , Neethumol Shaji ^{1*} & Abin Jose ^{1*}	42

16. Dyadic Adjustment and Resilience among Spouses of Individuals Having Chronic Diseases **45**
Sijo Francis^{1*}, Juliet P Thomas^{*}, Manu Kurian^{1*}, Anu Antony^{1*} & Dr. Mathew Kanamala^{1*}
17. Exploring the Synergistic Influence of Rice Husk Reinforcement on the Curing Process and Mechanical Characteristics of Natural Rubber Vulcanizates **48**
Sijo Francis^{1*}, Amala Abraham^{1*}, Jayafar T², Jose James^{1*} & Anu Antony^{1*}
18. A Study of Raney Nickel Catalyst and its use in the Hydrogenation Reactions **50**
Sijo Francis^{1*}, Ebin Raphael E S^{1*}, M.D. Sreekumar², Jose James^{1*} & Anu Antony^{1*}
19. Determination of Iron Content in Vegetables **53**
Dhanusree Dhaneesh^{1*}, Sheena Kuriakose², Sijo Francis^{1*}, Anu Antony^{1*} & Jose James^{1*}
20. Need of the Hour for Knowledge Human Resource Accounting for Success of an Organisation **55**
Tisha Tomy^{1*2}
21. Words of Survival: Delving into Trauma, Resilience and Identity in *Sold* **58**
Blessy Boban^{*}, Dr. Salini L R^{1*}, Mr. Roby Mathew^{1*}, Ms. Roopa Jose^{1*} & Dr. Aparna Prasad^{1*}
22. Myth in Nadia Hashmi's *One Half from the East*: On a Cultural Perspective **60**
Alex E.R^{1*}, Sherlin Suji S^{*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
23. Ethnic Violence in Nayomi Munaweera's *Island of a Thousand Mirrors*: A Statement on the Sri Lankan Civil War **63**
S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Roby Mathew^{1*}, Dr. Alex E.R^{1*} & Salini L.R^{1*}
24. Navigating Cultural Complexities in V.S. Naipaul's *A House for Mr. Biswas* **65**
Sunitha Mathew^{1*}, Roopa Jose^{1*}, Salini L.R^{1*}, Shintu Dennis^{1*} & Christy Joseph^{1*}
25. Disability and Performing Arts: A Study on Padma Venkatraman's *A Time to Dance* **67**
Divya Chandran^{*}, Dr. Shintu Dennis^{1*}, Dr. Salini L.R^{1*}, Ms. Sunitha Mathew^{1*} & Ms. Christy Joseph^{1*}
26. Liberal Feminism in Louisa May Alcott's *Little Women*: A Feminist Reading **69**
Minnu Thomas^{*}, Dr. Shintu Dennis^{1*}, Dr. Alex E.R^{1*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
27. A Review on the Politics in *Jawan*, and its Invisible Vigilante **71**
Dr. Aparna Prasad^{1*}, Sethulekshmi P.S.^{1*}, Christy Joseph^{1*}, Roopa Jose^{1*} & S. Abhilash Mathew^{1*}
28. The Representation of Dalit Self: Valkmiki's *Joothan* in a Dissident Space **73**
Stephena Fredy^{*}, Dr. Aparna Prasad^{1*}, Sethulekshmi P. S.^{1*}, Christy Joseph^{1*} & Roopa Jose^{1*}
29. Ultrafast Magnetisation Dynamics for Studying Fast Processes in Magnetism **75**
Robin John^{1*}, Mevin Mathew², Anju P Mathews^{1*} & Praveen Joseph^{1*}
30. Colourful Carbon Nanotubes **78**
Robin John^{1*}, Sijo Francis², Subin Thomas^{1*} & Ms. Deena Paul^{1*}
31. Attitude towards Drugs and Alcohol among Middle People **80**
Alan Jorly^{*}, Dr. Mathew Kanamala^{1*}, Ms. Droupathy Devi C G^{1*} & Dr. Jobi K V^{1*}

32. Library & Information Centers in the Society	82
Ms. Droupathy Devi C G ^{1*} , Dr. Jose James ^{1*} , Dr. Robin John ^{1*} & Ms. Anu Saju ^{1*}	
33. Self-confidence among Single Adolescents	84
Mr. Shiyon Sebastian ^{1*} , Dr. Justin Joseph ^{1*} , Ms. Droupathy Devi C G ^{1*} & Ms. Joice Mary Vincent ^{1*}	
34. Farm Stress of Small-Scale Farmers in Idukki District	86
Teenu Shaji ² , Dr. Praveen Joseph ^{1*} , Mr. Pramod Joseph ^{1*} , Manu Kurian ^{1*} & Dr. Justin Joseph	
35. Peer Pressure and Emotional Expressivity among Adolescents	89
Amitha Alex [*] , Manu Kurian ^{1*} , Dr. Joseph George ^{1*} , Mr. Kuriachan Jose ^{1*} & Dr. Mathew Kanamala ^{1*}	
36. The Lifelong Benefits of Positive Social Interactions and Close Friendships for College Students' Happiness	92
Dr. Jose James ^{1*} , Jimmy George ^{1*} , Amal Joseph ^{1*} & Shibu K R ^{1*}	
37. Unveiling the Enigma: The Power of the Subconscious Mind	95
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} & Mr. Biju Scaria ^{1*}	
38. Social Intelligence: Understanding and Navigating Human Relations	97
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} , Mr. Biju Scaria ^{1*} & Sijo John	
39. Navigating Uncertain Futures: Transformative Competencies for Education 2030	100
Dr. Sr.Sijo Francis ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Mr. Abin Jose ^{1*} & Mr. Eswarasarma ^{1*}	
40. Understanding Empathy and Stress Management: Keys to Emotional Well-Being	103
Dr. Sr.Sijo Francis ^{1*} , Dr. Mathew Kanamala ^{1*} , Ms. Neethumol Shaji ^{1*} & Mr. Shiju S ^{1*}	
41. College Life: A Journey to Well-Being and Happiness through Exercise, Sports, and Balanced Diet	106
Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Mathews Emmanuel	
42. Turbulent Waters of Adolescence: A Comprehensive Exploration	108
Dr.Jose James ^{1*} , Mr.Roby Mathew ^{1*} , Mr. Michael Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Silvanos P Thomas	
43. Life Satisfaction and Loneliness in Elderly: Exploration of the Connection	111
Alwin Jose Alex [*] , Dr. Mathew Kanamala ^{1*} , Dr. Jomon Kottarathil ^{1*} , Ms. Anu Saju ^{1*} & Mr. Eswarasarma ^{1*}	
44. Business Intelligence in the Aviation Sector	113
Asby O S [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Dr, Sharon Lee Jose ^{1*} & Ms. Geethu Jose ^{1*}	
45. Case Study on Online Food Delivery in Business Intelligence	116
Krishnadas Biju [*] , Jilu Jose ² , Dr. Jomon Kottarathil ^{1*} , Dr. Joseph George ^{1*} & Mr, Shiju S	

46. An Analysis and Prediction of Lung Cancer 119
 Haritha H*, Dr. Sabukkutty MG^{1*}, Jinsi Jose², Aneesh N^{1*}, Ms. Neethumol Shaji & Ms Meera R Nair^{1*}

47. Marital Attitude among PG Students based on their Religion 124
 Albin Binoy*, Dr. Justin Joseph^{1*}, Dr. Jomon Kottarathil^{1*}, Mr. Manu Kurian^{1*} & Ms. Anu Saju^{1*}

48. Business Analytics in the Agrarian Field 126
 Merin Shibu*, Aneesh N^{1*}, Almie Joseph K^{1*}, Ms. Sneha C S^{1*} & Mr. Pramod Joseph^{1*}

49. Attitude towards Drugs among Adolescents 130
 Sachin Jose*, Manu Kurian^{1*}, Dr. Jomon Kottarathil^{1*}, Dr. Mathew Kanamala^{1*} & Mr. Paul. C. Abraham^{1*}

50. Covid-19's Effect on Students 132
 Varsha B Mariya*, Dr. Sabukkutty M G^{1*}, Sruthy Sebastian^{1*}, Mr. Jimmy George^{1*} & Pramod Joseph^{1*}

Abstract

The goal of the study was to discover the implementation of business intelligence in the field of online learning platforms such as Byjus, Udemy, LinkedIn Learning, Unacademy, etc., and construct a comparative analysis between two online educational platforms given their business intelligence implementations.

Keywords: E-learning; business intelligence; BI in e-learning; learning analytics; data visualisation.

Introduction

Business intelligence the term refers to techniques and tools used to convert raw data to meaningful information that is used for business purposes. Business intelligence is the word that is booming in the whole world which makes magic with raw data. Companies are using huge amounts of money on business intelligence implementations to bring their companies to their desired positions.

Now a day's most organizations' students prefer e-learning platforms over regular education, though the relevance of online educational platforms/e-learning platforms is in the prime stage. The e-learning platforms can be accessed by worldwide users at any time also the e-learning platforms offer certification of respective courses and lifetime access to the content purchased by the user.

E-learning platforms offer interactive online services for education, utilizing advanced technologies for engaging learning. They provide learning modules, evaluations, and one-to-one communication, allowing learners to communicate and learn from scratch. Companies use BI strategies to market their content, generating revenue through user expansion, infrastructure expansion, and technology advancements. The e-learning platform market in India is expected to reach 312.13bn by 2026, with a 17 percent growth rate.

E-learning platforms offer various advantages and disadvantages, which can be analyzed using Business Intelligence (BI) and Online Analytical Processing (OLAP) technologies. In India, unicorn e-learning firms like BYJU'S, founded in 2011, are valued at \$22 billion and become the country's most valuable platform. Other popular platforms include Unacademy, Vedantu, and WhiteHat Jr. Coursera, Udemy, Skills, and EdX are globally used e-learning platforms. Each platform has its business intelligence strategies and analytics, providing different content and user data. Many students and institutions prefer e-learning over traditional education due to the quality content, updated with advanced technologies, and real-time scenarios. This case study will delve into the mismatching valuation of BYJU's and other e-learning platforms.

Business Intelligence in E-Learning

Business Intelligence (BI) is a crucial tool for supporting data selection, presentation, and analysis in e-learning platforms. It involves methodologies, technologies, and tools to transform data into meaningful information, enabling businesses to increase efficiency and profitability. BI in e-learning platforms aims to provide users with information to achieve greater success and efficiency. Stakeholders such as learners, instructors, course content authors, e-learning providers, and clients need to collaborate to create more efficient learning

processes and improve their skills. To achieve these goals, the learning environment must guarantee certain functionalities.

Data mining is a method of analyzing data from various perspectives to extract valuable information for a company's profit. It involves finding patterns among attributes in large databases and warehouses. In e-learning, data mining methods include forecasting, grouping, distilling data for human judgment, and discovering patterns and models. One of the main challenges is improving the e-learning experience for students enrolled in virtual courses. Various models, such as Association Rules, machine learning, deep learning, Decision Trees, and traditional statistical analysis, are used to address these problems.

Web mining techniques are applied to analyze blogs, discover navigation patterns, and reduce hypotheses, improving web applications. This is particularly useful for user profiling, web page personalization, server performance enhancement, and website structure improvement. Clustering and visualizations can help create similar groupings based on student behavior, enabling tutors to provide better feedback and learning recommendations. Combinations of Data Mining methods, such as multiple classifiers, genetic algorithms, and neuro-fuzzy models, have shown potential in web-based environments. This helps tutors understand student performance, study material quality, and learning behavior.

Visualization is a process where data is presented appropriately, revealing patterns and models. In e-learning platforms, student performance is analyzed and displayed in student profile sections as dashboards, allowing students to understand their progress, weak areas, and areas for improvement. This approach attracts more users and allows users to interactively study the presented data and the changes that occurred. Platforms track each user's learning process, presenting statistical data simply and understandably. High care must be taken when selecting data, as large amounts of data can be large. Descriptive statistics are commonly used, including average grades, e-course participation, performance on knowledge evaluations, most frequent errors in problem-solving, studied material, popular websites visited, and statistical reports about social networking tools. These reports should be informative, clear, and easy to understand.

Comparative Analysis: Byjus and Unacademy

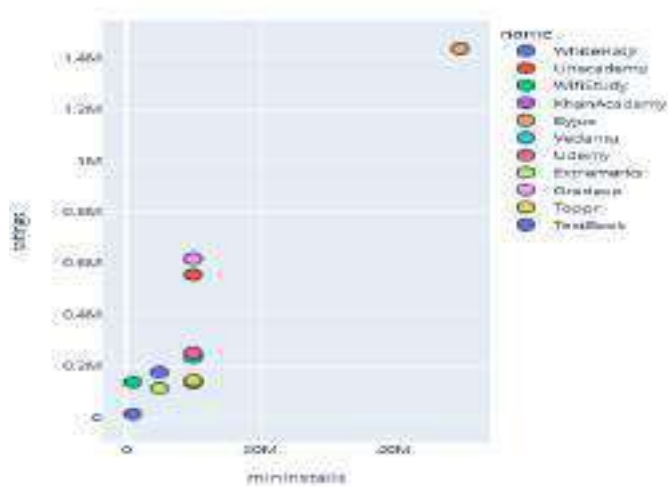

Byju's

BYJU, founded in 2011, is India's most valued e-learning platform. Initially providing online learning videos for 1 to 12th students and some classes for competitive exams, BYJUS has since expanded its offerings to include visualization-based content. In 2015, they launched the BYJUS Learning app, which has been a huge success, attracting many other e-learning companies. Despite facing challenges, BYJUS has successfully executed its business strategy. The platform initially focused on providing quality content for free, offering a freemium model for 15 days of limited access to content before paying for a subscription. By expanding its content to include NEET, JEE, UPSC, and CAT exams, Byjus gained more aspirants. Byjus follows a B2C model, focusing on two layers of audience: students and parents. Advertisements and demo videos attract students, while premium facilities are offered for free for one week. The interactive teaching mode and high-quality materials help students concentrate.

After the COVID-19 pandemic, Byjus acquired India's major offline tutor, Aakash Edtech, to escape the decline of most education companies. Byjus also tried to market its name through sponsorships of major sports teams and becoming the title sponsor of the FIFA World Cup 2022. However, Byjus has been criticized for its poor implementation of business intelligence, with recent financial reports showing a significant decline. The company has also attempted to acquire other successful companies in their countries but has faced criticism for

not fulfilling its audited financials. In conclusion, BYJUS and Unacademy are two prominent Indian e-learning platforms that have successfully implemented their business strategies and strategies. However, they have faced challenges in maintaining their financial reporting and addressing issues with their financial reporting.

Fig1. Education platforms ratings

Byjus has become an educational behemoth during the COVID-19 pandemic where the company has reached 40million users and 2.8 million paid subscribers.

Fig 2. Number of installations of educational platforms worldwide

Unacademy

Unacademy is an Indian e-learning platform founded by Gaurav Munjal, Hemesh Singh, Roman Saini, and Sachin Gupta. The platform, initially a YouTube channel, has grown into one of the largest platforms in India. Unacademy follows a freemium business model, providing both free and high-quality content for paid subscribers. The platform divides its platforms into two layers: the base model for non-paying users and the premium model exclusively for paid users. Unacademy's user base is around 30 million, with 350,000 paid subscribers. The platform mainly focuses on OTT platforms for advertisements in urban areas and TV and OOH methods in village areas. During the first nationwide lockdown, Unacademy experienced an 82% growth in revenue. After the relaxation of COVID lockdowns, Unacademy provided offline training, which helped it become a giant in its field. Unacademy's tutorials are short and cost-effective, with a cost-benefit ratio of about 10 minutes. Each lesson and course intuitively adjusts according to the training and user aptitude. However, compared to Byjus,

Unacademy has extensive courses without proper planning, making it difficult for users to choose the right course. Byjus' subscription plans are expensive, which may not be suitable for the middle-class population in India. Despite these challenges, Unacademy remains a top choice for its user base and user interface.

Conclusion

The research concludes that e-learning platforms are beneficial in post-pandemic society, and the use of business intelligence can enhance their effectiveness. These platforms provide user satisfaction and a new learning experience, increasing company revenue and user base. However, proper implementation and support are crucial. Platforms should understand users' preferences and weaknesses, analyze their strengths, and provide accurate feedback to make them more user-friendly.

Abstract

This case study explores the role of Business Intelligence (BI) in supporting logistics decision-making and transportation services. It highlights the characteristics of BI systems, their functionality, construction, and benefits resulting from their implementation. BI systems enable the transformation of efficient data into valuable information, enabling efficient decisions. They can be implemented in two ways: using data warehouses or data marts and ETL processes, or using BI in memory. The implementation of a specific BI system depends on the size of the logistics company, with larger companies having greater capabilities in this scope. Transportation logistics is now influencing decisions on production, storage, quantity, and logistics provider selection, reducing time and costs along the supply chain, which are part of strategic management.

Keywords: Data warehouse, transportation, logistics, business intelligence.

Introduction

Due to several variables that increased its complexity and caused it to be outsourced to third-party logistics companies, the job of logistics management underwent a major change. Third-party leaders are strategic partners in optimizing the supply chain and providing a competitive advantage. Transportation is a crucial link in a supply chain, connecting various entities and ensuring logistics execution. Outsourcing transportation is preferred due to its asset-intensive nature and different operations. A well-developed, efficient transportation system is essential for maximizing logistics benefits. Manufacturers rely on Transportation Service Providers (TSPs) for their transportation needs, which can be asset-based, non-asset-based, or non-asset-based. TSPs also provide value-added services like pickups, storage, and packing. To efficiently manage customer supply chains, third-party leaders use Business Intelligence tools like data warehousing and OLAP. These tools provide a unified view of the entire supply chain, improving the functioning of basic third-party services like transportation management and warehousing. By providing clients with specific information, third-party leaders can increase market responsiveness and improve internal organizational functions like human resources and financial management.

Methodology

The implementation of Business Intelligence (BI) systems in logistics management can improve decision-making processes, shorten analysis time, facilitate report creation, provide up-to-date data, consolidate data, apply visualization techniques, and lower functionality costs. BI tools should be tailored to business needs and user-friendly, as having the right information at the right time is crucial for today's global economy.

BI can enhance the effectiveness of services like transportation management, warehouse, and value-added services by providing in-depth analysis and reports on various functions involved in these services. Third-party leaders can provide clients with specific analysis and reports specific to their supply chain.

BI can also help customers increase responsiveness and market time, as well as improve organizational support functions like HR and financial management by providing an integrated view of these functions and supporting their specific decision-making requirements.

BI software can facilitate fast and easy selection of the best means of transport, reducing transportation costs and improving customer service. Route optimization and cargo load optimization software help find the best loading patterns for shipments, determine vehicle availability, and determine the exact costs of shipments.

Implementation of dashboards helps identify key performance indicators (KPIs) that fall outside accepted ranges, such as planning accuracy, capacity utilization, resource utilization, load balancing, route utilization, scheduling accuracy, vehicle availability, vehicle loading time, average transit time, cost of transportation per ton, on-time vehicle arrival, vehicle unloading time, order receipt accuracy, total order delivery time, on-time deliveries, goods delivery rate, and transportation costs.

BI systems also allow business users to perform ad hoc analysis and reports, align daily operations with strategic objectives, make independent analyses of marketplace transportation costs, and forecast economic and service impacts as consequences of changes in transportation models, allowing for the optimal operating strategy.

Conclusion

Business Intelligence (BI) systems have significantly improved decision-making processes in logistics, supply chain, and other business areas. They allow for cost reduction, and optimization in reverse logistics, support third-party logistics providers, and improve transportation efficiency through route optimization and inventory management. Analytics solutions provide better quality information for decision-making, improving the whole logistics area and enterprise.

A third-party leader in a logistics company should maintain consistency in improving existing services, adding new services, and making internal organizational functions more effective. BI tools like data warehousing can help achieve these objectives. Companies face intense competition, requiring cost reduction, increased functionality, flexibility, and the ability to make informed decisions based on operational and historical data.

Transportation Service Providers (TSPs) need to adapt BI solutions according to their business needs, moving towards BI Analytics solutions that not only show present behavior but also predict future behavior and suggest actions. TSPs should embrace BI in its nascent stages to stay competitive and move towards high-end BI solutions for market leadership and customer satisfaction.

The real future of business intelligence lies in the right use of these tools, guided by users who understand the business, data, and analytical methods involved and are familiar with software environments.

Abstract

In today's competitive market, BI is crucial for maintaining industry stability. This research investigates BI in a retail store using qualitative research methods and data mining and clustering. The study highlights the importance of requirements engineering, as even minor issues can cause major problems. The research also highlights the benefits for retail chain managers, emphasizing the need for continuous monitoring and adaptation to current and future trends.

Keywords: Business Intelligence, Benefits of BI, Data Warehousing, Data Mining.

Introduction

The current requirement to continuously improve management effectiveness in retail chains and the mounting pressure of cost-effectiveness in this (BI). The phrase “business intelligence” (BI) is broad and is frequently used to refer to technology, apps, tools, and procedures that collect, store, retrieve, and analyse data to add in decision-making. Business intelligence gives a greater visibility of your marketing techniques, which also enables you to identify possible issues and areas for improvement. You may gradually improve your marketing initiatives by using business analytics. You can use BI to find patterns in your industry and company. Then, you can take advantage of this trend to enhance your marketing and provide your business with a competitive edge in your industry.

Methodology

Our area of research is to uphold the benefits of using BI tools in retail marketing. For that, we choose two companies, one where the work is done manually and the other in which BI tools are used. By analysing both we understood the company where BI used to take marketing to the next level. Business intelligence in the retail sector assists in tracking how customers engage with eCommerce stores, and this data may be utilised to improve the shopping experience for customers. For instance, a consumer receives recommendations based on things they've previously browsed. Retailers can use business intelligence to make effective decisions based on consumer behaviour. Real-time data viewing enables businesses to instantly update their product offers and price points. From our research, we understood that BI in retail marketing helps to identify emerging consumer trends and also optimize store floor plans.

Business Intelligence (BI)

Business Intelligence (BI) is a system that enhances decision-making, cost reduction, and process quality by analyzing data and providing software solutions. BI includes technologies, applications, and processes for gathering, storing, and accessing data, enabling better decision-making. It covers various management branches, including marketing, financial management, and human resource management. Benefits of BI include faster reporting, improved decision-making, customer service, and increased revenue. Intangible benefits include eliminating software and hardware licenses, reducing headcount, and enabling new business ways.

Benefits of Business Intelligence

A study by Hannula and Pirttimäki found that Business Intelligence (BI) provides numerous benefits to organizations, including better decision-making, better anticipating threats and opportunities, growth of knowledge, increased sharing of information, improved efficiency, easier information acquisition and analysis, faster decision-making. The most significant benefits were harmonizing company personnel's thinking and broadening understanding of business.

Data Warehousing

Data warehousing is the technology that provides integrated and summarized information extracted from multiple, heterogeneous operational systems in a separate repository for the benefit of the decision-making process. A data warehouse is thus essentially a decision-support environment that leverages data stored in different sources by organizing it and delivering it to decision-makers across the enterprise regardless of their platform or their technical skill level. A large number of organizations have found data warehouse systems to be valuable tools to survive in a competitive and fast-evolving world. A data warehouse is a subject-oriented, integrated,time-variant, non-volatile collection of data in support of management's decision-making process. -W.H.Inmon,1993

Data Mining

Data mining is a process that identifies patterns in data, helping organizations overcome information overload. Traditionally, data is used for querying databases, but this method lacks exploratory characteristics. Data mining, which extracts hidden predictive information from large databases, is a powerful new technology that can analyze important information in data warehouses. Implemented on high-performance computers, it can provide insights into client responses and marketing strategies. The growing demand for data mining in new application domains suggests it can transform large passive databases into useful actionable information.

Domain: Freshmart Supermarket

Our area of case study is a supermarket where BI is yet to be implemented. For which it is impossible to analyze the sales of the supermarket. To analyze the trend statistically and mathematically. For the growth of a Business area, one must analyze the future trend and the going market trend for the increase in revenue and profit. Since BI is not yet implemented, the task is to analyze manually which is practically impossible.BI with the help of Data Mining forms clusters which is one source of increase in revenue. One of the main issues that wholesale-retail marketing or some other marketing faces is inventory cost. Since there is no BI, proper care and analysis should be taken manually to achieve a successful profit. When the analysis we made is not accurate, it may increase inventory costs which then results in a loss.

Implementation of BI in the Selected Domain

The Business Intelligence (BI) software industry is expected to reach \$22.8 billion globally by 2021, with further growth to \$29.48 billion by 2022. BI tools can increase revenue and reduce costs by analyzing sales trends, predicting future sales, and identifying customer preferences. Implementing BI improves merchandising, marketing, inventory management, and customer behavior, giving businesses a competitive edge.

Comparative Analysis

	Fresh Super Market	Nesto Hyper Market
Inventory cost	Inventory cost is high. The trend can be analysed	We can reduce the inventory cost. By implementing BI we

	manually but it is more time-consuming.	can analyse sales trends from which we will be able to predict future sales.
Customer Analysis	Manually analysing the customer purchasing trend based on different age limits is very much difficult.	We can analyze customers within an age limit for their average spending Through which we can suggest people of certain ages based on what they prefer.
Product Analysis	Grouping the products frequently purchased by customers based on brand and price without using the BI tool is time-consuming.	There might be products with several brands within different price ranges. Using BI, we can know which brand is commonly purchased and within what range.

Conclusion

The case study is not only useful for companies and BI vendors to implement BI tools in the marketing field but also for researchers to study the adoption process with a focus on models and methods of requirements engineering and their verification. These tools are necessary for gathering fast and crucial information which supports the decision-making process and decreases manual labour. The implementation of BI in the company will help us to enhance the value of management in the company and it also helps to improve the business process.

Abstract

The digital era has led to rapid growth in the data population, making traditional methods inefficient. This has made it challenging for industries to obtain timely and relevant information, leading to the need for big data and business intelligence. This paper explores the application of business intelligence in the travel and tourism sector, using a systematic literature review method. The analysis highlights the importance of these tools for digital transformation, providing a competitive advantage and driving efficient and strategic actions in the industry. Examples include Airbnb, Expedia, Superset, and self-service BI.

Keywords: Business Intelligence, Competitive Intelligence, Data collection, Implementing Business Intelligence, BITOUR, comparative analysis.

Introduction

This paper highlights the importance of business intelligence (BI) in tourism businesses, highlighting its potential to boost productivity and competitiveness. Despite fragmented literature, the study highlights the benefits of BI adoption in the sector, including user-friendly data collection, archiving, retrieval, processing, and analytical tools. The tourism sector was among the first to adopt BI, benefiting from its advantages. The study is based on a literature review but could benefit from fieldwork and mixed methods research for more reliable outcomes. The findings will benefit society by enabling citizens to demand goods and services produced through innovation and wise decision-making.

Methodology

This paper examines the importance of Business Intelligence (BI) in the travel and tourism industry, focusing on its implementation and impact. It reviews journal articles and research papers, evaluating the development of BI in this sector. The paper discusses various BI platforms and tools, including BITOUR, and their impact on the industry. It also highlights the importance of predictive and prescriptive analysis, data collection, and the impact of BI on the tourism sector. A comparative analysis is conducted, considering leading companies like Expedia and Airbnb, to understand the extent of BI's progress.

Travel and Tourism

Tourism is the practice of attracting, accommodating, and entertaining tourists for leisure or business. As one of the world's largest and most competitive industries, success depends on quality marketing efforts. Companies like hotels, airlines, travel agents, and tour operators must use the latest marketing methods to stand out.

Implementation

Tourism businesses need data analysis to stay updated with market trends, manage performance, communicate with clients, and forecast new offerings. Key Performance Indicators (KPI) and Business Intelligence (BI) help monitor and manage these metrics. Common BI applications include customer feedback mining, forecasting demand, geospatial analytics, pricing optimization, social media analytics, monitoring, online advertising, and IoT

applications. Data mining software analyzes customer feedback, while geospatial analytics compare occupancy rates and profitability. Online advertising and video analytics manage customer sentiments on social media platforms.

Bitour

BITOUR is a business intelligence platform for travel and tourism analysis, utilizing open data and geo-referenced information to provide insights into a nation's tourist industry. It uses a three-phase methodology: requirement analysis, solution design, and implementation and deployment. Data sources include OpenStreetMap, Twitter, Tripadvisor, and Airbnb. The platform's solution architecture consists of ETL architecture, data integration, processing, and visualization. BITOUR allows users to view graphical views of desired cities or places, helping them identify better places to visit. It supports five functionalities: destination definition, tweet processing, sentiment analysis, tourist identification, and data analysis and visualization.

Merits

The travel sector is facing challenges like declining earnings, market conditions, health crises, and budget constraints. To thrive, businesses should adopt business intelligence (BI) to evaluate market prices, set precise prices, and understand travel costs. BI also helps businesses stand out, promote quality services, and manage assets effectively.

Importance

The travel industry is complex, with numerous systems and players interacting in real time. However, gaps in data collection make it challenging for travel companies to launch focused marketing and use predictive analytics. Business intelligence and analytics are crucial in tackling operational and revenue-impacting inefficiencies. By integrating data from travel agencies, internet portals, private websites, and social media, businesses can analyze market trends and consumer preferences, identifying untapped sales potential. For example, predictive analytics can help businesses identify the best course of action for cost reduction, customer satisfaction, and profitability. Key Performance Indicators (KPIs) for the travel industry include spending and savings, travelers' behavior and policy, suppliers, processes, travelers' safety, corporate social responsibility, and data quality. By analyzing trends and utilizing predictive analytics, businesses can develop effective strategies to improve their operations and achieve organizational goals.

Benefits

Expedia and Airbnb are rivals in the global travel market, with Expedia using BI analytics and Airbnb focusing on homestays and tourism experiences. With a market cap of \$31 billion, both companies have 1.8+ million online bookable listings and a 15% share of global room nights in private accommodations. Both companies are expected to compete and become more similar.

Conclusion

Business Intelligence (BI) is crucial in the travel industry for effective service management, decision-making, research, market analysis, and customer loyalty. It helps influence clients' perceptions and attracts them to your services. A BI platform called BITOUR combines information from TWITTER, OPEN STREET MAP, TRIP ADVISOR, and AIR BNB to gather data and integrate it into a data warehouse. This data is then used to make informed decisions about tourism activities in a region or destination. The platform helps visualize the results of data analysis, enabling decision-makers to make informed decisions about tourism activities and customer satisfaction.

Abstract

Business Intelligence (BI) is a set of tools and technologies that transform data into information to improve decision-making in organizations. It can increase competitiveness and help organizations understand customer needs and demands better. In today's dynamic market, BI solutions are crucial for banks to manage and make timely, quality decisions. BI covers various areas, including CRM, Performance Management, Risk Management, Asset and Liability Management, and Compliance. Data warehouses and online analytical processes form an information base for BI applications. Data mining and knowledge acquisition are also important business segments of BI. This paper discusses the applications of BI in the banking and financial sector.

Keywords: Business Intelligence, elements of business intelligence, banking sector, financial sector

Introduction

Financial services and banking have increasingly adopted Business Intelligence (BI) solutions to improve operations by identifying, analyzing, and solving problems in real time. With over 2.5 billion gigabytes of data generated daily, BI tools provide a unified source of information for all employees. These tools help in generating actionable insights, trend analysis, and pattern identification, enabling better financial operations and decision-making. BI is a separate area encompassing factors of information technology, strategy, managerial accounting, corporate evaluation, and marketing. Modern banks are leaders in adopting new technologies and knowledge, making them prime targets for implementing BI infrastructure.

Benefits

Technology is transforming the banking and finance industry, enabling institutions to adapt to competition, customer demands, and risk management. Business Intelligence (BI) tools are transforming this by providing insights into customer data, improving operational efficiency, identifying profitable opportunities, and enhancing marketing. BI also aids in developing new investment strategies and risk reduction by tracking customer transactions and adjusting internal personnel. Overall, BI tools are driving profitability, reducing risk, and gaining a competitive edge.

Areas Encompassed

Business intelligence answers for banks need to Offer the decision makers from all commercial enterprise segments of the bank the ability to manipulate And take advantage of the potential of a mess of internal and external data resources. Commercial enterprise Intelligence covers many regions of Banking and monetary area, the most essential being :

- Customer Relationship Management
- Compliance
- Bank Performance Management
- Enterprise Risk Management
- Asset and Liability Management

Customer Relationship Management (CRM)

CRM is a crucial strategy for banks and other service providers to understand and retain customers. It involves focusing on understanding customers as individuals rather than as a set. CRM and technology control aim to enhance and consistently deliver accurate services to customers. CRM is a legitimate business method that helps banks identify their most valuable clients and prospects, and dedicate time and effort to expanding account relationships through personalized marketing, pricing, discretionary decision-making, and customized services. CRM is essential for banks to compete in the market and boost growth. By leveraging CRM, companies can improve customer service, make call facilities more environmentally friendly, sell products more efficiently, assist sales staff in closing deals quicker, simplify advertising and sales processes, find new customers, and increase customer satisfaction.

Bank Performance Management (BPM)

The banking and financial industry is a major buyer in automation, with many leading banks investing in key system workflows due to digitization and automation technology. Business Process Management (BPM) in banking provides flexibility and agility in operations, allowing banks to optimize customer-based operations and control internal monitoring strategies like compliance management. BPM software helps streamline banking operations, eliminate mistakes, and accelerate customer response time. The main objective of BPM is to achieve flexibility and agility in banking services. Robotic Process Automation (RPA) is also being used to automate various processes in the banking industry, such as money owed payable, customer support, loan processing, account closure, and credit card processing.

Enterprise Risk Management (ERM)

Organizational risk control (ERM) is crucial for financial institutions, including banks, insurers, and investment control groups, to manage economic, operational, event, and strategic risks. These companies face significant regulatory consequences and can impact the wider economic system. A robust ERM system can help maintain regulatory compliance, mitigate losses, boost business growth, and enhance profitability by optimizing risk exposures. By implementing robust ERM systems, financial institutions can avoid penalties and operational disruptions, manage potential losses proactively, and build customer acceptance, ultimately leading to increased profitability.

ALM Concept

The Asset-Liabilities Management (ALM) concept is a modern approach used by financial institutions to manage their assets and liabilities. It addresses market changes and exposure to risks like credit, forex, and hobby fee risks. The ALM concept enables banks to display daily changes in their asset and liability structure and limit risks. Its main challenge is to establish the correlation between risk and profitability of individual transactions, preventing excessive risks leading to losses. The ALM concept is based on providing the best profitability levels, efficient asset liability management, and management over banking change management. Risk management involves identifying and controlling risks at various levels, including risk exposure identification, risk assessment, risk financing, and risk management.

Compliance

In any financial institution or financial zone, the compliance branch is the frame liable for making sure the group as a whole remains compliant. Its goal is described, and it's to make sure the bank functions within the law, as a result preserving its integrity and popularity in the enterprise. In a vacuum, the compliance branch is typically tasked to:

- Guard the bank from facts theft
- Protect against fines imposed by the authorities

- Save you tax evasion
- Prevent money laundering
- Become aware of and examine chance areas
- Steer clear of activities that aren't within the bank's ethics coverage

Besides those, the department may also be tasked with growing a compliance program or coverage. That is typically accomplished through a joint attempt with senior management. The department establishes the overall coverage while the control establishes the tradition of compliance throughout the business enterprise.

Business Intelligence Architecture

A bank's business intelligence system consists of various layers, including operational database and external data, data integration and transformation, data warehouse, data access layer, and front end. Online Transaction Processing (OLTP) is the bank's fundamental data processing device, aiding daily business transactions. The information integration and transformation layer transforms data from operational and external resources into a database-friendly format. A data warehouse is used as the foundation for BI systems, enabling efficient statistics control and decision-making. Online Analytical Processing (OLAP) is software for quick, consistent, and interactive data analysis.

Conclusion

The banking industry is increasingly requiring a robust data system to meet complex customer and market demands, automate operations, and manage efficiently. Current banking data structures are evolving to meet these demands, but improvements in business intelligence systems are needed to fully utilize their capabilities. BI systems allow banks to anticipate future behavior, model consumer behavior, and make timely decisions, such as asset and liability control. By adopting and fully utilizing BI solutions, institutions can achieve sustained growth, profitability, and a competitive edge in the industry.

Abstract

Business Intelligence (BI) has become crucial for organizations due to increased competition and data management complexity. BI systems help organizations understand their vast data, business, and customers, leading to better decisions and higher profits. However, SMEs often struggle to implement BI systems due to various reasons. This paper investigates the performance of e-commerce companies with and without BI, the challenges faced by SMEs, and the reasons why companies do not prefer BI. The analysis shows the benefits of BI, why small-scale organizations cannot use BI systems, and why companies do not prefer BI. The study concludes that companies with a skilled workforce see better results, increasing overall performance.

Keywords: Business Intelligence, E-Commerce, Business Intelligence tools. Business, SMEs.

Introduction

E-commerce and Business Intelligence are powerful tools for businesses to understand consumer behavior, market trends, and consumption patterns. However, challenges such as high implementation costs, support, and lack of focus can restrict businesses from implementing BI. Most e-commerce platforms use Business Intelligence to compete in the marketplace. A study by Nuclear Research found that businesses spend \$10.66 for every dollar spent on BI, resulting in a 1,000% ROI. Using Business Intelligence helps businesses reduce expenses, implement more efficient processes, and use resources more effectively. Some SMEs do not use BI due to challenges and lack of innovation. Some companies still do not use BI due to perceived time and budget constraints. The paper discusses the main components of Business Intelligence, its benefits, challenges, and reasons for not using it.

Methodologies

This study aimed to investigate the performance of companies with and without Business Intelligence in the market, particularly in Small Scale E-Commerce. Secondary data was collected through various methods, including documents and internet papers. No sensitive data was collected, and no surveys or customer involvement were used. Data was collected from existing research papers, short articles, and analytical representations, and no criteria were selected. The research focused on non-numerical data and filtered information from other sources.

Integral Components

Business Intelligence components simplify decision-making processes by acquiring, gathering, analyzing, and reporting data. Online Analytical Processing (OLAP) helps businesses manage vast data collections for strategic monitoring. Advanced Analytics provides dashboards and reports for product or service statistics, making decisions more effective. Real-time Business Intelligence (RBI) helps businesses track market trends and offers special offers. Data

warehousing stores vast data volumes for retrieval and analysis. BI tools create charts, graphs, and tables using collected data.

E-Commerce and SMEs

Figure 1: Key Components of BI.

Business Intelligence in E-Commerce

Business Intelligence (BI) techniques are increasingly being used in the e-commerce industry to collect customer behavior data. This data is crucial for companies to make informed decisions, as it helps them understand customer behavior and make countermeasures. Research shows that 69.82% of online shopping carts are abandoned without full transactions, and 58.6% of online shoppers have abandoned their carts in the past three months. By analyzing this data, companies can identify factors such as long checkout processes, shipping costs, payment security concerns, lack of payment options, product quantity restrictions, and site speed. BI also provides data reports on sales trends based on customer preferences and purchasing behavior, helping companies make more profit in the long run. However, data collection can be challenging due to privacy concerns. Despite these challenges, BI can lead to operational efficiency, gaining an edge over competitors, and providing valuable reports such as inventory reports, sales reports, and marketing reports.

Business Intelligence in SMEs

Small and Medium-sized Enterprises (SMEs) in Europe, with a staff of less than 250, are often hesitant to adopt Business Intelligence (BI) due to financial and human resource constraints. The adoption of BI is low due to the high cost of implementing BI practices, high capital requirements, and the need for advanced knowledge in database modeling and data warehouses. Senior staff may refuse to learn advanced technologies, forcing others to continue using the same tools. Additionally, busyness, commitments, and emergencies can prevent SMEs from adopting BI. Spreadsheets are used by 1 in 5 businesses for data analysis, but many find them difficult to analyze, lose historical data, and share. These challenges hinder SMEs from adopting BI systems due to a lack of skilled workforce, limited budget constraints, and an inability to manage the onboarding process. However, overcoming these challenges can lead to the development of low-cost solutions that can help SMEs make effective decisions in the long run.

Companies without Business Intelligence

Analysts predict a \$100 billion increase in Business Intelligence (BI) spending from 2013 to 2018, indicating a high trend. However, some companies still resist BI due to factors such as improper requirements gathering, impure data, and a build-and-leave-it approach. Improper requirements gathering and poor data quality can lead to slow analysis and incorrect solutions. Additionally, the build-and-leave-it approach can result in accountability issues and a lack of

education on BI usage. A recent study found that BI usage among employees was 22%, indicating a need for better resource utilization.

Tools Used

Analysts predict a \$100 billion increase in Business Intelligence spending from 2013-2018. However, companies resist BI due to improper requirements gathering, impure data, and a build-and-leave-it approach. A recent study found 22% BI usage among employees. The Figure above is a report made in Power BI based on Sales, Average sales, and by country.

Analysis

Business Intelligence can be used by any company, regardless of size. Larger companies have more funds to implement BI practices, while SMEs have lower capital. Despite challenges like implementation costs and time, affordable BI solutions like Datapine, Microstrategy, and SAS Business Intelligence can help SMEs analyze trends and grow into futuristic companies. These tools can help companies analyze trends and grow into successful enterprises.

Conclusion

SMEs generally use BI tools less than large-scale organizations due to budget constraints. However, BI can be effectively used by any company with a skilled workforce. Despite having access to BI, a skilled workforce is crucial for efficient use. Larger companies should educate employees on BI to improve results and reduce internal conflicts. Small-scale companies can use tools to improve efficiency and grow without financial concerns. As companies grow, they can apply other features of BI, ensuring they have potential for competition.

Abstract

Data: New oil. Raw data useless; needs refining for insights. Knowledge from reports. Business relies on effective decision-making. Sports, big business; investment attracts stakeholders. Business intelligence transforms data into insights, aiding financial performance and competition. Stakeholders: athletes, teams, organizations. The paper explores sports business intelligence.

Keywords: Business Intelligence, Football, Cricket

Introduction

Data is the foundation of modern megatrends, shaping our lives and offering insights into the past, present, and future. Business intelligence collects, analyzes, and reports data for decision-makers, aiding strategy, competition analysis, and forecasting. Sports analytics, sponsorship, broadcasting, and athlete management are all influenced by data, enabling smart decisions and increased visibility.

Sports Business Intelligence

Business intelligence is revolutionizing professional sports by utilizing on-field sensors, wearable technology, statistics, team drafting, and engaging fans to gather live game data, improve fitness monitoring, and enhance team management strategies.

Bi Tools

Cloud-based analytics software offers custom in-game player insights, enhancing fan experience and aiding sports business operations. Tableau's Sports Management Analytics by Tableau empowers coaches to streamline operations, engage fans, and create data-driven dashboards. Boom Stats Analysis (BSA) is a cloud-based platform supporting multiple sports, enhancing team performance and providing opponent stats. SAP Sports One is a sports team management software that enhances collaboration, provides insights into team dynamics, and offers player tracking and development tools. Microsoft Sports Performance is a cloud-based analytics platform customized for athlete and team improvement, featuring predictive modeling, live dashboards for training regimens, video replay, and Power BI Solution Gallery for broadcast coverage. Game-scoring applications like Score Stream simplify game scoring and sharing memories, while Team Sideline is a cloud-based sports league management solution offering scheduling, roster and volunteer management, and payment processing. Team Snap covers a wide range of sports, and Hudl Technique records workouts, practices, and games with digital devices. Coaches can use playlists, slow-motion analysis, and player breakdown tools for feedback. Coaches can also use video analysis tools like Coach's Eye for quick player advancements.

Business Intelligence in Football

Football clubs use Business Intelligence (BI) to optimize revenue, analyze player contracts, track performance, manage injuries, and make strategic decisions. Real-time data monitoring and budget alignment are crucial for financial stability and performance.

Bi Tools for Football

Nacsport

Nacsport is a standout success in the sports industry, with innovative features that capture key moments and engage fans. This football analysis software offers an intuitive timeline for analysts to organize clips effectively. Users can add drawings, compare clips, and generate reports. Coaches share training drills and tailor video clips. The system ensures smooth operation and long-term excellence.

LongoMatch

LongoMatch is a football video analysis tool, providing detailed player statistics, including movements, possession, assists, penalties, goals, fouls, and more. It offers innovative features for real-time analysis and customizable dashboards. Users can export data in various formats. It enables coaches and fans to create presentations, filter video footage, and fulfill their dedicated analysis needs.

Dartfish Football Analysis

Dartfish is football software that turns matches into easily digestible figures, integrating with analytical tools like Opta, SportsCode, and InStat for comprehensive insights. It offers 3D recordings and interactivity for strategy discussions. The program uses AI for highlights, post-game debriefs, and form analysis. It enhances video replays for better decision-making. Whether for training, fan engagement, or pre-match prep, this affordable software is a must-have for winning teams.

Hudl

Hudl is a top online platform for performance analysis. It analyzes videos, tracks stats, and provides custom highlights. Features include ease of use, slow-motion playback, drawing tools, comparisons, and performance reports. Coaches can send videos for expert analysis. It works with standard recording devices, making it accessible and valuable for boosting team performance.

Cricket Business Intelligence

Criclytics enhances cricket player performance and team decisions by providing insights into weaknesses, pitches, and conditions, using high-tech devices and data analytics.

The Challenges: Data Cleaning and Preprocessing.

The growing number of matches in cricket's various forms has led to increased data complexity. Factors like field mapping, player tracking, ball tracking, and shot analysis add to the data's intricacy, making data cleaning and preprocessing more challenging.

Dynamic Modeling

In cricket, data analytics complexity grows with the multitude of variables related to players, the ball, and potential actions. The level of complexity in analytics and modeling depends on predictive questions, data representation, and computation. Factors like ball angle and hitting impact prediction add to the challenges of computation and predictions.

Predictive Analytics Complexity

The predictive analytics query requires highly granular dataset availability and the capability to synthesize data and create generative models that are highly accurate.

Bi Tools for Cricket

Insights by ESPNCricinfo :

Insights, developed by ESPNCricInfo, is a cricket analytics tool leveraging nearly two decades of historical cricket data and statistics. It combines ESPNCricInfo's cricket intelligence with extensive historical data through a comprehensive analytical process.

WASP (Winning and Score Predictor)

WASP predicts first innings scores and chasing team wins in limited-over matches, considering factors like pitch conditions, weather, dismissal probabilities, and venue history.

Visual Analytics powered by Qlik. This application was rolled out for the 2016 IPL.

Qlik developed Qlik Sense, providing viewers with league standings, team analysis, and player performance. This application enabled cricket fans to analyze self-service data and get to know their favorite players and teams.

Win Probability Statistic

Win probability statistics is a specialized metric for cricket, assessing player performance by calculating a team's real-time win probability based on historical data. It offers a comprehensive view of a player's contribution, going beyond traditional statistics like strike rate or batting average.

ScoreWith Data by IBM

ScorewithData accurately predicted Imran Tahir's significant role as the power bowler in a 2015 World Cup quarter-final, where he played a pivotal role in South Africa's victory against Sri Lanka.

Future

Sports management is adopting a 'data culture', monetizing player data for recruiters. Augmented analytics will provide real-time insights, while human experts remain crucial for nuanced analysis, positioning professional sports at the forefront.

Analysis and Conclusion

Business intelligence is a game-changer in the sports industry, transforming it from a physical activity into a data-driven business. Detailed analytics software empowers athletes, coaches, and managers to improve performance. It's applicable across various sports sectors, enabling informed decision-making, revenue growth, and enhanced fan experience. The future of business intelligence in sports is promising, driven by evolving technologies.

Abstract

This project aims to provide a comprehensive overview of maternal health risks, focusing on Maternal Mortality Ratio (MMR) and various factors affecting women. Factors such as age, blood pressure, and heart rate are significant risk factors for maternal mortality. Analyzing these factors using Orange tool algorithms and a tableau, the dataset was collected from the UCI Machine Learning Repository website and rural Bangladeshi hospitals, community clinics, and maternal health care.

Keywords: Maternal Mortality Ratio (MMR), Systolic BP, Diastolic BP, Orange tool, Tableau and UCIMachine Learning Repository.

Introduction

The Maternal Mortality Ratio (MMR) in India is 113, a serious issue affecting both mothers and children. Factors such as age, blood pressure, and heart rate can classify risk levels and provide necessary measures to avoid them. Understanding the relationship between these factors is crucial for developing effective strategies to tackle MMR. This project aims to provide information on risk levels during maternity, guiding users to take necessary measures to prevent death.

Literature Review

A study by three scholars aimed to identify risk factors for maternal death and trends in maternal mortality in low- and middle-income countries. The research used the Generalized Linear Model and Multivariable Regression Models to analyze the relationship among various features and factors associated with maternal mortality. A study on maternal health in India found that despite safe motherhood policies and national initiatives, maternal mortality rates remain high due to maternal health issues such as severe bleeding, infections, high blood pressure during pregnancy, complications, and unsafe abortions. The WHO published a paper on maternal mortality, highlighting the high mortality rates due to maternal health issues. The Maternal and Child Health Journal published articles discussing factors affecting maternal mortality and providing medications and practices. A scoping review on the impact of the COVID-19 pandemic revealed that pregnant women experience more adverse outcomes compared to others. Multiple interventions, including diet modifications, weight loss, and increased physical activity, were found to be effective in reducing the risk.

Implementation

The Orange dataset consists of 1014 instances and 7 features, with 6 numerical and one categorical target variable. Feature selection is performed based on information gain, with BS being the most important feature. The dataset is split into 8:2 training and test data, with 80% selected for training and 20% for testing. Decision Tree, Gradient Boosting, and Naïve Bayes algorithms are used. Decision Tree is a structure with a root node, branches, and leaf nodes, while Gradient Boosting predicts continuous and categorical target variables. Naïve Bayes Theorem considers features in the dataset as independent as and faster than other algorithms. The model that suits the dataset is identified using the Test and Score technique, which calculates efficiency using measures like AUC, CA, F1, Precision, and Recall. A Confusion

Matrix is developed for the model with the highest Test and Score values. The Prediction technique checks the model's performance using test data. The Tableau implementation involves creating an Excel sheet with test and score values, and data visualization methods like Pie Charts, Bar Charts, and Bullet Graphs.

	#	Info. gain
1	BS	0.356
2	SystolicBP	0.225
3	DiastolicBP	0.103
4	Age	0.093
5	HeartRate	0.048
6	BodyTemp	0.034

Figure 3.1 Feature Selection (Ranking of features)

Decision Tree is a structure with a root node, branches, and leaf nodes, while Gradient Boosting predicts continuous and categorical target variables. Naïve Bayes Theorem considers features in the dataset as independent as and faster than other algorithms. The model that suits the dataset is identified using the Test and Score technique, which calculates efficiency using measures like AUC, CA, F1, Precision, and Recall. A Confusion Matrix is developed for the model with the highest Test and Score values. The Prediction technique checks the model's performance using test data. The Tableau implementation involves creating an Excel sheet with test and score values, and data visualization methods like Pie Charts, Bar Charts, and Bullet Graphs.

Figure 3.2 Preprocessing and methods performed in Orange

Result and Discussion Model

The implementation of Orange involves a dataset with 1014 instances and 7 features, which can be used to determine the patient's level of risk. The dataset is split into training and test data using an 8:2 ratio, with 80% of the training data being used for training and 20% for testing. The algorithms used are Decision Tree, Gradient Boosting, and Naïve Bayes.

Model	AUC	CA	F1	Precision	Recall
Tree (1)	0.971	0.860	0.859	0.859	0.860
Naive Bayes	0.832	0.711	0.699	0.706	0.711
Gradient Boosting (1)	0.946	0.821	0.818	0.821	0.821

Figure 4.1 Test and Score Measures for Various Models

A Decision Tree is a structure consisting of a root node, branches, and leaf nodes, with each node representing a test on an attribute. Gradient Boosting is a machine learning technique that predicts continuous and categorical target variables, while Naïve Bayes Theorem considers features in the dataset as independent from each other. The Test and Score technique is used to identify the model that suits the dataset, taking into account AUC, CA, F1, Precision, and Recall. A Confusion Matrix is created for the model with the highest values in Test and Score. Prediction techniques are used to check the model's performance, using the test data to check the model's accuracy.

		Predicted			Σ
		high risk	low risk	mid risk	
Actual	high risk	209	4	11	224
	low risk	10	285	34	329
	mid risk	14	41	204	259
Σ		233	330	249	812

Figure 4.2 Confusion Matrix Formed for DecisionTree

Tableau is used to visualize the models, with methods such as Pie Charts, Bar Charts, and Bullet Graphs. Interdependencies among features play a crucial role in selecting the appropriate model for visualization. The Confusion Matrix shows that 209 High-Risk instances were correctly interrupted as High Risk, 285 instances were correctly predicted as Low Risk, and 204 instances were correctly predicted as Medium Risk. The highest error occurred when 41 instances of Medium Risk were identified as Low Risk, but these errors were lower than the above values.

Figure 4.3 Data Visualization of Models using BarChart in Tableau

Conclusion

The project aims to identify the Level of Risk during Maternity using a dataset. The feature selection technique helps understand the relationship between factors and the Target Variable, Blood Sugar (BS). A hike in BS leads to a higher Level of Risk, requiring proper attention and emergency medication. The dataset was analyzed using algorithms like Decision Tree, Gradient Boosting, and Naïve Bayes Theorem, with an accuracy of 97.1%. The model aims to study the relationship between factors and the Level of Risk, enabling the development of necessary measures to overcome MMR issues.

Abstract

This article discusses a data mining application for predicting heart failure cases, highlighting the importance of accurate predictions. The system uses a dataset called "Heart Failure Prediction" and uses various techniques for preprocessing, model building, evaluation, and prediction. The tool used is ORANGE TOOL, with a dataset of 918 observations and 12 attributes.

Keywords: Heart failure, Machine Learning, Data mining techniques, Preprocessing, Model creation, Prediction.

Introduction

Heart failure is a prevalent disease causing blood pressure, cholesterol, diabetes, and hypertension. Early detection can save lives, but late diagnosis can lead to death. This article aims to develop a model using a dataset with high accuracy for predicting heart failure. The dataset includes 12 attributes, including age, sex, chest pain, BP, cholesterol, fasting blood sugar, ECG, and heart disease. The model identifies a close relationship between blood sugar (BS) and the Level of Risk, recommending proper attention and emergency medication. The model uses algorithms like Decision Tree, Gradient Boosting, and Naïve Bayes Theorem, with an accuracy of 97.1%. The model aims to study the relationship between these factors and the Level of Risk, enabling the development of necessary measures and strategies to overcome the issue of MMR.

Literature Review

Previous research has focused on identifying features that contribute to better heart prediction accuracy. Machine learning algorithms such as Logistic Regression, KNN, and Random Forest Classifiers have been used to improve heart disease prediction accuracy. Some studies have shown that each algorithm has its strengths and can be used effectively. For example, a system using KNN with simplified parameters achieved an accuracy of 81.85%. Another system using artificial neural networks in C and C# programming languages achieved an accuracy of 80%. In 2013, S. Vijiyarani et al. developed an efficient classification tree technique for heart disease prediction using Decision Trees, Random Forests, and LMT Tree algorithms. In 2008, Sellappan Palaniappan et al. developed an Intelligent Heart Disease Prediction System (IHDPS) using data mining techniques like Decision Trees, Naïve Bayes, and Neural Networks. The IHDPS is user-friendly, web-based, scalable, reliable, and expandable. In 2012, Nidhi Bhatla et al. proposed a novel approach for heart disease diagnosis using data mining and fuzzy logic, focusing on reducing the number of attributes used in heart disease diagnosis. Ghumbre et al. compared Support Vector Machine and Radial Basis Function (RBF) algorithms for heart disease prediction using a patient dataset in India.

Implementation

This article uses ORANGE TOOL and TABLEAU 2022.2 for data visualization and analysis. The "Heart Failure Prediction" dataset, containing 918 observations and 12 attributes, is used for prediction. The dataset is preprocessed using feature selection to avoid attributes

from preprocessing techniques, such as normalization, which cannot normalize the age attribute. Tableau simplifies raw data into understandable formats.

A.Data Preprocessing

1.Feature Selection

Feature selection is a method used to avoid preprocessing techniques' attributes, such as normalization, by removing the age attribute from the dataset.

Fig: Feature Selection

2.Norm realization

Normalizing features in data mining reduces the range of attributes, preventing high values from dominating the dataset. This technique applies to all numerical attributes except age, as age cannot be normalized.

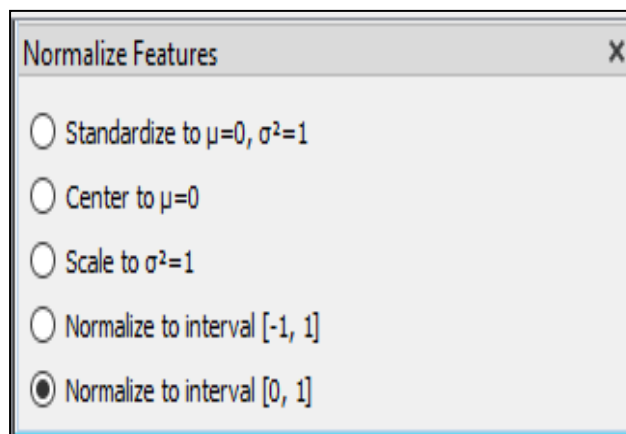

Fig: Normalization Feature

B.Classification Method

The dataset uses four classification methods: Naïve Bayes algorithm, K-Nearest Neighbor algorithm, Decision Tree algorithm, and Random Forest algorithm. K-Nearest Neighbor is a simple, Euclidean distance method used for regression and classification problems.

Fig: Model built using orange tool.

Naive Bayes is a supervised algorithm based on the Bayes theorem, assuming independence among predictors. Decision Tree is a tree-like structure used for classification and prediction, creating a tree-like structure using input variables. Random Forest is a supervised algorithm used for both classification and regression, creating a decision tree on sample data and averaging predictions to select the best solution.

$$P(c|x) = \frac{P(x|c)P(c)}{P(x)}$$

Labels: Likelihood, Class Prior Probability, Posterior Probability, Predictor Prior Probability

$$P(c|X) = P(x_1|c) \times P(x_2|c) \times \dots \times P(x_n|c) \times P(c)$$

Fig: Naïve Bayes Theorem

The results of the evaluation results show that the random forest model provides the highest accuracy (96.05%), recall, and precision values compared to other classification models, indicating that it predicts more accurately than other classification models.

Result and Discussion

The "Heart failure prediction" dataset, split into 918 rows, was used for model building and normalization features analysis. Four classification algorithms were used: KNN, Naïve Bayes, Decision Tree, and Random Forest. The Random Forest model demonstrated high accuracy, precision, and recall, making it suitable for predicting the heart failure dataset.

Conclusion

This project aims to build a model that can correctly predict the people who can have heart failure. For that, we created different models and selected one model which was the best. The best model is selected based on which has high accuracy, precision and recall. Here the best model selected is the Random Forest model and the prediction is done using new data given. The model was built using 735 rows of training data and 183 rows of testing data. Using this prediction, we can avoid situations where a person gets heart failure. Predicting heart failure earlier can save the lives of many people. Once the prediction is made, we take the necessary steps so that we can avoid a person's life by preventing risk.

Abstract

The study examines the impact of COVID-19 on airports globally, focusing on Australia and the Northern and Southern American regions. It uses data from the Geotab Data & Analytics Team's "The impact of COVID-19 on commercial transportation and trade activity" to analyze traffic in these countries and their states. The research uses machine learning models like Logistic Regression, KNN, SVM, and Random Forest to predict the country with the highest airport traffic post-COVID-19. Data visualization techniques are used to support the analysis.

Keywords: Airports, Covid-19, data analytics, data visualization, regression.

Introduction

The COVID-19 pandemic had a profound impact on the aviation industry, causing a dramatic decline in global air travel, resulting in flight cancellations, and airport closures. Airports, integral to economic development, faced severe disruptions, affecting governments, industries, and passengers. The dataset, sourced from Geotab and Kaggle, focuses on airport traffic as a percentage of a baseline period, from February 1 to March 15, 2020, comprising 10 features and 7,247 instances with a four-value target variable. The pandemic led to a 60% reduction in global air travel, with the Middle East, Africa, Europe, and the Americas bearing the brunt, and the Asia-Pacific region experiencing the most significant drop in flight operations. Estimates by the Airport Council International showed over 50% passenger traffic loss and a 57% decline in air operation revenues in 2020. However, by mid-July 2020, air traffic began to rebound as the industry adapted to the new normal, prompting this study to examine the changing airport operational activities in the context of resuming air travel.

Implementation

The dataset used for the Data Visualization and Analysis holds about 11 features and 7247 instances. Out of these 11 features, one feature determines the possibility of being the target objective.

(Fig 3.1)

The chosen dataset predominantly comprises categorical variables, with only one numeric variable, aiming to predict airport traffic volume in major North American airports. Feature selection is crucial, and 'Percent of Baseline' stands out as a key feature influencing predictions, particularly concerning the 'Country' variable. No missing or irrelevant data required preprocessing. The dataset was divided into a training and test set with an 80% to 20% ratio. Using the Orange Tool, the different Classification, Regression, and Prediction models were used.

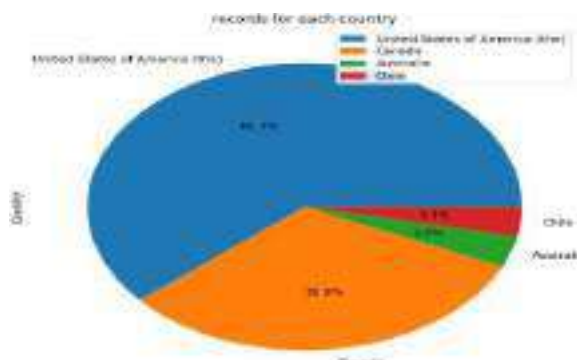

(Fig 3.2)

These results were computed for the Test and Score Evaluation and a conclusion was found that in all the 4 models Logistic Regression has a greater Accuracy with AUC of 72% and CA of 69%.

Model	AUC	CA	F1	Precision	Recall
GBM	0.681	0.662	0.672	0.683	0.662
RFM	0.575	0.453	0.528	0.600	0.463
Supportive SVM	0.718	0.603	0.659	0.695	0.603
Logistic Regression: ELM	0.720	0.690	0.705	0.692	0.690

(Fig 3.3)

Python code was used to process a dataset containing both object and integer data types, including features like Aggregation Method, Date, Version, Airport Name, Percent of Baseline, Centroid, City, State, ISO_3166_2, Country, and Geography. Irrelevant columns were dropped, and a new 'weekday' column was created based on the 'Date' feature. The dataset had 28 airports linked to 4 countries, and the Percent of Baseline measured daily traffic from February 1, 2020, to March 15, 2020. Country-wise analysis revealed Australia and Chile had only one state and airport with regular daily traffic, while Canada and the USA had a more extensive presence. The Percent of Baseline ranged from 0 to 100%. To plot the no of countries with the count of records, a pie chart was used. (Fig 4.1)

(Fig 4.1)

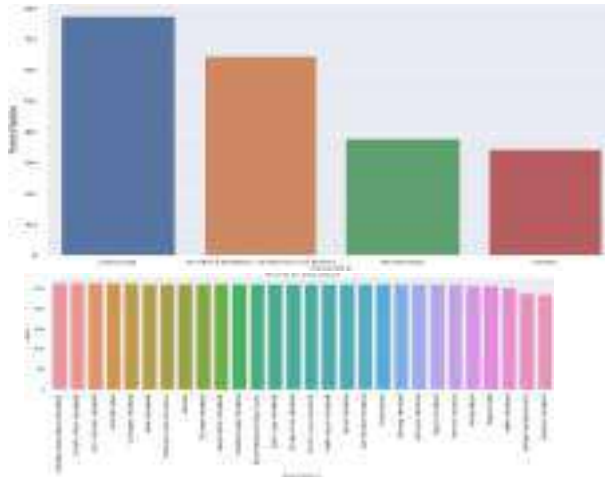

This pie chart gave the max count as 61.3% for the country ‘Canada’. And the lowest for ‘Chile’ with 3.3% of records.

To plot quick information regarding the city, state, country, and Airport Name with respect to its Percentage of Baseline the Barplot was used. (Fig 4.2)

(Fig 4.2)

To plot the no of records at each airport, a count plot was executed, which showed that almost all the Airports ranged from 50-250. (Fig 4. 2)

To plot the records per month ie, to know the amount of traffic in months from Jan-Dec, a count plot was plotted which, which shows that the months Jan, Feb, and Dec had lesser traffic while months May, August, and October had similar and same amount of traffic i.e., a bit higher than the other 3 months. The rest of the months had a count of 100-700 range with all similar wavelengths. (Fig 4.3)

When the weekday values were counted, it showed that Tuesday and Wednesday were the days that had more traffic compared to the other days.

The Model creation begins with the analysing of test and train data to implement it. At first, the data was split into Test and Train Scores so that the variables are properly utilized.

```

#y1() return:

#Train Dataset: Used to fit the machine learning model.
#Test Dataset: Used to evaluate the fit machine learning model.
#Train: 80%, Test: 20%
# get the variables

X = air[['PassengerVolume']]
Y = air['Country']

from sklearn.model_selection import train_test_split
X_train, X_test, Y_train, Y_test = train_test_split(X, Y, test_size=0.2)

```

Logistic Regression

Logistic regression is a linear classifier used in machine learning for binary classification and multiclass problems. It is a statistical method that uses a dichotomous dependent variable to explain the relationship between it and one or more independent variables. The logistic function, or sigmoid function, is central to logistic regression, providing output values ranging between zero and one. It shares similarities with linear and polynomial regression.

Random Forest Classifier

Random Forest Regression is a machine learning technique that uses multiple decision trees to improve predictive accuracy in regression and classification tasks. It uses Bootstrap and Aggregation to create a forest of decision trees, increasing stability and accuracy. The approach involves random sampling of dataset rows and features to form individual models. To apply it effectively, follow standard machine learning steps, including defining questions, obtaining data, addressing anomalies, creating and training models, evaluating performance, refining models, updating data, or exploring alternative techniques.

Random Forest Regressor

Random forests are a versatile supervised machine learning algorithm that excels in classification and regression tasks. They consist of multiple decision trees constructed on randomly selected data samples, each providing predictions. The outcome is determined through a voting mechanism, enhancing accuracy and mitigating overfitting. Random forests are particularly effective in classification problems, as they combine the results of individual trees.

Support Vector Machine

Support Vector Machines (SVMs) are supervised learning techniques used for classification, regression, and outlier detection. They represent data points in an n-dimensional space, with each feature corresponding to a specific coordinate. The primary objective is to identify a hyperplane that effectively separates two classes. Support Vectors are the coordinates of individual data points closest to the decision boundary, playing a crucial role in defining the optimal hyperplane in SVM classification.

K-Nearest Neighbors Algorithm

K-Nearest Neighbors (KNN) is a versatile machine-learning algorithm used for regression and classification tasks. It calculates distances to nearest neighbors in the dataset and assigns points to groups. In this case, a K value of 5 was chosen and the Euclidean distance method was used. Data visualization was done using Tableau, Maps, and charts to plot the target variable and its dependent variable.

Result

The COVID-19 pandemic significantly impacted airport traffic in Canada, with a maximum reduction of 0.741% compared to the baseline. This trend aligns with geographic coordinates,

as Canada had higher values than the other three regions. Both Canada and the USA had the highest COVID-19 impact counts on airport traffic. Hamilton International in Canada was the busiest airport, operating at 0.9% of the baseline. Manitoba had the highest baseline of 0.9016, while Hamilton had the highest baseline of 0.9043%. The most challenging period for airport traffic was from August to December 2020, with a slight improvement in October and December. Daily traffic increased on Mondays and Tuesdays, with October having the highest traffic count at 868.

Conclusion

The COVID-19 pandemic significantly impacted the economy, particularly the airline industry. The IMF projected 6.1% global economic growth in 2021 but expected a moderation to 3.6% in 2022 and 2023. The pandemic caused a 4.6 billion passenger reduction in 2021, with global airports experiencing a 10.2 billion passenger decline. However, it was predicted that global passenger traffic would recover to 77% of 2019 levels in 2022, with a full recovery expected in 2024.

Abstract

This paper aims to create a system that predicts a used car's selling price using various factors such as year of manufacture, torque, power output, engine capacity, and seating capacity. The goal is to create multiple prediction models, select the most accurate model, and use data visualization to compare their accuracy. The paper uses Tableau (2022.2) and the Orange tool (v3.31.1) with a Kaggle website dataset. The target variable, selling price, is one of 12 characteristics in the dataset, which has 8128 rows. The goal is to make the model useful and accessible for users.

Keywords: Ada Boost, Random Forest, Gradient Boosting, Tree.

Introduction

The post-COVID era has led to a shift in car ownership, with many opting for used vehicles over new ones due to financial benefits. The lockdown has made it easier for families to commute, but setting a price for a used car can be challenging due to various factors such as age, engine capacity, power, and torque. This paper aims to develop a model that can estimate a used car's value, helping buyers and sellers determine its worth. The model takes into account factors like model year, miles driven, fuel type, seller type, mileage, engine capacity, maximum power, maximum torque, number of seats, and transmission type. The models are then used to forecast an automobile's selling price, with the target variable being the selling price, which is one of the 12 features in the dataset. The model offers the highest degree of accuracy, with 1.1% of the values missing.

Methodology

Data Preparation

This dataset contains information about used cars. This data can be used for a lot of purposes such as price prediction to exemplify the use of linear regression in Machine Learning. The columns in the given dataset are as follows: 1. name (text) 2. year (numeric) 3. selling_price (numeric) 4. km_driven (numeric) 5. fuel (categorical) 6. seller_type (categorical) 7. transmission (categorical) 8. Owner (categorical) 9. Mileage (numeric) 10. engine Converting text values into values in Excel (numeric) 11. power in bhp (numeric) 12. torque in Nm (numeric) 13. seats (numeric). In the data we have acquired attributes like mileage, engine capacity, maximum power, and torque are given in text data type as the units of all these values are also given in the columns therefore we convert them into numerical values using the find and replace feature of Microsoft Excel.

Data Pre-Processing

Missing Value Imputation

The replacement of a missing value is known as missing data imputation, or simply imputing.

The simplest approach to handling missing data is to remove the entries that have missing val

ues. This is the best course of action in this case since there are over 8000 instances and removing the rows that have missing values will only reduce the number of rows to 7906. We remove the rows with missing values because replacing the data with the most frequent or average values may alter the data in undesired ways.

Outlier Detection

There are outliers in the data and if the outliers are not removed from the data then the data can give unexpected and unwanted results therefore it is necessary to remove the outliers.

Converting Categorical to Numeric Value

The attributes like seller type and transmission type should be converted to numerical type from categorical because it is necessary to convert nominal data to ordinal data.

Implementation

Tableau

It is the leading visualization tool used for data analytics and business intelligence. It was started by an American Company in 2003. It supports powerful data discovery and exploration of data.

Orange

Orange is a data mining software and was developed by scientists at the University of Ljubljana in 1997. The widget is a user-friendly one that helps users to read data, display the data in table and graphical format, feature selection, comparison, and visualization of items.

Python

Python is an object-oriented, interpreted, high-level programming. It was created by Guido van Rossum and was released in 1991. It is mainly used for web development, software development, mathematics, and system scripting.

Classification Models

Gradient Boosting

The gradient boosting algorithm is one of the most powerful algorithms in the field of machine learning. Gradient boosting is one of the boosting algorithms used to minimize the bias error of the model. Gradient boosting algorithm can be used for predicting not only continuous target variable (as a Regressor) but also categorical target variable (as a Classifier). When it is used as a regressor, the cost function is Mean Square Error (MSE) and when it is used as a classifier the cost function is Log loss.

Random Forest

Random forest is a Supervised Machine Learning Algorithm that is used widely in Classification and Regression problems.

Steps involved in the random forest algorithm:

Step 1: In the Random forest, n number of random records are taken from the data set having k number of records.

Step 2: Individual decision trees are constructed for each sample.

Step 3: Each decision tree will generate an output.

Step 4: Final output is considered based on Averaging for regression.

Random forests are created from subsets of data and the final output is based on average or majority ranking hence the problem of overfitting is taken care of. It is comparatively slower. Random forest randomly selects observations, builds a decision tree, and the average result is taken. It doesn't use any set of formulas.

In Orange, we can set the number of individual trees to be built in Random Forest and the accuracy increases as we increase the number of trees up to a certain point and remains constant. However, increasing the number of trees decreases the performance of the process.

Decision Tree

A decision tree is a supervised learning algorithm and is used to make changes to both classification and regression problems. The aim of employing a Decision Tree is to form a training model that will be used to predict the category or value of the target variable by learning simple decision rules inferred from prior data (training data).

Ada Boost

AdaBoost also called Adaptive Boosting is a technique in Machine Learning used as an Ensemble Method. The most common algorithm used with AdaBoost is decision trees with one level which means with Decision trees with only 1 split. These trees are also called Decision Stumps. What this algorithm does is that it builds a model and gives equal weights to all the data points. It then assigns higher weights to points that are wrongly classified. Now all the points that have higher weights are given more importance in the next model. It will keep training models until and unless a lower error is received.

Performance Evaluation Criteria

These four models were chosen from many of the prediction techniques. Now we need to further evaluate these models for a more precise conclusion

The performance is evaluated mainly based on four factors they are:

Mean Squared Error

The mean squared prediction error measures the expected squared distance between what your predictor predicts for a specific value and what the true value is. It is thus a measurement of the quality of a predictor.

$$\text{MSE} = \frac{1}{n} \sum_{i=1}^n (Y_i - \hat{Y}_i)^2$$

Root Mean Squared Error

Root Mean Square Error (RMSE) is the standard deviation of the residuals (prediction errors). Residuals are a measure of how far from the regression line data points are; RMSE is a measure of how spread out these residuals are. In other words, it tells you how concentrated the data is around the line of best fit. Root mean square error is commonly used in climatology, forecasting, and regression analysis to verify experimental results.

$$\text{RMSE} = \sqrt{\frac{\sum_{i=1}^N (x_i - \bar{x}_i)^2}{N}}$$

Mean Absolute Error

Mean Absolute Error is a model evaluation metric used with regression models. The mean absolute error of a model concerning a test set is the mean of the absolute values of

$$\text{MAE} = \frac{\sum_{i=1}^n |y_i - x_i|}{n}$$

R-squared

The predicted R-squared indicates how well a regression model predicts responses for new observations. This statistic helps you determine when the model fits the original data but is less capable of providing valid predictions for new observations. The value of R-squared is desired to be always near to one.

$$R^2 = 1 - \frac{RSS}{TSS}$$

Result & Conclusion

The original Car Price Prediction dataset that contained 8128 rows and 12 features was found to have 1.1% missing values. Removing rows with missing values brought it down only to 7906 instances. After outlier analysis was done to further increase the quality of the dataset the number of instances was further brought down to 7052. The original Dataset was divided into test and train datasets in the ratio of 80% to 20%. In this 80% was used to train the model and 20% was used to test the model. Data Visualisation was used to analyse which model was best suitable for this dataset.

In this paper, a comparison was made between different prediction models for a certain dataset and Random Forest Regression was found to be the best one for this dataset.

Orange data mining software and Tableau were successfully employed for an application in the field of used car price prediction. This can help used car dealers, online used car websites and so on to predict the value of a used car when certain data about it is given.

The paper's goal is to build a prediction model that can predict the price of a car when given certain data about it done

Abstract

The study investigates the health locus of control among cancer patients in the Idukki district using a descriptive method and convenience sampling. Data was collected from 100 individuals, focusing on the association between age, gender, and family type with health locus of control. The findings show a significant relationship between age and health locus of control, with a noticeable change observed as individuals aged 51 to 70 advance in age.

Keywords: Health locus, locus of control, cancer, cancer patient.

Introduction

Health locus of control refers to the belief that health is in one's control (internal control) or is not in one's control (external control). Health locus of control (LOC) reflects people's beliefs about who or what is responsible for the management of their health condition. LOC may influence a person's health behaviors and can therefore influence health outcomes. Locus of control (Rotter 1966) refers to an individual's beliefs about the extent of control that they have over things that happen to them. The more anxious or depressed a person is, the more external their locus of control tends to be, and a greater external locus of control is associated with a greater vulnerability to physical illness. Throughout a psychotherapeutic intervention, the locus of control tends to become more internalized.

Health Locus of Control

Health locus of control refers to an individual's belief about the extent to which they have control over their health outcomes. In the context of cancer patients, it is a concept that explores their perceived control over the onset, progression, and management of their disease. Understanding the health locus of control in cancer patients is crucial as it can greatly impact their mental well-being, coping mechanisms, and treatment adherence.

One aspect of the health locus of control in cancer patients is the internal locus of control. Individuals with high internal locus of control tend to believe that they have a significant role in their health outcomes. They may believe that their lifestyle choices and behaviors can influence the progression of their cancer and that they have control over the effectiveness of their treatment. This sense of control can be empowering for cancer patients, enabling them to engage actively in their treatment and adopt healthier behaviors that can improve their overall well-being.

On the other hand, cancer patients with an external locus of control tend to believe that external factors, such as fate, luck, or the decisions of healthcare professionals, determine their health outcomes. These individuals may feel helpless and perceive their cancer as something beyond their control. This can lead to feelings of anxiety, depression, and reduced motivation to follow treatment plans. Therefore, helping patients shift towards a more internal locus of control can be beneficial in empowering them and increasing their sense of control over their health.

It is worth noting that the health locus of control can be influenced by various factors, such as cultural beliefs, previous experiences, and the level of social support available to the patient. Healthcare providers play a crucial role in supporting cancer patients in developing a sense of internal locus of control. By providing clear and accurate information about their diagnosis, treatment options, and self-care strategies, healthcare professionals can empower patients to take an active role in their cancer journey. Additionally, fostering a supportive and collaborative relationship between the patient and the healthcare provider can further enhance the patient's perception of control and their ability to cope with the challenges of cancer.

The health locus of control in cancer patients is a significant factor that affects their mental well-being, coping mechanisms, and treatment adherence. Understanding whether individuals perceive their health outcomes as under their control or influenced by external factors is essential in providing appropriate support and interventions. Empowering cancer patients with an internal locus of control can enhance their engagement in their treatment and improve their overall quality of life. Healthcare providers have the responsibility to facilitate this shift towards an internal locus of control through clear communication, provision of accurate information, and emotional support.

This refers to the belief that individuals have regarding their ability to control their health outcomes. When it comes to cancer patients, this can play a crucial role in their overall well-being and treatment journey. Some may possess an internal locus of control, which means they believe they have the power to influence their health through lifestyle choices and adherence to treatments. On the other hand, some cancer patients may exhibit an external locus of control, feeling that luck or fate is responsible for their health outcomes. Research suggests that those with a strong internal locus tend to have better psychological adjustment during treatment, while those with an external locus may experience increased anxiety and lower quality of life. Understanding these differing perspectives is important for healthcare providers to tailor interventions accordingly and empower patients on their path toward overcoming cancer.

Results & Discussions

Cancer is a disease that is related and restricted to the body of an individual hence any patient can be approached with a similar treatment approach with subtle variations related to the location of the cancer and its severity. Treatment of cancer cannot be done in isolation, it needs to consider the bio-psych social model of health and need to consider individual differences. 8 Individuals differ widely with respect to their cognitive and emotional aspects. The cognitive aspects like attention, perception, memory, learning, reasoning, problem-solving, decision-making, etc, and their emotional aspects are particularly related to their emotional triggers, emotional expressions, and emotion regulation aspects. It is because of these reasons individuals will have their perceptions of health and illness, the causal factors for their illness, controlling measures, perceived effect of disease on their quality of life. Here we discuss the emotional competence and health locus of control in cancer patients. The results found that there is a significant difference in health locus of control based on gender is more common among females than males.

When considering the health locus of control of cancer patients in a specific age group, numerous factors come into play. Firstly, it is crucial to acknowledge that young cancer patients encounter unique obstacles as they navigate their diagnosis and treatment. They often grapple with feelings of fear, isolation, and uncertainty about their future. Moreover, these

individuals may have limited life experiences compared to older patients, which can exacerbate the emotional toll of cancer.

The concept of health locus of control refers to an individual's belief in their ability to control their health outcomes. When examining this concept in cancer patients based on age, different patterns can be observed. Younger cancer patients, typically in their twenties or thirties, tend to have a higher internal locus of control. They usually have a strong belief that they can influence their health outcomes through their actions, such as adhering to treatment plans, adopting a healthy lifestyle, and participating in support groups. This may be attributed to their relative youth, which often comes with a sense of empowerment and confidence to overcome challenges. On the other hand, older cancer patients, typically in their fifties or sixties, may have a higher external locus of control. They may believe that their health outcomes are largely influenced by external factors, such as medical professionals, medications, or luck. This could be due to the cumulative experiences of health issues they have encountered throughout their lives, leading to a perceived lack of control over their health.

Nevertheless, it is important to note that these patterns are not absolute and individual variations exist within each age group. Factors such as personal characteristics, previous experiences, and support systems can influence an individual's health locus of control regardless of age. Understanding these variations is crucial for healthcare providers to tailor their approach when working with cancer patients. Empowering younger patients by highlighting their control over their health can aid in their engagement with treatment plans and promote better outcomes. Older patients may benefit from interventions that focus on fostering a sense of control and providing support to manage any perceived lack of control. Overall, considering the age-specific health locus of control can contribute to more personalized and effective cancer care.

Conclusion

The study reveals that younger cancer patients have a higher internal locus of control, focusing on their actions as central to their health outcomes, while older patients attribute their well-being to external factors. Males generally have a stronger internal health locus of control than females. Family type also plays a role, with nuclear families having greater internal control over their health, while single-parent households tend to have an external outlook. These findings underscore the need for tailored support and interventions for cancer patients based on age, gender, and family structure to enhance their empowerment and involvement in managing their illness journey.

Abstract

The increasing global fuel prices, pollution, and high traffic density have led to a growing dependence on Metro Rails, particularly in cities. These trains are efficient, cheaper, reliable, secure, and quick for millions of people. To improve service, Business Intelligence Methods are used to analyze various aspects of metro trains, such as audience preferences and traffic time. By analyzing these reports, proper decisions can be made to improve service, meet people's demands, and make profits by targeting the right audiences. The literature provides various Business Intelligence methodologies for analyzing Metro Systems.

Keywords: Metro rail, business intelligence, transportation, warehouses, innovation.

Introduction

Information Technology is revolutionizing businesses by enabling them to process large data volumes, improve strategies, and enhance effectiveness. Business Intelligence (BI) is a technology-driven process that collects, analyzes, and visualizes data to make informed decisions. The ultimate goal is to drive better business decisions, increase revenue, improve performance, and gain a competitive advantage. In the transportation sector, particularly Metro Rail Services, BI is essential for analyzing data and making informed decisions to improve services. With rising fuel prices, pollution, and traffic density, understanding customer demands and providing necessary insights are crucial for increasing revenue. This paper discusses the methodologies used to apply BI in metro services, presents a sample analysis of the Indian Metro Dataset, and discusses the challenges and benefits of each methodology, including the steps taken and difficulties faced in implementing them.

Methodologies

BI Methods

To gain a competitive advantage, businesses need to understand market trends, customer wants, and consumer attitudes. Data collection is the first step in gathering business intelligence, which can be done using data warehouses or other sources. The data is then preprocessed to ensure it is clean and organized for application of Business Intelligence methods. The second step is analysis, where the need for analysis is understood and the data is analyzed. This involves understanding the situation and purpose of the data, such as a company's revenue generation issue. Business Intelligence methods can help identify areas for improvement and improve revenue.

Sophisticated analytical tools can be used to collect and analyze data, allowing organizations to better understand customer thoughts and identify areas for improvement. Reporting and presentation are crucial for understanding the meaning of measurements, as poor interpretation can lead to critical commercial, operational, and marketing issues. Real-time data monitoring and analysis are essential for businesses to remain competitive and make informed decisions.

Metro Data Collection

Metro data collection follows the Business Intelligence Methodology, involving visits to stations and collecting information like date, time, temperature, holiday, gender, and people type. However, this data may contain incorrect information, requiring correction. Data can be gathered from data warehouses or repositories like Kaggle. The collected data must have all necessary parameters for analysis, such as the time of day people use the metro. Data preprocessing handles missing fields and normalizes data to a specific unit, ensuring accuracy and relevance in reports and insights.

Significance of Analysis

Business Intelligence is crucial in understanding usage patterns of metro services, such as time, age group, gender, and traveler type. By analyzing this data, businesses can improve their strategies and increase profits. For example, identifying peak usage times can increase services and improve service. In the metro services industry, business intelligence implementation is essential for understanding customers. Success factors include project management, clear planning, reliable managerial backing, data quality and management, matched solutions to customer needs, performance considerations of the BI system, and a stable and scalable structure. These elements contribute to the success of business intelligence implementation in the metro services industry.

Analysis Report

The Indian Metro Dataset, sourced from Kaggle, was analyzed to gain insights into the Delhi Metro Services' Metro Details from 2017. The dataset, collected in 2017, includes core information like peak hours and day and time trends, with attributes such as location, time, and station details.:

date_time	Date, time, and hour of the data that is collected in the local IST time
is_holiday	Categorical Indian national holidays combined with regional holidays
air_pollution_index	Air Quality Index (10-300)
Humidity	Numeric humidity in Celsius
wind_speed	Numeric wind speed in miles per hour
wind_direction	Cardinal wind direction (0-360 degrees)
visibility_in_miles	Visibility of distance in miles
dew_point	Numeric dew point in Celsius
temperature	Numeric average temperature in Kelvin
rain_p_h	Numeric amount in mm of rain that occurred in the hour
snow_p_h	Numeric amount in mm of snow that occurred in the hour
clouds_all	Numeric percentage of cloud cover
weather_type	Categorical short textual description of the current weather

weather_description	Categorical longer textual description of the current weather
traffic_volume	The density of people

Scatter graph for traffic volume

The largest traffic of the day is seen around 7 am and 4 pm, which are the normal hours for students and office workers. This information may be seen by creating a scatter graph for traffic volume and hour. Many college-bound kids depend on the metro as their primary mode of transportation every day to get to and from school on schedule.

By looking at this graph, it is clear that weekends, namely Saturday and Friday, have lower traffic volumes than other weekdays. This is clear given that most people utilize the metro to commute on weekends when schools, universities, and offices are closed. As a result, traffic volume on weekends is lower than on weekdays. These are some of the core basic analyses that can be done with this data. Not only this but so many insights can be made which help to make a proper and meaningful decision.

The monthly traffic volume is shown as a line graph, with November, December, and January having the least traffic due to end-of-term exams. To increase revenue in metro services, it is suggested to slightly increase prices during peak hours (7 AM and 4 PM), which would not decrease customer numbers but increase revenue. A small increase of 10 rupees can significantly impact thousands of customers traveling, demonstrating the potential for business intelligence to significantly increase revenue or profit.

Conclusion

Business Intelligence (BI) is crucial for various industries, requiring a successful corporate work culture and utilizing the best human resources, technology, and business processes. Senior-level business sponsorship is essential for BI projects, and organizations must create a unified BI infrastructure using ERP investments and performance plans. BI is especially important for peak services like Metro and Rails, and businesses must build on their current knowledge management to keep their BI projects evolving.

Abstract

This paper focuses on predicting vehicle insurance interest based on health insurance customer data. Insurance claims pose a challenge for insurance companies, and understanding target market demographics is crucial. Machine learning methods are used to mine data information, helping companies adjust their insurance sales strategies. The study aims to build a machine-learning model that classifies and predicts vehicle insurance claim status. By analyzing health insurance customer data, various predictive models are implemented to choose or change selling modes, and advertisements are activated for customers interested in auto insurance.

Keywords: Vehicle Insurance Claim, Machine Learning, Random Forest Regression Gradient Boosting, Purchase, Prediction

Introduction

The increasing reliance on automobiles has led to a need for insurance policies to compensate for loss, damage, illness, or death. Insurance companies face challenges in risk assessment, policyholder classification, resource allocation, insurance claim classification, and prediction in the insurance claim handling process. Cross-selling is a crucial method for insurance companies to grow their profit, as it builds relationships with customers and helps them understand the quality of service. Analyzing health insurance data helps insurance companies approach customers for vehicle insurance. Processing large amounts of insurance claim data requires computational tools, including machine learning approaches. This data can be structured, unstructured, or semi-structured. The main objective of this study is to build machine learning models for prediction and analyze status prediction in machine learning techniques. This will help insurance companies distribute advertisements and information about their insurance to their target group based on customer needs, ultimately achieving utility successfully.

Materials and Implementation

Development Tools

The model creation and prediction process utilize Anaconda Navigator and Python programming. The tool allows access to Jupiter Notebook, import scikit-learn framework, and Python programming for data processing. Statistical summary, correlation, and graphic data analysis are performed on the provided dataset. Initial data analysis includes statistical descriptions like mean, min, max, standard deviation, and quartiles. Tableau Visualization is used for model representation.

Data Collection

The data collected for the prediction of vehicle insurance is the Health Insurance dataset of the customers of the company. Health Insurance Cross-sell Prediction data is used to predict the response of the customer to the new vehicle insurance policy.

Fig 1: Statistical Description of the Dataset

The Health insurance dataset consists of the data of the customers who are provided with Health insurance. This data set is used in building the model to predict whether the health policyholders will be interested in Vehicle Insurance Provided by the same company. In this dataset, we have 381109 records or instances of the health insurance customer’s information. These records are within the total number of twelve attributes. The target value of the health insurance dataset is the Response of the customers (in the form of 1s and 0s)Table 1. The dataset is a mixture of Numerical and categorical datatypes (Float, int, object).

Data Preparation Technique

Data processing techniques such as data cleaning, integration, normalization, and transformation were used to prepare the data set for accurate prediction. The heatmap was used to identify the correlation of each attribute with the target column, and highly correlated columns was taken as dependent data. Supervised learning is a type of machine learning that uses labeled data to create a model and predict the output. It can be used for risk assessment, image classification, fraud detection, and spam filtering. Supervised learning uses various algorithms to create the model and identify new data to produce results. The difference between classification and regression is that classification results in a fixed value, while regression allows for any value within the data set range as the dependent data as shown in Fig. 3.

Fig 3: Heat map to determine the correlation of the attribute with the target attribute

Random Forest

Random forest is a model that works with multiple decision trees. To get the optimum result we have to choose the majority among the values as the best value. Random forest is mainly used in remote sensing to predict the accuracy of the data. The Random Forest is used for the regression because it can handle the continuous variables. In the case of the random forest, only the subset of the features is taken into consideration for splitting a node.

Gradient Boosting

Gradient boosting is a supervised Learning method in Machine Learning. It consists of parallel tree boosting and is the library for regression, classification, and ranking. In Python gradient, boosting is implemented with the open-source library known as XGBoost. These algorithms

are used to train particular data that have labels and then use the model to predict new data (fig 4). The way the tree is built and combined is different from the Random Forest. Gradient Boosting helps us to identify the relevant and most influencing attribute in the dataset. The properties which influence choosing this are 1) Consistency and 2) Accuracy.

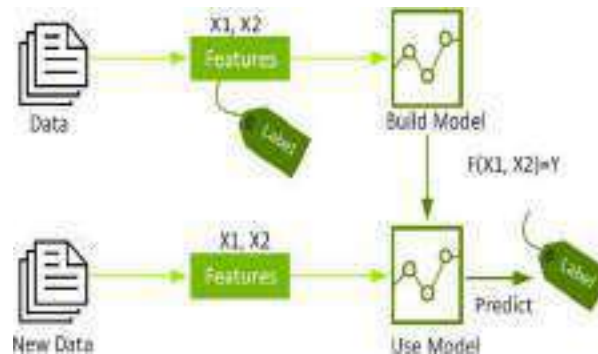

Fig 4: Gradient Boosting

Model Performance Evaluation Methods

Machine Learning uses evaluation metrics and classification reports to evaluate the performance of algorithms and target predictions. Confusion metrics, a two-dimensional table, explain predicted values using performance metrics like True Positive, True Negative, False Positive, and False Negative. To analyze and confirm the model, confusion metrics, accuracy, precision, recall, and F-score are considered. Accuracy evaluates the accuracy of predicted values, while precision measures the accuracy of predicted values. These metrics help in infer how models help in predicting targets. The recall rate of measures the proportion of the true value matched by the model among the total true values (fig 5).

<i>precision</i>	=	$\frac{TP}{TP + FP}$
<i>recall</i>	=	$\frac{TP}{TP + FN}$
<i>F1</i>	=	$\frac{2 \times precision \times recall}{precision + recall}$
<i>accuracy</i>	=	$\frac{TP + TN}{TP + FN + TN + FP}$
<i>specificity</i>	=	$\frac{TN}{TN + FP}$

Fig 5: True value table

Results and Discussion

The study uses Random Forest and gradient-boosting models for target prediction. The data set is divided into training and testing data. The model is trained with the training data and the correctness is checked through testing. Evaluation metrics and classification reports are used. The confusion matrix reveals that 65727 customers were not interested in purchasing new vehicle insurance, 1119 were not, 8623 were interested, and 753 were precited wrong. The classification report shows an accuracy of 87.3% and a precision of 88%, indicating the model's prediction is correct. To handle unbalanced customer data, the ROC-AUC curve is plotted, representing the probability of a positive being positioned to the right of a random negative. This model shows an AUC of 84.20 (fig 8).

```
Confusion Matrix:
[[65727  1119]
 [ 8623   753]]
```

Fig 6: Confusion Matrix

```

Classification Report is:
      precision    recall  f1-score   support

0       0.88       0.98       0.93       66846
1       0.40       0.08       0.13       9376

accuracy: 0.87 76222
    
```

Fig 7: Classification Report

Fig 8 : ROC curve

Whereas comparing the random Forest model with the Gradient Boosting, we have trained the training set with the model. We can observe that the accuracy of the prediction with the model is not much deviated. As looking at the classification report accuracy is 87.6%, precision of 88(Fig 10). Due to the unbalanced data, we have to plot the ROC curve. From the Area under the graph (AUC) The confusion matrix of the model describes that 66582 correctly predicted that the customers were not interested and 264 did not predict correctly. And 9160 is predicted to be interesting and 216 is not predicted correctly (fig 9).

```

Confusion Matrix:
[[66582  264]
 [ 9160  216]]

Conclusion

This paper uses Random Forest and gradient-boosting supervised learning methods to predict the purchase of vehicle insurance from a customer with health insurance. Despite challenges in selecting the correct model, Random Forest and Gradient Boosting were found to be accurate. The accuracy and AUC scores of both models were compared and cross-checked to ensure accuracy. The study suggests that customer data from insurance policies can be useful for companies to develop profit. The creation of an automobile insurance purchase prediction model based on personal purchase information can be used in future personalized advertisements. The data analysis process includes data collection, explanation, preprocessing,

training, testing, prediction, and comparison with both models. Although not all machine learning algorithms can be implemented for prediction, the study suggests that insurance companies can use targeted marketing methods to increase profits. This helps create a strategy for advertisements and target the population for new vehicle insurance.

Abstract

This paper uses machine learning to predict student mental health based on academic scores. It evaluates the correlation between depression and a student's CGPA. The project visualizes data using Tableau to determine the best model for classifying depression. The dataset was obtained from Kaggle and analytical tools like Tableau and Orange were used.

Keywords: Machine learning, mental health,

Introduction

This study uses machine learning to analyze the correlation between academic scores and mental health, specifically depression. Factors like age, marital status, anxiety, panic attacks, and treatment history are considered. The goal is to develop a machine learning model that accurately predicts the relationship between academic scores and mental health, reducing the incidence of serious illnesses and facilitating targeted healthcare services.

Implementation

Dataset

The dataset, sourced from Kaggle, includes 101 Google Forms surveys of University students to assess their academic and mental health. It includes 11 attributes, including timestamp, gender, age, course, year of study, CGPA, marital status, depression, anxiety, panic attacks, and seeking specialist help. The dataset classifies students based on academic scores and these dependent features, allowing for a comprehensive understanding of their mental health and potential treatment options.

Preprocess

Preprocessing is a crucial step in data analysis to improve its quality. It converts numerical values to categorical variables, extracts data information, and extracts statistical insights. The target variable is the attribute depression, which is determined by two values: yes, indicating depression, and no, indicating non-depression.

Model Building

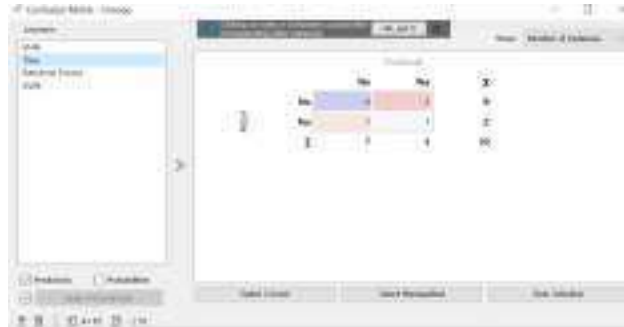

Model building involves creating data, statistics, and patterns using algorithms to generate predictions and inferences. In this case study, the model is analyzed using the open-source data analytical tool Orange, which offers visual programming for explorative qualitative data analysis and interactive visualization. The study uses classification algorithms like Decision Tree, KNN, SVM, and Random Forest.

The figure of a model built in orange

Decision Tree

Decision Tree is a supervised learning algorithm used for classification and regression problems. It aims to form a training model to predict target variable categories or values using simple decision rules inferred from prior data. The algorithm compares the foundation attribute values with the record's attributes, constructing a tree and derived rules for class classification. The accuracy of the Decision Tree is 0.938.

Confusion Matrix of Decision Tree

According to the confusion matrix of the decision tree, for the value 'yes' (means that are affected by depression), out of 2, 1 is predicted correctly as 'yes', and 1 is predicted as 'no'. Similarly, in the case of 'no' (means that are not affected by depression), out of 8, 6 is predicted correctly as 'no', and 2 is predicted as 'yes'.

K-Nearest Neighbours algorithm

The KNN algorithm is a supervised, easy-to-implementation method that solves both classification and regression problems. It classifies new samples based on the closest training samples in the feature field. The algorithm stores all available data and classifies new data points based on similarity. It is a non-parametric algorithm, making no assumptions on the underlying data. The accuracy of the KNN algorithm is 0.750.

According to the confusion matrix of random KNN, for the value 'yes' (means that are affected by depression), out of 2, 1 is predicted correctly as 'yes', and 1 is predicted as 'no. Similarly, in the case of 'no' (which means that are not affected by depression), out of 8, all 8 are predicted correctly as 'no'.

Random Forest

Random Forest is a classifier technique that uses multiple decision trees to improve predictive accuracy. It takes averages from each tree and uses majority votes to predict the final output. The accuracy of Random Forest is 0.938.

According to the confusion matrix of random forest, for the value ‘yes’ (means that are affected by depression), out of 2, 1 is predicted correctly as ‘yes’, and 1 is predicted as ‘no’. Similarly, in the case of ‘no’ (which means that are not affected by depression), out of 8, all 8 are predicted correctly as ‘no’.

Support Vector Machine (SVM)

Support Vector Machine (SVM) is a supervised learning algorithm used for classification problems in machine learning. It aims to create the best line or decision boundary to isolate n-dimensional space into classes, creating a hyperplane with maximum margin. The dimensions of the hyperplane depend on the features in the dataset. SVM chooses the utmost points or vectors, called support vectors, to create the hyperplane. It is memory efficient and versatile, using a subset of training points in the decision function. The algorithm maps data to high-dimensional space, making it easier to classify with linear decision surfaces. SVM can be used for both classification and regression challenges but is primarily used for classification.

According to the confusion matrix of SVM, for the value ‘yes’ (means that are affected by depression), out of 2, 1 is predicted correctly as ‘yes’, and 1 is predicted as ‘no’. Similarly, in the case of ‘no’ (means that are not affected by depression), out of 8, 7 is predicted correctly as ‘no’, and 1 is predicted as ‘yes’.

Experimental Results and Discussions

Model	AUC	CA	F1	Precision	Recall
RF	0.98	0.98	0.98	0.97	0.98
DT	0.95	0.95	0.95	0.94	0.95
KNN	0.92	0.92	0.92	0.91	0.92
SVM	0.90	0.90	0.90	0.89	0.90

The table shows that the random forest algorithm is the most accurate model for predicting cases, outperforming decision trees, KNN, and SVM. The AUC value, CA, F1 score, precision, and recall values indicate that Random Forest provides the highest accuracy, making it the final model.

Figure 4.3.c Prediction using random forest

In the above figure, test data is being given as input to predict the impact of academic scores on students' mental health. Based on the mentioned features the data is classified into students falling into depression as well as students not falling into depression accurately.

Conclusion

The study compared machine learning algorithms Decision tree, KNN, Random Forest, and Random Forests for accurately predicting students' depression. Using statistical techniques like precision, sensitivity, recall, F1 score, and overall accuracy, the random forest algorithm was found to provide the best results in predicting academic scores' impact on student mental health.

Abstract

In the 21st century, one of the diseases we are facing is liver cirrhosis which may be the result of alcohol consumption, hepatitis, or any liver disease. The last stage for recovery from cirrhosis is liver transplantation which helps the survival of patients. Different attributes may affect the level of liver Cirrhosis. For the model creation and the prediction, we used the orange tool and for visualization, we used the tableau. The one method which gives high accuracy will be taken for prediction. Based on the accuracy, precision, and recall, we will be visualizing the model. Certain techniques such as decision tree, random forest, naive Bayes, and KNN are used in which the naive Bayes gives the best prediction.

Keywords: Cirrhosis disease, model creation, prediction, data mining technique.

Introduction

The failure or the malfunctioning of the liver may affect other organs and cause death. Therefore the chance for patients facing cirrhosis have less chance of survival. This article shows whether the patient will survive or die. The larger consumption of alcohol is the main reason for cirrhosis and the other reasons may include the usage of impure water and fatty food and contact with polluted air.

Implementation

Orange

Orange consists of graphical widgets that provide strategies from the core library and orange modules and give a decent graphical user interface. It is an open-source data mining, and machine-learning tool, for data visualization.

Tableau

Tableau is mainly for data visualization which helps in getting new insights and data interpretation more easily than other visualization tools.

Data Preprocessing

Missing Values

In the cirrhosis dataset, there are 13% missing values in which more than one column of the same row is having missing values and thereby decided to remove the rows with missing values.

Relevant Feature Selection

Feature selection is a technique in which the data that are relevant to the model are taken to classify the outcome correctly. In the cirrhosis prediction dataset, there are 19 features some of which are not relevant for the analysis. So we will be removing the irrelevant features. We take the information gain ratio for the feature selection. We set the information gain ratio as 8 which selects the 8 relevant attributes from the dataset. The one which affects the analysis is the edema and the bilirubin.

Normalization

The normalization feature helps to get the values of each attribute in a normalized manner, which makes the values a smaller range. We standardised the data to a range of 0 to 1.

Decision Tree

The decision tree is a classification technique in which we are creating a tree by splitting the values based on their attribute values. Using the decision tree, we can easily make an interpretation and conclusion. We calculate the information gain of each attribute and select one attribute that has high information gain as the attribute to be split.

Supervised Feature Selection - Information Gain

$$H(U) = - \sum_{i=1}^n p(i) \log_2 p(i) \\ + p(1) \sum_{j=1}^m p(j|1) \log_2 p(j|1) + p(2) \sum_{j=1}^m p(j|2) \log_2 p(j|2)$$

U represents the *i*th element; *P(i)* is the probability of the *i*th element; *P(j|1)* and *P(j|2)* are the probabilities that the total *i* appears a set in the datasets; *P(j|1)* is the conditional probability of the *j*th category given that case *i* appears, and *P(j|2)* is the conditional probability of the *j*th category given that case *i* does not appear.

KNN (K-nearest neighbor)

The K-nearest neighbor is a technique used to provide solutions for both regression and classification. It works by calculating the distance between the new dataset and the existing dataset. The new dataset will have the value of a data point which is having low distance. In this way, the KNN works. We can take any of the distance measures such as Euclidean distance, Manhattan distance, etc..

Formula:

$$P(A | B) = \frac{P(B | A) \cdot P(A)}{P(B)}$$

A, B = events
P(A|B) = probability of A given B is true
P(B|A) = probability of B given A is true
P(A), P(B) = the independent probabilities of A and B

Naïve Bayes

It is a classification technique that follows the Bayes theorem which considers each predictor as independent.

Random Forest

Random forest consists of the number of trees on various subsets of the given dataset and takes the average to improve the predictive accuracy of that dataset. The greater the number of trees, the greater the accuracy.

The performance of the model can be evaluated by using the precision, accuracy, recall, and f1

score. The data mining technique which has a high accuracy is taken into consideration for the classification of data. Therefore the technique we used here is naive Bayes which has an accuracy of 78.2% compared to others.

Result and Discussions

Through the visualization and the performance measures, we concluded that the model that can predict more accurately is the naïve Bayes. So by using naïve Bayes, we can predict the new patient data.

The inference we got from this confusion matrix is:

- Patients with status as censored were 27 of which 16 were correctly predicted as censored 7 of them predicted as censored due to liver tx and the remaining 4 with death.
- Patients with status as censored due to liver tx were 5 and all of them were correctly predicted.
- Patients with status as death were 23 22 of them correctly predicted as death and 1 of them were predicted as censored due to liver tx.

We tested the model using new data and we got the status as death for a patient by putting values for attributes as bilirubin as 0.3, N_days as 2466, copper 52, prothrombin as 11, age as 19379, edema as N, albumin as 4, stage as 3 and SGOT as 28.38.

Conclusion

This article easily shows how to predict the status of a cirrhosis patient with different attributes. The pathetic situation of people having cirrhosis and the chance for them to survive or to live can be slightly changed by using the technique we used in this article.

All the data mining techniques are used for either prediction classification or clustering of data which gives a new phase to the unknown data. Machine learning and artificial intelligence can utilize the raw data that are around us and make use of it in every sector such as business, education, health, politics, etc.

In this article, we have implemented machine learning and data mining techniques in the health sector which help the examination of a doctor more easier.

Abstract

The project aims to develop an automated system to predict a customer's eligibility for a home loan, based on historical data. The model will reduce loan selection and select the best model with the highest accuracy. The data set is obtained from Kaggle's website, containing 615 rows and 13 features.

Keywords: Loan, Classification, KNN algorithm, Naïve Bayes algorithm, SVM, Decision Tree, Logistic Regression.

Introduction

Loans are financial instruments borrowed from banks or financial institutions, with the manual process being time-consuming and tedious. With numerous branches and a large customer base, financial institutions need more efficient automated systems for loan application processing. Loan lending is crucial for personal goals and bank operations. To reduce risk, financial institutions assess borrowers and assign credit scores. This data can be used to calculate credit risk and build models to determine loan eligibility. The project aims to design an automated loan eligibility model based on input attributes.

Literature Review

Numerous studies have been published on loan prediction, including one on machine learning models, another on credit risk analysis and prediction modeling using R, and another on ensemble techniques. These papers cover data collection, pre-processing, training, and testing for loan approval, with outlier detection and removal performed. Decision Tree has higher loan prediction accuracy. Another paper proposes a risk analysis method for sanctioning loans using R, which includes data selection, pre-processing, feature extraction, model building, prediction, and evaluation. An ensemble technique is presented for loan predictions using eleven machine learning models with nine properties, with Real Coded Genetic Algorithms calculating feature importance and K-fold validation determining model robustness. An Exploratory Data Analysis (EDA) is proposed for predicting loan amounts based on client needs, analyzing factors like annual income, customer trust, loan tenure, and repayment chances. The study found short-term loan interest was more prevalent.

Implementation

K-Nearest Neighbours Algorithm

The supervised machine learning algorithm simplifies regression and classification problems by calculating the distance between new samples and existing data points and assigning them to a common group.

Evaluation of Algorithm

	precision	recall	f1-score	support
0	0.65	0.65	0.65	23
1	0.64	0.64	0.64	22
accuracy			0.64	45
macro avg	0.64	0.64	0.64	45
weighted avg	0.64	0.64	0.64	45

KNN best accuracy: 80.00%

Logistic Regression

Logistic regression is a classification algorithm used for two output values. It uses a sigmoid/logistic function to fit data points and predict the target variable class. The maximum likelihood curve is chosen, and the prediction depends on the chosen threshold probability value.

Evaluation of Algorithm.

	precision	recall	f1-score	support
0	0.52	0.52	0.52	23
1	0.50	0.50	0.50	22
accuracy			0.51	45
macro avg	0.51	0.51	0.51	45
weighted avg	0.51	0.51	0.51	45

```
[[22 11]
 [11 11]]
LR accuracy: 51.11%
```

Decision Tree

The algorithm is a supervised method used for classification and regression tasks. It uses a tree structure with input attributes to predict class labels for new data. The algorithm calculates the maximum information gain for each attribute and moves from the root to the leaf node, comparing values with the new dataset.

Evaluation of Algorithm

	precision	recall	f1-score	support
0	0.73	0.70	0.71	23
1	0.70	0.73	0.71	22
accuracy			0.71	45
macro avg	0.71	0.71	0.71	45
weighted avg	0.71	0.71	0.71	45

```
[[26  7]
 [ 6 16]]
Decision Tree Accuracy: 82.22%
```

Support Vector Machine

The Support Vector Machine (SVM) is a supervised machine learning algorithm that classifies and predicts continuous values using regression. It is computationally inexpensive and accurate, aiming to identify a hyperplane that divides n-dimensional space into target classes. The hyperplane's dimensions depend on the number of attributes in the dataset.

Evaluation of Algorithm

	precision	recall	f1-score	support
0	0.71	0.65	0.68	23
1	0.67	0.73	0.70	22
accuracy			0.69	45
macro avg	0.69	0.69	0.69	45
weighted avg	0.69	0.69	0.69	45

```
[[15  8]
 [ 6 16]]
SVC accuracy: 69.89%
```

Naïve Bayes Algorithm

Naive Bayes is a supervised classification technique based on Bayes' Theorem, assuming feature independence. It's easy to build and implement, suitable for large datasets, and outperforms sophisticated algorithms.

Evaluation of Algorithm

	precision	recall	f1-score	support
0	0.50	0.43	0.47	23
1	0.48	0.55	0.51	22
accuracy			0.49	45
macro avg	0.49	0.49	0.49	45
weighted avg	0.49	0.49	0.49	45

```
[[10 13]
 [10 12]]
Categorical Naive Bayes accuracy: 48.89%
```

Result and Discussion

The dataset was split into 80% split (492 rows) for model building, with 122 rows used for testing. The training-test phase involved 5-fold cross-validation, followed by classification algorithms like Naive Bayes, Logistic Regression, KNN, SVM, and Decision Tree. Decision Tree achieved the highest accuracy (82.22%) and was chosen as the final model.

Conclusion

The project successfully developed a loan eligibility model to predict customer eligibility for home loans. Compared to five machine learning algorithms, Logistic Regression showed superior results, with better performance with selected features.

Abstract

Employee attrition is the gradual reduction in an organization's workforce due to resignation, death, and retirement. This project aims to classify whether an employee leaves the company based on various criteria. On average, the attrition rate for companies is projected at 18-19% annually. Employee attrition is downsizing, and unexpected resignations can cause significant losses for organizations. In the IT sector, attrition is a significant issue, and organizations are working to find solutions. It is crucial to know whether an employee will leave a company for various reasons. The project aims to build multiple classification models using the Orange tool and select the model with the best accuracy.

Keywords: Accuracy, Classification Model, Employee attrition, Organization.

Introduction

An efficient employee is a valuable asset for any organization. In a competitive world, companies can't afford to lose employees. Employee attrition and turnover differ: attrition is when employees leave without being replaced, while turnover involves departing employees who are meant to be replaced. To calculate the attrition rate:

Attrition Rate = (Number of employees who left in a year / Number of employees in a year) * 100. This formula helps measure how many employees leave the organization relative to the total number of employees in a given year. Reducing attrition requires improving employee satisfaction by offering better opportunities and a desirable work environment.

Implementation

Orange & Tableau

Tableau (2022.2) is a data analysis tool that simplifies data visualization for problem solving. It's user-friendly, offers mobile support, and responsive dashboards.

Orange (3.31.0) is an open-source data mining and visualization toolkit. It is used for explorative rapid qualitative features. In order to analyze any data and to bring out the important data analysis and interactive data visualization, we need to explore the data.

Data Description

The dataset, from Kaggle, has 4653 instances and 8 features used to classify employee attrition within 2 years.

In the training data, there are 4 numeric and 5 categorical variables among the 9 attributes.

Datasets are

- Leave or Not
- Education
- City
- Joining Year
- PaymentTier
- Age

Gradient Boosting (GB)

Gradient boosting is a popular technique where each predictor corrects the errors of the previous one. It's based on Classification and Regression Trees (CART). Each tree predicts, and the final prediction is made using a formula.

$$y(\text{pred}) = y1 + (\text{eta} * r1) + (\text{eta} * r2) + \dots + (\text{eta} * rn)$$

Fig: Gradient Boosting Formula

:

Tableau Visualization

Fig: Evaluation matrix visualization

The Gradient Boosting is having more accuracy (84.73%) than other classification models.

Result and Discussion

The "Employee Attrition" dataset has 4653 rows and 9 columns with the target variable "LeaveOrNot." It's split 70:30 for training and testing. Classification models used include KNN, Random Forest, Naïve Bayes, and Gradient Boosting. Here are the performance values for each model.

Model	AUC	CA	F1	Precision	Recall
kNN	0.790	0.778	0.768	0.772	0.778
Random Forest	0.853	0.824	0.819	0.820	0.824
Naive Bayes	0.699	0.713	0.702	0.700	0.713
Gradient Boosting	0.856	0.847	0.840	0.850	0.847

Fig Evaluation Result

Among the applied classification models, Gradient Boosting has highest accuracy which is 84.7%. The confusion matrix of GB is given below

		Predicted		Σ
		0	1	
Actual	0	888	44	932
	1	169	294	463
Σ		1057	338	1395

Fig: Confusion matrix of Gradient Boosting

An external test data was applied to test the classification using the GB model and the classification is as follows

Gradient Boosting	Age	Employed	Emp	Number of	Age	Gender	Employment	modelCorrect
1	35	1	Employee	1	35	Female	No	1
1	35	1	Part	1	35	Male	No	1
1	35	1	Non-Employee	1	35	Female	No	1
1	35	1	Employee	1	35	Male	No	1

Fig: Classification outcome for the given data

All the 8 features; Education, Joining Year, City, Payment Tier, Age, Gender, Ever Benched, Experience in current domain are necessary for the classification for the dataset.

Conclusion

Every organization's ultimate goal is to optimize profits, requiring skilled and experienced employees. Employee attrition has been a longstanding challenge, but it can be reduced by fostering a friendly environment, fair compensation, rewards, and encouragement. Data analysis reveals that females in Pune tend to leave organizations more quickly. Among classification methods, Gradient Boosting achieves the highest accuracy in predicting employee attrition.

Abstract

Business intelligence is a popular tool in decision support and business management systems, converting unprocessed data into knowledge. It includes tools like data warehouses, OLAP, ETL, and dashboards. In the public health sector, BI is used for financial and administrative activities, supporting patient diagnosis and long-term illness treatment. BI involves four steps: integration, storage, analysis, and presentation. In the presentation stage, a dashboard is used to provide information to end users, but implementing an efficient dashboard remains challenging.

Keywords: Business Intelligence, health sector, dashboard, data warehouse

Introduction

The healthcare industry is transforming with the integration of Business Intelligence (BI) to improve decision-making. Health informatics, a rapidly expanding field, analyzes medical data to make real-time and predictive analytics. BI is crucial for improving patient care, centralizing records, enhancing expense management, and leveraging data mining for preventive care. It also enables personalized treatment plans, contributing to more efficient healthcare delivery.

What is Business Intelligence?

Business Intelligence (BI) is crucial for healthcare organizations to improve decision-making, and understand strengths, weaknesses, and opportunities. Health informatics, a rapidly expanding field, plays a pivotal role in analyzing medical data. Access to public health data is essential for monitoring health communities, identifying links, and evaluating intervention effectiveness. BI applications in healthcare focus on improving patient care, centralizing records, enhancing expense management, and leveraging data mining for preventive care delivery.

Conceptual Architecture of Bi

BI comprises four stages: integration, storage, analysis, and presentation. It involves processes like Extract, Transform, and Load (ETL) and Online Analytical Processing (OLAP).

Integration: This is a crucial stage in BI since it involves ensuring the consistency of data from many sources before converting it into a single format. In BI language, the integration process is referred to as Extract, Transform, and Load (ETL).

Storage: This process, which frequently makes use of a relational database management system, organises the data in a data warehouse. The most common model now used in both open-source and commercial databases is relational databases. Analytically speaking, working with huge databases can be time-consuming.

Analysis: This procedure organises data in a way that makes it considerably better suited for analysis and reporting. OLAP is used in this stage. Instead of using tables, data is organized in a multidimensional aggregated structure and represented by data cubes. By converting raw data into a more user-friendly format, this format enables quick analysis. There are several ways to link relational databases to OLAP using both open-source and paid solutions. It is necessary to create objective measures or key performance indicators (KPIs).

Presentation: The end users receive the BI solution at this stage. Power users, business analysts, executive management, and casual users are all given the ability to make better-educated business decisions. The knowledge gained via this approach may then be applied to modify or alter present behaviour and aid the organisation in moving toward ideal procedures or objectives. Public health has employed KPI-presentation tools like Balanced Scorecards and Quality Dashboards. These technologies enable a variety of hospital-related tasks to be watched over.

Fig. Four steps involved in BI and their related process.

Bi in Public Health

Public health organizations collect vast amounts of data for policy development, healthcare delivery, and research. BI assists in diagnosing chronic diseases, assessing treatment outcomes, and identifying previously unknown illness patterns. Benefits of BI in Healthcare: BI optimizes resource allocation, enhances quality and efficiency, improves logistics and supply chain management, predicts treatment outcomes, controls costs, and provides physician profiling. BI Applications for Healthcare: BI applications include Decision Support Systems (DSS), Executive Information Systems, OLAP, Query and Reporting Services, Data Mining, Operational Data Services, and Integration Services.

Service Tools of BI for Health Care

Notable BI tools for healthcare include Tableau, Power BI, Sisense, and Qlik, which provide data analysis and visualization capabilities.

Clinical BI for Improved Patient Care: Clinical BI helps with patient medication, self-care tools, and patient dashboards for scheduling appointments and billing, enhancing overall patient care.

Dashboard Decision System

Dashboards are essential tools for summarizing and visualizing performance indicators, recognizing trends, measuring efficiency, and aligning strategies with organizational objectives. They help managers track department contributions, provide precise data points, and enable quick decisions, lower costs, and increase confidence in managing complex companies. The following are some advantages of using dashboards:

1. Visual presentation of performance measures.
2. The capacity to recognize and address negative trends, and produce thorough reports demonstrating new make better informed decisions based on trends on gathered corporate intelligence.
3. Efficiency measurements and inefficiencies.

4. Strategic alignment and organizational objectives.
5. Saving time over performing many reports.
6. Attaining complete visibility for all systems in an instant.

Dashboard in the Public Health Sector

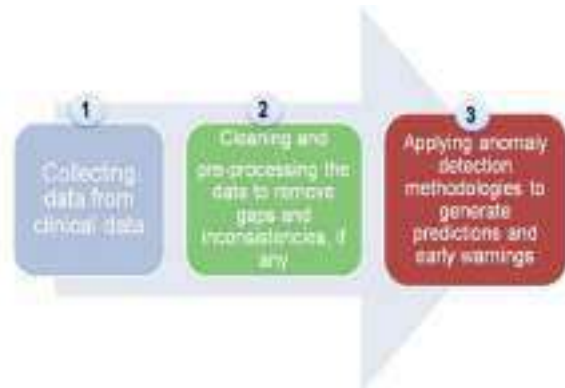

Fig. Three steps involved in using the dashboard for public health.

Future Scope of BI in Health Care

Analytics is becoming increasingly integral to healthcare, offering benefits like improved quality, cost reduction, and disaster response. However, challenges include data quality and availability. Despite these challenges, the integration of analytics in healthcare is expected to significantly change the future, with applications expanding for various purposes like enhancing efficiency, genetic data mining, and disaster response.

Conclusion

BI empowers public healthcare with data-driven decision-making. It plays a crucial role in various aspects of public health, from disease control to resource optimization.

Abstract

The study aims to predict wind speed accurately, a crucial factor for businesses, management, and the economy. Researchers propose a machine learning-based random forest model to address wind power instability caused by wind's potential flow. The model outperforms decision trees and linear regression in capturing complex input-output relationships from multiple dimensions of input data. Unpredictable wind fluctuations can lead to low system reliability, high reserve capacity, and increased operational costs for grid-connected power plants. Accurate wind speed prediction is essential for receiving early severe weather alerts. The study analyzes wind and storm causes and demonstrates the model's performance.

Keywords: Comparative analysis, machine learning, Wind Speed prediction, decision tree, linear regression, random forest, Classification

Introduction

Adverse weather conditions affect various sectors, including transportation, logistics, and agriculture. Accurate and timely weather forecasts are crucial for planning and managing activities and preventing natural disasters. Wind power, a renewable energy source, is essential for efficient wind park management. The Kaggle 'Wind Speed Prediction' dataset, with 6574 instances of daily averaged responses from various weather sensors, is used in the study. The dataset includes attributes like TIME, DATE, WIND, RAIN, T.MAX, T.MIN, T.MIN.G, and Time Zone: GMT. Traditionally, numerical weather prediction (NWP) models were used for weather forecasting, but they are computationally intensive and limited to longer-term forecasts. Data-driven machine learning models have significantly reduced processing time and bridged the gap in short-term forecasting.

Methodology

Data Preparation

The Wind Speed Prediction dataset, used in numerous studies, estimates wind speed using factors like average wind speed, precipitation rate, and temperature. Machine learning techniques like linear regression, decision trees, and random forests are used for data visualization, while tableau is used for visualization. Figure 1 shows a preview of the features.

Attribute Information

1. DATE	(YYYY-MM-DD)
2. WIND	Average wind speed (km/h)
3. RAIN	First indicator value
4. RAIN2	Precipitation Amount (mm)
5. RAIN3	Second indicator value
6. T MAX	Maximum Temperature (°C)
7. T MIN	Third indicator value
8. T MIN2	Minimum Temperature (°C)
9. T MIN3	Fourth indicator value
10. T MIN4	Fifth indicator value

Figure 1: Dataset Overview

Data Preprocessing

Entities or patterns make up a dataset. The essential qualities of a data item, like as the mass of a physical object or the time at which an incident happened, are captured by a collection of characteristics that characterize data items. Therefore, eliminating the null values that hint at a problem while retrieving the dataset's accuracy would be the first step in beginning to improve the dataset's quality. The dataset must then be described in order to acquire a general understanding of it and to get started, as seen in figure 2.

	DATE	WIND	MO	RAIN	MO.1	TMAX	MO.2	TMIN	TMNO
1	1981-01-01	13.67	0	8.2	8.8	9.0	0.0	3.7	-1.0
2	1981-01-02	11.25	0	8.1	8.8	7.2	0.0	4.2	1.1
3	1981-01-03	11.25	0	8.4	8.8	5.0	0.0	5.3	-0.9
4	1981-01-04	8.83	0	8.2	8.8	5.6	0.0	3.4	-3.2
5	1981-01-05	11.32	0	10.4	8.8	7.2	1.0	-1.5	-3.9

Figure 2:Dataset Description

Equations

The mean absolute error (MAE) and mean squared error (MSE) are used to evaluate the performance of models on a test set. MAE calculates the discrepancy between expected and actual values, while MSE computes the square root of the mean difference between the two. Greater variances between y and \hat{y} have a greater impact on the error term. RMSE measures the model's error in predicting quantitative data, which is crucial for evaluating performance in machine learning during training, cross-validation, and monitoring post-deployment. Root mean square error is a popular metrics for this purpose.

$$MAE = \frac{1}{n} \sum_{i=1}^n |y(i) - \hat{y}(i)|$$

$$MAPE = \frac{1}{n} \sum_{i=1}^n \frac{|y(i) - \hat{y}(i)|}{\frac{1}{n} \sum_{i=1}^n y(i)}$$

$$MSE = \frac{1}{n} \sum_{i=1}^n (y(i) - \hat{y}(i))^2$$

$$RMSE = \sqrt{\frac{1}{n} \sum_{i=1}^n (y(i) - \hat{y}(i))^2}$$

Month	F	Avg. Rain	Avg. Wind
December		2.27	11.85
November		2.27	10.81
October		1.80	9.39
September		2.40	8.61
August		2.00	7.77
July		1.63	7.86
June		1.52	8.01
May		1.63	8.78
April		1.77	10.22
March		1.45	11.31
February		1.79	11.21
January		2.10	11.82

Figure 3: Month - Average Rain & Wind

Random Forest Classifier

A supervised learning system called the Random Forest Algorithm gathers samples from many data sets and forecasts the best answer. It is beginning to take the shape of a decision tree. Additionally, it is more precise than the decision tree. However, it is more difficult to construct and quite slow at prediction. Random Forest, as the name implies, is a classifier that uses a number of decision trees on different subsets of the provided dataset and averages them to increase the dataset's predictive accuracy. Instead than relying on a single decision tree, the random forest gathers forecasts from various trees and predicts the outcome based on the predictions that received the most votes.

Linear Regression

The linear regression algorithm, which is also known as linear regression, demonstrates a linear relationship between a dependent (y) variable and one or more independent (x) variables. Given that linear regression demonstrates a linear connection, it follows that determines how the dependent variable's value changes in relation to the independent variable's value.

Here,

$$y = a_0 + a_1x + \epsilon$$

Y=Dependent Variable (Target Variable)

X=Independent Variable (predictor Variable)

a_0 = intercept of the line (Gives an additional degree of freedom)

a_1 = Linear regression coefficient (scale factor to each input value).

ϵ = random error

The x and y variable values serve as training datasets for the representation of a linear regression model. Finding the best- fitting linear line and the ideal intercept and coefficient values such that the error is reduced is the major goal of a linear regression model. The error is the discrepancy between the actual and anticipated values, and reducing this discrepancy is the objective.

Decision Tree

The Decision Tree Algorithm is a member of the supervised learning algorithm family. The decision tree approach can be used to resolve classification and regression issues as well, unlike other supervised learning algorithms. Utilizing a decision tree, the objective is to develop a training model that can be used to forecast the class or value of the target variable by learning straightforward choice rules derived from the past (training data). Starting from the tree's base, decision trees anticipate the class label for a record. We contrast the root attribute's values with the record's attribute. Typically, the decision-making guidelines take the form of if-then-else sentences. The rules are more intricate and the model is more accurate the deeper the tree.

Experimental Results

As we can see, the wind is the most important attribute, and keeping that in mind from the attribute relationship results in keeping that in mind, the different machine learning algorithms are performed, such as logistic regression, random forest, and classification tree. After all these models have provided us with the MAE, MSE, and RMSE values, we have concluded that Random Forest Regressor has lower values in metrics than the others. Hence, after the result, one can know that Random Forest is performing the best. Therefore, it seems like a better model for our dataset.

Figure 4: Bar Graph Representation

Figure 5:Pie Chart Representation

Conclusion

To utilize wind energy, accurate wind speed predictions are crucial. But putting the wind power online was quite challenging due to the erratic variations in the wind. This paper gave a general review of machine learning algorithms used in wind speed forecasting. The model that performs the best out of all of these is the random forest, with a comparably lower RMSE value of 4.6613963, after carrying out all the steps necessary to get the results, from preparation to preprocessing to attribute relationship and finally performing the models (random forest, linear regression, and classification tree).

Future Scope

There is lot of room for improvement based on the data because it is now possible to acquire real-time data that can be used to analyze all the existing models and develop new accuracy based on them. Testing the authors' model and doing a comparison with the new data available are two additional options. Since gathering data would take a while, data should be gathered from various sources repeatedly till then.

Abstract

PMMA, or Polymethyl Methacrylate, is synthesized by polymerizing Methyl Methacrylate (MMA) monomers. The polymerization process, typically achieved through free radical polymerization, involves the chain growth of MMA monomers to form the PMMA polymer chain. This process results in the creation of a versatile thermoplastic polymer known for its ease of synthesis, environmental stability, and wide-ranging applications.

Introduction

Poly (Methyl Methacrylate), commonly known as PMMA, is a polymer system of growing scientific and technical interest, offering the potential to create a wide range of materials with diverse electrical, optical, and magnetic properties. As one of the most significant thermoplastics in the polymer field, PMMA is produced synthetically through the polymerization of methyl methacrylate. This transparent and rigid plastic is often used as a glass substitute in various products and is marketed under trademarks like Plexiglas, Lucite, and Perspex. With a global production exceeding 600,000 tons annually and a cost of around \$5 per kilogram, PMMA is renowned for its hardness, rigidity, and relative transparency compared to traditional glass, all while being lightweight and easily molded into various shapes. Pure atactic PMMA boasts amorphous characteristics, offering high surface gloss, brilliance, exceptional clarity with 92% transparency, and a refractive index of 1.49. Furthermore, PMMA exhibits a glass transition temperature of 105°C, coupled with robust mechanical strength, respectable chemical resistance, and excellent weather resistance.

Procedure

The monomer (MMA) was made inhibitor-free by washing it with 2% Sodium hydroxide (NaOH) followed by distilled water and was dried using anhydrous Calcium Chloride (CaCl₂) before experimenting. 50 ml pure MMA and 2gm BPO are taken in a 100 ml beaker and made a homogeneous mixture using a magnetic stirrer. This mixture is poured into a petri dish and kept in an air oven at 75°C for 6 hours. We get white transparent thermoplastic PMMA.

FTIR analysis was performed by Scimadzu IR prestige-21 FTIR spectrometer. The absorption spectrums were recorded from 650-4000 cm⁻¹ using a ZnSe ATR attachment. The thin film method is used for the FTIR characterization of MMA and PMMA.

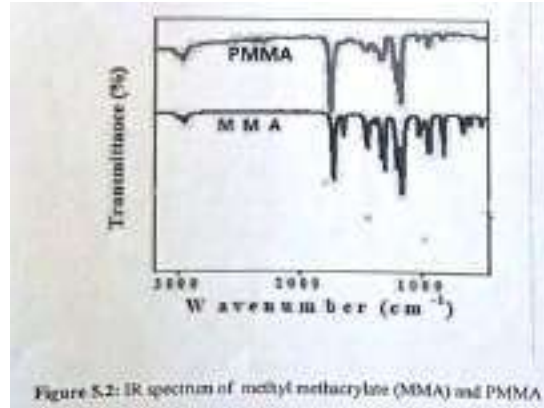

Results and discussions

Figure 5.1: PMMA pellets

Scanning Electron Microscopy (SEM) offers a remarkable glimpse into the microscopic world of materials like Polymethyl Methacrylate (PMMA), a transparent thermoplastic commonly known as acrylic or Plexiglas. When subjected to SEM, PMMA's surface morphology and

microstructure come into sharp focus. The SEM image of PMMA reveals intricate details, including surface topography, showcasing any imperfections, surface roughness, or structural features present. SEM can also help detect crystalline regions, foreign contaminants, and the size and distribution of particles if present. Furthermore, by examining fracture surfaces, SEM aids in assessing PMMA's toughness and fracture behavior.

The infrared (IR) spectrum of Polymethyl Methacrylate (PMMA), also known as acrylic or Plexiglas, provides valuable information about the chemical composition and molecular structure of this polymer. In an IR spectrum of PMMA, you can expect to observe several characteristic peaks and bands, each corresponding to different vibrational modes of the molecules in the material

Enhancing Green Chemistry Learning Through Art

Kavitha Jacob², Sijo Francis^{1*} & Dr. Jose James^{1*}

²Department of Chemistry, Bishop Abraham Memorial College Thuruthicad

¹Research and Post-Graduate Department of Chemistry, St. Joseph's College, Moolamattom

Abstract:

Incorporating art performance into the teaching and learning of Chemistry yields numerous benefits for both students and educators. Active participation in the learning process leads to a more comprehensive and multidimensional understanding of the subject. This paper aims to demonstrate the effectiveness of utilizing a cooperative learning strategy alongside art performance to teach Green Chemistry. Throughout three successive batches of postgraduate students, this method proved successful in enhancing students' skills in the affective, cognitive, and psychomotor domains, fostering enthusiasm in both facilitators and students.

Keywords: Active learning, art performance, green chemistry, collaborative learning

Introduction:

Active participatory learning is an instructional approach that fosters student engagement and active involvement in the learning process, transcending traditional passive learning methods like lectures or reading. It emphasizes hands-on activities, group collaboration, and critical thinking, empowering students to construct their knowledge and develop vital 21st-century skills. This approach aligns with constructivism, where learning is an active process of meaning-making through personal experiences and interaction. Active participatory learning methods encompass a wide array of strategies such as project-based learning, cooperative learning, simulations, debates, and hands-on experiments. These methods encourage creativity, critical thinking, and problem-solving, promote communication, and create a positive classroom environment.

Green Chemistry through Collaborative Learning

Green Chemistry, as defined by Paul T. Anastas and John C. Warner, focuses on principles that reduce or eliminate hazardous substances in the design, manufacture, and application of chemical products. To enhance the understanding of the 12 Principles of Green Chemistry, an active, cooperative, and collaborative approach incorporating art performance was developed and applied consecutively to three groups of postgraduate students.

The method involves several steps, including grouping, initial discussions with the facilitator, sharing preliminary concepts, finalizing concepts and plans, performing or displaying the art piece, discussion and feedback sessions, and mind mapping. The facilitator's role includes observation, listening, and timely intervention. Students are encouraged to choose any form of performance, such as street plays, skits, short films, or theme dances, fostering creativity and free thinking. After the presentation, discussions cover performance recap, conveyed concepts, and feedback from observers, participants, and the facilitator. Finally, all learners engage in mind mapping on the topic.

This method develops various skills in the cognitive, affective, and psychomotor domains, providing enjoyment and ensuring student engagement. Feedback from students confirms the method's effectiveness, demonstrating improved understanding and application of Green Chemistry principles in their daily lives.

Conclusion:

Active participatory learning methods offer a valuable educational approach, enhancing student engagement, critical thinking, and collaborative learning. By actively participating in various activities and discussions, students construct their knowledge, develop essential skills, and cultivate a lifelong love for learning. This approach not only improves academic achievement but also prepares students for success in the dynamic 21st-century world. Incorporating art performance enriches the learning experience, particularly in the context of Green Chemistry.

Abstract

Cancer remains a prominent global health concern, causing significant mortality and reduced quality of life. Despite various efforts to improve cancer treatment, early detection of cancer cells and targeted drug delivery remain crucial for enhancing therapeutic outcomes while minimizing side effects. Conventional cancer therapies often result in systemic toxicity and drug resistance. The utilization of nanotechnology presents a promising solution by enabling precise cancer cell targeting and early detection through innovative diagnostic methods. These advancements hold the potential to revolutionize cancer care, offering more effective and less harmful treatments to alleviate the global burden of this devastating disease.

Introduction

Genetic mutations can cause changes in the synthesis of certain biomolecules leading to uncontrolled cell proliferation and ultimately cancerous tissues. Cancer diagnostic and therapeutic strategies are targeted at early detection and inhibition of cancerous cell growth and its spread. Notable among the early diagnostic tools for cancers is the use of positron emission tomography (PET), magnetic resonance imaging (MRI), computed tomography (CT) and ultrasound.

Nanotechnology aids in tumor imaging

Nanoparticles like semiconductors, quantum dots, and iron oxide nanocrystals offer unique optical, magnetic, and structural properties crucial in cancer applications. They can be combined with various anti-tumor drugs and biomolecules, such as peptides and antibodies, for highly specific tumor labeling, aiding early cancer detection. Recent studies highlight the exceptional specificity of superparamagnetic iron oxide nanoparticles (SPIONs) with no reported side effects, making them ideal for lung cancer MRI imaging aerosols. Magnetic powder imaging, with its high resolution and sensitivity to cancer tissues, has also shown promise in tomographic imaging technology.

Nanotechnology Tools Used in Cancer Diagnosis

In current research, nanotechnology can validate cancer imaging at the tissue, cell, and molecular levels²⁰. This is achieved through the capacity of nanotechnology applications to explore the tumor's environment. For instance, pH- response to fluorescent nanoprobe can help detect fibroblast-activated protein-a on the cell membrane of tumor-associated fibroblasts. Hereon, we will discuss some nanotechnology-based spatial and temporal techniques that can help accurately track living cells and monitor dynamic cellular events in tumors.

Near Infrared (NIR) Quantum Dots

The lack of ability to penetrate objects limits the use of visible spectral imaging. Quantum dots that emit fluorescence in the near-infrared spectrum (i.e., 700-1000 nanometers) have been designed to overcome this problem, making them more suitable for imaging colorectal cancer, liver cancer, pancreatic cancer, and lymphoma²²⁻²⁴. A second near-infrared (NIR) window (NIR-ii, 900-1700 nm) with higher tissue penetration depth, and higher spatial and temporal resolution has also been developed to aid cancer imaging. A silver-rich Ag₂Te quantum dots

(QDs) containing a sulfur source has been reported to allow visualization of better spatial resolution images over a wide infrared range.

Nanoshells

Another commonly used nanotechnology application is the use of nanoshells. Nanoshells are dielectric cores between 10 and 300 nanometers in size, usually made of silicon and coated with a thin metal shell (usually gold). These nanoshells work by converting plasma-mediated electrical energy into light energy and can be flexibly tuned optically through UV-infrared emission/absorption arrays. Nanoshells are desirable because their imaging is devoid of heavy metal toxicity even though their uses are limited by their large sizes.

Nanotechnology in cancer biomarking

Cancer biomarkers are biological features whose expression indicates the presence or state of a tumor. These are used to study cellular processes, and to monitor or identify changes in cancer cells, and these results could ultimately lead to a better understanding of tumors. Biomarkers can be proteins, protein fragments or DNA. Among them, tumor biomarkers, which are indicators of a tumor, can be tested to verify the presence of specific tumors. Under current medical conditions, biomarkers from blood, urine, or saliva samples are used to screen individuals for cancer risk. But these biomarkers have not proven adequate for cancer screening.

Conclusion

By improving the interactions between the physicochemical properties of the nanomaterials employed, safer and more efficacious derivatives for diagnosis and treatment can be made available for cancer management. In sum, we sought to highlight the key advantages of nanotechnology and the shortfalls in their use to meet clinical needs for cancer. Adding to that, the therapeutic benefits of nanotechnology and future advancements could make them a therapeutic potential to be applied in other disease conditions. These may include ischemic stroke and rheumatoid arthritis which would require targeted delivery of a suitable Pharmacologic Agent at The Affected Site.

Abstract

In this review, we outline the commonly used nanomaterials that are employed in cancer diagnosis and therapy. We have highlighted the suitability of these nanomaterials for cancer management based on their physicochemical and biological properties. We further reviewed the challenges that are associated with the various nanomaterials which limit their uses and hamper their translatability into the clinical setting in certain cancer types.

Introduction

Nanotechnology has led to several promising results with its applications in the diagnosis and treatment of cancer, including drug delivery, gene therapy, detection and diagnosis, drug carriage, biomarker mapping, targeted therapy, and molecular imaging. Nanotechnology has been applied in the development of nanomaterials, such as gold nanoparticles and quantum dots, which are used for cancer diagnosis at the molecular level. Given that, several studies have examined different forms of nanomaterials, such as liposomes, polymers, molecules, and antibodies, with the conclusion that a combination of these nanomaterials in cancer drug design can achieve a balance between increasing efficacy and reducing the toxicity of Tools in cancer therapy.

Nanospheres

Liposomes are nanoscale spheres composed of natural or synthesized phospholipid bilayer membrane and water phase nuclei. Neutral drugs can be transported in liposomes, but due to a poor avidity for acidic environments, they are not readily released from the inside of the liposomes. In tumors they can fuse with cells, are internalized by endocytosis, and release drugs in the intracellular space. In the case of the appropriate pH, redox potential, ultrasonic, and electromagnetic field, the liposome can also release the drug through passive or active ligand-mediated activity.

Nanotube

Carbon nanotubes possess a property that allows them to absorb light from the near-infrared (NIR) region, causing the nanotubes to heat up by the thermal effect and, hence can target tumor cells. The natural forms of carbon nanotubes promote noninvasive penetration of biofilms and are regarded as highly competent carriers for the transport of various drug molecules into living cells. Due to the suitability of carbon nanotubes, drugs such as paclitaxel are assembled with them and administered both in vitro and in vivo for cancer treatment.

Polymeric nanoparticles

Polymeric nanoparticles (PNPs) are inventions that relate to a solid micelle with a particle size range of 10-1000 nm. PNPs are collectively known as polymer nanoparticles, nanospheres, nanocapsules, or polymer micelles. PNPs serve as drug carriers for hydrophobic drugs and are widely used for drug discovery. The PNPs constructed from amphiphilic polymers with a hydrophilic and hydrophobic block can perform rapid self-assembly because of the hydrophobic interactions in an aqueous solution. Thus, to carry the hydrophilic charged molecules, such as proteins, peptides, and nucleic acids, these blocks are switched to allow interactions in the core and neutralize the charge.

Dendrimers

The dendrimers are nanocarriers that have a spherical polymer core with regularly spaced branches. As the dendritic macromolecule diameter increases, the tendency to tilt towards a spherical structure increases. There are usually two ways to synthesize dendrimers, a divergent method in which the dendrimers can grow outward from the central nucleus, and a convergence method, where the dendrimers grow inward from the edges and end up in the central nucleus.

Quantum Dots

Quantum dots (QDs) are small particles or nanocrystals of semiconductor materials between 2 and 10 nanometers in size. The ratio of the height of the surface to the volume of these particles gives the QDs the intermediate electron property which is between a mass semiconductor and a discrete atom. Various QD-based techniques such as modification of QD conjugates and QD immunostaining have been developed. With the improvement of multiplexing capability, QDs conjugation greatly exceeds the monochromatic experiment in both time and cost-effectiveness.

Conclusion

Nanotechnology has shown a lot of promise in cancer therapy over the years. Improved pharmacokinetic and pharmacodynamic properties and nanomaterials have contributed to improved cancer diagnosis and treatment. Nanotechnology allows targeted drug delivery with minimal systemic toxicities. The therapeutic benefits of nanotechnology and future advancements could make them a therapeutic potential to be applied in other disease conditions. These may include ischemic stroke and rheumatoid arthritis which would require targeted delivery of a suitable pharmacologic agent at the affected site.

Abstract

We have experimented to synthesize **Potassium Tris(oxalato)chromate (III)** complex from Merck grade samples of Potassium dichromate, Potassium oxalate monohydrate and Oxalic acid dihydrate. Then the compound (Potassium Tris(oxalato)chromate (III) complex) is characterized by FTIR spectrometer, UV-visible spectrophotometer, and magnetic susceptibility measurement.

Introduction

One of the most challenging research fields in modern chemistry is the design and synthesis of multifunctional compounds and materials with predictable structures and properties. Metal cations can be successfully used to link relatively stable coordination compounds containing potential bridging units leading to one, two- and three-dimensional systems.

Coordination compounds are important for at least three reasons. First, most of the elements in the periodic table are metals, and almost all metals form complexes, so metal complexes are a feature of the chemistry of more than half the elements. Second, many industrial catalysts are metal complexes, and such catalysts are steadily becoming more important as a way to control reactivity. For example, a mixture of a titanium complex and an organometallic compound of aluminum is the catalyst used to produce most of the polyethylene and polypropylene "plastic" items we use every day. Finally, transition-metal complexes are essential in biochemistry. Examples include hemoglobin, an iron complex that transports oxygen in our blood cytochromes, iron complexes that transfer electrons in our cells; and complexes of Fe, Zn, Cu, and Mo which are crucial components of certain enzymes, the catalysts for all biological reactions. Chromium (VI) has many industrial uses as pigments, catalysts, and fungicides. Chromium (III) is a common and stable oxidation state that displays significant kinetic inertness.

Experiment

Preparation of Potassium Tris(oxalato)chromate(III)

To a solution of 1.83 g potassium oxalate monohydrate and 4.67 g oxalic acid dihydrate in 70 ml water, 1.67 g powdered potassium dichromate is added in small portions with vigorous stirring. When the reaction has ended, the solution is evaporated nearly to 20% of its original volume and allowed to crystallize in an ice water bath. Potassium trioxalatochromate forms deep-green crystals. Collect the product by suction filtration, wash with 25 ml alcohol, and then dry in the oven. Record the mass of the product collected. IR and UV-vis. Spectra are also measured.

Results

Infrared Spectra

The IR spectrum of the complex was recorded in the solid state. Here the interaction of electromagnetic radiation of frequency 4000 – 450 cm with matter was studied.

The IR spectra of the complex exhibit bands corresponding to the bidentate oxalate ligand (ca. 1710, 1686, 1657 cm⁻¹ [$\nu(\text{C=O})$]; 780 cm⁻¹ [$\delta(\text{CO})$]) suggesting the presence of oxalate groups. The band observed at 893 cm⁻¹ has been assigned to $\nu(\text{C-C})$.

Figure1 IR spectrum of the complex

Electronic Spectra

In the electronic spectrum, the strong absorption maxima observed at 567 and 417 nm show d-d transitions (${}^4 A_{2g} \rightarrow {}^4 T_{2g}$ and ${}^4 A_{2g} \rightarrow {}^4 T_{1g}$) typical for Cr(III) octahedral complexes

Figure 2-UV-vis. Spectrum of the complex

Abstract

Green-synthesized zinc oxide nanoparticles hold significant promise in nanotechnology, with a wide range of applications. When it comes to nanoparticle synthesis, employing plants can offer distinct advantages over other biological entities. This approach can overcome the time-consuming process of working with microbes and maintaining their cultures, which can often lead to a loss of their potential for nanoparticle synthesis. Therefore, the use of plant extracts in this context can have a profound impact in the coming decades. Additionally, it is a cost-effective, economical, and environmentally-friendly method

Introduction

Nanotechnology is an important field of modern research dealing with the strategy and manipulation of particle structures ranging in size from approximately 1 to 100 nanometers. Nanotechnology has the potential to create many new materials and devices with a vast range of applications, including medicine, electronics, energy, and the environment. Nanoparticles are of great scientific interest because they serve as a bridge between bulk materials and atomic or molecular structures.

In this work, the leaf extract of Aloe vera was used for the generation of zinc oxide nanoparticles. Nanoparticles are characterized by UV visible, FTIR X-ray diffraction spectroscopy. Synthesis of ZnO polymer Nanocomposites of selected polymer and characterization by UV visible, FTIR spectroscopy.

Materials

Zinc nitrate used as the precursor was purchased from Merck Chemicals and was used without treatment. The Aloe Vera leaves were collected locally. All aqueous solutions were prepared using double distilled water.

Synthesis of ZnO nanoparticles

The aloe Vera plant extract was added with zinc nitrate as the precursor with a total volume of 200 ml. The precipitate obtained was dried at 80 C showing the whole process of ZnO biosynthesis.

Synthesis of ZnO/Polymer Nanocomposites

ZnO/ polymer PVP Nanocomposites were prepared by mixing an aqueous solution of the polymer (1mM, in 5% HCl) with the synthesized ZnO nanoparticles (1 mM)

Result and discussion

UV-visible spectroscopic analysis of ZnO nanoparticle

The UV-Vis spectra were recorded over the 200–800 nm range. UV-visible absorption spectrum of synthesized nanoparticles is shown in Figure 1. The absorption for bulk ZnO occurs around 385 nm. The high blue shift absorption for the synthesized ZNPs in comparison with the bulk ZnO can be due to a high decrease in particle size. The UV-vis spectrum of ZnO gives a characteristic peak at about 360–390 nm. The absorption band at about 265–274 nm in the Nanocomposite spectra is worth mentioning, which is caused by the π absorption of the functional groups in the polymer

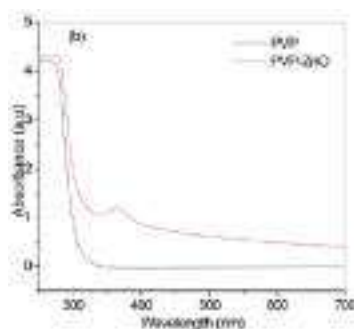

Figure 1 - UV-Vis. Spectra of PVP, and ZnO/PVP,

Fourier-transform infrared spectroscopy (FTIR)

FTIR spectra of PVP, ZnO nanoparticles, and the Nanocomposites are recorded at room temperature from 4000 to 500 cm^{-1} . In the ZnO nanoparticle spectrum, the absorption band at 531 cm^{-1} is typical of the Zn–O stretching vibration. The appearance of the Zn–O vibration mode at 544 cm^{-1} means the successful formation of ZnO/ PVP. The peak observed around 3600 cm^{-1} is attributed to the stretching vibration of the hydroxyl group and the peak appeared at 1730 cm^{-1} carbonyl groups present in the aloe Vera extract involved in the NP synthesis. Meanwhile, the peak observed around 1346 cm^{-1} and below is ascribed to the existence of metal oxide. The ZnO was formed from aloe Vera leaf extract where the free carboxylic and the amino group of the plant extract acted as both reducing and capping agents.

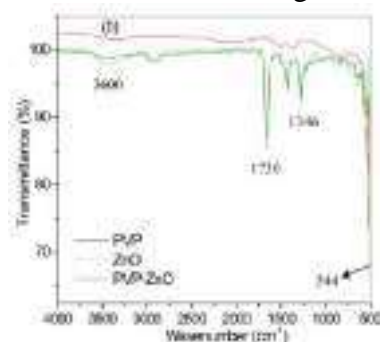

Figure 2.1: FTIR spectra of PVP, PVP/ ZnO

Conclusion

In the study, we have reported a green approach for ZnO synthesis using aloe Vera plant extract. The method is simple, inexpensive and eco-friendly without using toxic chemicals. FTIR studies clearly show the formation of ZnO and indicate that the plant extract contains various phytochemicals, which work as a capping and stabilizing agent for synthesized Zn NPs.

Abstract

Here we are presenting the results of the Thermonuclear X-ray burst of 4U1636-536 using ASTROSAT/LAXPC data during the year 2018. Light curve analysis of this source reveals 15 thermonuclear X-ray burst-like events. All the bursts are very strong and the burst peaks to persistent intensity 9 times except for two bursts B2 and B10. Energy resolved burst profile shows the burst-like event disappears above 30 keV. We fitted each burst in a different energy range with model BURS and found that the decay time decreases with energy.

1. Introduction

Low Mass X-ray binary (LMXB) are bright X-ray sources which accrete through the Roche lobe and overflow through the inner Lagrangian point. X-rays in this system are produced at the inner part of the accretion disk and the surface of the neutron star. X-ray variabilities which are mostly observed by LMXBs are X-ray bursts and QPOs [1]Walter & Lewin, 1997).

A thermonuclear X-ray burst (or type-I X-ray burst) is a quick, intense flash of X-ray emission caused by thermonuclear burning occurring on the surface of an accreting neutron star. Due to the intense gravitational pull of the neutron star, when a low-mass main sequence star and companion star are in orbit around one another, the companion star overflows its Roche-lobe and hydrogen is dragged into an accretion disc around the neutron star. Periodic X-ray bursts result from the repetition of the procedure. Most of the X-ray bursts with an energy output of $\sim 10^{39}$ erg last about 10-100 seconds, and repeat at regular intervals separated by several hours or days. They have durations ranging from a few seconds to a few minutes, with the burst profile showing a rapid rise (0.3 – 10 seconds) followed by a slower decline (5 – 100 seconds). Observation of X-ray bursts helps to determine the neutron star radius if the distance to the source is known. Here we are analyzing the Type-1 bursts from the atoll source 4U 1636-536.

4U 1636–536, a persistent X-ray burster, is an LMXB comprising a neutron star and a late-type, low-mass companion star. It is approximately 19.5694 Light Years away and mass of $\sim 1.4 M_{\odot}$. The companion star is of mass 0.4–0.5 M_{\odot} . 4U 1636–536 is classified as an atoll source based on the track it traces in the Color-Color Diagram (CCD). Superbursts [3] and millisecond Quasi-Periodic oscillations [4] were detected in this source. Doublet and rare triplet bursts were detected from this source [5] in the AstroSat/LAXPC observed during 2016.

2. Observation Data Reduction

Astrosat is India's first dedicated multi-wavelength astronomy satellite. The satellite consists of five payloads. Here we analyse the AstroSat LAXPC observations of low mass X-ray binary 4U1636- 536 during the year 2018. Here, we analyzed four sets of data observed during 09 May 2018, and 06 August 2018 are used and analysed.

For analysing the data, we used LAXPC software developed by IUCAA. The command \$LAXPCDATAPATH\$ is used to set the datapath. Data file lists are made using the command \$laxpc_make_filelist\$, creating event files, filter files and an orbit file list. An Event file in FITS format is created using the command \$laxpc_make_event eventfiles\$. This produces a new file called 'level2.event.fits'. Using the filterfiles a new GTI file is created. A new GTI file named 'usergti.fits' is created using the command \$laxpcmake_stdgti filterfiles\$. These files are further used for the analysis and creation of lightcurves.

A light curve is created using the `level2.event.fits` file using the command `$laxpc_make_lightcurve$`. The parameters specified in that command are `-p`, `-t`, `-u`, `-o` and `-e`. Parameter `-p` is for denoting which `laxpc` counter is used. The parameter `-t` specifies the bin time of the lightcurve and here it is given 1 sec. Parameter `-e` denotes the energy ranges of the lightcurve and if nothing is given then the default value of 3 to 80 keV is used. The `usergti` filename is specified by `-u` and the output filename by `-o`. A background lightcurve is created using the command `$laxpc_make_backlightcurve$`. The background light curve is subtracted from the light curve produced using the tool `lcmath`.

3 : Timing Analysis

Light are extracted into curves four different observation IDs. The lightcurve from the second observation ID is named L1 in this paper and it contains one burst, which we call B1. The lightcurve, L2 from the third observation ID contains two bursts B2 and B3. The bin time of all these light curves is 1s.

All the lightcurves have a persistent count rate of ~ 200 counts/sec and L1 contains a burst B1 with a peak count rate reaching ~ 947 counts/sec and a decay time of ~ 7 seconds.

The lightcurve 2 contains two bursts B2 and B3 respectively. B2 has a peak count rate of ~ 2368 counts/sec with a decay time of ~ 22 seconds and B3 has a peak rate of ~ 3076 counts/sec with a decay time of ~ 16 seconds. B3 is large compared to B2. These are shown in Figure 3.1.

3.1: Lightcurve 1 and L2 plotted with bin time 1 second in the energy range of 3.0 to 80.0 keV.

3.1 Energy-Resolved Burst Profiles

The default energy range of the lightcurves is 3.0 to 80.0 keV. To analyse the energy dependence of the bursts, light curves are created in different energy ranges. The lightcurves of the first burst B1 are created in 3-5keV, 5-7keV, 7-9keV, 9-11keV, 11-13 keV and 13-15 keV ranges. Lightcurves of all the other bursts are created in 3-6 keV, 6-9 keV, 9-12keV, 12-15keV, 15-18keV and 18-21keV. Their corresponding backlight curves are also created as before. The background-subtracted light curves are used for the analysis. The burst profiles of six energy values are plotted in the same window. These combined plots of a few sample burst profiles are given below in the following Figures 2.3 and 2.4.

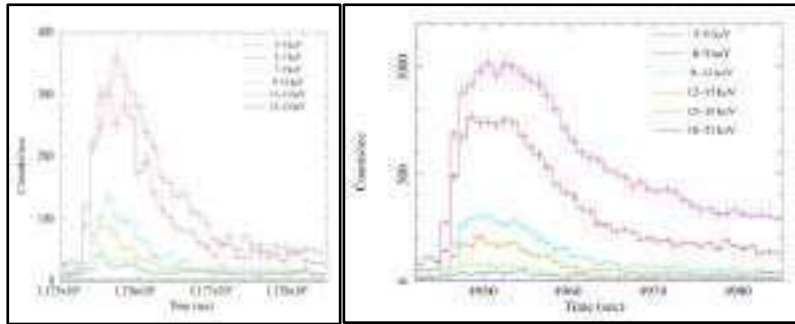

Figure 3.3: Energy-resolved burst profiles of L1:B1 and L2:B2

It is seen that the burst count rate is decreasing with increasing value of energy. The count rate is maximum for the 3.0 to 5.0 keV range in B1 and the 3.0 to 6.0 keV range in B2, and B3. Burst property is identifiable only up to ~21 keV.

3.2: Analysis of Thermonuclear Bursts

To observe the variation of Decay Time with different energies, the individual burst-like events are created in various energy ranges and fitted using model Constant(CO) and BURS. The CO model is used to fit the persistent part and the BURS model to fit the burst region. Few sample fitted burst profiles of lightcurve 1 in energy ranges 3.0 to 5.0 keV, 5.0 to 7.0 keV, 7.0 to 9.0keV, 9.0 to 11.0 keV, 11.0 to 13.0 keV and 13.0 to 15.0 keV are shown as in the below figures.

Figure 3.5: Energy range 3.0-5.0 keV and 5.0-7.0 keV of burst B1

The fitted parameters namely, CO (Constant), ST (Starting Time), PT (Peak Time), DT (Decay Time), and BN of B1 of light curve 1 in the various energy ranges are given in Table 2. We can see that burst characteristics, specifically, the decay time, change with energy range. The decay time of the burst is compared with the increasing energy range and the values are given in Table 3. From all these observations, it is seen that in most cases the decay time shows a decreasing nature as the energy increases. The plots of energy against decay time are shown in the following figures.

Figure 3.6: Variation of decay time with energy

Energy Range	ST (S)	PT (S)	DT (S)	BN (c/s)
3 to 5	11752.11	11756.83	7.00	350.0
5 to 7	11752.14	11756.06	6.83	285.0
7 to 9	11752.66	11756.05	4.75	127.64
9 to 11	11752.73	11755.33	4.87	86.0
11 to 13	11752.95	11754.77	3.49	45.0
13 to 15	11753.03	11755.16	4.04	33.0

Table 2: Variation of decay times with increasing energy in B1

Energy Range (keV)	Decay time (Sec)
3 to 5	7.00
5 to 7	6.83
7 to 9	4.75
9 to 11	4.87
11 to 13	3.49
13 to 15	4.04

Table 3: Fit parameters at different energy ranges of B1 of L 1

4: Results and Conclusion

The light curve is created for the atoll source 4U 1636-536 using 2018 year LAXPC data shows 15 Type I bursts. The third burst B3 has the highest count rate of ~3076 counts/sec. Burst B8 is with the second highest count rate of ~2961 counts/sec and B15 with ~2905 counts/sec. Energy-resolved analysis of these bursts shows that the burst-like property is only distinguishable up to 21 keV. All of the bursts show a decreasing intensity as the energy ranges are increased. The comparison of the decay time of each burst with different energy ranges showed a similar trait of reduced decay time with increasing energy.

Abstract

Oxalate ion is present in a variety of fruits and vegetables. The content of oxalate ion present in a specific fruit or a vegetable can be determined by carrying out experiment on the crushed pulp of that fruit or vegetable. The experiment gives the strength of oxalate ion content which can be directly related to the amount of oxalate ion present in that specific fruit or vegetable.

Introduction

Oxalate is the dianion with the formula $C_2H_4^{2-}$, also written $(COO)_2^{2-}$. Oxalate occurs in many plants, where it is synthesized by the incomplete oxidation of carbohydrate. The root or leaves of Rhubarb and buckwheat are high in oxalic acid. Other edible plants that contain significant concentrations of oxalate include in decreasing order, star fruit (carambola), black pepper, parsley, poppy seed, amaranth, spinach, chard, beets, cocoa, chocolate, most nuts, most berries, fishtail palms, and beans. Although unusual consumption of oxalates (for example, the grazing of animals on oxalate-containing plants such as *Bassia hyssopifolia* or human consumption of wood sorrel) may result in kidney disease or even death due to oxalate poisoning.

Tomatoes are a popular fruit (though often used as a vegetable) widely cultivated and consumed worldwide. They are native to South America but have been grown in Mexico and other parts of the Americas for thousands of years. Tomatoes are members of the nightshade family, along with potatoes, peppers, and eggplants. Tomatoes are a good source of vitamins A and C, potassium, and fiber. They also contain lycopene, a powerful antioxidant thought to have several health benefits, including reducing the risk of certain types of cancer and heart disease. There are many varieties of tomatoes, ranging in size from small cherry tomatoes to large beefsteak tomatoes. They can be eaten raw or cooked in various dishes, including salads, soups, sauces, and stews. Tomatoes can also be canned or dried in recipes throughout the year. Tomatoes are generally considered a healthy food choice but contain a moderate number of oxalates. Oxalates are compounds in many plant-based foods that can form kidney stones in some individuals. Additionally, drinking plenty of water and maintaining a healthy lifestyle can help prevent the formation of kidney stones.

This report describes a method for the estimation of oxalate ion content in red and green tomatoes. Oxalate ions are extracted from the fruit or vegetable by boiling pulp with dil. H_2SO_4 . Then the oxalate ions are estimated volumetrically by titrating the dilution with standard $KMnO_4$ solution.

Procedure

1. Weigh 50 g of fresh (green) tomato pulp and crush it to a fine pulp using a pestle and mortar.
2. Transfer the crushed pulp to a beaker and add about 50 ml dil. H_2SO_4 to it. Boil the content for 2 minutes.
3. Cool and filter the contents in a 100 ml measuring flask.
4. Make the volume up to 100 ml by adding distilled water.
5. Take 20 ml of solution from the measuring flask into a titration flask and add 20 ml of dil. H_2SO_4 to it.
6. Heat the mixture to about $60^\circ C$ and titrate it against N/10 $KMnO_4$ solution taken in

a burette. The end point is the appearance of permanent light pink colour.

7. Repeat the above procedure for ripened (red) tomato

Results and Discussions

Weight of fruit taken each time = 50 g

Volume. of pulp extract taken in each titration = 20 ml

Normality of KMnO_4 solution = 1/10

Tomato type	Volume of KMnO_4 added (ml)
Red	27.6
Green	23

Results

Normality of oxalate ion in red tomato = 0.138N

Normality of oxalate ion in green tomato = 0.115 N

Strength of oxalate ion in red tomato = 6.072 g/litre

Strength of oxalate ion in green tomato = 5.060 g/litre

Conclusions

Our observations showed that the oxalate ion content in ripened tomatoes (red) is more than that of fresh (green) tomatoes. Hence, we can conclude that oxalate ion content in tomatoes increases with ripening. The estimation of oxalate ion content can help in research in many other fields, such as various harmful effects of oxalate on our body and its relation with kidney disorders.

Introduction

The development of a country is an intricate process influenced by a myriad of economic, social, political, and cultural factors. Each nation embarks on a unique developmental path based on its specific circumstances, available resources, and challenges. The competitiveness of a country, in this context, is shaped by the diverse types of capital it possesses. The different types of capital are (i) Natural Capital (Natural Resource Capital), (ii) Man Made Capital (iii) Financial Capital (iv) Institutional Capital (v) Human Capital (vi) Knowledge Capital (vii) Cultural Capital. In the contemporary digital age, knowledge capital holds significant importance. The rapid advancements in technology and the prevalence of digital platforms have transformed the way societies function. Access to information, innovation, and the ability to adapt to technological changes are crucial components of knowledge capital. Countries that prioritize education, research and development, or countries that foster a culture of continuous learning are better positioned to thrive in the digital era. Knowledge capital not only drives economic growth but also enhances a nation's resilience in the face of global challenges. While all types of capital are essential for a nation's development, the increasing dominance of the digital order underscores the critical role of knowledge capital. Investment in education, technology, and innovation is key to ensuring sustainable and inclusive development in the contemporary world. But developing countries like India are facing a threat of Brain Drain which decelerates the development process of the country. The migration of highly educated individuals seeking better opportunities abroad, remains a persistent challenge for India. This phenomenon poses significant implications for the nation's economic growth, intellectual capital, and social development. Against this backdrop, it is relevant to discuss the measures to be taken in the context of the National Education Policy (NEP) 2020.

Brain Drain and Impact

Brain-drain, the phenomenon of skilled professionals seeking opportunities abroad, has a historical backdrop that spans several decades. Notably, countries like India witnessed a significant exodus of professionals and scientists, particularly to the United States and Western nations. Certain regions, such as India, China, the Philippines, and various African nations, have been hotspots for brain drain. Conversely, countries like the United States, Canada, Western Europe, and Australia have been favoured destinations for skilled migrants. The motivations behind brain drain are multifaceted. Skilled individuals often migrate in pursuit of enhanced career prospects, access to cutting-edge research facilities, higher income avenues, political stability, and an improved quality of life.

The impact of brain drain on source countries is complex. While it results in a loss of crucial human capital necessary for economic progress and innovation, remittances from expatriates can bolster the economy of these nations, offering a dual effect. Destination countries benefit significantly from brain drain. They gain access to highly skilled workers who contribute substantially to their economies, research institutions, and cultural diversity, enriching the social fabric. In response, some source countries have initiated "brain gain" initiatives. These strategies aim to reverse brain drain by creating attractive job opportunities, enhancing research infrastructure, and providing incentives for skilled professionals to return home, thereby bolstering domestic expertise. Additionally, a contemporary concept known as "brain circulation" has emerged. This phenomenon underscores the fluidity of the talent

movement, where professionals traverse between countries, accumulating diverse experiences, fostering international networks, and contributing to multiple nations throughout their careers. This dynamic interplay fosters a global exchange of knowledge and expertise, challenging the traditional notion of brain drain as a unidirectional flow.

Data Point regarding Knowledge Capital

As per data shared by Union Minister of State for Education Subhas Sarkar in the Lok Sabha in February, 30.13 lakh Indian students have gone abroad for higher studies since 2017. In 2022 alone, 7.5 lakh students left the country, a 69 percent increase compared with 2021 and a 28 percent rise from the pre-pandemic figure in 2019.

Another interesting fact is that the economic ascent of both China and India can be ascribed to a myriad of factors fostering sustained development. While both nations stand as formidable economic giants in Asia, China has surged ahead. China's rapid progress can be primarily attributed to its emphasis on human development, including healthcare and education, coupled with its authoritarian political structure and equitable resource distribution. These factors have propelled China into becoming the world's fastest-growing economy.

In contrast, India's lag can be traced back to its shortcomings in prioritizing crucial areas such as improving literacy rates and investing substantially in human development. Additionally, India's democratic system, while a fundamental strength, has faced challenges in swift decision-making, potentially hindering rapid economic advancement when compared to China's centralized approach. Now China is a 16 trillion-dollar economy and India is a 3.9 trillion-dollar economy. The question is what transformed China into such a big economy. The answer to this is the innovation and research of that country. Knowledge generation is a competitive pillar for every country. This is evident from the number of patents, which is 1.2 million, filed by China every year. At the same time India has only 54000 patents to its credit in a year. This figure itself shows the urgent need to give more emphasis to knowledge generation. At this juncture National Education Policy is relevant

The National Education Policy (NEP) 2020 emphasizes the importance of innovative pedagogy and smart learning environments. Educational institutes in India should focus on incorporating smart education to stay ahead in the global learning landscape. This incorporation demands a focus on five crucial aspects: making education enjoyable, engaging, efficient, effective, and ethical. Enjoyable and engaging smart education can leverage augmented reality (AR) and virtual reality (VR) technologies to create immersive learning experiences, enabling students to explore complex concepts and virtual environments. Collaboration tools, discussion forums, and social learning networks should be considered to foster peer interaction and collaborative problem-solving, boosting student engagement and motivation. NEP 2020 aims to make Indian institutions globally competitive, thereby retaining talent domestically.

Negative Impacts of Brain Drain

1. **Loss of Human Capital:** Brain drain results in the loss of highly skilled and educated professionals, which can hinder the development of a knowledge-based economy in India. This loss of human capital is particularly significant in sectors such as technology, medicine, engineering, and academia.
2. **Reduced Innovation:** Many of the brightest minds leave India, which can lead to a decline in innovation and technological advancement within the country. This can hinder the development of cutting-edge industries and limit economic diversification.
3. **Economic Consequences:** When highly skilled individuals emigrate, India loses out on the potential economic contributions they could have made through taxes, entrepreneurship, and job creation. This can lead to a brain drain-induced economic loss.
4. **Healthcare Sector:** Brain drain in the healthcare sector can result in a shortage of doctors, nurses, and medical professionals, particularly in rural areas. This affects the overall health and well-being of the population.

5. Education Sector: The emigration of teachers, researchers, and educators can negatively impact the quality of education in India, which can have long-term consequences on the country's human capital development.

Positive Impacts of Brain Drain

1. Remittances: Many Indian expatriates send remittances back to their families in India, contributing to household income and helping to reduce poverty for some. These remittances can also have a positive impact on the overall economy.
2. Skills and Knowledge Transfer: Some individuals who emigrate gain valuable experience, knowledge, and skills abroad, which they may bring back to India at a later stage. This can benefit various industries and sectors.
3. Diaspora Engagement: The Indian diaspora can serve as a valuable resource for the Indian economy by fostering economic, political, and cultural ties with other nations. This can lead to trade and investment opportunities.
4. Return of Talent: Over time, some individuals who emigrate may choose to return to India, bringing their expertise and global exposure back to the country. This can contribute to the development of various sectors.

Conclusion

India, with a population of 1,428,627,663, forms 17.76% of the world population. The Human Flight and Brain Drain Index, ranging from 0 (low) to 10 (high), for India was 7.5 in 2023. Brain Drain affects India due to limited educational infrastructure, lack of research opportunities, and attractive prospects overseas. However, the ongoing debate regarding the overall impact, shows positive effects on both source and destination countries. The brain drain continues to challenge India's economic growth and development. However, the NEP 2020 represents a significant step toward tackling this issue. By creating an environment conducive to education, research, and innovation, India can transform brain drain into brain gain. Sustained efforts in education reform, infrastructure development, and global collaborations are essential. Retaining intellectual capital ensures a brighter future for the nation and its citizens. Through these strategic initiatives, India can nurture its talented youth, encouraging them to contribute significantly to the nation's progress.

Recycling of PET Bottles

Sijo Francis^{1*}, Dr. Anu Antony^{1*}, Dr. Joby K V^{1*} & Dr. Jose James^{1*}

^{1*}Assistant Professor, Research and Post-Graduate Department of Chemistry, St. Joseph's College Moolamattom, Idukki 685591, Kerala, India

Introduction

Polymers are essential materials composed of repeating monomer units linked together to create long chains. Polyethylene terephthalate (PET) is a common thermoplastic polymer within the polyester family. PET finds widespread use in various applications, including clothing fibers, liquid, and food containers, thermoforming in manufacturing, and as an engineering resin when combined with glass fibers. One of its most well-known applications is in the production of soft drink bottles. Additionally, PET-based materials are in demand for their stability and durability in antimicrobial coatings, particularly in the medical field due to the rise in nosocomial infections and antibiotic-resistant bacteria.

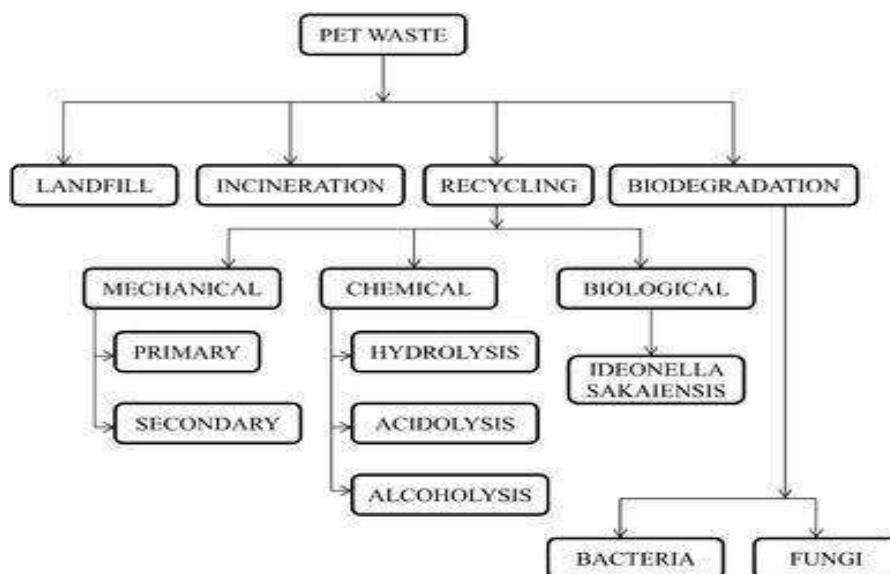

PET Bottles

PET is a colourless, transparent polymer that is almost unbreakable and can be recycled well. These good properties led to a broad distribution of PET as a packaging material for beverages. By contrast with beverage cans or cartons, the transparency allows the beverage to be seen. The unbreakable nature of PET is an advantage over glass bottles. Moreover, PET is distinctly lighter than glass.

Recycling of PET Bottles

Recycling processes are the best way to economically reduce PET waste. On the other hand, as the price of virgin PET remains stable, new and cheaper technologies for recycling PET benefit the PET recycling industry by providing the industry with relatively cheaper PET. Different methods can be adopted for the degradation of PET.

Steps in PET Bottle Recycling

Procedure

The PET bottle is cut into small pieces of appropriate size. It is washed with distilled water & dried. To a 10% NaOH solution in 100 ml mixed solvent of ethanol and water (20:80) in a 300 ml flask, 2g PET resin was added and the flask was heated to 110°C for 0.5 hr. The unreacted residue was filtered and the filtrate was acidified by 20% sulphuric acid to give a solution with white solids. White solids separated by filtration were washed with water and dried.

PET flakes

Unfiltered TPA.

The white powder of TPA

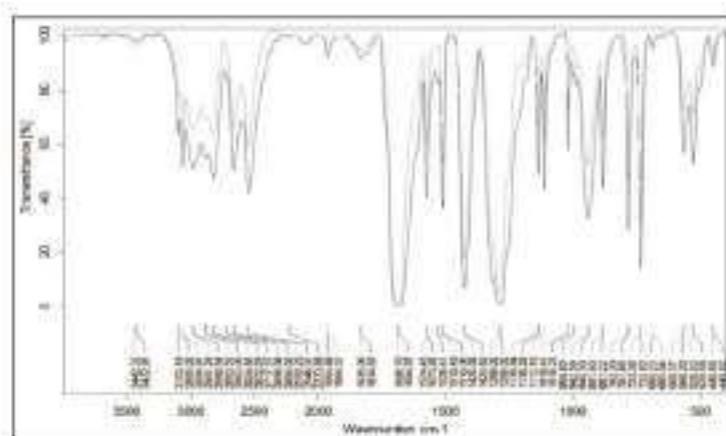

Results and Recommendations

PET resin was decomposed to disodium terephthalate by the reaction with NaOH, which was then protonated to terephthalic acid (TPA) by sulphuric acid.

- The Melting Point of Terephthalic Acid was found to be 300°C.
- TPA is a white crystalline powder.
- The white solid product obtained through alkaline hydrolysis of PET was characterized by a recording of FT-IR spectra to be confirmed as terephthalic acid. The FT-IR spectra of the obtained product have shown the same characteristic bands as well as standard TPA.

FT-IR Spectra of standard TPA and TPA obtained by alkaline hydrolysis of PET
Based on the findings & results of this project, it is recommended that,

- ✓ Various government, private sectors, NGOs & industries can create job opportunities for limited-income people to participate in PET/ plastic collection.
- ✓ Promote recycling of PET bottles & other plastic waste through adoption of good practices in collection & selection of the appropriate methods.
- ✓ Designing community PET recycling collection programs greatly increases the quantity & quality of collection & reduces the overall recycling cost. Two best practices are,
 - To establish an effective & ongoing consumer education program.
 - To design PET bottles with screw-neck tops as accepted for recycling.
- ✓ Promote & encourage current investments in PET recycling by offering subsidies.
- ✓ Prohibit the impart of second-hand machinery/ old technology for soft drinks& water bottling factories, however new machinery contributes to waste saving.

Abstract

The primary objective of the study was to evaluate the social-emotional competency of school teachers in Kerala. The study was conducted on a group of 327 teachers including both males (N=265) and females (N=62). A convenient sampling method was used to select the sample. The present study tried to find out any significant difference in teachers' social-emotional competence with respect to their demographic details. The researcher used self prepared questionnaire and the Teachers' Social Emotional Competency Scale (2008) developed by W.L. Nonglait and E.B. Myrthong for data collection. The data was collected by using the survey method. The statistical procedures used to analyse the acquired data were the 't' test, ANOVA, and correlations. The study found that there is a significant difference in the social-emotional competency of teachers based on certain demographic factors such as gender, residential area, marital status, monthly income, etc. Further, it revealed that the teachers' social-emotional competency did not vary on the basis of total experience, religion, qualification, and the number of children. The study also revealed that the social-emotional competency of teachers related to age, as the age increased the social-emotional competency of teachers became reduced.

Keywords:- Social Emotional Competency

Introduction

Teachers play a vital role in the development of students, not only academically but also in their social and emotional growth. Social-emotional competency is an essential aspect of effective teaching, as it enables educators to connect with students, understand their needs, and create a supportive learning environment. This study aims to investigate whether there is a significant difference in teachers' social-emotional competency based on the number of children they have.

Brown, J., Wilson, A., & Martinez, D.(2021) "Teachers' Social-Emotional Competency and Classroom Management Strategies". This research explored the relationship between teachers' social-emotional competency and their classroom management strategies. The study demonstrated that teachers with higher social-emotional skills were more likely to implement proactive and positive behaviour management techniques, resulting in improved student behaviour. This is fulfilled when the number of children is controllable for the teacher within the limited boundaries.

In addition to this Anderson, T., Martinez, L., & Brown, M. (2018) "The Impact of Teachers' Social-Emotional Competency on Parent-Teacher Relationships" explored how teachers' social-emotional competency influences the quality of parent-teacher relationships. The results indicated that teachers with strong social-emotional skills were more effective in building collaborative partnerships with parents, leading to increased parental involvement and support for students in conflict resolution and collaboration a strong bond benefiting the child's well-being,

A study conducted by Garcia, J., Smith, L., & Johnson, K. (2022) investigated in their research “Teachers’ SocialEmotional Competency and Classroom Climate” the impact of teachers’ social-emotional competency on classroom climate. The study found that teachers who demonstrated higher than 40 social-emotional skills created a positive and inclusive classroom environment, fostering a sense of belonging and enhancing student engagement.

It's important to note the number of children as a factor to support and foster their individualism, whereas large classes may pose more challenges. However, it's not only the matter but also the support, resources, and training available to teachers. Schools can help enhance the social and emotional competencies of teachers through professional development, support programs, and creating conducive teaching environments.

Variables		Sum of squares	df	Mean square	F
Self-regulation and management of emotions	Between Groups	151.75	4	37.93	1.62
	Within Groups	7518.59	322	23.35	
	Total	7670.34	326		
Articulation of interpersonal knowledge and skills	Between Groups	504.54	4	126.13	2.24
	Within Groups	18071.12	322	56.12	
	Total	18575.67	326		
Ability to discern and understand others	Between Groups	72.64	4	18.16	0.87
	Within Groups	6671.07	322	20.71	
	Total	6743.71	326		
Ability to interact effectively	Between Groups	113.75	4	28.43	0.62
	Within Groups	14106.71	322	20.71	
	Total	6743.71	326		
Teachers Social Emotional Competency Total	Between Groups	2127.36	4	531.84	1.38
	Within Groups	123963.66	322	43.81	
	Total	126091.02	326		

Results and Analysis:

The distribution of the sample based on the Number of Children shows majority of the sample had 2 children. It is 42.5 percent of the total sample. A sample having no children was 23.2 percent of the total sample. A sample having a single child (N=52) was 15.9 percent. A sample has 3 children (N=49) and more than 3 children (N=11) and their corresponding percentages are 15 and 3.4 respectively.

Table no. 1: ‘ANOVA’ with respect to number of children.

From the above table, the ‘F’ values of the table are not statistically significant. The table shows that there won’t be any significant difference in teachers’ social-emotional competency on the basis of the number of children. This may be because individual differences in personality such as empathy, emotional intelligence, and communication skills can significantly impact a teacher’s social–emotional competency but are not necessarily linked to whether the teacher has children or not or the number of their children. Therefore, the hypothesis ‘there will be a significant difference in teachers’ social-emotional competency on the basis of the number of their children’ is rejected.

Conclusion:

The findings of this study have found that there was no significant difference in teachers’ social-emotional competency based on the number of their children. Thus the hypothesis is rejected and therefore emotional competency was not varied on the basis of the number of children. This has provided valuable insights into the relationship between the number of children teachers have and their social-emotional competency. Understanding this relationship can help inform teacher training and professional development programs, ultimately contributing to improved teaching practices and student outcomes.

Abstract

The major objective was to study the attitude of college lectures towards educational administration. The sample constituted a of total 203 college lecturers belonging to seven districts of Kerala. The Attitude towards Educational Administration scale prepared by Dr. T.R. Sharma was used this for this study. The data was collected, scored, and calculated. Statistical procedures used are mean, Standard Deviation. 't' test, ANOVA, and Correlation. The study revealed that there is significance in the attitude of college lectures toward educational administration based on some demographic factors such as monthly income and residential area. Also, the study revealed that age, and educational qualifications designation did not affect the attitude toward educational administration. The study shows that 69.5 percent hold extremely negative attitudes towards educational administration. About the attitude, the assistant professors hold a highly negative attitude towards educational administration.

Keywords: Attitude, College Lectures, Educational Administration

Introduction

The research was about finding out whether there are any significant differences in the attitude of college lecturers based on their type of institution. Mangore (2015) examined the Attitude of Teachers towards the Teaching Profession and the result indicates that there is a significant difference in Positive attitudes towards the Teaching Profession of the Arts and Sciences group. Science groups have negative attitudes toward the teaching profession. Sharma, (July- August 2013) conducted a study on the attitude of teachers towards Continuous Comprehensive evaluation (CEE) the study conducted was mainly an argument to find out the attitude of teachers towards continuous and comprehensive evaluation. Accordingly, the hypothesis was formulated. For this purpose, a sample of 100 teachers was purposively selected. After establishing proper rapport the attitude scale was administered to the subjects. The data was scored according to the scoring procedure given in the manual. To study the significance of difference between the various groups t-test was applied. The overall results indicated that there is a significant difference between the attitude of school teachers toward continuous comprehensive evaluation of locality experience and the nature of the school. For the collection of data for the present study, the investigator used a standardized tool named. Teachers' attitude scale towards continuous comprehensive evaluation given by Dr. Vishal Sood and Dr. Mrs. Arti Anand. Educational policy needs to be directed toward improving aspects of teaching, such as instructional practices and teacher attitudes. Kumar (2016) conducted a study on the Research aptitude of different academic streams at the postgraduate level. The study aimed to assess the research aptitude of postgraduate students of Haryana. The study was conducted on 150 students and the finding shows negative attitude among the post-graduate students towards research.

The basic qualities of an ideal teacher are genuinely affectionate and tender-heartedness, a readiness to share the responsibility involved in a lecture room, an inspiration to provide meaningful training experiences for all scholars, and an eagerness towards their subjects. Negative attitudes displayed in the school by teachers may result in negative performance while positive attitudes put forth by teachers in the school may result in a positive performance. The attitude of a teacher, consciously or unconsciously, directly or indirectly affects students' academic performance.

Results and Discussions

	DESIGNATION			Total
	Designation, Professor	Designation, Assistant professor	Designation, Guest faculty	
Attitude- above 50	1	18	8	27
attitudegroup: Attitude- 43 - 50	1	25	9	35
Attitude below 43	5	83	53	141
Total	7	126	70	203

The table revealed that there are 203 faculties; among that attitude, more than 50 are assistant professors.

The study shows that 18 assistant professors have an attitude above 50. the samples belonging to assistant professors were (N=126), 62.1 percent and those belonging to guest faculty were (N=70), 34.6 percent and those belonging to the category of professor were (N=7), 3.4 percent. The samples belonged to a group who were not stressed (N=74), 63.5 percent and who felt stressed were in (N=74), 36.5 percent. Attitudes that were above 50 were considered extremely high and positive attitudes, those that belonged to a score of 43-50 were considered moderated positive attitudes and the group that belonged to less than 43 belonged to a category of extremely low negative attitude towards educational administration. majority of samples belonged to the married group 74.9 Percent (n=152), and the rest were unmarried 25.5 percent (N=51). The majority of the sample were Postgraduates (N=140), 69.0 percent, and samples with Ph.D. were (N=51),25.1 percent and those with Ph.D. and above qualified were (N=12), 5.9 percentages. 40.39 % of respondents belong to the age group of 30 – 39 (n = 82). Among them male respondents are (n=29) 14% and female respondents are (n=53) 26% of the total sample.

Respondents belong to the age group of 20-29 is 34.9 (n = 71). Among them, male respondents are (n=15) 7.28 and female respondents are (n=56) 27.5% And 13.7% of respondents belong to the age group of 40-49 (n = 28). Among them male respondents are (n=11) 4.4% and female respondents are (n=17) 8.3% And 7.88 respondents belong to the age group of 50-59 (n = 16). Among them male respondents are (n=11) 5.4% and female respondents are (n=5) 2.4 % And 2.95 respondents belong to the age group of 60 and above (n = 6). Among them male respondents are (n= 5) 2.4% and female respondents are (n=1) .49%

Conclusion

The present study on Teachers' Attitudes toward Educational Administration reveals that the Teachers' Attitude toward Educational Administration is unfavorable to a percentage of 69.47. As per the hypotheses included it reveals the demographics that the researcher developed were not the reasons for developing a negative attitude towards educational administration among teachers. It might be based on the educational system that prevailed in Kerala.

Abstract

The main objective of the study is the evaluation of career conflict among adolescents in Idukki district, Kerala. A total of 300 adolescents, including boys(N=132) and girls(N=168), participated in the study. The sample was chosen using a convenient sampling technique. The current study aimed to determine whether there were any appreciable differences in adolescent career conflict according to their demographic information. For data collection, the researcher employed a self-made questionnaire and the Career Conflict Scale (2015). The survey approach was used to gather the data. The 't' test, ANNOVA the statistical technique utilised to examine the collected data. According to the study, there is a significant difference in career conflict among adolescents depending on certain demographic factors, such as the type of school which is higher among the students of government schools as compared to students of CBSE. Additionally, it showed that there was no difference in adolescent career conflict based on the type of family, religion, birth order, or the level of education of the parents.

Introduction

The choice of a career is among life's most crucial choices. The time in a student's life when they must make ethical decisions about their careers is adolescence. It is a period of major life transformation. The career will depend on the courses taken at this level. The most crucial time for adolescents is picking a career. Career selections that, if made improperly, could substantially impair a person's future adolescence (both physically and emotionally).

Career conflict has an impact on a lot of students. The professional choice process is crucial for both adolescent boys and females. To better their future, adolescents must choose a profession at a specific stage of life. However, an adolescent decision about their career is influenced by several factors, including environmental, social, and personal factors. Adolescents find it challenging to select the ideal career because of this. Adolescent boys and girls select distinct vocations, as shown by several research. The career decision-making process highlights how individuals choose a career trajectory; moving from a state of confusion to a decision. Mau, Calvert& Gregory (1997). In 2004, Kniventon performed a study on students' career conflicts. The research is concerned with identifying several elements that influence students' career decisions. Employment opportunities, personal aptitudes, educational attainment, cultural influences, family ties, gender differences, school type, decision-maker location, religion, environment, family values, personality, financial circumstances, socioeconomic status, parents' educational and occupational backgrounds, and employment opportunities are just a few of these variables.

The adolescent stage is typically viewed as a difficult and important one since the pupils must confront and handle numerous basic adjustments. A person learns to deal with the physical and social changes that distinguish adult behaviour from that of children during the psychological phase of adolescence. Stress is a result of many factors during this time. One of the most common challenges that teenagers face is choosing a career path. Making early career decisions is the most difficult for adolescents. One of the most important developmental stages of adolescence is the exploration of one's future aspirations and job objectives.

Adolescents strive to develop a sense of self-worth and responsibility for their decisions during their years in school. The upper secondary stage should be utilised by students to help them decide on the right educational and professional paths based on their interests, abilities, aptitudes, goals, and personality qualities. Therefore, every adolescent should carefully select their career to ensure that it is a perfect fit. The selection of a rewarding vocation should be the aim of today's youngsters.

Result and Discussions

Table no:1

Mean standard deviation and corresponding 't' values obtained based on the type of school

Variables	Mean of government school N=87	SD	Mean of CBSE school N=213	SD	't' value
Social	65.80	6.143	63.74	6.604	2.504*
Educational	32.14	3.087	30.91	3.765	2.533*
Personal	31.94	3.639	30.73	3.329	2.780**
Work culture	27.28	4.100	25.03	4.408	4.088**
Family	37.55	5.434	35.40	6.425	2.743**
Gender	25.10	5.632	20.43	5.438	6.688**
Career conflict	219.82	20.804	206.24	20.054	5.261**

*significant at 0.05 level ** significant at 0.01 level

Young people's career conflict has important features. All other dimensions are significant at the 0.01 level, except for the educational dimension, which is significant at the 0.05 level. The students from government schools had a higher mean score in the overall career conflict scale and all of its subscales than the students from CBSE schools, according to all the aspects. It suggests that the sort of education had an impact on the conflict in the career.

The study revealed that there is no significance based on the type of family. It indicated that the type of family does not affect career conflict. The study again revealed that there is no significance based on religion. It indicated that religion does not affect career conflict among adolescents. Hence, the hypothesis is rejected.

The study revealed that there is no discernible difference based on the father's educational background. It showed that adolescents' career conflict is unaffected by the father's educational background. It became clear that the educational background of the mother had no bearing. It showed that adolescent career conflict is unaffected by the mother's educational background.

The study showed that adolescents' social subscales were based on where they lived. The estimated 'F' value of the subscale social is (4.03) and is significant at the 0.05 level, and the overall level of professional conflict among adolescents is significant at the 0.05 level. As per the study, the subscale social is higher among rural and lower among semi-urban and shows

semi-urban urban kept a difference with rural groups. Urbans did not vary with the other two groups.

Conclusion

The study "Career Conflict among adolescents" attempts to examine the degree of career conflict among adolescents based on their various demographic characteristics, including, type of school, religion, birth order, type of family, and father and mother's educational background. Based on age group, the researcher can discover that there is a sizable variance in professional conflict among adolescents. According to the study, there is a significant difference in career conflict among adolescents depending on certain demographic factors, such as the type of school which is higher among the students of government schools as compared to students of CBSE. The study contributes to our understanding of adolescent career conflict. The study's findings open up a new channel of knowledge and insights for all parties involved, particularly those who are involved in the education system, such as educators, researchers, policymakers, counsellors, and other higher authorities.

Abstract

The prime objective of the study was to evaluate the emotional maturity among young adults. The study was conducted on a group of 300 young adults including both males (N=125) and females (N=175). A convenient sampling method was used to select the sample. The tools used were a self-prepared questionnaire and an emotional maturity scale (Singh & Bhargava, 2010). The obtained data was analyzed using the SPSS tool and conducted t t-tests, ANOVA, and Correlation. The study found that there is no significant difference in emotional maturity among young adults based on demographic factors such as gender, religion, residential area, job status, education, family structure, marital status, and consumption of alcohol. The study also revealed that emotional maturity is related to age, as the age increased the emotional maturity among young adults became reduced.

Keywords: Emotional Maturity, Young Adults

Introduction

The concept of the 'young adult', also synonymous with adolescence and youth, is heavily context-dependent. Over time, the perception of the concept has shifted from merely a developmental outlook to one that is also bound by a socio-cultural understanding. Broadly, it is believed to be a stage between childhood and adulthood and is influenced by several social, economic, and cultural factors. Young adulthood is a unique developmental period that occurs between the ages of 18 and 25 years, during which there are key developmental tasks that allow the young adult to participate in self-exploration and identity formation (James and James, 2008). Young adulthood is a period of transition from adolescence to early adulthood with significant age-appropriate developments. "Emerging adulthood" is a term often used to refer to the period beginning in the late teenage years and extending into the mid-twenties (Feldman, 2017).

Emotional Maturity means a person's ability to control his/her emotions and express them in a socially desirable manner. Emotions can be described as some sort of feelings that are associated with some instincts or biological drives. According to Raruch, Grotberg & Stutman (2008), "The capacity to sublimate, to direct one's instinctive hostile energy into creative and constructive outlets is part of Emotional Maturity." It means controlling one's emotions rather than allowing the emotions to control which doesn't mean the emotions to be hidden or repressed. An emotional person can give expression to his emotion at the right time and in a proper manner. This means emotional maturity is having proper emotions at the proper time and expressing them in the proper form and proper quality. Emotional Maturity is the result of healthy emotional Development.

Emotional immaturity may play a role in impulsive and violent offenses, such as assault or robbery. It may not have the same impact on white-collar crimes, which often involve complex motivations and decision-making processes. Emotional maturity can be a contributing factors to crime rates, particularly regarding impulsive and aggressive offenses. Understanding emotional immaturity can help healthcare professionals develop targeted interventions to prevent or treat emotion-related mental health problems.

Results and Discussions

The emotional maturity among young adults hasn't got any significant difference by gender. The present study supported the study of Jane Smith (2018). This study explored to examine the relationship between emotional maturity and social relationships, specifically considering

gender as a potential influencing factor. The research involved a large sample of participants from diverse backgrounds, including both males and females. The findings indicated that there were no significant differences in emotional maturity and social relationship skills between genders, suggesting that these aspects of human development are not inherently gender-dependent.

The age group doesn't play an important role in building emotional maturity among young adults. The mean of age group 20 and below is 114.16 and its standard deviation is 27.41. The mean of the age group above 20 is 107.73 and its standard deviation is 29.41. Thus the difference is not statistically different.

Emotional maturity is not statistically significant based on education, religion, residential area, and job status. It is important to recognize that individual cases can differ and some individuals may find that the factors play a role in their emotional development.

The mean score for the emotional maturity of the nuclear family is slightly higher than the mean score for the emotional maturity of the joint family and the mean score for the social relationship of the joint family is higher than the mean score for the social relationship of the nuclear family. However, the calculated 't' value is lower than the table value (1.96) and there is no significant relationship between emotional maturity and family type.

As per the results, the emotional maturity among young adults has no significant difference based on marital status. The present findings contradicted to previous study conducted by Anderson, Johnson, Thompson et al.,(2020). The study revealed that emotional maturity was positively associated with social relationship satisfaction among both single and married individuals. However, the relationship between emotional maturity and social relationship satisfaction was significantly stronger among married individuals compared to single individuals.

The findings also revealed that the emotional maturity of young adults was not significantly varied based on consumption of alcohol. The mean of individuals who consume alcohol is 113.59 and the mean of individuals who do not consume alcohol is 107.49. However, the difference is not statistically significant. The present findings contradicted with the study of Anderson and Wilson et al.,(2019). The study shows that nonconsumers of alcohol exhibited higher levels of emotional maturity compared to alcohol consumers.

The study also revealed that total emotional maturity is negatively related to age, which means that as age increases, emotional maturity decreases. Emotional maturity can contribute to development at any age, and it can be influenced by a range of individual and environmental factors. While age can be a contributing factor, it is just one element in the complex development of emotional maturity.

Conclusion

The study was conducted within a limited period, so it has certain limitations. However, the study found that emotional maturity is related to age. Therefore, emotional maturity is an indispensable aspect of a young adult's life, and profoundly influences the personal growth, overall well-being, and success of an individual. Emotional maturity plays a pivotal role in managing stress, maintaining mental health, and achieving professional success. Thus, recognizing and cultivating emotional maturity is crucial for guiding young adults toward a fulfilling and well-rounded life.

Abstract

In the fast-paced and dynamic business environment of India, maximizing team performance through effective management is a critical imperative. This article explores the multifaceted landscape of team management in the Indian context, probing into the unique challenges and opportunities. It provides insights into the key strategies for effective management, including leadership, communication, cultural sensitivity, and talent development geared toward optimizing team performance.

Keywords: Team performance, Effective management, Leadership, Communication, Cultural Sensitivity, Talent Development

Introduction

India, a burgeoning economic powerhouse, thrives on diversity, innovation, and a youthful workforce. The success of organizations in this diverse and complex environment heavily relies on maximizing team performance. Effective management is not only about steering the ship but also about navigating the turbulent waters of varied cultures, languages, and aspirations. This study attempts to explore the nuances of team management in the Indian context and outline strategies to ensure teams perform at their zenith.

Challenges in the Indian Context

Managing teams in India comes with a unique set of challenges. India's multicultural landscape, varying languages, and regional disparities require a management approach that is not one-size-fits-all. Managers must understand and navigate these challenges to maximize team performance. Moreover, the generational diversity within the workforce, from Baby Boomers to Gen Z, adds another layer of complexity.

Multigenerational workplaces often require different management approaches. According to a survey conducted by the Confederation of Indian Industry (CII), understanding the motivations and aspirations of various age groups is pivotal for ensuring their alignment with organizational goals. In the Indian context, where family values hold immense significance, especially among older employees, recognizing and respecting these values is essential for effective team management.

Strategies for Maximizing Team Performance

The various strategies which can be followed in organisations to maximise team performance are:

1. Leadership: Leadership is the cornerstone of effective team management. In India, where hierarchical structures are still prevalent in many organizations, leaders need to strike a balance between authority and approachability. The research survey conducted by the Indian Institute of Management, Bangalore, suggests that leaders who adopt a more participatory leadership style tend to have higher employee engagement levels.

Additionally, a study by the Tata Institute of Social Sciences (TISS) underscores the importance of empathetic leadership in the Indian culture. Leaders who show empathy and actively listen to their team members tend to create a more positive work environment and foster better team performance.

2. Effective Communication: In a country with 22 officially recognized languages and a multitude of dialects, effective communication is a paramount challenge. Organizations need to implement communication strategies that cater to linguistic diversity. Studies show that companies investing in multilingual communication tools have a 23% higher rate of cross-functional collaboration.

The digital age has further transformed communication in India. A report by Nielsen indicates that organizations leveraging digital communication channels have a competitive edge. It reveals that 76% of Indian consumers prefer digital channels for communication, making it essential for companies to adapt to this trend.

3. Cultural Sensitivity: Recognising, understanding, and respecting the rich tapestry of Indian culture is essential for effective team management. A study by the National HRD Network found that organizations that promote cultural sensitivity and diversity tend to have more innovative and high-performing teams. Encouraging cultural exchanges, celebrations, and training programs can foster an inclusive work environment in organisations.

The Confederation of Indian Industry (CII) emphasizes the importance of cultural sensitivity by highlighting that fostering a sense of belonging among team members from diverse backgrounds can result in a 33% increase in team productivity.

4. Talent Development: India is the home to a vast pool of talent, but nurturing and developing that talent is crucial for team performance. The National Association of Software and Service Companies (NASSCOM) surveys indicate that organizations with robust talent development programs witness a 21% increase in employee productivity. Investing in continuous learning, upskilling and career growth opportunities is a pivota for effective team management.

In the Indian context, talent development often requires a customized approach. A study by the National Skill Development Corporation (NSDC) highlights the importance of skill development initiatives tailored to regional and sector-specific needs. Developing industry-specific skills and knowledge can result in a 25% increase in team performance.

Case Study: Infosys - A Model of Effective Team Management

Infosys, one of India's leading IT services companies, stands out as a model of effective team management. The emphasis of Infosys on leadership development, language diversity, cultural sensitivity and talent development has consistently led to high team performance. Infosys invests significantly in leadership training programs, linguistic diversity initiatives and cross-cultural awareness workshops. These efforts have contributed to the strong global presence and continued success of the company.

Infosys has taken a comprehensive approach to leadership development. They have introduced initiatives such as mentorship programs and leadership training modules customized to different employee segments. These initiatives have resulted in a 20% increase in the retention of high-potential employees.

Infosys is also a frontrunner in leveraging technology for communication and collaboration. They use digital tools to bridge language gaps and encourage cross-functional collaboration. Their digital communication approach has led to a 30% improvement in project delivery timelines.

Infosys fosters a culture of cultural sensitivity through initiatives like cultural exchange programs and celebrating diverse festivals. Such efforts have led to a 25% increase in employee satisfaction scores.

Finally, Infosys has implemented tailored talent development programs that address the specific skills and knowledge requirements of its employees. These sector-specific programs have resulted in a 15% improvement in project quality.

Conclusion

Maximizing team performance through effective management is an ongoing journey, especially in the diverse and dynamic landscape of India. Leaders and managers in this context must be agile, adaptable and sensitive to the unique challenges presented by this multifaceted environment.

By prioritizing leadership development, multilingual communication, cultural sensitivity, and talent development, organizations can create an environment where teams thrive, innovate and achieve their full potential. In the Indian dynamic business landscape, effective team management is not just a goal; it is a competitive advantage that can lead to sustainable success.

Abstract

In the volatile business world, resilience in management is not just a desirable trait but a necessity. This article attempts to analyse the vital concept of resilience in management and offers insights into thriving during challenging times by providing empirical evidence of how adaptive leadership, effective communication, employee support and a culture of learning are essential for resilient management. The study also discusses the role of technology in building resilience.

Keywords: Resilience, Adaptive leadership, Effective communication, Employee support

Introduction

In a rapidly changing business environment, resilience is the linchpin of effective management. Resilient leaders adapt, persevere and guide their teams through adversity, ensuring stability and progress. This article covers the indispensable concept of resilience in management, demonstrating the impact of resilience on organizational performance.

Significance of resilience in management

Resilience in management has demonstrated its significance through various research studies. Organizations led by resilient leaders consistently outperform their counterparts, especially during the period of crisis. Research studies revealed that companies with resilient leadership achieved a 5.3% increase in revenue during the 2008 financial crisis period compared to their less resilient peers. In a more recent study by McKinsey, companies with resilient leaders fared 2.2 times better in total shareholder return during the COVID-19 pandemic compared to less resilient companies.

Role of technology in building resilience

In the digital age, technology plays a pivotal role in building resilience. Recent data shows that organizations embracing technology for resilience purposes are better equipped to handle disruptions. According to Gartner, 85% of organizations that integrated digital technologies into their resilience strategies reported a significant reduction in downtime during disruptions.

Moreover, artificial intelligence and data analytics have become valuable tools in predicting and mitigating risks. Research studies by Accenture found that companies using AI for risk management reduced their exposure to disruptive events by 50% and decreased the associated costs by 25%.

Strategies for thriving in challenging times

The strategies that organisations can adapt to face the issues include:

1. Adaptive Leadership: Adaptive leadership has a quantifiable impact on organizational success. It was found the Harvard Business Review states that companies with adaptive leaders were 10% more likely to survive industry disruptions and had a 7% higher return on assets compared to those without adaptive leadership. Moreover, organizations utilizing data-driven insights for adaptability were found to outperform their peers by 5%.

2. Effective Communication: Empirical evidence underscores the importance of effective communication in resilient management. The studies revealed that organizations with

transparent and empathetic communication experienced a 47% decrease in employee turnover and a 17% increase in productivity. Organizations leveraging digital communication tools showed a 25% improvement in engagement metrics.

3. Employee Support: The study published in the Journal of Occupational Health Psychology found that organizations investing in employee well-being programs saw a 28% reduction in sick days and a 22% increase in job performance. Moreover, organizations implementing telemedicine and virtual well-being programs experienced a 35% improvement in employee health and productivity.

4. Learning and Adaptation: Resilience in management is inextricably linked to a culture of learning and adaptation. International studies revealed that companies embracing a culture of adaptability had a 34% higher profit margin compared to those resistant to change. In a survey conducted by the Boston Consulting Group, 82% of companies that actively promoted a culture of learning and adaptation reported increased revenue over the past three years.

Conclusion

The analysis demonstrates that resilience in management is more than a buzzword; it's a proven strategy for success. It is just a snapshot of the overwhelming evidence supporting the impact of resilient leadership. By adopting adaptive leadership, nurturing effective communication, prioritizing employee well-being and fostering a culture of learning and adaptation, managers can transform challenges into opportunities. Organizations with resilient management can perform better, adapt faster and emerge stronger in the face of uncertainty, especially when technology is embraced as a resilience enabler.

Abstract

The prime objectives of the study examine Influencing factors of stress vulnerability among middle-aged people. The present study analyse the differences between socio-demographic details and stress vulnerability among middle-aged people. The sample was selected by using a convenient sampling method (n=249). The tools used were a self-prepared socio-demographic data sheet stress vulnerability scale (L.H. Miller and A.D. Smith, 1985). The obtained data was analyzed using the SPSS tool and conducted t-test. ANOVA and Correlation. The study found that there is a significant difference in Stress vulnerability among middle-aged people based on some demographic factors such as type of Economic status, Religion, , Education qualification.

Keywords: Stress Vulnerability, Middle- Aged people

Introduction

The middle-aged population represents a significant demographic group experiencing various stressors due to work, family, health, and societal expectations. According to WHO “Stress can be defined as a state of worry or mental tension caused by a difficult situation. Stress is a natural human response that prompts us to address challenges and threats in our lives. Everyone experiences stress to some degree. The way we respond to stress, however, makes a big difference to our overall well-being”.

Stress vulnerability refers to an individual's susceptibility to experiencing negative effects from stressors in their environment. It is a concept used in psychology and psychiatry to understand why some people are more likely to experience mental health problems in response to stress than others. Several factors can contribute to stress vulnerability, including genetic predisposition, early life experiences, personality traits, coping skills, and social support. For example, individuals with a family history of mental illness may be more vulnerable to stress-related disorders, such as anxiety or depression. Similarly, people who experienced childhood trauma or abuse may be more susceptible to stress-related disorders later in life. Personality traits can also play a role in stress vulnerability. Some individuals may be more prone to negative thinking patterns, perfectionism, or low self-esteem, which can increase their susceptibility to stress-related problems. On the other hand, people with positive coping skills, such as problem-solving, social support, and relaxation techniques, may be more resilient to stress.

Stress vulnerability is a complex and multifactorial concept that is influenced by a range of biological, psychological, and social factors. Understanding stress vulnerability can help healthcare professionals develop targeted interventions to prevent or treat stress-related mental health problems.

Results & Discussions

Stress vulnerability among middle-aged people can be influenced by a variety of factors, including religion. Different religions may have specific teachings, practices, and support systems that can affect how individuals in this age group cope with stress. Stress vulnerability among Muslims is different from Hindus. It is higher among Hindus and lower among Muslims. Muslims have low levels of stress vulnerability. Christians and others are not differentiated. The calculated 'F value of stress vulnerability is 9.149 and it is higher than the table value 3.78 and it is significant at 0.001 level. So, there is a significant difference in the stress vulnerability among middle-aged people based on their religion. .The present findings

supported the study. Watson et al. (1990), the study found that there is a significant difference in stress vulnerability with respect to religion.

Middle-aged individuals may experience stress due to financial concerns, job stability, and other economic factors. The calculated F value of stress vulnerability is 61.71 and it is higher than the table value 4.60 and it is significant at 0.001 level. So, there is a significant difference in the stress vulnerability among middle-aged people based on their economic status. Middle-aged belongs to the high class and the middle class is different from the lower class. The high class has lower levels of stress vulnerability.

Typically, higher levels of education can provide individuals with better problem-solving skills and access to higher-paying jobs, potentially reducing financial stress. However, the relationship between education and stress vulnerability is complex and can vary from person to person. Lower education qualifications may face more challenges in the job market and may have limited access to resources that could help alleviate stress. Higher education levels can also provide individuals with better health awareness and coping strategies, which can contribute to reduced stress. The f value of stress vulnerability is 9.149 and it is higher than the table value 3.78 and it is significant at 0.001 level. So, there is a significant difference in stress vulnerability among middle-aged people based on their educational qualifications. Further the study revealed that there is no significant difference in Stress vulnerability among middle-aged people based on some demographic factors such as type of gender, age group, residential area.

Conclusion

The study found that there are significant differences in Stress Vulnerability among middle-aged couples based on certain demographic factors. Such as religion, economic status, and educational qualification. Further, it revealed that the Stress Vulnerability among middle-aged couples did not vary based on Gender, age group, or Occupation, The study was conducted within a limited period, so it has certain limitations. Stress vulnerability among middle-aged individuals is relevant and significant due to its wide-ranging implications for health, economy, family dynamics, mental well-being, and the development of effective interventions.

Abstract

The prime objective of the study was to evaluate the social relationships among young adults. The study was conducted on a group of 300 young adults including both males (N=125) and females (N=175). A convenient sampling method was used to select the sample. The tools used were self prepared questionnaire and the social relationship scale (Dr. Pradeep Kumar, Faheem Nabi, and Neha Thakur,(2017). The statistical procedures used to analyse the acquired data were the 't' test, ANOVA and correlations. The study found that there is a significant difference in social relationships among young adults based on certain demographic factors such as age, job status, and consumption of alcohol. Further it is also revealed that the social relationships among young adults did not vary based on gender, education, family structure, marital status, and place of residence.

Keywords: Social Relationship, Young Adults

Introduction

A 'young adult' is a term used to describe individuals who are in the stage of life that follows adolescence and precedes full adulthood. It's a transitional period characterised by various developments and challenges. Young adults typically fall into the age range of roughly 18 to 35 years old. Young adults though considered self-reliant and self-dependent, right guidance from significant others like parents and elders can help overcome the traumatic situation stemming from dealing with difficult choices.

A relationship between two or more individuals is termed a social relationship. For people, the social relationship is a sense of belongingness that pulls them together. Social relationships can be considered the basic units of social structures or society that bound people to live and work together. Social relationship is crucial for everyone for support and security throughout life and considerable research confirm that engagement in pleasing social relationships is also the key dimension for the psychological development of any individual. The major social relationship realm in a student's life includes parents, siblings, friends, peers, relatives, and teachers.

The social relationship among young adults is reduced in the present day due to advanced technologies. Thus the decline in good social relationships can affect the person's emotional maturity and well-being. The purpose of this paper is to identify the influence of social relationships on the sociodemographic factors of young adults. Once this objective is fulfilled various strategies or measures can be employed to reduce conflicts, shape the personality, and can build good social relationships among young adults.

Results and Discussions

The majority of social relationship scale hasn't got any significant difference by gender. Even though the subscales of social relationships such as siblings and peers have significant differences with the gender of the sample population at 0.05 level. It is clear that despite of other subscales, only siblings and peers got a significant difference with the gender. The peer group relationship and sibling relations significantly varied among males and females. Both of these relationships are higher among females than males. In all the subscales and total social relationships, females obtained a higher mean score than males. However, the difference is not statistically significant.

The results showed that there is a significant age difference in the total social relationship and its subscales except for relatives and strangers. The total relationship and its subscales parents, siblings, and friends show a significant difference at 0.01 level, and peers, strangers show a significant at 0.05 level.

The total social relationship and its sub-scales such as parents, siblings, friends, relatives, teachers, and strangers do not statistically differ based on education. The subscale peers show significant differences. The corresponding 't' value is 2.03. The calculated 't' value (2.03) is higher than the table value (1.96) and it is significant at 0.05 level. It means that there is a significant difference with the peers based on education.

The findings showed that the social relationship among young adults has no significant difference based on the family type. The calculated 't' value is lower than the table value (1.96) and it is statistically not significant. The mean score of the social relationship of a joint family is higher than the mean score of the social relationship of the nuclear family. While the social relationship among young adults has no significant difference based on marital status.

The subscales of parents, siblings, and strangers of social relationships do not vary based on the consumption of alcohol. In subscales relationship with friends, relatives, peers, teachers, and the total social relationship is statistically significant. It also revealed that nonalcoholic consumers keep more social relationships than alcohol consumers.

The subscale peers in the social relationship scale significantly differed based on religion. The calculated 'F' value of the subscale peers (3.20) is higher than the table value (2.99) and it is statistically significant at 0.05 level. It means that religion is influenced the peer group relationships. Muslims and Christians kept a difference in peer relationships. It is higher among Christians and lower among Muslims. Hindus do not differ from each other.

The residential area is a factor that influenced the subscale teachers in the social relationship scale. The calculated 'F' value of the subscale teacher (3.10) is higher than the table value (2.99) and it is statistically significant at 0.05 level. The semi-urban group remained different from the urban. Relationship with teachers is higher among semi-urban and it is lower among urban. Rurals do not differ from each other groups.

The total social relationship and the subscales of siblings and friends significantly differed based on job status. The subscales siblings and friends are significant at 0.01 level and total social relationship is significant at 0.05 level. The employed group kept a difference between the unemployed and students group in sibling relationships. It is higher among employed people and it is comparatively lower among the unemployed group. However, the group mean analysis of friends' relationships does not show any significant difference.

Conclusion

Social relationships are also an integral aspect of human existence, playing a crucial role in shaping the development and well-being of young adults. As they transition from adolescence to adulthood, the support and interactions they receive from various individuals significantly impact their emotional, cognitive, and social growth.

The study found that there is a significant difference in social relationships among young adults based on certain demographic factors such as age, job status, and consumption of alcohol. Further it is also revealed that the social relationships among young adults did not vary on the basis of gender, education, family structure, marital status, and place of residence.

Abstract

The prime objective of the study was to evaluate the self-confidence among single adolescents. The study was conducted on a group of adolescents (single child - 62, others - 120). Convenient sampling method was used to select samples. The present study was focused on finding out whether there is any significant difference in self-confidence among single adolescents and other adolescents. The study also tried to find out any difference in self-confidence with respect to age, gender, education, birth order, residential area, family type, and occupation of father and mother. The tools used were a self-prepared socio-demographic sheet, Agnihotri's Self-confidence Inventory developed by Regha Gupta and The data was collected by survey method. The statistical procedures used to analyse the acquired data were the 't' test, ANOVA, and correlations. The study found that single adolescents have higher levels of self-confidence. The study also revealed that there is a significant difference in self-confidence based on the type of family, birth order and occupation of the father. Self-confidence was more or less similar among boys and girls. It is not varied based on the occupation of the mother, residence type, age, and education. The study revealed that there is no correlation between age and self-confidence.

Keywords: Self-confidence, Single Adolescents

Introduction

The word adolescence is Latin in origin, derived from the verb 'adolescence', which means "to grow into adulthood". Adolescence is a time of moving from the immaturity of childhood into the maturity of adulthood. Though there is no single event or boundary line that denotes the end of childhood or the beginning of adolescence experts think of the passage from childhood into and through adolescence as composed of a set of transitions. These transitions are biological, cognitive, social and emotional which can be turbulent times for them. In the adolescent period, siblings play an important role in the social lives of most individuals.

Self-confidence is a crucial aspect of an individual's emotional and psychological development, particularly during adolescence a transitional phase between childhood and adulthood. Adolescence is marked by significant physical, cognitive, and social changes, leading to a heightened need for self-assurance and identity formation. During this time, young people may encounter various challenges that can either boost or hinder their self-confidence. Understanding the factors influencing self-confidence in adolescents is essential for fostering a positive self-image and empowering them to navigate life's complexities with resilience and assertiveness (Kaur. H, 2018).

Understanding and nurturing self-confidence during this period are essential for positive mental health, academic achievement, and building strong interpersonal relationships. In this context, it becomes essential to explore the factors influencing self-confidence in adolescents and identify strategies to help them develop a healthy sense of self-belief and resilience. While it offers certain advantages for parents and their children, it also brings its own set of unique challenges and considerations. Understanding single-child adolescents' experiences can inform parents, educators, and policymakers about how to best support their development and address any potential disadvantages they may face.

Results and Discussions

The findings showed that there is no significant difference in self-confidence among the adolescents based on gender, age group, education, residential area, and mother occupation. Because, Self-confidence is a result of a person's experience, upbringing, personality, and personal beliefs. It can vary widely among individuals within the same demographic groups. Additionally, people from different backgrounds can have similar levels of Self-confidence due to their unique life experiences and coping mechanisms.

The results also showed that there is a significant difference in self-confidence based on the family type. Here, it is found that a Nuclear family has more Self-confidence than a joint family. The Mean of a joint family is 24.61 and the mean of the nuclear family is 39.72.

Birth order is a factor that affects Self-confidence among adolescents. Single children have a higher level of Self-confidence and Middle children have a lower level of Self-confidence. The present findings supported the study conducted by Jean, T (2002). The research showed a significant difference in self-confidence between first-born and last-born adolescents, with first-borns reporting higher levels of self-confidence.

Father's occupation is also a factor that affects Self-confidence among adolescents. Children whose fathers work in the public sector have the highest Self-confidence and children whose fathers work in the private sector have the lowest Self-confidence.

Conclusion

Self-confidence in single adolescents refers to their belief in their abilities, worth, and capacity to handle challenges and succeed in various aspects of life. During this critical developmental stage, self-confidence plays a significant role in shaping their social, academic, and emotional well-being. Single adolescents with higher self-confidence are more likely to engage in positive behaviors take on new challenges, and maintain better mental health. Building self-confidence in adolescents can be achieved through supportive environments, positive reinforcement, setting achievable goals, and encouraging them to develop their strengths and talents. However, it is essential to note that self-confidence can fluctuate due to various factors, including peer pressure, academic stress, and personal experiences. Therefore, fostering a nurturing and encouraging atmosphere is crucial in helping adolescents build and sustain their self-confidence.

The study revealed that there is a significant difference in self-confidence based on the type of family, birth order and occupation of the father. Self-confidence was more or less similar among boys and girls. It is not varied based on the occupation of the mother, residence type, age, and education. The study revealed that there is no correlation between age and self-confidence.

Abstract

The major objective was to study emotional competence and self-concept among adolescents. The sample constituted a of total 220 school students. The Emotional Competencies Questionnaire in Youth and Adolescents Scale was prepared by Izabela, Zych, Rosario Ortega-Ruiz, Raquel Muñoz-Morales, and Vicente J. Llorent (2018) was used for this study. Self-concept was measured using the Adolescents Self-concept Short Scale: A version of PHSCS Feliciano Veiga, António Leite (2006). The data was collected, scored, and calculated Statistical procedures used are mean, Standard Deviation, 't' test, ANOVA, and Correlation. The study reveals emotional competence is higher in urban residents area but Self-concept was more or less similar among urban and rural areas.

Keywords: residential areas, self-concept, and emotional competence.

Introduction

Adolescence is a critical developmental stage marked by profound emotional and cognitive changes, where self-identity and emotional competence play a pivotal role in shaping future well-being. This research endeavors to shed light on the often-overlooked influence of residential environments on the self-concept and emotional competence of adolescents.

In a study conducted by Mehrotra, K & Dua, R. Sai (2014) on gender and locality matter in emotional competence among adolescents. The findings of the study revealed that the students have an average level of emotional competence on various dimensions of the emotional competence scale and the girls showed more enhancements in positive emotions than the boys. Urban students showed more positive enhancement in positive emotions than rural students. On all the other dimensions of the emotional competence scale and also on overall emotional competence, rural and urban students were found similar.

While previous studies have primarily focused on familial and peer dynamics, this investigation delves into the potential impact of neighbourhood characteristics, community resources, and socioeconomic factors on the intricate psychological landscape of young individuals.

Hundekar, et al, (2015) conducted a study on the Emotional competence of working and non-working women. The study was an attempt to examine the emotional competence of working and non-working women from urban and rural areas or Dharwad Taluk. The findings of the study suggested that emotional competence was higher in both urban employed and nonemployed women. Rural employed and non-employed women were incompetent with their emotions.

Kumar S (2012), attempted to explore the study on Emotional competence of senior secondary school teachers about their age, gender, type of school, and locality. The study was conducted to evaluate emotional competence based on gender, age, school type and locality. 200 secondary school teachers were taken as samples for this study. The findings of the study revealed that there is no significant difference was found in the emotional competence of teachers based on gender whereas a significant difference has been found in the emotional competence of teachers based on their age and type of school.

By analyzing the interplay between residential contexts and psychological development, this study aims to provide a comprehensive understanding of the multifaceted determinants that shape adolescent self-identity and emotional resilience.

Results & Discussion:

The sample collected shows that 70.0 percent of the adolescent sample belonged to the rural residential area (N=154). The percentage of Urban settlers is 30.0 percent (N=66).

Table - 1 Mean, Standard Deviation and Corresponding to 't' value of self-concept and emotional competence of adolescents based on their residential area.

Variables	Mean of Urban (N=66)	SD	Mean of rural (N=154)	SD	't' Value
Adolescents Self Concept Short Scale	126.45	15.97	125.98	16.34	0.196
Emotional Competence Scale	62.25	9.22	56.68	13.12	3.12*

**Significant level at 0.001

The table revealed that there is no significant difference in adolescents' self-concept based on residential areas. In the case of adolescents, self-concept is more or less similar among urban and rural areas. The 't' value is 0.196 therefore it is lower than the table value so there is no significance.

Considering the emotional competence in adolescents, urban residents have the highest level of emotional competence. The calculated 't' value (3.12) is higher than the table value, therefore it is significant at 0.001 level.

The present finding supported the study (Thompson,1995) The study found that individuals from rural areas scored significantly higher on measures of emotional awareness and empathy compared to those from urban areas. The researchers suggested that this might be due to stronger community bonds and more face-to-face interactions in rural areas.

This finding holds crucial implications, shedding light on potential socio-environmental influences on emotional development during adolescence. Urban environments often offer greater exposure to diverse social interactions, educational resources, and cultural experiences, which might contribute to the observed elevated emotional competence.

Conclusion

In Conclusion, the findings from this research shed light on the intricate interplay between residential areas, self-concept, and emotional competence among adolescents. The study reveals that while urban residents exhibit higher levels of emotional competence, the self-concept of adolescents remains relatively consistent across both urban and rural areas. These results highlight the complexity of the factors shaping adolescent development, suggesting that the influence of residential environments on emotional and psychological well-being may differ in nuanced ways. Further exploration is warranted to unravel the underlying mechanisms that contribute to these disparities, ultimately guiding the development of targeted interventions and support systems to enhance the holistic growth of adolescents, irrespective of their residential context.

Abstract

The major objective was to study emotional competence and self-concept among adolescents. The sample constituted of total 220 school students. The Emotional Competencies Questionnaire in Youth and Adolescents Scale was prepared by Izabela, Zych, Rosario Ortega-Ruiz, Raquel Muñoz-Morales, and Vicente J. Llorent (2018) was used for this study. Self-concept was measured using the Adolescents Self-concept Short Scale: A version of PHCSCS Feliciano Veiga, António Leite (2006). The data was collected, scored, and calculated. Statistical procedures used are mean, Standard Deviation, 't' test, ANOVA and Correlation. The Study reveals that emotional competence is higher among females, but self-concept was more or less similar among males and females.

Keywords: Emotional Competence, Self-Concept

Introduction

In contemporary society, the intricate interplay between gender and the development of self-concept and emotional competence among adolescents has garnered significant attention from researchers and psychologists. In a study conducted by Mehrotra, K & Dua, R. Sai (2014) Gender and locality matter in emotional competence among adolescents. The findings of the study revealed that the students have an average level of emotional competence on various dimensions of the emotional competence scale and the girls showed more enhancements in positive emotions than the boys. Urban students showed more positive enhancement in positive emotions than rural students. On all the other dimensions of the emotional competence scale and overall emotional competence, rural and urban students were found similar.

Adolescence, characterized by a pivotal period of self-discovery and emotional maturation, often coincides with the emergence of societal and cultural expectations linked to gender roles. Tariq Bhat (2022) conducted a Study of Socioemotional Competence Among Adolescence about Mental Health. The results revealed that there are diverse levels of social-emotional competence among adolescents. There is no significant difference in social-emotional competence and mental health among adolescents respect with to their Gender. The study also reveals that there is a positive interrelation between "Socio-Emotional competence and mental health among adolescents".

Consequently, understanding the influence of gender on the intricate web of self-identity formation and emotional regulation is crucial for comprehending the multifaceted challenges faced by adolescents during this critical phase of development. In a study conducted by Habib, U., Habib, O., Ansari, A (2016) on emotional competence in male and female adolescents of Jammu and Kashmir. The findings of the study revealed that male and female adolescents differ significantly with respect to their emotional competence. The various dimensions of emotional competence further revealed that female adolescents scored significantly higher on three dimensions of emotional competence (happiness, love, and interest). Dimension-wise analysis of emotional competence revealed that male and female adolescents do not differ on the following dimensions i.e., anger, sadness, and jealousy but they do differ on the dimensions of happiness, love, and interest.

This research endeavors to explore the nuanced connections between gender, self-concept, and emotional competence, to shed light on the dynamic interrelationship between these key elements in the context of adolescent psychological growth and well-being.

Results & Discussion:

The major findings of the study are given below:

The samples on the basis of class of study and gender revealed that 8 males (3.63%) and 33 females (15%) belonged to the 8th standard. In the 9th standard, there are 33 males (15%) and 15 females (6.81%). In the 10th standard, there are 15 males (6.81%) and 13 females (5.90%). In the 11/12th standard there are 12 males (5.45%) and 31 females (4.09%). In the above table, 16 males (7.27%) and 44 females (20%) were undergraduates.

T-test

Table 1 - Mean, Standard Deviation and corresponding 't' values obtained by boys and girls in self-concept and emotional competence of adolescents based on their gender.

Variables	Mean of boys (N=84)	SD	Mean of girls (N=136)	SD	't' Value
Adolescents Self Concept Short Scale	126.05	15.21	126.16	16.83	0.49
Emotional Competence Scale	54.53	14.01	60.72	10.55	3.71**

**Significant level at 0.001

The table revealed that there is no significant difference in adolescents' self-concept on the basis of gender. In the case of adolescents, self-concept is more or less similar among boys and girls. The 't' value is 0.49 therefore it is lower than the table value so there is no significance.

Considering the emotional competence in adolescents, girls have the highest level of emotional competence. The calculated 't' value (3.71) is higher than the table value, it is significant at 0.001 level.

The study found significant differences in emotional competence between male and female adolescents. Females displayed a higher degree of emotional competence compared to males, specifically in the areas of emotional expression and empathy.

The data unequivocally demonstrate that adolescent girls exhibit a markedly higher level of emotional competence when contrasted with their male counterparts. This finding is particularly significant as emotional competence plays a pivotal role in shaping an individual's ability to comprehend, manage, and effectively respond to emotions, thereby influencing various aspects of psychological well-being and social interactions. The observed discrepancy in emotional competence between genders points towards potentially intricate socio-cultural and developmental dynamics that may contribute to this phenomenon. It is conceivable that societal expectations and norms, as well as variations in emotional expression and communication styles, may contribute to the observed divergence.

Conclusion

In conclusion, the research findings underscore the profound impact of gender on the development of self-concept and emotional competence among adolescents. The evidence suggests that societal norms and cultural expectations significantly shape the way adolescents perceive themselves and manage their emotions, leading to distinct gender-based patterns.

Acknowledging the complex interplay between biological, psychological, and socio-cultural factors is crucial for implementing targeted interventions and fostering an inclusive environment that promotes healthy self-perception and emotional well-being for all adolescents, irrespective of gender. Further interdisciplinary research is warranted to unravel the intricate dynamics at play and devise comprehensive strategies that empower adolescents to navigate their identities and emotions in a way that fosters holistic growth and resilience.

Abstract

This study aimed to evaluate the emotional maturity of young adults in Kerala, involving a sample of 250 individuals aged 18-25, consisting of 100 males and 150 females, selected using a convenient sampling method. The primary objective was to identify any significant variations in emotional maturity based on demographic factors.

Data collection involved a self-prepared questionnaire and the Emotional Maturity Scale by Singh & Bhargava (2010), gathered through a survey. Data analysis employed 't'-tests, ANOVA, and correlations.

The results disclosed notable disparities in emotional maturity concerning gender and marital status. However, no significant variance was observed with regard to age group, residential area, family structure, emotional handling, taking initiative, or achieving a balanced life. A notable outcome was the lack of correlation between age and emotional maturity, implying that age alone is not a dependable indicator of emotional maturity in young adults.

Keywords: Emotional Maturity, Young Adults

Introduction

According to Brackett & Salovey (2006), Emotional maturity plays a crucial role in personal development and is associated with better mental health, improved communication, and more successful interpersonal interactions. When people think about maturity, the first thing that often comes to mind is age. Emotional maturity involves understanding, regulating, and expressing emotions. It empowers individuals to navigate life's challenges, fostering fulfilment and happiness.

Emotions are intricate psychophysiological states shaped by internal and external factors, encompassing physiological reactions, subjective experiences, and behavioural displays. Emotional maturity involves the ability to delay gratification, handle frustration, engage in long-term planning, and adapt to life's demands while maintaining effective interpersonal relationships.

Emotional stability results in improved self and interpersonal adjustments, heightened life satisfaction, and effective stress management. It is vital to understand that emotional maturity is not guaranteed with chronological adulthood, emphasizing its importance for healthy relationships. While related, emotional balance and emotional maturity differ; the former involves managing positive and negative emotions, primarily observed in adults, and should not be confused with emotional control, which some employ out of fear of consequences.

The period of young adulthood presents a myriad of challenges. While these individuals attain legal maturity, they often find themselves unprepared to navigate the complex situations that arise. Young adults tend to require more time to assess their issues and determine the most suitable course of action. Of particular concern is the emotional maturity of young adults. Emotional maturity is critical for individuals to exercise control over their emotions, express them in a healthy manner, and maintain self-respect and a positive self-concept. Contrary to common belief, age is not a reliable indicator of emotional maturity. It varies from one person to another. Developing emotional maturity is of utmost importance for young adults, as it can

have a profound impact on their transitional phase in life. The purpose of this paper is to identify the influence of emotional maturity on the sociodemographic factors of young adults.

Results and Discussions

The research titled Emotional Maturity among Adolescents and Its Importance by Mridula C. Jobson (2020) also yielded findings similar to those of previous studies. Factors such as age, gender of the participants, type of family, and the presence of siblings showed no association with the emotional maturity of the participants.

Emotional maturity played a central role in the assessment, allowing individuals to identify the causes of conflicts, seek common ground, and find mutually beneficial solutions. This quality is particularly advantageous for young adults as it equips them with conflict resolution skills and nurtures social and emotional competencies, such as empathy and emotional awareness.

The study specifically examined emotional maturity in young adults from Kerala's Idukki district, using tools like the Emotional Maturity Tool for data collection. Various statistical techniques, including mean, standard deviation, 't'-tests, cross tabs, ANOVA, and correlation, were employed to analyze the data and gain insights into the region's levels of emotional maturity.

The major findings of the study reveal that the majority of young adults in the sample fell within the 20-25 age group, with unmarried individuals exhibiting higher emotional maturity levels compared to their married counterparts. Additionally, males displayed greater emotional maturity than females, but emotional maturity did not significantly vary with age. Marital status was a key determinant, with emotional maturity differing significantly between married and unmarried young adults, while residential area, religion, and the pursuit of a balanced life showed no significant influence on emotional maturity. Furthermore, the type of family structure did not impact emotional maturity. Lastly, the findings suggest that young adults' abilities in handling emotions were relatively similar across the sampled population.

The tenability hypothesis was tested by examining the relationship between emotional maturity and various demographic factors. The results revealed that there were significant differences in emotional maturity based on gender and marital status, partially accepting the hypothesis. However, no significant differences were found based on qualification, age group, residential area, family type, handling emotions, taking initiative, balanced life, and religion, leading to the rejection of the hypothesis in these cases.

Conclusion

Youth, when equipped with knowledge and opportunities, can drive positive development. Young adulthood is pivotal, as it presents challenges and responsibilities shaping future paths. Emotional maturity is vital in this phase, impacting later well-being. This study examines emotional maturity in young adults and its link to socio-demographic factors, offering insights for stakeholders and future generations.

Abstract

The prime objective of the study was to evaluate the mathematical problem-solving ability among single adolescents. The study was conducted on a group of adolescents (single child - 62, others - 120). Convenient sampling method was used to select samples. The present study was focused on finding out whether there is any significant difference in the mathematical problem-solving ability among single adolescents and other adolescents. The study also tried to find out any difference in the mathematical problem-solving ability with respect to age, gender, education, birth order, residential area, family type, and occupation of father and mother. The tools used were self self-prepared socio-demographic sheets and a Problem-Solving Ability Test developed by L.N Dubey and Dr. C P Mathur. The data was collected by survey method. The statistical procedures used to analyse the acquired data were the 't' test, ANOVA and correlations. The study found that single adolescents have lower levels of mathematical problem-solving ability. The study also revealed that there is a significant difference in the mathematical problem-solving ability among adolescents based on age, gender, education, birth order, and occupation of the father. There is no significant difference in the mathematical problem-solving ability based on the occupation of the mother, type of family and residential area. The study revealed that there is a correlation between age and problem-solving ability.

Keywords: Problem Solving Ability, single adolescents

Introduction

The word adolescence is Latin in origin, derived from the verb 'adolescence', which means "to grow into adulthood". Adolescence is a time of moving from the immaturity of childhood into the maturity of adulthood. Though there is no single event or boundary line that denotes the end of childhood or the beginning of adolescence experts think of the passage from childhood into and through adolescence as composed of a set of transitions. These transitions are biological, cognitive, social and emotional which can be turbulent times for them.

Mathematical problem-solving ability is an essential skill for adolescents to develop as they prepare for their future academic and professional careers. Adolescents who have strong mathematical problem-solving skills are better equipped to handle complex problems and challenges that require analytical thinking and logical reasoning. In this essay, we will explore the importance of mathematical problem-solving ability in adolescents and how they can develop and improve this skill. Benjamin, E. W(2015).

Adolescents can also benefit from working with a tutor or mentor who can provide guidance and support as they develop their mathematical problem-solving skills. Another way for adolescents to improve their mathematical problem-solving ability is to use technology. Understanding single-child adolescents' experiences can inform parents, educators, and policymakers about how to best support their development and address any potential disadvantages they may face. This knowledge can help shape educational practices, parenting strategies, and social policies that promote positive outcomes for single-child adolescents. Additionally, studying this group can contribute to the broader understanding of family dynamics and the impacts of family structure on child development.

Results and Discussion

The results indicated that there is a significant difference between gender and problem-solving ability. Here, it is found that girls have more problem-solving ability than boys. The mean of boys is 6.44 and the mean of girls is 7.78. Hence, these findings contradict the study

of Fanai L. (2020). They found that no significant difference was found in mathematical problem-solving ability with respect to gender.

There is no significant difference between family type and problem-solving ability. This may be because the problem-solving ability in mathematics is primarily influenced by factors such as cognitive skills, education, and exposure to mathematical concepts. Family type might have an impact on a person's environment and upbringing, but it is not a direct determinant of one's mathematical problem-solving ability.

The findings also revealed that there is a significant difference between Self-confidence on the basis of age group. The calculated t value of problem-solving is 3.57 is higher than the table value this indicates that there is a significant difference between problem-solving abilities based on age group.

Education is a factor that affects the problem-solving ability among adolescents. The high school group kept a difference between the UG and HSS groups. HSS students have the highest problem-solving ability and high school students have the lowest problem-solving ability.

There is a significant difference in problem-solving ability by birth order. The single-child group kept different from the other group. Middle children have the highest problem-solving ability and single adolescents have the lowest problem-solving ability.

Father's occupation is also a factor that affects the problem-solving ability among adolescents. Children whose fathers work in the private sector have the highest mathematical problem-solving ability and children whose fathers work in the public sector have the lowest problem-solving ability. The study conducted by Mayer, R. E (1982) supported the present study. Children whose fathers worked in the private sector showed significantly higher mathematical problem-solving ability compared to children with fathers in other sectors. However, the problem-solving ability in adolescents doesn't vary by the Mother's occupation and residential area

The results also indicated that there is a correlation between age and problem-solving ability. This may be because the increase in mathematical problem solvability with age can be attributed to several factors, such as accumulated knowledge, experience, and cognitive development over time. As people grow older, they have more exposure to mathematical concepts and problem-solving techniques, which enhances their skills. The study conducted by Mazana et al., (2019) found a statistically significant positive correlation between age and mathematical problem-solving ability, indicating that older students tended to perform better in solving math problems.

Conclusion

The level of mathematical problem-solving ability among single adolescents may vary due to various factors, such as individual interest, educational background, and exposure to mathematical concepts. It's essential to provide a supportive learning environment and tailored guidance to help them improve their skills. Mathematical problem-solving ability among adolescents can vary widely based on individual aptitude, education, and exposure to mathematical concepts. Encouraging problem-solving activities and providing a supportive learning environment can help enhance their mathematical abilities.
