Book Review

A Review of 'Topics in Graph Theory'

Dr. Jomon Kottarathil¹

Dr. N.K. Sudev, *Topics in Graph Theory - A book on Graph Theory*, Owl Books, Thiruvananthapuram, Kerala India, 2018, 190 pp; ISBN 978-93-856662-1-6.

Graph Theory is a branch of discrete mathematics which interweaves the link between mathematics and almost all the 'new-gen' subjects. In truth, the subject continues to be an inevitable part in the study of Computer Science and uses mathematical logic in the field of computer sciences to bring out certain results. That's why Graph Theory is given as a core paper for computer engineering students.

There are a lot of basic or introductory books on graph theory available in literature. But "Topics in Graph Theory" by Dr. N.K. Sudev alias Sudev Naduvath seems to be a standalone reference book on Graph Theory. It is prepared as per the syllabus of the fifth semester Bachelor of Technology program in Computer Science and Technology under APJ Abdul Kalam Technological University, Thiruvananthapuram, Kerala, India. Being a text book, even though it does not go to the depth of the subject matter, it is definitely a beginner's guide or a handy dictionary to the enthusiast. The narrative is similar to that of a teacher who teaches in a class. Few topics such as join and ring sum, deletion and fusion, subdivision and smoothing, vertex-cut and edge-cut, 1-isomorphism and 2-isomorphism, path matrix and cycle matrix which usually less explained in other books on introductory studies are dealt with

¹ Savio Higher Secondary School, Devagiri, Kozhikode, Kerala, India; jomon.sjcm@gmail.com

extensively in the book. Besides motivating quotes, aesthetic sense in drawings and illustrations leave a high impression by the readers towards the book. The book is rich with application level problems and algorithms.

Sudev has done justice to the syllabus as well as to the students on covering the syllabus. In a bird's eye view the book has the following features: well explained and well-structured concepts, several examples for aspirants of learning, sufficient Bibliography, solved question papers, easy to refer index which cover even minute references and so on. Since it is primarily meant as a textbook for engineering students, Sudev made an extra effort to draw considerable number of diagrams and flow charts of algorithms and also explained them step by step. Though there are few typos, mastery of the author on the subject matter is explicitly seen while we go through the chapters.

The textbook is divided into ten chapters. The first chapter starts with a meaningful quote from the "Ambassador of Graph Theory" Frank Harary. It says, "Graph Theory serves as a mathematical model for any system involving a binary relation". It introduces the basic definitions, degree sequences, fundamental classes of graphs, subgraphs, spanning subgraphs and isomorphic graphs. For the characterization of degree sequences, the theorem known as *Havel-Hakimi Theorem*² could be added so that the students can easily identify whether the given sequence is graphical or not. The graph operations such as union, intersection, complement, join, ringsum, deletion, fusion, subdivision, smoothing are discussed in the second chapter. The third chapter is on the connectedness of graphs. Paths, cycles, distances, edge-deleted and vertex-deleted subgraphs are deliberated here.

The discourse in the fourth chapter includes the "Konigsberg Seven Bridge Problem", which is believed to be the foundation of Graph Theory. It may be a mere coincidence that the two pillars to whom the development of 'Konig(s)-Berg Seven Bridge Problem' (Graph

² Both Havel and Hakimi proved it separately. A non-decreasing sequence $s : d_1, d_2, \dots, d_n ; n \geq 2$ of non negative integers, where $d_1 \geq 1$ is graphical if and only if the sequence $s_1 : d_2 - 1, d_3 - 1, \dots, d_{d_1+1} - 1, d_{d_1+2}, \dots, d_n$ is graphical[1] [2].

Theory) in the 20th century owes much are Denes Konig and Claude Berg: The former wrote the first book on Graph Theory in 1936 after exactly 200 years of the publication of first article on graph theory by Leonhard Euler whereas the latter wrote the second prominent book on Graph Theory and introduced hyper graphs and is considered as an apostle of graph theory[3]. The fundamental concepts like Eulerian and Hamiltonian graphs, Fleury's algorithm, weighted graphs and the classic problems like 'Chinese Postman problem' and 'Travelling Salesman's Problem' are also seen in this chapter.

The fifth chapter deals with the directed graphs and their equivalence relations and networks. I think it covers almost all basic definitions related to digraphs. Unfortunately, no exercise problems are seen in the end of the chapter. Trees and their properties are elaborated in the sixth chapter. Though the connectedness is introduced in the third chapter and discussed in the sixth chapter, connectedness perceived through the vertex-cut, edge-cut, cut-sets, 1-isomorphism and 2-isomorphism and plenty of theorems related to cut-vertex and cut-edge make this chapter a unique one.

The planarity of graphs is introduced through the 'Three Utility Problem' in chapter eight. Related discourses like Kuratowski graphs, geometrical dual are followed in the chapter. Even though the concept of combinatorial dual graph is given in the syllabus, it is not described in the textbook. The reason may be that Whitney recognized the equivalence of geometrical dual graph and combinatorial dual graph [4]. The ninth chapter extensively explains the matrix representation of graphs such as incidence matrix, cycle matrix, cut-set matrix, adjacency matrix and path matrix. The final chapter explains various types of algorithms including the algorithm for connectedness and components, for spanning tree, for minimal spanning tree and for shortest path. The interconnections between various types of matrices are beautifully presented. The flow charts for these algorithms are added in the appendices.

As a textbook, a list of symbols used in the textbook for easy reference, answer key or hints for answers of exercise problems and the reference list of books (with reference to the pages) given in

chapter wise are preferably added. Keeping a little bit of history of the emergence of graph theory would strengthen the interest in students. Though the general mathematical concepts like pigeon-hole principle (Ref. Theorem 4.5.3 Dirac Theorem) and use of contra positive (Ref. Theorem 4.5.4 Ore's Theorem) are familiar to the students, they could be added in the appendix as glossary.

In short, the book "Topics in Graph Theory" by Sudev goes beyond the realm of a text book and provides a background on the basics of Graph Theory. The book is a synthesis of the flexibility in the writing and expertise of the author, hence the term 'flexpertise'[5] is an apt word to describe this book.

In Transit MEDIA, CULTURE & NATURE

Synergizing matters and events has always been the remedy for the ongoing clash between the existing multiple predominant forces. Nature, Culture and Media form the three pillars on which modern human existence is raised: a healthy proportion of the three form the need of the era. The twenty two scholarly articles on Nature, Culture and Media forming part of this work are the contributions of gifted academicians across the country.

This collection of articles aims at opening vistas of novel perceptions which are sure to bequeath an edifying experience to knowledge hunting readers. The unknown facets of Nature, Culture and the Media are being explored here, through these articles, in an attempt to decode the cipher of modernity.

Social Media- the Vox Populi of the Masses: A Cultural Reading of the Liberated Space in the Digital World

Roby Mathew

*Digital freedom stops where that of users begins...
Nowadays, digital evolution must no longer be a customer
trade-off between privacy and security. Privacy is not to sell,
it's a valuable asset to protect*

– Stephane Nappo

With the advent of computer and with the birth of the era of information technology, the quantum of information generated and transmitted across the globe has become unimaginable. The epoch making invention which changed the course of the world was the invention of the printing press which caused the democratization of education and information in the world. But with the passage of time various inventions put together to form the world of mass media. Media, though a socializing agent in the society with the potential to bring in the desired changes is an ideological apparatus in the view point of Marxist criticism. Hence it is manipulated and controlled by a set of powerful individuals. The voice of the common man was not heard on such mass media. But the advent of

ABOUT THE EDITORS

Jose James

Jose James is an Assistant Professor in the Research and Post-Graduate Department of Chemistry at **St. Joseph's College in Moolamattom**, Idukki, Kerala, India. Mr. James has recently submitted his PhD thesis under the faculty development program of the Indian University Grants Commission, under the supervision of Prof. (Dr.) Sabu Thomas (Pro-Vice Chancellor and Professor of Polymer Science and Engineering in School of Chemical Science, Mahatma Gandhi University, Kottayam) and Dr. George V. Thomas (Principal and Associate Professor, Department of Chemistry, St. Joseph's College, Moolamattom, India). He has extensive research experience in the field of interpenetrating polymeric networks (IPNs) and has two publications dealing with diffusion of IPN in *Polymer* (Elsevier) and on viscoelastic behavior of IPNs in the *New Journal of Chemistry* (RSC). He has attended more than 20 international conferences with one publication in IOP conference proceedings and has presented many research papers. In addition, he has co-authored three chapters published in international books. He has four years of research experience in polymer chemistry and nanotechnology at the laboratories of the School of Chemical Science, Mahatma Gandhi University, Kottayam, Kerala, India.

Sabu Thomas, PhD

Sabu Thomas is currently the Vice Chancellor of Mahatma Gandhi University, Kottayam, Kerala, India. He was the Founder Director of the International and Inter University Center for Nanoscience and Nanotechnology and is also a full professor of Polymer Science and Engineering in the School of Chemical Science of the same university. He is a fellow of many professional bodies. Prof. Thomas has co-authored many papers in international peer-reviewed

ABSTRACT

A series of interpenetrating polymer networks (IPNs) based on styrene butadiene rubber (SBR) and poly [methyl methacrylate] (PMMA) have been synthesized by Sequential polymerization technique. The effect of two initiating systems (Benzoyl peroxide (BPO) and Azobisisobutyronitrile (AIBN)) are employed in the polymerization of MMA during the fabrication of IPN. The viscoelastic properties of these IPNs were investigated in detail in the temperature range of -80 to 200°C and at a frequency of 1Hz. IPNs with 50 wt% of PMMA has broad transitions arising from β - and α -relaxations in PMMA. The morphology of the IPNs was analyzed with TEM images and tried to correlate these results with viscoelastic behavior and their damping properties.

10.1 INTRODUCTION

The central motive in materials science, especially in polymer technology, is to fabricate a material with effective performance, excellent properties, and an optimum cost-to-benefit ratio. The synthesis, properties, and applications of multicomponent polymeric systems are of great technical and educational interest in materials science. Polymer blending provides an efficient path for the creation of multicomponent polymeric systems [1]. The principal focus of polymer blending is to fabricate new materials with efficiency and low cost through commercially viable protocols. Interpenetrating polymer networks (IPNs) are one of the most rapidly growing areas in multicomponent polymeric systems [2].

The IUPAC compendium of chemical terminology defines IPNs as “polymers comprising two or more networks that are at least partially interlaced on a molecular scale but not covalently bonded to each other and cannot be separated unless chemical bonds are broken” [3]. IPNs are in fact a special class of polymer blend. The two characteristic features of IPNs [4] that distinguish them from other types of multiphase polymer systems are: (1) IPNs swell but do not dissolve in solvents and (2) creep and flow are suppressed in IPNs. Normal mixing of two or more polymers/copolymers does not lead to the creation of an IPN. The formation of an IPN is schematically represented in Fig. 10.1.

Only IPN strategy can admit the intermixing and intercalation of two or more cross-linked polymeric network systems [5]. Molecular level interpenetration is absent in almost all IPNs and true interpenetration occurs only at phase boundaries [6]. The sequential and simultaneous IPN fabrication routes are the most extensively used and studied methods [7].

PADAYANI

Salini L. R.

The most striking thing about Patayani and Kadamanitta poems is the fact that they have contributed significantly to the realization of self. It was not just a mimetic act, but has helped to satisfy the unconscious of the common man. They have made effective use of archetypal images. The book will focus on the psychoanalytical aspects of the form Patayani and will be looking on the major factors of what makes Patayani and Kadamanitta Kavithakal popular.

Abstract

A classic set of semi-interpenetrating polymer networks (semi-IPNs) have been fabricated using the judicious selection of a pair of thermoplastic and an elastomer with effective interpenetration between them. Semi-IPN based on styrene butadiene rubber (SBR) and poly [methyl methacrylate] (PMMA) has been fabricated by sequential polymerization technique. The different mechanical properties of semi-IPNs are investigated in detail. Tensile toughness values of semi-IPNs are evaluated and their chemistry is explained. Morphological analysis of semi-IPNs through SEM provides clear insight of their component distribution in it. This protocol of characterization in semi-IPN can definitely act as a platform for designing of new toughened plastic with low cost and facile fabrication protocol.

Key Words: IPN, semi-IPN, Toughened plastic, Mechanical properties

Abstract

A microwave assisted method for the oxidation of alcohols employing 3% ethylene glycol dimethacrylate (EGDMA) crosslinked polyvinylpyrrolidone - bromine complex (PVP-Br) in a solvent free condition is reported. Primary and secondary alcohols are easily converted into the corresponding carbonyl compounds using PVP-Br complex under microwave condition. A thermal comparison for each reaction was also carried out in order to get a clear understanding about the influence of microwave irradiation on the reaction yield. The effect of microwave power on the rate of oxidation and the stability of PVP- Br reagent under microwave conditions were also studied.

Key words: microwave assisted, polyvinylpyrrolidone, oxidizing reagent, polymer- supported, functionalized polymer

1. Introduction

Application of polymer-supported reagents in organic synthesis has grown over the years due to its convenient handling and easy work up procedures. But the main drawback of polymer-supported reagents is that the reaction kinetics is generally slow

Abstract

The uses of metal nanoparticles as therapeutical agents have been known from ancient times. Recently, noble metal nanoparticles have demonstrated their potential biomedical applications towards anticancer and antimicrobial fields. This review discusses the toxicity of selected cancerous and microbial cells the metal nanoparticles. The challenges in the targeted drug delivery are also briefly analyzed here.

Introduction

Cancer is the immoderate proliferation of abnormal cells. World Health Organization (WHO) stated cancer as the second top detrimental disease suffered by humanity. The uncontrolled cell division results in two types of mass of cells; benign and malignant tumours. The first type usually developed in a localized manner and the second type spread towards adjacent tissues by a process known as metastasis and was harmful to life. The causes of this mutagenic disease were genetic factors, chemical carcinogens, exposure to radiations, and tumour viruses. The modern food habits and lifestyle patterns lead to an increase in the number of cancer patients all over the world.

ആത്മീയതയുടെ ആഘോഷം ബനീഞ്ഞാക്കവിതകളിൽ

ഡോ. ജോഷി വർഗീസ്

ദസ്തയേവ്സ്കിയെപ്പോലുള്ള വിശ്വസാഹിത്യകാരന്മാർ ജീവിതത്തിലൂടെയും കൃതികളിലൂടെയും ഈശ്വരനോട് ചോദ്യങ്ങൾ ചോദിക്കുകയും ഉത്തരങ്ങൾ കണ്ടെത്താൻ അസ്വസ്ഥരായി അക്ഷീണപരിശ്രമം നടത്തുകയും ചെയ്തവരാണ്. വലീൽ ജിബ്രാന്റെയും കസൻദ്സാക്കിസിന്റെയും സാഹിത്യ രചനകളും നീത്ഷേയുടെ ഫിലോസഫിയും നമുക്കറിയാം. ഇവരിൽ നിന്നെല്ലാം എത്രയോ വ്യത്യസ്തമായിട്ടാണ് - എത്രയോ ലളിതമായിട്ടാണ് - ബനീഞ്ഞ ജീവിതത്തെയും മരണാനന്തരജീവിതത്തെയും കണ്ടത് എന്നത് ശ്രദ്ധേയമാണ്. ജീവിതത്തിന്റെ മാത്തമാറ്റിക്സ് ലളിതമല്ലെന്നും മനുഷ്യ ജീവിതം നേർവരയിൽ സഞ്ചരിക്കുന്ന ഒന്നല്ലെന്നും ജീവിതം നൽകുന്ന അഗ്നിപരീക്ഷകളിലെ ചോദ്യങ്ങളുടെ ഉത്തരങ്ങൾ എളുപ്പത്തിൽ കണ്ടെത്താനാവില്ലെന്നും നമ്മുടെ കവയിത്രിക്ക് അറിയാമായിരുന്നു. പക്ഷേ ഈ അറിവ് ബനീഞ്ഞാമ്മയെ ഭയത്തിലേക്കും ആകുലതയിലേക്കും ഉത്കണ്ഠയിലേക്കും തള്ളിവിട്ടില്ല. ആത്മീയ ദർശനമാണ് ബനീഞ്ഞയിൽ നിറഞ്ഞു നിന്നിരുന്നത് എന്നതാണ് അടിസ്ഥാന കാരണം.

മലയാളത്തിന്റെ മിസ്റ്റിക് കവി സിസ്റ്റർ മേരീ ബനീഞ്ഞയുടെ ഭൂരിഭാഗം കവിതകളിലും ആത്മീയതയുടെ ആഘോഷമാണ് നമുക്ക് കണ്ടെത്താൻ കഴിയുന്നത്. തന്റെ ജീവിതത്തിന്റെ ലക്ഷ്യത്തെപ്പറ്റി വാനമ്പാടി എന്ന ആത്മകഥയുടെ ആമുഖത്തിൽ ബനീഞ്ഞാമ്മ പറയുന്നു.

“മർത്യനെ സൃഷ്ടിച്ചതീശ്വരനാണെങ്കിൽ
ഈശ്വരനോടൊരു ചോദ്യം”

എന്നൊരു കവിതാ ശകലം ഞാൻ കേട്ടിട്ടുണ്ട്. എന്ത് ചോദിക്കാനാണ്?

Micro-finance and Micro credit for sustainable Business

Rev. Dr. Thomas George V, CMI

Need for managing financial risks has given birth to a number of micro credits, micro insurance products and many other financial services that are micro in nature. Over the years, micro finance as a financial service innovation is fast emerging as an important method of bettering the lot of the poor and the downtrodden. Micro finance is finance provided to benefit the low income women and men. It can be defined as provision of thrift, credit and other financial services and products of very small amount to the poor in rural, semi-urban or urban areas for enabling them to raise their income levels and improve living standards.

Micro credit is based on the premise that the poor have skills which remain unutilized or underutilized. In its latest report on the state of the micro finance industry, the Microcredit Summit Campaign says: if we want to provide financial services in a way that helps people to move out of poverty, then we need to provide things that cannot be stolen. In the last decade microfinance has penetrated major part of rural and sub urban India empowering particularly women. These women have taken up many professions including self employed sectors like cottage industries, tailoring, and handicrafts among other. This in turn has assisted in the overall development of the rural economy. This paper attempts to make a study on the contribution of micro finance and micro credit in sustainable business.

Key words: Micro Finance, Micro credit, Loss and Sustainability

Abstract

The Kyoto Protocol, 1977 made the countries to work out action plans to address the issues on climate change and the reduction of green house gas emissions. Even though it was a great march towards green earth, the issue of striking a balance between the industrial and economic development on one side and green initiative on the other side is a mammoth problem need to be faced by the world. This situation opened a platform for discussion upon the issue among the developed and developing countries.

Carbon trading initiatives in the world turned around mainly upon the carbon-capping and carbon offsetting which opens an opportunity to trade the unused credits as well to green technology for offsetting carbon emissions. Under carbon-cap trading programme, the countries with less emission can trade the credits among the countries with excess limits. In carbon offsetting, environment friendly technologies are developed or imported as well

The Nostalgic Nomenclature of Eateries: A Cultural Reading of the Names of Street Food Stalls in Kerala

Roby Mathew

*Assistant Professor in English
St. Joseph's College, Moolamattom*

Abstract

The culture of Kerala is inseparably entwined with the cultural development of hotels and cuisines. From the thatched teashops to the budding street food stalls stand as witness to the cultural changes that revolutionize the taste of the foodies in Kerala. The cultural intermediaries which are catalytic to the alteration in the food consumption of the Keralite people vary from social causes to economic rationale. Along with the modification of the ambience of hotels and street side food vending shops, the names too underwent transformations. The nostalgic names which anchor the consumer to a certain period in the history of Kerala magnify the prosperity and pristine ambience in the then time. This overcharging of the irrecoverable nostalgic past has an economic gain pervading underneath. This paper titled 'The Nostalgic Nomenclature of Eateries: A Cultural Reading of the Names of Street Food Stalls in Kerala' attempts to analyze the change in the names of hotels and street side food vending shops in Kerala in this decade. This study is backed by the application of Cultural Studies, the emerging theoretical area in the 21st millennium. The names of eateries in Kerala with the accompaniment of the typographies which take us to the past is a tool in the hands of late capitalism which opt for an aristocratic past which the modern society tries to recreate in such a manner that the consumers are wooed to move to them to experience the taste of the past.

मन्नु भण्डारी की कहानी 'आकाश के आइने में' चित्रित नारी समस्याएँ

Dr. Sobhitha Sebastian

Department of Hindi

St. Joseph's College, Moolamattam, Idukki

साहित्य आँखें है। जो देखता भी है और दिखाता भी। साहित्य की आँखों से हम समाज देखते हैं और समाज की आँखों से साहित्य देखते हैं। साहित्य की अनेक विधाएँ होती हैं। उपन्यास, कहानी, नाटक, आलोचना, आत्मकथा, निबंध आदि साहित्य की प्रसिद्ध और सफल विधाएँ हैं। अन्य गद्य रूपों की अपेक्षा कथात्मक साहित्य में पाठक की रुचि सम्भवतः सर्वाधिक तृप्त होती है। इसी कारण आधुनिक युग में कथा साहित्य का अभूतपूर्व विकास हुआ। इस में कहानी सब से मनोरंजक साहित्यिक विधा बन गयी। इसके ज़रिए समाज की यथार्थ स्थिति सरल एवं मनमोहक रूप में उजागर होती है।

हर युग में समस्याएँ रही हैं। लेकिन समस्याओं का स्वरूप, तीव्रता और विस्तार अलग-अलग है। इन सभी समस्याओं को नई कहानीकारों ने अपनी कहानियों द्वारा प्रस्तुत करने की कोशिश की है। ऐसे साहित्यकारों में अग्रणी है मन्नु भण्डारी। मन्नु भण्डारी परिवार, समाज, राजनीति, धर्म, प्रशासन, शिक्षा आदि क्षेत्रों में उभरती समस्याओं का अंकन करने में कटिबद्ध दिखती है।

मन्नु भण्डारी अधिकांशतः ऐसे स्त्री पात्रों को गढ़ा है जो अपने परिवार से परे जाकर अपनी पहचान बनना नहीं चाहती बल्कि पारिवारिक संबंधों के घेरे में रहकर ही समस्याओं से जूझते हुए अपने अस्तित्व को बरकरार रखने का प्रयास करती है।

'आकाश के आइने में' कहानी में शहरी एवं ग्रामीण नारियों की समस्याएँ मन्नु जी ने उजागर किया है। कहानी की शुरुआत शहर से होती है। शिप्रा पति से अलग होकर एक स्कूल चलाती है। उसे स्कूल में लेखा, दिनेश, सुषमा, प्रीती जैसे लोग मिलते हैं। नौकरी-पेशा सुषमा के माता-पिता उसका विवाह करना नहीं चाहते हैं। लेकिन वह महिम से कोर्ट मैरेज करने की तैयारियाँ खुद करती है। प्रीति घर की देखभाल के लिए नौकरी छोड़ती है तो पति नाराज हो जाता है। यह सब शहरी

कुमार अंबुज की कविता में उत्तर आधुनिकता

Dr. Jesty Emmanuel

Department of Hindi

Alphonsa College, Pala, Kottayam

वैश्वीकरण के परिणाम से उत्तर आधुनिक जीवन जगत अमानवीय माहौल से जटिल हो गया है। समकालीन समाज में दिन ब दिन बढ़ती स्वार्थता, धनलिस्सा, पदमोह आदि के कारण अवसरवादिता, समझौता परस्थता, क्रूरता, हिंसा आतंक आदि अमानवीय भावनाएँ बढ़ गये हैं। सत्य और अहिंसा के बुनियाद पर स्थापित भारतीय संस्कृति में नष्ट होनेवाली इनसानियत और भ्रातृत्व भावना को बचाने और जगाने के प्रयत्न में समकालीन कविता कर्मनिरत है। वर्तमान समय का नब्ज पकड़कर समकालीन कविता को दिशब्यापी करनेवाले कवियों में कुमार अंबुज का अद्वितीय स्थान है।

कुमार अंबुज ने संवेदनशीलता मौलिकता और अनुभव के बल पर वर्तमान समाज और जीवन को अपनी रचनाओं में समाहित किया है। उनकी रचनाओं में एक ओर हाशिएकृत मामूली आदमी की पीडा, संघर्ष, दर्द और तनाव का चित्रण है तो दूसरी ओर संवेदनशील पाठकों के हृदय को जगाने की अत्भुत क्षमता भी छिपी हुई है। प्रौद्योगिक और मीडिया संस्कृति के जाल में 'फँसकर खो गये मानवीय संवेदना को वापस लेने की निरंतर कोशिश में उनकी काव्य संवेदना पाठकों के हृदय को झकझोरती है। वर्तमान जीवन में रिस्तों के अभाव संबंधों की स्वार्थपरता, संवेदनहीनता, अपनी ज़मीन की स्मृतियाँ आदि चित्रण के साथ प्रौद्योगिक संस्कृति से पुनर्जन्म पाये पूँजीवादी संस्कृति का नया रूप, मीडिया, बाजारवाद उपभोक्तावाद, कंप्यूटर संस्कृति का चकाचौंध, विस्थापन की समस्या आदि प्रवृत्तियों ने अंबुजी की कविता को उत्तराधुनिक कविता का ज़बरदस्त दरतावेज़ बनाया है।

अंबुजी ने अपने जमाने की बहुमुखी चेहरे को देखा और उसे कविताओं अंकित किया। उनकी राय में यह मुखौटो की संस्कृति है। इस संस्कृति के पत्रों का बाहर प्रकट रूप असली रूप नहीं असली रूप तो मुखौटो में छिया पडा है जो मौकापरस्त है जिसमें मामूली आदमी को जाल में फँसाने की अदभुत क्षमता है लोगों में परंपरागत मूल्यों के प्रति एक विरक्ति भाव उत्पन्न करने का ताकत है। सांस्कृतिक

*** Assistant Professor in Psychology, Department of Social Work, St. Joseph's College Moolamattom.

Abstract

Alcohol dependency is a chronic disease characterized by uncontrolled drinking and preoccupation with alcohol. Stressful events such as bereavement or losing a job can also trigger heavy drinking. This can then lead to alcohol dependence and other complications. Major objectives of the study is to examine the anxiety, depression and stress of individuals with alcohol dependence and the influence of demographic variables such as age, marital status, income and place of residence upon anxiety, depression and stress. Samples (N=35) were selected through random sampling method from were person attending alcohol anonymous group. The result shows that there is no significant difference between marital status of the respondents on depression, anxiety and stress. Anxiety, depression and stress did not vary among individuals belonging in the urban and rural area. Further, it showed that age is not related with anxiety depression and stress.

Key words: Alcohol dependence, Anxiety, Stress, Depression.

Abstract

Alcohol dependency is a chronic disease characterized by uncontrolled drinking and preoccupation with alcohol. Stressful events such as bereavement or losing a job can also trigger heavy drinking. This can then lead to alcohol dependence and other complications. Major objectives of the study is to examine the anxiety, depression and stress of individuals with alcohol dependence and the influence of demographic variables such as age, marital status, income and place of residence upon anxiety, depression and stress. Samples (N=35) were selected through random sampling method from were person attending alcohol anonymous group. The result shows that there is no significant difference between marital status of the respondents on depression, anxiety and stress. Anxiety, depression and stress did not vary among individuals belonging in the urban and rural area. Further, it showed that age is not related with anxiety depression and stress.

Key words: Alcohol dependence, Anxiety, Stress, Depression.

Abstract

Guanidinium Carbonate (GC), an organic third order NLO single crystal has been successfully grown in water solution by slow evaporation technique. The crystalline purity of the crystal was measured by powder X-ray diffraction technique. The third order nonlinear optical character of the GC crystal was confirmed through the typical pulsed laser beam Z-scan technique. The optical limiting behavior of the sample leads to the nonlinear refraction.

Keywords: Crystal Growth, PXRD, Z-scan, NLO

1. Introduction

Amino acids are given attention in the field of potential applications including laser technology, telecommunications, optical computing, optical data storage [1, 2]. The crystal structures with non-centrosymmetric space groups have been of interest as materials for optical second harmonic generation (SHG) and third order nonlinear optical properties [3]. The present study deals with crystal growth and third order nonlinear optical properties of guanidinium carbonate crystals.

Nanotechnology is a branch of science which deals with materials at nanoscale with the size of the particles concerned ranges less than 100 nm. "Nanotechnology" concept was introduced by Richard P. Feynman, a Nobel laureate in his famous 1959 lecture "There's Plenty of Room at the Bottom" (Feynman, 1960). This field of science has been experiencing an unprecedented growth since then and contributed immensely in the advancement of science (Laurent *et al.* 2008). These materials can be of various dimensions ranging from 1D, 2D or 3D (Tiwari *et al.*, 2012) owing to their overall shape. Nano particles are structurally made of three layers i.e., a surface layer which can be modified with various functional groups such as surfactants and metal ions etc, a middle shell layer consists of materials which are chemically different from the core and the innermost core region (Shin *et al.* 2016).

Different types of nanoparticles

Nanoparticles are broadly classified based on the physical and chemical characteristics into (1) Carbon-based Nanoparticles (2) Metal Nanoparticles (3) Ceramics Nanoparticles (4)

Abstract

Membrane technology plays a significant role in analytical separations over the past decennia. They permit regulated passage of particles. By introducing proper functional groups, their efficiency can be further improved in terms of flux and antifouling property which directly affects the separation capacity and the life of the membranes. The layer by layer (LbL) assembly of polyelectrolytes (PEs) is a simple and promising technology for incorporating suitable functional group on polymeric membranes. In this review, various LbL methods of multilayer preparation, mechanism of formation and parameters which affect the properties of surface modified membranes are briefly discussed.

1. Introduction

Membrane treatment processes find applications in various fields such as water purification, gas separations, textile dye effluent treatment, removal of microorganisms, separation of macromolecules, hemodialysis, hemofiltration, plasmapheresis, gas

Abstract

A series of interpenetrating polymer networks (IPNs) of styrene butadiene rubber (SBR) and poly(methyl methacrylate) (PMMA) have been synthesized by adopting the sequential interpenetration and in-situ polymerization method. The morphologies of the IPNs were analyzed with scanning electron microscopy (SEM). It is found that more interpenetration occurs as PMMA content in IPN enhances and there is a reduction in free volume of the corresponding IPN. Also the morphology changes from dispersed island pattern to a co-continuous one. Besides, the transport parameters and morphological behavior of IPNs were studied in detail. The specific physics involved in the characterization protocol is effectively utilized to explore the chemistry of IPN formation.

Key words: Interpenetrating networks, transport behaviour; microscopic techniques; morphology.

1. Introduction

Multi-component polymeric materials enable a new fabrication method to associate the properties of different polymers into one tailor-made material.¹ The synthesis of an interpenetrating polymeric network (IPN) provides a promising path in this direction. IPNs are a combination of incompatible polymer networks in which at least one of the polymer is synthesized and / or cross-linked in the presence of the other.² Conventional blending is usually accompanied by phase separation. This is in addition to their potentially wide ranging applications on account of the possibility to adjust the sorption and mechanical properties.

Amorphous materials like rubber and plastic are characterized by a rich concentration of free volume defects, which are the unoccupied regions available for segmental motion within the polymer material. The detailed analysis of transport parameters of the polymer networks has been made and is the highlight and novelty of the present work. The motivation behind the adoption of this particular protocol of characterization is that the IPNs can act as platforms for designing cost-effective toughened plastic with controlled morphology and properties.

2. Experimental details

2.1. Materials and methods

Styrene butadiene rubber (SBR) used for this study was supplied by Indian Synthetic Rubber Limited (ISRL) and methyl methacrylate (MMA), dicumyl peroxide (DCP), divinyl benzene (DVB) and benzoyl peroxide (BPO) of 99% purity were purchased from Sigma-Aldrich. Toluene, used as the solvent for transport studies, was purchased from Merck, India Ltd.

2.2. Preparation of IPNs

SBR was masticated with DCP (1/2/3 per hundred gram rubber (phr)) in a two-roll mixing mill at room temperature as per ASTM standards. The curing behavior of SBR compounds were studied on a Rheometer and the optimum cure time was determined. The mixture was vulcanized at 423 K on a hydraulic press and a cross-linked SBR sheet was obtained.

The cross-linked SBR sheet (2mm thick) was then weighed and kept immersed in a homogeneous mixture of MMA, DVB and BPO (of concentrations based on the MMA content) for different time intervals. The semi-IPN fabrication was carried out as per the above method without using the cross-linker (i.e., DVB). The obtained swollen samples with different weight percentages

Thermal and Microwave assisted polymer-supported halogenation reactions using NNMBA-crosslinked polyvinylpyrrolidone-bromine complexes

Saju M Sebastian ¹, Beena Mathew ^{1*} and Ebey P Koshy ²

¹ Post Graduate and Research Department of Chemistry, St Joseph's College Moolamattom, Arakulam P.O., 685 591, Kerala, India,

² School of Chemical Sciences, Mahatma Gandhi University, Priyadarshini Hills P.O. 685 560, Kerala, India

Abstract

A fast and simple method for the halogenation of some activated aromatic compounds and α -halogenation of ketones under *microwave irradiation* and *conventional heating*, is reported, using N,N'-methylenebis acrylamide crosslinked polyvinylpyrrolidone-bromine complex

Key words: microwave assisted, polyvinylpyrrolidone, oxidizing reagent, polymer-supported, functionalized polymer

1. Introduction

Application of polymer-supported reagents in organic synthesis has grown over the years due to its convenient handling and easy work up procedures. But the main drawback of the use of polymer-supported reagents is that the reaction kinetics are generally slower compared to traditional solution-phase chemistry. This is due to the necessity for the reactant to diffuse through the polymeric network in order to come in contact with the reagent, only at which point can the reaction take place. This drawback can be minimised by doing polymer supported reactions under microwave irradiation. Chemists are increasingly looking for a strategy that would combine the advantages of microwave heating with polymer assisted organic synthesis¹.

Microwave-assisted and polymer supported organic synthesis have emerged independently as versatile tools for rapid generation of organic molecules. A massive number of research publications have appeared over the last decades in the application of microwave technology in organic synthesis such as pericyclic², cyclization³, aromatic and nucleophilic substitution⁴, oxidation⁵, alkylation⁶, decarboxylation⁷, condensation⁸, peptide synthesis⁹, acylation¹⁰, cycloaddition¹¹, deprotection and protection¹², heterocycles¹³ etc. Some of the major advantages include spectacular decrease in reaction time, improved conversions, clean product formation and wide scope for the development of new reaction conditions.

Halogenation of organic substrates is an important reaction for the preparation of pharmaceutical and agricultural chemicals. Here we report the synthetic applications of NNMBA-crosslinked polyvinylpyrrolidone-bromine (PVP-Br) complex in a solvent free condition under microwave irradiation. This reagent was found to halogenate activated aromatic compounds. It can also be used for the α -halogenation of ketones.

2. Experimental

2.1 General: N-vinylpyrrolidone was purchased from Merck, Federal Republic of Germany. N, N'-methylene-bis-acrylamide (NNMBA) was purchased from Aldrich U.K. All low molecular weight compounds were commercially available samples and were purified by distillation or recrystallization unless otherwise stated. IR spectra were recorded on a Shimadzu FTIR-8400S spectrophotometer. UV spectra were recorded using shimadzu UV-2450 spectrophotometer. All microwave experiments were performed using a Onida Powersolo 20 microwave oven.

2.2 Preparation of NNMBA-crosslinked poly(N-vinylpyrrolidone)

To a solution of 0.46g of 10% aqueous solution of sodium dibasic phosphate and 40% of sodium sulphate in 240ml of water heated to 50-65°C, a solution of N-vinylpyrrolidone (43.12g) NNMBA (1.85g) and AIBN (0.12g) were added. The mixture was heated to 60-70°C for 5h. It was cooled to room temperature with stirring. The product was filtered, washed with water (25mlx4times) and acetone (20mlx5 times), dried at 60°C and yield (80%) was noted.

2.3 Preparation of polyvinylpyrrolidone-bromine (PVP-Br) complex

To a suspension of NNMBA-crosslinked PVP (5g) in CCl₄ (20ml), bromine (5ml) was added and stirred at room temperature

Abstract

Recently social networking sites became the most admired communication tools evolved as the central of information allocation source around the world. The potential positive outcomes of social networking are numerous and wide-ranging. There are serious apprehensions over how they could be integrated in the present academic atmosphere. As a net working tool, its effectiveness has already been manifested in millions of people who use these networks for amusement, communication and exchanging of observations, knowledge, data and information all over the world. The development of Web 2.0 technologies paved the way for the fast proliferation of social media. Currently, students and lecturers use social networking sites during working hours for entertainment, communication, exchanging views and knowledge, and even as efficacious teaching tool. When more and more people make use of the Web, additional knowledge, data and information is created, evolved and nourished daily. As more students and teachers involved in generating educational content, the quality, reliability, availability and standard of information gradually improve. Consequently, each and every net work browsing now becomes an uninterrupted learning experience for each user. Hence, gurus have to create conducive ambiance for formal and informal learning - that hold fast to educational guidelines and tie together social networking communities. A thorough examination of the impediments involved in the creation of new learning ecology, and a meticulous exploration of the challenges faced by both technology experts and teachers in delivering a truly ground-breaking and effective approach to education are authentic need of the time. This article intends to highlight the potential benefits of social media in today's education.

Keywords: *Education, Facebook, Media literacy, Content Creation, Collaborative Learning, Mobile technology, Social Networking, Social Networking Sites*

1. Introduction

Nowadays, besides entertainment and informational purposes, social networking sites have penetrated many fields of educational practices and processes. It transformed young people's way of thinking, doing, behaving and living, while it acts as the most appropriate means of communication and entertainment. Social media like Web 2.0 technologies, Facebook, Twitter, Myspace, Google+, LinkedIn, Instagram, Blogs, micro-blogs(Wikis), Ning, MySpace, Delicious, Digg, Flickr, YouTube, Dailymotion and RSS are used daily by millions and millions of youth worldwide. The development of Web 2.0 technologies triggered the fast proliferation of social media. Its web-based tools and platforms facilitate discussion, participation, and sharing of various forms of content (namely, text, video, audio and image) in a very convenient way. Increased broadband availability, the improvement of software tools, and the development of more powerful computers and mobile devices, have played pivotal role in integrating technology, social interaction and content creation through Web 2.0 technologies.

Social media encompass a wide range of tools that integrate technology, social interaction and content creation. Social networks certainly tone up the behavioural patterns of the adolescent who enjoy and universally acknowledge this medium in their life. As a net working tool, its effectiveness has already been manifested in millions of people all over the world who use these networks for amusement, communication and exchanging of observations, knowledge, data and information. Currently, students and lecturers use social networking sites during the working hours, not only for entertainment but also for communication, exchanging views and knowledge, and even as efficacious teaching tool. They are able to acquire collaboration, motivation and understanding or identifying methods of collaborative learning. When educators provide more information about their activities which they followed for academic processes, students' expectations about their trustworthiness are positively influenced and improved. This will bring their students closer, aiming at encouraging them to make progress of their educational experience. Further, it will reinforce their motivation for learning, positively reform educational reality, and enlarge the learning process beyond the boundaries of a traditional classroom. Social media platforms can be grouped into three major categories. The first

Abstract

Green technology has a significant impact on environmental, economic, and social status of society. Renewable technologies facilitate large-scale production of materials, novel innovation methods, abatement of pollution, and energy in a low-cost manner. The different notions of green and eco-friendly technology are of practical and academic importance. In this chapter we give the basics of green technology.

Key Words: Green technology; energy; pollution; cost-effective; large-scale; renewable

1. Introduction

Green technology is an eco-friendly concept that is being applied to basic education, technology, and engineering for production of materials that are less harmful to the eco-system of the planet. Green technology suppresses adverse gas emission to the atmosphere, save water resources, and preserve features of soil. It encourages environment friendly techniques with minimum waste. Green technologies utilize less amount of energy than the conventional technologies. It is a clean technology based on principles of environmental science, green chemistry, and modern technologies. Natural resources are exploited in a green pathway to produce materials with multidimensional characteristics. It also takes into account the various impacts of technology on the environment. Efficiency of the technology, recycling provisions, and issues related to the health of man, animals and plants are the major concerns of green technology. In order to deal with these concerns, green technology proposes a few major concepts. Hence, any knowledge of green technology requires an adequate understanding of these concepts. Of the many concepts we identify three major concepts. They are (1) cleaner production, (2) green innovation, and (3) social sustainability.

1.1. Cleaner production

The concept of cleaner production envisages the combination of the protection of environment and economic development. It rules out the opportunity for the accumulation of waste and ecologically unacceptable pollutants. It is an integrated attempt for sustainable development. Cleaner production demands changes in raw materials, changes in technology, and changes in production process. Sometimes quality, composition, and durability of the product needs to be compromised in an acceptable manner in order to reduce hazardous emissions. It requires more responsibility and offers new opportunities for innovation. Individuals as well as industrial undertakers must contribute towards the implementation of clean production. The availability of sophisticated instruments and necessary funding are inevitable for the implementation of the technology. Government has to insist policies and regulations for the fulfillment of the idea in to reality. Encouragements and incentives are to be given at appropriate time to inculcate the scheme of clean production into the mainstream.

1.2. Green innovation

Protecting our environment is our great responsibility. Green innovation urgently catches international attention as the natural resources dreadfully declines and environmental pollution increases. Green innovation involves three categories, namely product, process and managerial innovations. Environmental awareness requires the supply, production, and packaging design of products with minimum hazardous and toxic substances¹. Besides the above mentioned three categories of green innovation, there are six important aspects of green innovation. They are the innovation of new objects and the methods of their production.

Abstract

Hierarchically porous MOFs (HP-MOFs) containing mesopores (2-50 nm) along with micropores (< 2 nm) have raised considerable interest recently, due to their variety potential applications in adsorption, separation of molecules, drug delivery, catalysis etc. In this work we report a simple, green and ultrafast route for the synthesis of a hierarchically porous Zn-BDC MOF using the cooperative template strategy by the simultaneous introduction of ZnO as the accelerator and cetyltrimethylammonium bromide (CTAB) as the surfactant. The advantage of this method is that the synthetic procedure was accomplished in a few minutes (minutes) at room temperature and pressure and the synthesized MOF was found to be an efficient catalyst for photo-induced dye degradation.

Introduction

Water is essential for the existence of life on earth. However due to various anthropogenic activities, water is getting polluted day by day. On one hand industrial developments makes human life better whereas on the other hand, cause depletion of potable water. Water gets polluted mainly by heavy metals, industrial effluents, fertilizers, pesticides, organic dyes etc¹. Organic dyes from textiles, medicines, pesticides, solar cells etc contaminate the open water resources thereby causing threat to aquatic life leading to environmental imbalance². This has led to intense research in the field of technologies related to water treatment all around the world³. Porous coordination network structures called MOFs with fascinating applications such as adsorption, catalysis, separation, sensing etc have proved very early to be efficient photocatalysts for degradation of organic dyes⁴. Hence, hierarchically porous MOFs (HP-MOFs) with micro/meso/macro-pores in the network structures should be better catalysts for dye degradation than conventional MOFs⁵. Presence of mesopores along with micropores in the MOF networks enable them to be used as hosts to accommodate bulky molecules which enable their reaction or transformation in these pores. To generate MOFs of tunable porosity, different approaches were explored, resulting in hierarchically structured materials which include encapsulation and etching technique, ligand extension technique, ionic liquid assisted technique, induced-defect-formation, spray-dry technology etc⁶⁻⁹. However most of these methods use high temperature and pressure, long reaction time or special apparatus which are energy consuming and pollution causing. A time-controlled room temperature synthesis of HP-MOFs with high STYs (2035 kgm⁻³d⁻¹) was reported by Huo et al¹⁰. However, extending this strategy to green and facile synthesis remain challenging¹¹. A recent approach of synthesizing mesoporous materials with certain templates or surfactants that can act as structure directing agents has proved to be a promising route for the synthesis of HP-MOFs with tunable surface area and porosity¹²⁻¹⁶. Recently methods like modified template strategies as well as cooperative template strategies were developed to prepare HP-MOFs which have enabled the reduction of the synthesis time, under facile synthetic conditions¹⁷⁻²¹. Here, a simple room temperature method was applied successfully for the synthesis of a HP-Zn-BDC MOF which has proved to be an efficient photocatalyst for dye degradation.

Methods

(a) Rapid room temperature synthesis of hierarchically porous Zn-BDC MOF

14.4 mmol ZnO powder was dispersed in 32 mL deionized water and 72 mL DMF (solution A). 28.8 mmol Zn(NO₃)₂·6H₂O was dissolved in 72 mL deionized water (solution B). Then, solution B was mixed with solution A under fast magnetic stirring (solution C). 14.4 mmol of CTAB (surfactant) and 21.6 mmol of 1,4-benzene dicarboxylic acid were added to 64 mL ethanol and stirred for 30 minutes (solution D). Solution C was added to solution D under fast magnetic stirring for 2 minute and allowed to stand for 5 minutes. The colourless solid product was filtered, washed and dried in a vacuum oven at 150°C to obtain HP-Zn-BDC MOF which was further used for photocatalytic dye degradation studies of the dye Rhodamine- B.

'ഒരു നല്ല അപ്പന്റെ ചാവറുളം' കുടുംബനവോത്ഥാനവും

ജിയോ തോമസ്, ഗവേഷകൻ
ശാസ്ത്രീശാലം ഡീപ് യൂണിവേഴ്സിറ്റി, ഡിബലിഗൽ

നല്ല അപ്പന്റെ ചാവറുൾ എന്നത് ചാവറ കുടുംബക്കോസ് ഏലിയാസച്ചൻ' മരണത്തിനുമുമ്പായി നൽകിയ കരണപട്ടമാണ്. "എന്റെ കൈയെഴുത്തുവാൻ ഇതിനെ ഞാൻ നിങ്ങൾക്കു തരുന്നു. ഞാൻ മരിച്ചാലും ഈ കടലാസ് മരിക്കുകയില്ല. ഇത് എന്റെ നിക്ഷേപമായി സൂക്ഷിപ്പാൻ എന്റെ മക്കളായ കൈനകരി കുരിശുപള്ളിക്കാരായ നിങ്ങളെ ഞാൻ ഇത് എടുത്തു. 19-ാം നൂറ്റാണ്ടിൽത്തന്നെ കുടുംബങ്ങൾ സാമൂഹിക, സാംസ്കാരിക, ആത്മീയമേഖലകളിൽ നവീകരിക്കപ്പെടേണ്ടതുണ്ട്. മൂത്തോടെ, അതിനുവേണ്ട സുവ്യക്തമായ മാർഗ്ഗനിർദ്ദേശങ്ങൾ മരണത്തിനുമുമ്പായി ചാവറയച്ചൻ നൽകി. "എന്റെ കുടുംബപ്പുസ്തകം" രണ്ടുപ്രകാരത്തിലും മക്കളുമായിരിക്കുന്ന നിങ്ങൾക്ക് ഇത് എന്റെ ഒരസ്മരണ (മരണശാസനം) ഈ ലഘുകൃതിയിലെ കുടുംബ-സാമൂഹിക നവോത്ഥാനതലത്തിന്റെ വിശദമായ വായനയാണ് ഈ പ്രബന്ധം.

ചരിത്രവും പാരമ്പര്യവും

ഉസാമുഹൂ-രാഷ്ട്രീയപശ്ചാത്തലത്തിൽ നവോത്ഥാനം എന്നത് കാലികമായി ഏറെ ചർച്ചകൾക്ക് വഴിയൊരുക്കിയ നിയമവും പ്രകിയയുമാണ്. ഇംഗ്ലീഷിലെ Renaissance എന്ന പദത്തിനു തന്നെല്ലാമയ മലയാളപദമായിട്ടാണ് നവോത്ഥാനം അറിയപ്പെടുന്നത്. പുനർജന്മം, പുന:സൃഷ്ടി എന്നീ അർത്ഥങ്ങൾ വരുന്ന Renaissance എന്ന പദം പതിനാലാം ശതകത്തിൽ ജനിച്ച സാമൂഹികവും സാംസ്കാരികവും ഖൈഷണികവുമായ പുത്തൻ ഉണർവിനെ സൂചിപ്പിക്കുവാൻ ഉപയോഗിച്ചതോടുകൂടി തത്ത്വങ്ങൾ വിശാലമായി പതിനാലാം ശതകത്തിൽ ഇറ്റലിയിലാണ് നവോത്ഥാനത്തിന്റെ ആരംഭം എന്നും സമൂഹത്തിന്റെ പലകളിലും സംഭവിച്ച പുത്തൻ ഉണർവ് ആദ്യം പ്രകടമാകുന്നത് കലയിലും സാഹിത്യത്തിലും ആയിരുന്നു എന്നും നിർവചനങ്ങൾ വ്യക്തമാക്കുന്നു. യൂറോപ്യൻ ചിന്താമണ്ഡലത്തിൽ സംഭവിച്ച നവീകരണപ്രകിയ പുതിയ തലങ്ങൾക്കു കാരണമായി. അച്ചടിയന്ത്രം, കടലാസ്, വെടിമരുന്ന്, വടക്കുനോക്കിയന്ത്രം എന്നിവയുടെ ഉപയോഗം യൂറോപ്യൻ നവോത്ഥാനത്തിനു പ്രധാനമായും വഴിയൊരുക്കിയത് ഡോ.എൻ.സാം അഭിപ്രായപ്പെടുന്നു. 'യൂറോപ്യൻ മറ്റു കണ്ടുപിടുത്തങ്ങളേക്കാൾ കടലാസിന്റെയും അച്ചടിയുടെയും ആരംഭവും തത്ഫലമായി എഴുതപ്പെട്ട പലകളുമാണ് യൂറോപ്പിന്റെ സമസ്തമേഖലകളിലും സംഭവിച്ച പുത്തൻ ഉണർവിനു തുടക്കം കുറിച്ചത് എന്നത് വ്യക്തം. ചരിത്രത്തിൽ നന്മയും ധർമ്മവും പ്രചരിപ്പിക്കുകയും അതുവഴി ഉൽകൃഷ്ടമായ ഒരു സമൂഹത്തെ സൃഷ്ടിക്കുകയുമാണ് യൂറോപ്പിന്റെ ലക്ഷ്യമെന്ന പ്രാചീന യവനസാഹിത്യചിന്തകൾ ലോകനവോത്ഥാനത്തിനുതന്നെ കാരണമാകുന്നതായി തിരുപറഞ്ഞാലിലുടെ മനസ്സിലാക്കാം.

പാലോ ശതകത്തിൽ ഇറ്റലിയിൽ ആരംഭിച്ച നവോത്ഥാനം, പത്തൊമ്പതാം ശതകമാകുമ്പോഴേക്കും പാശ്ചാത്യസമൂഹത്തിന്റെ നൂതനതലവും എത്തുന്നതായി കാണാം. സമൂഹത്തിന്റെ സമസ്തമേഖലകളിലും സംഭവിച്ച ഈ പുത്തൻ ഉണർവിന് തത്ത്വസമൂഹത്തെ ഇന്ത്യയിലും സാഹിത്യവുമായി അഭ്യേദമായ ബന്ധമാണുള്ളത്. രാജാറാം മോഹൻ റോയ്, സ്വാമി ദയാനന്ദൻ സർവ്വീട് അഹമ്മദ് ഖാൻ എന്നിവരുടെ സാഹിത്യ സാംസ്കാരിക ഇടപെടലുകൾ ഇന്ത്യൻ നവോത്ഥാനമുഖത്തെ ഏതാനും നൂറ്റാണ്ടുകൾ മാത്രം.

പാശ്ചാത്യ നൂറ്റാണ്ടിന്റെ രണ്ടാം പാതി മുതൽ ഇരുപതാം നൂറ്റാണ്ടിന്റെ ആദ്യപാതി വരെയുമാണ് കേരളനവോത്ഥാനത്തിന്റെ പലതരം ചരിത്രം അടയാളപ്പെടുത്തുന്നത്. അതോടെ കേരളനവോത്ഥാനം പൂർണ്ണമാക്കുന്നോ അതിനുശേഷം നവോത്ഥാനം സമൂഹായത്തിലും സംഭവിച്ചിട്ടില്ലെന്നോ ഇതിനിർമ്മമില്ല. ചട്ടമ്പിസ്വാമിയെയും ശ്രീനാരായണഗുരുവിനെയും തുടർന്നുവന്ന നവോത്ഥാനം സാമൂഹ്യ- സാമൂഹികനേതാക്കളെയും കേരളനവോത്ഥാനത്തിന്റെ അവിഭാജ്യനേതൃത്വനിരയിൽ ചരിത്രം ആദരവോടെ നൂണ്ടെങ്കിലും, ഇവർക്കെല്ലാം മുമ്പേ കളമൊരുക്കി പ്രാദേശികമേഖലകൾ വിജയകരമായി പെയ്തുവച്ച പ്രതിഭയാണ് ചാവറസ് ഏലിയാസച്ചൻ. അദ്ദേഹത്തിന്റെ കേരളനവോത്ഥാനസംഭാവനകൾ ഇന്ന് ഏറെ പഠനവിഷയമാകുകയും ചെയ്തിട്ടുണ്ട്.

കുടുംബനവോത്ഥാനവും

നവോത്ഥാനം എന്ന സംജ്ഞ സാമൂഹത്തിനും രാഷ്ട്രത്തിനും സമൂഹായത്തിനും മാത്രമല്ല, കുടുംബത്തിനും അനുയോജ്യമാണെന്ന് എന്റെ ചാവറുൾ എന്ന ലഘുകൃതി സാക്ഷ്യപ്പെടുത്തുന്നു. വീക്ഷണങ്ങളിലും ദർശനങ്ങളിലുമുള്ള നവോത്ഥാനതലത്തിലൂടെ നവീകരണമാണ് ചാവറയച്ചൻ ലക്ഷ്യം വച്ചത്. കുടുംബങ്ങളാണ് സമൂഹസൃഷ്ടിയുടെ ഘടകം എന്നതിനാൽ കുടുംബങ്ങളെ

'Ecosophy' of the 'American Adam': The Archetypal Mould of Melville's Mythical Characters and Situations

Roby Mathew¹

¹Assistant Professor, St. Joseph's College, Moolamattom, Arakulam P.O., Idukki-685591, Kerala, India

19, the bicentennial year of the birth anniversary of Herman Melville one of the herculean figures in American nautical literature, gives the psyche of Melville who penned the parable of a monomaniac who ventures into the deep to annihilate evil from the face of the earth. *Moby Dick*, the magnum opus of Melville, undoubtedly depicts the archetypal quest of an archetypal protagonist and an archetypal antagonist. *Typee* which preceded *Moby Dick* drives home the archetypal state of Eden which human beings have but always longed for. *Moby Dick* with multiple quests at its core; the quest of Captain Ahab "heading towards destruction" and the quest of Ishmael "heading towards survival" (Jenkins 5) sheds light into the roots of our ecological crisis. Lynn Jenkins remarks, "Our "environmental crisis" is often held to have its roots in early patriarchal myths, the *Genesis* myth, and the Judeo-Christian mythology of a god-given supremacy of man over woman and nature." (White 1203)

Herman Melville's narratives are set in a frame of voyage which is technically part of whaling. Whaling, one of the most popular enterprises in the nineteenth century, offered umpteen possibilities to incorporate any number of archetypes in its narrative. Herman Melville's *Moby Dick*, with which he made an indelible mark in the history of American literature, and other works which preceded *Moby Dick* like *Typee* and *Omoo* share the common structure as that of a voyage. The frame tale is that of a journey through the sea which various narrative patterns are created. The journey through the sea entails uncertainty, encountering the unexpected, proving the prowess of masculinity and exploring the exotic shores and a courageous mind seeking something for renown and reward. Herman Melville who was forced to find a living in the sea at an early age was initially drawn to this life in the watery part of the earth.

The lessons which his life taught him during his childhood and later as a harpooner in whaling ships and while doing some other work, led him to a longing for the distant past in which he lived as Adam in the Garden of Eden. *Typee* obviously recreates the Edenic past. To quote the phrase of Arne Naess, it is an 'ecosophic quest'. Jenkins remarks, "In ecosophy there is a kind of quest which, rather than seeking progress by the domination and use of nature, seeks harmony with nature, but with it goes the recognition that it is no longer possible to live as we did in the prepatriarchal, distant past. (6)

Because of the historical dominance of nautical culture by men, Melville's central characters are usually men. It focally explores archetypal themes such as masculinity and heroism, investigations of social hierarchies and the psychological struggles of the individual in the hostile environment of the sea. The archetypal mould of an adventurous nautical story demands its parts as: characters and setting in and around the sea, introduce a problem or unexpected difficulty during the voyage, solve the problem by having an adventure and the resolution which in the dramatic tradition can be catastrophe or denouement. Melville, inspired by William Shakespeare, moulded Ahab in the guise of a Shakespearean tragic hero with the archetypal tragic flaw as hubris. The antagonist in this tragic tale is the mythical leviathan that figures in the book of *Job*. Infuriated by the ill-treatment of Job, Job questions God and in return God asks Job about leviathan as,

⁷ Can you fill its hide with harpoons
or its head with fishing spears?

⁸ If you lay a hand on it,
you will remember the struggle and never do it again!

⁹ Any hope of subduing it is false;
the mere sight of it is overpowering. (Job 41: 7-9)

At the place Ahab determined to harpoon the leviathan which for Ahab is an eternal symbol of all that is evil in nature. Melville's works namely *Moby Dick* and *Typee* reenact the biblical narratives which begin in *Genesis* and passing through the book of *Job*, the story of Jonah, the story of great flood and the book of prophets. Many a character in his works takes after the biblical character with similar names. While *Moby Dick* delineates the fall of man and the

‘Ecosophy’ of the ‘American Adam’: The Archetypal Mould of Melville’s Mythical Characters and Situations

Roby Mathew¹

¹Assistant Professor, St. Joseph's College, Moolamattom, Arakulam P.O., Idukki-685591, Kerala, India

2019, the bicentennial year of the birth anniversary of Herman Melville one of the herculean figures in American nautical fiction, revives the psyche of Melville who penned the parable of a monomaniac who ventures into the deep to annihilate evil from the face of the earth. *Moby Dick*, the magnum opus of Melville, undoubtedly depicts the archetypal quest of an archetypal hero for an archetypal antagonist. *Typee* which preceded *Moby Dick* drives home the archetypal state of Eden which human beings lost but always longed for. *Moby Dick* with multiple quests at its core; the quest of Captain Ahab “heading towards disaster” and the quest of Ishmael “heading towards survival” (Jenkins 5) sheds light into the roots of our ecological crisis. Lynn White Jr. remarks, “Our “environmental crisis” is often held to have its roots in early patriarchal myths, the *Genesis* myth, and a compounding mythology of a god-given supremacy of man over woman and nature.” (White 1203)

Herman Melville’s narratives are set in a frame of voyage which is technically part of whaling. Whaling, one of the most lucrative enterprises in the nineteenth century, offered unpteen possibilities to incorporate any number of archetypes in its compass. Herman Melville’s *Moby Dick*, with which he made an indelible mark in the history of American literature, and other works which preceded *Moby Dick* like *Typee* and *Omoo* share the common structure as that of a voyage. The frame tale is that of whaling from which various narrative patterns are created. The journey through the sea entails uncertainty, encountering the unknown, expecting the unexpected, proving the prowess of masculinity and exploring the exotic shores and a courageous mind to risk everything for renown and reward. Herman Melville who was forced to find a living in the sea at an early age was initially fascinated by this life in the watery part of the earth.

The lessons which his life taught him during his childhood and later as a harpooner in whaling ships and while doing some odd jobs ignited a longing for the distant past in which he lived as Adam in the Garden of Eden. *Typee* obviously recreates the Eden in him. To quote the phrase of Arne Naess, it is an ‘ecosophic quest’. Jenkins remarks, “In ecosophy there is a kind of primitivism which, rather than seeking progress by the domination and use of nature, seeks harmony with nature, but with it goes a realization that it is no longer possible to live as we did in the prepatriarchal, distant past. (6)

Because of the historical dominance of nautical culture by men, Melville’s central characters are usually men. It focally includes distinctive themes such as masculinity and heroism, investigations of social hierarchies and the psychological struggles of the individual in the hostile environment of the sea. The archetypal mould of an adventurous nautical story demands its parts as: introduce the characters and setting in and around the sea, introduce a problem or unexpected difficulty during the voyage, solve the problem by having an adventure and the resolution which in the dramatic tradition can be catastrophe or denouement. Melville, the admirer of William Shakespeare, moulded Ahab in the guise of a Shakespearean tragic hero with the archetypal tragic flaw as hubris. The antagonist in this tragic tale is the mythical leviathan that figures in the book of *Job*. Infuriated by the ill-treatment of God, Job questions God and in return God asks Job about leviathan as,

- ⁷Can you fill its hide with harpoons
or its head with fishing spears?
⁸If you lay a hand on it,
you will remember the struggle and never do it again!
⁹Any hope of subduing it is false;
the mere sight of it is overpowering. (Job 41: 7-9)

In his pride of place Ahab determined to harpoon the leviathan which for Ahab is an eternal symbol of all that is evil in nature.

Melville’s works namely *Moby Dick* and *Typee* reenact the biblical narratives which begin in *Genesis* and passing through *Exodus*, the book of *Job*, the story of Jonah, the story of great flood and the book of prophets. Many a character in his voluminous *Moby Dick* takes after the biblical character with similar names. While *Moby Dick* delineates the fall of man and the

The Mirage of Progress Depriving Life in Sarah Joseph's *Gift in Green*

Sunitha Mathew

Assistant Professor in English
St. Joseph's College, Moolamattom

Abstract

Though nature is all powerful and perennial, man transmogrifies it to fit his selfish needs which ultimately perpetrate irredeemable damage to our ecosystem. Ecocriticism examines the various ways literature treats the subject of nature. There are debates within Ecocriticism concerning the crucial matter of the relationship between nature and culture. When cultural dominance is perpetuated without sensitivity to, and respect for, indigenous ways of life, it is imperialistic and expansionist. Cultural invasion tends to have a negative effect on cultural diversity. The novel *Gift in Green* by Sarah Joseph points fingers at various kinds of invasions and ecological destructions and laments the departed rustic fertility and glory of the simple pure land of 'Athi' at the wake of the 'so called' progress. It is high time to rethink the idea of progress as a cultural practice.

Key Words: Nature, Invasion, Ecocriticism, Progress

Introduction

Nature functions as a synonym for life. Nature is also defined against artifice and technology. Culture is a term that refers to a large and diverse set of mostly intangible aspects of social life. Culture can be a force for oppression and domination when subscribing to mainstream values and norms which benefit only to the powerful minority. Material culture is composed of things that humans make and use. This aspect of culture includes a wide variety of things from buildings, technological gadgets, and clothing to film, music, literature, and art among others. Material culture emerges from and is shaped by the non-material aspects of culture – knowledge, values, beliefs etc. It is in the realm of non-material culture that a minority is able to maintain unjust power over the majority.

Ecocriticism is the study of literature and the environment from an interdisciplinary point of view where literary scholars analyze texts that illustrate environmental concerns. The term ecocriticism is first used by William Rueckert in his essay "Literature and Ecology: An Experiment in Ecocriticism" in 1978. Ecocriticism starts developing as a school of literary criticism in the 1990s. Ecocriticism is a response to the need for humanistic understanding of our relationships with the natural world in an age of environmental destruction. Ecocritical writers evaluate the texts which exemplify the environmental issues. The Writers in India also showed a great concern towards nature and natural objects. Sarah Joseph, a leading novelist and short story writer in Malayalam, is one such writer who explores the theme of ecocriticism in her works through different ways. All her works are well received and have won prestigious awards as well as the Sahitya Academy Award. Her novel *Gift in Green* assumes particular significance in the context of the rising stridency of a global culture. The novel pivots on the decay, death and degeneration of Athi. The atrocities inflicted on nature by the modern, 'cultured' man disrupt the harmonious relationship between the land and the simple folks living there. Sarah Joseph questions the irredeemable damage done to the body of nature in the name of progress. The novel significantly touches important environmental issues emerging at the time, such as environmental pollution, deforestation, endangered species, water contamination and so forth.

Man Vs Nature

The novel *Gift in Green* depicts how the greed for material wealth, prosperity, and progress assisted by technology and power disrupts the harmonious relationship between man and nature. Athidesam, an imaginary location provides the ambience for *Gift in Green*. This unravished island with its natural beauty and primitive purity depicts the sublime existence of nature. The peace-loving, farm-loving people there live a life inseparable from the land and water. The land provides everything to meet their daily needs. "Fish or mussels: enough to meet one's daily needs. Add to this the two Pokkali harvests from the paddy fields . . . Everyone cultivated pumpkin, white gourd, spinach and beans for their own use. Every household had a cow, buffalo, hens and

Electronic Resources: a study with special reference to UGC INFLIBNET N-LIST Consortium

Droupathy Devi.C.G

Librarian UGC

St. Joseph's College Moolamattom

Abstract

The present information seeking behavior of users changed to Electronic Resources than Print Resources for gathering information. But one should not forget that both print and electronic resources are inevitable in the procedure of information gathering. Many electronic resources have been made available in Academic and Public Libraries. Speaking of the academic Community, one of the important sources providing electronic sources is "National Library and Information Services Infrastructure for Scholarly Content" (N- LIST).. Consortium for Higher Education Electronic Resources, e - content for PG Courses etc. are part of this. This paper intends to study different types of electronic resources and how they help academic community with special reference to UGC INFLIBNET N-LIST Programme.

Key words: Electronic Resources, UGC, INFLIBNET N-LIST programme, Academic Community, Academic Publishing.

Introduction

The present era is an era of Information and Knowledge revolution. Cambridge English dictionary defines Information as an uncountable noun meaning "facts about someone/something." And knowledge as "understanding of or information about a subject they you get by experience or study, either known by one person or by person generally. (dictionary.cambridge.org). Information has always been a part of growth and improvement. As the father of Library & Information Science, Dr. S.R.Ranganathan explains through his "Five Laws", Users demand the most relevant, accurate and current information without loss of time since information gets obsolete within no time. Due to the complexity and varied interpretation of the concept of users' needs and requirements, it is unanimously accepted opinion that user needs cannot be predicted. In the modern society, the types of information and the media which present them have become manifold and multifarious, offering users a wide spectrum of vast selection.

The arrival and proliferation of electronic resources and digital libraries have a number of significant impacts on the use of print resources and traditional libraries. Reading preferences and the use of print and electronic resources vary among different disciplines. They desire to meet their information needs through online. The new age readers' insist on the use of online resources to cater to their needs.

Electronic Resources

Electronic resources (or e-resources) are materials in digital format accessible electronically. Examples of e-resources are electronic journals (e-journals), electronic books (e-books), online data bases in digital formats, Adobe Acrobat documents (.pdf), webpages (.htm, .html) etc. (www.libfaq.smu.edu.sg>fag).

Electronic Resources are defined as resources which require computer access or any electronic product that delivers a collection of data, be it text referring to full text databases, electronic journals and image collections, other multimedia products, and numerical, graphical or time based, as a commercially available title that has been published with an aim to be marketed.(lisbdnet.com)

To some extent, Electronic Resources solve storage problems. It also enables multiple users to access information simultaneously. The users can find out information easily and collection and organization of electronic resources can be done quickly. Also it offers efficient delivery of information economically to all users.

Types of Electronic Resources

Electronic Resources are divided into two major types. They are

1. Online Electronic Resources
 - a. Electronic Journals

Quality of life and stress tolerance of ASHA workers

Manu Kurian*

Fr. Lijo Kochuveetil CMI*

Dr. Justin Joseph**

Dr. Mathew Joseph Kanamala**

Jismy Joseph***

Abstract

An **accredited social health activist (ASHA)** is a community health worker instituted by the government of India's Ministry of Health and Family Welfare as a part of the National Rural Health Mission (NRHM) since 2005 onwards. Today the ASHA workers play significant and defined role in individual families of our society irrespective of their caste, creed and economic status. ASHAs are also meant to serve as a key communication mechanism between the public healthcare system and local communities. Thus the ASHA workers are vital part of our social support system and making sense of gender equality. The present study scrutinized influence of age, education and experience ASHA workers upon their quality of life and stress tolerance. A sample of 100 ASHA workers was selected through convenient sampling technique. 'T test and ANOVA were used to test the hypothesis. The result showed significant deference in the level of stress tolerance on the basis of age whereas no statistically significant deference showed in quality of life. Further, no significant deference was observed in quality of life and stress tolerance of ASHA workers grouped on the basis of education, experience and number of children.

Key Words: Quality of life, Stress tolerance, ASHA worker.

Introduction

The National Rural Health Mission (NRHM) (2005-12), is a government flagship programme, launched on the 12th April, 2005 in 18 states across the country, including eight Empowered Action Group (EAG) states, the North-Eastern states, Jammu & Kashmir and Himachal Pradesh, that seeks to provide effective health care to the rural population, especially the disadvantaged groups, by improving access, enabling community ownership and demand for services and strengthening public health systems for efficient service delivery.

In April, 2005, as a key component of efforts to expand access to health services by National Rural Health Mission (NRHM) introduced the Accredited Social Health Activists (ASHA) in each village within the identified States to act as an interface between the community and the public health system. ASHA must primarily be a woman resident of the village married/widowed/divorced, preferably in the age group of 25 to 45 years. She should be a literate woman with due preference in selection to those who are qualified up to 10 standard wherever they are interested and available in good numbers. This may be relaxed only if no suitable person with this qualification is available. ASHAs are seen as health activists in the community who will create awareness on health and its social determinants, counsel mothers on key health behaviors and mobilize the community towards local health planning and increased utilization and accountability of the existing health services.

The present study focuses to assess quality of life and stress tolerance of ASHA workers with reference to their environs. The concept of quality of life broadly encompasses how an individual measures the 'goodness' of multiple aspects of their life. These evaluations include one's emotional reactions to life occurrences, disposition, sense of life fulfillment and satisfaction, and satisfaction with work and personal relationships (Diner, such, Lucas, & Smith, 1999). Social acceptance and job satisfaction of ASHA workers in the Garo Hills Division of Meghalaya: a cross-sectional study, revealed that social acceptance of ASHAs was rather to some extent for 36.4%. Almost 52% of ASHAs were dissatisfied with job and 61% were unhappy with their performance based remuneration. This is a mere example of diminished quality of life of ASHA workers with reference to their sphere of work.

Today ASHA workers are facing tremendous stress due to their heavy work load and lack of sufficient honorarium. A study conducted by Saxena, V., Kakkar, R., and Semwal, V.D - *Indian J Community Heal.* 2012 illustrated that the most important

The role of magnetic properties of Metal Organic Frameworks towards clean energy storage application

Reshma Jose, Gopalan Rajaraman, Sourav Pal

Department of Chemistry, Indian Institute of Technology Bombay, Powai, Mumbai 400076, India

Abstract

Metal Organic Framework based gas absorptive system are of wide interest in today's scenario due to their fascinating properties such as high porosity and surface area, tunable nature, diversity in metal functional groups and make them attractive candidate for various application such as catalysis, sensing, gas separation and storage. Though various studies have been done to improve the efficiency of MOFs, the role of magnetic properties of MOFs are less studied. Paramagnetic MOFs offer much attention as they offer flexible ground state and the nature of magnetic coupling will give idea towards tuning the ground state properties. Here in this review, various modifications of MOFs to improve their magnetic properties and thereby gas adsorption properties are explained.

Introduction

Development of safe and effective gas storage system is critical for the implementation of fuel cell economy. Among the various approaches to improve the performance of such systems, Metal Organic Frameworks (MOFs) based adsorptive gas storage system is envisaged as a long-term solution as a replace of carbon based fuels.¹ Metal-organic frameworks (MOFs) are crystalline porous materials made by linking metal ions and clusters with organic ligands. Their application in clean energy is most significantly as storage media for various gases such as hydrogen and methane and carbon dioxide.² The fascinating properties of MOFs such as porous nature, size tunability and the surface area³ make them an attractive candidate for potential applications in gas storage^{4a,4b}, molecular separation^{5a-5c}, and catalysis.^{6a-6c} The coordinatively unsaturated sites of frameworks allow selective and adsorptive separation of various gases.^{7a-7c} Though zeolites, COFs and complex hydrides are available for gas adsorption applications⁸, the balance between the high gravimetric and volumetric adsorptive capacity of MOF make them a promising class of material for adsorptive gas storage application and clean energy purpose.

Why magnetic MOFs?

MOFs can be considered as porous network possessing metal clusters and organic ligands as linkers. Apart from the applications of MOF as molecular sieves, sensors and storage devices it has also been widely studied as a molecular magnetic material due to their peculiar responsive nature of changing the magnetic features under the influence of external agents such as temperature, pressure and guest molecules. Their magnetic properties offer wide application as switches and sensors.^{9a-9c} The slow magnetic relaxation of single chain magnet (SCM) allows them potential candidate for spintronic devices, high-density information storage, quantum computing etc. The reason for these characteristic properties of SCM arise from the weak inters chain interactions and large single-ion anisotropy and intrachain interactions. Such switchable SCMs provide an additional and independent way to control the magnetic states. Thus the diversity of MOFs and their potentially interdependent properties due to organic inorganic components ensure them as magnetically responsive materials.^{10a-10c} Also, paramagnetic MOFs offer additional flexibility to ground state by switching of spin state as well as magnetic coupling interactions in their ground state. Theoretical insight into the gas adsorptive nature of MOF seeks high impact because the prediction of magnetic properties and the coupling data provide much input towards the synthesis procedures of MOFs.

The effective manipulation of the magnetic properties of the framework through physical or chemical responses is a major challenge in bridging molecular magnetism and responsive MOFs.^{11a-11c} The solution to connect these two is to introduce suitable motifs that are responsive for external stimuli and causes a switching the magnetic state and influencing the coupling interactions in a fruitful manner. Thus the target of MOFs as a tunable magnetic material with external responses such as pressure or temperature can be achieved. The magnetically tuned MOFs offer wide application in molecular magnetism due to their reversible nature of gas binding due to physisorption or chemisorption interactions.

Synthesis of the sensing part of Perylene Mono-Imide based fluorophore probe for sensing applications

Reshma Jose

Ph.D. Scholar, Department of chemistry, Indian Institute of Technology

Bombay, Maharashtra

email: reshmajose@iitb.ac.in

Abstract

Fluorescent based chemo sensors are potential candidates for sensing applications such as detection of cations and anions, environmental pollutants and biologically active species due to their peculiar properties such as high sensitivity and selectivity, low cost etc. This article focuses on the synthesis and analysis of photophysical properties of the sensing part of a perylene monoimide (PMI) based fluorophore probe for cation sensing application. PMI substituted with ethylhexyl amine was selected as the sensing part of the fluorescent probe. Mono brominated PMI derivative was synthesized and the normalised absorbance and emission spectra of reactant PMI gives $\lambda_{abs} = 485(\text{nm})$; $\lambda_{em} = 541(\text{nm})$; ($\lambda_{ex} = 541\text{nm}$) and that of mono brominated PMI was found to be $\lambda_{abs} = 485(\text{nm})$; $\lambda_{em} = 541(\text{nm})$; ($\lambda_{ex} = 541\text{nm}$).

Introduction

Fluorescent sensors have attracted much research interest in various fields such as pharmacology, biology, and environmental sciences as it offers wide application such as detection of pollutants in water, environmentally important species, biologically important anions and cations¹, small neutral molecule etc. Florescent sensors comprise of a sensing site and binding site to which the substrate molecule binds and the binding site is capable of transferring the substrate interaction to sensing site through charge transfer interaction. The peculiar properties of fluorescent molecule such high sensitivity, high selectivity², cost effective nature and sub nanometre spatial resolution with submicron visualisation³⁻⁴ make them potential candidates for sensing applications. The detection of analyte molecule is achieved by photo physical mechanism such as chelation induced enhanced fluorescence, intramolecular charge transfer, photo induced electron transfer and so on. Hence, fluorescent chemosensors have attracted much attention in past decades for gas sensing applications.

In light of this, we designed several precursors for fluorescent sensor which can serve as a linker for the binding site to which the metal binds and is called sensing part or fluorophore. We have developed several sensing site for the sensor based on the Perylene Mono-Imide dye (PMI), which is a polycyclic aromatic hydrocarbon with excellent electron acceptor ability. It also possesses diverse and fascinating properties such as high molar extinction coefficient in the visible region, high fluorescence quantum yield and high thermal stability which makes it a suitable acceptor moiety in the fluorescent probe.⁵⁻⁶ The structure of the PMI is shown in fig 1 is with bay and peri positions marked in the diagram. Modification of peri position of PMI derivative give rise to enhanced photo physical properties of the system.

Abstract

Nanotechnology which is an emerging field in research and nanoparticles are considered to be its basic for the development of several nanostructured devices or materials. Metal nanoparticles exhibit unique properties due to its magnetic activity, chemical reduction, sensing, biomedical application and others. It has been widely reported that in green synthesis using plant extracts, the plant medium act as a good reducing and capping agent for the synthesis of metal nano particles. The present study reports an environmentally gentle and unexploited method for the synthesis of silver nanocatalysts using *Salvinia molesta*. The synthesised AgNPs were characterized using Ultraviolet-Visible (UV-Vis) spectroscopy, X-ray diffraction (XRD), and High resolution transmission electron microscopy (HR-TEM). High resolution transmission electron microscopy images revealed that the synthesized objects were predominantly of spherical shape with its average diameter ranges between 19-25nm. The XRD and HR-TEM studies clearly demonstrate the crystalline nature of the nanoparticles. Further, the Ag NPs has an effective catalytic activity in the reduction of highly environmentally polluted organic dyes like Methylene blue.

Introduction

The development of biological inspired experimental process for the synthesis of nanoparticles is evolving into an important branch of nanotechnology[1]. Biologically synthesized silver Nano particles could have many applications such as they might be used as spectrally selective coating for solar energy absorption and intercalation material for electrical batteries as optical receptors, for bio labelling, and as antimicrobials[2]. Silver compounds were shows to be effective against both aerobic and anaerobic bacteria by precipitating bacterial cellular proteins and by blocking the microbial respiratory chain system[3][4]. Before the advent of silver nanoparticle, silver nitrate was an effective antibacterial agent used clinically[5]. The possible mechanisms of actions includes better contact with the microorganism nanometre scale, silver provided an extremely large surface for contact with bacteria. The nanoparticles get attached to the cell membrane and also penetrate inside the bacteria. Silver nanoparticle immobilized on silica spheres have been tested for their ability to catalyst the reduction of dyes by sodium borohydride (NaBH₄)[6]. In the absence of silver nanoparticles the sample was almost stationary showing very little or no reduction of the dyes. When silver nanoparticles where added to the solution, rate of reduction increases. The reaction time showed to be strongly. When the concentration was doubled, the reaction time was reduced to less than one third. Here silver nanoparticle aids the transfer of electrons from the BH₄ ion to the dyes, and thereby causing a reduction of the dyes. BNH₄ ions are nucleophile while dyes are electrophilic[7]. SEM pictures of the nanoparticles showed that they were intact after the reaction and still immobilized on the silica spheres[8]. This proves that the particles act as a catalyst because they are not consumed in the reaction

Materials and methods

Silver nitrate (99.99%), methylene blue and sodium borohydride were purchased from sigma Aldrich. All glassware's were cleaned with aqua regia and rinsed several times with deionized water.

Synthesis of silver nanoparticles

Silver nanoparticles have been synthesized by adding 2 mL extract to preheated 30 mL 3.1×10^{-4} M silver nitrate solution and subjected to microwave irradiation for 4 min. The formation of silver nanoparticles is indicated by the appearance of yellowish brown colour within 5 min.

Catalysis

1 mL 100 mM sodium borohydride solution is added to 1 mL 10^{-3} M methylene blue. The solution are then made up to 10

Abstract

De novo protein design is a powerful tool that plays an important role in understanding the sequence-to-structure and structure-function relationships in proteins and polypeptides. The successful protein designs have tremendously advanced our understanding of protein folding problem, by providing structurally and functionally enhanced novel polypeptides or miniproteins with appreciable thermostability and bioavailability. Use of advanced computational techniques have been an integral part of successful *de novo* design of peptides and proteins. One advancing method involves unusual structural fold, created *de novo* for functional engineering is retrofitted with a novel polypeptide sequence to harbor a desired function, by following the established principles of protein folding. Inspired by the previously reported 20-residue triple stranded antiparallel β -sheet peptide "Betanova", we have used the later approach in the current study to rationally design a triple stranded antiparallel β -sheet miniprotein of d" 30 amino acids, named 'RL1' with an unusual structural fold, having a receptor-like hole, with a potential to be engineered as a functional receptor. The structural stability of RL1 is tested in comparison with Betanova using classical molecular dynamics (MD) simulation over 20ns at 300K. In a short look RL1 is found to be stable enough throughout the MD and has the potential to be engineered as a receptor.

Introduction

Proteins are a class of biologically important macromolecules made up of a chain of amino acids. Depending on the functional requirement, proteins can be a small polypeptide chain of 10 amino acids and sometimes can be a very long polypeptide chain of 100s of amino acid residues.¹ The main chain of naturally occurring proteins are generally made up of only L- () amino acids, except Glycine. All proteins possess the inevitable property of protein folding through critical tertiary contacts. Researchers still study this problem of protein folding since serious biochemical malfunctions arises when a protein misfolds to other states. To better understand such protein folding processes one can design small fragments of complex proteins and study those individual foldons.

Figure 1: Cartoon representation of the structure of few miniproteins d" 30 amino acids, from the literature. (a) Trp Cage, (b) avian pancreatic polypeptide, (c) Trp zipper, (d) BBA, (e) Zinc finger and (f) BH17.

ദലിത് ജീവിതത്തിന്റെ നേർക്കാഴ്ചകൾ സരസ്വതീ വിജയത്തിൽ

പ്രൊ. ടെലി കെ. തോമസ്

സമൂഹത്തിന്റെ മുഖ്യധാരയിൽ നിന്നു മാറ്റി നിർത്തപ്പെട്ടവരാണ് ദലിതർ. യഥാസ്ഥിതിക ഹിന്ദുമതവും ബ്രാഹ്മണിക ധർമ്മശാസ്ത്രങ്ങളുമായി രൂന്നു അന്തിന്നു കാലണം. സ്വന്തം മണ്ണിൽ വളർന്നുവന്ന ഇവിടുത്തെ ദേശീയ ജനവിഭാഗത്തെയാണ് ദലിത് എന്ന പദം കൊണ്ട് അർത്ഥമാക്കുന്നത്. കടന്നാക്രമണത്തിന്റെയും കയ്യേറ്റത്തിന്റെയും സംസ്കാരം പ്രചരിപ്പിച്ച് തദ്ദേശീയ ജനവിഭാഗങ്ങളുടെമേൽ ആധിപത്യം ഉറപ്പിച്ച ആഭ്യന്തരവും പിന്നാലെ വന്ന പടിഞ്ഞാറൻ പരിഷ്കാരികളും ഒരു ജനതയുടെ സംസ്കാരത്തിന്മേൽ അധിപത്യം പുലർത്തി സ്ഥാപിച്ചെടുത്തതാണ് ഈ മോഴ്കോയ്ക. പരിത്രാസര മെന്റണെടുക്കുകയും എന്നാൽ എപ്പോഴും പരിത്രാസരത്തിന്മാണ് മാറ്റിനിർത്തപ്പെടുകയും ചെയ്യുന്ന ജനവിഭാഗമാണ് ദലിത് ജനങ്ങൾ. അവരുടെ വിധിപ്പുകകൊണ്ടും കണ്ണുനീരുകൊണ്ടും കെട്ടിപ്പൊക്കുന്ന സമൂഹത്തിൽനിന്നും അവർ അന്യരാകപ്പെടുന്നു. ഇതിനുമേലും സമ്പന്നരും സാങ്കേതിക ആധിപത്യവും ചേർന്ന് മൂപ്പപ്പെടുന്ന വരേണ്യതയ്ക്കുമുമ്പിൽ എപ്പോഴും അപേക്ഷിക്കാൻ മാത്രമായുള്ളവർ എന്നു കരുതപ്പെടുന്ന ഒരു ജനതയാണിത്. യഥാർത്ഥ ദലിത് ജീവിതം അപമാനീതവും പീഡിതവുമായ അനുഭവങ്ങൾ മാത്രം നിറഞ്ഞതാണ്.

ചിന്തകളുടെയും സിദ്ധാന്തങ്ങളുടെയും ശക്തമായ അടിത്തറയിലാണ് പാരമ്പര്യം ജനിക്കുകയും വളരുകയും ചെയ്യുന്നത്. ഈ ചിന്തകളും സിദ്ധാന്തങ്ങളും തന്നെയാണ് പാരമ്പര്യത്തെ നില്പിർത്തതുകയും സമ്പന്നമാക്കുകയും ചെയ്യുന്നത്. അധിമവർഗ്ഗം എല്ലാഴ്ചോഴ്ചം തങ്ങളുടെ സ്ഥാപിത താല്പര്യങ്ങൾക്ക് മുന്നം തട്ടാത്തതരത്തിലുള്ള പാരമ്പര്യം സൃഷ്ടിക്കാൻ ശ്രമിക്കുന്നു. സമൂഹത്തിലെ ദുർബ്ബലവിഭാഗങ്ങളെ ഈ പാരമ്പര്യത്തിൽ അവർ തളച്ചിടുന്നു. ഇന്നുവരെയുള്ള നൂറുകൾ പാരമ്പര്യങ്ങളെല്ലാം ഒരു പിടിയാളുകൾ ദുരിപക്ഷത്തിനുമേൽ അടിച്ചേല്പിച്ചതാണ്. ഇത്തരം പാരമ്പര്യത്തെയും സംസ്കാരത്തെയും തിരസ്കരിക്കുന്നതോടൊപ്പം അധിമവർഗ്ഗം അടിച്ചേല്പിച്ച് പാരമ്പര്യത്തെ ചോദ്യം ചെയ്യുകയാണ് ദലിത് സാഹിത്യകാരന്മാർ ചെയ്യുന്നത്. വരേണ്യവർഗ്ഗത്തിന്റെ ആവ്യന്യതയ്ക്കു സമാന്തരമായി സഞ്ചരിച്ചുകൊണ്ട് അവർ നിരവധി ചോദ്യങ്ങൾ തൊടുത്തു വിടുന്നു. ഇപ്രകാരം പരത്താൻപതാം നൂറ്റാണ്ടിന്റെ ഉത്തരാർദ്ധത്തിൽ ദലിതരുടെ ജീവിതാവസ്ഥകൾ ചിത്രീകരിച്ചുകൊണ്ട് പോയേതടിക്കുത്തമ്പു രചിച്ച നോവലാണ് സരസ്വതീവിജയം.

സരസ്വതീവിജയത്തിന്റെ രചനാലക്ഷ്യം

അന്ധനീരാസത്താലും ഇടിയവ്യക്താസത്താലും അന്ധാചരങ്ങളാലും അവകോലപ്പെട്ടു കിടക്കുന്ന ഹിന്ദുമതത്തെ കഠിനമായി കവറുത്തിരുന്ന വ്യക്തിയാണ് സമുദായ പരിഷ്കർത്താവും സാമൂഹിക സേവകനും അഭിഭാഷകനും എഴുത്തുകാരനുമായിരുന്ന പോത്തലി കുഞ്ഞമ്പു. ഇതിനുമേലുള്ള വിദ്വേഷമേലും വിജയമാണ് സരസ്വതീവിജയത്തിലൂടെ അദ്ദേഹം പ്രകീർത്തിക്കുന്നത്. ഇതിവ്യത്യാസത്തെ സൃഷ്ടിച്ചത് ബ്രാഹ്മണമതമായിരുന്നുവെന്നും അത് വൈദികന്മാരുടെ സാർവ്വത്രിയ താല്പര്യങ്ങളുടെ ഫലമായിട്ടായിരുന്നുവെന്നും അദ്ദേഹം വിശ്വസിക്കുകയും ചെയ്യുന്നു. അഭിപ്രായപ്പെടുകയും ചെയ്തിരുന്നു. താഴ്ന്ന ജാതികാരോടുമുള്ള താല്പര്യം, ബ്രാഹ്മണവിദ്വേഷം, അഭിഭാഷകവൃത്തി, ക്രിസ്ത്യമതാഭിമുഖ്യം എന്നിവ സരസ്വതീവിജയത്തിന്റെ രചനയിൽ പ്രകടമായ സ്വാധീനം ചെലുത്തിയിട്ടുണ്ട്.

നോവലിന്റെ രചനയെക്കുറിച്ച് അദ്ദേഹം തന്നെ പറയുന്നത് ഇപ്രകാരമാണ്. കണ്ടാൽ കണ്ണുകളുകേണമെന്നുവെച്ച് ഉയർന്ന ജാതികളാൽ നടപ്പുണ്ടാക്കിയ വിഭജനം ഉള്ള ജീവിതത്തെ എന്നപോലെ ബഹുമാനമായി ദുർഭര അകറ്റപ്പെട്ട അഗതികളായ ഹന്തരുടെ ഇടയിൽ വിദ്യാഭ്യാസം ഉണ്ടാക്കേണ്ടത് അത്യാവശ്യമാണെന്നും വിദ്യാഭ്യാസം കൊണ്ട് അവരുടെ സ്ഥിതി വളരെ പരിഷ്കരിച്ചു വരുമെന്നും മദിരാശിയിലെ ചില ഇംഗ്ലീഷുവർത്തമാനപത്രങ്ങൾ ചോദിച്ചോടയച്ചുതന്ന ചില ലേഖനങ്ങൾ വായിച്ചപ്പോൾ മലയാളത്തിലെ പുഴയരുടെ സങ്കടാവസ്ഥ ഓർത്ത് ഇവ പുസ്തകം എഴുതാൻ ഇടപന്നുമാണ്. 1892 ൽ സരസ്വതീവിജയം പ്രസിദ്ധീകരിക്കുമ്പോൾ അദ്ദേഹത്തിന്റെ മനസ്സിലുണ്ടായിരുന്ന ചിന്ത ഇതുതന്നെയായിരുന്നു.

സാമൂഹിക പ്രതിഫലനം നോവലിൽ

സാമൂഹികമായ ഉച്ചനീചത്വങ്ങളുടെ ഹൃദയസ്ഫുടകായ വിവരണങ്ങൾ സരസ്വതീ വിജയത്തിൽ സുലഭമാണ്. ഇന്ത്യൻ ജാതിവ്യവസ്ഥയുടെയും ബ്രാഹ്മണാധിപത്യത്തിന്റെയും പ്രത്യയശാസ്ത്രമായ മനുസ്മൃതിയെ കൂട്ടുപിടിച്ചാണ് കുബേരൻ നമ്പൂതിരി തന്റെ ക്രൂരതകളെല്ലാം കാണിക്കുന്നത്. ചുരുക്കം ചുരുക്കമാണ് വരുത്താനും അതിന് ദൈവികമായ അടിത്തറ ഉണ്ടെന്ന് സ്ഥാപിക്കാനും മനുഷ്യന്റെ ആദിപിതാവായ മനു എന്ന സാങ്കല്പിക മഹർഷിയിൽ അതിന്റെ പിതൃത്വം അവർ അടിച്ചേല്പിക്കുന്നു. ചുരുക്കത്തിന്റെ ആയുധം മാത്രമല്ല ആക്രമണത്തിന്റെ ഭാഷ്ട്രീയ ആയുധവും നിർമ്മാണമാണ് മിജ്ജരാജിക്ക് മനുസ്മൃതി. മനുസ്മൃതി എന്ന പാഠശ്വാത്താണ് ഹൈന്ദവ സാമൂഹിക പ്രമം പടുത്തുയർത്തിയിട്ടുള്ളത്. ഹൈന്ദവ വിദ്വേഷഗ്രന്ഥങ്ങളുടെ ഭാഗമായതുകൊണ്ട് എല്ലാ ഹിന്ദുക്കൾക്കും അത് ദിവ്യഗ്രന്ഥമാണ്. ഇതിനെയും തൊട്ടുകൂട്ടിയായുമായും മനു ഉയർത്തിപ്പിടിക്കുന്നു എന്നു മാത്രമല്ല അവയ്ക്ക് നിയമപരമായ അംഗീകാരം നല്കുകയും ചെയ്യുന്നു.

പാട്ടുപാടിയ കുറ്റത്തിന് കുബേരൻ നമ്പൂതിരിയുടെ കാര്യസ്ഥനാൽ ചവിട്ടിനീട്ടിത്തപ്പെട്ട ബോധം മകളു മരണത്തിന് എന്ന പുഴയ യുവാവിന്റെ മരണത്തെക്കുറിച്ചാണ് കഥ വികസിക്കുന്നത്. ചെർമ്മൻ എഴുത്തുപഠിക്കാൻ പാടില്ല. പാട്ടുപാടാൻ പാടില്ല. അങ്ങനെ ചെയ്താൽ നാട്ടിൽ മറ്റു പെണ്ണിപ്പേരും നമ്പൂതിരി പൊറ്റുകൾക്കു പറഞ്ഞുകൊടുക്കുന്നതാണിങ്ങനെ. മാത്രമല്ല അവന്റെ ചാലയിൽപോലും അവൻ പാടാൻ പാടില്ല. എഴുത്തു പഠിക്കാൻ നാട്ടിൽത്തന്നെ മാറ്റിപ്പോയി പിടിച്ചെടുക്കും എന്നാണ് നമ്പൂതിരി പറയുന്നത്. ചെർമ്മന്റെ അമ്മയെയും പെങ്ങളെയും വിസ്മരിക്കുന്നത് 64 അടിമകൾ വന്നുകൊണ്ടാണ്. അല്ലെങ്കിൽ ഉണ്ടാകാതിരിക്കാനാണ്. പുഴയർ താമസിക്കുന്ന മാളത്തിന്റെ ഹൃദയഭേദകമാണ്. കട്ടിലോ കയ്യോ

Hierarchy of Needs in *The Martian*: Stranded Soul Spilling the Silver Screen

Dan George, Research Scholar, Dept. of English, Goa University

The existence of human beings comprises of the choices that they make. From sipping a cup of coffee in the morning, from building a house to live, from calling a person that he miss, people take a plethora of decisions, make choices and bear the consequences. Human beings are motivated by a hierarchy of needs and the choices they make in their life depend on these needs. Historically, the word 'motivation' comes from the Latin root 'moveers' which means to move. Motivation is the process of inducing movement in the organism. Motivation is a complex phenomenon which is influenced by multiple variables operating within the organism and in the environment. In our daily life, we use the term motive as our determination to act in some specific way, to carry out an intention, to arrive at a goal. Human beings are motivated when they are characterized both by a state of drive and by a direction of behaviour towards some goal which is selected in preference to all other possible goals.

The problem of motivation has been the central theme of philosophy since ancient times. Men have always been speculating and finding reasonable explanations of behaviour. The history of motivation is as old as the existence of human beings on earth. Its history can be traced back in the writing of Greek philosophers who believed in the concept of 'free will' of man. The man was supposed to be an active and free agent capable of choosing the right or wrong course for his action. Old Greek philosophers did not introduce the concept of motivation in their explanation of human behaviour. Man's intellect and free will provided sufficient amount of his actions. Reason was the determinant of the behaviour of man. Contemporary philosophers rejected the theory of 'free will' developed by Plato. They proposed the concept of ethical hedonism. It was believed that pleasure seeking and avoidance of pain is the ultimate goal of human life and this action of human beings is ethically good. The philosophical thought was characterized by the concept of reason and free will as the explanation of human behaviour. It hardly contained direct relevance to the modern problem of motivation. The second phase in the development of the concept of motivation began with a great intellectual revolution in sixteenth and seventeenth centuries. Philosophers and scientists replaced the old Greek philosophy by introducing more rational and scientific concepts.

Motive is a concept which joins together drive and goal. Motives can be grouped into Physiological motives, Social motives and Personal motives. Physiological motives are essential for the survival of the human beings. They include food, oxygen, water, sex, warmth in the body and emotions. Man is a social animal. Therefore he has social motives. He lives in groups which shape his behavior according to a definite pattern. Social motives are learnt in the social environment. They are influenced by cultural heritage and philosophy of the life of people. They are rooted in physiological motives and emerge out of them gradually with advancing age of the child. Social motives are the sources which bind human beings and social progress depends on their proper development. Some of the important social motives are social approval, affection, respect, prestige and money, etc. In addition to the social motives which are necessary for socialization, every person has special categories of motives which are dependent on the unique structure of the personality of the person. There may be a long list of personal motives depending upon individual differences which motivates individuals for action. Some of the common personal motives include interests, attitudes, values, and goals.

Maslow's hierarchy of needs is a theory in psychology proposed by Abraham Maslow in his 1943 paper "A Theory of Human Motivation." in *Psychological Review*. Maslow used the terms "physiological", "safety", "belongingness and love", "esteem", "self-actualization", and "self-transcendence" to describe the pattern that human motivations generally move through. Soon after Maslow began his career, he became frustrated with the two types of psychology at the time, which were Freudian psychoanalysis and behavioural psychology. Maslow believed that psychoanalysis focused too much on the sick half of psychology and not enough on the healthy half. On the other hand, he believed that behaviourism did not focus enough on how humans differ from the animals studied in behaviourism. He thus contributed to the third force of psychology that arose in response to this frustration: humanistic psychology.

Maslow critically examined the traditional approach of pain avoidance, pleasure seeking and tension reduction as the major sources of motivating behaviour. He has consistently argued that needs are arranged in a hierarchy. As one general type of need is satisfied, another higher order need will emerge and become operative in life. He developed his own system of needs and

The Pursuit of Meaning: Nuances of Frankl's Logotherapy in *Into the Wild*

Jissmon K.J.

Guest Lecturer, Department of English, St. Joseph's College, Moolanattom
e-mail: jisskarackaljoseph@gmail.com

Introduction

The course of human history is a series of quests and confrontations to and of the "self." Since the ages of Plato and Aristotle, the ideas regarding the "self" and "meaning" have been given greater importance. Being a "thinking species", the humans are always attributed with a wide range of choices and ultimate freedom. In a sense one can say that it is this choice of freedom, that is, the choice of "will" that paves the way to a man's ultimate meaning and his confrontation with his existence. What really count are one's own actions. "Man is nothing other than what he makes of himself" (22) says Jean-Paul Sartre in his *Existentialism Is a Humanism*. The question is, how does a man "make" himself? What is really happening in the making process? How can a man make his life a "meaningful" one? The idea was celebrated and was at its peak until the formulation of the Psychotherapeutic theories of Austrian neurologist and psychiatrist as well as a Holocaust survivor, Viktor Emil Frankl. Frankl introduced new psychoanalytic and psychotherapeutic terms into the realm of studies related to the complexities of human mind. It was in his seminal work, *Man's Search for Meaning* (1946), that Frankl introduced the idea of Logotherapy, as a clinical as well as a psychological term.

Logotherapy: The Final Destination!

Life is not primarily a quest for pleasure, as Freud believed, or a quest for power, as Alfred Adler taught, but a quest for meaning. The great task for any person is to find meaning in his or her life (Frankl 8), says Harold S. Kumar in his preface to Viktor E. Frankl's ever celebrated work *Man's Search for Meaning* (1946). In general, the human life can be regarded as an unlimited, eternal quest for meaning and existence. According to Frankl, "Logotherapy focuses on the meaning of human existence as well as on man's search for such a meaning" (104). The term "logotherapy" comes from the Greek word "Logos," which means "meaning". In general terms, it is considered to be The Third Viennese School of Psychotherapy, the other two being Sigmund Freud's psychoanalysis and Alfred Adler's individual psychology. Based on an existential analysis, which refers to the analysis of one's own existence, which naturally flows into the question of meaning, logotherapy focuses on Kierkegaard's "will to meaning" and opposes Adler's Nietzschean doctrine of "will to power" and Freud's "will to pleasure." Elaborating further on the "will to meaning," one can see man's search for meaning as the primary drive in his life and not a secondary rationalization of instinctual drives. What Frankl says here is important in this context, that the meaning is unique and specific in that it must and can be fulfilled by him alone; only then does it achieve a significance which will satisfy his own will to meaning (105).

There are certain occasions when one cannot find a meaning of his or her own. Frankl calls this "existential frustration". In this condition, the will to meaning gets frustrated and logotherapy views this as "existential frustration."

The term "existential" may be used in three ways: to refer to (1) *existence* itself, i.e., the specifically human mode of being; (2) the *meaning* of existence; and (3) the striving to find a concrete meaning in personal existence, that is to say, the *will* to meaning (106).

This notion of "existential," as it is evident, is different from the traditional concept of the term. Frankl says that this existential frustration can cause neuroses, that is, "noogenic neuroses." The next most important aspect that Frankl introduces in relation to logotherapy is that of the "existential vacuum". Life does not always take a flawless path. Sometimes there comes a situation where one's whole assumption about life and meaning gets questioned. Haunted by the experience of inner emptiness, they feel a void within themselves, and thus end up in existential vacuum. According to this, the meaninglessness is a hole, an emptiness, in one's life and one needs to "fill" this hole. When man is questioned by life, he can only answer by answering for his own life; to life he can respond only by being responsible. Logotherapy makes one fully aware of his or her own responsibilities. The maxim of logotherapy about the responsibility of life is important here,

Live as if you were living already for the second time and as if you had acted the first time as wrongly as you are about to act now! (Frankl 114)

A Review on Nanomaterial Coated Polymeric Membranes

Jain Maria Thomas

Research and Post-Graduate Department of chemistry, St. Joseph's College, Moolamattom, Idukki, 685591, Kerala, India

Abstract

Water scarcity is a major global issue. Polymeric nanocomposite membranes play a major role in the removal of various pollutants from aquatic media due to the presence of nanofillers. In this review the performance of the nanocomposite membrane in terms of permeability and fouling resistance are compared with the bare polymeric membranes. The nanocomposite membrane shows better permeability due to very small pore size distribution. They also show improved fouling resistance due to the decrease in surface roughness. The performance of the membrane depends on both the properties of nanofillers as well as the composition of the membrane. At higher concentrations of nanofillers aggregation of nanoparticles results in a decrease in performance.

1. Introduction

The demand of water is increasing with population growth. It also leads to water pollution. The protection of current water resources and production of clean drinking water by proper technologies are of vital importance.

Membrane technique is a widely accepted and an effective method for the production of safe drinking water. It is a cost effective and environmental friendly method since it requires minimum energy input and does not produce any harmful chemicals [1, 2]. It is a cost effective and environmental friendly method since it requires minimum energy input and does not produce any harmful chemicals. By properly modifying the pore sizes and surface properties it is capable of selectively filter various contaminants [3]. There are various membrane separation process. Among which pressure driven membrane process have great importance. Pressure driven membrane techniques can be classified as microfiltration (MF), ultrafiltration (UF), nanofiltration (NF) and reverse osmosis (RO). Among these MF and UF are low pressure methods and they are mainly used for the removal of suspended solids, fungi, virusus and macromolecules [4]. But the high pressure techniques such as NF and RO mainly focus on small ions, organic pollutants, hardness removal, water desalination etc [5].

Another classification of membranes is based on their composition as inorganic and polymeric membranes. Inorganic membranes are superior to polymeric membranes due to its high mechanical strength, chemical resistance, temperature endurance, good fouling resistance etc. But the major disadvantages are high cost and difficulty in controlling pore size. In water treatments polymeric membranes are commonly used. Polymeric membranes are cost effective and we can easily tune the pore sizes. But due to hydrophobic nature it is more prone to fouling and it affects the filtration efficiency of the membranes [6]. Also it reacts with chlorine, which is the most commonly used disinfectant in water treatments.

A good membrane always possesses good permeability, antifouling performance and resistant to chlorine. The performance of the membrane can be improved by changing its surface functional properties by different surface modification methods. One way to change the surface functional property is the incorporation of proper nanoparticles in the membrane system. These nanoparticles show unique properties and possess large surface area [7]. Thus the properties of the polymeric membranes can be enhanced by the introduction of nanoparticles. Different types of nanocomposites such as mix matrix, thin film nanocomposites, surface located nanocomposite etc. can be synthesized depending on the location and structure of nanoparticles on the membrane. This review discusses about various nanocomposite membranes and their efficiency in improving the filtration properties of polymeric membranes.

2. Carbon nanotubes (CNTs)

Carbon nanotubes (CNTs) are composed of graphene sheets. Both Single-walled carbon nanotubes (SWCNTs) and multi-walled carbon nanotubes (MWCNTs) have been used for improving the functional properties of membranes. CNTs allow frictionless transport of water molecules and hence useful for the fabrication of high flux membranes [8]. The antifouling performance of the polyethersulfone membrane was found to be improved on incorporating CNTs during the filtration of proteins, albumin and

बदलती नारी मानसिकता : मन्नु भंडारी की कहानियों में

Dr. Sobhitha Sebastian

Assistant Professor in Hindi, St. Joseph's College, Moolamattom

भूमिका

साहित्य समाज का दर्पण होता है। साहित्य की आँखों से हम समाज देखते हैं और समाज की आँखों से साहित्य देखते हैं। प्राचीन काल से अब तक साहित्य के विभिन्न रूप कविता, कहानी, उपन्यास, नाटक आदि समाज का प्रतिनिधित्व करते रहे हैं। इसमें कहानी सर्वाधिक लोक-प्रिय विधा है। अदिन दुग से लेकर कहानी आज तक विकसित होती आ रही है। इस में परिस्थिति और समय के अनुसार परिवर्तन होता रहा है। स्वतंत्रता के बाद की कहानी परिवर्तित भावलोक की कहानी है। कहानी ग्रामीण परिवेश से आगे चलकर शहरी जीवन को अपनाया है। नवीन कहानीकारों ने बाजारवादी, उपभोक्तावादी जीवन की जटिलता और आर्थिक विसंगतियों तनावों एवं संघर्षों को पर्याप्त कुशलता से उभरा है।

मन्नु भंडारी

स्वातंत्र्योत्तर काल में नारी समस्याओं को लेकर अनेक लेखिकाओं ने कहानी के क्षेत्र में पदार्पण किया। साहित्य के युगों पुरानी कथा की रुढ़ियों के मलबे के नीचे से नारी के मौलिक व्यक्तित्व का अन्वेषण, उसके चरित्र का यथार्थ और निस्संग अभिव्यक्ति करनेवाली लेखिका है मन्नु भंडारी। वह नारी अस्तित्व के पारिवारिक और सामाजिक पक्ष के प्रति पूर्ण सहज है।

मन्नु जी पहली साहसी लेखिका है जिन्होंने आधुनिक शहरी नारियों के भावों को सत्य के साथ खोलने का प्रयत्न किया। इसके बारे में राजेन्द्र यादव की राय है। “भ्रम और सेक्स के दुहरे जटिल शोषण के संस्कारों के जाल से नारि के मौलिक और स्वातंत्र व्यक्तित्व को खोज निकालने के लिए जिस साहस और निर्भीकता की आवश्यकता है वे मन्नु के सबसे सशक्त हथियार हैं।”¹ अकेलेपन और आर्थिक समस्याओं से आहत नारी के धूधले स्वरूप को लेखिका ने बड़ी सहजता और पैनी दृष्टि से प्रस्तुत किया है, मन्नु जी ने ‘आँचल में दूध और आँखों में पानी’ वाली नारी के विपरीत नारी मन की घूटन, टूटन तथा आक्रोश को उकेरा है।

छठे दशक की महिला लेखिकाओं में मन्नु भंडारी का नाम सर्वाधिक महत्वपूर्ण है। कथा रचना में नया मोड़ लेकर आयी मन्नु भंडारी ने हिंदी कहानी को रुढ़ियों से मुक्त करने की कोशिश की। मन्नु भंडारी के अंतर लिखने की जो शक्ति निहित है इसके बारे में उनका कहना है, - “जीवन की धड़कन से भरपूर स्थितियाँ, विचार या समस्याएँ ही मुझे लिखने के लिए प्रेरित करती हैं।”² मन्नु जी ने बड़ी ही ईमानदारी के साथ नारी मन के भावों, स्थितिविशेष में पुरुष के मन में उठनेवाले भावों, शंकाओं और ईर्ष्याओं को अपनी कहानियों में समावेश किया। इस संदर्भ में डॉ. उर्मिला गुप्त का कथन शोथक है, □ “सुश्री मन्नु भंडारी ने व्यक्तिगत चरित्रों को मुख्य केंद्र बनाकर कथानकों की सृष्टि की है। व्यक्तित्व के विकास में सामाजिक परिवेश को प्रेरणा स्रोत माना”³। उनकी कहानियों में व्यक्तियों को प्रमुखता देने के साथ समाज भी प्रमुख रहा।

मन्नु भंडारी ने नारी जीवन के विभिन्न पहलुओं जैसे दाम्पत्य जीवन, बेटी की समस्याएँ, नारी शोषण, नारी का प्रेमिका रूप आदि को अपनी कहानियों के लिए कथ्य चुना है। आधुनिक पति-पत्नी के औपचारिक सम्बन्ध, टूटते-बिखरते स्नेह, रिश्ते नातों के विविध पहलुओं की सटीक अभिव्यक्ति इनकी कहानियों में हुई है। ‘तीन निगाहों की एक तस्वीर’, ‘कील और कसक’, ‘बंद दरवाजों के साथ’ आदि कहानियाँ इसका दस्तावेज हैं।

तीन निगाहों की एक तस्वीर

□ ‘तीन निगाहों की एक तस्वीर’, पारिवारिक प्रेम और दाम्पत्य सम्बन्ध की कहानी है। बीमार दर्शना नैना की मौसी है। नैना उसे मिलने आती है। दर्शना उसे नहीं पहचान सकती है। लेकिन मौसी को बेहद ध्यान करने के कारण वहीं रुक जाती है। दर्शन नैना से मिले बिना ही दम तोड़ देती है। वहीं से नैना दर्शना की डायरी और हरीश नामक लेखक की कहानी हाजिल करती है। यहाँ से दर्शन की कहानी शुरू होती है। दर्शना टी. बी से बीमार पति की सेवा करती है। रिश्तेदारों से सिर्फ मौखिक सहानुभूति मिलती है। टी. बी के कारण उसकी ओर किसी ने झाँककर भी नहीं देखा है। आर्थिक तनाव के कारण दर्शना एक कमरा किराये पर दे रखा है। उस कमरे में आया लेखक हरीश और दर्शना के बीच एक आत्मीयता स्थापित हो जाती है। जब इस बात का पता उसके पति को चलता है, तो उसे वह बहुत पीटता है। उसके बाद घर से निकाल देता है, और सब संबंधियों को इसकी सूचना देता है। सब लोग दर्शना से नफरत करते हैं। यही दर्शना अपने पति की मृत्यु की खबर सुनकर कहती है, “मरी तो मारी भावनाओं ही जैसे मर गई हैं। मैं ही जाने क्यों जिंदा हूँ।”⁴ यह अंत में नौकरी करती है। ऐसे दर्शना के बारे में नैना ने जो अनुभव पाया है उसकी तस्वीर मन्नु जी ने प्रस्तुत कहानी के द्वारा खींची है। डॉ. शिवशंकर पाण्डेस की राय में “तीन निगाहों की एक तस्वीर कहानी पारिवारिक प्रेम एवं दाम्पत्य सम्बन्ध की कहानी है। जिन्दगी का यथार्थ तथा आधुनिकता बोध जीवन में अकेलेपन, अजनबीपन तथा व्यर्थताबोध को उभरने का प्रयत्न तो करता है ही, साथ ही धरातल पर सघर्ष को जन्म देकर उसके संबंधों को खंडित भी करता है और उसके सोच को भी बदलता है।”⁵ इस कहानी में तीन निगाहें नैना, हरीश, और दर्शना हैं।

कील और कसक

यौन अतृप्ति के परिणाम की और संकेत करनेवाली कहानी है ‘कील और कसक’। इस कहानी की नायिका रानी के विवाह काले चेचक के दागोंवाले कैलास से होता है। रात-दिन प्रेस में काम करते-करते कैलास का मन-मरिचक चयन की तरह हो गया है। मन्नु जी के शब्दों में “कैलास स्वयं एक मशीन बन गया था, भावहीन, रसहीन, उसे न रानी में दिलचस्पी थी, न घर में कर्ज का भूत कोड़े लग-लगाकर काम करवाता था”⁶ रानी के यहाँ एक पेटुंग ‘रेखर’ आया। रेखर खवारा मिली प्रशंसा और सहानुभूति ने रानी को उसकी ओर आकृष्ट किया। इसी दौरान रेखर का व्याह एक सुन्दर लड़की से हो जाता है। व्याह के बाद रानी विद्विष्य-सा

राष्ट्रवाद और हिंदी सिनेमा

Dr. Susan Alex

Asst. Professor, Dept. of Hindi, Govt. College, Kottayam

भूमिका

मानव सभ्यता के आरंभ से मनुष्य मस्तिष्क की भूख मिटाने के लिए विभिन्न कलाओं का सृजन किया। साहित्य, कला, शिल्पकला, चित्र कला, संगीत कला, नाट्य कला आदि विभिन्न कलाएँ सभ्यता के विकास में महत्वपूर्ण भूमिका निभाती हैं। सिनेमा चित्रकला से ज्यादा प्रभावित है। सिनेमा और नाटक दृश्यकला है। सिनेमा रंगमंच की सीमाएँ भेदने में समर्थ है। इसी कारण से सिनेमा का प्रभाव ज्यादा महत्वपूर्ण है। भारत जैसे देश में जहाँ ज्यादा लोग अनपढ़ हैं, सिनेमा एक ऐसा माध्यम है जिसके द्वारा जनता जागृत हो सकती है।

सिनेमा और भारतीय समाज

सिनेमा एक कथा प्रस्तुत करनेवाला माध्यम है। इसकी भाषा चित्रभाषा होने से सिनेमा की संप्रेषणीयता बढ़ती है। सिनेमा एक साथ अनेक लोगों तक पहुँचने में सक्षम है। यह सार्वदेशिक और सार्वकालिक है। सिनेमा सद्भावनाएँ उत्पन्न करने में सक्षम दीखता है। डॉ. सी. एच. रामुलु के मत में - १. □ सद्भावना के मूल में सद्वृत्ति, सत्संकल्प, सदिच्छा और मानवीय करुणा निहित है। इसके लिए व्यक्ति का परिष्कृत हृदय तथा उदात्त चरित्र का संपन्न होना अपेक्षित है। □

सिनेमा का स्वरूप परिवर्तित होता है। सिनेमा का व्यावसायिक पक्ष है। यह मात्र कला नहीं व्यवसाय भी है। यह गतिशील माध्यम है। वैज्ञानिक साधनों की सहायता से सिनेमा का प्रसार संभव है। इस कारण से सिनेमा को विशुद्ध कला के रूप में रखना समीचीन नहीं दीखता है।

भारत में १९१३ से सिनेमा की शुरुआत हुई। दादा साहेब फालके द्वारा बनाया राजा हरिश्चंद्र प्रथम फीचर फिल्म है। उन्नीस सौ तीस तक आते आते भारत में करीब २०० से अधिक फिल्में बनती थीं। राजा रडिश्चन्द्र में शब्द का अभाव था। भारत का प्रथम शब्दयुक्त फिल्म आलम आरा १९३३ में आरदेशिर इरानी ने बनाया था। उस समय से आज तक भारत फिल्मों के लिए उर्वर भूमि रही। भारत में विभिन्न भाषाओं में फिल्में बनती हैं। लेकिन हिंदी भारत के प्राय सभी राज्यों के बीच संपर्क भाषा का दर्जा प्राप्त करने से पूरे भारत में हिंदी सिनेमा का महत्वपूर्ण स्थान है।

राष्ट्रवाद: सामान्य अवधारणा

भारत को संपूर्णता में देखने का प्रयास करती हिंदी सिनेमा कई फिल्मों के द्वारा अपनी स्थानीय सीमाओं से ऊपर उठते दीखता है। पूरे भारत को एक राष्ट्र के रूप में प्रस्तुत करते हुए भारतीय जनता को देशप्रेम के आदेश में दुबोनेवाली कई फिल्में निकली हैं। डॉ. सी. एच. रामुलु के मत में २. □ राष्ट्रीयता एक मानसिक भावना है कि जो एक निर्णीत भूखंड में रहनेवाले लोगों के सामान्य गौरव, विभूतियों और परंपराओं का सन्मिश्र रूप है। □

व्यक्तिपरक प्रेम विस्तृत होकर राष्ट्रीयता बनती है। राष्ट्रीयता देशप्रेम और देशभक्ति की नींव पर टिकी है। राष्ट्रीयता व्यक्तिपरक प्रेम से ऊपर उठकर समष्टिपरक बनती है। डॉ. सी. एच. रामुलु का कथना इस संदर्भ में उल्लेखनीय है- ३. □ मातृभूमि के प्रति सघन रागात्मकता ही राष्ट्रीयता है। □

सभ्यता के विकास क्रम में जंगली मानव अपना घर, कुल, कबीले की रीति रिवाजों और आचार - विचारों का निर्माण करता रहा। अपना परिवार और परिवारवालों की सुरक्षा हेतु कुछ नियम बनाये। अपनी वस्तुओं की चोरी न हो इस दृष्टि से कानून बनाये। धीरे- धीरे मानव समूह विभिन्न गोत्रों, देशों में विभक्त हो गये। हरेक गोत्र और देश अपनी अपनी रीति रिवाज और आचार - व्यवहार अपनाने लगे।

स्थूल दृष्टि से देखने पर राष्ट्रीयता भौगोलिक सीमाओं के अंतर्गत निहित है। देश की प्रकृति, नदियाँ, पर्वत आदि के माध्यम से अपने जन्मदेश को देखना ही राष्ट्रीयता का आधार है। देश की सामाजिक और सांस्कृतिक परिस्थितियाँ भी राष्ट्रीयता के अंतर्गत निहित हैं। राष्ट्रीयता का मनोवैज्ञानिक पहलु भी है। जिन लोगों में एक हो वैभव, परंपराएँ और वैतुक संपत्तियाँ हैं, उन में राष्ट्रीयता की मनोवैज्ञानिक भावना उत्पन्न होती है।

भारत और राष्ट्रीयता

भारत में राष्ट्रीयता का सूत्रपात उन्नीसवीं सदी के नवजागरण के साथ हुआ। पूरे भारत में विदेशी शासन के विरुद्ध एक उल्लेखना जागृत हो उठी। भारतीय राष्ट्रीय चेतना के प्रसार के अंतर्गत भारत में एक शिक्षित वर्ग उभरा। स्वामी विवेकानंद, रविंद्रनाथ टैगोर जैसे महान व्यक्तित्वों ने भारतीय राष्ट्रवाद को अंतर्राष्ट्रीय आकार देने में सक्षम रहे।

अंग्रेजी शिक्षा द्वारा सभी जाति के लोगों को शिक्षा का अधिकार देने से शिक्षा पर ब्राह्मणों के एकाधिकार को समाप्त कर दिया। भारत में सब से पहले बंगला भाषा अंग्रेजी से ज्यादा संपर्क में आई थी। महान उपन्यासकार बंकिमचंद्र और शरत्चंद्र उभरे जिन्होंने अपनी रचनाओं द्वारा राष्ट्रवाद की प्रेरणा दी। स्वामी दयानंद ऐसे व्यक्तित्व थे जिन्होंने पूरे भारत को हिंदी के सूत्र में बाँध दिया था। निर्मल कुमार जी का कथन उल्लेखनीय है- ४. □ स्वामी दयानंद ने अपनी सभी पुस्तकें हिंदी में लिखीं। उनका विचार था कि हिंदी के जरिए पूरे राष्ट्र को संगठित किया जा सकता है। □

नवजागरण की प्रवृत्ति समूचे भारत में राष्ट्रीयता की लहर उत्पन्न करने में सक्षम रही। स्वाधीनता संग्रम एक ऐसा अंदोलन रहा जब भारत में एक शिक्षित वर्ग सामने आया। जिन्होंने भारत की प्राचीन संस्कृति, साहित्य और इतिहास का पढ़न- पाठन में अपने को पूर्ण रूप से समर्पित किया।

तत्कालीन साहित्य और दूसरी कलाएँ नवजागरण की प्रवृत्तियों को अपने में समेटने में सक्षम रहे। आगे चलकर ये स्वाधीन भारत की सामाजिक, सांस्कृतिक

2.1 Introduction

Pervaporation (PV) is an efficient membrane process for liquid separation. The past decades had witnessed substantial progress and exciting breakthrough in both the fundamental and the application aspect of PV. The thermodynamic approach of PV, featuring emphasizing membrane/species interactions, though gained great successes in the past decades, is now facing its toughest challenge in the org–org separation. A kinetic era of PV, featuring emphasizing diffusion selectivity, as well as the synergy between the selective diffusion and sorption, is in the making, and this approach will eventually find solutions to the challenging org–org separation [1–3].

2.1.1 Design and choice of membrane materials for pervaporation

For the practical application of PV, the membrane must have a high permeation rate and a large separation factor. To obtain a higher permeation rate, an improved permeability coefficient is necessary. Although a so-called trade-off relationship exists between permeability and selectivity, that is, high selectivity is generally accompanied by low permeability, acceptable membrane materials with both high permeability and high selectivity may be synthesized by polymer design. Generally diffusion of small molecules through a dense membrane is favored, and the solubility of a compound in a polymer is governed by the chemical affinity between the penetrant and

Dr. Jose James is serving as Assistant Professor in the Research and Post-Graduate Department of Chemistry, **St. Joseph's College, Moolamattom, Idukki, Kerala, India.** Mahatma Gandhi University, Kottayam, had recently awarded PhD degree to him. His research supervisors are Prof. (Dr.) Sabu Thomas (Vice Chancellor, Mahatma Gandhi University, Kottayam) and Dr. George V. Thomas (Former Principal, St. Joseph's College, Moolamattom). He has extensive research experience in the field of interpenetrating polymeric networks (IPNs) and has four publications in reputed international journals. He has attended more than 20 international conferences and presented many research papers. He has authored and edited one international and two national books. In addition, he has co-authored five international book chapters. He has 5 years of research experience in polymer chemistry and nanotechnology laboratories of the School of Chemical Science, Mahatma Gandhi University, Kottayam, Kerala, India.

Dr. K.P. Pramoda is a senior scientist in Institute of Materials Research and Engineering (IMRE), (A*STAR) Agency for Science, Technology and Research, Singapore. She has hands-on working experience with almost all thermal and thermo-mechanical characterization tools. She has also collaborated extensively with both academic and industrial researchers over a variety of materials. She has also guided research staff and students who are now working in the polymer industry and in R&D wings of major industrial units. She has co-authored more than 80 papers in international peer-reviewed journals with 4,500 citations. She has five book chapters and two patents to her credit. She is a reviewer for many international journals. She has specialized expertise in thermal analyses such as thermogravimetric analysis (TGA), differential scanning calorimetry (DSC), dynamic mechanical analysis (DMA), thermo-mechanical analysis (TMA), dielectric analyzer (DEA), and microthermal analysis (microTA). She has attended more than 60 international conferences and presented many research papers. She has won more than 15 international awards.

CREATION OF NEW GENERATION WITH SCIENTIFIC TEMPER

Dr Jose James

Introduction

“Education is the manifestation of perfection already in man.” It was one of the principle doctrines of Mahatma Gandhi about education. It is a process for the creation of Global citizens with caliber to face the challenges of contemporary society. To cope up this concept, the new generation must equip with scientific temper. The term scientific temper was coined by the first Prime Minister of India Jawaharlal Nehru in his book “The discovery of India.” The salient feature of scientific temper consist of exploration for new branches of knowledge, admit anything with a proof, the ability to change one’s opinion in light of new indications and not to trust on pre-conceived philosophies in the absence of observational substantiation.

Importance in the Current Scenario

The scientific temper is a way of life which uses the scientific method and which may, consequently, include questioning, observing physical reality, testing, hypothesizing,

DALIT STEREOTYPING AND THEIR RIGHTS: REHASHING KAMMATTIPADAM

— Dr. Joseph George, Anjana Sabu,
Nikhila Siriac

Abstract

Caste discrimination remains one of the most severe and forgotten human rights abuses of the twenty-first century. It leads to extreme poverty and powerlessness which contribute to exploitation and violence against the Dalits – formerly known as untouchables. Cinema is a political arena with an established contour of domination and subordination. Though the realm is fraught with sexist ideologies, the more perounding matter of contention is racism. The racist dogma penetrates into the social fabric so subtly that the biased credo has become the norm. The paper aims to read Kammattipadam as a film that represents the body politics and the stereotyping of Dalits in subordinate roles. We live in a society where our bodies form a part of our identity and our identity is coupled with the body that we were born into. In ancient days, the visual body was treated as something ordinary, fixed and trouble-free. The Dalit aesthetics is delineated in contrast with the aesthetics of the mainstream character in the movie. The skin color, physical features, hair, the way the characters are dressed up and the way they are conducted, often act as a way to tell others about the characters – in fact, 'betray' them. It clearly offers the notion of being a Dalit which instills into the inner depths of the audience who blatantly believes what is portrayed in the film is absolutely real. The viewers thereafter consider Dalit people as meek and submissive and look upon them as a section to be suppressed and to be ruled. A subtle exploration of the voicelessness of the subaltern who falls victim to the deceptive notions of development is discussed. The attempt to unveil the cliched portrayal of Dalits and

THE VOYAGE OF DEVADASIS FROM THE PAGES TO REALITY

— Dr. Joseph George, Roby Mathew,
Anu Vincent, Sethulakshmi P.S.

Abstract

The term devadasis itself suggests the meaning as the servant of God and the practice of devadasi system was followed from the Vedic age itself. This system was prevalent in South India especially in the reign of Cholas and Pallavas. They enjoyed their high status by practicing dance and music to entertain the kshatriyas and guests of the royal family. After the decline of the dynasties, the status of devadasis fell into the profession of the prostitute. The practice is still following through the ritual of Yellamma, the deity of devadasis. Now a day, it does not appear as a ritual but as simply sexual exploitation as most of the girls belong to Dalits.

The chapter focuses on the life of devadasis who offer their life to satisfy the mortal needs of higher status men. There are many organizations to help women. Unfortunately, these helping hands never stretch to the little girls who were forced to act as devadasis in their early childhood. In this vast country, they hide in the dark corners and again they wrap into the secrets of superstitious beliefs. The human rights and the abolishment of laws never help them until they get basic rights. In the twenty-first century, there are many people who struggle to meet their needs. The human rights, particularly of women are discussed in the chapter.

Keywords: Devadasis, sexual exploitation, human rights

Introduction

'Devadasis', the term itself says that they are the servants of God but

Introduction

Cinema is a creative visual art. Films need plots which portray real life situations that are relatable to the audience, a sound environment to appeal to the minds of the concerned people, effortless and simple dialogues to trigger the emotions of the spectators, etc. It is very well known that the Indian film industry is vast as it covers numerous cultures as well as multiple languages. But most of the time, such multicultural properties are manifested only in the portrayal of male protagonists, and everything else is side-lined.

Malayalam films are not any exception in this case as it predominantly narrates for pleasing the patriarchal tastes of the society. The superiority that men want to enjoy all the time is being celebrated in cinema. It proves that in our society, male dominance is very evident, and women are placed in the margin. In other words, "there is a clear discrimination between man and woman, and placement of a clear position as well, in which man is

Preface

Gender equality is not only a fundamental human right, but a necessary foundation for a peaceful, prosperous and empowering world. But women and girls around the world continue to experience violence and cruel practices. Physical and/or sexual violence affects women of all ages, ethnicities, socioeconomic status and educational level. About one third of developing countries around the globe have not achieved gender parity in primary education. In sub-Saharan Africa, Oceania and Western Asia, girls still face barriers to entering both primary and secondary school according to USAID. Regardless of where you live in, gender equality is a fundamental human right. Advancing gender equality is critical to all areas of a healthy society, from reducing poverty to promoting the health, education, protection and the well-being of girls and boys. Investing in gender equality and women's empowerment can unlock human potential on a transformational scale.

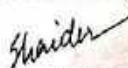

For societies to thrive, women and girls, men and boys must have equal access to education, healthcare, and technology. They must have equal control of resources, lands, and markets. And they must have equal rights and opportunities as peace-builders and leaders. There has been great progress over the last decades as more girls are going to school, fewer girls are forced into early marriage, more women are serving in parliament and positions of leadership and laws are being reformed to advance gender equality. Despite achieving these goals, many challenges still faced by the various economies around the globe. These include discriminatory laws and social norms being pervasive, women continue to be underrepresented at all levels of political leadership, and 1 in 5 women and girls between the ages of 15 and 49 report experiencing physical or sexual violence by an intimate partner within a 12-month period.

and we are mostly confined within the four walls of our homes, cases of domestic violence have registered an unprecedented rise in countries across the world. It appears that the corona virus is actually testing relationships across societies. Unfortunately, women are facing abuse at home, the place where they are supposed to be the safest. This work based on various issues related to women offers a ray of hope during the tumultuous times we all are part of.

Dr Ana Mateen as I know her has been a profound scholar, a dedicated academician and nice human being. The work under consideration is definitely a much needed research in the field of women and their roles in a globalised society.

I sincerely believe that this book will be a great source of information for researchers and academicians especially related to women studies with special emphasis on socio economic issues encompassing women empowerment. I wish the composition the very best!

INTRODUCTION

The objective of maternity leaves and provisions for childcare are to ensure the dignity of motherhood by giving holistic consideration to woman and her newborn, when she can't play out her obligation because of her physical and biological conditions. In the modern world, since the number of women employees are burgeoning day by day in the industry, the need for maternity/parental leaves is keenly and seriously deliberated by different countries and states together with the concerned organizations and the matter is gaining decisive attention all around.

Being a mother is extremely sensitive and special moment for a woman. This is one time when she needs to take the best care of herself and her baby so that she fulfills her call to care for a healthy next generation. It additionally changes her way of life and expects her to make certain trade-offs with her daily routines and life. A woman employee should have the option to give quality time to her baby without agonizing over whether she will lose her employment or steady income. The Maternity Benefit in India gives her the assurance that her rights will be looked after while she is at home to care for her child.

Women in India are better-off in many ways than their peers around the world. India being a developing country, is not really ready to embrace the luxury of six months benefit of maternity as in many developed countries. It is mainly because it denies opportunity for women to work in private sector where maternity laws are applicable. The possibility for women to work lies up to 90% in the private sector too. The chapter critically analyses the maternity benefit in India. The Maternity (Amendment) Bill was passed in 2017 with increased paid leave of 6 months over and above the existing Maternity Benefit Act 1961 where it was only 12 weeks, which is the third highest in the world. The question that remains is whether it is applicable for every single woman working – as an inclusive measure, or does it exclude many unfortunate and underprivileged women working in unorganized sectors. Currently, the law is applicable to firms with at least ten or more employees. This limited view of maternity benefits is a result of the Indian elite's desire to merely imitate policies meant for, and

MATERNITY BENEFITS IN INDIA AS A WELFARE MEASURE FOR WOMEN : A CRITICAL ANALYSIS

*Saji George
**Roopa Joshi

ABSTRACT

The socio-economic scenario of the developing countries have witnessed remarkable changes in the last two decades. The most important and positive change in this regard is the emergence of women as part of the country's labor force. The policymakers in these countries need to comprehend this imperative role of women and provide the necessary gender-centric support to them. The Maternity Benefits Amendment Act 2017 in India with its many embellished provisions, is supposed to be one such forward thinking and farsighted measure. The chapter explores why and how these glossy stipulations can potentially backfire by hindering opportunities for women to enter work force, and even disable women empowerment indirectly. It calls for an eye-opening deliberation from the part of policy makers, stakeholders, establishments and the public to ensure social equality for women and to make sure that she does not cease to be part of the work force after child bearing and maternity leave.

Keywords: Women empowerment, Maternity Benefits, Women labour force, Working woman, Childcare, Social security, Welfare for working women.

Introduction:

Molecular machines are meant to an assembly of molecular components which perform machine-like movements by suitable external stimuli. A nanomotor is a molecular or nanoscale device which is capable of converting distinct forms of energy into motion.[1] The natural or most complex biological molecular motors are present in the cells in the form of multi-protein chains. These protein-based biological nanomotors are responsible for all kinds of motion/transportation in all forms of life. Bio-nanomotors make an essential appearance in all aspects of critical cellular processes like mitosis, DNA replication, repair, recombination, RNA transcription, ATP synthesis, and directional motility of cellular components to their destinations.[2] Some of such biomotors include myosin, which is responsible for muscle contraction and kinesin, which carries cargo inside the cell, named as linear bio-nanomotors. The other types of biomotors are rotary biomotors for example, spermatozoa that are highly specialized haploid cells equipped with a self-powered flagellum to facilitate the motility.[3,4]

Though the different biomotors are known to associate with diverse cellular function and possess different structure, they all must undergo conformational changes to trigger the motion. Most motile bacteria are driven by rotation of flagellar filaments from the cell membrane and different species of bacteria use different motion methods to locate optimal growth conditions or to avoid toxic substances.[5] Inspired from nature as the cells in living organisms act as the molecular machines to power the organs, regulate temperature and repair the damage, scientists from multidisciplinary fields pivoted their attention in developing artificial nanomotors. Thus the active transport in cells inspired for the integration of active motion into synthetic devices. And a first successful attempt in replicating such kind of function for relatively controlled conversion of chemical energy to mechanical energy in synthesized molecules was a breakthrough in the area of nanotechnology.

Bio-hybrid devices by employing motor proteins in the synthetic environment are the primary version of molecular shuttles. A direct approach to build the nanoscale transport machine is by employing linear motors like myosin and kinesin which possess the necessary structural feature to have directional motion along cytoskeleton and also can bind the cargo. These motors are fuelled by ATP hydrolysis and convert its chemical energy into linear motion. However, the replacement of natural motors by synthetic or hybrid motors needs a suitable environment similar to the conditions in a cell. Myosins move along the actin filament consisting of two strands polymerized from actin subunits twisted around each other and in the year 2000, Soong and his co-workers successfully replaced the actin filament with a nickel bar and mounted the motor protein on an engineered, nanoscale support structure.[6] The major difference between the motor proteins, Kinesin and Myosin are that they move along different cellular track, which is a microtubule network onto which Kinesin is attached whereas it is actin filament for Myosins. It was found that the combined action of many motor proteins which could transport microchips of 20 μm length demonstrating the possibility to develop artificial muscle.[7] Nevertheless, the design of bio-hybrid nanomachines has to address the questions of loading, guiding, and control of movement simultaneously. The main drawback of incorporating biological motors into synthetic devices is that it demands a specific biological environment or this environment may not necessarily be compatible with the device.

The Nobel Prize in Chemistry 2016 was awarded to Jean-Pierre Sauvage, J. Fraser Stoddart and Bernard L. Feringa for “*the design and production of artificial molecular machines*”. The development of molecules with controllable movements became a revolution in the world of miniaturisation of technology which could bring Chemistry into another dimension. In 1984 Sauvage, a chemist at the University of Strasbourg in France made an attempt to produce such molecular machines and he succeeded in it by linking two ring-shaped molecules together to yield a nanoscale chain called catenane which is often a mechanically-interlocked architecture consisting of two or more interlocked macrocycles and also showed that one ring structure could freely move relative to the other.[8a] Then in 1994, Stoddart who is from Northwestern University built a first molecular wheel which is a free-moving ring structure on an axle called rotaxane capable of moving 0.7 nanometers and was used to develop molecular muscle and in a computer chip. Feringa, who works at the University of Groningen showed that a molecular rotor blade - made from two flat chemical structures connected by carbon atoms and attached to methyl groups - could be made to spin continuously in the same direction by exposing it to UV light. He continued his work on nanomotors and in 2011 he and his lab created a ‘*nanocar*’ (Figure 1). [8b] Artificial motors not only in molecular scale but also micro- and nanoscale with controlled motion have got inclusive attention among the nano-science community and the applications of these motors would be limitless. The nanomotors can be designed and fabricated for targeted applications like environmental remediation, sensing, assisted fertilization,

Figure 1: Feringa’s version of Nanocar featured in 2016 Nobel Prize media [image reproduced from ref. 8b with copyright

cargo transportation, drug delivery, and even precision micro-/nanosurgery.[8c-10] The control on speed, direction and collective behaviour of the artificial Micro/Nanomotors might be affected by diverse factors. It is found that the speed variation of motors is highly connected to the concentration of fuel which makes a crucial role in functioning of Micro/Nanomotors.[11] The environmental conditions like temperature also have a profound effect on the regulation of speed

of nanomotors because the temperature-dependent catalytic efficiency of selected synthetic catalytic nanomotors trigger and fasten the decomposition of fuel and increase the rate of motor motion.[12] In the case of motors which are driven by an external field, the strength and direction of the applied field may have a control on the speed and direction of their motion. Another possible way of controlling the motion of synthetic motors is by applying external magnetic field and incorporating magnetic metallic components in the design of Nanomotors.[13,14] The sensitive response of nanomotors to even minor changes of local environment promise these motors a chemotaxis behaviour which is due to the occurrence of local chemical gradient and pushes the motors to move towards the area of higher concentration. The collective behaviour of nanomotors is especially crucial in biomedical applications. The chemotactic state generated by diseased sites in living organisms trigger the action of nanomotors and become a potential candidate in targeted drug delivery applications. Therefore, it is very important to understand the design, functions, mechanism, and working conditions of these nanoscale machines.

2. Design and Fabrication

Inspired by the biological motors, considerable effort was taken to fabricate artificial Micro/Nanomotors. Designing plays a pivotal role in fabricating efficient Micro/Nanomotors which mimic the natural motors. It took long years for researchers to come up with perfect designs where the properties change dramatically when dealt with micro/nano size. Because, on moving to the microscopic world, Brownian Randomization effects, physical forces between the particles, low Reynold's number etc. become challenging while designing these motors in this size regime. However, researchers were able to overcome these challenges to an extent and fabricate artificial Micro/Nanomotors of various designs such as Janus type,[15] Bimetallic,[16] and Tubular.[17]

2.1 Janus Micro/Nanomotors

Janus motors or two-phased spheres are particles with unique properties due to their asymmetric structure. The term "Janus" comes from the ancient mythological Roman God, having twin faces looking to the past and the future, to creation and destruction. These particles possess two distinct phases which differ in their physical and chemical properties or directionality within a single particle. These particles are generally classified into three categories such as polymeric, inorganic, and polymeric-inorganic, all of which possess different shapes. The most common types are

spherical or cylindrical Janus motors. Au-SiO₂,[18] Pt-SiO₂,[19] Au-TiO₂[20] are some of the examples of synthetic Janus motors whereas, lipids, enzymes, and plant leaf surfaces are natural asymmetric Janus like systems. The conventional physical vapour deposition (PVD) is the most used method to fabricate Janus type motors. But, due to the uncompromising conditions of this method of fabrication, electrochemical deposition turned up as an ideal method for metallic Janus motors.

2.2 Bimetallic Micro/Nanomotors

Bimetallic Micro/Nanomotors are comprised of two different metal segments chosen in such a way that they establish an asymmetric charge distribution and electrical dipole around the particle when in contact with an electrolyte. In other words, one of the metal acts as anode and other as a cathode. Therefore, these types of nanomotors work as a short-circuited electrochemical cell in which the surface flux of protons is generated from the anode and moves to the cathode. During motion, the more anodic metal will be directed forward in the bimetallic Micro/Nanomotors. The two main methods of fabrication are template-directed electroplating (TDEP) and physical vapour deposition (PVD). TDEP method uses a porous membrane template to which the metallic nanorods are deposited electrochemically, which can be later released from the template. PVD method consists of coating substrates by the heating and evaporation of metals and metal oxides. Au/Pt nanomotor is one of the best examples for bimetallic nanomotors where platinum serves as the anode which is synthesized electrochemically in alumina membrane template.[21] The observed velocities of these type of Micro/Nanomotors are comparable to flagellar bacteria or similar organisms.

2.3 Tubular Micro/Nanomotors

Tubular Micro/Nanomotors have a unique hollow structure, which enables them to possess a strong driving force and easy surface functionalization. These hollow structures provide a confined space for chemical/biochemical reactions or physical transformations and thereby enable the driving force to be much stronger than other Micro/Nanomotors with different geometries like cone or cylinder. Tubular motors can be metallic, polymeric, semiconducting, and magnetic in nature. Tubular micromotors were initially known as Microjets/Microrockets.[22] The fabrication techniques of tubular motors mainly include rolled-up [23,24] and template-assisted method. Rolled up method is performed by the deposition of a photoresist layer on a substrate followed by

the deposition of different metals to form a pre-stressed, multimetallic thin membrane. By selectively removing the sacrificial photoresist layer using a suitable solvent, the multimetallic membrane roll up to form tubular Micro/Nanomotors. Fe/Pt bilayer micromotor is an example.[25] Unlike Rolled up method, Template assisted method is mostly used to prepare smaller sized Micro/Nanomotors with larger in number. Membrane template-assisted electrodeposition is one of the commonly used techniques which utilizes porous alumina membranes as a template.[26,27] The tubular nanomotors synthesized in these pores results in uniform size and large pore densities and are highly demanded for biomedical applications. Tubular Micro/Nanomotor are widely used in environmental [25,28] and biomedical applications.

Although researchers have contributed a lot to the design and fabrication of synthetic nanomotors, the biocompatibility and efficiency towards biomedical applications remain confronting. To overcome this, scientists developed biohybrid Micro/Nanomotors consisting of both synthetic and biological parts. The biological parts may include enzymes (eg: Catalase, Urease etc), [29,30] cells (RBCs, Sperm cells etc.), bacteria (*E. coli*) [31,32] etc. Bio-hybrid Micro/Nanomotors are promising alternatives for drug delivery in an effective and biocompatible way where the biological parts mimic the distinguished characteristics of the living organisms.

3. Mechanism- An Overview

Contrary to the macroscopic objects, micro/nano scaled motors seldom have moving parts for their propulsion. In the macroscopic realm things can move by virtue of its inertia which scales with L^3 (L is the linear dimension) whereas in the nano regime viscous forces dominate (which scales with L^2). The ratio of the inertial forces to the viscous forces is a very important parameter called Reynold's number (Re) which decide the nature of motion of a particle in a fluid. Near the nanometer size regime where the viscous forces dominate the inertial forces the Re becomes a small number ($\sim 10^{-4}$). At low Re the particles will interact with the fluid medium much more than that of the macroscopic object and hence can show discontinuous motions such as Brownian motion. In order for a nanomotor to obtain continuous propulsion in a desired direction, there has to be breaking of symmetry happening in the system.[33] Primarily, this symmetry breaking is introduced into a nanomotor system by the use of a gradient of some physical parameter (thermal, acoustic electric, magnetic *etc.*) around the nanomotor. The above-mentioned symmetry breaking can be introduced into the system either by self-generated field gradients (Autonomous

nanomotors) or by an external applied field (Non-autonomous). Self-propelling can be facilitated using suitable chemical reactions for expelling gas molecules and utilizing the recoiling from such emitted gas and also by utilizing local electric field inherent to the medium in which they propel. At first, we will discuss a few methods in which an external field (Non-autonomous) is key to the propulsion of the Micro/Nanomotor followed by a discussion on self-propelling (Autonomous nanomotors) mechanisms.

3.1 Acoustophoresis: Propulsion mediated by ultrasonic sound waves.

Sound waves with high frequencies, typically in MHz (10^6) frequency range are used for propelling the nanomotors because those frequencies are safe for living beings. Ultrasound waves form standing wave (just like a rope tied to a pole and made to oscillate at the free end forms a standing wave) pattern if applied across the cell containing the nanomotor suspension. The ‘nodes’ are points where the resultant wave amplitude (hence energy) is minimum. Such nodes at various spatial positions form a plane called the ‘nodal plane’ and the nanorods (motors) are lifted to the nodal plane.[34]

We have, $h = n \lambda/2$; where, n is an integer is the condition for forming the standing wave, and h is the height of the cell. All of the action (translational /rotational) of the nanomotors are happening at this plane where the resultant amplitude will be minimum with a lower energy hence, compelling the nanoparticle to migrate to those regions. Prof. Thomas Mallouk and team at the Pennsylvania State University

Figure 2: Acoustophoresis of Au and AuRu nanorods. (a) Alignment of nanorods into chain assembly under the influence of an acoustic field. (b) in plane motion and in plane rotation of nanorods and (c&e) pattern formation which are dimensionally related to the wavelength of sound wave in use. (d) Optical image of the response of nanorods and the

have imaged the various kinds of motion of the nanorods with certain specific patterns such as

circular chain of particles, parallel lines of assembled particles and so on, all having some dimensional relationship with the wavelength of sound wave used (400 nm in this case) as shown in Figure 2. The above-mentioned team of researchers have made this research into the next level *i.e.*, they could utilize this acoustic propulsion of nanomotors made of gold nanorods inside living cells (HeLa cell) for actively interacting with intracellular components which show tremendous potential in biomedical application.[35]

3.2 Magneto/Electrophoresis: Propulsion mediated by Magnetic field/ Electric field gradients

The mechanism in which an electric field is responsible for the motion of nanomotor is called Electrophoresis. Usually, the interfacial layer between a particle and the medium in which it is dispersed is rather a passive surface which doesn't impart any kind of force on the particle. But only in certain combination of interfaces such an interface is an active area whose responses create a slippery action resulting in the propulsion of the particle. These kinds of slip velocities are derived from the concept of a double layer, the first one being a layer of fixed charges on the surface and the second one is a spatial charge which is diffused into the liquid.[36,37] Both the charges balance each other to maintain a charge neutral state. An externally applied electric field exerts a force on the outer diffuse charge layer. The Debye screening length (k^{-1}) decides how much the stationary charge layer is screened from an externally applied field and is inversely proportional to the square of electrolyte concentration in the surrounding liquid. The electrokinetic flow of this diffuse charge layer according to the applied field is termed as electro-osmosis which becomes parallel to the surface (along the direction of E field) if the dimension of the particle is greater than the Debye length. A combination of the Stokes equation (for velocity field in electro-osmosis) with the Poisson's equation for the variation of electrostatic potential as a function of the space charge results in 'slip velocity' u governed by Helmholtz equation for electro-osmosis.

$$u = \frac{-\epsilon k T}{\eta e} \zeta E$$

A more simplified version of this in the case of a nanorod is the Smoluckowski equation, $u = \frac{\epsilon}{\mu} \zeta_{\text{rod}} E$; for a uniform charge distribution, where ϵ is the permittivity of the medium around the nanorod, k -Boltzmann constant, T - temperature, η -coefficient of viscosity, ζ -the zeta potential, E -the applied electric field and μ - the dynamic viscosity. From the above expression it is

clear that the movement of a nanoscopic object in fluid is a function of the zeta potential of the material in the medium and the dielectric permittivity of that medium and it also depends on the applied electric field.

There are a class of magnetic-nanomotors whose propagation is controlled by the simultaneous use of magnetic and acoustic fields. In the absence of a magnetic field they behave similar to the non-magnetic counterparts which are propagated by ultrasound. They form the similar kind of pattern, and levitation to the nodal plane in the absence of magnetic (B) field; whereas the B field gives an additional control for their motion which adds to their functionality. The control of such nanomotors is achieved at relatively low fields 40 mT. The motion of such nanomotors under the influence of B field is governed by the expression for torque of magnetic moment μ_B given by $\tau = \mu_B \times B$. There are also deterministic alignment of magnetic layer (permalloy) capped silica microspheres in an AC magnetic field.[38] Artificial bacteria flagella composed of a magnetic head (Cr/Ni) and a spiral ribbon (semiconducting) shows deterministic movement at B fields as low as 2 mT.[39]

3.3 Light controlled propulsion of nanomotors

Light is another interesting stimulus to propel the nanomotors which shows numerous possibilities. It was demonstrated that micro torpedoes with gold capping can be steered using infrared light and can also be used for micro explosives triggered by high power of light/IR. They also show excellent mobility in various fluids including intra-cellular fluids with a tremendous application potential in biomedical field. The mechanism being photothermal effect in which the gold nanoparticles incorporated into the torpedoes can give rise to local heating upon light irradiation.[40] This results in a thermal gradient driving movement of the water molecules in the medium giving rise to a thermophoretic force. The direction of motion of the torpedoes is determined by the resultant of many hot steam bubbles which provide the recoil thrust for the nanomotor to be propelled.

$F_{\text{thermophoresis}} = C\Delta T$; where $C = \frac{9\pi p\eta^2 K_a}{2\rho g T K_p}$; η -coefficient of viscosity, p - radius of torpedoes tail, K_a - thermal conductivity of steam gas, K_p - thermal conductivity of gold. In the case of AgCl particles, unlike Janus particles, the symmetry breaking is obtained by shape anisotropy which results in the asymmetry of reactivity. AgCl particles release H^+ ions by hydrolysing the water

molecules along with the release of Cl^- ions. In the presence of light, unbalanced release of compositional difference between the two phases of the nanoparticle which in turn creates an asymmetric ion gradient (diffusiophoresis) giving rise to movement of the nanoparticle.[41]

3.4 Various Autonomous motions of nanomotors

Self-electrophoresis and self-diffusiophoresis are examples of autonomous propulsion mechanisms. In self-electrophoresis the necessary asymmetry in the electric field is obtained by chemical gradients unlike an external source in the case of ordinary electrophoresis. Such an electric field generated by the chemical gradient pushes the nanomotor in desired direction.[42]

For example, Ayusman Sen's research group demonstrated that AuPt nanorods make use of this mechanism in dilute H_2O_2 solution for their propagation by a catalytic reaction at the Pt side converting H_2O_2 into H^+ and a reverse reaction at the gold end resulting in the production of H_2O molecules utilizing H_2O_2 , electron and H^+ . Such a chemical gradient gives rise to an electric field and the nanorod propagate with Pt as the leading end. Not only nanorods but also spherical bimetallic particles are also showing self-electrophoresis.[43]

The mechanism in which the solute concentration gradient drives the nanomotors is called diffusiophoresis which are majorly of two types namely electrolyte (if the solute molecules are charged) nonelectrolyte (uncharged) diffusiophoresis which are used by micromotors and pumps.[36,44]

Figure 3: Photocatalytic micro/nanomotor with different mechanism for working. Though light is the stimulus in this the image shows 3 different kinds of mechanisms as a response to the light out of which bubble thrust is also shown which can occur with normal catalytic reactions without light. [image

3.4.1 Chemically powered Nanomotors

In the case of Janus particles, the symmetry breaking is obtained by compositional difference between the two phases of the nanoparticle. One of the phases is an active catalyst which enhances certain reaction, giving rise to the production of either gases or excess ions.[45] The other phase is an inert metal which doesn't take part in catalytic activity and hence aiding to attain the necessary asymmetry needed for the propulsion of nanomotors. Figure 3 shows the bubble thrust mechanism,

but not for an ordinary catalytic reaction but for a photocatalytic reaction which also incorporates some of the phenomena discussed in the previous sections such as self-electrophoresis and self-diffusiophoresis in the presence of light. Certain chemical species which can react utilizing this catalytic activity of nanorod/Janus particle powers the nanomotors.[46] The reaction product will be in gaseous phase which when escaping from the nanomaterial exerts a recoiling force (due to momentum conservation) which can be utilised for cargo delivery at the microscales. There are also certain works in which photocatalytic reactions giving rise to bubble generation along with other photoactivated mechanisms.[47] Although there is a plethora of variations of the above mechanisms and their combinations for the manipulation of nanomotors for various applications, we are limiting our discussions to the above few mechanisms due to the limited scope.

4. Bio-Medical Applications

In search of artificial analogue for biological motors, a significant progress in the design and fabrication of man-made Micro/Nano-motors with much biocompatibility has been evidenced in recent years. The applications of biocompatible artificial and bio-hybrid nano-devices are promising especially in areas like sensing and isolation, cancer therapy - drug delivery and diagnostics, nanosurgery and imaging. Fuel free and physically driven Micro/Nanomotors are more attractive in biomedical applications than fuel driven motors which otherwise demand for non-biotoxic and biocompatible fuel. Moreover, integration of magnetic nanoparticles into the motor makes it convenient for loading, transporting and releasing pathway.

4.1. Isolation/Sensing

Nanomotors are used in the field of sensing and isolation of biomolecules/pathogenic cells via specific functionalization which depends on the target biomolecules/cells to be sensed or isolated. Tubular Micro/Nanomotors fabricated by rolled-up method with large surface to volume ratio is used for the isolation of circulating cancer cells (CTCs). For instance, a rolled-up metal sheet containing layers of platinum (power system-converts peroxides to oxygen and water), iron (transport system-to be steered with an external magnetic field) and gold (Bio-conjugating system-decorated with antibody molecule that target carcinoembryonic antigens (CEA)) inside out, shows high performance in the isolation of CTCs.[48] Template-based self-propelled gold/nickel/polyaniline/platinum (Au/Ni/PANI/Pt) tubular micromotors, functionalized with the Concanavalin A (ConA) lectin bioreceptor, are shown to be extremely useful for the rapid, real-

time isolation of *Escherichia coli* (*E. coli*) bacteria from fuel-enhanced environmental, food, and clinical samples.

4.2. Drug Delivery

The geometry and the design of nanomotors show great importance for drug delivery. The large surface area and increased mobility of Janus motors facilitate higher DOX (doxorubicin, stops the growth of cancer cells) uptake by HeLa cells. Certain modifications to the design of Janus motors demonstrated the effective encapsulation of DOX, navigated by an external magnetic field and responsive drug release triggered by NIR light.[49] Janus motors with one hemisphere as magnesium core and other coated with poly(N-isopropylacrylamide) (PNIPAM) hydrogel was used for temperature-controlled cargo release useful for cancer drug delivery.[50] Recently chemically driven tubular micromotors are known for active drug delivery. Wang and Co-workers demonstrate the use of Zinc-based tubular micromotor for drug delivery in stomach triggered by the harsh acidic environment in the stomach.[51] The use of rolled-up tubular microengines perhaps eliminate the step of pre-functionalization before drug loading and entrap the cargo inside through precise motion in laminar fluid. Ti/Fe/Pt microtube is an example for a tubular motor which exhibit the movement with the cargo at speeds of up to 275 $\mu\text{m/s}$ with optimized surfactant and fuel concentration.[52] Bio-hybrid nanomotors are also highly potent due to their large bioavailability resulting from the high affinity of cells towards biomolecules. Moreover, the biological organism can mediate the enhanced drug uptake.[53] Cell-based structures such as red blood cells, bacteria and stem cells show remarkable efficiency and biocompatibility as drug carriers.[54]

4.3. Nanosurgery

Significance of Nanosurgery arises due to totally non-invasive operation performed from outside the body by using nano or micro tools. Surgical nanorobots such as microdrillers, microbulletes or nanojets which are readily fabricated are introduced into the body through vascular system and their motion is manipulated and controlled by external magnetic field. Biocompatible surgical nanorobots are capable of eliminating isolated cancerous cells, remove micro vascular obstructions and perform “non-invasive” tissue transplants. In 2013, Solovev and his co-workers explored the possibility of performing drilling operation by Ti/Cr/Fe microtubes with sharp tips and controlled remotely by external magnetic field.[55] An iron layer was deposited carefully on the Ti/Cr layers

in a trapezoid pattern before a tilted roll-up process, yielding sharp tips. These microdrillers were shown to re-orient from horizontal to vertical rotation and perform corkscrew-like movement towards the porcine liver tissue and starting the drilling operation.

4.4. Imaging

Cell imaging based on Micro/Nanomotors is sensitive to physiological and pathological conditions. Magnetic nanorobots are useful in magnetic resonance imaging. The potential of these man-made nano-devices for controlled navigation make them one of the best tools for image-guided therapy. The bio-hybrid magnetic nanorobot derived from spirulina microalgae and coated with Fe₃O₄ particles allowed in vivo fluorescence imaging and remote diagnostic sensing without the need for any surface modification.[56]

EDITORIAL

The dawn of this decade witnessed the unmanageable hike of bogus information which disoriented the masses with their verisimilitude. The reliable source of information is imperative in this world of information explosion. *Josephine Researcher-IV*, the novel initiative of St. Joseph's College, Moolamattom, brings together the likeminded researchers, scientists, social activists and faculty members belonging to various disciplines to contribute the veritable piece of information to the treasure chest of knowledge. The outcomes of explorations and experiments which infuse life to the pages enthuse the readers with insightful and inconclusive piece of information. This volume which affirms quality rather than the quantum of knowledge reiterates the interdisciplinary of research paradigm and spurs further researches.

This interdisciplinary research book, which functions as energy pathway, offers dynamic platform for the creative minds to disseminate the distilled knowledge for the inquisitive minds. The treasure trove of knowledge unravels itself before the explorer and demystifies the plurality of knowledge it eludes. On this occasion, we are thankful to the contributors, who are like Alfred Lord Tennyson's Ulysses says, "yet all experience is an arch whereto/Gleams that untraveled world whose margin fades/ Forever and forever when I move". The paramount role of the readers in bridging the energy pathway is appreciated on this context.

We are extremely grateful to our manager **Very Rev. Dr. Fr. George Edayadiyil CMI** for his insightful support. We are thankful to **Rev. Dr. Thomas George CMI** (*Our Local Manager and Chairman of the advisory board*). The inspiration and ingenious support of **Dr. Ebey P. Koshy**, our Principal is to be reckoned on this occasion for infusing life to this resource book. We also express our gratitude to Rev. Fr. Libin Valiyaparambil CMI, our Bursar.

The present issue (fourth Volume) includes nine research articles from science, four from social science and twelve from literature. We expect that these articles of primary and secondary nature would enable us to have a share in creating a more harmonious world.

Dr. Jose James
Dr. Joseph George
Mr. Roby Mathew

TABLE OF CONTENTS

A. SOCIAL SCIENCE

1. **Academics for Holistic and Fruitful Life**
Rev. Dr. George Edayadiyil CMI 13
2. **Life Skills Proficiency of Adolescents in Relation to Self-Confidence and Social Intelligence**
Rev. Dr. Thomas George CMI 21
3. **A lot can happen over a coffee: A case study on CCD**
Dr. Joseph George 30
4. **Spiritual Intelligence and Moral Values among Adolescents**
Aleena Michael & Dr. Mathew Kanamala..... 41
5. **Happiness among women undergone tubal ligation surgery**
Fr. Lijo K Joseph & Anitha Mohandas..... 48
6. **The influence of exercise on Wellness among Ex-service men having Lifestyle Disease**
Akhil P. Sivan & Dr Justine Joseph..... 55
7. **Happiness and Self-Concept of Sexually Abused Adolescent Girls**
Rajasree H Kumar & Manu Kurian 62
8. **Women Entrepreneurship and Economic Upliftment:a case Study with Special Reference to Palai Municipality**
Jovana Pramod..... 68

B. SCIENCE

9. **Comparison of Docking Potentials of Different Anti-alzheimer Drugs on Molecular Receptors**
Sijo Francis, Aleena Benny & Jobin Alex..... 79
10. **Morphological and Mechanical Depiction of Semi- Interpenetrating Polymer Networks of SBR -PMMA Systems**
Jose James, George V. Thomas & Sabu Thomas 86
11. **Compact HMSIW Bandstop Filter with Coupled Vertical Loops**
Anju P Mathews & Praveen Joseph..... 93

12.	Terpolymerization of anhydrides and lactide with Propylene Oxide and Carbon Dioxide using Cobalt Salen catalyst and Double metal cyanide catalyst	
	Jobi Kodiyan Varghese & Bun Yeoul Lee.....	96
13.	Theoretical investigations on molecular geometry and charge transfer interactions analysis in a [H₂pip]Cd₂Cl₆(H₂O)₂	
	Jesby George, Praveen Joseph & Anju P Mathews.....	107
14.	Fabrication of reduced graphene oxide-b-cyclodextrin-copper oxide composite modified electrode for tyramine detection	
	Jaise Mariya George & Beena Mathew.....	113
15.	Green and Gentle Synthesis of CuO Nanoparticles Using Pimenta Dioica Under Optimised Conditions	
	Mubeena Sainudheen & Dr. Jain Maria Thomas.....	120
16.	Reen Synthesis of Citric Acid for the Study of Surface Directing Property of Citric Acid on ZnO; Cu²⁺ Nanophosphors and Hydroxylation of Benzophenone with modified ZnO; Cu²⁺	
	Aswiny Soman & Dr. Bejoy Thomas.....	126
17.	Derivatisation of Carboxylic Acids : Phthalimidomethyl Esters	
	Jijamol M. P. & Prof.T. M. Jose.....	132
C. LITERATURE		
18.	The Inconclusive Binary Tussle between the Creature and the Creator: The Ecosophy in Herman Melville's Nautical Fiction	
	Roby Mathew & Dr. R. Anitha.....	137
19.	Re-Reading the Binaries of Subjectivity, Diaspora and Nationalism: A Postcolonial Stance on Amitav Ghosh's the Shadow Lines	
	Roopa Jose.....	147
20.	Establishing Identity: Space, Gender and Patriarchy in Anita Nair's Ladies Coupé	
	Sunitha Mathew.....	154
21.	The Great Indian Language Issue: Do We have a Solution?	
	Abhilash.....	158
22.	The Fading Cries: An Ecocritical Approach to Selected Animal Poems	
	Jissmon K.J.	162
23.	Oneness and Boundaries Out of Thin Air: Cultural Imagination and its Relevance (or Impact?)	
	Arun Sebastian.....	168

24.	An Introduction to Robert M. Prsig's Zen and the Art of Motorcycle Maintenance Melvin Shaji Mathew	173
25.	അനസ്താസ്യായുടെ രക്തസാക്ഷിത്വവും തിരുത്തപ്പെടേണ്ട സാഹിത്യചരിത്രങ്ങളും ജിയോ തോമസ്.....	178
26.	പക്ഷിയുടെ മണം സൃഷ്ടിക്കുന്ന സ്ത്രീ Alphonse P. Parackal.....	184
27.	'अक्षयवट': एक विश्लेषणात्मक अध्ययम Dr. Sobhitha Sebastian.....	186
28.	डॉ.शंकर शेष के नाटकों मेंसमकालीनपारिवारिकयथार्थ Dr. Nadia C. Raj.....	188
29.	समकालीन हिन्दी साहित्य में नई प्रवर्तियाँ एवं समस्याएँ डॉ. षिजा ग्रेस	193
30.	The role of Community Based Organizations in Rural Development Jobins Joseph & Manu Kurian	195

EDITORS

Dr. Jose James

Dr. Jose James is serving as Assistant Professor in the Post-graduate and Research Department of Chemistry since 2011. He has extensive research experience in the field of polymer science under the guidance of Prof. Sabu Thomas, Vice- Chancellor of Mahatma Gandhi University, Kottayam. He has six international publications in peer reviewed International Journals. He edited 2 International and 3 National Books. He has co-authored 7 International and 4 National Book chapters. He has been served as the Associate Editor of *Josephine Researcher* for the last three years. He has attended more than 20 International Conferences and presented 14 research papers. He has been serving as a reviewer of number of International Journals like *New Journal of Chemistry (RSC)*, *Nanoobjects (Elsevier)* etc... He served in the college as various capacities like staff secretary, PTA secretary, NSS programme officer, College Union staff advisor etc. He is a motivational speaker and performed as quiz master in various intercollegiate and Inter University competitions.

Dr. Joseph George

Dr. Joseph George joined the service in 2004 and presently acting as the Head, Department of Management Studies and IQAC Co-ordinator of the College. He did Doctoral Degree in the area of Human Resource Development & Labour Laws. He is a Post Graduate both in Commerce and Management. He is a graduate in Law and took Post Graduate Diploma in Human Resource Management. He is a Member of Board of Studies and acted as Chairman of various Board of Examinations. He is the executive committee member of Grand Academic Portal (Education), Ahmedabad registered under the Ministry of Finance, Govt. of India. He has worked as the Certified Financial Resource Person of Securities Exchange Board of India and acted as the Editorial Board member of GAP Global Journal of Social Sciences.

Sri. Rony Mathew

Sri. Rony Mathew, Assistant Professor and Head, Department of English, St. Joseph's College, Moolamattom, has been serving as the Chief Editor of *THROBS*, the annual newsletter of the college for the last three years. Having undertaken a Minor Research Project and a few publications in National and International journals, he has a stint of research experience to his credit. Pursuing his Ph. D programme in American nautical fiction, he has also been serving as the staff editor of college magazine for the past few years.

ACADEMICS FOR HOLISTIC AND FRUITFUL LIFE

Rev. Dr. George Edayadiyil

Provincial
St. Joseph's Province, Kottayam

As St Joseph College, Arakulam publishes the 2021 edition of Josephine, let us reflect on our mission. Our college situated on a very beautiful, serene, and picturesque hilly area in the district of Idukki in the high ranges is established for the seekers of knowledge and wisdom. We focus on quality based, disciplined, holistic, inclusive and Glocal approach as a centre for study, teaching, learning, research, service and holistic formation of the young minds. That is about the creation of an ambience in which this process happens naturally with the team work of all the stake holders, namely, the students, the staff, the parents, the university, the management, the well-wishers and the general public. Education is a team game where all the stake holders are integral parts working together with the single aim of inspiring and empowering the new generation in a holistic way for their own good and their families, societies and nations.

Our Interconnectedness

An anthropologist proposed a game to a tribe of *Nguni* children in Southern Africa. He put a basket of sweet fruits about 30

meters away and told them that whoever touches it first, can have the entire basket of fruits. He blew the whistle, so that they may start running. To his amazement they did not run alone, but rather they took each other's hands and ran together, then they sat together enjoying the treats. When he asked them, why they did not run alone for the basket, to have it all for oneself, they said: UBUNTU, and said how can one of us be happy when others are sad? Ubuntu is a *Nguni Bantu* term meaning "humanity." It is often translated as "I am because we are," or "humanity towards others," but is often used in a more philosophical sense to mean "the belief in a universal bond of sharing that connects all humanity." Over

two thousand years ago, black people of Africa developed a collective meaning to life, to describe the kind of relationship an individual person is expected to have with their family, community, society, environment and their spiritual world.

In our globalized and digitalized world, the common and shared bond is something that is to be given a better attention. The virtual, the imaginative and the ideal world makes us strangers in the real world of imperfections. The tendency of the day, is to grow alone rather than growing together. This is becoming true even in families. Pope Francis in his recent Encyclic letter, *Fratelli Tutti* quoting Pope Benedict XVI, highlights this aspect when he wrote: “society becomes ever more globalized, it makes us neighbours, but does not make us brothers.” He further writes: “Nobody is saved alone.” The pandemic COVID 19 has unequivocally shown the interconnectedness of humanity.

At times we blame the system and the challenges that we face, to escape from our own responsibilities and commitments as members of one human family. George Bernard Shaw said, “People are always blaming their circumstances for what they are. I don't believe in circumstances. The people who are born on in this world are the people who get up and look for the circumstances they want, and if they can't find them, they make them.” People create better circumstances where things happen. Such people create history. History is not something that happens, great men and women create history facing all the challenges and threats. It is true in the history of any institution and for our college too. There are people who stood against the odds to create the legacy of this

college. Learning history is about learning what we are and what we can be.

CMI Education Vision

The St Joseph College, Arakulam is a Christian catholic minority institution. The Catholic Church in India runs around 50,000 educational institutions including 400 colleges, six universities and six medical colleges. The CMI congregation runs over 400 schools, 39 colleges and a university. In the Bible, Proverb 29:18 says: “Where there is no vision, the people perish.” The CMI congregation has a profound and inclusive education vision of integration that rests on five pillars: 1) Holistic Education; 2) Value Education; 3) Quality Education; 4) Co-operation of Families; and 5) Social Commitment. The education vision of our college is rooted in these.

The Basic Reference Point

CMI Education mission has a reference point and a long legacy that comes from the life, spirit and vision of St Kuriakose Elias Chavara, the mystic founder of CMI congregation who was deeply involved in the socio, cultural and educational empowerment of the people of the 19th century Kerala. The starting of the Sanskrit school at Mannanam, Kerala in 1846 marks the beginning of the CMI legacy of education. This was something unimaginable in Kerala society of the 19th century which was very divided on various ways: caste, creed, colour, etc. According to K.S. Radhakrishnan, the renowned philosopher and the former Vice-Chancellor of Sanskrit University, Kalady, St Chavara's revolutionary step in starting the inclusive Sanskrit school was instrumental in forming a common

public in the society of that time. Later in 1866 he inspired all the churches to start inclusive elementary schools associated with them, with the threat of the closer of the Churches otherwise.

Rooted in that legacy and through years, CMI holistic education philosophy has flowered and it aims: "...to form leaders who are intellectually competent, spiritually mature, morally upright, psychologically integrated, physically healthy, and socially acceptable; who will champion the cause of justice, love, truth and peace." As per CMI education policy, "education is the integral formation of the human person for the fulfillment of his/her individual and social responsibilities." Our education mission aims at individual and social transformation. "We aspire towards creating a just and humane society where dignity of the human person is respected, where unjust social structures are challenged, where our cultural heritage of ahimsa, religious harmony and national integration is upheld, and where the poor and the marginalized are especially taken care of." The challenging education vision of our college is integrally connected with the aspirations and the dreams of our mother land.

It is the commitment to the realization of the holistic individual and social welfare that has to inspire us in our education mission of excellence to go forward with passion, thanking God for the showers of blessings that we received from him all these years as an education institution. We are to be the faithful care takers of that noble legacy coming from our founders and nurtured by people who walked before us these years. Let us be grateful. The Motto of our college is "truth liberates."

The way to freedom is the way of truth. This is rooted in the Biblical and the Indian traditions. Knowledge dispels darkness of ignorance and fills the heart of all with the light of truth. This is the mission of the college. We shall not forget that there are people, systems and ideologies that try to keep people away from knowledge and wisdom feeding on the ignorance of the poor people.

Dreams of Our Land

The noble legacy of our nation that is enshrined in the preamble of our constitution makes us feel proud of our nation and of our ancestors: WE, THE PEOPLE OF INDIA, having solemnly resolved to constitute India into a SOVEREIGN SOCIALIST SECULAR DEMOCRATIC REPUBLIC and to secure to all its citizens: JUSTICE, social, economic and political; LIBERTY of thought, expression, belief, faith and worship; EQUALITY of status and of opportunity; and to promote among them all; FRATERNITY assuring the dignity of the individual and the unity and integrity of the Nation. Right now, whether the pillars of Indian democracy, namely, the legislative, executive and judiciary are working together to realise the dreams enshrined in our constitution? The signs of the times, liberalism, popularism and divisive politics and religions are forcing us to think otherwise. Are the Indian dreams on anvil today after 74 years of independence? Are the generations that fought and brought us the freedom based on the age-old Indian values and ethos becoming strangers to us?

In a changing society, how far do the changes make the society cultured and civilized? Are the changes for good? Here is a story of a man who wrote a letter to a

hotel asking permission to accommodate his dog. "I would very much like to bring my dog with me. He is well groomed and very well behaved. Would you be willing to permit me to keep him in my room with me at night?" In reply the hotel owner wrote: "I have been operating this hotel for many years. In all that time, I've never had a dog steal towels, bedclothes or silverware or pictures off the walls. I've never had to evict a dog in the middle of the night for being drunk and disorderly. And I've never had a dog run out on a hotel bill. Yes, indeed, your dog is welcome at my hotel. And if your dog will vouch for you, you're welcome to stay here, too." A beautiful reply indeed. It speaks volumes about the distorted human nature and the unpolluted goodness of creatures and nature. All our developments and growth need to make us more cultured and refined, more open and generous, more inclusive and integral, more creative and happier, more grateful and giving, and more authentically human and deeply spiritual. Let us pray and act for the realization this dream.

Change Agents in a Changing World

We are living in an ever changing and challenging world that moves at a tremendous pace. The pandemic COVID 19 has brought in a new normal which was unthinkable a year back. The time has changed and we too have changed. At this time of history, we shall train the young ones for life rather than for jobs. The great Greek philosopher Heraclitus wrote: "The only thing that is constant is change." Change is an eternal reality that we encounter on a day-to-day basis. Science says that for an average person the cells totally change within a span of seven years. We are constantly created

anew. How can we cope up with these changes in this ever-changing world? In this digitalized and globalized netizen's world, people are getting divided with narrow-mindedness. At times, people tend to become barbarians in our age. How can we create a better world of peace and harmony?

In such a fast changing world our education vision, mission, policies and strategies are to be constantly reinterpreted, updated and made alive by critically and creatively responding to the times by being faithful to the original spirit and focused vision in tune with the needs and aspirations of all stake holders.

One of my confreres, Fr Varghese shared his experience with me a few years back. He was going for a trip to the Himalayas and on the way, he walked with some Hindu pilgrims going for a festival. On the way to the mountain where the festival was held, there were many booths with exhibitions, displays, games, etc. Since he got tired of walking, he got into a booth with not too many people. A respected swami was giving a talk in that booth on the subject, "Rigidity and Flexibility." He said that what is rigid is going to die and what is flexible is going to survive. He gave the example of the teeth and tongue. See, how our teeth go, but what about the tongue? It lasts. Further he gave the example of the Catholic Church. He said it is surviving because it adapts and renews itself time and again. Today Pope Francis with his clarion call for change and by his love for the poor, marginalized and youth is challenging and renewing the church from inside.

As for us, we have to renew and revitalize ourselves from within to be relevant

and meaningful for this ever changing and challenging world. Education is the powerhouse of humanity. Gurukulas, Academies, Schools and Universities were the change agents in history. So, we shall not be complacent. Constant renewal and adaption with a focus on the internal resources and the ambience are necessary for the survival any living organism. Let us be agents of change wherever it is needed. For that we need a solid vision, genuine motivation and deep commitment. Let's remember the ancient quote: "When you change the way you look at things, the things you look at change."

Motivation

In *Alice's Adventures in Wonderland* by Lewis Carroll, there is a beautiful and relevant dialogue between Alice and the Cat.

Alice: "Would you tell me, please, which way I ought to go from here?"

"That depends a good deal on where you want to get to," said the Cat.

"I don't much care where—" said Alice.

"Then it doesn't matter which way you go," said the Cat.

"--so long as I get SOMEWHERE," Alice added as an explanation.

"Oh, you're sure to do that," said the Cat, "if you only walk long enough."

Let us not be like Alice, not knowing where to go. We have the vision and mission to guide us on the way. Book of Psalms 143:10 reads: "Teach me to do your will, for you are my God, may your good Spirit lead me on level ground." Trust in God remains as our foundational core value. Let ours be a purpose driven life strengthened by the providence of God.

The onus is upon us, and on nobody else, to take this centre of learning, research and service forward on a path of excellence with vision, commitment, hard work and passion. For that let us be the best of what we can. Here is a poem by Douglas Malloch, titled, **Be the Best**:

If you can't be a pine on the top of the hill,
Be a scrub in the valley – but be

The best little scrub by the side of the rill;
Be a bush, if you can't be a tree.

If you can't be a bush, be a bit of the grass,
And some highway happier make;

If you can't be a muskie, then just be a bass –
But the liveliest bass in the lake!

We can't all be captains, we've got to be crew,
There's something for all of us here.

There's big work to do and there's lesser
to do

And the task we must do is the near.

If you can't be a highway, then just be a trail,
If you can't be the sun, be a star;

It isn't by size that you win or you fail –
Be the best of whatever you are!

This is what we shall all be and this is what
we animate our students to be.

Be the best of what we are.

The Path of Excellence

Ours is an era of excellence. Under the new education policy (NEP) average or mediocre institutions cannot stand the test of time. Here is a story. A German once visited a temple under construction in India, where he saw a sculptor making

an idol. Suddenly he noticed a similar idol lying nearby. Surprised, he asked the sculptor, "Do you need two statues of the same idol?" "No," said the sculptor without looking up. "We need only one, but the first one got damaged at the last stage." The gentleman examined the idol and found no apparent damage. "Where is the damage?" he asked. "There is a scratch on the ear of the idol," said the sculptor, still busy with his work. "Where are you going to install the idol?" The sculptor replied that it would be installed on a pillar twenty feet high. "If the idol is that far, who is going to know that there is a scratch on the ear?" the gentleman asked. The sculptor stopped his work, looked up at the gentleman, smiled and said, "I will know it."

The desire to excel doesn't depend on whether someone else appreciates it or not. "Excellence" is a drive from inside, not from outside and that drive creates history. Let us have that collective will for excellence to take our students too in the path of excellence. Former Director of CMC Vellore, Dr Sunil Chandy once said: "We are not opposed to merit but what the government defines as the exclusivity of merit. We believe in suitability. Let's say we have candidates with full score in all subjects, they can get into any medical college. But to convert him/her into a physician takes a different kind of suitability." "Getting 99 percent does not ensure that you will make a committed doctor. I would rather train a chap with 55 percent who has a sense of social consciousness." This Dr Chandy described as 'merit with a mission.' We need to have a profound social sensitivity as individuals and as an institution. As an education institution in the district of Idukki, we have

a tremendous responsibility to empower our student community coming mostly from the agrarian background. We cannot turn a blind eye to the thousands of farmers who are organizing non-violent protection against the farm laws legalized by the central government. We have to stand with justice. St Chavara said: "the day that you haven't done any good for others, will not be counted in the book of life." This is the culture of Excellence we try to inculcate in the students and we create a disciplined, holistic and inclusive ambience in which the students are trained for life rather than for a career. The ambience matters and all the stakeholders are responsible for that in their own unique way.

Our college is to be a nurturing ground for an individual's holistic development to make an effective contribution to the society in a dynamic environment. Do we have a mission with a passion trusting in the providence of God? We believe that "The Glory of God is man fully alive." This stands at the core of our path of excellence.

Every institution has a culture of its own. What is the unique culture of our college? Do we have one? Is it just one among the hundreds of other colleges? What kind of difference can we make as a centre of learning for the better future of our students and for the good of the society? Do we have a benchmark to actualise our potentials as individuals, members of different departments and as a college? What is the benchmark here? To what extent are we able to take forward the young dynamic minds that come to us? Are we here for a purpose? So, let us try hard to realise our own potential for the betterment of our own students and for the

good of those around us and the society. We need to have the passion for excellence on the individual, departmental, and of college levels. We read in Brihadaranyaka Upanishad, 4.4.5:

You are what your deep, driving desire is/ As your desire is, so is your will

As your will is, so is your deed/ As your deed is, so is your destiny

Intense desire, will, and deed – this is the path to create destinies for us and our societies.

Team Work

It is in the ambience of educational institutions that the culture of the society and the nation is nurtured and matured. This is all the more true in our times when the socialization process that takes place in families is minimum due to small nuclear families and because of the invasion of digital media. We come together and work together with a vision and a mission. A sentence attributed to Aristotle reads: “The whole is more than the sum of its parts.” Further, one of the important war strategies that Chanakya proposes in His book *Kautilya's Arthashastra* is “Never go into battle alone” however confident you are. We need real team spirit in our education mission especially in these challenging and complex situations of the world.

When we consider the two major stake holders of this institution, namely the students and the staff, we find more elements that unite them than separate. Based on the set theory in mathematics, if we draw circles around these, we find a lot of intersection points. The air we breathe, the water we drink, the space we occupy, our dreams and our challenges, the service we undertake here, the time we spent in

this campus, when we meditate on these and other points we come to know that there are more points of intersection than of divergence. But we need to realise that there are centripetal and centrifugal forces within us and in our communities and societies. Can we count on the centripetal forces to strengthen our collective will and goals for the good of the student community and for the good of humanity at large? Arnold J. Toynbee, one of the most famous British historians of the last century in his twelve-volume analysis of the rise and fall of civilizations, claims that most of the ancient civilizations died of internal decay rather than of external attack. Unity of the staff fraternity together with the management needs to be the strength of the College.

As there are many stake holders in this institution, our inner strength comes from the percolation of the vision and mission by all the stake holders, the students, parents, staff, the management and the public. This fit between the individual and the organization is the key to committed team work in the path of excellence. It is here that we need collective decision making and implementation in an atmosphere of togetherness.

Make a Choice which is Ours

William Jennings Bryan said in 1899: “Destiny is not a matter of chance, it is a matter of choice; it is not a thing to be waited for, it is a thing to be achieved.” Our former president, Dr APJ Abdul Kalam wrote: “Dream is not that which you see while sleeping it is something that does not let you sleep.” Our college is the result of the dreams and sleepless nights of many who made things happen with vision, determination, commitment,

and hard work trusting in the providence of God. Even today we toil together to take our college to a grater tomorrow. We have to build a system of organizational excellence and a consistent all-round development strategy with a far-sighted vision.

Today, despite all the developments and growth, many are insensitive to the harsh social realities that exist. There is a sharp divide between the rich and the poor in our country. Many turn their face away from truth, justice, gender justice, freedom, poverty, equality and job loss. We have to look at the socio, political, cultural and economic realities around us in a critical and creative way. We have heard the famous prayer of Rabindranath Tagore: "Where the mind is without fear, and the head is held high; Where knowledge is free; Where the world has not been broken up into fragments by narrow domestic walls; Where words come out from the depth of truth; Where tireless striving stretches its arms toward perfection; where the clear stream of reason has not lost its way into the dreary desert sand of dead habit; Where the mind is led forward by You into ever widening thought and action- Into that haven of freedom, my Father, let my country awake." These lines reflect the heart of our Motto: Truth Liberates.

We have to ask: Are we living in a world of freedom or fear? Are we in the process of creating a just and human society? Do we live in a culture of mutual respect and care? Do our women, children, and less privileged feel safe? Are we allured by systems and ideologies that create a divided society? Are power, money and fame the only things that matter in our time? At times, the Indian scenario presents a bleak picture. We know that corruption

of various types reigns everywhere and it even challenges the foundation of our republic, namely, the legislature, executive and judiciary. We need to be watchful and act prudently as the citizens of our country.

Nick Vujicic writes in his book titled, *Life without Limits*, three types of guides who have made impact in his life. They are the Mentors, Role Models and Fellow Travelers. He further explains: "Mentors are people who've been where you want to go, but they are also supporters and encouragers who share your dreams and truly want you to succeed." "Role models have been where you want to go, but they aren't usually as close to you as mentors." "Fellow travelers are usually peers, co-workers, and others with similar goals to yours, who are walking on a parallel road." The staff fraternity and the parents can be all the three for our seekers of knowledge and wisdom. It is in serving these learners that we shall find our true happiness and peace. Let me salute all the staff and parents for their wonderful contributions to the College and to the students for making the college what it is today. It is the staff fraternity that is to take the college and the students to new heights with innovative and collaborative projects and programs. Let us make our college a centre of Excellence, creating a new education culture, which is the nurturing ground, for teaching, learning, research and service. Let our college march forward in her service to the seekers of knowledge and wisdom and for the welfare of all – Sarvodaya. God bless you all and let us seek the intercession of our patron St Joseph for whom Pope Francis has dedicated this year through the apostolic letter *Patris Corde* (With a Father's Heart).

LIFE SKILLS PROFICIENCY OF ADOLESCENTS IN RELATION TO SELF-CONFIDENCE AND SOCIAL INTELLIGENCE

Rev. Dr. Thomas George CMI

Prior

St. Joseph's Monastery, Arakulam

Introduction

The World Health Organization defines life skills as the abilities for adaptive and positive behavior that enable individuals to deal effectively with the demands and challenges of everyday life. They represent the psychosocial skills that determine valued behavior, reflective skills such as problem solving and critical thinking, and personal skills such as self-awareness and interpersonal relationship skills. Specific emotional, cognitive, and behavioral and resilience skills play a vital part in ensuring an adolescent's personal and social success (Langford & Badeau, 2015). Children and adolescents with psychosocial skills have positive mental health and wellbeing (Savoji & Ganji, 2013; WHO, 1993). These skills are known to be the key contributors to negotiating and mediating challenges that young people face in becoming productive citizens (Prajapati, Sharma, & Sharma, 2017).

Today behavioral disorders and social deviations among adolescents lead to aggression, destructive tendencies, alcoholism and drug abuse, violence, inability to maintain healthy relationships

with others, emotional instability, inability to take decisions and solve problems effectively. These issues are mainly due to lack of life skills, self-confidence and social intelligence which should be providing them with the ability to confront such difficult situations and prepare themselves to solve life's problems. The research on addiction to drug and drug abuse in adolescents indicated three relevant related factors – low self-confidence, disability in showing emotions and lack of social intelligence. Recent research reveals that the life skill education has positive effect on self-confidence, social intelligence, psychological health, assertiveness, self-esteem, and decision making among adolescents. Learning and practicing of life skills in relation to self-confidence and social intelligence would lead to reinforcement in the perspectives, values and manners of adolescents.

Given the role of life skills as a strong catalyst for the development of positive behavior, building life skills in the early years of life will help adolescents navigate their social and emotional challenges such as coping with emotional pain, conflict, peer pressure and relationship issues

(Aishath Nasheeda et al., 2018). How life skill programs are structured and delivered can significantly impact long-term program quality. Therefore, it is important to deliver these programs systematically in order to have a lasting impact on the health and wellbeing of participants (Holt et al., 2008). Findings reveal great promise for life skills education as a way to promote positive behavior and to act as a buffer against risk-taking behaviors for adolescents in developing countries (Aishath Nasheeda et al., 2018). There is a need to understand adolescents' learning experiences within life skills education and to identify which skills are most effective at times of difficulty. Examining adolescent experiences within the embedded culture of the individual is important to understand how individuals from different backgrounds construct life skill knowledge into reality.

Life Skills in Curriculum

Life skills proficiency is also an educational intervention that is designed to address areas with wants- and result-based participatory learning. There is a growing demand to educate adolescents with life skills to help them deal with their day-to-day life challenges and transition into adulthood with informed healthy choices. (Aishath Nasheeda, et al., 2018). The goal of life skills proficiency is to equip individuals with fitting information on risk-taking behaviors and build up skills such as communication, boldness, self-awareness, problem solving, critical and creative thinking, etc., to protect them from ill-treatment, misuse and exploitation. Demonstrating its effectiveness, significance and value, life skills have become a major part of many intervention programs

around the globe, particularly those aimed at the prevention of alcohol abuse, drugs and smoking (Huang, Chien, Cheng, & Guo, 2012). Developing countries such as India, Sri Lanka, Maldives, Bangladesh, Thailand, Myanmar and Nepal incorporate life-skill concepts into their curriculum at different grade levels (WHO, 2001). Countries in the Asia and Pacific Regions, for instance, combine life skills into comprehensive Sexuality Education (CSE) programs to reduce risk behavior and improve the health and well-being of young people (UNFPA, 2015).

Drawing on Bandura's social learning theory, skills are learnt through interaction, processing and structuring of experiences (Prajapati et al., 2017). One of the more recent approaches to teaching life skills is through an infusion. Infusion integrates preventive objectives and activities into academic activities. The fundamental purpose of the infusion approach is to educate learners on how to transform knowledge and concepts to become skilled in their daily life. Thus, life skills proficiency contents are infused into the basic subjects of higher education prospectus with a ground-breaking delivery technique. Infusion has been shown to be effective in reducing smoking, binge drinking, and use of marijuana (Smith et al., 2004; Vicary et al., 2004) and as a result, many countries have integrated life skills into their primary, secondary and higher education curricula. However, for an infusion approach to be effective, it needs to be designed well and delivered age-appropriately (Konkel, 2016).

Preparing young generation to confront today's severe situations in educational scenario seems to be a vital task. Helping

adolescents in the growth and development of necessary skills for effective life, creation or increase of self-confidence in confronting problems, solving them, to have successful compatibility with social environment and effective and constructive life in society seems crucial (Shoari, 1998). Therefore, most of the learning environments in the world have initiated the education of life skills in relation with self-confidence and social intelligence in order to prevent behavioral disorders and social deviations. Educating on the life skills is one of the means of psychological and mental health development which would further lead the individual to social, cultural and political evolutions. Studies reveal that life skills tend to be effective in bringing about individual changes relevant to knowledge, skills and attitudes in risk areas as well as psychosocial skills (Menrath et al., 2012). Programs conducted in countries like India and Iran, such as the Life Skills Education Program, comprised of a series of developmental sessions consisting of communication skills, assertiveness, anger management, decision-making, creative and critical thinking skills, etc. (Naseri & Babakhani, 2014; Parvathy & Pillai, 2015). Scholars, however, have emphasized the need to implement sustainable life skills programs as a top priority (James et al., 2006; Jegannathan et al., 2014). Gatekeepers, policy makers, administrators and teachers of life skills need to believe in the potential and value of the life skills programs and receive appropriate training (James et al., 2006; Jegannathan et al., 2014). Further, long term monitoring and evaluation reviews are required to gather empirical evidence on the effectiveness of programs (Tuttle

et al., 2006). This includes participant feedback and discussion on each life skills topic in order to improve application of the skills taught (WHO, 2001).

Life Skills for Adolescents

Adolescence is a period of multiple transitions marked by physiological changes, efforts toward the construction of identity, and a progression from concrete to abstract thought and the ability to think abstractly, multi-dimensionally and to reason more effectively. It is an emotionally intense and often stressful period. Adolescence nature is multifaceted and flexible; the same potential may have different results depending on whether the environment encourages or discourages it. Each adolescent has his own unique traits and express them as uniquely. Adolescence is a transition stage and thus is the period of tremendous psychological imbalances among students. During adolescence, students try to understand more about society, social relations, social approval, respect, social identity, etc. They begin their social contact in a wider sense, approach various social institutions in a novel way, develop morale, and understand taboos, standards, and mores of society. Their behavioral aspects undergo many changes in a rapid speed. Some of them accept society with increased social awareness and some of them may become agitators, aggressors, bullies, or even criminals.

Life skills for adolescents would mean adolescents being able to maintain smooth and effective inter-personal relations, fulfilling personal and social responsibilities, making accurate and timely decisions, solving conflicts without any delay and healthy and positive arguments with dynamic actions which

are helpful to themselves and others. For these young adults, life skills are expounded as, “personal and social skills that adolescents should have learned in order to take effective and certain actions regarding other people and society” (Nori, 1998). They are abilities for adaptive and positive behavior that enable adolescents to deal effectively with the demands and challenges of life. In a wide sense, the skills that function for the well-being of these adolescents to develop into active and productive members of their communities, nurturing a greater sense of confidence, usefulness, sensitivity and openness, are considered as life skills for them. Caring, understanding, cooperation and collaborative learning are important life skills which stimulate cooperative learning, conflict resolution, group-oriented method of problem solving and task performance. Hence, future research should be directed toward investigating how life skills program knowledge is translated into behavior and attitude change in these adolescents (O’Hearn & Gatz, 1999; Parvathy & Pillai, 2015; Pierce, Gould, & Camiré, 2017).

Self-Confidence as a Life Skill

Self-confidence is an attitude that is characterized by a positive belief that you can take control of your life and of your plans. It is a belief in your abilities. The feeling of self-confidence is a positive state of vibration where the subconscious mind is directed towards success. When an individual’s level of self-confidence increases, then his/her chances to succeed in life also increases. Self-confidence deeply depends on one’s character, guts, and self-worth and it focuses more on doing things that give positive results. Each positive

experience is a positive reinforcement that increases one’s self-confidence. Thus, self-confidence is an attitude which allows individuals to have a positive yet realistic views of themselves and their situations. Even when some of their expectations are not met, they continue to be positive and accept themselves. It is the belief in one’s ability to succeed and is the stepping stone to progress, development, achievement and success in life. The successes and achievements in turn will strengthen one’s self-confidence further. Self-confidence thus becomes the key determinant for human cognitive, motivational, affective and decision making processes. Self-confident people know how to take the edge off doubts, conquer fears, and how to find a silver lining in a sky gone gray with storm clouds. They get to the root of the problem; focus on it and understand that one needs to resolve each issue before one can move on. Learning how to be confident is the most important life skill that adolescents need to acquire. It impacts their happiness, success and well-being. All other desirable qualities use confidence as the foundation. Historically, confidence was thought of as an innate personal trait — some were born with it; others were not. However, more recent research substantiates that confidence is learned and developed. No one is born with confidence. People begin to develop confidence during the growing-up process. Adolescent age strengthens the foundation of self-confidence laid in childhood.

Social Intelligence Skills for Adolescents

Social intelligence is the capacity to understand the society and its heartbeats. It is generally defined as an aggregate

global capacity of an individual to act purposefully, think rationally and deal effectively with a given situation. Thorndike (1920) defined Social Intelligence as “the ability to understand others and act wisely in human relations”. It is also the ability to understand the feelings, thoughts and behaviors of people in social or interpersonal situations and to act appropriately based on that understanding. The main dimensions of social intelligence are patience, cooperativeness, confidence, sensitivity, recognition of social environment, tactfulness, sense of humour, and memory. Socially intelligent individuals possess tolerance, cooperation, sympathy, social acceptance, helping mind, and a spirit of we-feeling in the society. Social scientist Dr. Ross Honeywill believes that social intelligence is an aggregated measure of self- and social-awareness, evolved social beliefs and attitudes, and a capacity and appetite to manage complex social changes. Recently, popular science writer Daniel Goleman has drawn on social neuroscience research to propose that social intelligence is made up of social awareness (including empathy, attunement, empathic accuracy, and social cognition) and social facility (including synchrony, self-presentation, influence, and concern) (Introducing Social Intelligence, 2021). Recent research in the emerging field of social neuroscience—what happens in the brain while people interact—is beginning to reveal subtle new truths about what makes a good person. One exhibits empathy and become attuned to others’ moods—this action literally affects both their own brain chemistry and that of others. Indeed, researchers have found that when two (or more) independent brains react

consciously or unconsciously with each other, the individual minds become, in a sense, fused into a single system. Another finding in neuroscience reveals that, the brain produces a class of neurons called spindle cells with an extra-long branch to make attaching to other cells easier and transmitting thoughts and feelings to them quicker. This ultra-rapid connection of emotions, beliefs, and judgments creates what behavioral scientists call our social guidance system. Goleman and Boyatzis define social intelligence as “a set of interpersonal competencies built on specific neural circuits (and related endocrine systems) that inspire others to be effective.” The socially intelligent, who influence others, are skilled at appealing to others and developing mutual trust from key players in a situation. They give constructive feedback to colleagues and help others focus on growth opportunities. These socially intelligent people build an atmosphere of cooperation, helpfulness, and respect in other people. They help others commit to the group’s effort. They help a team to develop an identity, positive relationships, and spirit. Adolescents with high social intelligence understands subtle etiquettes and knows how to listen to people. These adolescents can typically motivate others to cooperate, and people generally enjoy being around her/him. Socially intelligent adolescents have the ability to pick up emotions in other people and to work out what’s really going on with them; to appreciate another person’s perspective; to understand and appreciate the impact of one’s communication on others; to cultivate rapport and be attuned with the broad diversity of adolescents, and to manage interactions effectively and to engage with others for mutual benefit.

Operational Definition of the Key Terms:

Life skills are abilities for adaptive and positive behavior that enable individuals to deal effectively with the demands and challenges of everyday life [WHO, 1996]. The following are the ten generic skills.

Critical Thinking: According to Michael Scriven & Richard Paul, critical thinking is the intellectually disciplined process of actively and skillfully conceptualizing, applying, analyzing, synthesizing, and/or evaluating information gathered from, or generated by, observation, experience, reflection, reasoning, or communication, as a guide to belief and action. It implies making reasoned and well-thought out judgments with clarity, accuracy, precision, consistency, relevance, sound evidence, good reasons, depth, breadth, and fairness.

Creative Thinking: It is an ability that helps adolescents look beyond their direct experience and address issues in a perspective which is different from the obvious or the norm. It adds novelty and flexibility to the daily life of adolescents. It contributes to problem solving and decision making by enabling adolescents to explore available alternatives and various consequences of their actions or inaction.

Decision Making: The process of assessing all the pros and cons of each issue by considering all possible options and the merits and demerits various decisions might have in the present and in the future on them. This skill teaches the adolescents to take appropriate decisions in crucial, decisive and critical situations.

Problem Solving: Choosing the best-suited decisions out of different options, in the face of various types of obstructions

and hurdles, and going through the process again and again until a positive and dynamic outcome of the problem is achieved. Through this skill, adolescents acquire knowledge and experience to unearth the best solutions for their problems.

Interpersonal Relationship: This skill teaches the adolescence to begin and reinforce cooperation, trust, and sportsmen spirit. Further it helps them to understand the significance and worth of mutual relationships with others and how to relate with others always in a positive and reciprocal manner. It helps them to maintain healthy and enduring relationships with their peers, friends and their family members.

Effective Communication: It is a process of indoctrination. This skill educates the adolescents to understand others, conditions, expresses desires and demands active listening, and seeks assistance and advices in times of need. Clarity and integrity of thoughts enhance the additional meaning of the message. Contextual communication improves its effectiveness as it takes into consideration the age, region, sex and intellectual abilities of the recipient.

Coping with Emotions: Emotion is a mental reaction, which manifests itself in the mind of an individual. It creates responses in the brain called feelings, which causes physical changes in the body. This includes alteration of expressions in the face and chemical alteration in the brain. Upon coping with emotions, being aware of how emotions influence behavior, one can take conscious effort to solve personal and interpersonal problems, in order to try to master, minimize or tolerate stress and conflicts appropriately.

Coping with Stress: Coping with stress is an ability to recognize the source of stress, how to be aware of the experience of stress and how to take action to reduce and control it in one's life through life skills education. It is the process of spending mental, conscious energy on dealing with problems in life. The first fraction of coping with stress is being able to tolerate stress – to function reasonably well in stressful situations and get through them. The second component is recovering, that is, getting back to normal when the stressful situation is over.

Self-Awareness: Self-awareness is the capacity for introspection and the ability to recognize oneself, his character, strengths and weaknesses, desires, feelings, motives and dislikes as an individual separate from the environment and other individuals. Daniel Goleman proposed a popular definition of self-awareness, as “knowing one's internal states, preferences, resources, and intuitions.” This definition emphasizes on the capacity to monitor one's inner world, thoughts, feeling and emotions as they arise. Self-awareness is the capacity to go beyond accumulating knowledge about ourselves – to recognize one's own feelings, behaviors, and other characteristics like cognitive, reasoning, physical, psychological and intellectual power and the ability to notice and monitor one's inner world.

Empathy: It is an ability to understand another person's thoughts, feelings and condition from his or her point of view. It helps one to understand and accept others and their behavior, which may be very different from him. According to Hodges and Myers, “Empathy is the capacity to comprehend and experience

what another person is experiencing from within his frame of reference, that is, the competence to put oneself in another's situation. Empathy includes a broad range of emotional states, together with caring for the others, a desire to help them, experiencing emotions that is equivalent to another person's emotions, being sensitive to another person's thinking or feeling

Conclusion

According to the WHO (1997), internalizing the core essential life skills helps the adolescents to deal with the concerns in the modern world in a dignified and mature way bringing success to them. Learning of life skills together with self-confidence and social intelligence, will make adolescent students to engage in problem solving, make conjectures and test their ideas. This will further form assertive students who will assist and lead the group in all its endeavors providing equal status and role to all students and creating an atmosphere to realize the importance of everyone's thinking. In such a situation, roles are clearly defined and students are accountable for their assigned tasks in order to maintain individual responsibility and group accountability. Psychologists believe that learning of life skills together with self-confidence and social intelligence helps students to effectively negotiate and navigate through complex relationships and also difficult environments. A positive learning environment with life skills, builds confidence, resilience and hope in students. It also prepares them for success in the future. It promotes group interactions that help the adolescents to discover his/her own strengths and limitations in following instructions, understanding ideas, generating new ideas, making joint

decisions, listening to others' ideas and learning to appreciate different points of view.

Most accomplishments require more than a sharp mind. In fact, an impressive intellect is of little value if it is not paired with self-knowledge and an ability to work well with others. True success requires a great deal of life skills along with self-confidence and social intelligence. Adolescents smart in these skill sets, are able to read between the lines by picking up on the subtle changes in the tone and body language of others. Their listening skills extend beyond auditory clues to include the visual and tactile hints that are often missed. When a colleague or friend is uncomfortable, they are able to uncover the reason and quickly put them at ease. They do not only listen well, they know how to speak in an impressive and interesting way. They are able to express themselves without dominating a conversation. They are conscious of entertaining without offending. They have mastered the delicate balance it takes to be interesting, but not intimidating. They do this by reading others. They are conscious of making their friends feel valued, loved, and important. Other students enjoy being around them. They just spread a good feeling wherever they are. Life skills flourish knowledge, values and views, that guide the children how and when to perform a task. Unfortunately, this crucial set of life skills with self-confidence and social intelligence is not adequately taught in modern educational scenario. Therefore, more attention is required in the contemporary scenario to develop programs that are ongoing and sustainable, through systematic planning, implementation, monitoring and

evaluation in order to help adolescents acquire these skills.

A LOT CAN HAPPEN OVER A COFFEE: A CASE STUDY ON CCD

Dr. Joseph George

Assistant Professor
St. Joseph's College, Moolamattom

Cafe Coffee Day, a part of Coffee Day Global Limited, is India's favourite hangout for coffee and conversations. Cafe Coffee Day popularly known as CCD, opened its first cafe in 1996 at Brigade Road, Bangalore. V.G Siddhartha from Chikkamangaluru District of Karnataka was the man behind changing the beverage culture of India with a variety of drinks and side dishes. Cafe Day Global which is the parent of CCD chain was incorporated in 1993. V.G Siddhartha opened first CCD outlet with an initial investment of 1.2 crore.

CCD founder V.G. Siddhartha who feared of achieving a target of 500 tons end up selling 6500-7000 tons of branded coffee, exports about 28000 tons of coffee, sells another 2000 tons locally each year and has a carrying capacity of 75000 tons which is largest in the country and additionally cafe attract at least 40000-50000 visitors per week. CCD is a 750 crores ISO 9002 certified company has over 6000 acres of coffee estate which is one of the largest in Asia. Largest number of Coffee Day Cafes is located in Bangalore. It has even tied up with world space and micro sense to enable its cafes with satellite radio and Wi-Fi respectively. Its first Wi-Fi cafe was opened in Lavelle road Bangalore.

Vision:

'To be the best cafe chain in the country by offering world class coffee experience at affordable prices.'

Mission:

- To be ranked number one among the service sector
- To provide the best quality service to customers at affordable price
- To create own niche merchandising like Indian coffee powder, cookies, coffee mugs and curry paste.

Bean Good: Coffee Day Growth

2017-18	1722	245	47747
2018-19	1750	250	48000~

Source: Coffee Day Annual report

Birth of Cafe Coffee Day

V.G. Siddhartha is born to a family which has a history of growing coffee since 1870 and owned several acres of property. Siddhartha started his career as a trainee in Indian stock market at FM Financials, Mumbai in 1983. With the two years of experience in stock market, Siddhartha left Mumbai to build something of his own by 1985. While working on FM Financials, Siddhartha bought Sivan Securities in 1984 and turned it into a successful investment banking and stock broking company with the seed investment given by his father, he invested 5 lakhs in a property at Bangalore. He started Sivan Securities with the amount left.

Between 1985 and 1992, he made a lot of money through inter market arbitration. With the 10% arbitration margin per day, he made about rupees 1 lakhs to 2 lakhs per day and in the process, he was steadily buying land near his father's plantation. By 1991, he would have over 5000 acres of coffee plantation, which meant 20 sq. km of land.

Back then, coffee growers would make 35 cents per pound of coffee, while the international price was \$1.20. Despite owning large tracks of coffee plantations, Siddhartha wasn't quite making a lot of money from his coffee business. Much of that was because India's coffee sector was still under the control of the coffee board. There was no open market system and coffee planters were supposed to pool the coffee to the coffee board.

The year 1991 was crucial for India as the government decided to embrace a new economic policy of liberalisation. Siddhartha, along with a few others, went to meet Manmohan Singh, India's then

finance minister, credited for opening up the Indian Economy.

By 1992, with the government then opening up the sector, Siddhartha was among the handful to tap into the opportunity. That year, Siddhartha started his coffee business, Amalgamated Bean Company Trading Ltd. (now called Coffee Day Global) an integrated coffee business that ranges from procuring, processing and roasting coffee beans to retailing of coffee products.

In March - April 1993, he sold 4000 tons of coffee to international buyers at 80 cents per pound, with a frost affecting business in Brazil, Siddhartha was able to sell coffee at \$ 2.5 per pound. Soon, he started retailing coffee through a chain of stores under the brand Fresh & Ground.

Between 1992 and 1995, it became India's biggest trader in commodity because there is a frost, and the prices went up by three times.

But the big idea to set up retail outlet came from a chance to meet with one of his buyers in Europe, the owner of Germany's best Coffee Chain, Tchibo. To his dismay, Siddhartha would learn that the family had only ventured into the coffee business as late as 1948, when they opened a ten by ten stores in Hamburg. Siddhartha was inspired by Tchibo and the rest is history.

The first Cafe Coffee Day retail store was launched in 1995 and in 1996, first outlet was opened in 1996 July 11 at Brigade road Bangalore, Karnataka. CCD's first outlet attracted many people with the offer - a coffee and an hour internet surfing with rupees 100. The initial investment to start the first outlet was rupees 1.2 crores.

After acquiring Sivan Securities; Coffee Day invested in Mindtree Hospitality Firm in 2000. And Sivan Securities was renamed as Way 2 Wealth Securities. Way 2 Wealth Ltd. is a venture capital division came to be known as Global Technology Ventures and setup Global village Tech Park as Incubator Park in Bangalore, providing office space, communication links, recreational facilities and a commercial centre.

The Hospitality venture through Coffee Day Hotels & Resorts Private Limited launched a subsidiary under brand name "The Serai" in Chikkamangaluru. By 2010, private equity firm Kohlberg Karvis Roberts & Co, standard chartered and NS invested in Coffee Day enterprises. In the year 2011 Coffee Day picked another 7.62% in Mindtree and Coffee Day Global acquired Sical Logistics through Tanglin. His business ranged from coffee business and plantation to real estate and financial investment.

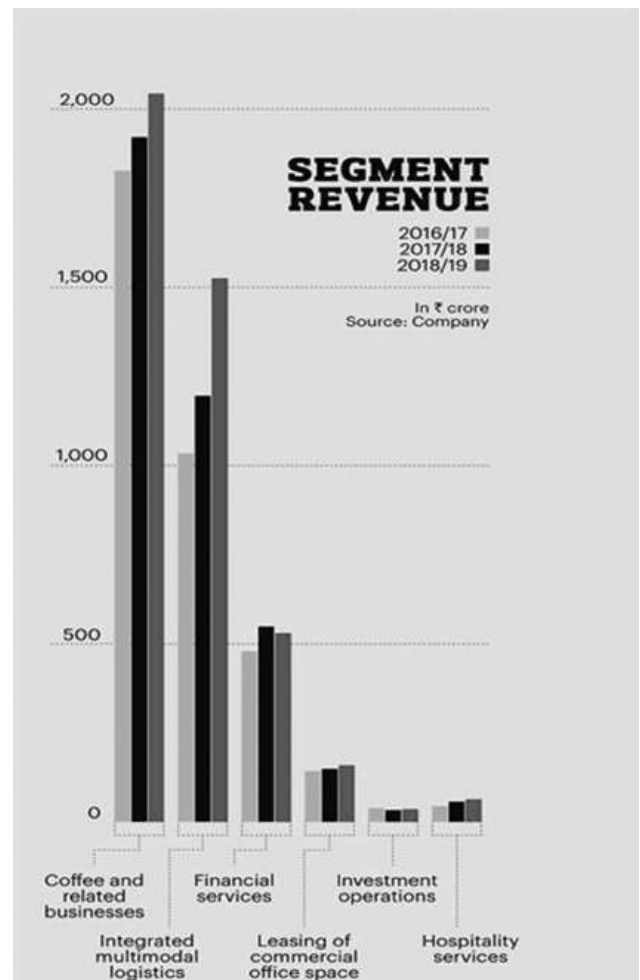

In the year 2015, Cafe Coffee Day goes public with listing at \$ 1 billion valuation and tax department attached Mindtree shares owned by V.G. Siddhartha and Coffee Day enterprises. Through IPO, CCD raised \$175 million.

CCD group exports India's biggest green coffee with a turnover of 2500 crore. CCD now has 1750 outlets in more than 200 cities including Prague, Vienna, Kualalumpur, Czech Republic, Nepal, Egypt, Malaysia etc. The company reported a revenue of Rs.1777 crores in FY 2018 and Rs.1814 crore in FY19.

Today CCD sells 6500-7000 tons of coffee, sells another 2000 tons locally each year exports about 28000 tons of coffee and has a carrying capacity of 7500 tons, which

is largest in the country. Additionally CCD attracts about 40000-50000 visitors per week.

A money control report puts the annual turnover of the Coffee Day enterprises at Rs. 4264 crores. V.G. Siddhartha owns 12000 acres of coffee plantations in 2015 Forbes list pegged his net worth at \$1.2 billion.

Initial challenges faced by CCD

- Major challenge faced by CCD chain was to make a revolutionary change in Indian culture; where people refer to use tea rather than coffee.
- Next was the tough competition from

International chain such as Costa Coffee, Starbucks and also from various domestic players and concept cafes.

Source: www.economictimes.com

Strategies followed by CCD to overcome challenges

To stand up against competition CCD has build 3As strategy.

- Affordability
- Accessibility
- Acceptability

Combination of Aspiration and Affordability worked better for Indian

Cafe Coffee chain. It gives coffee an attractive makeover and remained as favourable hangout choice for school and college students. It wasn't restricted to metro cities; it took coffee to cities and towns across the country and offered same experience everywhere. It brings people together to relax and unwind and to make people speak more about CCD by saying "Lets Catch Up".

Starting of crisis

The things started to go in a wrong way when they started to follow Debt Centric Method. That means borrowing money from market. About Rs.1.5crore is needed to start that much outlet faster. So commonly debts will occur; because raising such money by importing coffees is not possible; so they started borrowing and also by other means.

2015: In 2015, their debts were accumulated as 6300crores; so they launched an IPO and 1150crore were raised from an IPO.

2015-2016: The Company's net debt was Rs.6600 crores including short term borrowing. The company's cash flow was a negative Rs.533 crore at the end of 2015-2016. The promoter group had already pledged more than half of their holding to raise money largely for construction business (Tanglin) and hospitality business.

2016-2017: The net adjusted debt stood at Rs.3323 crores. By the end of June 2017, close to 50% of promoter, group shares and 39% of Siddhartha's share were also pledged. This was because the income tax department conducted a raid at CCD and find out 362 crores of unaccounted income. A person was caught in Singapore with Rs. 1.2 crores of cash and declares that

the money belongs to V.G. Siddhartha; this was the reason for income tax department to conduct raid in different offices for 20 times.

After outrage on social media under tax terrorism, the income tax department reported that search on a prominent politician's case had led to credible evidence of concealed transaction by CCD and after search operations on Siddhartha's company and other properties he had admitted to not revealing unaccounted money of around Rs. 480 crores.

His first high headache was a loan of Rs. 300crore that took several years ago from HDFC Ltd. That loan was coming up for repayment early this year, Siddhartha however managed to convince Axis bank and Standard Chartered Bank to put in close to Rs. 1000 crore in his business.

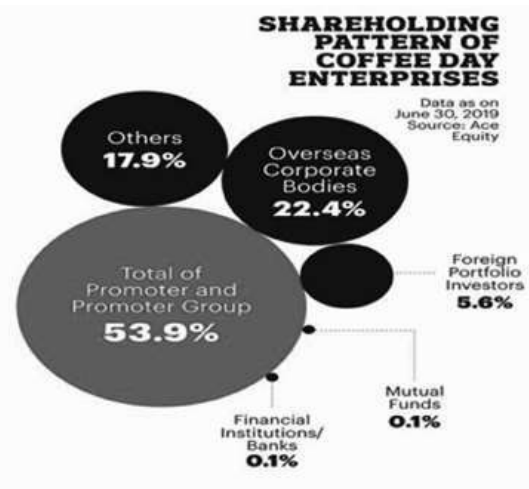

2018: Together with all these, main auditor of CCD reported that 40 subsidiaries was not conducted any audits for the last period. This reached the Board of Directors and all the lenders came to know about this and they said that they will not give money because they lost trust on CCD and the shareholders said that they need buy back i.e., by taking the shares back the company should give money back. But the company was not in a situation to repay the money; so much pressure was created by the shareholders; and in 2018; in an unverified note, Siddhartha has blamed one of the private equity investors for pushing him to return capital apart from his taxation woes.

Standard Chartered sold its private equity asset in December 2018 to ICG strategic equity, the private equity arm of the US based Intermediate Capital group.

2019: In 2019, the debt was at 6600crores. They earn Rs. 4264crore revenue at 2019, but the profit was only 143crores out of that and this was not enough to cover the debt of Rs.6600crores.

V.G. Siddhartha in his personal capacity owns 32.75% stake in CDEL, the listed company of which 0.3% of his personal share are pledged. In total the promoter group and family own 53.93% shares. In 29 July 2019, Siddhartha went missing and his body was found in Netravathi river backwater two days later. A letter assumed to be written by Siddhartha addressing board of directors and staff was made public in which he takes responsibility for not creating a profitable business mode.

In September 2019, the company appointed auditing firm Ernst and Young to scrutinize their books of account. They also suggested that the auditors will also go into circumstances of last letter written by founder and the points he made in it.

Source: www.google.com

Analysis of the crisis Trapped in the corner:

The curious case of V.G Siddhartha's alleged suicide and purported note has

caused consternation across corporate India. Coffee Day Enterprises, the holding firm of CoffeeDay, had a total debt of around Rs. 6550 crore as on March 2019. The group's coffee business, which includes some exports reported revenues of Rs. 1777 crore in FY18 and Rs.1814crore in FY19.

Besieged from all sides Siddhartha's core business of coffee was badly hit. A 13 year low coffee price in the international market dragged Indian prices also to multi-year lows despite lower domestic production. Indian Coffee exports too are expected to be down 10 per cent this year.

The Mindtree Connect

Sources close to developments have revealed that debt level of the entity had drastically reduced after Siddhartha's controversial stake in most of his business to pare his debt.

Earlier in March 2019, he had sold his entire 20.32 per cent stake in the

Bengaluru headquartered IT services firm to engineering major, L & T for around Rs. 3200 crore, which had been utilized to pare some debt from Coffee Day Enterprises balance sheet.

Grasping at Straws

The amount of debt was impairing his business as working capital requirements could not be met. While the Mindtree stake sale gave him some room to manoeuvre, the going had got really tough. In his desperation, he was also reportedly in a dialogue with global beverage maker Coca-Cola for an equity sale in flagship Cafe Coffee Day (CCD) at an enterprise valuation of around Rs.10000 crore may have been on the anvil.

It was also reported that Blackstone was in talk to buy a majority stake in Siddhartha's real estate venture Tanglin Developments for around Rs. 2800 crore.

Nowadays everyone look forward to expand their business. CCD also opened several outlets across the country. The very first problem started here. Out of the unorganised outlets CCD opened in the same locality; some shop will have business and rush and the other remain empty. Even though some of the outlets remain vacant these outlet also have running expenses and they don't have enough profit to cover up this.

Customers used CCD for availing free Wi-Fi and other costless services. They only order low cost item and spent 4-5 hours in the outlets. Thus the outlet seem rush but they may not earn enough profit.

CCD opted COCO model, ie, company owned company operates rather than franchisee model. If they were opted

franchise model they will never face such an expense because they will get rent and fee and the other operating expenses in franchisee model.

Debt increased in CCD outlets and the loss tempted them to take loan, but they became unable to repay these loans; debt increased more and they invested earnings from business in real estate.

Even though they have assets above 12 crores they invested in real estate, this was a suicidal attempt. According to economic times, they have 6500 crores debt and 3500 crores by CDEL promoter and 1000 crores by the owner. This created low liquidity and piled up debt.

Another reason for the failure of CCD was their gross margin. They expanded geographically all over the world but their gross margin remains same. There was no one to check the unnecessary expansion.

Under Income Tax Scanner

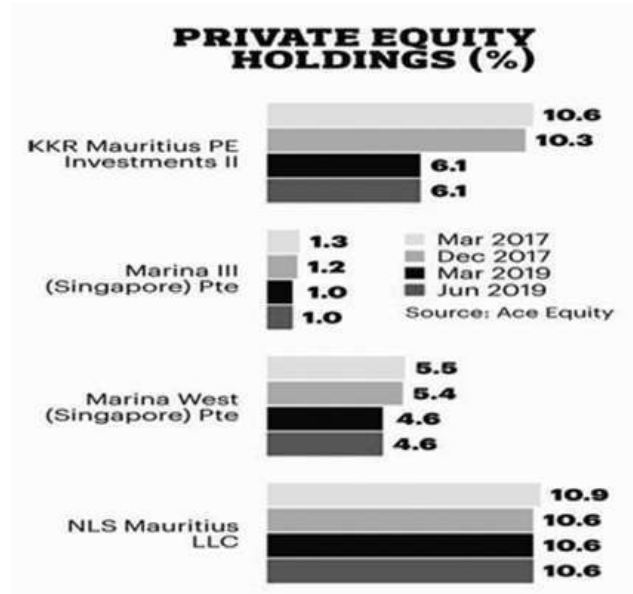

In September 2017, the Income Tax Department first raided premises of India's largest coffee chain Cafe Coffee Day and they found Rs. 650 crore concealed income from the documents seized while concluding the search and seize operations.

Foul Play

In his purported letter that Cafe Coffee Day boss V.G Siddhartha wrote, he expressed unhappiness over not creating "the right profitable business" and alleged "harassment" by a senior income tax officer.

Siddhartha is the elder son-in-law of former Karnataka Chief Minister S.M Krishna. Siddhartha is credited with creating India's largest coffee empire. But he

was under huge pressure from his private equity partners. Even though Siddhartha mention in his letter as *one of the private equity partners*, we don't know who was forcing for repayment. KKR Mauritius PE investments, Marina III PE investments, Marina West PE, NLS Mauritius LLC are some of the private equity firms of CCD.

Source: www.economicstimes.com

The Last Letter

The letter says, *I have failed to create the right profitable business model despite my best efforts. I would like to say I gave it my all. I am very sorry to let down all the people that put their trust in me. I fought for a long time but today I gave up as I could not take any more pressure...*

He could not take any more pressure from one of the private equity partners, forcing him to buy back shares, a transaction he had partially completed six months ago by borrowing a large sum of money from his friend. Tremendous pressure from other lenders lend to him succumbing to the situation and was a lot of harassment from the Income Tax Department in the form of attaching

our shares on two separate occasions to block their Mindtree deal and then taking position of their Coffee Day shares...

V.G. Siddhartha

To our Board of Directors and Coffee day family,

After 37 years, with strong commitment to hard work, having directly created 30,000 jobs in our companies and their subsidiaries, as well as another 20,000 jobs in technology company where I have been a large shareholder since its founding, I have failed to create the right profitable business model despite my best efforts.

I would like to say I gave it my all. I am very sorry to let down all the people that put their trust in me. I fought for a long time but today I gave up as I could not take any more pressure from one of the private equity partners forcing me to buy back shares, a transaction I had partially completed six months ago by borrowing a large sum of money from a friend. Tremendous pressure from other lenders lead to me succumbing to the situation. There was a lot of harassment from the previous DG income tax in the form of attaching our shares on two separate occasions to block our Mindtree deal and then taking position of our Coffee Day shares, although the revised returns have been filed by us. This was very unfair and has led to a serious liquidity crunch.

I sincerely request each of you to be strong and to continue running these businesses with a new management. I am solely responsible for all mistakes. Every financial transaction is my responsibility. My team, auditors and senior management are totally unaware of all my transactions. The law should hold me and only me accountable, as I have withheld this information from everybody including my family.

My intention was never to cheat or mislead anybody, I have failed as an entrepreneur. This is my sincere submission, I hope someday you will understand, forgive and pardon me.

I have enclosed a list of our assets and tentative value of each asset. As seen below our assets outweigh our liabilities and can help repay everybody.

Regards,
V.G. Siddhartha

Observations & reflections

An analysis of CCD's available financials from stock exchange notes, Siddhartha's own suicide note and corporate presentations, assuming these are all true figures, nothing that would the business down; nothing in the available figures suggest that a collapse was imminent or the business had failed permanently. The company has assets well over its liabilities to cover its obligations and there was investor's interest in CCD to pick up a part of the stake in the fast growing coffee chain. Siddhartha had already pledged most of his shares. The company's borrowings were heavily used for expansion plans. Besides coffee business, CCD had ventured into real estate, hospitality among others. What possibly worried Siddhartha was rising debts and interest burden, which wasn't unique to CCD. At a time when general economy was slowing steadily, demand has decreased drastically across the segments

and credit lines are drying upon account of a continuing liquidity crunch. Most of the companies in the consumer business have been facing a similar situation, promoting many of them to cut costs, labour, and sell non-core assets. Most of the FMCG firms have been posting weak results.

What is puzzling here is that not all doors were closed before Siddhartha and CCD for the promoter to end life citing business failure. Selling his assets and part of his shareholdings would have given a new lease of life to CCD and Siddhartha, helping the company to pare its debts and focus on core business. Over the year, the overall debt jumped to 64% to around Rs.6547crore and the interest outgo increased. There were several financial institutions that lend money to CCD including IFCI being one of the major lenders.

Source: various reports

The role of some private equity players and their nominees on Coffee Day Enterprises and also some independent

directors has come under the scanner of market regulator SEBI. In the letter to the company's directors and employees, Siddhartha said that he had 'given up' in the face of pressure from one of the private equity partners to buy back shares. A senior resource from CCD reported to a newspaper that, *should the PE firms and lenders be not booked for abetment to Siddhartha's suicide? It took Siddhartha's life by demanding 25% returns where as it borrowed from State Bank of India at 8%. Is that company responsible for Siddhartha's suicide?*

Now use simple logic, how can a plain shareholder, large or small, put pressure on promoter to do buy back unless there is a deal?

As of March 2019, Coffee Day Enterprises, which is the holding firm for CCD, had a total debt of around Rs 6,547 crore. Not only this, his other companies like, Devadarshini Info was under 1171crore debt and Gonibedu Coffee estate was under 775 crore debt. Out of which 1028crore debt was personally guaranteed by him of the Coffee day enterprise. This likely reduced drastically after Siddhartha sold his stake in Mindtree for about Rs 3,200 crore. The total debt had now reached 10,000 crore, out of which Coffee day enterprise had 6547crore debt.

In order to get aid from these debts he started giving most of his shares to banks, so that with that money he could clear off some debt. But it's not thousands of debt we are talking about, it was a debt of crores, which is not that easy to clear off. Due to which, in the stock exchange, he sold his 20.41% stocks of an IT company, Mindtree. With this he earned 3200crore, which helped him to clear off some loan.

But again, this was not sufficient. He was continuously planning to work this out. He even thought to sell off the Coffee day enterprises stakes to Coca Cola.

The urgency to sell his stake in Mindtree was magnified in the aftermath of the IL&FS crisis, when troubled lenders refused to roll over debt as they would have normally done.

While Cafe Coffee Day has historically been seen as a beloved chain in India, its sheen had been wearing off over the last decade. Losses jumped from mere Rs 7.72crore in FY 2009, to over Rs 150 crore in FY 2016. On a consolidated basis, the company had reported profit after tax of Rs 6.64 in FY 2011, but this rocketed to a loss of Rs 155.75 crore by FY 2015.

In the last two years, things started looking upwards, with Coffee Day Enterprises reporting a profit of Rs 48.94 crore in FY 2018. The group's coffee business expected to close FY 2020 with sales of over Rs 2,000 crore. In fact, in the last few months, market buzz indicated that Siddhartha may have been looking to sell his equity in CCD to Coca Cola for up to Rs 8,000 crore.

In the audit by the firm EY, it is likely to conclude on their draft report that 20 - 25 billion rupees (\$270 - 300 million) is missing from its accounts. It also details hundreds of transactions between the founder's listed and personal businesses that were not conducted at arm's length.

Thus the question arises that on what rule is such a non transparent deal allowed in listed shares? What is the difference between such a deal and pledge of shares?

The CCD founder has also had various

run-ins with the Income Tax department. In 2017, his offices in Bengaluru were raided in the search for undisclosed income. His letter also refers to the January 2019 incident when the department had attached the shares that he and Coffee Day Enterprises owned in Mindtree Ltd., a move that sparked worries that would prevent them from selling their stake in the IT firm.

In its regulatory filing, Mindtree said that the attachment was for a “tax demand” that was likely to be raised on Coffee Day and Siddhartha.

It was unclear whether this attachment had anything to do with the Rs 650 crore in undisclosed income the IT department had claimed it unearthed in its 2017 raids. The attachment, according to Mindtree’s filing, also *prohibited for transfer or charge* of 22.2 lakhs equity shares of Coffee Day Enterprises Ltd., and 52.7 lakhs shares held by Siddhartha.

At the time, Coffee Day enterprises insisted that there was no tax liability on the part of Siddhartha as the company and its promoters had filed the revised returns – a claim that the CCD founder makes in his alleged letter to the Board as well.

In February 2019, the IT department appeared to relent and released the attachment on Siddhartha and Coffee Day’s Mindtree’s shares.

However, on the same day, to make up for this, it directly attached 46.01 lakhs shares of Coffee Day Enterprises held by the CCD founder.

Siddhartha has received an order under section 281B of the Income Tax Act, 1961, on February 13, 2019, provisionally

attaching 46,01,869 shares of Coffee Day Enterprises held with Way 2 wealth Brokers of V.G Siddhartha to safeguard the interest of the revenue in respect of likely future tax and penalty obligations in respect of open assessments,” the company said in a regulatory filing at that time.

While the exact contours of the IT department’s grievance with Siddhartha are unknown, the CCD founder has referred to it as “harassment” and that it led to liquidity concerns and his eventual “succumbing” to the situation.

With the Cafe Coffee Day in every nook and corner, certainly, many a cups of their coffee was a turnover in many lives. Waking up to the parting of the once most successful entrepreneur it gives chills to every youngsters who once followed his journey as a roadmap.

Mental health and wellness rapidly deteriorating in our country, not only to V.G Siddhartha but in our Kerala too. Recent case of Joy Arackal is also an example. Depression is being underrated in India, giving up life is seeming easy, it’s extremely saddening.

V.G Siddhartha was a godfather for many, but what if the society has done just a black day with such a disastrous end. The challenger to star bucks, internationally famous Cafe Coffee Chain and his rise and fall is a lesson to youngsters.

There were many reasons on the failure of CCD. Media reflect the same old story of excessive borrowing by company which is disproportionate to intrinsic valuation of company.

Siddhartha started with a small capital and ended up creating an empire of around

Rs. 20,000 crores. He did that, as he said, not by chasing money but by chasing his passionate dreams.

Now there are two ways one could do that. One way is to invest that money in a business, accumulate the profits over a time, reinvest that profit in other businesses and gradually diversify. This is a slow process and one may not live to realize one's entire dream in one's life time.

There's another, more rapid way of growing, to realize one's dreams in one's lifetime. That's to fuel growth by taking loans and other like means. Here again there are accepted standards to maintain, like debt-equity ratio. While passionately chasing one's dreams there'll be temptation to cross the acceptable limit and accumulate more loans than one can manage, especially so when one has powerful political connections to stall loan recovery by banks. But we are not eluding Siddhartha's to be the case. That time will tell. But that's the general trend for lot of businesses. Siddhartha fuelled feverish growth of his companies with loans and probably by some dubious means as well. Whether it was within acceptable limits, whether were there any misuse of political power time will tell. Siddhartha's greatness lies in turning the investment, whatever the source may be, into highly successful internationally reputed business generating employment to several thousands of local people.

But what about the loans and the dubious means, if any? After all banks have to survive. Well usually in such cases one ropes in a big company flush with cash to buy a big slice of stake or even to take over the company if necessary. That was

precisely what Siddhartha was trying; he was in talks with Coco Cola to invest in Cafe Day to tide over the loans.

Then why did he die?

Essentially an entrepreneur's job is risky one. It's like walking on a razor's edge. It's the system that can make a hero out of a successful entrepreneur by acknowledging his positives or a zero out of him by focusing on the negatives.

Looks like our hero Siddhartha was a late in the wrong political end, with wrong political connections, using dubious *hawala* means. There was also a private equity investor who was behaving like a money lender.

When we look at the large picture, what Siddhartha created against the negatives, one wishes the system was more tolerant, more compassionate, even grateful as to reward his achievements and at the same time punish, if justified, just so much as to correct him. It's all about maintaining a delicate balance.

But the sad thing is the system cruelly threw Siddhartha into river Nethravathi. A fate no entrepreneur deserves. This must stop at all cost if we are to nurture the spirit of entrepreneurship. Without entrepreneurs Indian economy is doomed.

SPIRITUAL INTELLIGENCE AND MORAL VALUES AMONG ADOLESCENTS

Aleena Michael¹ & Dr. Mathew Kanamala²

¹ Professional Social Worker

²Head of the Department, Department of Social Work, St. Joseph's College, Arakulam, Kerala, India

Abstract

Morality and Spiritual intelligence are one of the most important dimensions in every one's life, and the level of moral development would affect any person's life. The present study aims at finding out the spiritual intelligence and moral values among adolescents. The study was conducted on a sample of 502 adolescents, out of these, 199 boys and 303 girls. The researcher used questionnaire method for the collection of relevant demographic details from the respondents. For the collection of necessary data, the investigators used the Spiritual Intelligence Scale by King and DeCicco (2009) and Moral Value Scale (MVS; Guptha and Singh, 2010). The data were analyzed by using Mean, S.D., 't' test, ANOVA and correlation. The results indicated that there is a significant difference in age, gender and religion, type of family, adolescents have or have not siblings and time for personal prayer.

Keywords: Spiritual Intelligence, Moral Values, Adolescents

Introduction

Spiritual intelligence is a set of

intellectual capabilities based on non-material and transcendent aspects of reality, specifically those that contribute to the integration, awareness and adaptive application of the non-material and transcendent aspects of one's existence. The concept of spiritual intelligence was first raised in the academic literature in psychology by Stevens (1996) in her book, *Spirituality in Nursing: from Traditional to New age*, and then in 1999 by Emmoms. Spiritual intelligence was coined and introduced by Danah Zohar (2000). The word spiritual in the Zohar/Marshall concept comes from the Latin word *spiritus*, which means, "that which gives life or vitality to a system". Then Danah Zohar and Ian Marshall combined and did research on SI and defined it as the intelligence with which problems related to meaning and value are addressed and solved. It is an intelligence with which one will plan and place one's actions and one's life in a wider, richer, meaning-giving context. Spiritual intelligence is the intelligence with which one can access one's deepest meanings, purposes, and highest motivations. It is the intelligence with which fundamental questions are asked and with which answers are reframed. SI

becomes a form of “hyper thinking giving rise to” meaning-giving, contextualizing, and transformative intelligence.

According to Wolman (2001), Spiritual Intelligence is the human capacity to ask ultimate questions about the meaning of life and to experience simultaneously the seamless connection between each of us and the world in which we live. The spiritual intelligence is an awareness of world or globe and place of the person where he is situated. According to Vaughan (1998), Spiritual Intelligence suggests wisdom and compassion; understanding and inner peace; love and freedom; depth and breadth of vision. According to Emmoms (1999), ‘Spiritual Intelligence is a framework for identifying and organizing the skills and abilities needed for adaptive use of spirituality’.

Spiritual Intelligence is the ultimate intelligence with which we address and solve problems of meaning and value, the intelligence with which we can place our actions and our lives in a wider, richer, meaning-giving context, the intelligence with which we can assess another. Thus spiritual intelligence has a significant impact on the excellence of student's life and it goes devoid of saying that teenage years are a sensitive stage which requires instruction to make a brighter outlook and be uncovered to the difficulties.

A moral value is a universally accepted ethical principle that governs the day to day living of life. Moral values are usually communal and shared by the public in general, thus if there is no agreement among community members no moral values will be established. Moral values are the worthy ideals or principles that

one follows to distinguish the right from the wrong. These ideals or virtues are considered worthy in building up the character of an individual. Moral values refers to the good virtues such as honesty, integrity, truthfulness, compassion, helpfulness, love, respectfulness, hard-work, etc.

The word moral is derived from the Latin word “Mos” that means custom, practice or rule, a way of accomplishing things. Morality is inferred from a person intrinsically motivated resistance to a temptation and from its guilt feelings that follow acts of transgression when he understands and also accepts prevailing standards of morality of the specific society (Kohlberg, 1976). Students are the future of India. The future of our country depends upon the moral values imparted to them during their children life. Moral lessons should be properly implemented among students in school and colleges.

Adolescents is the intermediate period between childhood and adulthood. This period is otherwise called as the age of teenagers. It includes three sub periods, such as: early adolescents (12 years -14 years), middle adolescents (14 years -17 years) and late adolescents (17 years -19 years). Adolescents is the developmental transition between childhood and adulthood entailing major physical, cognitive and psychological changes. During this period physical changes that occur are universal, but social and psychological changes largely depend on the cultural contexts. As this is the transitional phase of life adolescents rebel against their parents and society most often. Therefore, this period is labelled as storm and stress period.

Method

Descriptive research design was used in this study. Sample (N=502) selected from Meenachil Taluk in Kottayam district, Kerala.

Tools

1. Demographic data sheet prepared by the researcher.
2. Spiritual Intelligence Scale by King and DeCicco (2009)
3. Moral Value Scale (MVS) by Gupta and Singh (2010).

Reliability and Validity

The split half reliability co-efficient of the test is calculated to be 0.91 after correlation and the test-retest reliability is 0.89. Both co-efficient are at the level 0.01. Hence SISRI 24 is a reliable measurement for assessing spiritual intelligence.

The test retest reliability and the split-half reliability were estimated for each age group separately. MVS was validated against MJT (moral judgement test) developed by Sinha and Verma (1992). MJT measures moral judgement which involves the cognitive capacity and insight to see the relationship between the abstract principles and concrete cases and to judge the situations as right or wrong, keeping in view the knowledge of moral standards.

Objectives

1. To find out whether there are any significant difference in spiritual intelligence and moral values among adolescents on the basis of their age.
2. To find out whether there are any significant difference in spiritual intelligence and moral values among adolescents on the basis of their gender.

3. To find out whether there are any significant difference in spiritual intelligence and moral values among adolescents on the basis of their religion.
4. To find out whether there are any significant difference in spiritual intelligence and moral values among adolescents on the basis of their type of family.
5. To find out whether there are any significant difference in spiritual intelligence and moral values among adolescents on the basis of whether they have siblings.
6. To find out whether there are any significant difference in spiritual intelligence and moral values among adolescents on the basis of their time spend for personal prayers.
7. To find out whether there are any significant difference in age, spiritual intelligence and moral values.

Hypotheses

1. There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of their age.
2. There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of their gender.
3. There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of their religion.
4. There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of their type of family.

5. There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of whether they have siblings.
6. There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of their time spend for personal prayers.
7. There will be a significant difference in age, spiritual intelligence and moral values.

Results and Discussion

The following session explains the difference in the spiritual intelligence and moral values among adolescents.

Table No. 1

Mean, standard deviation and corresponding 't' values of spiritual intelligence and moral values among adolescents based on gender

Variables	Mean of Boys(N=199)	SD	Mean of Girls(N=303)	SD	't' values
CET	17.18	4.84	18.79	5.30	3.45**
PMP	13.33	3.83	14.99	3.61	4.92**

**significant at 0.01 level *significant at 0.05 level.

Above table revealed that spiritual intelligence and its all subscales significantly differed among boys and girls. Spiritual intelligence higher among girls than boys. Girls in the society lead a prescribed life according to the norms of the society than boys.

Mohanty (2018) found that girls are better than boys in the development of both spiritual intelligence and positive self-identity.

In the case of moral values except lying, keep statistically significant difference.

Moral values higher among girls. Cultural features and attitude towards girl children from a significant adults may be developed a higher level of moral value among children.

“There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of their gender.”

Hypothesis is accepted.

Table No. 2

Mean, standard deviation and

corresponding 't' values of spiritual intelligence and moral values among adolescents based on type of family.

Variables	Mean of Nuclear family(N=371)	SD	Mean of Joint family(N=131)	SD	't' values
CET	18.31	5.26	17.70	4.95	1.14

Moral Value	26.58	3.01	25.51	3.59	2.10*

**significant at 0.01 level *significant at 0.05 level.

Above table revealed that subscales of spiritual intelligence personal meaning production (PMP) and conscious state expansion (CSE) and total spiritual intelligence showed significant difference. Other subscales did not varied significantly according to whether they have siblings.

In the case of moral values, subscale of moral values stealing and total moral values showed significant difference. Other subscales did not varied significantly according to whether they have siblings.

“There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of they have or have not siblings.”

Hypothesis is accepted.

Table No. 4

Mean standard deviation and corresponding ‘t’ values of spiritual intelligence and moral values among adolescents based on time for personal prayer.

Variables	Mean of Yes(N=459)	SD	Mean of No(N=43)	SD	‘t’ values
CET	18.35	5.29	16.06	3.19	2.78**
PMP	14.50	3.81	12.55	2.88	3.24**
CSE	17.76	4.61	14.53	2.72	4.51**
TA	12.87	6.19	9.81	3.61	3.18**
Spiritual Intelligence	63.49	15.76	52.97	9.04	4.30**
Lying	5.54	1.30	5.37	1.00	0.82
Dishonesty	6.67	1.01	6.13	1.24	3.25**
Stealing	8.26	1.03	7.55	1.16	4.26**
Cheating	6.20	1.28	5.37	1.09	4.12**
Moral Value	26.69	3.00	24.44	2.97	4.70**

**significant at 0.01 level

*significant at 0.05 level.

Above table revealed that spiritual intelligence and its all subscales significantly differed on the basis of personal prayers. Spiritual intelligence higher among adolescents have their personal prayers than adolescents haven't their personal prayers.

In the case of moral values except lying, keep statistically significant difference. Moral values are more among in adolescents have time taken for personal prayers. Moral values and its subscales dishonesty and Stealing are higher among

in adolescents haven't time taken for personal prayers than adolescents have time taken for personal prayers.

“There will be a significant difference in spiritual intelligence and moral values among adolescents on the basis of personal prayers.”

Hypothesis is accepted.

Table No. 5

Correlation table of age group, spiritual intelligence and moral values.

Variables	Age group
CET	-0.233**
PMP	-0.110**
CSE	-0.134**
TA	-0.084
Spiritual intelligence	-0.176**
Lying	0.046
Dishonesty	-0.059
Stealing	0.041
Cheating	-0.110*
Moral value	-0.033

As per the table age is related with spiritual intelligence. The relation is negative and significant. Which means that as age increases spiritual intelligence and moral value subscale cheating decrease.

As age increases critical existential thinking (CET), personal meaning production (PMP), conscious state expansion (CSE) and total spiritual intelligence decreased. In the case of moral values subscale cheating also decrease, as increases.

Hypotheses is partially accepted.

HAPPINESS AMONG WOMEN UNDERGONE TUBAL LIGATION SURGERY.

Fr. Lijo K Joseph & Anitha Mohandas

1. Research Scholar, College of Social Sciences, Srinivas University, Mangalore, India.

2. Professional Social Worker.

Abstract

Artificial birth control methods are used to prevent conception or pregnancy through the use of various devices, drugs, agents, sexual practices, or surgical procedures. One among such surgical procedure for women is known as Tubal ligation, wherein fallopian tubes are cut, blocked or burned or a combination of all these to seal them and prevent future fertilization. The primary objective of the study was to evaluate the happiness of women undergone tubal ligation surgery in Idukki district. Snowball sampling method was used for the selection of the samples. The study was conducted on 100 women who have undergone tubal ligation surgery. Descriptive research design was used by the researcher. The results revealed that anxiety and depression of women undergone tubal ligation surgery is influenced by number of children and pregnancy complications. It is also revealed that the level of happiness is higher among women undergone tubal ligation surgery.

Keywords: *Anxiety, Depression, Stress, Happiness, Tubal ligation, Artificial birth control surgery.*

Introduction

Tubal Ligation is a type of surgical sterilization procedures for women. “Tubal” refers to your fallopian tubes, and “ligation” means to tie off (WebMD, 2019). It is a surgical procedure in which the fallopian tubes are permanently blocked or removed. Studies suggest that tubal sterilization is a remarkably safe surgical procedure. The most effective form for preventing pregnancy is sterilization and it is the permanent form of birth control (Spadoto et al., 2014).

The most accepted method of contraception in India is female sterilization or tubal ligation. Tubal sterilization is the most practiced method of contraception globally. It has been estimated that the procedure has been performed on 190 million women worldwide. Among other advantages, tubal sterilization is a balanced contraceptive method (Lutala et al., 2011). India officially launched its population policy and family planning policy in the year 1952 which was the first in its kind all over the world. During the programme, the government made available many contraceptive methods to the couples like condoms, IUD,

diaphragm, and sterilization. The method of sterilization gained popularity soon after the implementation. During its early years, the programme focussed on the health rationale of family planning. Family planning as a strategy for population stabilisation received attention only after 1971 population census (Chaurasia & Gulati, 2007).

The studies related with psychological and physical repercussions among women undergone tubal ligation surgery is less in number. However the studies conducted among women undergone tubal ligation states that they have experienced psychological problems in a number of ways after being sterilized (Lutala et al., 2011). Yet another studies revealed that women undergone tubal ligation experienced some of the common mental health disorders like depression anxiety and stress (Luo . et.al. in 1996).

Mental health is all about how people think, feel, and behave. It refers to cognitive, behavioral, and emotional well-being. According to World Health Organization(2004), "Mental health is a state of well-being in which an individual realizes his or her own abilities, can cope with the normal stresses of life, can work productively, and is able to make a contribution to his or her community." According to this definition mental health has been often conceptualized as a purely positive affect, marked by feelings of happiness and sense of mastery over the environment. The contributing factors which disrupt mental well being includes factors in people's lives, interpersonal connections, and physical factors. The ability to enjoy life is an important characteristic of a mentally well person.

That means happiness and mental well being are interconnected. In order to achieve psychological resilience, one needs to make a balance between life activities, responsibilities, and efforts. When there is an imbalance, especially when a person experiences conditions such as stress, depression, and anxiety, mental health is at risk and disrupt a person's routine.

Depressive disorders are the most common mental health problem in any human community with ten percent of the population evicted by depression at any given time (WHO, 2008). According to the World Health Organization (2012), unipolar depressive disorders were ranked as the third leading cause of the global burden of disease in 2004 and was expected to move into the number one place by 2030. Depression is the also most frequently encountered mental health problem affecting woman's overall health. Prevalence rates are approximately twice among women than men with 30 percentage has been reported among women in South East Asia (Gururaj et al., 2020). The National Mental Health Survey also proved that Depression was higher in females, separated or widowed (Malhotra & Shah, 2015).

Little science exists to explain how or why mental health influences contraceptive behavior. Psychological research suggests that altered cognitive processes may contribute to heightened "perceptions" of physical symptoms among women with mental health conditions. Depressed or anxious women may also internalize negative or incorrect information about contraception and have exaggerated concerns about risks and side effects (Beck, 1987).

Happiness is as a state of well-being and contentment (Merriam-Webster, n.d. 2020). It is perhaps one of the most salient of human pursuits. Happiness has been the most important goal for humans throughout history (Tamir et al., 2017). Aristotle considered his eudaemonia, usually translated as 'happiness', to be the ultimate goal of humans, and superior to all other goals. Eudaemonic happiness was suggested to be related to psychosocial functioning and distinct, albeit correlated, with pleasure-driven hedonic happiness. Cross-cultural research conducted in 47 countries indicated that happiness is rated higher than all other personal values such as health, love or wealth (Medvedev et al., 2017). Majority of the women are satisfied and happy after the decision to undergo sterilization. But the scientific studies regarded with the relationship between happiness and tubal ligation is lacking. The present study is an attempt to understand the level of happiness among women undergone tubal ligation surgery.

Method

Descriptive research design was used in this study. Sample (N=100) selected from the Idukki district.

Tools

1. Demographic data sheet prepared by the researcher
2. Oxford happiness questionnaire developed by Michael Argyle and Peter Hills (2001)
3. Anxiety, depression, stress scale developed by Pallavi Batnagar (2011)

Reliability and Validity of Anxiety, Depression Stress

Reliability of the total scale in terms

of internal consistency as measured by Cronbach's Alpha and Spearman- Brown coefficient is 0.81 and 0.89. The obtained reliability for anxiety depression and stress subscales as measured by Cronbach's Alpha is 0.76 and 0.75 and 0.61 and when measured by Spearman- Brown coefficient is 0.86 and 0.76 respectively.

Reliability and Validity of Happiness

The Oxford happiness questionnaire has a high reliability value of 0.91. It has a high test retest reliability. As well as a strong correlation ($r = 0.90$) with other well known happiness measures like the depression happiness scale.

The construct validity established through association of the measure with a variety of individual differences in traits and cognitive variables that are associated with psychological wellbeing. Robbins and Francis and Edward (2010) found the construct validity in terms of positive association with extraversion ($r = 0.38$) and negative association with neuroticism ($r = 0.57$) Oxford happiness questionnaire accesses the same construct with validity as the Oxford happiness inventory.

Objectives

1. To find out whether there is any difference in anxiety, depression, stress and happiness of women undergone tubal ligation surgery on the basis of number of children.
2. To find out whether there is any difference in anxiety, depression, stress and happiness of women undergone tubal ligation surgery on the basis of problems confronted on pregnancy.

Hypotheses

1. There will be a significant difference

in the anxiety, depression, stress and happiness of women undergone tubal ligation surgery on the basis of number of children.

- There will be a significant difference in the anxiety, depression, stress and happiness of women undergone tubal ligation surgery on the basis of problems confronted on pregnancy.

Results and discussions

The following session explains the significant difference of anxiety, depression, stress and happiness of women undergone tubal ligation surgery.

Table 1

Mean, SD and corresponding 't' values of anxiety, depression, stress and happiness based on their Number of children.

Variables	Mean of having two children (N=75)	S.D	Mean of three children and above (N=25)	S.D	't' values
Anxiety	4.4667	3.39448	6.3200	3.00998	2.429*
Depression	2.0000	2.88050	3.4800	3.44141	2.117*
Stress	4.3333	3.01946	5.2800	3.03480	1.356
Happiness	3.9568	.50123	3.8193	.43836	1.223

*significant at 0.05 level

The above table shows that there is significant differences in Depression, Anxiety, based on their number of children. In depression the 't' value 2.117 is higher than the table value, then it is significant at 0.05 level. In anxiety the 't' value 2.429 is higher than the table value, then it is significant at 0.05 level. Stress and happiness did not vary significantly on the basis of number of children.

Hence, hypothesis, there will be a significant difference in anxiety, depression, stress and happiness of young mothers undergone tubal ligation surgery based on number of children is partially

accepted. Present study supported the findings of Luo et al., in 1996. They found that the risk for depression is higher among women who had undergone tubal ligation surgery and also they found that the risk of anxiety is also higher after tubal ligation surgery. It may be because of the regret and guilt feeling experienced by them after the surgery. Present findings contradicted the findings of Ertel et al., 2011.

Table 2

ANOVA of ADS and happiness of women undergone tubal ligation surgery with respect to problems confronted.

Variables		df	Mean squares	f
Anxiety	Between group	4	50.954	5.201**
	Within group	95	9.797	
	Total	99		
Depression	Between group	4	19.987	2.210
	Within group	95	9.046	
	Total	99		

Stress	Between group	4	22.756	2.632
	Within group	95	8.647	
	Total	99		
Happiness	Between group	4	.769	3.568*
	Within group	95	.216	
	Total	99		

* *significant at 0.01 level *significant at 0.05 level

The table reveals that the calculated 'F' value of anxiety is 5.201, which is greater than the table value and it is statistically significant at 0.01 significant level. The calculated 'F' value of happiness is 3.568, which is greater than the table value and it statistically significant at 0.05 level. The calculated 'F' value of stress is 2.632, which is lower than the table value and it is not statistically significant. The calculated 'F' value of depression is 2.210, which is lower than the table value and it is not statistically significant. In the case of happiness F value is greater than the table value and it is significant at 0.05 level which means that happiness varied among different groups of women.

The result of group mean analysis is given below.

Post hoc test of anxiety with respect to problems confronted during pregnancy

Confronted problems	N	Subset for alpha= 0.01	
		1	2
Abortion	6	3.5000	
None	72	4.2639	
Stillbirth	8	6.6250	6.6250
Miscarriage	8		7.5000
Pre-term birth	6		8.6667
Sig.		.055	.212

According to the results, women confronted with pre-term birth group and miscarriage group kept a difference with aborted women group. Still birth group women do not differed with any other groups. Anxiety is comparatively low among aborted women. The present findings supported the findings of Tavoli, et al., in 2018. They found that women confronted with miscarriage experience higher level of anxiety and depression as compared to women without history of miscarriage.

Post hoc test of happiness

Confronted problems	N	Subset for alpha = 0.05		
		1	2	3
Still birth	8	3.5388		
Miscarriage	8	3.5905	3.5905	
None	72	3.9598	3.9598	3.9598
Pre-term birth	6		4.0632	4.0632
Abortion	6			4.2874
Sig.		.082	.051	.177

The group mean analysis indicated that stillbirth and miscarriage kept a difference with abortion. The findings of present study indicates that the happiness is higher among aborted women group than the women confronted with stillbirth group and miscarriage group. The above findings

supported the study of Rocca et al., (2012) which revealed that women confronted abortion experienced more relief, comfort and happiness. It might be due to the satisfaction experienced by the women confronted with abortion and the absence of the pregnancy related problem in the future. The argument of the researchers is supported by the finding of Lutala et al., (2011). It revealed the fact that after tubal sterilization, participants experienced either physical or mental relief that gave them a sense of satisfaction. Women undergone abortion face short-term negative emotions after an abortion. At the same time, evidences of experiencing negative long-term impacts on mental health is not proven through scientific studies. So hereby researchers assume that as a long term impact happiness and relief prevails over guilt, regret and sadness.

Conclusion

The number of women undergoing tubal ligation has become larger in India and worldwide. Clinical and psychological repercussions of tubal ligation is to be studied thoroughly. But majority of studies over the topic proves that some of the common mental health problems like depression anxiety and stress affects the quality of life and happiness of women undergone tubal ligation.

THE INFLUENCE OF EXERCISE ON WELLNESS AMONG EX-SERVICE MEN HAVING LIFESTYLE DISEASE

Akhil P. Sivan¹ and Dr Justine Joseph²

1. Student, Department of Social Work, St. Joseph's College, Arakulam, Kerala, India
2. Assist. Professor, Department of Psychology, St. Joseph's College, Arakulam, Kerala, India

Abstract

People from different parts of the nation join the armed forces; get involved in the activities of the force for a period of time. After the period of service, the person retires from the armed force and gets introduced into a different community. The present study is aimed to reveal the connection between exercise, wellness and lifestyle diseases. The convenient sampling was used for the selection of the samples. The study was conducted on 156 Ex-servicemen who have served in different sections of the armed force. Ex-servicemen who have Diabetics (N=49), Cardiac diseases (N=35) and BP/Cholesterol variations (N=47), all of the mentioned lifestyle diseases (N=15) and without any lifestyle diseases (N=10) are selected for the study. The researcher used questionnaire method and interview method for the collection of relevant demographic data from the respondents. There is a significant difference was observed with the wellness of persons doing exercise with others.

Keywords: Wellness, Exercise, Ex-servicemen, Lifestyle diseases

Introduction

A person who services in the armed force goes through different circumstances which demands both physical and mental hard work. The majority of the jobs in the armed force are physically demanding jobs and the service men follows a well disciplined way of life in which a person gets about four hours of exercise in a day, balanced diet and periodic medical checkups. But things begin to change when a person retires from the armed force after the completion of service period (basically of 15 years). They experienced various problems related with their retirement. Bellino (1969) listed seven anxiety-producing problems experienced by military retirees: employment, finances, changing social factors, residence, new household patterns, integration into civilian life, and changing interpersonal relations. Bellino (1970) noted that civilian life often resulted in the military retiree spending more time at home than ever before, which often caused adjustment problems for the family. Garber (1971) observed that unemployed retirees experienced a high incidence of family disruption, as well as a higher

divorce rate than the general population. They are entered into an entirely different society and their habit of doing exercise and concentration upon their duties based on their trade begins to change with the retirement. Hence the majority of the persons gradually loses their interest to follow those habits especially that of doing exercise, having a balanced diet etc. By this way, the retirement brings drastic changes in their life. As time passes, due to the changes in their lifestyle (decrease in the duration of exercise and difference in the quality and quantity of food and the periodic medical checkups), majority of them affected with lifestyle diseases.

Presence of any lifestyle diseases may bring changes in the wellness of the person. This brings changes in the thought, emotions, control, work and the positive humor of the person. It also brings changes in the wellness factors including: creativity, physical, social, essential and coping of the person. This definitely puts an influence upon the person's way of viewing the world around him/her changes. The stress and strain in the daily life may results maladaptive adjustments among them. Various research studies evidenced that diet and lifestyle are the major factors influenced susceptibility to many diseases. Some of the effects of lifestyle diseases upon a person include; tiredness, low appetite, unable to tolerate life stress, adoption of health risk behaviors, inability to find a task enjoyable, sudden anger, reduced curiosity, decreased confidence levels, increased nervousness, inability to take quick decisions and so on.

The lifestyle diseases can be considered as diseases linked with the way people live their life, which is commonly caused by

lack of physical activity, unhealthy eating as well as alcohol, drugs and smoking abuse.

Lifestyle disease can be defined as a disease associated with the way a person or group of people lives. Lifestyle diseases include atherosclerosis disease, stroke, obesity, type 2 diabetes; and diseases associated with smoking and alcohol and drug abuse. Diseases that mostly have an effect on our lifestyle are heart disease, stroke, blood pressure, obesity and diabetes. The diseases that appear to increased among ex-service men too. The sudden changes in the lifestyle of ex-servicemen like quitting exercise and avoiding timely food may also contribute to this. Presence of any lifestyle diseases brings changes in the normal functioning of a person. The burden of disease reduces the wellness among veterans. The presence of any of the disease or disorder affects not only the person himself, but those who are around him/her also (William and Schiel, 2016).

According to ICMR (2017) the range of disease burden or DALY rate among the states in 2016 was 9-fold for ischemic heart disease, 4-fold for chronic obstructive pulmonary disease, and 6-fold for stroke, and 4-fold for diabetes across India. Non-communicable diseases (which include lifestyle diseases) caused for 62 percentage of all deaths from major disease groups. Three of the five leading individual causes of disease burden in India were non-communicable, with ischemic heart disease and chronic obstructive pulmonary disease as the top two causes and stroke as the fifth leading cause.

Mental and physical fitness were important in the well functioning of a

person. Regular physical exercises enhance the total fitness. The studies of Jones (1998) and Vuori (1995) found enormous positive effects of daily exercise. The people who make exercise as essential part of their routine are more happy and efficient than others. Exercise does not mean to go to gym or some club for daily activity; it only means to do some physical activity no matter how and where. Exercise is useful in preventing or treating coronary heart disease, osteoporosis, weakness, diabetes, obesity, and depression. Strengthening exercises provide appropriate resistance to the muscles to increase endurance and strength. Cardiac rehabilitation exercises are developed and individualized to improve the cardiovascular system for prevention and rehabilitation of cardiac disorders and diseases. A well-balanced exercise program can improve general health, build endurance, and slow many of the effects of aging. The benefits of exercise not only improve physical health, but also enhance emotional well-being. Regular physical activity remains an essential behavior for endorsing health, postponing or preventing predominant musculoskeletal disorders such as mechanical low back pain, neck and shoulder pain and decreasing the risk of increasing coronary heart disease, hypertension, diabetes, osteoporosis, obesity and colon cancer.

Majority of the sample is doing any type of exercise such as muscle stretching, muscle strengthening and other forms of exercise (including yoga and cardiac exercises). Some of them have returned to their exercise patterns after the onset of the lifestyle disease.

Deviations from the regular pattern

of life of veterans created multifaceted change in the remaining life of the veterans. The concept of wellness, safety feeling and comforts may be crushed in between the drastic change and social demands of the surroundings. At this stage, regular lifestyle could not be followed and the fitness and wellness may go down. In this scenario, present study is relevant and entitled as 'The Influence of Exercise on Wellness of Ex-servicemen having Lifestyle Disease'.

Objective

To examine the influence of exercise on wellness of Ex-servicemen having lifestyle diseases.

Hypothesis

There will be a significant difference in the wellness of the Ex-servicemen having lifestyle diseases on the basis of the type of exercise.

Tools

1. Demographic data sheet prepared by the researcher
2. Five Factor Wellness Inventory developed by Myers, Sweeney and Hattie (2004)

Method

A number of 156 Ex-servicemen were selected by using convenient sampling method. Ex-servicemen having Diabetics (N= 49), BP/Cholesterol (N=47), Cardiac diseases (N=35), all of the mentioned lifestyle diseases (N=15) and without any lifestyle diseases (N=10) were included in the study.

Reliability and Validity

Hattie, Myers and Sweeney (2004) reported alpha coefficients for the five sec-

ond order factors as: Creative self- .93, Coping self- .92, Social self- .94, Essential self- .91, Physical self- .90 and .94 for total wellness. The sample in their study included 3043 persons who had completed the wellness evaluation of lifestyle, however, only the 73 items that comprise the 5F-Wel were examined in their reliability analysis.

The authors report that several studies provide evidence of construct validity of the Five Factor

Wellness Inventory (e.g., self-esteem, Spurgeon, 2002; relationship self-efficacy, Shurts, 2004; and spirituality, Gill, 2004; as cited in Myers & Sweeney, 2004). In-

ternal consistency was examined for the 5F-Wel using a sample of 2,093 persons, including 52% males and 48% females (Myers & Sweeney, 2004). The alpha coefficients are reported to be high for both the first- and second- order factors and ranged from .90 to .85 (Myers & Sweeney, 2005, p. 41). In the third-order scales, alpha coefficients ranged from .70 to .87, except for Self-Care (.66) and Realistic Beliefs (.68) (Myers & Sweeney, 2005).

Results and Discussion

The following session explains the influence of exercise upon the wellness of Ex-servicemen having lifestyle diseases.

Table 01

ANOVA with respect to type of exercise

Type of Exercise		Sum of Squares	df	Mean Square	F
Coping self	Between Groups	384.359	2	192.179	4.069*
	Within Groups	7225.661	153	47.227	
	Total	7610.019	155		
Physical self	Between Groups	176.683	2	88.342	3.270*
	Within Groups	4133.907	153	27.019	
	Total	4310.590	155		
Creative self	Between Groups	1146.195	2	573.097	6.472**
	Within Groups	13548.030	153	88.549	
	Total	14694.224	155		
Essential self	Between Groups	1.723	2	.862	.023

	Total	5693.692	155		
Social self	Between Groups	17.951	2	8.975	.465
	Within Groups	2954.530	153	19.311	
	Total	2972.481	155		
Total wellness	Between Groups	5249.991	2	2624.995	4.07*
	Within Groups	98645.907	153	644.744	
	Total	103895.897	155		

* Significant level at 0.05 level

The above table shows that the ANOVA of the wellness of the ESM with lifestyle disease on the basis of the type of exercise done by the ESM. It shows that the wellness of the ESM with lifestyle disease is varied according to the type of exercise, whether they are following muscle stretching or muscle strengthening exercise. The calculated 'F' value of the wellness is 4.07, which is higher than the table value; hence it is statistically significant at the 0.05. The calculated 'F' value of the wellness factor coping self is 4.06 which is higher than the table value and it is statistically significant at 0.05 level. The calculated 'F' value of the wellness factor physical self is 3.27 which is higher than the table value and it is statistically significant at 0.05 level. The calculated 'F' value of the wellness factor creative self is 6.47, which is higher than the table value and it is statistically significant in the 0.01 level of significance.

Post Hoc Tests

Table 02
Coping Self

Type of Exercise	N	Subset for alpha = 0.05	
		1	2
Muscle stretching exercise	130	50.55	
Muscle strengthening exercise	16	53.43	53.43
Others	10		56.20
Sig.		.215	.235

According to the post hoc tests, the ESM with lifestyle disease have difference in the wellness subscale coping self based on the type of exercise which they are doing. The mean of wellness factor coping self of the ESM who are doing

muscle stretching exercise is 50.55 and that of ESM doing other forms of exercise is 56.20, which means that the ESM doing other forms of exercise kept a difference with muscle stretching exercise group.

Table 03
Physical Self

Type of Exercise	N	Subset for alpha = 0.05
		1
Muscle stretching exercise	130	25.98
Muscle strengthening exercise	16	28.31
Others	10	29.50
Sig.		.059

According to the post hoc tests, the ESM with lifestyle disease have no difference in the wellness factor 'physical' based on the type of exercise which they are doing. The mean of wellness factor 'physical' of the ESM who are doing muscle stretching exercise is 25.98 and that of ESM doing other forms of exercise is 29.50. In ANOVA the F value is statistically significant but in group mean analysis there is no group mean difference was observed.

Table 04
Creative self

Type of Exercise	N	Subset for alpha = 0.05	
		1	2
Muscle stretching exercise	130	54.49	
Muscle strengthening exercise	16	58.56	58.56
Others	10		64.80
Sig.		.201	.051

According to the post hoc tests, the ESM with lifestyle disease have difference in the wellness factor 'creative' based on the type of exercise which they are doing. The mean of wellness subscale creative self of the ESM who are doing muscle stretching exercise is 54.49 and that of ESM doing other forms of exercise is 64.80, which means that the ESM who doing other forms of exercise is more creative than the rest of the categories based on the type of exercise.

Table 05
Total Wellness

Type of Exercise	N	Subset for alpha = 0.05	
		1	2
Muscle stretching exercise	130	195.51	
Muscle strengthening exercise	16	206.68	206.68
Others	10		216.00
Sig.		.193	.278

According to the post hoc tests, the ESM with lifestyle disease have difference in the wellness based on the type of exercise which they are doing. The mean of wellness of the ESM who are doing muscle stretching exercise is 195.51 and that of ESM doing other forms of exercise is 216.00, which means that the ESM who doing other forms of exercise is having more wellness than the rest of the categories. As per the result, individuals doing other forms of exercise keeping more wellness than others.

Conclusion

The main aim of the study was to investigate about the influence of exercise

upon wellness of the Ex-service men having lifestyle diseases. The study found that the habit of daily exercise have a noticeable influence upon the wellness of the Ex-servicemen with lifestyle disease. Exercise plays an important role in the wellness. The transformation of the life of people retired from the armed force has led them to lead a life that is entirely different, a life in another community with another lifestyle. Majority of the people who have retired from the armed force have lifestyle disease of one or another type. The people who once served the nation are now trying to deal with their issues in the day to day life. The restrictions put by the lifestyle diseases upon the retired people have brought changes in their personality also. They are unable to enjoy what they enjoyed in the past and are unable to do what they wish to do.

HAPPINESS AND SELF-CONCEPT OF SEXUALLY ABUSED ADOLESCENT GIRLS

Rajasree H Kumar¹ & Manu Kurian²

¹Professional Social Worker

²Lecturer, Department of Social Work, St. Joseph's College, Moolamattom

Abstract

The prime focus of this study is to illustrate the happiness and self-concept of sexually abused female adolescents. A number of 70 participants (N =70) were selected from various institutions of Idukki District by using convenient sampling method. The happiness questionnaire by Bharadwaj & R Das (2017) and The self-concept questionnaire by Saraswat (1984), were administered to collect data from the respondents. It was found that there is significant difference in self- concept and happiness based on age and educational qualification respectively and happiness increases with the belief of having someone to share their feelings. As the age increased the adolescents showed a significant difference in self-concept which indicates their acceptance towards dreadful life events.

Keywords: *Happiness, Self-concept and sexually abused*

Introduction

Child sexual abuse is an upcoming terror in our society. Sexual assault in childhood or adulthood impacts not only the victim, but also the victim's family and friends as well as society as a whole. In

this regard, sexual assault is a public health problem that concerns everyone. According to WHO: "Child abuse or maltreatment constitutes all forms of physical and/or emotional ill-treatment, sexual abuse, neglect or negligent treatment or commercial or other exploitation, resulting in actual or potential harm to the child's health, survival, development or dignity in the context of a relationship of responsibility, trust or power". The reports and ratio of sexual abuse cases can be obtained from official webs of state and central governments, news papers, journals etc.. whereas the psychological and physiological aftermath on those victims are seldom detailed. Childhood sexual abuse (CSA) can have many medical, social, and psychological sequelae, which are wide ranging and need to be addressed. Sexual assault has numerous potential consequences that can last a lifetime and span generations, with serious adverse effects on health, education, employment, crime, and the economic well-being of individuals, families, communities and societies. The consequences of sexual assault are complex and difficult to document. Victim studies reveal the difficulties experienced by people who have been sexually assaulted compared to their

non-assaulted counterparts. However, most of these studies do not allow these difficulties to be attributed to the sexual assault alone. As per the data revealed by National Crime Record Bureau 21,605 child rapes were recorded in 2018 which included 21,401 rapes of girls and 204 of boys. Overall crimes against children has increased steeply over six times in the decade over 2008-2018. As per the report of Childline, in Kerala during the period between April and September, 2019 a number of 690 cases of child sexual abuse were reported.

Happiness always reflects the state of mind. It is a state of well-being characterized by emotions ranging from contentment to intense joy. Happiness or a happy person has been defined as someone who experiences frequent positive emotions, such as joy, interest, and pride, and infrequent (though not absent) negative emotions, such as sadness, anxiety, and anger (Lyubomirsky et al., 2005). Exposure to adverse experiences in childhood can have substantive negative impacts on individuals' physical and mental development, affecting behavioral choices during adolescence and adulthood and ultimately long-term health outcomes. Negative childhood experiences, such as physical or sexual abuse, exposure to domestic violence, family breakdown and bullying in school or community settings, have been associated with poor educational attainment, low employment, substance use, involvement in violence and poor physical and mental health. The psychological and physiological mechanisms linking childhood adversity and poor adult health are increasingly being identified (Bellis, Hughes, Jones, Perkins, and McHale 2013).

Self-concept is a general term used to refer to how someone thinks about, evaluates or perceives themselves. To be aware of oneself is to have a concept of oneself. According to Baumeister "The individual's belief about himself or herself, including the person's attributes and who and what the self is". It seemed that there is a close connection between self concept and sexual abuse. Majority of the studies over the topic proved their significant relationships. Sexually abused children had lower self-concept, social support and perceived parental quality, and higher psychopathology than the control group did. Higher self-concept, social support and perceived parental quality were linked with lower levels of psychopathology (Ateret Gewirtz-Meydan 2020)

Objectives

- To study whether there is any significant difference in happiness and self-concept among sexually abused adolescent girls
- To study whether there is any significant difference in happiness and self-concept based on their age.
- To study whether there is any significant difference in happiness and self-concept based on their education
- To study whether there is any significant difference in happiness and self-concept based on their belief of having someone to share their feelings.

Hypotheses

- There will be a significant difference in happiness and self-concept among sexually abused adolescent girls are significantly different.
- There will be a significant difference

in happiness and self-concept based on their age.

- There will be a significant difference in happiness and self-concept based on their education.
- There will be a significant difference in happiness and self-concept based on the belief of having someone to share their feelings.

Method

Descriptive research design was used by the researchers to conduct the study. Participants (N=70) of the study were selected from Idukki District by using convenience sampling method. The researchers obtained permission from Child Welfare Committee of Idukki district to collect data from shelter homes. The researchers followed all the rules, regulations and guidelines of Child Welfare Commomittee regarding the confidentiality of sexually abused adolescent girls . The data was collected from the respondent individually by obtaining their verbal consent and administrated the questionnaire.

Instruments

- Demographic data sheet prepared by the researchers.

- The happiness scale - The happiness questionnaire was developed by Dr. Rajeev Lochan Bharadwaj and Dr. Poonam R Das, professors of department of psychology (2017). This scale has twenty-eight items relating to issues of happiness and hold the property to evoke response correctly. The scale of happiness can be administered in both individual or group testing situations. Scale has both positive and negative items.
- The self - Concept scale - The self-concept questionnaire was developed by Dr. Raj Kumar Saraswat, professor in psychology. The self -concept questionnaire provides six separate dimensions of self-concept such as physical, social, intellectual, moral, educational and temperamental self-concept. It also gives a total self-concept score. The inventory contains 48 items and each dimension contains eight items which is provided by five alternatives.

Results and Discussion

Table no:01

The mean, Standard Deviation and corresponding 't' values of happiness and self-concept based on the belief of having someone to share feelings.

Variables	Mean of having belief that there is someone to share feelings (N=50)	SD	Mean of not having the belief that there is someone to share feelings (N=20)	SD	't' values
Self-concept	113.14	19.34	108.45	16.53	0.953
Happiness	108.45	21.38	154.65	26.56	2.42*

*significant at 0.05 level.

The above table reveals that there is a significant difference in happiness of sexually abused female adolescents based on the belief of having someone to share feelings. The 't' value of happiness is 2.42 which is higher than the table value. But self-concept doesn't show any significant difference with the belief of having someone to share feelings. In happiness, the mean of having the belief to share feelings with someone was 108.45 and mean of not having someone to share feeling was 154.65.

The present findings supported the study of Schonbucher, Maier, Kuo, Schnyder, and Landolt (2014). they conducted a study on sexually abused and found that they had received more emotional support from their parents to better cope with the abuse. The worst part about struggling and being frustrated is feeling like we're

alone and no one understands. But this table demonstrates a positive vibe in happiness with children who could share their feelings because problem shared is a problem halved. So hereby the result justifies that these rehabilitation centers act as a social support system where they are cared for, has assistance available from other people (colleagues, Social workers, professional social workers etc.) , and most popularly, that each and every child of the institution is part of a supportive social network.

Hence, hypothesis "there will be a significant difference in happiness and self-concept based on the belief of having someone to share their feelings" is partially accepted.

Table no:02

ANOVA with respect to age groups.

Variables		Sum of squares	df	Mean square	F
Self- concept	Between groups	2312.12	2	1156.06	3.59*
	Within groups	21541.07	67	321.50	
	Total	23853.20	69		
Happiness	Between groups	1879.77	2	939.88	1.70
	Within groups	37036.80	67	552.78	
	Total	38916.58	69		

*significant at 0.05 level of significance.

From the above table the calculated 'F' value of self-concept 3.59 is in between the table value and is significant at 0.05 level. So, there is a significant difference in self-concept based on age group. The calculated 'F' value for happiness is 1.70 which is lower than the table value. So, there is no significant difference in happiness. So here the hypothesis "There will be a significant difference in happiness and self-concept based on age group is partially accepted.

The results of group mean analysis given below:

Table No:03

Post hoc test of self-concept

Age group	N	Subset for alpha = 0.05	
		1	2
Above 17	16	102.75	
15 to 17	27	111.11	111.11
Up-to 14	27		117.85
Sig.		0.127	0.217

As per the table self-concept is more among age group up to 14. They kept statistically significant difference with above 17 group. The table revealed that the higher group (above 17) obtained a low score in self-concept than other groups. As defined by Baumeister (1999) the self concept is The individual's belief about himself or herself, including the person's attributes and who and what the self is. When relating the result of this table with above definition it is believed that as the child is getting older and matured the 'very incident' (sexual

molestation) is haunting them for their entire life span. It is universally accepted fact that the number of unreported sexual abuse cases are always higher than the reported ones. And this result is leading to the very conclusion that majority of marital adjustment problems, personality disorders, depression, suicides have been rooted in sexual abuse or molestation. As discussed in the introduction part sexual abuse can cause a multidimensional defect in the child and this statement is exemplified through this table.

Table no:04

ANOVA with respect to education.

Variables		Sum of squares	df	Mean square	F
Self-concept	Between groups	1121.43	2	560.71	1.653
	Within groups	22731.76	67	339.28	
	Total	23853.20	69		
Happiness	Between groups	4662.02	2	2331.01	4.55*
	Within groups	34254.56	67	511.26	
	Total	38916.58	69		

*significant at 0.05

From the above table the calculated 'F' value for self-concept is 1.653 which is lower than the table value. So, there is no significant difference in self-concept based on their education. The calculated 'F' value for happiness is 4.55 which is higher than the table value and is significant at 0.05 level. So, there is a significant difference in happiness based on their education. The hypothesis "There will be a significant difference in happiness and self-concept based on educational qualification" is partially accepted.

But the table also reveals that happiness of sexually abused female adolescents vary based on their education.

The results of group mean analysis given below:

Table No: 05

Post Hoc test of happiness

Education	N	Subset for alpha=0.05	
		1	2
Above 12	2	125.50	
10 to 12	24		160.16
7 to 9	44		169.72
Sig		1.00	0.493

The table reveals that happiness is low among girls having +2 and above level of education. They keep statistically sig-

nificant difference with other two groups. lower educational groups did not vary each other and they have higher level of happiness. It is because as children become more conscious over the dreadful experience they came across and tend to develop several irrational feelings and attitude on their self and life. The aftermath of all these mental process prevent them from experiencing common joys and mirth of live events.

Table no:06

Correlation of happiness and self-concept.

Self-concept	Happiness
	0.468**

** significant at 0.01 level.

As per this table self-concept is related with happiness. The relation is positive and significant at 0.01 level which means that when self-concept increases happiness also increases and vice versa. It is because when there is a development in the self concept of children they become capable of understanding their strengths and limitation which obviously contribute a rich inner self. Thus children might be able to tackle their challenges in daily life and become happy over life .

At the same time being happy in life is to be self - realistic and self realization is achieved through the development of self concept. This is the way both factors are interconnected in children.

Conclusion

The foremost intention of the study was to examine the happiness and self-concept of sexually abused female adolescents. The study could reveal the very fact that the victims who had someone to share their feelings showed higher level of happiness. At the same time it is also found as the age increased the self concept also decreased. The victims as well demon-

strated lower happiness as their education amplified. The study is significant as well as beneficial to the professional social workers, clinical psychologists, psychiatrists, teachers, doctors and parents to understand the victim's inner reflections and thought process.

WOMEN ENTREPRENEURSHIP AND ECONOMIC UPLIFTMENT: A CASE STUDY WITH SPECIAL REFERENCE TO PALAI MUNICIPALITY

Jovana Pramod

Abstract

Entrepreneur is an Economic agent who plays a vital role in the economic development of a country. Economic development of a country refers to steady growth in the income levels. Traditionally, an entrepreneur has been defined as a “person who organize and manages any enterprise, especially a businessmen”. While women are starting more business than men, they find it harder at the outset to grow their business and access venture capital than men entrepreneurs in our country. Most women business owners in Indian organization were either housewives or fresh graduates with no previous experience of running a business. Thus women business owners were in traditionally women oriented businesses like –garments, beauty care and fashion designing which either does not require any formalized training or are developed from a hobby or an interest into a business. The present study in concerned with intent to analysis the present situation of women entrepreneurship. In the present areas women are coming in front and taking up the enterprises. It increases the status of women as well as promote for the economic development of

country and household income. It empowers the women.

Key words: Empowerment, Women, Entrepreneurship, Business, Interest

OBJECTIVES

- To study how women entrepreneurship helps to generation of employment
- To study how women entrepreneurship improve their status
- To study how does it leads to income generation
- To provide solution to various problems faced by women entrepreneurship

STATEMENT OF THE PROBLEM

The problem selected for the study is about the socio-economic impact made by the women entrepreneurs in the society and the changes occurred to them when they started the business and whether it was effective or not and the problems faced by them.

METHODOLOGY

The methodology adopted to carry out the study contest are of the following:

● **DATA COLLECTION**

For the purpose of study, primary and secondary data are used. The primary data was collected directly from the enterprises led by women, centered in Palai municipality, using a structured interview schedule. The secondary data was collected from Newspaper, Internet, journal and other publications.. The data has been collected from Pala municipality and from 25 respondents.

● **TOOLS FOR ANALYSIS**

The data collected through interview schedule, were tabulated and analyzed using various statistical tools and mathematical techniques, pie diagrams, graphs, charts and tables. They are used for analyzing the data in a simplified and attractive manner.

REVIEW OF LITERATURE

J.S Saini and B.S Rathore [2001] in their book 'Women Entrepreneurship: theory and practice' deals with entrepreneurial philosophy, where the success of women entrepreneur has been discussed. According to the authors, success of a women entrepreneur depends on the entrepreneur's willingness to hold responsibility for her own work

S.S Khanka [2009] in his book 'Entrepreneurship Development' illustrates the personal characteristics of successful entrepreneurs as hard work, desire for high achievement, high optimism, independence, foresight, better organizing capacity and innovativeness. According to the author, success of a small enterprise is, to a great extent, attributed to the success of the entrepreneur himself.

Sujatha Mukherjee [2010] in her article,

profiling the urban women micro-project women entrepreneurs in India, in the journal of 'entrepreneurship Development' draws the picture of an entrepreneur as a person who assumes the risk associated with uncertainty. According to the author, being entrepreneurial involves combining personal characteristics and financial means and resources within an environment to set up a business.

Mary Kay Copeland [2010] in her article, 'strategies of a successful women entrepreneur' has deliberated on the characteristics of a successful women entrepreneur. According to author, the behavior and personality characteristics that leading resources have found in effective and successful women entrepreneurs are- self confidence, risk bearing capacity, discerning power, creativeness, resilience, tenacity and courage.

Women Entrepreneurship

A woman entrepreneur is a woman who initiates, organizes and runs a business enterprise of her own or with the support of a group of like minded people. Female population who chooses to venture into industrial activities are Women entrepreneurs. The government of India defines a Woman entrepreneur's enterprise as one which is owned and controlled by woman or women having a minimum financial interest of 51%. Just like a male entrepreneur, a Woman also explores activities, undertake risks, innovates, co-ordinate and controls, supervise and lead effectively.

There are certain innate qualities in a woman which makes her a successful entrepreneur. Her managerial skills, caring attitude and deft manners are characteristics that to be pointed out.

A woman becomes an entrepreneur either on account of pull factors which motivate her such as independence, self actualization, reputation etc.or an account of push factors which compelled her to take up entrepreneurship.Push factors include acute financial crisis, death of earning members etc.

ROLE OF WOMEN ENTREPRENEURS

Women and social-role interface

In the journal "A Reflection of the Indian woman in the entrepreneurial world" published by Indian institute of management (IIM), Ahmadabad defines the role of women entrepreneur in a diagrammatic way as given below.

Role of women as an entrepreneur can be explained as follows.

1. Imaginative
2. Attribute to work hard
3. Persistence
4. Ability and desire to take risk
5. Profit earning capacity

Data Analysis and Interpretation

The present study is an attempt to study the impact of Women entrepreneurship in Palai.It also sought to analyse the role of women entrepreneurs in promoting economic, social upliftment of women.

This chapter deals with analysis of data collected from Pala municipality. The main objective of this chapter is to examine the impact of women entrepreneurs in promoting women upliftment, through a sample study .All the relevant information received from the questionnaire are analysed through a special package of computer. The tabulated data was analysed and interpretations was made according to sequence of objectives. Several charts and tables were used to make interpretations easier.

PALA MUNICIPALITY

Pala is a municipal town 28 km east of kottayam in the Indian state of Kerala spread over an area of 15.93 km2. It is situated 173 km north from the state Capital Thiruvananthapuram, on the banks of the Meenachil River and is the head quarters of the Meenachil Taluk and the Pala Revenue Division. Pala connects to high ranges through Thodupuzha and KanjirapallyTaluks.

SHOPWISE CLASSIFICATION

The study was made among 25 different shops, which can be classified as;

Shopwise Classification

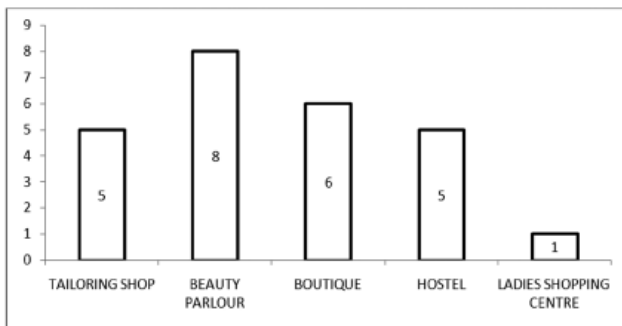

Sl. no	Type of Shop	No. of Repondents	Percentage
1.	Tailoring Shop	5	20%
2.	Beauty Parlour	8	32%
3.	Boutique	6	24%
4.	Hostel	5	20%
5.	Ladies Shopping Centre	1	4%
	Total	25	100%

Source; Primary Data

The below graph shows that 20% of the respondents were running tailoring shops and 32% of the respondents are running beauty parlours. While 24% of the respondents are running boutique and 20% of the respondents are running hostels and 4% are running ladies shopping centre.

SHOPWISE CLASSIFICATION

BRANCH WISE CLASSIFICATION

A study was also made to look whether they had further branches for their enterprises.

Branchwise Classification

Sl.No	Number	Percentage
Yes	14	56%
No	11	44%
Total	25	100%

Source; Primary Data

The graph below shows that about 56% of the respondents are having branches while 44% of them are not having the branches.

BRANCH WISE CLASSIFICATION

AGEWISE DISTRIBUTION

The respondents are classified in relation to their age groups. There are three class of respondents belonging to different age groups as depicted in table 3.4

Age wise distribution

Age	No. of Respondents	Percentage
Above 20	2	8%
Above 30	9	36%
Above 40	14	56%
Total	25	100%

Source; Primary Data

The below graph shows that majority of the respondents are above 40 i.e. about 56% while 36% of the people are above 30. Only 8% people are above 20.

AGE WISE CLASSIFICATION

EDUCATIONAL QUALIFICATION WISE DISTRIBUTION

Educational qualification of the people is very much relevant in starting of enterprises. The following table illustrates the above fact.

Educational Qualification Wise Distribution

Educational Qualification	No. of Respondents	Percentage
Higher Secondary	9	36%
Degree	12	48%
P.g	1	4%
Other Professions	3	12%
Total	25	100%

Source. Primary Data

The below graph shows that that 36% of the respondents have received their higher secondary education and about 48% of respondents have received their degree education.4% of the respondents has done their P.G and 12% of the people has done other professions including Nursing ,beautician courses and others

EDUCATIONAL LEVEL QUALIFICATION

MONTHLY INCOME WISE DISTRIBUTION

Income is an important factor which affects the standard of living of the people. As Income raises, the standard of living increase thereby making an increase in social and mental upliftment of women. The monthly income details of the respondents are furnished as below.

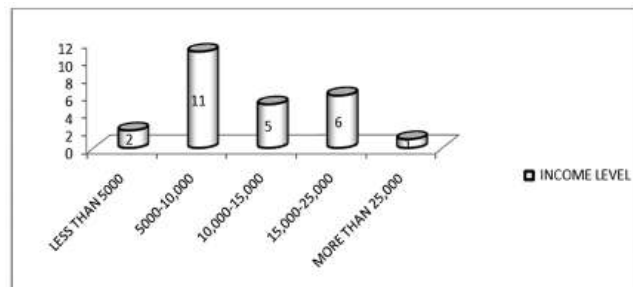

Monthly Income wise classification

Monthly Income	No. of Respondents	Percentage
Less Than 5000	2	8%
5000-10,000	11	44%
10,000-15,000	5	20%
15,000-25,000	6	24%
More Than 25,000	1	4%
Total	25	100%

Source; Primary Data

The below graph shows that 8% of the respondents are receiving less than Rs.5000 per month and about 44% of the respondents are receiving income between Rs 5000-10,000.20% of the respondents are receiving income between 10,000-15,000 and 24% of the respondents are receiving are receiving income between Rs.15, 000- 25,000 and 4% of the respondents are receiving more than Rs.25, 000.

MONTHLY INCOME WISE CLASSIFICATION

STANDARD OF LIVING, SOCIAL STATUS AND ROLE IN DECISION MAKING

As women take up new enterprises, their standard of living, social status and role in decision making improves. The following table shows their improvement in the social and political arena, after becoming an entrepreneur.

Standard of living, Social Status and Role in decision making

1. Standard of living

Standard of Living	Frequency	Percentage
Increase	25	100%
No Change	-	-
Total	25	100%

Source; Primary Data

2. Social Status

Social Status	Frequency	Percentage
Increase	25	100%
No Change	-	-
Total	25	100%

Source; Primary Data

3. Role in Decision Making

Role In Decision Making	Frequency	Percentage
Increase	25	100%
No Change	-	-
Total	25	100%

Source; Primary Data

STANDARD OF LIVING, SOCIAL STATUS, ROLE IN DECISION MAKING

Source.Primary Data

The above figure shows that the social status, role in decision making and standard of living of the women has improved due to their enterprises. Neither of the respondents commented that there hasn't been any improvement.

PROVISION OF EMPLOYMENT OPPORTUNITIES

The starting and efficient functioning of enterprises requires labourers and employers. A study was also made to analyse the provision of employment opportunities among women entrepreneurs.

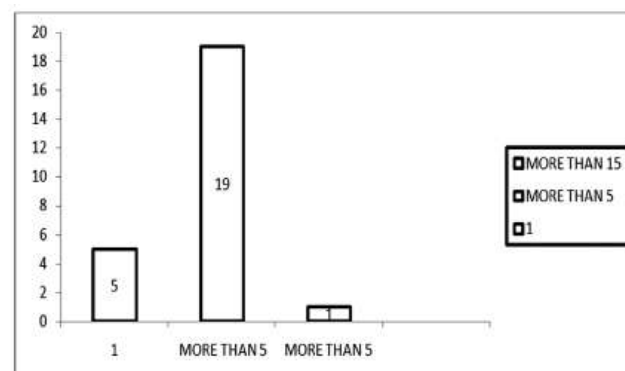

Provision of employment opportunities

Employment Opportunities	Frequency	Percentage
1	5	20%
More Than 5	19	76%
More Than 15	1	4%
Total	25	100%

Source; Primary Data

From the graph, we can analyse that about 20% of the respondents employ one person and about 76% employ more than 5 persons. Only 4% employ more than 15 persons.

PROVISION OF EMPLOYMENT OPPORTUNITIES

Source; Primary Data

WHETHER PROBLEMS FACED FROM SOCIETY

There are many factors that hinders women entrepreneurs to start their enterprises. The following table shows the above fact.

Whether problems faced

Whether Problems Faced	Fre-quency	Percent-age
Yes	3	12%
No	22	88%
Total	25	100%

Source; Primary Data

WHETHER PROBLEMS FACED

Source.Primary Data

The pie diagram shows that 88% of the respondents have not faced any problems from the society while 12% of the respondents faced problems from the society including financial crisis, lack of support and lack of much knowledge in enterprise maintaining and the lack of knowledge about the funds available etc.

AVAILABILITY OF PROFIT

The main aim behind any enterprise is profit. If any enterprises don't receive the expected profit, it may close after some-time.

Availability of Profit

Availability of Profit	Fre-quency	Per-centage
Yes	24	96%
No	1	4%
Total	25	100%

Source; Primary Data

Source.Primary Data

The above doughnut figure shows that 96% of the respondents are receiving profit and 4% of the respondents are not receiving profit.

MEANS OF WAGES

A study was conducted to analyse how the entrepreneurs pay their wages to the employees.

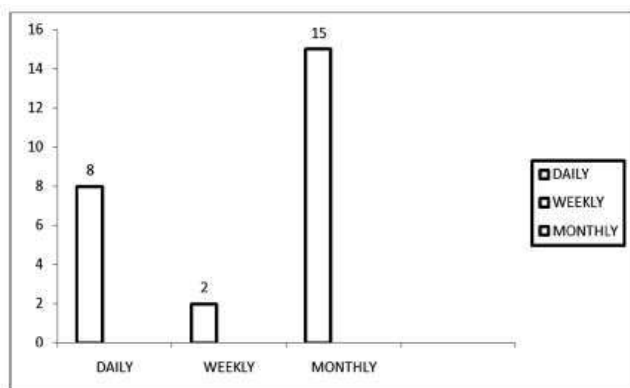

Means of wages

Means of Wages	Frequency	Percentage
Daily	8	32%
Weekly	2	8%
Monthly	15	60%
Total	25	100%

Source; Primary Data

We can analyse from the graph that 32% of the women entrepreneurs provide their employees with daily wages and 8% of the women entrepreneurs provide their employees with weekly wages while 60% of women entrepreneurs provide their wage in monthly basis.

MEANS OF WAGES

Source; Primary Data

KNOWLEDGE ABOUT LOAN FACILITIES

Knowledge about loan facilities provided by banks is an important factor in establishing and continuing an enterprise and in its development too.

Knowledge about loan facilities

Knowledge About Loan Facilities	Frequency	Percentage
Yes	12	48%
No	13	52%
Total	25	100%

Source; Primary Data

From the above table, we can understand that 48% of the respondents was aware about the loan facilities and 52% of the respondents are not aware about the loan facilities.

Source.Primary Data

AWARENESS ABOUT THE SCHEME-SAVAILABLE TO WOMEN ENTREPRENEURS

The government provides large number of schemes to promote women entrepreneurs.

Awareness about schemes to women entrepreneurs

Awareness About The Schemes	Frequency	Percentage
Yes	22	88%
No	3	12%
Total	25	100%

Source; Primary Data

AWARENESS ABOUT THE SCHEMES AVAILABLE TO WOMEN ENTREPRENEURS

Source. Primary Data

From the above pie diagram we can infer that 88% of the respondents were aware about the schemes provided by the government and 12% of the people were not aware about the schemes provided by the government.

TIME ALLOTTED FOR WORK

The women entrepreneurs have to adjust between her work and home to run her enterprise smoothly. With the study conducted, it was analysed that, all of them can manage both their work and home.

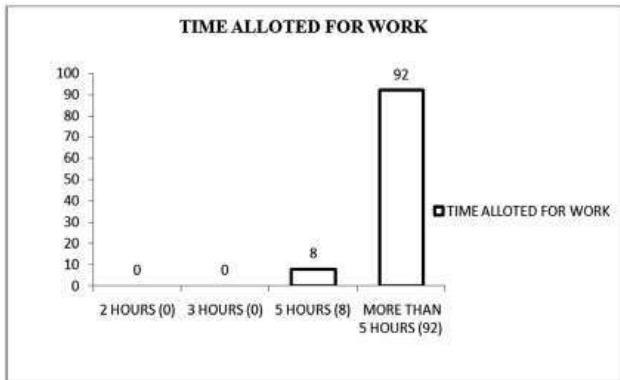

Time allotted for work

Hours Allotted	Frequency	Percentage
2 Hours	-	-
3 Hours	-	-
5 Hours	2	8%
More Than 5	23	92%
Total	25	100%

Source; Primary Data

From the above table we can analyse that 92% of the respondents spent more than 5 hours in their area of work and about 8% spend about 5 hours in their work area.

Source.Primary Data

FINDINGS AND SUGGESTIONS

The present study illustrates that most of the women ie. 32%of women were running beauty parlours among the25 respondents.In this study 56% of women are having branches so that we find that are getting profitable income.In this study we find that the majority of respondents are above the age of 40 among the 25 respondents.It is found that 48% of respondents are having degree level of education. So one of main tool of promotion of entrepreneurship is the level of education. we find that most of the women are receiving profitable income in their enterprise.This study shows that there is a huge improvement in the condition of women in the areas of standard of

living, social status and the role of decision making.Among the 25 respondents 76% women were providing employment opportunities to more than five.Among the 25 respondents 88% of women have not faced any problems from the society. The main goal of an enterprise is to obtain profit. The study found that 96% of women receiving profit from therebusiness.The majority of entrepreneurs pay the wages to the employees on monthly basis. This study inferred that 52% of respondents were not aware about the loans and concessions provided by financial institutions.The government introduced various schemes for promoting women entrepreneurship. In this study 88%of respondents were aware about the newly introduced schemes.Majority of women spend more than five hours for work daily.

Consider women as specific target group for all developmental programmes. Provide better educational facilities and also technical education to women. Vocational training should be provided Adequate training programme on management skills and leadership should be provided to women community. Skill development centres should be created to promote women entrepreneurs.Encourage women's participation in decision making.Special training should be given on achievement motivation.Making provision of marketing and sales assistance from government part by establishment of women cooperatives. Moreover proper supply of raw materials is to be ensured.Open finance cells and provide easy loans at lower interest rates. State finance corporations and financing institutions should extend purely trade related finance to women entrepreneurs. The financial institutions should provide more working capital assistance both for small

scale ventures and large scale ventures. Marketing provision of micro credit system and enterprise credit system should be given to women entrepreneurs at local level. Repeated gender sensitisation programmes should be held to train financiers to treat women with dignity.

1. Infrastructure in the form of industrial plots and sheds, to set up industries is to be provided by state run agencies. Industrial estates could also provide marketing out lets for the display and sale of products made by women.
2. A women entrepreneur's guidance cell should be setup to handle the various problems of women entrepreneurs all over the state. District industries centres and single window agencies should make use of assisting women in their trade and business guidance.
3. Involvement of nongovernmental organisation in the women entrepreneurial training programmes and counselling
4. All these remedial measures will fail unless there is a change in the social attitude. She should get support basically from her family.
5. To conduct seminars and workshops for the latest schemes that introduced by the government to support women entrepreneurship.
6. In general, women lack confidence in their strength and competence. In order to remove this family should encourage and support them.

CONCLUSION

Women constitute almost half of the total population in India. But they are not

enjoying their freedoms, equalities, privileges, on par with their male counterparts. The government of India has defined women entrepreneurs based on women participation in equity and employment of a business enterprise. Accordingly a women entrepreneur is defined as an enterprise owned and controlled by a women having minimum financial interest of 51% of the capital and giving at least 51% of the employment generated of the enterprise to a women. In this study we collected sufficient information from the Pala municipality and we conducted a sample survey among 25 women entrepreneurs. In this survey we could understand that a women enterprise or a women entrepreneur can provide employment opportunities to the society and she can change the prevailing social concepts about a women entrepreneur. It can be said that today we are in a better position where in women participation in the field of entrepreneurship is increasing at a considerable rate. Women sector occupies nearly 45% of the Indian population. At this juncture, effective steps are needed to provide entrepreneurial awareness, orientation and skill development programmes to women. The role of women entrepreneur in economic development is also being recognized and steps are being taken to promote entrepreneurship. Though there are several factors contributing to the emergences of women as entrepreneurs, the sustained and coordinated effort from all dimensions would pave the way for the women moving into entrepreneurial activity thus contributing to the social and economic development of the members of the family and thereby gaining equality and equal importance for themselves.

COMPARISON OF DOCKING POTENTIALS OF DIFFERENT ANTI-ALZHEIMER DRUGS ON MOLECULAR RECEPTORS

Sijo Francis, Aleena Benny, and Jobin Alex

Department of Chemistry, St. Joseph's College, Moolamattom
srsijofrnacis@gmail.com

ABSTRACT

Computational techniques have been recently evolved as an efficient medicinal tool for the identification and treatment of various diseases. With this background, a study was carried out to compare the docking potentials of different anti-alzheimer drugs on molecular receptors. In this work, 1EVE is considered as acetyl cholinesterase inhibitor and donepezil, galantamine, memantamine and lovodopa as drugs. The interactions between 1EVE protein and drugs were analysed using molecular docking studies. *Mucuna pruriens* is a natural herb used in Ayurvedic medicine for the treatment of Parkinson's disease. The major phytochemical present in *Mucuna pruriens* is lovodopa. Among four drugs, lovodopa is found most effective. The methodology can be efficiently utilized to find out novel drugs for Alzheimer's disease.

Key words- *anti-alzheimer drugs; donepezil, galantamine; memantamine; and lovodopa*

Introduction

Alzheimer disease (AD) is an irreversible, progressive neurodegenerative disorder or

dementia that destroys our memory and other metal functions. Dr Alois Alzheimer found out this disorder which is nowadays known as Alzheimer disease (AD). AD is most commonly affected by older adults, but it can also affect people in their 30s or 40s (early-onset form). It is a most common form of dementia, a progressive brain dysfunction, and leads to gradually increasing restriction of daily activities. Dementia is most common among the elderly population and it is a lifelong progressive neurodegenerative disease of the Brain. AD is characterized by more than just memory loss; it also results in other cognitive and Behavioral symptoms that progressively impair function in activities of daily living.

The main symptoms of AD are loss of forming new memory, speech disorder, mood swings, disruption of executive functions (decision making), memory loss, metal confusion, and eventually death is occurring. In AD, the whole brain size shrinks so that the tissue has increasingly decreased nerve cell and connection. The main reasons for AD's are the formation of senile plaques and neurofibrillary tangles in brain. Other common neurologic

presentations include changes in language ability (e.g.:- anomia, progressive aphasia), impaired visuospatial skills, impaired executive function. The actual reason for Dementia is still unknown.

There are no drugs or treatments that can cure AD completely. However, medicines have been developed for an AD that can slow down their progression, or temporarily deduce symptoms. But there is much need of new drugs due to their side effect. Currently, the U.S. Food and Drug Administration approved five drugs which are used to treat AD symptoms. Donepezil, galantamine, and rivastigmine (three of available drugs) are belongs to "cholinesterase inhibitors".

Molecular Docking is a tool in computer-assisted drug design and development. It involves the interaction of two or more molecules to give a stable adduct. Molecular docking predicts the three-dimensional structure of any complex based on binding properties of ligand and target. It generates different possible adduct structures that are ranked and grouped together using scoring function in the software. Based upon total energy of the system, docking simulations predict optimized docked conformer. The main aim of molecular docking is to attain ligand-receptor complex with optimized conformation possessing less binding free energy. We can predicted binding free energy (ΔG_{bind}), there by provides additional clues about the nature of various kinds of interactions leading to the molecular docking.¹ The widely used molecular docking softwares are auto dock v1.5.6, auto dock4 2.6, dockvision, gold, flexidock etc.

Molecular docking and three-

dimensional quantitative structure-activity relationship (3D-QSAR) studies on β -Secretase analogues can be performed to explore the inhibitory mechanism since β -Secretase is an important protease in the pathogenesis of Alzheimer's disease. The Lamarckian Genetic Algorithm (LGA) was applied to locate the binding orientations and conformations of the peptidomimetics with the β -secretase. A good correlation between the calculated binding free energies and the experimental inhibitory activities suggests that the identified binding conformations of these potential inhibitors are reliable.²

Fragment based QSAR and molecular docking technique can be used effectively in the development of dual inhibitors against Alzheimer's disease -amyloid cleavage enzyme (BACE-1) and acetylcholinesterase (AChE), being important for AD progression, have been considered as promising drug targets. Consideration of the lead molecules as prospective drugs for the effective dual inhibition of BACE-1 and AChE. The GQSAR model provides site-specific clues about the molecules where certain modifications can result in increased biological activity. This information could be of high value for design and development of multifunctional drugs for combating AD.³

Molecular docking programs use scoring functions to estimate the binding energetics of the predicted ligand-receptor complexes. The energy variation, due to the formation of the ligand-receptor structure, is given by the binding constant (K_d) and the Gibbs free energy (ΔG_L). Prediction of the binding energy is performed by evaluating the most important physical-

chemical phenomena involved in ligand-receptor binding, including intermolecular interactions, desolvation and entropic effect.

Auto Dock Tools (ADT) is a package of automated docking tools and excellent resource to engage biochemistry students in computational studies. It is frequently used, fast and available free of charge from the Scripps Research Institute. Aside from generating binding energies in these docking studies, the position of the ligand in the host's binding site can be visualized. And hence is considered as an efficient molecular docking technique for drug design and delivery. By ADT it is found that among the available AChE PDB entries one can find the empirical crystallographic structure of tacrine in complex with *Torpedo californica* AChE (1acj). The human and *Torpedo* sequences are 59% identical, and the global structural alignment of alpha carbons (1acj vs. 1b41) has an RMS of 1.21 Å (526 alpha carbons, Swiss PDB Viewer Magic Fit).⁴

Computer models serve as valid alternatives to experiments related to drug development which involves assessment of absorption, distribution, metabolism and excretion. SwissADME web tool gives free access to a pool of fast yet robust predictive models for physicochemical properties, pharmacokinetics, drug-likeness and medicinal chemistry friendliness, among which in-house proficient methods such as the BOILED-Egg, iLOGP and Bioavailability Radar. The iLOGP implemented in SwissADME corresponds to Model9 of the seminal publication, which was trained on 11,993 molecules ($r=0.72$, $MAE=0.89$, and $RMSE=1.14$ against experimental $\log P$). 5-fold crossvalidation

ensured robustness ($q^2CV=0.52$, $MAE_{CV}=0.89$, and $RMSE_{CV}=1.14$) and external test benchmarks showed the excellent predictive power and extended applicability domain compared to well-established methods.⁵

The ligand-based drug design is used when the structure of the receptor is unknown, but when a series of compounds have been identified that exert the activity of interest. It is represented as a collection of functional groups in three-dimensional space that is complementary to the geometry of the receptor site.

AutoDock Vina is an open-source program for doing molecular docking. It was designed and implemented by Dr. Oleg Trott in the Molecular Graphics Lab at The Scripps Research Institute. Auto Dock Vina significantly improves the average accuracy of the binding mode predictions. AutoDock Vina has been tested against a virtual screening and was found to be a strong docking program. For its input and output, Vina uses PDBQT files format used by AutoDock. PDBQT files can be generated and viewed using MGL Tools.

Procedure

The current work was aimed to identify the best possible targets of new drug molecule for AD using auto dock vina programme. For this purpose, the databases of various ligands were prepared using **PyMol**, which is done by taken 3-D crystallographic structure of targeted protein from protein data bank in pdb format and open this protein using PyMol and remove unwanted ligands and water molecules and add hydrogens into appropriate sites of protein. Similarly, the ligand prepared by taken drug structure

from Pubchemdatabase in sdf format and is converted to pdb format using open babel software. Then open the drug and protein using **MGL TOOLS** and add polar hydrogen atoms and saved in PDBQT format separately. In the last step, analysis of binding sites and co-ordinates of receptors are taking place by following steps are opening of receptors as pdb files in **Discovery Studio** and receptor binding sites defined and grid co-ordinates(X,Y,Z) account. Then docking process run using **Autodock vina**, once the process was complete, the binding energy of ligand binding to the receptor will be obtained and which is the best pose. Then which is saved in PDBQT format. Subsequently, the output is opened in **Discovery Studio** and identifies different non-bonded interactions. Analysis of result was carried out by differentiating binding affinity towards protein.

RESULTS AND DISCUSSION

The binding sites in the protein have the following co-ordinates:-

Site number	X-coor- dinate	Y-coor- dinate	Z-coor- dinate
I	1.712	65.376	65.887
II	15.212	49.626	6.637

1. Donepezil

3-D Structure of Donepezil is shown in Fig. 1

Fig. 1 The 3-D crystal structure of donepezil

The docking of the downloaded drugs in the active site of AChE showed good binding affinities which showed comparable values with already established drugs.

Ligand	Docking score (Kcalmol ⁻¹)
Donepezil	-10.5

Lowest root mean square deviation valued (rmsd) confirmations is taken as the docking score. Smaller the value of rmsd, greater the docking power. Normally the value lower than -8 is considered as good drug. Here Donepezi has excellent binding capacity. Interactions between Donepezil with AChE receptor is shown in Fig 2.

Fig. 2 3-D image showing the docking of the drug donepezil with AChE receptor.

The drug interaction with protein residues is clearly visible from the 3-D images. The 2D-images showed the types of interactions of the drug donepezil with AChE receptor (Fig. 3).The main points observed

1. The absence of green dotted line shows there is no conventional H-bonding.

2. The most common interaction is vander Waals interactions
3. π - π interactions are denoted by dark pink dotted lines
4. Light pink lines explain π -alkyl type interactions.

Fig.3 2-Dimensional image depicts interaction between protein-receptor moieties

2. Galantamine

3-D Structure of Galantamine is shown in Fig. 4

Fig. 4 3-D Structure of Galantamine

Docking score or binding energy of Protein and Galantamine is -9.7 Kcal mol⁻¹

Interactions between Galantamine and AChE receptor is shown in Fig. 5. The 2-D image depicts the interactions more clearly (Fig. 6).

Fig. 5 Interactions between Galantamine with AChE receptor

Fig. 6 2-Dimensional image depicts interaction between protein-receptor moieties (Galantamine)

The main points observed

1. The green dotted line shows there is strong H-bonding.
2. The vander Waals interactions are observed as light green centres

3. Carbon-hydrogen bond is observed.
4. π - π interactions are denoted by dark pink dotted lines
5. Light pink lines explain π -alkyl type interactions.
6. π -sigma type interactions are also observed

3. Memantamine

The docking score is $-7.8 \text{ K cal mol}^{-1}$

Fig. 7 Interactions between Memantamine with AChE receptor

Fig. 8 2-Dimensional image depicts interaction between protein-receptor moieties (memantamine)

The main interactions

1. Strong Conventional H-bonds
2. Only four vander Waals forces

3. one π -sigma interactions
4. A number of π -alkyl interactions are observed

4. Lovodopa

Mucuna pruriens is a tropical legume native to Africa and tropical Asia and widely naturalized and cultivated. *Mucuna pruriens* is a natural herbal supplement used in Ayurvedic medicine, an ancient practice from India, that lowers stress, reduces anxiety, improves focus, boosts the libido, and elevates mood. *Mucuna* is used for the treatment of Parkinson's disease. One of the major chemical constituent of *Mucuna pruriens* is lovodopa. The crystal structure of lovodopa is given in Fig.9

Fig. 9 The crystal structure of lovodopa

Docking score= -7.1

Fig. 10 Interactions between lovodopa with AChE receptor

Fig. 11 2-D image showing the interactions between L-DOPA with AChE receptor

The interactions are mainly van der Waals interactions, conventional H-bonding, π - π interactions. There also found some unfavourable interactions

Comparison of docking effect

Ligand	Docking score (Kcalmol ⁻¹)
Donepezil	-10.5
Galantamine	-9.7
Memantine	-7.8
L-DOPA	-7.1

The docking score shows the efficiency of the drug. Here we can find that L-DOPA has excellent efficiency.

Conclusions

The docking of the active site of acetylcholinesterase with drug Donepezil is established using computational tools. Computational methods were found to be efficient in rational drug designing considering the number and strength of non-covalent interactions involved. The analysis of the interactions between protein residues and drug molecule shows a van der Waals type attractions. The methodology

can be utilized efficiently to find out novel drugs for Alzheimer's disease.

Abstract

A classic set of Semi-Interpenetrating polymer networks (S-IPNs) has been fabricated using the judicious selection of a pair of thermoplastics and an elastomer with effective interpenetration between them. S-IPNs based on styrene butadiene rubber (SBR) and poly [methyl methacrylate]- (PMMA) have been synthesized by sequential polymerisation technique. This synthesized low cost S- IPN can be promisingly employed as a toughened plastic with co-continuous morphological pattern. The different mechanical properties of S-IPNs are investigated in detail. Morphological analysis of S-IPNs through SEM provides clear insight of their component distribution in it. This protocol of characterization in S- IPN can definitely act as a platform for designing of new toughened plastic with low cost and facile fabrication protocol.

2.1. Introduction

Multi polymeric systems have explicit role in the broad canvas of material science.¹ Interpenetrating polymer networks (IPNs) are a special type of polymer blend with specific features and potential applications.² IPNs are defined

as networks where two components are cross-linked but not to each other.³ Sequential polymerization, simultaneous polymerization and latex blending methods are the common protocols⁴ employed in the manufacture of IPNs. The path for blending of two cross-linked polymers can be effectively achieved through IPN synthesis.⁵ The dual cross-linked nature⁶ of both the components in IPN performs their own specific features over the morphological features. Blend ratio, crosslink density of each network, size, shape and distribution of phase, domain sizes of components, overall composition and interfacial tension are the major factors in engineering the ultimate properties of IPN.⁷ Both the components of IPN are in cross-linked fashion, it is represented as full-IPN.⁸ If one component exists in linear style, the resultant system is called semi-IPN.⁹ The cross-linked phase of semi-IPN usually exists as continuous phase.¹⁰

A number of articles had been present in the literature dealing mechanical analysis^{11, 12} as the central theme in blend characterization.¹³ Articles of IPNs with mechanical properties ¹⁴

as the primary subject are limited in number.¹⁵ Mathew *et al.*¹⁶ successfully explained the morphology, mechanical properties and failure-topography of semi-interpenetrating polymer networks based on natural rubber and polystyrene.

In this chapter, a novel set of semi-IPN membranes have been prepared from poly methyl methacrylate (PMMA) and styrene butadiene rubber (SBR) by adopting sequential polymerization protocol. PMMA is a transparent thermoplastic with low cost and is widely employed for different applications. SBR is a very important all-purpose, low cost synthetic rubber. By the judicious interpenetration of SBR and PMMA by sequential polymerization technique, we have prepared a series of low-cost semi-IPN based membranes.¹⁷ The properties and morphology of S-IPNs can be tuned and engineered by changing the composition and crosslink density of the SBR and PMMA phases.

The morphology of the S-IPNs was analyzed with transmission electron microscopy, scanning electron microscopy, atomic force microscopy and confocal Raman imaging. The detailed interpretation of mechanical behavior of S-IPNs supported with morphological results and theoretical predictions are the key highlight and novelty of this chapter.

2.2. Materials and Methods

2.2.1. Styrene butadiene rubber (SBR)

Styrene butadiene rubber (SBR) is one of the chief and cheap synthetic general-purpose elastomers. SBR has wide range of applications in tyre and non-tyre fields. Styrene butadiene rubber (Synaprene 1502) with 23.5% styrene content was used for this study had been supplied by Indian

Synthetic Rubber Limited (ISRL) through Appollo Tyres, Chalakudy. Cold emulsion polymerized SBR has been employed for this study.

2.2.2. Methyl methacrylate (MMA) monomer

Methyl methacrylate (MMA-99%) monomer used in the experiment was purchased from Sigma-Aldrich, India contains ≤ 30 ppm methyl Ether of Hydroquinone (MEHQ) as inhibitor. The monomer was made inhibitor free by washing it with 2% sodium hydroxide (NaOH) followed by distilled water and was dried using anhydrous calcium chloride (CaCl₂) before carrying out the experiment.

2.2.3. Preparation of semi-IPNs

Cured SBR sheets of definite weight and of thickness (2mm) with specific density values (0.950 g/cc for ¹S₁₀₀, 0.953 for ²S₁₀₀ and 0.956 for ³S₁₀₀) were immersed in a homogeneous mixture of MMA (with density 0.936 g/cc), BPO and DVB (the inhibitor free MMA monomer containing 1% BPO as initiator and 0, 2, 4 and 6% of DVB based on the MMA content) for different time intervals. SBR/PMMA semi-IPNs have been prepared by without using DVB. Here polymerization was carried out in the absence of cross linker for PMMA. SBR strip of 10×3cm dimension is immersed in MMA mixture taken a glass petri dish. To get an equilibrium distribution of MMA monomer in the matrix, swollen samples were kept at 273 K for three hours. These SBR sheet was kept in between two stainless steel plates inside an oven at 353K for 16 h for polymerization. Afterwards, the rubber sheet was vacuum dried to constant weight.

2.2.4. Representation of IPNs and semi-IPNs

The IPNs and semi-IPNs can be represented as $^a\text{SBP}_c\text{D}_d$. (a indicates weight of DCP per 100 grams of SBR rubber, S indicates SBR rubber, B stands for BPO as the initiator for polymerization of

PMMA, P represents PMMA, c indicates weight percentage of PMMA, D stands for Divinyl benzene [DVB], d corresponds to wt. % of DVB content). The composition of different IPNs and semi-IPNs employed for different characterization can be summarized as follows.

Table 2.1: Composition of IPNs and Semi-IPNs

Representation	DCP (Phr)	PMMA: SBR (Wt. %) in IPN	DVB(wt.%)	Type of semi-IPN
1SBP30D0	1	30:70	0	Semi-IPN
1SBP50D0	1	50:50	0	Semi-IPN
1SBP70D0	1	70:30	0	Semi-IPN

2.3. Characterization methods for semi-IPNs

2.3.1. Tensile properties

The mechanical properties of the samples Tensile strength (TS) and elongation at break (EB %) were studied using universal testing machine in accordance with ASTM D 412-16 and with ASTM D 638. The instrument used was Tinius Olsen HT50kT UTM. The experiments were conducted for dumbbell shaped samples with gauge length of 25 mm at a cross head speed of 50mm/min at room temperature to rupture by an electro mechanical machine equipped with a 5 kg load cell.

2.3.2. Hardness

The Shore A hardness was measured using a Durometer for the semi-IPNs and IPNs according to ASTM D-2240 test method.

2.3.3. Density

The density of the samples was measured

at room temperature using the hydrostatic technique according to ASTM D-792.

2.3.4. Scanning electron microscopy (SEM)

The morphology of IPNs, composites and IPN composites were studied using JOEL-JEM 2010 model scanning electron microscope. The samples were cryogenically fractured, sputtered with gold and examined under microscope.

2.4. Results and discussion

2.4.1. Mechanical properties

Mechanical analysis is one of the important tools in S-IPN characterization. The various factors affecting the tensile properties of S-IPNs can be summarized as follows.

2.4.1.1. Effect of blend ratio

The blend ratio in S-IPN has major role in engineering the mechanical properties. The stress-strain curves for IPNs are shown in the Figure 2.1.

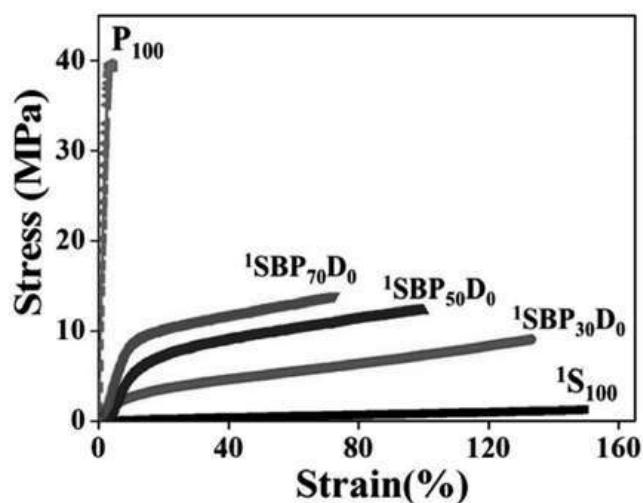

Figure 2.1: Stress-strain curves for S-IPNs.

The deformation pattern of each S-IPN under an applied stress is clear from the above figure. The deformation tendency of SBR ($^1S_{100}$) is of typical elastomer in nature. On the addition of PMMA, the deformation pattern changes. The gradual change from

the rubbery to the plastic nature can be clearly visualized, as we moving from 30 to 70 wt. % of PMMA in the stress-strain curve. S-IPN with 70% PMMA ($^1SBP_{70}D_0$) shows the typical plastic nature and the IPN with 70% SBR ($^1SBP_{30}D_0$) shows a rubbery nature. For samples where the PMMA content is greater than or equal to 50%, a yield point was observed.

When the PMMA content goes above 50%, the stress-strain curves show distinct elastic and inelastic regions. In the elastic region, yielding was observed. On increasing the plastic content, the rubbery nature decreases and a necking tendency characteristic of plastics appears. The brittle type behavior was shown by pure PMMA (P_{100}). The effect of blend ratio on mechanical properties of IPN can be summarized in the Table 2.2.

Table 2.2: Effect of composition on mechanical properties semi-IPNs (D0 series)

Composition	Density (g/CC)	TS (MPa)	EB (%)	Young's Modulus (MPa)	Hardness Shore A (± 3)
$^1S_{100}$	0.95 \pm 0.01	1.24 \pm 0.3	149 \pm 12	1.74 \pm 0.1	42
$^1SBP_{30}D_0$	1.01 \pm 0.02	7.06 \pm 0.5	133 \pm 11	3.50 \pm 0.2	76
$^1SBP_{50}D_0$	1.04 \pm 0.02	12.25 \pm 0.6	99 \pm 6	15.16 \pm 0.25	80
$^1SBP_{70}D_0$	1.09 \pm 0.02	13.85 \pm 0.7	74 \pm 4	22.34 \pm 0.85	83
P_{100}	1.19 \pm 0.04	39.6 \pm 1.3	3.5 \pm 0.6	2166.12 \pm 8.34	-

2.4.2. Morphological characterization

There are various protocols and factors in morphological characterization of IPNs and semi-IPNs. They had been explored in detail and are summarized here. In this report, we present the analysis of a series of full IPNs and semi-IPNs with different compositions, cross-link densities and attempt has been made to correlate these morphological observations with mechanical performance.

2.4.2.1. Effect of blend ratio in S-IPN

The effect of blend ratio on behavior of S-IPN can be explained by the following SEM images. Figure 2.2 (A-F) shows SEM images of semi-IPNs with same cross-link density for both components and having different PMMA concentrations ranging from 0 to 70 wt.%. All the six samples show phase separation with different morphologies clearly depicting the quantitative influence of second

component on the morphology developed during S-IPN synthesis. Fig. 2.2(A) depicts the SEM images of neat SBR ($^1S_{100}$) and 2.2(B) narrates the S-IPN (with 30 wt. % of PMMA). It shows sea-island like morphology, i.e. PMMA phase is dispersed in the continuous SBR matrix. Here PMMA exists as small domains but SBR and PMMA phases are separated. Figure 2.2 (C) represents S-IPN with 40% PMMA content. Here the number and size of PMMA domains are increased while keeping the two phases separated and follows dispersed morphology. Figure 2.2 (D) depicts S-IPN with 50:50 blend ratio with tendency of PMMA domain to undergo distended phase. As further enhancement in PMMA concentration

occurs, they show gradual gradation from dispersed system morphology to co-continuous morphology (with 70 wt. % of PMMA) through more or less dual phase morphology (with 60 wt. % of PMMA).

In S-IPNs, the first synthesized phase (here cross-linked SBR) forms more continuous phase. The second component in S-IPN has an important role in designing the morphology of resultant system.¹⁸ It is crystal clear from Figure 2.2. At 70 wt. % PMMA content, both phases become co-continuous. This can be clearly visualized from Figure 2.2(F). The enhancement in tensile strength and in storage modulus of IPN with increase in PMMA content is well supported by this SEM analysis.

Figure 2.2: Scanning Electron micrographs of (A) Neat SBR($^1S_{100}$) (B) $^1SBP_{30}D_0$ (C) $^1SBP_{40}D_0$ (D) $^1SBP_{50}D_0$ (E) $^1SBP_{60}D_0$ and (F) $^1SBP_{70}D_0$

According to a theory developed by Sperling, "in the case of sequential S-IPN, polymer II which is formed in a swollen network I, constitutes a spherical core and is in a contracted state, while polymer I surrounds the core and is in

an expanded state. This clearly depends on the concentration of the second component and when it increases and reaches a certain limit, polymer II also becomes continuous as polymer I".¹⁹ This situation of co-continuous morphology

is also established in our S-IPN system with 70wt. % of PMMA. This fact was supported by Figure 2.2 C. In this stage, PMMA domains undergo interlinking and lead to larger domain size while maintaining co-continuous features. In S-IPNs, the phase synthesized first forms the more continuous phase and control the morphology. S-IPN with 30% PMMA shows a fine structure with PMMA domains dispersed all over SBR matrix. As the concentration of PMMA rises, the size of PMMA domains also increases and found to form clusters of large domains surrounded by very small domains. S-IPN with PMMA concentration 50% or above (${}^1\text{SBP}_{50}\text{D}_0$ and ${}^1\text{SBP}_{70}\text{D}_0$) showed higher miscibility when compared to S-IPNs with PMMA concentration < 50%. These effects can be visualized in the following scheme.

Figure 2.3: Schematic representation showing the effect of concentration of second component in morphology of resultant S-IPN, (A) S-IPN with low PMMA content, (B) moderate PMMA content and (C) high PMMA content

24. Conclusion

New classes of semi-IPN multi component polymeric systems were developed from SBR and the methyl methacrylate monomer by the sequential method via in-situ polymerization. These specialized blends have a very ordered and compact arrangement of the two phases. The effective and low-cost polymer blend formed from SBR and PMMA by the interpenetration technique having a wide range of mechanical properties starting

from reinforced rubber to toughened plastic. It is found that in all cases as the PMMA content increases the tensile strength, density, modulus and hardness increase. The EB % values decrease due to decrease in the elasticity of the material with a decreasing SBR content. It is also concluded that the system shows a continuous morphology above 50% PMMA with enhancement of properties. As the PMMA content in S-IPN enhances, the distance between two adjacent PMMA distribution decreases and resulted in more homogenous, close packed morphology.

The effects of blend ratio and cross-linking in SBR and PMMA phase were analyzed by different morphological techniques like SEM. Morphological analysis confirmed that as the % of PMMA content in IPN enhances system show gradual gradation from dispersed island morphology to co-continuous morphology. Morphological characterization protocols provide an efficient route for the differentiation of IPNs from semi-IPN. These studies prove that component I and II have their own roles for tuning the morphology of resultant IPNs. Cross-linker content of SBR and PMMA phases have prominent role in ultimate properties of S-IPN. There is no chemical interaction between SBR and PMMA in S-IPN.

COMPACT HMSIW BANDSTOP FILTER WITH COUPLED VERTICAL LOOPS

Anju P Mathews, Praveen Joseph

Introduction

The vertical loop with slit is a new approach to the conventional resonator structures [3] in connection with SIW. In order to limit the loop size [4], conductor strip separated by a nonconductor region with vias on either side is placed vertically in the top and bottom surface of the Half Mode Substrate Integrated Waveguide (HMSIW). The bandpass filter design topologies of the embedded vertical loops are studied in the previous section.

The bandstop filter using HMSIW coupled vertical loop is studied in this section. The filter is fabricated on Rogers RT 5880 laminate ($\epsilon_r=2.2$, $h=0.79$ mm) with 33×13 mm² overall dimension. A narrow stop-band is realized in the proposed structure. The structure is fabricated using standard photolithography process.

Geometry

The HMSIW loop filter is fed using microstrip line with a tapering for impedance transformation. The HMSIW section is edge coupled to vertical loop with slit. The top and bottom structure topology is shown in Fig. 5.24 (a) and (b) respectively. The geometry of the slitted loop is shown

in Fig. 5.24 (c). The filter parameters and the loop parameters are shown in Tables 5.7 and 5.8 respectively.

Design Evolution

The HMSIW coupled with vertical loops are designed and simulated. A loop without slit is placed near the magnetic wall of HMSIW and no remarkable excitation is found as shown in Fig. 5.25. A slit introduced at the ground portion of the loop affects the loop excitation and a narrow stopband is observed as shown in Fig. 5.26. The stopband bandwidth can be increased by increasing the number of loops involved in the design as given in Fig. 5.27.

5.3.3 Simulation and Analysis

The frequency dependence of various loop parameters are studied in this section. The loop parameters such as loop width (Ws), gap (C2) and slit separation (G1) shifts the frequency to higher range with the increase in the parameter as shown in Fig. 5.28 (c), (d), (e), (f), (i) and (j) respectively. An increase in parameters like loop length (Ls) and Xoff shifts the frequency to the lower range as given Fig. 5.28 (a), (b), (g) and (h).

Fabrication and Measurement

The Fig. 5.29 shows the photograph of the fabricated filter with the SMA connectors. Standard photolithography is used for the fabrication process and the S parameter measurements are taken using Rohde & Schwarz ZVB20 vector network analyzer. The measured result in comparison with the simulated results are shown in Fig. 5.30. A small frequency shift is observed in the measurement result, which may be caused due to the fabrication inaccuracies of the tiny featured loop in the filter structure.

Abstract

One pot terpolymerization of CO₂, PO and cyclic anhydrides or lactide were performed using salen cobalt complex and double metal cyanide catalyst. Glass transition temperature (T_g) was found to be higher by incorporating phthalic anhydride to poly propylene carbonate back bone. The added amount of PA was fully incorporated on polymer chain. Improved thermal property prevents the agglomeration of polymer resin during summer season. Aliphatic polyesters found various applications because of biodegradability and bio compatibility. A new DMC catalyst prepared using H₃Co(CN)₆ giving consistent carbonate fraction and activity were used for terpolymerization for incorporating third monomer. Cyclic anhydrides and lactide were employed to incorporate as third monomer on poly(propylene carbonate-co-propylene oxide). Resulting polymer were characterized using ¹H NMR, ¹³CNMR, GPC and DSC.

Introduction

The increasing concentration of carbon dioxide in atmosphere, influences climate

changes resulting in global warming is currently a discussing subject in media, politics and science¹. Carbon dioxide can be utilized to prepare biodegradable polycarbonate by coupling with epoxides. The pioneer work for this alternating copolymerization of CO₂/propylene oxide was introduced by Inoue in 1969². A highly active and efficient catalyst was discovered which shows high turnover frequency (TOF, 16000 h⁻¹), molecular weight (M_n 300000) and high selectivity (>99%)³. A continuous process pilot plant was constructed for the commercial production of polypropylene carbonate⁴. The main demerit of resulting polypropylene carbonate (PPC) is its low glass transition temperature (T_g). The T_g of 40°C is too low to use for commercial utilization⁵. In summer at more than 40°C PPC pellets agglomerates to form a cluster and retracts commercialization of this attractive polymer. In order to improve thermal and mechanical properties of copolymer researchers are putting third monomer in CO₂ and PO or CHO copolymerization⁶. Terpolymerization of CO₂, epoxides and anhydrides results in terpolymers having improved thermal

and mechanical properties⁷. In this work we were able to increase the T_g of PPC by incorporating phthalic anhydride in to the polymer back bone.

Double metal cyanide (DMC) catalysts reported in early 1960s for the ring opening polymerization (ROP) of epoxide were inexpensive, easily prepared and superior to base catalysts⁸. For the past decades several improvement were observed on DMC catalysts⁹. However the catalyst performance fluctuates due to washing with tBuOH, water and it is sensitive to preparation process. Washing was carried out to remove K⁺ ions since it substantially affects catalysts activity¹⁰. Carbonate fraction (f_{CO_2}) using conventional DMC catalyst was found to be low in the range of 10- 40 mol%¹¹. Combining both Catalysts DMC and salen Co(III) complex we were able to achieve a carbonate fraction up to 64 %^{5a}. We reported a highly active new DMC catalyst prepared using $H_3Co(CN)_6$ which gives carbonate fraction consistently 60-65 % and do not fluctuates on its performance¹².

Aliphatic polyesters find biomedical application in drug delivery vesicles, bone screws, suture wire because of biocompatibility and biodegradability¹³. Polyesters can be synthesized by terpolymerization of CO_2 , epoxides and lactones or anhydrides^{6-7, 14}. Terpolymerizations using CO_2 , Cyclohexane oxide (CHO) and lactide were reported with zinc complexes¹⁵. One pot solution terpolymerization using CO_2 , CHO and maleic anhydride (MA) with heterogeneous double metal cyanide catalyst was also reported^{14a}. A polymer supported double metal cyanide catalyst was also employed for incorporating

third monomer in CO_2 epoxide terpolymerization^{7, 16}. Here in this report we used our highly active new double metal cyanide catalyst to incorporate third monomer like lactide and other anhydrides by terpolymerization.

Experimental

General Remarks. CO_2 gas (99.999% purity) was dried through storage in a column of molecular sieves 3A at a pressure of 30 bar. Propylene oxide (PO) was dried by stirring over CaH_2 and then vacuum-transferred to reservoir. All reagents were purchased from Aldrich and purified by recrystallization before use. 1H NMR (400 MHz) and $^{13}C\{^1H\}$ NMR (100 MHz) spectra were recorded on a Varian Mercury Plus 400 instrument. The gel permeation chromatograms (GPC) were obtained in $CHCl_3$ at 35 °C using a Waters Millennium apparatus with polystyrene standards. The T_g data were determined from a second heating at a heating rate of 10 °C/min with DSC (Differential Scanning Calorimetry) using Thermal Analysis Q10.

A typical procedure for $CO_2/PO/PA$ terpolymerization using Salen Co(III) complex. A bomb reactor (~50 mL) was assembled inside a glove box after charging with a magnetic bar, catalyst 1 (3.0 mg, 1.8 μ mol), PO (10.4g, 179 mmol), phthalic anhydride (1.0 g, 6.75 mmol) and 4 mg ethanol. The CO_2 gas was pressurized (23 bar) at room temperature, and the reactor was then immersed to touch the bottom of oil bath maintained at the temperature of 70 °C. After induction time (1 hour) the pressure started to decrease. The polymerization was performed until the pressure drop was 5-6 bar for full conversion. Because of stirring problem, the maximum pressure drop was ~6 bar

at which ~7-8 g of polymer were isolated. After the polymerization, the reactor was cooled to room temperature using an ice bath, and CO₂ gas was released. All volatiles were removed by rotary evaporation, and the isolated polymer was stored in a vacuum oven at 120 °C to completely remove propylene carbonate.

A typical procedure for CO₂/PO terpolymerization using DMC Catalyst and lactide or anhydride. A bomb reactor (~50 mL) was assembled inside a glove box after charging with a magnetic stirring bar, PO (10.0 g, 170 mmol), DMC catalyst (5.0 mg), and an optional monomer anhydride or lactide. The CO₂ gas was pressurized at room temperature, and the reactor was then immersed with out touching the bottom of oil bath maintained at the desired temperature of 90 °C. After induction time, the pressure started to decrease. The polymerization was performed until the pressure drop was 5-6 bar. Because of stirring problem, the maximum pressure drop was ~6 bar at which ~7-8 g of polymer were isolated. After the polymerization, the reactor was cooled to room temperature using an ice bath, and CO₂ gas was released. All volatiles were removed by rotary evaporation, and the isolated polymer was stored in a vacuum oven at 120 °C to completely

remove propylene carbonate.

Results and Discussion

Terpolymerization of CO₂, PO, PA using salen Co(III) complex. Terpolymerization with anhydrides is an attractive way to improve thermal and mechanical properties of polypropylene carbonate. We have demonstrated preparation di and triblock polymers through immortal polymerization using salen Co(III) complex^{4a}. Phthalic anhydride is the suitable third monomer in this terpolymerization as aromatic ring in the polymer back bone enhances the Tg of resulting polymer. 500mg of PA in polymerization increases the Tg by 2°C (Entry 3 Table 1). But on increasing the amount of PA to 1g could not increase the Tg further (Entry 4 Table 1). But on adding small amount of ethanol raises the Tg up to 5°C With 1g PA which indicates that a small amount ethanol is necessary as chain transfer agent for the full incorporation of PA. The key of terpolymerization mechanism includes the chain transfer or chain terminating ethanol enables the formation narrow distributed polypropylene carbonate end capped with hydroxyl group. The hydroxyl end group of polypropylene carbonate ring opens the cyclic anhydride and results in PA incorporated terpolymer.

^aPolymerization conditions: PO (10.4 g, 170 mmol), Catalyst 1 (3.0 mg), CO₂ (30 bar), Temperature (70 °C), Induction time (1.0 h), Polymerization time (2.5 h). ^bYield after removal of propylene carbonate. ^cSelectivity, Weight of PA, carbonate and polyester fraction determined by 1H NMR spectroscopy. ^dDetermined on DSC. ^eDetermined on GPC using a polystyrene standard.

The terpolymerizations were carried out at 70°C by touching the bottom of bomb reactor in oil bath. Phthalic anhydride and catalyst are highly soluble in PO and PO acts as both solvent and monomer for this polymerization. CO₂/PO copolymerization is strictly alternating copolymerization using salen cobalt catalyst. Most of the metal salen catalyst gave high activities and selectivities for CO₂/PO copolymerization. To get an insight of incorporation terpolymerization were carried out with varying amount of PA. From 1H NMR it was clear that all added PA monomer were incorporated with reasonable discrepancies. Similar experiments conducted with lactide, caprolactone, maleic anhydride and other

cyclic anhydrides were not found to be working even in the presence of ethanol.

Figure 1 The 1H NMR spectrum of (A) PPC (Entry 1 of Table 1), (B) (Entry 8 of Table 1)

Polymer Characterization: The terpolymer were characterized by 1H NMR, 13C NMR, GPC and DSC. The polymerizations were carried out to reach full conversion by giving 2.5 hour reaction time except the CO₂/PO Copolymerization (Entry 1

of Table 1). The peak at 7.5 and 7.7 ppm represents 4 aromatic protons of PA. The peak at 5.3 ppm and a shoulder close to 5 ppm and 4.4 ppm indicates insertion of PA into polymer back bone. The percentage of PA incorporated can be calculated from NMR justifies the added amount during polymerization and can be calculated from NMR by the following way.

$$\text{PA (polyester) \%} = [(A_{7.4-7.8}/4)]/[(A_{5.2-5.5} + A_{4.8-5.2})/3]$$

$$\text{PC(polycarbonate) \%} = 100\% - \text{PA\%}$$

¹³C NMR peaks at 166 ppm, 132 ppm, 131 ppm and 128 ppm also supports the incorporation of phthalic groups on PPC back bone. As the amount PA increases incorporation also increases as PA solubility is pretty high in PO. DSC gives single T_g and GPC data also supports genuine terpolymer.

Preparation of low-molecular-weight PA/PO/CO₂ terpolymer using varying

amount of ethanol. It is clear from our studies that small amount of ethanol is necessary to ring open the phthalic anhydride for insertion into polymer back bone. Darensbourg used small amount of water to make triblock copolymer from PO, CO₂ and lactide¹⁷. Ethanol is used as a traditional chain transfer agent in our polymerization as water kills our catalyst and blocks polymerization, even small amount of water increases the induction time. Initially we tried the polymerization in the absence of ethanol but we could not find considerable increase in T_g as the amount of PA increases. The slight amount of increase in T_g in the absence of ethanol is attributed to moisture content in our polymerization condition. As the amount of ethanol increases the Molecular weight decreases from 85000 (Entry 1 of Table 2) to 18700 (Entry 5 of Table 2). The decrease in T_g from 44.9°C to 42.7°C is due to the lowering of molecular weight.

The thermal property of polymer increases due to incorporation of phthalic groups. The terpolymer shows better Tg the CO₂/PO copolymer. The Tg of terpolymer is 5°C higher than the copolymer (Entry 8 of Table 1). Thus the agglomeration of PPC pellets can be prevented and which enhance the commercialization of this attractive polymer.

Figure 2 DSC Curves (A) PPC (Entry 1 of Table 1), (B) (Entry 8 of Table 1)

Terpolymerization using double metal cyanide catalyst by the addition of lactide and various cyclic anhydrides as third monomer.

Double metal cyanide catalysts for the copolymerization of PO and CO₂ to produce poly(propylene carbonate-co-propylene oxide) has been thoroughly investigated¹⁸. It has also been reported for the copolymerization of CS₂/epoxides¹⁹ and cyclic anhydrides/epoxides²⁰. Recently we reported a new DMC catalyst

[ZnCl]⁺² [HCo(CN)₆]²⁻•[CH₃OH] prepared using H³Co(CN)₆ which is superior to conventional DMC catalyst in terms of carbonate linkage and activity¹². Here we report terpolymerization using new DMC catalyst, CO₂ and PO with

lactide (3,6-dimethyl-1,4-dioxane-2,5-dione (1) and various anhydrides like maleic anhydride (MA) (2), succinic anhydride (SA) (3), glutaric anhydride (GA) (4), phthalic anhydride (PA) (5), 1,2-cyclohexane dicarboxylic anhydride (CDA) (6) and cis-1,2,3,6-tetrahydrophthalic anhydride (TPA) (7).

The polymers having random structures with ether linkages are obtained by this terpolymerization and shows relatively broad molecular weight distribution. The new DMC catalyst is a hydrogenated form and it contain proton play key role for giving high catalyst performance without fluctuation. It is a cationic coordination catalyst and the mechanism of this reaction is considered to be cationic coordination mechanism.

^aPolymerization conditions: PO (10.0 g, 170 mmol), Temperature (90 °C), Induction time (1.0 h), Reaction time 2h, CO₂ pressure (30 bar). ^bYield after removing propylene carbonate. ^cSelectivity, carbonate, ether and polyester fraction determined by 1H NMR spectroscopy. ^dDetermined on DSC. ^eDetermined on GPC using a polystyrene standard.

Characterization of polymers. The terpolymers obtained are characterized by 1H NMR, ¹³C NMR, GPC and Tg. The 1H NMR spectrum of terpolymer (Entry 2 of Table 3) shows characteristic peaks of lactide incorporation at 5.18 ppm and 1.5 ppm and could not find lactide homopolymerization peaks. The ¹³C NMR spectra shows peak at 169 ppm is the CO₂ peak of lactide unit, CH-O peak near to CO₂ and other lactide related peak were observed between 70-73 ppm. DSC gives single Tg 15°C. From NMR 10 mol % of lactide was found to be incorporated.

An extra absorption peak of 1H NMR spectrum at 6.2 ppm (-CH=CH-) shows the presence of MA unit in terpolymer (Entry 3 of Table 3). A peak at 5.2 ppm supports its incorporation. Other characteristic peak includes 1.3 ppm, 3.5 ppm, 4.2 ppm and 4.9 ppm. The ¹³C NMR peaks at 129 ppm and 164 ppm also indicates that MA terpolymerize or insert into terpolymer backbone. GPC and DSC data also supports it is a genuine terpolymer. The peaks at 2.6

ppm and 5.1 ppm indicates the presence of succinic anhydride incorporation in ¹H NMR spectrum (Entry 4 of Table 3). The ¹³C NMR peaks at 171 ppm and 29 ppm also ensures SA incorporation. DSC and GPC data also supports these terpolymers are genuine terpolymer not mixtures.

The ¹H NMR peaks at 5.1 ppm, 2.3 ppm and 1.9 ppm supports the terpolymerization of glutaric acid in the terpolymer (Entry 5 of Table 3) whereas ¹³C NMR peaks at 172 ppm, 33 ppm and 19 ppm also supports the GA incorporation. The glass transition temperature is low -3°C because of CH₂ groups in polymer backbone. Molecular weight also low (Mn 93000). The aromatic hydrogens of Phthalic anhydride were observed at 7.7 ppm and 7.4 ppm of 1H NMR spectrum of terpolymer (Entry 6 of Table 3). The peak at 5.2-5.4 ppm also ensures the terpolymerization of phthalic groups. The ¹³C NMR peaks at 166 ppm, 131 and 128 ppm also ensures PA incorporation.

The ^1H NMR peaks at 5.1 ppm, 2.8 ppm, 1.9 ppm and 1.7 ppm shows CDA incorporation (Entry 7 of Table 3). The ^{13}C NMR peaks at 172 ppm, 42.5 ppm, 26.2 ppm and 23.7 ppm also ensures CDA incorporation. The ^1H NMR peaks at 5.6 ppm, 5.1 ppm, 3.0 ppm, 2.5 ppm and 2.3 ppm supports the incorporation of TPA in terpolymer back bone (Entry 8 of Table 3). The ^{13}C NMR peaks at 172 ppm, 124 ppm, 39.3 and 25.4 ppm shows TPA incorporation.

The carbonate fraction was not found to be altered much during terpolymerization. Caprolactone gives poor selectivity for terpolymerization (0.78) for terpolymerization with DMC catalyst. The Tg of terpolymers depends on ether linkage and molecular weight. Glutaric anhydride gives lowest Tg among all terpolymers due to flexible aliphatic unit. Single Tg and DSC curve also supports these terpolymers are genuine not a mixture of copolymers or terpolymers. CO_2 and third monomer could not homopolymerize nor copolymerize under the reaction conditions. So the terpolymerization is competitive alternating of PO with CO_2 and PO with third monomer.

Conclusion. Incorporating phthalic groups improves thermal property of polypropylene carbonate. A rise in Tg of 5°C is enough to prevent agglomeration PPC pellets and enhance commercialization of this attractive polymer. A small amount of ethanol is used to ring open phthalic anhydride and influences is incorporation. The new DMC catalyst identified as $[\text{ZnCl}]^{+2}[\text{HCo}(\text{CN})_6]^{2-} \cdot [\text{CH}_3\text{OH}]$ shows good catalytic performance towards the terpolymerization of third monomer like lactide and various anhydrides. The cationic

coordination catalyst results in polymer having random structure and relatively broad molecular weight distribution. The glass transition temperature depends on ether linkage and molecular weight

Abstract

Theoretical characterizations of piperazine attached chlorocadmate complex are carried out using geometrical optimization and natural bond orbital analysis. The charge transfer from the metal atom to the amine group of the molecule is evident from the natural bond orbital analysis. The intermolecular interactions such as N-H...Cl, O-H...Cl, C-H...Cl give stability in the molecule.

Keywords: Density Functional Theory, Normal Coordinate analysis.

Introduction

Piperazine derivatives such as 1-Amino 4-methylpiperazine [1], 1-(m-(trifluoromethyl)phenyl) piperazine [2], monohydrate piperazine hydrogen phosphate [3] have nonlinear optical activity. Piperazine is an organic compound which consists of a six-membered ring containing two nitrogen atoms at opposite positions in the ring. Piperazine conformations are differ as chair, half-chair, boat, twist boat and envelope forms. Above these conformations, Hendrickson proposed that chair is most stable and chair-chair inter link have the most stable transition state [4],[5]. The center metal exhibits a variety of coordi-

nation numbers in the Cd(II) complexes. The coordination of Cd²⁺ cation is basically present only in polymeric chlorocadmate (II), although a variety of stoichiometry's are possible to form chains by face, edge, or vertex sharing in CdCl₆ octahedra [6],[7]. Piperazine categorized as building blocks in drug discovery due to its pharmacological properties [8],[9]. It have a broad range of applications in pharmaceuticals as antimicrobial, anti-tubercular, anticonvulsant, antidepressant, anti-inflammatory, cytotoxic, anti-malarial, antirhythmic, antioxidant and antiviral activities etc.

In the present crystal, the investigations on optimized geometry, orbital charge transfer interaction, intra and inter molecular interactions are used by theoretical methods.

Computational Details

The DFT study has been carried out with a new hybrid exchange correlation functional level using the B3LYP [17] with the standard basis set 3-21G(d,p) level [18] through Gaussian 09W software package [19]. The appraisal of intra, inter molecular interactions, donor - acceptor energy relations of the complex were adopted from the NBO analysis using the

NBO 5.0 program in Gaussian 09W software package [21].

Result and Discussion

Optimized Geometry of the complex $[H_2pip]Cd_2Cl_6(H_2O)_2$

The optimized structure of monomer is given in figure 1 and its parameters are tabulated in table 1. The bonds N_6-H_{17} , $O_{21}-Cd_{22}$, $Cl_{25}-Cd_{27}$, and $Cd_{27}-O_{30}$ have difference in bond length above 0.05\AA between monomer and observed XRD data. Also, due to this change in bond length, there arises slight deviation at its corresponding bond angle and dihedral angle. The dimer structure shows deviation in bond N_6-H_{17} (elongate), $Cd_{22}-Cl_{24}$, $Cd_{27}-Cl_{29}$ (shorten) with difference in bond length $\sim 0.06\text{\AA}$. Comparing with monomer, the dimer structure is more close to the experimental single crystal XRD data. The C-C-N ring angles of the piperazine are varied as 111° and 109° . This reveals that piperazine

of the present compound shows the most stable chair confirmation. The hydrogen bonded distance of the intra and inter molecular interactions in this complex which expands ($N_3-H_{12}\cdots Cl_{57}$, $O_{21}-H_{19}\cdots Cl_{55}$, $C_{36}-H_{45}\cdots Cl_{24}$) and compress ($N_{35}-H_{43}\cdots Cl_{29}$, $C_5-H_{16}\cdots Cl_{55}$, $C_{34}-H_{42}\cdots Cl_{24}$, $N_{35}-H_{43}\cdots Cl_{28}$, $C_{34}-H_{41}\cdots Cl_{29}$, $N_6-H_{17}\cdots O_{21}$, $N_{38}-H_{49}\cdots O_{53}$) within the Van der Waal radii (3.06\AA) in reference with observed data are entered in table 4. These interactions describe the coordination and sharing of edges of five Cl^- ions and one water molecule in the octahedral zigzag infinite extension of the $Cd(II)$. All the above interactions confirm that the dimer molecule has more structural stability than monomer molecule. The nitrogen atom of piperazine ($C_4N_2H_{12}$) act as acceptor forms hydrogen bonds to the terminal Cl atom. Most of the bond parameters of dimer structure using basis set B3LYP/3-21G is matched with its experimental bond parameters.

Table 1: Optimized bond lengths, bond angles and dihedral angles of $[H_2pip][Cd_2Cl_6(H_2O)_2]$ by using B3LYP/3-21G(d,p) in comparison with the XRD data.

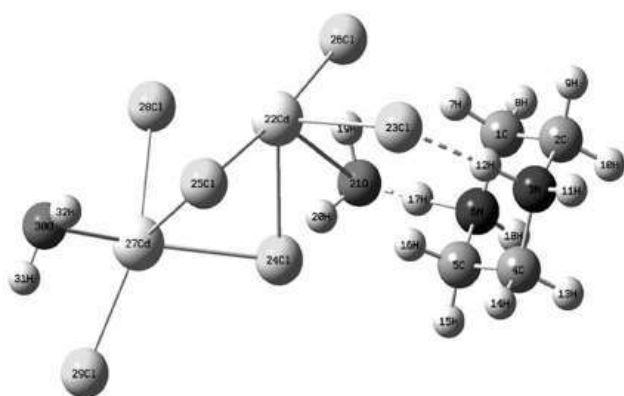

Fig.1. Atomic number scheme used in optimized geometry of $[H_2pip]Cd_2Cl_6(H_2O)_2$ monomer molecule.

Natural Bond Orbital Analysis

The natural bond orbital analyses describe the intra and inter molecular charge transfer (ICT) interaction causing stabi-

lization of the molecule (Table 2). The $\sigma^* \rightarrow \sigma^*$ orbital interaction observed between donor $Cd_{54}-Cl_{56}$ and acceptor $O_{53}-Cd_{54}$ bond is occurs with highest stabilization energy 1846.30 KJ/mol. The lone pair (LP) interaction LP (2) $O_{21} \rightarrow \sigma^*(N_6-H_{17})$ and the $\sigma \rightarrow \sigma^*$ orbital interaction $\sigma(O_{53}-Cd_{54}) \rightarrow \sigma^*(N_{38}-H_{49})$ confirms the presence of N-H...O intermolecular interaction with energy 314.47 and 198.50 KJ/mol respectively. The LP (2) $Cl_{28} \rightarrow \sigma^*(N_{35}-H_{43})$ and LP (2) $Cl_{61} \rightarrow \sigma^*(N_3-H_{11})$ confirms the contribution of the N-H ... Cl interactions 180.70 and 104.46 KJ/mol. The electron charge transfer from $\pi(Cd_{59}-Cl_{60})$ to $\sigma^*(H_{52}-O_{53})$ bond orbital reveals the evidence of the occurrence of O-H...Cl interaction. The crystal chemistry of chlorocadmates

(II) is confirmed through the $\sigma \rightarrow \sigma^*$ orbital mutual interactions of Cd-Cl bonds. The simple tetrahedral anions CdCl_4^{2-} is formed by the $\sigma \rightarrow \sigma^*$ orbital interactions which is mutually with four bonds such as, $(\text{Cd}_{27}-\text{Cl}_{24})$, $(\text{Cd}_{27}-\text{Cl}_{25})$, $(\text{Cd}_{22}-\text{Cl}_{24})$, $(\text{Cd}_{22}-\text{Cl}_{25})$ and are serves as the backbone of chain polymers. These hydrogen bonding network involving organic cations together with chlorocadmates (II) forms panoply

of the columnar stacks of chains which stabilizes the whole crystal with great stabilization energy. The overall natural bond orbital analysis reveals that the H...Cl hydrogen bonded intermolecular interaction has more contribution in the present complex than other hydrogen bonded intermolecular interactions to maintain its stability.

Table 2: Second order perturbation theory analysis of Fock matrix in NBO basis of $[\text{H}_2\text{pip}][\text{Cd}_2\text{Cl}_6(\text{H}_2\text{O})_2]$.

Conclusion

Semi-organic molecule $[H_2pip]Cd_2Cl_6(H_2O)_2$ is optimized by B3LYP/3-21++G(d,p) basis set. From this geometry, it is found that the molecular model recovered from B3LYP/3-21++G(d,p) in this study being the best representation of the actual molecular structure. Theoretical studies using optimized geometry and NBO gives information mainly about the interatomic properties, intermolecular interactions and charge transfer.

Abstract

A simple and novel electrochemical sensor was developed to determine tyramine based on the reduced graphene oxide- β -cyclodextrin-copper oxide composite modified gold electrode (rGO- β -CD-Cu₂O/AuE). The reduced graphene oxide provide stable matrix and a large surface area for the fabrication of the sensing interface while the Cu₂O nanoclusters dramatically promoted the current of tyramine on the electrode. β -cyclodextrin can form inclusion complexes with tyramine molecule via non-covalent interactions. FTIR, XRD, scanning electron microscopy and electrochemical methods were used to characterize the rGO- β -CD-Cu₂O composite.

1. Introduction

Tyramine is a naturally occurring trace amines derived from the amino acid tyrosine (Fig 1.1). Tyramine act as a catecholamine releasing agent. Notably, it is unable to cross the blood – brain barrier, resulting in only non-psychoactive peripheral sympathomimetic effects following ingestion. Tyramine occurs widely in plants and animals and is

metabolized by various enzymes including monoamine oxidases [1]. In foods it is often produced by the decarboxylation of tyrosine during fermentation. Evidence for the presence of tyramine in the human brain has been confirmed by postmortem analysis.

Fig 1.1 Structure of tyramine

Electrochemical sensors and biosensors have recently found extensive applications in diverse industries. Many analytical instruments used in environmental, food, pharmaceutical, or clinical laboratories and also most of the commercial point-of-care devices work using chemical sensors or biosensors, as a whole or a basic part. Graphene is one of the most promising materials that holds great promise for potential applications in many technological fields because of its high surface area, low cost, and high conductivity.

Cyclodextrin (CDs) with their largely hydrophobic cavities of variable size and numerous ways of chemical modification are the subject of intensive electrochemical research including both their behavior in homogeneous solutions and in thin films attached to the electrode surfaces. Therefore, CDs are employed in electrochemical sensing devices for the determination of selected analytes. Macrocyclic host such as β -cyclodextrin (β -CD) as functional molecule not only can effectively disperse graphene and meanwhile can bring in new and enhanced functions. Therefore, various macrocyclic hosts modified graphene organic-inorganic nanohybrids have attracted considerable attention recently in electrochemical sensing field. Cuprous oxide (Cu_2O) has been considered as a promising candidate for electrochemical sensors due to their low cost and significant catalytic activities [2]. Here we developed an electrochemical sensor for the detection of tyramine using rGO- β -CD- Cu_2O modified gold electrode.

2. EXPERIMENTAL

2.1 Materials and methods

Monosodium phosphate and disodium phosphate were obtained from SRL. β -CD purchased from Sigma Aldrich.

Several techniques were used to characterize rGO- β -CD- Cu_2O composites and they include Fourier Transform Infra Red (FT-IR), scanning electron microscopy (SEM), X-ray Diffractometry (XRD) and cyclic voltammetry (CV). In the present work Perkin Elmer FT-IR was used with a frequency range of 400-4000 cm^{-1} . Scanning electron microscopy (SEM) images were obtained with a JEOL-JSM-6390A SEM. Bruker AXS D8 Advance for

X-ray diffraction studies. Electrochemical measurements were performed using a SP300 electrochemical workstation, Bio-Logic Science Instruments SAS (Germany).

2.2. Synthesis of copper oxide nanoclusters

Microwave assisted treatment of Fehling's solution and plant extract used to synthesize Cu_2O nanoclusters. The obtained Cu_2O nanoclusters were characterized by various techniques. [3]

2.3 Synthesis of graphene oxide from pristine graphene

Graphite oxide was synthesized from graphite powder by modified Hummer's method [4]. 2.0 g of graphite powder was added into 100 mL concentrated H_2SO_4 at room temperature. Under stirring, the mixture was cooled to 5°C using an ice bath, and the temperature of the mixture was kept to below 5°C for 30 min. KMnO_4 (8.0 g) was added gradually under stirring and cooled, so that the temperature of the mixture was not allowed to reach 10°C . 100 mL distilled water was added into the mixture, stirred for 1 hr and further diluted to approximately 300 mL with distilled water. 20 mL of 30% H_2O_2 was added to the mixture to reduce the residual KMnO_4 . The solid was filtered, washed with 5% HCl aqueous solution (800 mL) to remove metal ions and with distilled water until the pH was 6. The resulting graphite oxide (GO) was dried at 45°C for 24 hr [32].

2.4 Synthesis of Exfoliated Graphite Oxide (ExGO)

Aqueous colloids of ExGO were prepared by dispersing 1.0 g GO into 500 mL of distilled water by ultrasonication

and centrifugation for 2 hr to remove any unexfoliated GO. The ExGO was dried at 45°C for 24 hr.

2.5 Preparation of reduced graphene oxide and β -cyclodextrin composite (rGO- β -CD)

About 0.01 g rGO and 0.32 g β -cyclodextrin were mixed with 100 mL water and sonicated for 1 hr. After that 1 mL hydrazine and 7 mL ammonia solution were added to the above solution and kept in water bath for about 4 hr with constant stirring. It was washed with double distilled water until it became neutral. Then it placed in hot air oven for 12 hr.

2.6 Synthesis of rGO- β -cyclodextrin- Cu_2O composite

0.75 g of rGO- β -CD nanocomposite and 0.75 g of Cu_2O nanoclusters were mixed in 100 mL water and it was kept in water bath for about 10 hr with constant stirring. It kept in a hot air oven at 80°C for 24 hr.

2.7 Electrochemical measurements

A platinum wire and an Ag/AgCl (saturated KCl solution) electrode were used as auxiliary and reference electrodes, respectively. Modified gold electrode used as the working electrode. CV measurements were carried out in 100 mM PBS at 100 mV s^{-1} . Nyquist plots of faradic impedance were carried out in the same electrolyte.

2.8 Fabrication of the electrochemical sensor

Gold electrode (AuE) with diameter of 3 mm was treated sequentially with 0.3 and 0.05-mm alumina powder and chamois leather. AuE was cleaned by ultrasonication in ethanol and double-distilled water for 5 min. Finally, the

electrode was washed with Milli-Q water. A 0.7 mL portion of the solution of rGO- β -CD- Cu_2O , was mixed with 60 μL of 5 wt% Nafion solution by ultrasonication for a few seconds. 3 mL of the ink was dropped on the surface of the clean gold electrode with a micropipette and then dried at room temperature. Similarly rGO/ β -CD/AuE was fabricated. All electrochemical experiments were carried out at 25°C.

3. RESULTS AND DISCUSSION

3.1 Characterization of rGO- β -CD- Cu_2O nanocomposites

3.1.1 FT-IR spectroscopy

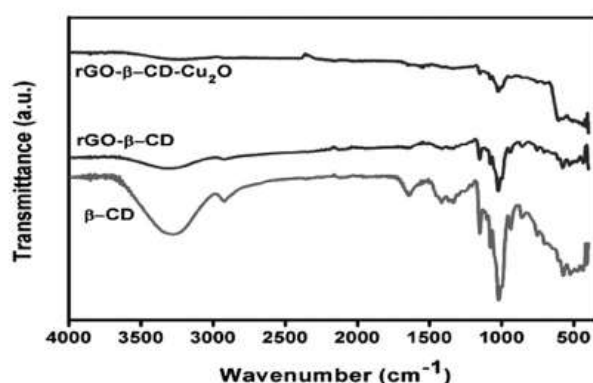

Fig. 3.1 FTIR spectrum of β -CD, rGO- β -CD, rGO- β -CD- Cu_2O

The structural evaluation of the nanocomposite was performed using FT-IR. Figure 3.1 shows that GO and rGO- β -CD samples possess hydrophilic O-H group (3010–3650 cm^{-1}) on their surfaces, thus ensuring their good dispersibility in water. A stretching vibration of CH between 2830 and 2950 cm^{-1} was obtained in the spectra. Furthermore, aromatic C=C stretching modes at 1630, 1671 and 1642 cm^{-1} belongs to rGO and rGO- β -CD. The characteristic stretching vibrational modes of C=O (1731 cm^{-1}), C-O (1219 cm^{-1}) and C-O (1051 cm^{-1}) bonds were observed in rGO- β -CD spectrum. After modification

with Cu_2O , the other characteristic peaks were shifted in position [2]. The Cu-O bond which is nearly at 615 cm^{-1} shifted to 610 cm^{-1} due to the presence of rGO- β -CD.

3.1.2 X-ray diffraction studies

The crystalline nature and structure of the synthesized nanocomposites were investigated with XRD analysis.

Fig. 3.2 XRD pattern of β -CD, rGO- β -CD, rGO- β -CD- Cu_2O

The XRD pattern of cyclodextrin indicates high crystallinity in cyclodextrin due to the characteristic sharp peaks at (041), (141), (180), (042), (162), (222), (223), and (044) (Fig. 3.2). The characteristic peaks of β -cyclodextrin reduced in the presence of reduced graphene oxide. The sharp peak at 37° of rGO- β -CD- Cu_2O indicated the (111) plane of Cu_2O nanoclusters. The peaks at 42.73° and 61.62° were representing the planes of Cu_2O at (200) and (220) respectively.

3.1.3. Scanning Electron Microscopy (SEM)

Fig. 3.3 Scanning electron micrograph of (a) β -CD, (b) rGO- β -CD, (c) rGO- β -CD- Cu_2O .

Other peaks were merged with the peaks of rGO- β -CD. These XRD patterns confirm the formation of rGO- β -CD- Cu_2O composite.

From the SEM images it was clear that β -cyclodextrin appeared as irregular-shaped crystals (Fig 3.3a). In Fig. 3.3b, graphene oxide sheets strongly attached with small fragments of β -cyclodextrin randomly gave rGO- β -CD. The β -cyclodextrin crystals appeared as it was grow on the graphene oxide sheets. The Cu_2O nanoclusters- adhered on β -CD-rGO composite displayed in Fig. 3.3c. Morphological characteristic of synthesized composite was affirmed by SEM.

3.2 Electrochemical detection studies

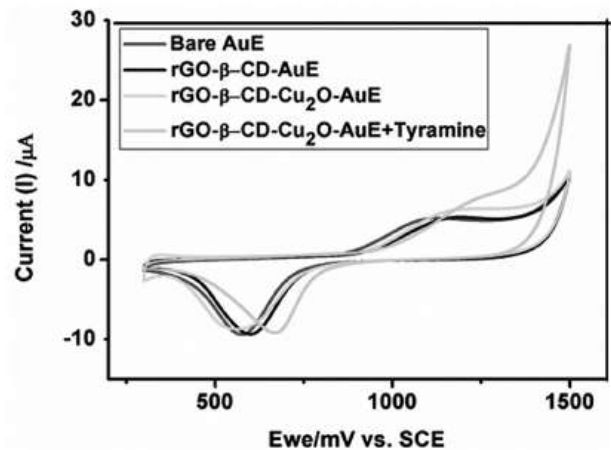

Fig. 3.4 Cyclic voltammogram behavior of tyramine, phosphate buffer (pH 4.0) bare gold electrode, rGO- β -CD-AuE, rGO- β -CD- Cu_2O -AuE in the absence and presence of tyramine $1.0 \times 10^{-3}\text{ M}$; scan rate: 100 mVs^{-1} .

The electrochemical behavior of 1 mM tyramine in a 100 mM pH 4.0 phosphate buffer solution was investigated using cyclic voltammetry at a scan rate of 100 mV s^{-1} exhibits a well-defined irreversible anodic peak. The results are shown in Fig. 3.4. The voltammogram of bare gold electrode exhibit small amount of current due to slow electrodic process. rGO- β -CD modified electrode shown slightly increased both oxidation and reduction current owing to the high conductivity and large surface to volume ratio of rGO and β -CD. rGO- β -CD- Cu_2O brought up a shift in redox peaks. The reason for the better performance of the rGO- β -CD- Cu_2O could be attributed to the high conducting property of Cu_2O and electronic structure. In the presence of tyramine, the modified electrode have improved redox current. Here, reduced graphene oxide sheets and Cu_2O provide high conductivity and β -CD enables the formation of inclusion complex with tyramine molecules.

3.2.1 Effect of pH

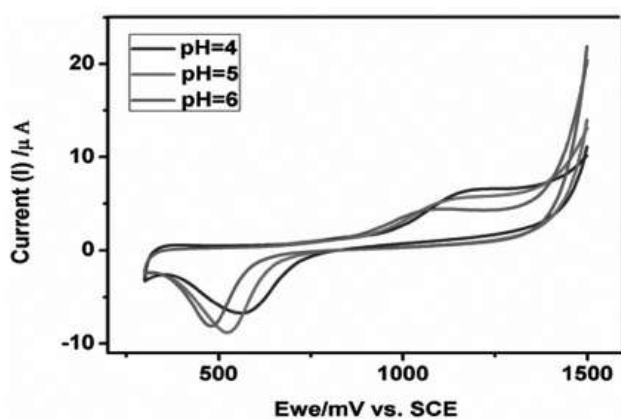

Fig. 3.5 Cyclic voltammogram obtained for 1.0 mM tyramine in buffer solution at different with potential scan rate: 100 mVs^{-1}

The electrochemical responses of tyramine in 100 mM PBS with different pH values at a scan rate of 100 mVs^{-1} were studied. The peak current was highest at

pH 4, as seen in (Fig. 3.5). Thus, pH 4 PBS was used for the determination of tyramine and for further experiments. However, with increase in the solution pH, the peak potentials shifted to less positive values upto pH 7.0. Gold electrodes are very weak chemisorbers due to filled d-orbitals, yet display a higher electroactivity towards drugs oxidation. The electrocatalytic behavior of gold is highly complex. The catalytic component of gold electrode is believed to be hydrous gold oxide, AuOH , which is formed by the chemisorption of hydroxide anions to the gold surface. This effect is more pronounced at higher pHs, and occurs in the region of premonolayer oxidation of the gold surface.

3.2.2 Effect of scan rate

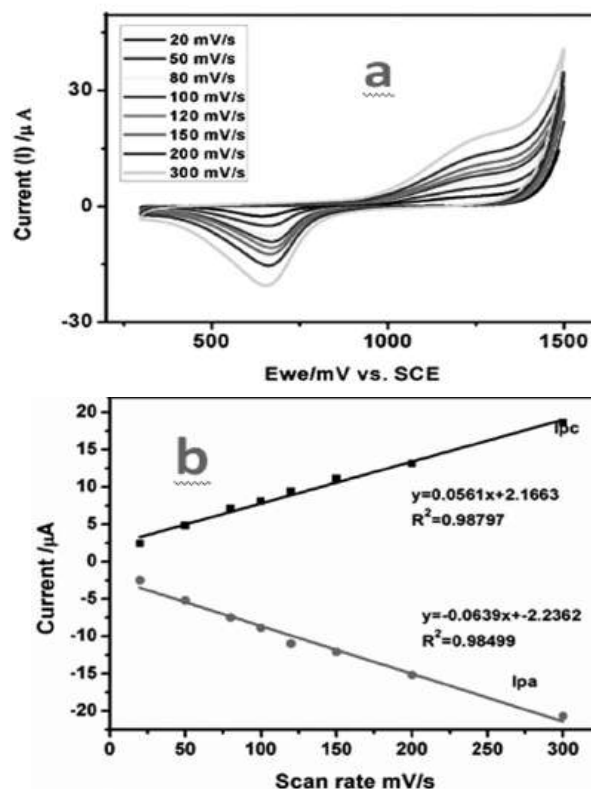

Fig. 3.6 a) Cyclic voltammograms of 1.0 mM tyramine in buffer solution at pH 4 at different scan rates (20, 50, 80, 100, 120, 150, 200, 300) mVs^{-1} , b) dependence of the peak current on the scan rate

The electrochemical behaviours of tyramine at different scan rates were studied at pH 4 by CV (Fig.3.6 a). The dependence of the peak intensity I_p (μA) upon the scan rate (ν) (Fig. 3.6 b) were carried out to assess whether the process on gold electrode was under diffusion or adsorption-controlled. The influence of the square root of the scan rate on the peak current showed a linear relationship between 20 to 300 mVs^{-1} and the equation can be expressed as follows:

$$I_p = 0.056 \nu^{1/2} + 2.166; R^2=0.987$$

$$I_{pc} = -0.063 \nu^{1/2} - 2.236; R^2=0.984$$

Suggesting that the oxidation of tyramine at $rGO-\beta-CD-Cu_2O$ is an adsorption-controlled process.

3.3 Electrochemical impedance spectroscopy (EIS) characterization

The electron-transfer kinetics and diffusion characteristics can be determined from the shape of the impedance spectrum. The semicircular portion obtained at higher frequencies corresponds to an electron transfer-limited process. The electron transfer characteristics were interpreted by using the Randle's equivalent circuit.

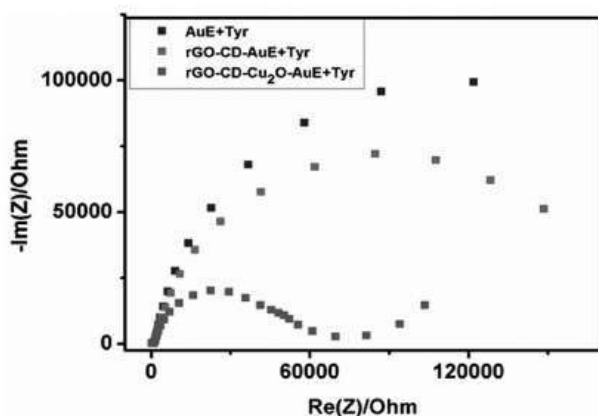

Fig. 3.7 Electrochemical impedance spectroscopy of modified electrodes. (a) Bare AuE, (b) $rGO-\beta-CD-AuE/Tyr$, (c) $rGO-\beta-CD-Cu_2O Au E/Tyr$ in 100mM pH 4.0 PBS.

As shown in Fig. 3.7, the Nyquist plot of the bare gold electrode displays a well-defined, enlarged semicircle with an electron transfer resistance (R_{ct}). Compared with the bare gold electrode, the diameter of the semicircle in the Nyquist plot of the $rGO-\beta-CD$ decreases dramatically (magenta curve). The electrode modified by $rGO-\beta-CD-Cu_2O$ film exhibits a much lower resistance and the Nyquist plot of the electrode shows a nearly straight line. It is consistent with previous study, which indicates that the Cu_2O nanoclusters are an excellent conducting material and could act as tiny conduction centers to promote the electron transfer. The results of the impedance change during the electrode modification, provide an evidence for the successful immobilization of the $rGO-\beta-CD-Cu_2O$ composite on the electrodes. These results also prove that the $rGO-\beta-CD-Cu_2O$ could improve the electron transfer rate between the electrode and tyramine, which is consistent with the CV results shown in Fig 3.7.

4. Conclusion

A novel, sensitive and effective electrochemical sensor for the sensing of tyramine was developed using $rGO-\beta-CD-Cu_2O$ composite. The tailored $rGO-\beta-CD-Cu_2O$ composite was characterized by using FT-IR, SEM, XRD techniques and its electrocatalytic nature were studied using CV and EIS. The $rGO-\beta-CD-Cu_2O$ composite modified gold electrode was an excellent platform for the detection of tyramine. The electrochemical behavior of tyramine was detected using cyclic voltammetry and electrochemical impedance spectra. Electrochemical responses of tyramine at different pH values

are also calculated. It is found that at pH 4.0 tyramine gives high electrochemical responses. This method can be applied for real samples also.

GREEN AND GENTLE SYNTHESIS OF CUO NANOPARTICLES USING *PIMENTA DIOICA* UNDER OPTIMISED CONDITIONS

***Mubeena Sainudheen and Dr. Jain Maria Thomas#**

*Research and PG Department of chemistry, St Joseph's College,
Moolamattom

Abstract

The scientific community is in search for new methods for the synthesis of metallic nanoparticles. Green synthesis has become a vast developing area of new research groups. These days biogenic methods are considered to be a safer alternative to usual physical and chemical methods for nanosynthesis due to their environment friendly nature. Here we adopt a plant mediated green synthesis of CuO nanoparticles using the fruit extract of maluspumila an easily available fruit. This is an eco-friendly and low cost method. The formation of CuO nanoparticles were confirmed by their change of colour to light green due to the phenomenon of Surface Plasmon Resonance. The green synthesized nanoparticles were characterized by UV-visible spectroscopy IR spectroscopy.

1. Introduction

Nanotechnology is a brainchild of modern fundamental science. It is a very complicated professional area, uniting the efforts of professionally qualified chemists, physicists, mathematicians, material scientists, computer scientists, and so on. Nanotechnology is manipulation

of matter on an atomic, molecular, and supramolecular scale. The earliest widespread to the particular technological goal of precisely manipulating atoms and molecules for fabrication of macro scale products, also now referred to as molecular nanotechnology. In nanotechnology, a particle is defined as a small object that behaves as a whole unit with respect to its transport and properties. A nanoparticle is an ultrafine particle with at least one dimension between 1-100 nanometers. Within this size all the properties (chemical, physical and biological) changes in fundamental ways of both individual atoms/molecules and their corresponding bulk. Nanotechnology has the potential to create many new materials and devices with a vast range of applications, such as in medicine, electronics, energy and environment. Tremendous growth in these expanding technologies had opened applied frontiers and novel fundamentals.

Nanoparticles are of great scientific interest as they are in effect, a bridge between bulk materials and atomic or molecular structures. A bulk material should have constant physical properties regardless of its size, but at the Nano-

scale size-dependent properties are often observed. Thus, the properties of materials change as their size approaches the Nano scale. For bulk materials larger than one micrometer (or micron), the percentage of the surface is insignificant in relation to the volume in the bulk of the material. Nano sized particles are quite unique in nature because Nano size increase surface to volume ratio and also its physical, chemical, and biological properties are different from bulk material. Nanoparticles show different properties such as quantum confinement, surface plasma resonance (SPR), decrease in melting temperature which are directly related to the crystal lattice of the nanomaterial.

There are several methods of creating nanoparticles, including gas condensation, attribution, chemical precipitation, ion implantation, pyrolysis and hydrothermal synthesis. In attribution, macro and micro scale particles are ground in ball mill, a planetary in a ball mill, or other size reducing mechanism. The resulting particles are classified to recover nanoparticles. The biological synthesis of nanoparticle is a challenging concept which is very well known as green synthesis. The biological synthesis of nanomaterial can solve environmental challenges like solar energy conservation, agricultural production, catalysis, electronic, optics, and biotechnological area. Green synthesis of nanoparticles are cost effective, easy, eco - friendly, nontoxic, large scale when compared to the chemical methods which are costly as well as emit hazardous by-products which can have some deleterious effect on the environment.

In this work, leaf extracts of *Pimenta dioica* were used for the generation of

copper oxide nanoparticles. The leaf extracts generated from *Pimenta dioica* have strong fungicidal and bactericidal properties. In addition it also has acaricidal, nematocidal, anticancer, antioxidant and deodorizing properties. All these properties make the leaf extracts generated highly resistant to spoilage and they can be stored for up to three months even in contaminated areas quite safely. However not all leaf extracts from other plant sources stay for so long. This property of *Pimenta dioica* makes it extremely useful for industrial nanoparticle synthesis where long term storage of leaf extract is possible. Besides its use as a spice and flavor, allspice has been used for various gastrointestinal illness, rheumatism, and neuralgia. The leaf extracts also have antiseptic, anesthetic, and several other medical properties. In order to exploit all the above mentioned benefits of bioinspired synthesis along with those provided by nanotechnology, CuO nanoparticles were generated from the leaf extracts of *Pimenta dioica*. The rate of nanoparticle synthesis was very high, which justifies the use of plants over microorganisms in the biosynthesis of metal nanoparticles through greener and safer methods [22].

Cupric acetate solution, Leaves of *Pimenta Dioica*, All aqueous solutions were prepared using distilled water.

2.2 Preparation Of *Pimenta Dioica* Leaves Extracts

Pimenta Dioica leaves were collected from the local region and are displayed in figure 3.1. They were washed and cleaned with distilled water and dried with water

absorbent paper. Then it was crushed with mortar. It is dispensed in 100 ml of distilled water and heated in a water bath for 15 minutes at 70-80°C. The extract was then filtered using Whatman No.1 filter paper. The filtrate was collected in a clean and dried beaker and was stored.

2.3 Synthesis Of Copper Oxide Nanoparticle

During the synthesis of Copper oxide nanoparticles both the precursor and the reducing agent were mixed in a clean beaker in 1:1 proportion. For the reduction of Cu^{2+} , 4 ml of leaf extract was mixed to 4 ml of freshly prepared 0.01M $\text{Cu}(\text{CH}_3\text{COO})_2$ solution with constant stirring at 70-80°C. Within a particular time there is a change in colour was observed by nanoparticles so prepared.

3. Results And Discussions

3.1 Colour Change

In this study, *Pimenta Dioica* leaf extract was used to produce copper oxide nanoparticles. The colour of the reaction solution changed from light brown to dark brown when the extract is mixed with 0.01M copper acetate solution in 1:1 ratio, which indicated the formation of CuO nanoparticles (Figure 4.1). This colour change was obviously due to the excitation of surface Plasmon resonance in the metal nanoparticles, indicating the formation of CuO nanoparticles. *Pimenta dioica* leaves contain proteins, lipids, vitamins A, B1, B2 and C. Moreover, *Pimenta dioica* leaf is rich in chemicals such as eugenol, β -caryophyllene, α - humulene, 1,8-cineone. Most of these compounds are polyphenolic bioactive constituents called eugenol that contribute substantially to its unique colour and flavour and are

responsible for the formation of CuO nanoparticles.

Figure 4.1. Tube A - Copper acetate solution, Tube B - *Pimenta Dioica* leaf extract, Tube C - Copper oxide nanoparticle synthesized solution.

3.1 Characterization of Copper Oxide Nanoparticles

UV-Vis spectroscopy was used to confirm the formation of CuO nanoparticles from *Pimenta Dioica* leaf extract. Figure 4.2 shows the UV-visible spectra of the synthesised CuO nanoparticles. The dispersion of CuO nanoparticles displays intense colours due to the SPR absorption. The surface of a metal is like plasma having free electrons in the conduction band near the surface of the nanoparticles. Electrons are limited to specific vibration modes by the particles' size and shape. Therefore metallic nanoparticles have characteristic absorption spectrum in UV-Vis region. The Plasmon band in the absorption spectrum at 273 nm is due to the CuO nanoparticles prepared by green method. The presence of a peak in the region indicated the formation of CuO nanoparticles as reported earlier in another study.

Characterization of Copper Oxide Nanoparticles

UV-Vis spectroscopy was used to confirm the formation of CuO nanoparticles from *Pimenta Dioica* leaf extract. Figure 4.2 shows the UV-visible spectra of the synthesised CuO nanoparticles. The

dispersion of CuO nanoparticles displays intense colours due to the SPR absorption. The surface of a metal is like plasma having free electrons in the conduction band near the surface of the nanoparticles. Electrons are limited to specific vibration modes by the particles' size and shape.

Therefore metallic nanoparticles have characteristic absorption spectrum in UV-Vis region. The Plasmon band in the absorption spectrum at 273 nm is due to the CuO nanoparticles prepared by green method. The presence of a peak in the region indicated the formation of CuO nanoparticles as reported earlier in another study.

The characteristic IR spectrum of copper oxide Nano-particles is illustrated in figure 4.3. The FTIR spectrum of plant-mediated CuO nanoparticle shows that the absorption band at 3280 cm^{-1} corresponds to the hydroxyl (OH) functional group in alcohols and phenolic compounds. The sharp absorption peaks were observed in the range of 1700–1000 cm^{-1} . The IR band around 1611.2 cm^{-1} can be assigned to aromatic bending of alkene group (C=C). Sharp peak at 1342.3 cm^{-1} is attributed to the deformation vibration of the C–H band of alkane (CH₃ and CH₂) group. Absorption peak at 1038.0 cm^{-1} corresponds to the stretching vibration of C–O group of primary and secondary alcohols (C–O). These different bands arise from the capping materials in the plant extract that are responsible for the reduction of copper ions to copper oxide nanoparticles. Appearance of the peak at 1639 cm^{-1} indicates the stretching vibration of the Cu–O bond of copper (II) oxide nanoparticles. The present IR spectrum is well consistent with that of CuO reported in earlier studies.

Figure 4.3. FTIR spectrum of the CuO nanoparticles.

Figure 4.2. UV-visible spectrum of the CuO Nanoparticles.

Copper Oxide Nanoparticle Formation At Different Experimental Conditions.

Volume Ratio Of Extract And Copper Acetate

The formation of copper oxide nanoparticles depends on the ratio of extract/copper acetate (v/v). The UV-Visible spectrum of copper oxide nanoparticles at different extract/copper acetate ratios are displayed in figure 4.4. The maximum absorption was observed at 1:1 ratio, but by increasing the ratio to 1:2 and 1:3 v/v, the absorption decreased. A red shift was observed on increasing the volume of the copper acetate from 1:1 to 1:4. The accurate position of SPR band could differ depending on the size, shape

and capping agent, among other individual properties of the nanoparticles.

Figure 4.5. UV-visible spectra showing the effects of *Pimenta dioica* leaf extract concentration on the formation of CuO nanoparticles.

Effect Of Concentration Of The Extract

The effect of concentration on the formation of CuO nanoparticles was studied by varying the concentration of extract from 2 % to 8 %. Figure 4.5 displays the formation of CuO nanoparticles on varying the *Pimenta Dioica* leaf extract concentration. Maximum absorption was found for a concentration of 6%. Further increase in concentration did not have much impact on absorption. So the concentration of extract should be kept at the maximum value of 6 % for synthesis.

Figure 4.5. UV-visible spectra showing the effects of *Pimenta dioica* leaf extract concentration on the formation of CuO nanoparticles.

Effect of Temperature

Temperature is one of the important physical parameter affecting on the synthesis of CuO nanoparticles. Figure 4.6 shows the UV-Visible spectra of CuO nanoparticles prepared at different temperatures (400C, 500C, 600C and 700C). It was observed that the absorbance increases with increasing temperature. Increased reaction temperature led to a rapid reduction rate of the copper ions and the subsequent homogeneous nucleation of copper nuclei allowing for the formation of copper oxide nanoparticles with small size.

Figure 4. 6. UV-visible spectra showing the effect of temperature on the formation of CuO nanoparticles.

In this study we have synthesized copper oxide nanoparticles using plant extracts. It is the simplest, rapid, eco-friendly, non-pathogenic, economical protocol and providing a single step technique for the biosynthesis process. The nanoparticles are stable in aqueous medium for a long time without any aggregation. The characterization of nanoparticles was conducted using UV-Visible and FTIR spectroscopic techniques. Colour changes occurs due to surface plasmon resonance during the reaction within the ingredients present in the *Pimenta dioica* leaf extract, results in the formation of copper oxide Nano particles which is confirmed by

UV-Visible spectrum. The reactions were carried out at different conditions were optimized in order to get the CuO nanoparticles.

Abstract

The search for new sources of biosurfactants has been attracted the interest of many researchers. In this background a study was carried out to synthesize citric acid from lemon peel by green method. Pure citric acid is obtained from lemon peel using alkali extraction, acid precipitation and is followed by evaporation of filtrate. Citric acid is used as surface directing agent in the synthesize of ZnO:Cu²⁺ nanophosphors by chemical technique based on coprecipitation method. The use of citric as SDA produce surface modified ZnO:Cu²⁺ nanophosphors. The hydroxylation of benzophenone by modified ZnO:Cu²⁺ nanophosphors as photocatalyst to 2-hydroxybenzophenone is examined. This work aims at synthesizing citric acid from natural source to use it as an SDA on nanophosphors and to study the photocatalytic activity of nanophosphors using an eco friendly and low cost approach.

Keywords : Citric acid, SDA, ZnO:Cu²⁺ nanophosphors, Hydroxylation

1. Introduction

Surfactants are the most versatile products of the chemical industry. They

are utilized in every industrial area ranging from household detergents to drilling muds and food items to pharmaceuticals. They are amphiphilic molecules and are thus absorbed in the air, water interface. At the interface, they align themselves so that the hydrophobic part is in the air and hydrophilic part is in water. This will cause the decrease in surface or interfacial tensions. The substances that shows surface activity is called by several names-surface active agents, surface active compounds and surface active agent (surfactant). Surface active substance and surface active compounds are almost identical. They are substances affecting the surface or interfacial properties in the widest sense. Surfactant is the compound that dramatically lowers the surface tension of water and forms aggregates like micelles in aquos media.

Exciting characteristic features of nanomaterials in contrast to their bulk phase require shape control of morphologies at the nanometre scale. Surfactants, a unique class of surface active molecules, possess remarkable ability to control crystal growth and direct it in shape and size controlled manner. The fine tuning of the

desired morphologies can be achieved by controlling the surfactant architecture as well as its self-assembly behaviour. Since the advancement in nanotechnology, the nanometallic surface with clear atomic packing in different crystal lattice planes has become tremendously important in terms of surface adsorption, surface passivation, shape control effects and surface plasmon effects. All these properties are dramatically affected in the event of surface adsorption. Surfactants have proven to be the best shape directing agents in the synthesis of nanomaterials, which is primarily related to the surface adsorption of surface active molecules on different crystal planes of nucleating centres, thus controlling the overall shape.

In this work, ZnO;Cu²⁺ nanophosphors are prepared by using citric acid as SDA by coprecipitation method. Various distinct morphologies of the nanostructures can be obtained by varying the composition of citric acid.

2. Experimental

2.1 Preparation of citric acid

Lemon peel washed thoroughly with water to remove the soluble particles. Transferred to a R.B flask and refluxed for 2 hour using distilled water. Collect the extract from it. Add 0.1M NaOH solution until the pH become 9. Filter the solution. Add 100 ml 0.25 M CaCl₂ solution to the above filtrate and boil for 10-15 minutes. Filter the solution and wash the precipitate with hot water. Add 15% H₂SO₄ solution to the obtained precipitate, Stir well the mixture. Again filter the solution. Collect the filtrate and make evaporate it to 80 °C until the volume is reduced to 60ml. Filter the final solution .The remaining

filtrate were evaporated to 80°C. After the evaporation the remaining white crude crystalline precipitate were collected and dried.

2.2 Synthesis of ZnO:Cu²⁺ using citric acid as SDA

Synthesizing of uncapped ZnO:Cu²⁺: 0.5 M zinc acetate and 0.01 M copper acetate were taken in 100 ml of methanol and dissolved while continuous stirring for 2 hour at room temperature (solution A). Simultaneously 0.14 M KOH solution was prepared in 100 mL of methanol with refluxing through water condenser with constant stirring for 2 hour at 50 °C (solution B).

Then the solution A and B were mixed with constant stirring for 2 hour. Final solution was allowed to cool at room temperature and aged overnight. This solution was centrifuged and washed several times to remove unnecessary impurities. The obtained precipitate was placed in a vacuum oven for 24 hour at 50°C to get white powders of ZnO;Cu²⁺. Similar procedure was followed for synthesis of citric acid capped ZnO:Cu²⁺ samples. Prepare different samples by varying the concentration(0.5M,1M, 2M and 3M) of citric acid in the solution. The synthesized nanophosphores were further calcinated at 100 °C for 4 hour.

2.3 Hydroxylation of benzophenone using modified ZnO:Cu²⁺ nanophosphors

0.25 g of benzophenone, 1mL of isopropyl alcohol and 0.5 g of modified (0.3M citric acid treated) ZnO:Cu²⁺ were mixed together. The slurry in a petridish was dried in air and dry mass was kept under UV light, 15W (at a distance 3 cm from light source) for 12 h of

photoactivation (high-power UV light removed the adsorbed moisture and hence water splitting was not observed and no hydroxylation of benzophenone took place). The photoproduct was separated by centrifugation with 5 mL ethanol. The residue was washed and dried to obtain 2-hydroxybenzophenone. The photoproduct was characterised using UV-Vis. spectroscopy.

3. Result & Discussion

- Citric acid extraction from lemon peel
- Synthesised ZnO:Cu²⁺ by coprecipitation method using citric acid as surface directing agent.
- characterized ZnO:Cu²⁺ using , uv-visible spectroscopy, XRD, FTIR and TGA.
- The photocatalytic activity of ZnO:Cu²⁺ were studies by using it in the reduction of benzophenone

3.1 Characterzation Techniques

3.1.1 FTIR studies

Fig 1.

The synthesised citric acid were characterised by FT-IR spectroscopy (Fig 1). There is a broad peak at 3380 and 3040 cm⁻¹ corresponds to the stretching vibration

O-H and C-H bond respectively. The peaks at 1210 and 1620 cm⁻¹ corresponds to the symmetric and anti-symmetric stretches of the carboxylate group of citric acid.

FTIR is also used for the characterisation of ZnO:Cu²⁺ with different concentration of citric acid (Fig 3).

Fig 3

The peak at 547 cm⁻¹ is assigned to the stretching frequency of Zn-O bond. The broad absorption peaks around 3455 cm⁻¹ and 1150 cm⁻¹ are attributed to the normal polymeric O-H stretching vibration of H₂O in Cu-ZnO lattice which may due to the moisture in sample. Another sharp peak at 1597 cm⁻¹ is attributed to H-O-H bending vibration, which is assigned to small amount of H₂O in ZnO nanocrystals.

3.1.2 X-ray diffraction studies

The synthesised ZnO;Cu²⁺ by coprecipitation method using citric acid as SDA is characterised by XRD analysis. The figure(2) below shows the XRD peaks of the nanosphors.

Fig 2.

The fig 2. for ZnO:Cu²⁺ nanophosphors synthesized at room temperature show broad peaks at the positions 32.21°, 34.50°, 36.55°, 47.50°, 56.50°, 63.10°, 66.37° and 67.90°, which are in excellent agreement with standard JCPDS file for ZnO (JCPDS 36-1451, a=b= 3.249Å and c=5.206Å) and can be indexed as the hexagonal wurtzite structure of ZnO. The intensity of peaks is higher for 0.3 M concentration of citric acid when compared to 0.1 concentration.

3.1.3 Thermogravimetric Analysis

Thermal stability of the nanophosphor

was carried out using TGA and was performed using Perkin Elmer, Diamond TG/DTA instrument. All the measurement were performed under inert atmosphere. The sample was heated from room temperature at a heating of 20 °C. From the TGA analysis of (Fig:12a) ZnO:Cu²⁺ 0.1M CA, it is seen that the decomposition temperature at 90 to 100°C corresponds to decomposition of water. The decomposition temperature of CA range is 250-300 °C and the compound become stable at 380 °C. The weight loss is 60.77 % as seen in the fig:12a.

fig:12a Analysis of 0.1M citric acid (as SDA) ZnO:Cu²⁺ nanophosphor, 0.3 M citric acid (as SDA) ZnO:Cu²⁺ nanophosphor

In fig:12b, the decomposition temperature of 240-300°C corresponds to the decomposition of citric acid and become stable at 400 °C. The weight loss is 65.46% as calculated from the TGA analysis (fig:12b).

3.1.4 Hydroxylation of benzophenone

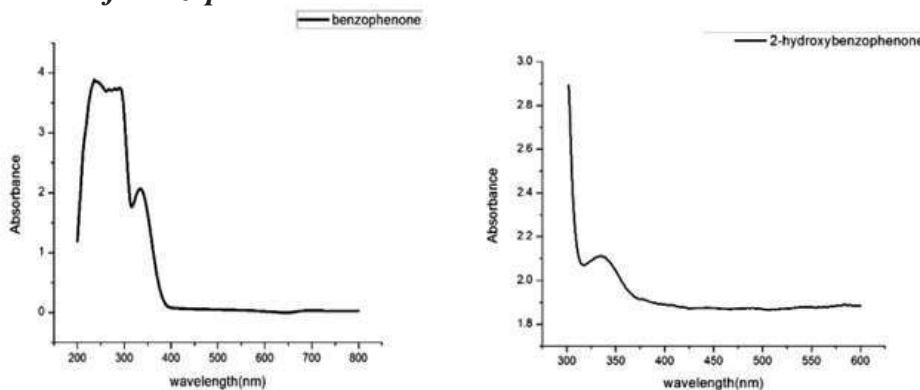

Fig. 4 a) UV-vis. spectroscopy of benzophenone **b)** 2-hydroxybenzophenone

The photocatalytic activity of modified ZnO;Cu²⁺ nanophosphors is examined by UV-Vis spectroscopy (Fig.4a). Benzophenone shows absorption peak at 236 nm in isopropyl alcohol before the reaction, and after the reaction a new peak appeared at 337 nm. Explicitly, 2-hydroxybenzophenone shows absorption maxima at 337 and 260 nm (Fig. 4b). These wavelengths are in good agreement with the absorption maxima of authentic 2-hydroxybenzophenone.

4. Conclusion

The low-cost coprecipitation method was used to synthesize ZnO;Cu²⁺ with varying the composition of citric acid as SDA. Citric acid is synthesised by green method from natural source lemon peel. The best surface modified ZnO;Cu²⁺ nanophosphors is obtained at 0.3 M concentration of citric acid which is the SDA. The hydroxylation of benzophenone is tested with the modified catalyst and the formation of 2-hydroxybenzophenone is confirmed from the UV-Vis. absorption spectrum. Hydroxylation of benzophenone using modified ZnO;Cu²⁺ catalyst is an effective, low cost and an eco-friendly approach. This work explore the possibilities for using citric acid as Surface Directing Agent for producing modified ZnO;Cu²⁺. The surface modified ZnO;Cu²⁺ improves its photocatalyst activity for the hydroxylation of benzophenone.

DERIVATISATION OF CARBOXYLIC ACIDS : PHTHALIMIDOMETHYL ESTERS

* Jijamol M.P. and Prof.T.M.Jose #

Department of Chemistry St.Thomas College, Pala

* Research and PG Department St.Joseph's College Moolamattom

Abstract

Quantitative organic analysis and identification of an unknown compound is an integral part of most organic chemistry laboratory courses. On chemical basis, the final step in the confirmation of a specific compound requires the preparation of one or two crystalline derivatives. For organic carboxylic acids, the main options are amides, anilides and the ester derivatives (4-nitrobenzyl and 4-bromophenacyl esters). The first two derivatives normally involve the preparation of acid chloride followed by reaction with appropriate amine. Improved procedure for the preparation of esters of type mentioned above has been reported. One of the drawback of 4-nitrobenzyl bromides and 4-bromophenacyl bromides is that they are expensive and therefore not routinely used in laboratories. In addition, the reagent may be undergoing partial hydrolysis during esterification.

Here, used another reagent for the esterification of carboxylic acids. The reagent used for esterification was an N-(chloromethyl)phthalimide(NCP).

Key Words: NHP, NCP

Introduction

Related to the carboxylic acid and to each other are a number of chemical families known as functional derivatives of carboxylic acids: acid chlorides, anhydrides, amides and esters. These compounds in which the -OH of a carboxyl group has been replaced by -Cl, -OOCR, -NH₂ or -OR. Like the acid to which it is related, an acid derivative may aromatic or aliphatic, substituted or unsubstituted; whatever the structure of the rest of the molecule, the properties of the functional group remain essentially the same.

Here we used the reagent for the esterification of carboxylic acid is N-(chloromethyl)phthalimide(NCP).

Experimental Methods

1. Preparation of N- (Hydroxymethyl), Phthalimide (Nhp)

Procedure

Add finely powered phthalimide (2.0g) to a solution of formalin (37-40%) in a round

bottom flask. Attach a water condenser and reflux the mixture for four hours. Filter the solid and washed with cold water. Crystallize the product from hot benzene. Yield of crystallized sample is 2g (84%). Melting point is 148°C. Solubility – Sparingly soluble in CCl_4 . Moderately soluble in ether, highly soluble in most other solvents.

II. Preparation of N - (Chloromethyl) Phthalimide (Ncp)

N-(chloromethyl) phthalimide is made by as following equation.

1. NHP 2. Thionyl chloride 3. Benzene

Procedure

Heat a mixture of N- (Hydroxy methyl) phthalimide (1.2 g) and little excess of freshly distilled thionyl chloride (5-6ml) under reflux using water condenser for 30 minutes. Remove the excess thionyl chloride with addition of benzene and distillation (thionyl chloride co distilled with benzene). Crystallise the residue from benzene.

Yield of the crystallised sample = 0.8g (62%)

Melting point = 132 °C

Solubility - freely soluble in chloroform, acetone, ethanol etc and insoluble in water.

III. Preparation of Phthalimdomethyl Esters of Carboxylic Acid

The esters are obtained as follows.

Reagents

Benzoic acid, NCP, triethyl amine, acetone

Procedure

Phthalimidomethyl benzoate

Dissolve benzoic acid (0.05g), NCP(0.100 G) in acetone (10 ml) and add triethyl amine (1ml). Reflux the solution for an hour. Distill the solvent, preferably under reduced pressure and add water to the residue. Collect the solid product by filtration, wash with aqueous sodium carbonate followed by cold water. Dry the residue and crystallize from acetone-hexane.

Melting point -108° C

Similar procedure is used for the preparation of ester of following acids

(A) Phthalimidomethyl orthochlorobenzoic acid

Melting point = 145°C

(B) Phthalimidomethyl cinnamate

Melting point = 151°

Representative sets of acids were subjected to esterification and the results are presented in the table

Sl. No	Acid	Melting point	Derivative melting point
1	Benzoic acid	121	108
2	O-Chlorobenzoic acid	155	145
3	Cinnamic acid	133	151

RESULTS AND DISCUSSION

The esterification reaction occurs under simple conditions using acetone as solvent and triethylamine reagent. Reflux one hour in a water bath. The yields of esters are in the range of 70-80%. The phthalimidomethyl esters are

white crystalline solids, stable at room temperature and drying conditions (100 °C). They melt sharply and do not decompose at their melting points. They are readily soluble in benzene, chloroform, acetone, ether and alcohol and insoluble in water and hexane. The best way to crystallise these is to dissolve them in an organic solvent and add hexane or petroleum ether. Laboratory reagent grade acetone and triethylamine can be used, though conversions are lower as compared to the purified and dry solvent. The presence of water in the acid also decreases the yield of the esters. A noteworthy observation is that the phenols and alcohols do not react under the condition used here, to form phthalimido methyl esters, however, amines form N-alkyl derivatives. For example, piperidine forms (N-phthalimidomethyl) piperidine. Results of this work indicate that NCP is useful reagent for derivatisation of carboxylic acids. The reagent offers many advantages over other alkylating agents.

(1) It is easily obtained from phthalimide in high yields. (2) It is a stable substance and can be stored without any special precautions (3) All carboxylic acids give solid esters in good yield (4) The esterification reaction is straight forward and no byproducts are formed. A little excess of acid is used into ensure that all NCP is used up. We have not investigated the mechanism esterification

IR Spectra

a. Imides are part of five membered rings such as phthalimide have C=O band at 1790-1735 and 1745-1680 cm^{-1} , The lower frequency band is more intense.

The cyclic imides do not have the 1505 cm^{-1} , C-N-H band.

b. Carboxylic acids: Carboxylic acids show a very strong band for the C=O group that appears in the range of 1730-1700 cm^{-1} , simple aliphatic acids in the dimeric form. This band is shifted to lower frequencies with conjugation to a C=C or phenyl group. The O-H stretch appears in the spectrum as a very broad band extending from 3400 to 2400 cm^{-1} . This broad band centres on about 3000 cm^{-1} and partially obscures the C-H stretching bands if this very broad O-H stretch band is seen, along with the C=O peak, it almost certainly indicates the compound is a carboxylic acid.

c. Esters (Phthalimidomethyl Esters): Esters show a very strong band for the C=O group that appears in the range of 1750-1735 cm^{-1} for simple aliphatic esters when it is conjugated to a C=C OR phenyl group. On the other hand, conjugation of a C=C or phenyl group with the single bond oxygen of an ester leads to an increased frequency from the range 1300-1000 cm^{-1} . Ring strain moves the C=O absorption to a higher frequency in cyclic esters. In phthalimido methyl esters an additional phthalimido group with ester group.

Analysis of IR spectra

A. N-(chloromethyl)phthalimide
The peak at 1750 cm^{-1} due to the presence of a carbonyl group

1. The peak at 1398.30 cm^{-1} due to the presence of C-N bond stretching vibration
2. The peak at 553.53 cm^{-1} due to the presence of C-Cl stretching vibrations
3. The peak at 943.13 cm^{-1} due to the aromatic C-H out of plane bending

B. Carboxylic acids

(a). Cinnamic acid (b). Benzoic acid (c). O-Chloro benzoic acid

1. The peaks at 1685.67cm^{-1} , 1755.1cm^{-1} and 1697.24cm^{-1} , are due carboxylic acid C=O stretching
2. The peaks at 921.12cm^{-1} , 916.12cm^{-1} , 912.27cm^{-1} are due to O-H out of plane bending
3. The peaks at the range $2677-3818.79\text{cm}^{-1}$ due to OH stretching vibration, strong H – bonding. Also it overlaps with C-H stretching absorption
4. The peaks at range 1315cm^{-1} C-O stretching vibrations

C. Phthalimido methyl Esters

(a). Phthalimido methyl cinnamate
(b) Phthalimido methyl benzoate (c). Phthalimido methyl O-chloro benzoate

1. The peaks at 1724.24cm^{-1} , 1743.53cm^{-1} and 1755.10cm^{-1} are due to the presence of C=O, stretching vibrations in ester.
2. The peak at 1190cm^{-1} range due to the presence of C-O stretching vibration.

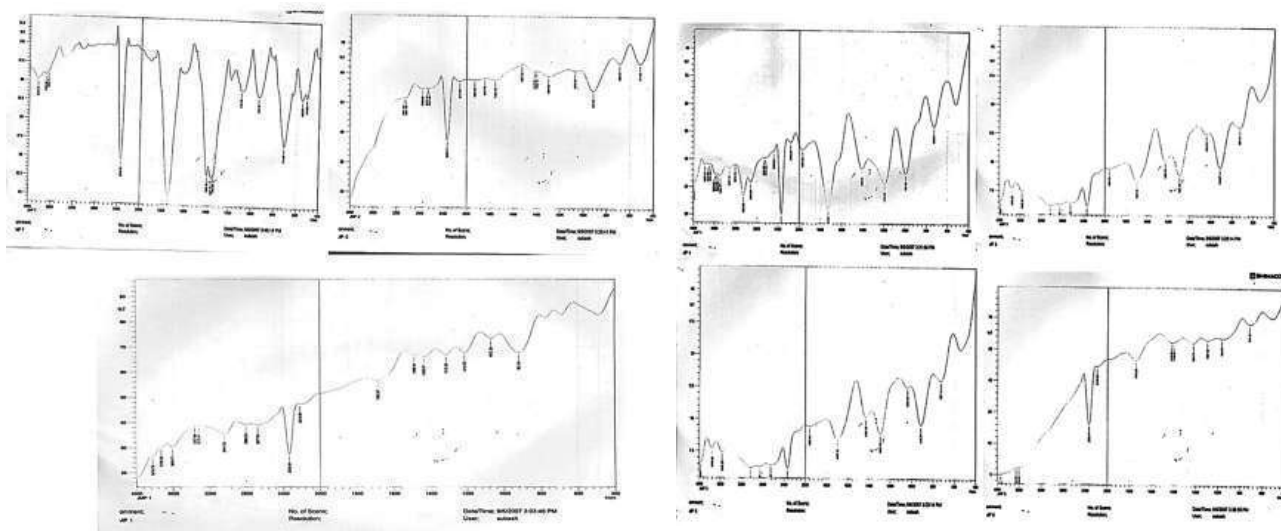

3. The peaks at 1400cm^{-1} range due to the presence of N-C bond stretching.

4. The peaks at range $2800-3200\text{cm}^{-1}$ C-H stretching vibrations.

CONCLUSION

The result of this work indicate

1. NCP is a reagent for derivatisation of carboxylic acids
2. The experiments described here offer an opportunity to reinforce a few concepts in organic chemistry course, namely nucleophilic addition of an amine to carbonyl is phthalimide + formaline –N-(Hydroxymethyl) phthalimide an important reaction to form C-N bonds and nucleophilic substitution. N –(Hydroxymethyl) phthalimide + thionyl chloride =-NCP, ie the conversion of alcohol to chloride. The sequence, phthalic anhydride –phthalimide –N(hydroxyl ethyl) phthalimide –N-(chloromethyl) phthalimide –phthalimido methyl ester will form a good multi step synthesis. The products in each step are crystalline solids and are obtained in high yields.

THE INCONCLUSIVE BINARY TUSSLE BETWEEN THE CREATURE AND THE CREATOR: THE ECOSOPHY IN HERMAN MELVILLE'S NAUTICAL FICTION

Roby Mathew & Dr. R. Anitha

Assistant Professor, Department of English, St. Joseph's College, Moolamattom
Principal, D.B College, Thalayolaparambu

Nature with its various terrains occupies the background of literature where human actions, expected and unexpected are foregrounded. Herman Melville, who spent part of his youth as a whaler in whaleships, preferred to place his characters in the background of the ocean, but the actions he scripted are expected. When Captain Ahab is drowned into the unfathomable bottom of the sea as a vanquished hero in spite of his indomitable will and mastery and Ishmael the sole survivor of the crew in the ship *Pequod*, the reader is intrigued by the defeat of the protagonist at the end and the survival of the white whale. But Melville scripts down the unceasing human sagas of struggle for dominion. Who is mightier: man, or nature? Or man or God? Even when the protagonists in *Typee* and *Omoo* the prequels to *Moby Dick*, speak volumes on the heaven like landscape and simplicity of life in the exotic islands, and even resolved to settle down in such islands, they feel an invisible tie pulling them towards a capitalist environment where 'live with what you have' is discarded and 'live for more' is embraced. The locale of the nautical fiction is as expansive as the ocean to include the islands and the bizarre existence of

the natives. The ecological exploitation of the savages by the civilized occupies the subtext of many of Melville's novels. The white whale through whom nature holds her sovereignty over the creatures is identical with the *Aswamedha*, the horse ritual which was prevalent in ancient India. It is no wonder that the ecosophy of Melville is perceptible in attributing the sovereignty to nature rather than to man, but the tussle is perpetuated between Ishmael and the white whale.

Key words: foregrounding, ecosophy, ecology, autonomy

Being born with a silver spoon in his mouth in 1819 in New York, Herman Melville experienced the comfort, luxury and safety of a well to do family. But the comfort lasted only for a short period of time which eclipsed with the death of his father who was a prosperous merchant. The demise of his father shook him violently that he had to do away with his formal education and took to sea as a sailor at the age of twenty on a merchant ship and later on a whaler named *Acushnet* of which he rightly remarked in *Moby Dick*, his magnum opus as, "A whale ship was my Yale College and my

Harvard” (Melville 93). His harrowing experience on whaling ships and voyage in the unchartered seas accounted for his novels which became posthumous success and made him the forerunner of American fiction. In fictional works too there are hidden facts which account to one's social and religious upbringing, ideology, cultural underpinnings, familial relationship, expressed and suppressed desires, political leniency, racial prejudice and economic status.

Nautical fiction is literally described as a genre of literature which focuses on the relationship between human beings and the sea with the setting in the sea or near the sea. Though nautical fiction was in vogue in various parts of the world, the American nautical fiction had its forerunner as James Fenimore Cooper with his *The Pilot* (1824) followed by Frederick Marryat with his *Frank Mildmay* (1829). The genre of nautical fiction got inflated with the advent of subsequent writers and their works like Herman Melville's *Moby Dick* (1851), Joseph Conrad's *Lord Jim* (1899), C.S Foster's *Hornblower Series* (1937-67) and the like. The popular acceptance of this genre is evident in the volley of books on life in the sea that hit the market. The English writer Ian McGuire with his *The North Water* (2016) revitalized this genre with its resemblance to *Moby Dick*.

In the surface of *Moby Dick*, which foregrounds the tale of revenge: the revenge between Captain Ahab and the white whale entails the revenge between human beings and nature. With the white whale sinking the ship in the sea along with the crew and their leader Ahab, the writer connotes the invincible stature of the nature. Herman Melville who spent his

youth in the sea as a whaler felt at home in the sea and either he or his characters identified the animals on land with the marine creatures and the crew in the ship. Ahab identifies the harpooners as leopards, Stubb as shark and Ahab is often identified as tiger. Ahab's crew is also identified with tigers. This nomenclature sheds light on the predatory nature of humans and other creatures. To Ahab the sea which forms two third of the earth is the darker side of the earth. Thus, he declares eternal vengeance with the sea.

Melville's initial works are inconclusive, as they offer the protagonists to resume the narrative in sequels. In addition to that, the inconclusiveness heralds the spirit of American capitalist dream. In *Typee* Tommo is transfixed by the beauty and simplicity of the island and admires the island as inhabitable save the fear of cannibalism, but he leaves the island for good. In *Omoo* which is sequel to *Typee* the narrator recounts the beauty and peaceful existence in the islands, but towards the end he leaves the island for America. In *Moby Dick* Captain Ahab who is maddened by the rage to avenge the white whale perished in the end, but Melville leaves one character intact to continue the zest for a capitalist world, which is not lulled by the simplicity of primitivism, but the ever-propelling capitalism.

The white whale has to remain unconquered at the end of *Moby Dick*, for the death of the white whale and the triumph of Captain Ahab will certainly position human beings at the center of ecology and the power to rule the world will be vested with them. Carl G. Jung in his popular book *Modern Man in Search of a Soul* justifies the ecocentric perspective

of archaic man quoting the belief of the primitive man in Africa. He narrates the belief as:

Primitive man, in Africa for instance, is still far from the glorification of human powers. He does not dream of regarding himself as the lord of creation. His zoological classification does not culminate in homo sapiens, but in the elephant. Next comes the lion, then the python or the crocodile, then man and the lesser beings. It never occurs to him that he might be able to rule nature; it is civilized man who strives to dominate nature (Jung 165).

The intriguing question that may disturb the reader towards the end of *Moby Dick* is: Why didn't Melville make Captain Ahab a victor? Captain Ahab is cast in the mould of a vanquished hero whose meticulous planning, hard gained expertise and thorough knowledge of the sea and the technical expertise went futile before the fury of nature. The ecological reason for casting Ahab as a vanquished hero might be that the fatal hubris which steered Ahab may rule the world leading to greater perils. Taxonomically, *Moby Dick* is a sperm whale which is the largest of the toothed whales and the largest toothed predator. If Captain Ahab could avenge the white whale, then human beings will occupy the center of the ecological discourse. As the initial novels of Melville portray the voyage of whale ships across the globe, the mastery of man in conquering the watery part of the world and capturing whales, the biggest mammals on earth, whereby imposing superiority on earth. Hence, the advent of a white whale is quite imperative to check the ascendancy of man on to the throne of the ultimate ruler.

Whaling was not just a lucrative economic activity. Along with finding a living in the sea, it was an adventurous feat to conquer the watery part of the world. In the chapter titled 'Nantucket' in *Moby Dick* Melville adds, "and at last, launching a navy of great ships on the sea, explored this watery world: put an incessant belt of circumnavigations round it; peeped in at Behring's Straits; and in all seasons and all oceans declared everlasting war with the mightiest animated mass that has survived the flood;" (54). The sailors set sail to the faraway places and islands from where they brought home stories of adventurous escapades, sighting strange sea creatures and strange tribes which often fascinated the Nantucketers. The prequels to *Moby Dick* namely *Typee* and *Omoo* are narratives of that vogue which fascinated the people. *Typee* narrates the protagonist and his companions being captured and imprisoned by a set of cannibals and *Omoo* narrates his wandering across the islands after his flight from the Typees. When he attempts to pen down the narratives of whaling and expeditions to far-flung islands, Melville pieces together the ecological practices of the locale, which often are associated with the religious exercises.

The locale of Melville's stories is either sea or islands surrounded by the sea. Of numerous nautical writers, D.H Lawrence found certain distinctiveness in Melville, as he comments in his essay titled 'Herman Melville's *Typee* and *Omoo*:

The greatest seer and poet of the sea for me is Melville. His vision is more real than Swinburne's, because he doesn't personify the sea, and far sounder than Joseph Conrad's, because Melville doesn't

sentimentalize the ocean and the sea's unfortunes...He was half a water animal, like those terrible yellow-bearded Vikings who broke out of the waves in beaked ships. (Lawrence 11)

It is the presence of this sea which is the backdrop of all the vengeance and masculinity which often foreshadows the ecological concerns. It is this watery world which is a realm of insecurity. When Ahab introspects in 'The Great Armada', "and when he glanced upon the green walls of the watery defile in which the ship was then sailing, and bethought him that through the gate lay the route to his vengeance, and beheld, how that through that same gate he was now both chasing and being chased to his deadly end;" (317). Ahab imagines his end through these lines. It is this world in which the position of the subject and object may flip at any moment. The ideology of the mastery of nature over culture is reiterated towards the end of *Moby Dick* as he concludes the rolling of the same sea which did so five thousand years ago.

The sea also offers another possibility of exploitation through sea routes. Ishmael notes, "they not a little correspond to the central gate way opening into some vast walled empire: and considering the inexhaustible wealth of spices, and silks, and jewels, and gold, and ivory with which the thousand islands of that oriental sea are enriched" (314) The sea which fashioned human imagination and life centuries ago has a perennial existent in human psyche as mighty, prepossessing, unpredictable and perilous. It has a flourishing existence in world literature. The horizon of human imagination found invincible creatures in this unfathomable mass of water as

Leviathan³ in the Bible, Craiken in Norse mythology and the white whale in *Moby Dick*. In classical works the sea often forms a background in which one proves one's prowess and masculinity. The female characters are seldom found as sailors in the ships rather they form the destinations as Faway in *Typee* and Yillah in *Mardi*.

The Book of Job in the Old Testament in the Bible reverberates the rhetorical questions shot at Job by God to remind him of the incomprehensible Universe which he deems to rule in and the indestructability of the Universe. The following rhetorical questions shot at Job by God at the moment of Job's disillusionment when he questions God:

- ¹ "Can you pull in Leviathan with a fishhook or tie down its tongue with a rope?"
- ² Can you put a cord through its nose or pierce its jaw with a hook?
- ³ Will it keep begging you for mercy? Will it speak to you with gentle words?
- ⁴ Will it make an agreement with you for you to take it as your slave for life?
- ⁵ Can you make a pet of it like a bird or put it on a leash for the young women in your house?
- ⁶ Will traders barter for it? Will they divide it up among the merchants?
- ⁷ Can you fill its hide with harpoons or its head with fishing spears?
- ⁸ If you lay a hand on it, you will remember the struggle and never do it again!
- ⁹ Any hope of subduing it is false; the mere sight of it is overpowering. (Job 41: 1-9)

What God asks Job in the Bible is ventured in *Moby Dick* by Captain Ahab in his diehard pursuit for the white whale. Leviathan in the Bible is deemed to be the mightiest creature of God's creation. The rhetorical questions magnify the might of the animal. In the parlance of ecology the Leviathan is analogical to the environment which exists unintelligible to human mind. This passage echoes the *Aswametham* ritual prevalent in ancient India where the horse is set free to wander through out the kingdom and the one who attempts to bridle the horse challenges the king's sovereignty. In *Moby Dick*, Captain Ahab risks his life to annihilate the white whale to claim his sovereignty, but the attempts go futile which entails the ascription of sovereignty to the Creator.

In a similar fashion *Moby Dick* is construed to be an allegory of a monomaniac hero's pursuit to conquer the indefinite world with the definite means which ultimately culminates in the destruction of the captain and the crew along with the ship. *Pequod*, the ship in which they set sail for the three-year expedition is named after the native American tribes Pequot, a set of people who became extinct in the unfurling of centuries. It definitely foreshadows the inevitable extinction of the transnational cosmopolitan crew who go in search of the white whale.

When determined to capture whales, the sea becomes a battlefield. Melville is an adept in using analogies to vivify the chase and the catch. He describes, "The compact material columns in which they had been hitherto rapidly and steadily swimming, were now broken up in one measureless rout; and like King Porus' elephants in

the Indian battle with Alexander," (318). Captain Ahab who takes after the Israelite king who led his kingdom to its doom by idolatry and wickedness, navigates the ship *Pequod* and the crew to its peril by the same wickedness and self-centeredness. Regardless of the consideration for others and their opinions, he assumes the role of a dictator who is indisputably obeyed by every member of the crew. Captain Ahab, who has been a harpooner for forty years on whaling ships, killed the first whale at the age of eighteen; left his young wife like a widow soon after the marriage, is now wedded to the white whale and is fascinated by the call of the sea.

Melville's nautical fiction, specifically *Moby Dick*, is an exemplum of the moral tussle taking place in one's mind. Melvillian characters who are destined to wander in the sea assume the role of spokespersons of the exploitation meted out towards the natives in exotic islands and on dumb brutes. The tussle is observable in various terrains in the nautical fiction. The aggression between the tribes in *Typee*, the resistance of the Typee tribe towards the white men against the latter's invasion and colonization; the conflict in the form of mutiny on the board of the ship between the captain and the crew and the predator and the prey rivalry in *Moby Dick* between the carcass of the whale and the sharks. Thus, Melvillian nautical world is an arena of incessant tussles.

The 26th chapter of *Moby Dick* 'Knights and Squires' rightly portrays the crew of *The Pequod*. The chapter opens with the nativity and religious leniency of the chief mate of the *Pequod*, Starbuck who hails from Nantucket and he is a Quaker by descent. The author reiterates the

religious label with special caution to link the environmental view of Quakers with Starbuck. Quakers believe in human beings' dominion over nature. It is further revealed when Starbuck is described in *Moby Dick* as "For, thought Starbuck, I am here in this critical ocean to kill whales for my living, and not to be killed by them for theirs; and that hundreds of men had been so killed Starbuck well knew" (96). The self-assured statement by Starbuck in *Moby Dick* gets reverberated in the present century commercial practicality of the consumerist society. The news story titled 'Outrage over killing of rare whale' on *The Hindu* dated 16 July 2018 by Reykjavik echoes the above-mentioned declaration by Starbuck in the 21st century.

The complementariness of the binary pairs forms contradictoriness in the Melvillian terrains. Serpil Oppermann in her essay 'Feminist Ecocriticism: A Post humanist Direction in Ecocritical Trajectory' points to the western perception of framing the distinct binaries of various entities which are to be subdued. She aptly remarks, "Western epistemologies have legitimated oppressive practices. It also stimulates adequate theoretical models to deconstruct the gendered dichotomies of nature/culture, body/mind, matter/discourse, and subject/object" (Oppermann 20). The dichotomy of nature/culture is pervasive in the books of Herman Melville as the major characters in *Moby Dick* wear a hue of antagonism with nature where nature is to be relegated to foreground culture. The aggravation of the nature/culture dichotomy is partially the result of the ideology of capitalism. Graham Huggan in his ecological text *Postcolonial Ecocriticism* comments on the role of representation as, "While cruelty, death or

extinction are not necessary results of the human representation of animals- many such representations are sympathetic or benign- it is difficult for animals to escape anthropocentrism because they exist in modern cultures much more in representation than in 'the real'. (Huggan 139). It is anthropocentrism which takes the center stage of representation which often relegates the ecocentrism into the oblivion. The dominant representation always sways the minor observations as it happens in *Moby Dick* where the enmity of Ahab with the white whale sways the representation of the white whale as a compendium of malice on earth.

The tussle between the complementary pair, savage and civilized is writ large in *Typee* and *Omoo*. In his works Melville takes special care to include a primitive man, either a native or aborigine to tie the knot with nature and valorize the innate simplicity and the zest for a life closer to nature. In *Moby Dick*, Melville includes Queequeg, a cannibal who comes from the South Sea Islands. In *Omoo* Melville adds a number of natives who lead a life which the narrator longed for. In *Typee* the Typee community are presented as cannibalistic and aborigines. Thus, in his influential works, Melville reiterates the role of the primitive people in binding the people to the earth. Melville meticulously places characters who follow the pagan rituals and worldviews in his works as a dichotomy for the savage and civilized poles of the world. In the essay 'Mariner's Multiple Quest' James McIntosh states, "Queequeg constructs nature as a subjective retreat, a dwelling place for his imagination in which stars are isles and one travels into death as into something familiar. In Pip's case, the sea is not just an analogue for his

terrified state of mind – though it is that – but also a landscape oppressively actual”. (Mcintosh 37).

The contradictory terrains form a sphere of tussle between the utopian and dystopian landscape and seascape. From the dystopian locale in America to the Utopian and Eden like topography in the far away South Sea Islands fascinate the writer. In *Omoo* and in *Typee*, the writer abundantly uses the word ‘Eden’. A longing for an ideal locale is vivid in the writings of Melville as it was a paradigm for the nineteenth century writers. Patrick Parrinder in his seminal essay ‘Utopia and Romance’ says:

At its high point in the late nineteenth century the utopian romance was an increasingly self-conscious genre, a narrative of love and adventure combined with the didactic or satirical portrayal of a supposedly utopian society. In utopian romances, the excitements of love and adventure are normally experienced by a visitor to utopia, not by the utopians themselves, and for good reasons (Parrinder 154).

The utopian romance which foregrounds the quest as its motif incorporates a cosmic world view. These works also suggest the distancing of geographical locations and the distancing of epochs. When in America, the industrialized community thrives on the platform of technology and unmindful exploitation of resources, in the distant locales the half-naked natives with their pagan religions and mindful coexistence with nature form part of the narratives.

In his utopian Romantic imaginations Melville shapes an Eden like valley in

the far away island. In *Omoo* Melville describes the valley as:

It is no exaggeration to say that, to a European of any sensibility, who for the first time, wanders back into these valleys – away from the haunts of the natives – the ineffable repose and beauty of the landscape is such that every object strikes him like something seen in a dream...” I thought I was walking in the Garden of Eden (102)

Paganism is pertinent to the regional ecology and the utilization of the native resources available. Graham Harvey reiterates, “Paganism is a creative tradition of honouring and celebrating the living earth” (38). Sustainable development is feasible only in the utilization and dependence of the indigenous resources available. European colonization followed by the spread of Christianity destabilized the way of life of the natives. In *Omoo* Melville observes the aftermath of European advent to Tahiti, an island in the South Seas as:

It has been said that the only way to civilize a people is to form in them habits of industry. Judged by this principle, the Tahitians are less civilized now than formerly.... Instead of acquiring new occupations, old ones have been discontinued. As previously remarked, the manufacture of tappa is nearly obsolete in many parts of the island. So, too with that of the native tools and domestic utensils; very few of which are now fabricated, since the superiority of European wares has been made so evident. (116)

Colonization affected the religious practices, food habits, dress code and the ecological perceptions to an

alarming level and this resulted in the destabilization of ecology. But Melville prioritized a life in the lap of nature when he compares a European father with a pagan one as the Typee gentleman can easily bring up their children in the cannibalistic way, while a European father struggles to feed one's hungry children. Melville repeatedly comments on the self-sufficiency of the tribe as, "the children of a Polynesian father, without troubling their parents, pluck from the branches of every tree around them" (112). Paganism is perceptible as a consciousness which incorporates respect for nature and having an ecological understanding and practice. In its manifestation, it is visible in the worship of nature. In *Omoo* Melville mentions the utilitarian attitude of the natives towards the coconut tree. He makes a mention that "Upon one of the Tonga islands, there stands a living tree revered itself as a deity" (161)

The attitudinal tussle in foregrounding either deep ecology or shallow ecology takes a subterranean stand in the narratives. The pagan natives uphold a deep ecological religiosity, while the European explorers exhibit a shallow ecological outlook. The eco-centric world view which is an amalgamation of deep ecology assumes the role to human beings as only one of the strands in the web of beings on earth. It is unlike the Old Testament observation of human beings as the stewards of nature. The eco system in which one lives is respected in all the possible ways in pagan culture. The European binary pair nature and culture which is operational as the yardstick to differentiate people and practices from one another really jeopardized the world view and social practices as natural and cultural. Peter

Barry in *Beginning Theory* observes this binary factors as, "It is obvious here that social inequality is being 'Naturalized', that is, literally disguised as nature, and viewed as a situation which is 'god-given' and inescapable, when actually it is the product of a specific politics and power structure." (Barry 244) The efforts to colonize the native kingdoms were justified by this 'white man's burden' which necessitates the Europeans to colonize the savages and civilize them in the parameters of civility framed by the civilized west.

Melville, who spent his youth both on land and in the sea, witnessed the invincibility of the natural elements: wind, water, fire, earth and void. Melville's nautical novels came to the limelight during the early part of the 19th century, the epoch breaking invention of steam engine was at its introduction in the navigation. Hence, the voyage in Melville's novels was made possible by the wind. Thus, a sailor in Melville's nautical world lived in close contact with the elements.

The arcadian life in the Typee valley is contrary to the mechanically and technically driven capitalist extractivism where nature is the abundant source of resources which may be plundered ignoring the necessity to set them aside for the posterity. Melville who witnessed the plight of the islanders who subdued themselves before the civilized Europeans who came to the islands with the mission of civilizing and converting, vivified the deterioration in his sequel titled *Omoo* which portrays the island women being contracted with Syphilis and the livelihood of the people were taken away tactically and gradually. The indigenous crafts and

artifacts were dropped by the islanders as a result of the introduction of durable foreign goods. The indigenous pagan religions were exterminated and a foreign and ecologically unfriendly religion was imposed.

The ecosophy of Herman Melville is rightly expressed in the form of regional autonomy without which the land may be ecologically plundered, about which in *Typee*, Melville admonishes the civilizing mission in the islands and looting the resources as:

The depopulated land is then recruited from the rapacious hordes of enlightened individuals who settle themselves within its borders, and clamorously announce the progress of the Truth. Neat villas, trim gardens, shaven lawns, spires and cupolas arise, while the poor savage soon finds himself an interloper in the country of his fathers, and that too on the very site of the hut where he was born. The spontaneous fruits of the earth, which God in his wisdom had ordained for the support of the indolent natives, remorselessly seized upon and appropriated by the stranger are devoured before the eyes of the starving inhabitants... (195-96)

Vulnerability always accompanies the existence of human beings on earth. Of all the terrains, the sea occupies the most vulnerable but it also lures the adventurous to its bosom as Ishmael remarks in the "Loomings" as, "If they but knew it, almost all men in their degree, some time or other, cherish very nearly the same feelings towards the ocean with me" (3). *Moby Dick* in the outer layer is the violent search of a monomaniac Captain for the white whale that ripped off his leg in one of the fatal encounters with it. But the

subtext of the Melvillian novels heralds man's encounter with the elemental forces. Captain Ahab who is blinded by his false and fatal pride challenges the elemental forces. In "The Candles" he thunders back to the fire as:

Come in thy lowest form of love, and I will kneel and kiss thee; but at the highest, come as mere supernal power; and though thou launchest navies of full-frighted worlds, there's that in here that still remains indifferent. O thou clear spirit, of thy fire thou madest me, and like a true child of fire, I breath it back to thee. (415)

Moby Dick is diachronic descriptions of the development of human beings on earth. From the worshipers of elemental forces like thunder, fire and wind to the technically skilled species who set out to tame the forces which threatened them. As the technical aids helped the Melvillian heroes to rebel against nature and a fraction of the populace remained technologically ignorant and close to nature. *Moby Dick* is not the sole antagonist in the titular novel *Moby Dick*, but the elemental forces assume the guise of antagonists cornering the protagonist on multifarious occasions. When tossed in the typhoon and struck with lightning, Captain Ahab and the crew grew helpless. In spite of being surrounded by the invincible elemental forces Ahab decides to fight back. It is perceptible in the description of Ahab by Ishmael as, "In his fiery eyes of scorn and triumph, you then saw Ahab in all his fatal pride" (424).

Melville's America was on its efforts to expand the market and extract the resources for propelling the economy. This philosophy of expansionism is subterranean in his initial works *Typee*,

Omoo and later in *Moby Dick*. The power struggle that exists between the binaries in Melville's works assumes multifarious forms like the struggle between man on land and the aquatic animals in the sea; the struggle between the savages in the unexplored islands and the civilized explorers; the struggle between the paganism and Christianity. Hence, the 'Other' is ever prevalent in the works. In the capitalist parlance nature is the store house of resources. Whether it be the land or the sea, the capitalist intention is to extract the resources. In *Moby Dick* Captain Ahab's indefatigable effort to float along different oceans in search of Moby Dick is suggestive of the desire to extract resources irrespective of topological differences.

Even after the eclipse of Herman Melville about one and a quarter century ago, the popularity of Melville outlives him through the incessant struggle that he scripted through his works. The inconclusiveness of *Moby Dick* with Ishmael, the sole crew member to be saved by the *Rachel* is destined to carry the struggle. As God asked Job in the Bible about the invincibility of the Leviathan, the Leviathan swims away calmly victorious reclaiming the sovereignty of the Creator rather than the creature. Melville foresees the doom of human beings unless they check their avarice for exploiting the world for claiming dominion over it and he encapsulates it in *Omoo* when he warns, "The palm- tree shall grow/ the coral shall spread/ But man shall cease" (118).

RE-READING THE BINARIES OF SUBJECTIVITY, DIASPORA AND NATIONALISM: A POSTCOLONIAL STANCE ON AMITAV GHOSH'S *THE SHADOW LINES*

Roopa Jose

Assistant Professor, Dept. of English

Abstract

The paper focuses on how Amitav Ghosh, the diasporic Indian writer and winner of the 54th Jnanpith award, deconstructs the Metadiscourse of nationalism in his influential novel *The Shadow Lines*, through the little narratives of the nameless narrator. It is an attempt to resolve the irresolvable subjectivity issue in studies of diaspora and nationalism.

Keywords: Diasporic writing, Nationalism, Multiculturalism, Subjectivity, Uninationality.

Nationalism commands profound emotional legitimacy in modern history and is deeply entrenched in general imagination. It is born from the idea of a people's collective history that spans through a long past and racial and/or religious origins that are shared. This is especially so in the postcolonial era, where the identity question is an acute search for Third World nations seeking to claim their individuality as nations, and shed the yoke of being culturally marginalised for a substantial period of their history.

In his seminal novel *The Shadow Lines*, Amitav Ghosh explores the issues

of national borders, the discursive and historical process by which they have come about, and the resulting ironies that affect people's lives in incomprehensible ways in the postcolonial era rich with contradictions. Benedict Anderson in his *Imagined Communities: Reflections on the Origins and Spread of Nationalism* has put forward some ideas on the concept of nation that may help us better understand the convoluted worlds of Amitav Ghosh. Anderson writes, "Nationality, or as one might prefer to put it in view of the word's multiple signification – nation-ness as well as nationalism – are cultural artefacts of a particular kind" (13). He goes on to define the nation as "an imaginary political community – and imagined as both inherently limited and sovereign" (15). Thus the nation is an idea, a myth. It is a discursive construct, not a pre-existing reality. As Ernest Gellner argues in his book *Nations and Nationalism*, "nations are not inscribed into the nature of things" (49). They fundamentally are fabrications. The idea of the nation has been fabricated primarily by the West. It has arisen with the rise of industrialization and capitalism and with the collapse of religious and dynastic regimes.

Anderson investigates the mode of writing that precipitated the creation of the 'imagined community' called nation. He believes that the simultaneities of time and space, exemplified in contexts like that of the novel and the newspaper, are at the core, of the ways in which we regard ourselves as members of a national culture. Nations are narrated like novels and newspapers. Hence individuals come to consider themselves belonging to "a solid community moving steadily down (or up) in history" (26). In the twentieth century, during the numerous conflicts against colonial rule, the myth of the nation proved to be extremely powerful and profitable.

The national political boundaries that had not existed until colonisation and were often set by the colonising powers, often collaborated with anti-colonial nationalist movements. In his influential novel, *The Wretched of the Earth*, Frantz Fanon emphasizes the concept of the nation as the center of anti-colonial resistance. This is because, he says: "national consciousness and national culture are inseparable from each other, anticolonial resistance cannot succeed without them" (172). However, Fanon is of the view that it has to be replaced rapidly by a political and social consciousness once independence is attained or it might lead to what is called neo-colonialism.

Among other theoreticians, who see the myth of the nation as a productive concept, is Partha Chatterjee. In his popular book *Nationalist Thought and the Colonial World*, Chatterjee explains the origin of the nation in the West as having much to do with the universal urge for liberty and progress" (2). Many anti-colonial

revolutions sought to follow Western nationalism's revolutionary elements, which guaranteed people the political and moral rights of liberty and political self-determination.

Nationalism sought to demonstrate the falsity of the colonial claim that the backward peoples were culturally incapable of ruling themselves in the conditions of the modern world. Nationalism denied the alleged inferiority of the colonized people. (Chatterjee 30)

But a disenchantment with the conceptions of nation and nationalism has arisen in the years after the busy period of decolonization. Bruce King argues in his book *West Indian Literature*;

Where the end of the second world war brought a demand for national political independence to the forefront as a solution to the problems of the colonies, this was soon found to be an unrealistic hope as many new nations became divided by civil wars and micro nationalisms . . . (3)

Before the introduction of colonial rule, many inhabitants of colonial territories had no sense of a "deep horizontal comradeship" (Anderson 6). While the myth of the nation may serve as a powerful weapon in uniting people opposed to colonialism, it also does so by denying the uniqueness of those people that it aims to homogenise – generated from differences in gender, ethnicity, faith and culture. In his essay "Racism and Nationalism", Etienne Balibar says, "many decolonized nations have undergone the painful experience of seeing nationalisms of liberation turned into nationalisms of domination". (60)

In the discourse on nationalist representations, Homi K. Bhabha offers

one of the most potent and influential interventions. His essay “DissemiNation: Time, Narrative and the Margins of the Modern Nation” shows nationalist images as highly volatile and unstable structures that do not produce the unity they promise. Bhabha terms nation as a “major structure of ideological ambivalence within the cultural representations of postcoloniality” (309). Thus nationalist discourse according to Bhabha are “fragile, split and contradictory rather than benevolent and inclusive” (309) and must always be challenged. Several other postcolonial critics such as Tom Nairn, Hans Kohn, Elie Kedourie, and Benedict Anderson, share the view that nationalism is both an invention and a force of destruction. To quote one such scholar, Ernest Gellner: “Nationalism is not the awakening of nations to self-consciousness: it invents nations where they do not exist.” (169)

Amitav Ghosh joins the clan, as he challenges the notion of nationhood that is consolidated by the baptism of wars or oppressive state apparatus. He displays – movingly and powerfully – a nationalism, finding its limits, limits that often are the residue of those ineffable shadow lines, the boundaries of the subcontinent. The boundary that is being problematized in the novel is not that between the colonised and colonisers, but rather one that separates India. As Alter affirms; “The novel betrays no anxiety because it attempts to prove nothing and interrogates, rather than defines, the concept of a totalizing India” (13).

In their war against foreign rulers, Indian nationalism, which was the chief tool of the freedom fighters, could not even guarantee the territorial integrity of

the nation. Nationalism has modified its meaning in the Indian context, to exclude those from the other side of the border, but not everyone on this side of the paradise too could be included. Ghosh rejects the notion of nationalism that rejects all these who chose to live beyond the border.

In *The Shadow Lines*, the narrator ponders over the deadly repercussions of borders. Though he acknowledges the well-intentioned political map-makers, he is struck by the fact that “the bonds that link Calcutta and Dhaka are closer than ever” (233). ‘Shadow lines’ are only borders created by politicians. In the text, they have other resonances as the demarcation lines that distinguish coloniser and the colonised, past and the present, self and the portrait. Ultimately, they are the significant acts that establish nations of distinct identity.

The novel’s personal drama is set out on a canvas of sweeping historical events: the independence struggle and the advent of the Bengal insurgency, the English war against Hitler’s Germany, the Chinese invasion and the Indo-Pak war, the desecration of Srinagar’s Hazratbal Shrine in 1963, and the communal disturbances in Khulna and Calcutta in 1964. The movement back and forth in time and across the borders and boundaries of nations, cultures, races and communities, is not merely a structural device - it serves to image a central theme - that the lines dividing past and present are just shadows and that the reality is too vast and complex a concept to be circumscribed within historical or spatial contours. Two views of nationalism and what it means to constitute a nation contest each other throughout the novel. One is voiced clearly by the narrator’s grandmother and the other

takes the form of events that comment on this romantic view in subtler ways. The narrator's grandmother upholds the belief in a united people fighting for freedom and autonomy and constituting a nation held together by blood. The grandmother of the narrator upholds the belief of an united people battling for independence and sovereignty and creating a community held by blood together. "For her, somebody like Ila, the offspring of a metropolitan education and circling between India and London, is an enigma because she escapes categorization, and a traitor because she bought freedom, "for the price of an air ticket (87). She protests:

Ila has no right to live there ... everyone who lives there has earned his right to be there with blood ... They know they are a nation because they have drawn their borders with blood ... war is their religion. That is what it takes to make a country. Once that happens, people forget they were born this or that, Muslim or Hindu, Bengali or Punjabi. They become a family born of the same pool of blood. That is what you have to achieve for India; don't you see ...? (76)

In this regard, Novy Kapadia in her essay titled "Imagination and Politics in Amitav Ghosh's *The Shadow Lines*", comments, "In her conversation she (Thamma) reveals an alarming prospect, that feelings of nationalism can only develop through the process of war and sustained bloodshed" (204).

Ila later calls this a war-mongering fascist ideology but the narrator sees a pitiful side to this kind of thinking: a deep-seated bitterness at the yearning for middle-class values of "unity of nationhood and self-respect and national

power" (Gosh 77). The narrator's view is however insightful in explaining people's need for the national myth, and how the force of nationalism commands its appeal, although Ghosh, along the same line of argument made by Anderson, would be the first to reveal its shaky foundations.

Most of the events taking place in the text work against the concept of a nation. In his effort to de-mystify this conception, the writer begins with the notion of the national boundary. He puts across the perspective that in modern days, a boundary supposedly uniting those who are inside it as well as separating them from those who are others, divides rather than it unites. The author shows this in several instances, one of which is through the use of allegory: the partitioning of the grandmother's original home. This partition went through the house in an arbitrary manner not making architectural sense, but making the absurd claim of equality and fairness to both sides. For example, it went through a door, a chest of drawers and their father's name-plaque outside. Hind Wassef opines:

This seems to be reminiscent of the India-Pak border, the outcome of the 1947 partition, which was relatively arbitrary, but laying the same claim to fairness in that the land was divided according to the majority religion in a particular administrative district. (9)

The definition of 'shadow lines' is built in reference to this boundary, to connote arbitrariness and artificiality. The narrator, his family, and the past he is attempting to rebuild are also terrified by this border – more than any border between India and Britain.

The author also reveals the futility of this partitioning in providing any real solution to the disputes, for he tells us they had all longed for this division

. . . but once it had actually happened instead of the peace they had so much looked forward to, they found that a strange, eerie silence had descended on the house. It was never the same again after that; the life went out of it. (Ghosh 21)

He believes that national boundaries de-humanize societies because they reject the reality of human and political plurality that exists in any community.

Thus, national borders are made to assert a distinction between self and others, often at a point of crisis. After the partition, people highlight the gaps between themselves and the newly-formed outsiders, as a mechanism of demonising the other. The grandmother's construction of the elaborate web of stories of the "upside down house" (122) on the other side, illustrates this. Then these ideologies of distinction are so instilled in the minds of the people and the community's culture that while the conflicts may be long forgotten, people bear the partition walls in their minds:

. . . they had grown so thoroughly into the habits engendered by decades of hostility that none of them wanted to venture out into the limbo of reconciliation. They liked the wall now; it had become a part of them. (Gosh 22)

From allegory the text moves into reality and demonstrates how partitions come to affect people's lives in ways that are difficult to comprehend. In 1964, as Tha'mma plans to fly to Dhaka, she wonders if she would be able to "see the

border between India and East Pakistan from the plane" (151). When her son laughs and asks her if she thought that the border was a long black line with green on one side and scarlet on the other, like it was in a school atlas," (151) she says:

. . . surely there's something - trenches perhaps, or soldiers, or guns pointing at each other . . . But if there aren't any trenches or anything, how are people to know? I mean, where is the difference? And if there's no difference, both sides will be the same. (151)

Displacement then gives rise to a daunting series of insider-outsider combinations that we witness from the uncertainty of the grandmother. Firstly, she cannot comprehend how her place of birth came to be at odds with her nationality. Like Ila, she finds that she is herself now beyond categorization. As she is informed of what has become of her house and her family, she also learns that she is an alien in her home town. Her uncles have "scattered" (156) all over the Middle East, in Bangalore and other places, and her house has been taken over by Indian Muslim refugees, who are insiders as far as partition has made Dhaka into a Muslim city – but outsiders as they are homeless refugees. When her son points to the historical fact that they also came as refugees to Calcutta, she is intolerant of the word and says ". . . we are not refugees. We came long before partition" (129).

Once in Dhaka, Tha'mma tries to persuade her senile old uncle to leave the decrepit surroundings he lives in, to move to India where she believes he belongs to. However, the old man refuses to move because:

Once you start moving, you never stop. That's what I told my sons when they took the trains. I said: I don't believe, in this India - Shindia. It's all very well, you're going away now, but suppose when you get there, they decide to draw another line somewhere? What will you do then? Where will you move to? (Ghosh 215)

The logic of the nation-state in the subcontinent requires partition to be read as a single, inevitable, original act, one that must never be replicated so citizenship and national boundaries would be automatically, magically co-extensive in a post-partition, post-independence India, but the act of partition itself, as the old Jethamoshai argues, suggests otherwise. Borders and boundaries, shadow lines etched on maps, maintain political distance, but teach the inevitability and even absoluteness of socio-cultural differences across nations, even more firmly. Suvir Kaul, in this regard, comments, "lines on the map are the handwork of administrators and cartographers, and they do not mark much more than the will of the state." (288)

In fact, the maps are beguiling. They tell that the people of the adjacent countries are different, while the truth is altogether otherwise. East Pakistan and West Bengal cannot be separated by any lines, because they have the same culture, the same language and the same food habits. People living in two countries have blood relations. How can they be separated from each other? The novelist has tried to bring this point home to the readers. The narrator draws circles on the maps to discover that the places, generally believed to be far and distant, are not so distant. A circle of 1200 miles in radius, he finds, will cover more than half of the world population:

Beginning in Srinagar and travelling anti-clockwise, it cut through the Pakistani half of Punjab, through the tip of Rajasthan, and the edge of Sind . . . It was a remarkable circle: more than half of the mankind must have fallen within it. (Ghosh 231)

The child who had once believed that distance separates, that it is a corporeal substance . . . that across the border there exists another reality" (Ghosh 233); has by the end of the novel had some of these certainties shattered. Bartholomew's Atlas is for him, no longer a safe guide to a neatly compartmentalized world; The solid lines that separate countries turn into a glass by which we may examine the world and in doing so, it becomes obvious that Chiang Mai in Thailand is closer to Calcutta than New Delhi is, Chengdu in China is closer than Srinagar is. He is disillusioned as to the artificial and imagined nature of the division of borders. The text is a complex allegory that challenges the basis and foundations of this division of borders. As Meenakshi Mukherjee comments:

The material world represented by maps has not changed, nor is it suggested that immigration queues, customs barriers and visa regulations can be wished away, but the defamiliarizing perspective in *The Shadow Lines* initiates an interrogation of the organizing principles of division. (267)

Amitav Ghosh asserts that these boundaries are imagined, by political leaders and political ideologues and their imagining are fraught with incongruities. These incongruities in the construction of national borders de-humanize communities because they negate the reality of human and political diversity which is present in any culture. In an interview Ghosh remarks:

When (one) comes under pressure, the first response is to say the problem can be solved by division . . . An absolutely unpolitical culture is an impossibility. It's enormously important for us to think of multi-ethnic states, because every state is multi-ethnic. (Wassef 89)

As always, Ghosh is not only at pains to demonstrate the porousness of geographical borders, but also the artificiality of a range of binary categorizations of culture and of human psyche. "Shadow Lines" of the title are the borders that divide people and Ghosh establishes that these boundary lines are artificial and constructed realities.

ESTABLISHING IDENTITY: SPACE, GENDER AND PATRIARCHY IN ANITA NAIR'S *LADIES COUPÉ*

Sunitha Mathew

Assistant Professor, Department of English,
St. Joseph's College, Moolamattom, Kerala

At potentially dangerous spaces, women set their own agendas to seize the right to live their own lives. The oppressive set of cultural norms limits the destinies of women in both public and private spaces. The gender discrimination is the foundation for the social inequality between men and women. Women are facing unjust social and sexual exploitation based on the cultural construct. The established gender roles prohibit women to have access to leadership and decisive roles in family and society. They are trapped within marital struggles, economic problems, gender discriminations, Poverty, frustration, sexual abuse, etc. Virginia Woolf's *A Room of One's Own* speaks for the literal and figural spaces of women in a patriarchal system. These spaces are still governed by the values of patriarchal structures and institutions. A never ending quest for female space and identity is possible in the sociocultural patriarchal setting of India. As Clara Nubile has suggested, Indian women are "doomed to carry the social burden and cultural humiliation of generations" (30).

Exposed to the routine forms of patriarchal oppression, the women being plunged into traditional silence and

submission is constantly intervened in many of the novels written by Indian women writers. Among the contemporary women writers, Anita Nair occupies a prominent place in championing the women causes through her exemplary novels. *Ladies Coupé* (2001), her second novel, depicts various social, cultural, economic, physical and psychological challenges that the women characters undergo in a male-dominated society. Through her striking women characters in the novel, she presents how women living in orthodox and conservative families feel inhibited to raise their voice against the immediate aggressive dominance of male in their space.

Akhila, the 45-year-old spinster heroine in the novel sets out to break free from the conservative Tamil Brahmin upbringing bound to her. She starts her journey "Dreaming escape and space. Hungry for life and experience" (Nair 2). She is certain that she won't let her family use her anymore. Ahkila's desire to settle her question of her own space is answered through the train journey she takes to Kanyakumari. Through this most exciting and liberating experience, she gets to enjoy things outside her narrowly

prescribed world and moves beyond the ascribed identity of a silent, timid person. She rethinks and revisions the cultural prescriptions that inscribe the submission and passivity upon a woman's mind and body. The psychological transformation of Akhila happens, as Felsky observes, "gradually through a steady accumulation of insights into the structures of power governing relationships between men and women" (131). Trapped by patriarchal systems, Akhila finds her journey to Kanyakumari provides a space to recount her past and allows her a choice whether to be a passive woman according to the expectations of the society or an active woman with an autonomous identity.

Akhila's desire for freedom and identity is supplemented with the narratives of the passengers in the coupé. Being caught in the male-dominated, restricted space, the women in the coupé pass veracious judgment of the constrained society. All these stories are about the action taken by them to overcome the oppressions inherent in the traditional patriarchal world but suggest the limits which continue to restrict their development of autonomy and self-fulfillment. Instead of liberating themselves and going against the norms, they find ways to negotiate with the existing male dominated society and thereby enjoying the benefits of protective patriarchal system.

Devoting each chapter of the novel to one of the woman's story, Anita Nair tries to solve the eternal problematic question: Can a Woman stay single and happy at the same time? Janaki, an old woman, Margaret Paulraj, a School teacher, Sheela, a fourteen-year-old girl, Prabhavati, a perfect home maker, and Marikolunthu,

the most victimized of all were her co-passengers. Anita Nair vividly portrays various constraints that these women face in a patriarchal society due to financial instability, sexual harassment, unrequited love, social dependence etc. Though each one is different from one another in their social status and financial conditions, they undergo psychological trauma in their life due to dead sense of inhibitions and rigid code of conduct imposed on them in a male-dominated orthodox society.

Janaki, the eldest of all, blindly accepts the patriarchal understanding that woman is inferior to man. Her life shows how patriarchal control is unavoidable in the life of a woman. Still, long after being a queen of the household chores, at a certain age, even after adjusting herself with the changing relationships, she dreams on living an independent life of her own. She says, "Women like me end up being fragile. Our men treat us like princess . . . I think I was tired of being this fragile creature" (23).

Being sensitive to patriarchy is the very first step to the path of liberation. The fourteen-year-old Sheela is able to perceive things beyond her age. She finds her father starts scolding her for the very same things that he used to delight in her when she was a child. She is the only one who understands the wishes of her grandmother and fulfills it during her last rites. It is her mental maturity that relieves her of the bitterness of sexual harassment by her friend's father. She develops a sense of selfhood and individuality against the patriarchal mistreatment.

Margaret Shanthi, the Chemistry teacher is inhibited by her husband Ebenezer Paulraj who is also the Principal of the

school in which she is working. Instead of her desire to take PhD, she is forced to take B.Ed. Her own sense of beauty is marred when she is directed to shorten her long hair. Against her expectations, she is compelled to abort her first baby. Though she obliges to all his orders, the injustices imposed on her mind and body gradually makes her hate him and takes revenge in a subtle way. "I had no other recourse but to show him what the true nature of water is" (96). She kills his ego by feeding him with fatty foods and making him lethargic and obese.

Yet another passenger journeying in the same compartment is Prabhadevi. She is born to a rich family and brought up as a perfect woman suitable for a home maker. She is trained to be a good cook, good designer, a good singer and a perfect needle worker. After her marriage with Jagadish, a jewellery owner, she feels a vacuum in her life. The unending waiting for things to happen in her nuclear family makes her disappointed. On her trip to New York, she wanted to be like the women there. She notices, "Their lives were ruled by themselves and no one else." (177). Her new interest in the western culture and styles and her emancipatory pride in her beauty end up with the sexual advancement of Pramod. Shocked by the vulnerability of a woman's existence, she recoils to stay within the safety of family life. At last she empowers herself by learning swimming, a craving she had for a longtime, without anyone's help – empowerment from within.

From time immemorial, men have been using sexual violence as a means to manipulate control over women. Among the co-passengers of Akhila, Marikolunth

is the only humble, peasantry woman. After the death of her father she is sent to Chettiyar's family as a maid. She falls prey to the sexual violence when Murgesan, a relative of that family rapes her. After long suffering and humiliation, she gives birth to a child. Frustrated, she refuses to take up the burden of looking after the child and leaves to Velloor for a job. At another point in her life, she is again forced to work at Chettiyar's house and this time, Sujatha's husband Sridhar takes sexual advantage of her. When her physical condition weakens, she sets out for Kancheepuram to meet Murugesan. In order to repay the money that is borrowed for her operation, she sends her son Muthu to work in his factory. It is only her emotional stability that keeps her stay alive in a life of poverty, frustration, ignorance, and loneliness.

The minor characters in the novel, Akhila's school friend Karpagam and colleague Catherine Webber, too break the larger frame of patriarchy that denies personal freedom to women. They are portrayed as courageous women who break the shackles of patriarchy and strive for self-definition.

Akhila is symbolic of all those who are in a quest for female self and liberated selfhood in a patriarchal world. Akhila's journey to Kanyakumari brings about a radical change in her attitude towards sex, social roles and marital relationship. She realizes that the ability to live alone is not the real question; it is the living as a woman in a patriarchy. Even though Akhila crosses the threshold of self-discovery, her final decision is to re-establish her contact with her former lover, Hari; to find dreams and happiness rather than suppressed

desires. She finally decides, “to leave for the railway station. To wrest the reins of her life back, she thinks, looking at her return train ticket” (276).

Anita Nair succeeds in projecting the crisis of the social norms by delineating the difficulties that are faced by the traditional Indian women in relation to men. Shedding away the fear of facing the consequences of establishing selfhood, her characters counteract the established patriarchal ideologies and oppressive tendencies that surround them. They are in constant quest for their female space within the complexity and contradictions of society and finally discover the inner strength to assert their autonomy and agency.

THE GREAT INDIAN LANGUAGE ISSUE: DO WE HAVE A SOLUTION?

Abhilash

.....

.....

It has always been a confusing thing for everyone to comprehend. When two Indians – let us say, one from Kerala and one from the neighbouring state of Tamilnadu – meet, what language do they use for communication? Of course, English! English, the language of the coloniser; the language of the English people and the U.S.! The same language which unites the whole of India. The language which politicians often look at with contempt. And use at their own convenience to arouse a regional language sensitivity to gain more popularity.

India has a long list of languages. The Eighth Schedule to the Indian Constitution contains a list of 22 scheduled languages. It is also home to hundreds of other languages, many of them used as mother tongue by various people. Hindi is only first among equals, which is the mother tongue of about forty percent of the population. I do not conceal the fact that Bengali, Marathi, Telugu and Tamil have more than 50 million speakers each. With more than 30 million speakers, Malayalam also is not far behind. In the case of English, about one and a half billion people speak English, of which only 360 million are native speakers.

In the case of a language being used as mother tongue, Hindi exceeds English by a large margin.

In 2018, The Indian Express reported that there are 121 languages in India which are spoken by ten thousand people or more, and that there is a total of 19500 mother tongues spoken in India. The news was published in relation with the analysis of a census conducted that year. The report further says:

There are 121 languages which are spoken by 10,000 or more people in India, which has a population of 121 crore, it (the census) said. The Registrar General and Census Commissioner, India, said since a household may consist of persons related by blood or of unrelated persons or a mix of both, it is absolutely necessary to ask every person about her or his mother tongue. It was required because the mother tongue of each member of a household need not necessarily be the same — these may be different for different members in the household.

No other country in the world has such an issue to face. Since we are told about this from childhood onwards, we

do not feel surprised at this problem. But for an outsider, it is really amusing to see people in India communicate to each other in a foreign tongue. The history of the multiplicity of languages in India can be traced back to the various empires as well as the small kingdoms that ruled India in the past. When India got freedom in 1947, there was an attempt to unite the country by declaring Hindi as its official language. Even today, non-Hindi states have to teach Hindi at schools, though it has not helped the national integration in any considerable manner. Instead, we find English taking over the responsibility of linking India. Hindi is still the most spoken language in India. However, we find many states consider Hindi as exerting dominance over them.

English, however, enjoys a better reputation throughout India. In Hindi States as well as Non-Hindi states, English Medium schools are always considered better places to educate children. English is the only language in the prestigious institutes of higher education. There is no choice possible here. Whenever the common man thinks about a child achieving higher positions in career, English language competency is a compulsory background for it in his dreams. So English medium schools flourished all across India. Consider the case of Kerala. Most of the students who perform better in the field of professional courses have an English background, whether taught at schools or acquired on his own. In a state like Kerala where the level of education is so high, English became a precious commodity to perform well in interviews for both in-state as well as foreign jobs. So when it comes to the case of the education of a child, even the least

educated parent prefers a school where knowledge in English can be acquired.

Recently, we notice a reversal policy from the part of the state governments. For example, the Government of Kerala has decided to make Malayalam the only language of official communication. Though I do not doubt the genuine interest to promote mother tongue in the state, I wonder whether a state like ours can afford to do it. Malayalam is the language of our culture, our history. But consider the population density of Kerala and the percentage of youth who get higher education. It has been a long tradition in Kerala for the educated youth to seek employment outside Kerala, a large number of it being in foreign countries. People who work in Western countries and the Middle East has contributed a lot for the economic stability of the small state of Kerala.

What if we pull down English and insist on using mother tongue? First of all, Keralites now use many words from English as part of their daily vocabulary. This is mostly irrespective of their educational levels. This happens as the majority are educated and use sophisticated words in English in many casual contexts. When this standardised language is used in visual media, it reaches all. A deliberate attempt to reverse this trend will only take us back to the times where the divide between the social classes was very wide. The truth is that we do not know the Malayalam equivalents for many words like office, restroom, bill, receipt, bus shelter, ticket, football, shoes, restaurant, etc. If we try to find out and use the dictionary meanings of these terms, our language will appear only awkward. In fact, some Keralite

news papers are coining new Malayalam equivalents for some words, the success of which we cannot say anything at present.

What I am concerned about is the consequences of these. Knowledge of a global language is nothing to be ashamed of, in the first place. We no longer have to consider it as the language of the coloniser or the language of oppression. In fact, it is a powerful weapon we have got in our hands. It is the key to the vast expanse of knowledge of the world. In these times of internet and globalisation, any attempt to hold on to a small part of the world will be a barrier to the growth of any promising child from India. Internationally, Indians usually outperform in any field which needs intelligence and reasoning. Though China emerges as a world power, the greatest barrier for their growth is lack of English communication skills. Even as they try to improve this situation, it will take a long time to bring in any noticeable change. Instead of implementing a compulsory mother tongue drive, what the Indian states should do is to put more importance in English teaching.

Multilingualism in this sense – mastering mother tongue as well as the universal language – is a practical and viable option in many ways. Scientists opine that it helps in better communication skills, heightened linguistic recognition, superior executive functioning and multi-tasking. It even helps in fighting dementia. It broadens one's mind and provides multiple perspectives. Benefits of multilingualism practices in education include the creation and appreciation of cultural awareness, adds academic and educational value, enhances creativity, adjustment in society and appreciation of local languages.

The greatest advantage of this for the Indians will be putting an end to the class divisions. Now English is the language of the elite classes, just like Sanskrit was once. In interviews, candidates fail if they fail to speak fluently in English. Once we go abroad, whatever we know can be used only with fluency of the link language. This is true even if you visit a country as a tourist. Can you even think of an all-India tour, without having English communication skills? Unless English competency is ensured to all kinds of students, the so-called Convent School kids will always take away whatever opportunities are there. One can definitely argue that a candidate can get to a good position by applying for the government sector jobs. But the numbers? We cannot ensure jobs for all in our own place. We will have to look at jobs outsourced by western countries. Even giving tutorials online can generate income. Then let us prepare them for global opportunities. Isn't it a necessary thing we should do?

Mother tongue is one's own language, and they will learn it at any rate. Our school syllabus, if followed genuinely, will provide enough material for the students to learn regional language. Moreover, the learner watches movies in that language, reads newspapers in the language, and much more. There is no real threat at all for the nourishment of one's mother tongue. Those who wish to become advanced learners in that language can still do it. There is no question of neglecting anything. I am pointing at a practical solution which may ensure a better future for the coming generations. Change is the only thing without change. There will be changes in our social life and culture in the future. After all the attempts to promote regional

culture and heritage, one cannot stop our youngsters from watching Hollywood movies and visiting KFC stores. Let us try to make changes positive, instead of sensitising any issue unnecessarily.

THE FADING CRIES: AN ECOCRITICAL APPROACH TO SELECTED ANIMAL POEMS

Jissmon K. J.

Research Scholar, Mahatma Gandhi University,
Kottayam.

Since the ages of great philosophers like Aristotle and Plato the relationship between human beings and other fellow inhabitants of earth has been treated as a consecrated one. Man is inexplicably interlinked to nature like a child to its mother. The crux of ecocritical or ecological arguments can be found as this. But the present day scenario portrays a picture just as the opposite of what has been considered sacred. The recent activities of humankind give us nothing but a clear cut picture of the malice that has befallen upon nature and other living creatures due to the careless, selfish and money-minded nature of human beings. The fauna is now at the verge of extinction, their very existence being threatened and their rights are denied. It is due to these concerns that certain writers began to move their pen for the sake of animals, the real owners of earth. Serious discussions have been made regarding these issues and a wide range of theories has been formulated. By the end of the second half of the twentieth century the issues regarding nature and its conservation became focal point on which later developments were built. It is from this impetus that the new modes of writings and representations came into

being in the realm of literature. Eminent writers like William Rueckert, Cheryll Glotfelty, Rachel Carson and so on took up the issue and brought it to the forefront. It appears that William Rueckert was the first one to use the term “ecocriticism” in 1978. Rueckert, by using the term “ecocriticism,” speaks about a kind of intrinsic and inevitable relationship between nature and literature, the very way nature is addressed and treated in various forms of writing. Cheryll Glotfelty in her introduction to *The Ecocriticism Reader: Landmarks in Literary Ecology* (1996) says that “ecocriticism is the study of the relationship between literature and the physical environment” (Glotfelty xviii). Here, the subjects such as nature and literature are taken as overlapping, interdisciplinary ones:

Ecocriticism defines itself as a practice of reading literature from an earth-centered (rather than human centered) perspective. There is also an activist dimension to ecocriticism: at least part of the reason ecocritics want to discuss the centrality of nature in literature is to raise awareness more generally about the need for concern and indeed action with regard to the environment. (Buchanan 143)

The ecological aspects and issues are now studied in relation to literature by placing them within the wider milieu of culture. It is only by juxtaposing these two areas that one can address the anti-environmental attitudes that humankind inflicts upon nature nowadays. We often forget the fact that there is no existence for us without the existence of the remaining flora and fauna. It was from this impetus that the notion of deep ecology came into being. Deep ecology views human being just as “one” among the many other inhabitants of this earth. It exhorts for a paradigm shift where the human being is placed “among” the rest rather than “above” them. The shift must be made from an anthropocentric to a more ecocentric or biocentric one. The ecocritical writers always objurgate the fellow human beings for their cruel attitude toward nature. The poets have always considered the nature as a superior phenomenon to which we all belong. The poems by Robert Wrigley, Robert Pack and Chad DeNiord portray the oppressing attitudes and deeds of humankind upon earth and its remaining inhabitants.

The Cries Are Fading

The American poets Robert Wrigley, Chad DeNiord and Robert Pack in their poems always speak about the profound relationship between man and nature. In their poems they always praise nature and mark human beings place in it. The poem “Little Deaths” Wrigley presents before us the malice that humans inflict upon the nature and other living beings. The title of the poem itself reveals the seriousness of the issue discussed. Here, the word “little” is placed with the word “death.” This oxymoron also points out the general

human attitude. For the “mighty” creations, like what we call ourselves, death or even extinction of the rest of the living beings is of “little” importance or of no importance at all. The poem pictures humans as the superior, supreme authority that controls all other living beings. The way the poet details about the deaths of those little creatures like bugs, moths, frogs and rabbits is intriguing. The poet accounts the “killing” process of these creatures as if it is a noble act. The moths in the first stanza are tossed in the stove for it entertains the poet. Then he speaks about the ill fated bugs and the broken grasshopper whose deaths are nothing but mediocre ones. The cruel act of man can be seen when Wrigley writes:

In the woods behind their summer camp
Pentacostal kids crucified frogs
to the trees. Three nails
and a sapling trunk, little fish-belly
amphibious Jesus. Once
I shot a turtle, green lump under
duckweed, (15-20)

Here, one can quote from Shakespeare without much ease as to say the humans “kill” the other creatures “for their sport” (Bloom 41). The picture gives a clear example of an anthropocentric point of view. The speaker in the poem is the dictator who has got the authority to define the lives of other living beings. M.H. Abrams, in his *A Glossary of Literary Terms* (1957), defines anthropocentrism as an array of ideas which are:

oriented to the interests of human beings, who are viewed as opposed to and superior to nature, and as free to exploit natural resources and animal species for their own purposes. (Abrams 97)

This is the prevailing attitude the poet maintains in the poem. The “deaths” of animals are insignificant in this paradigm. The poem ends in such a way that it embraces the chaos which is going to end in a phase where no one is feared of death anymore. This means the fact that the deaths and killings have become a norm and the acts of “little deaths” will continue forever. The complete transformation of man into a kind of monster is clear when the poet says that:

into a cool rocky pool on Potlatch Creek,
we insisted on total immersion,
as though it were a baptism,
as though afterward death were nothing to fear. (27-30)

The words “immersion” and “baptism” means the act of complete submission to and submersion in evildoings and humans’ later transformation into a complete monster that has the ability to mark the doom of earth and its inhabitants. In the last stanza the poet proclaims his love for violence and cruelty and ends the poem in another act of “murder” of four crawdads. He is curious to see who is going to die first, whether it is he or the crawdads. The sacred relationship between humans and animals is no longer a matter to be concerned. The apocalypse is now at hand. Human has indeed become the real murderer and he rejoices in the “little deaths” of his fellow beings. The poem ends as:

I have my own ideas about that,
my own crawl sense of who’ll die first,
and how. Those four crawdads we caught.
(31-33)

In Chard DeNiord’s “Confessions of a Bird Watcher” the poet takes us into the

stark realities of the modern world where man-made buildings stand as a symbol of death. The poet witnesses the “dying” act of those birds which strike against the windows and die. The buildings stand as a metaphor for human evil. The poems clearly depict the evildoings of humans upon animal lives. The birds, unfamiliar of the modern buildings and constructions, fly against them. These buildings are new and strange to them. The poem shows how manmade structures disrupt the balance of the ecosystem and pose a threat to the existence of other living beings, especially for birds. The birds are attracted by the feeder which is placed outside, but when they fly towards it they mistake the glass for air and break their necks:

I have sat at my window now for years and
watched a
hundred birds
mistake the glass for air and break their
necks,
wondering what to do,
how else to live among them and keep my
view. (9-13)

It is quite clear that the poet knows about the impending doom of those birds. He is well aware of the hidden dangers that the building poses. Yet he is not ready to change anything to save those little birds and he also loves to watch them beside the feeder. He is the one who really attracts them. Here, a kind of complicated relationship can be seen. The human becomes the lifesaver and the destroyer. The poet says he knows that the windows are the reason for their deaths and he is the one who attracts them with seeds in the feeder and water in the bath. But he only feels sorry for them.

What sign to post on the sill that says,
 “Warning, large
 glass window.

Fatal if struck. Fly around or above but
 not away.

There are seeds in the feeder and water
 in the bath.

I need you, which is to say, I’m sorry
 for my genius as

the creature inside

who attracts you with seeds and watches
 you die

against the window

I’ve built with the knowledge of its
 danger to you.

With a heart that rejects its reasons in
 favor of keeping

what it wants:

the sight of you, the sight of you.” (17-
 28)

The warning sign that he wants to post can also be regarded a kind of justification which he makes to justify his own brutal acts. The poet knows about the hidden danger but he also loves the sight of those birds. What we need to understand is the inevitability of a change of perspective. The poem calls for a reanalysis of the relationship between man and nature from a deep ecological point of view. The birds and other living beings have the right to live in this earth like we humans have. The proponent of deep ecological studies Fritjof Capra in his *The Web of Life* (1996) defines the idea as

seeing the world as an integrated whole rather than a dissociated collection of parts. It may also be called an ecological view, if the term ‘ecological’ is used in a much broader and deeper sense than usual.

Deep ecological awareness recognizes the fundamental interdependence of all phenomena and the fact that, as individuals and societies, we are all embedded in (and ultimately dependent on) the cyclical process of nature. (Capra 6)

The humans must be taught this fact that he or she is just a part of that cycle and if the uniformity of the cycle is disrupted it will eventually leads to catastrophe.

It is the fact that man draws his inspiration from nature. Whenever he looks at nature, he feels relieved and it helps him dwell in serenity. The poem “Eagle” by Robert Pack portrays the image of an eagle whose impending doom is at hand and praises over its majestic beauty as well as laments over its imminent extinction. The poet bemoans over this terrible fact. In the beginning of the poem he introduces the eagle drifting around her nest. Like in “Confessions of a Bird Watcher” the poet here knows that the creature is at the verge of extinction. He also acknowledges the fact that this ill fate is due to the human activities and nothing else. Pack opens the poem as:

At dusk, I see an eagle’s silhouette
 Drifting around her distant nest,
 And think how close to stark extinction
 She has come, the ultimate defeat,
 Contingent on some human whim (1-5)

What is purposefully forgotten is the interconnectedness of humans and nature. By destroying nature we are destroying ourselves. Man is a part of nature, an ineluctable part, and the aftermaths of his evil deeds towards nature will definitely be reflected upon himself. The poet now accepts this fact that he feels a kind of

calmness when he looks at nature. The sight of the eagle makes his mind composed.

With a kind of love because
She helps me almost to forget myself,
I watched her tilted wings glide off and lift,
Swooping in some smooth current (16-19)

The lines clearly portray the intricate bonding between man and nature. The fact that the poet transcends himself when he is with nature, savoring the beauty of her, amounts to this bonding with nature. Man's profound relationship with nature is highlighted here. In Brihadaranyaka Upanishad this relation is seen as the most pure and sacred one. The last stanza of the poem speaks about how the poet attains transcendence when he sees the majestic flight of the eagle.

And so I try to think myself released
From thinking of myself
By fixing on the eagle's dips and swerves
Around their nest, my mind filled with their forms,
The angles of their silhouettes, their curves. (31-35)

What we need to note here is the redeeming acts of nature. The irony is that the eagle helps to restore the poet's lost serenity and soothes his mind even when it is in the midst of extinction.

Conclusion

WE STAND NOW where two roads diverge. But unlike the roads in Robert Frost's familiar poem, they are not equally fair. The road we have long been travelling is deceptively easy, a smooth superhighway on which we progress with great speed, but at its end lies disaster. The other fork

of the road – the one “less travelled by” – offers our last, our only chance to reach a destination that assures the preservation of our earth. (Carson 277)

says Rachel Carson in her epoch making work *Silent Spring* (1962). Even though Carson is talking about the harmful effects of pesticides on nature and the need to put a halt on that, the lines can be attributed to a wide range of environmental issues which call for attention. Considering all the anti-environmental acts of human beings what is expected now is a deviation from the long travelled roads of exploitation and destruction to a new less travelled one of conservation and care, not only of earth but also of all its inhabitants. People should be made to think from a deep ecological point of view where he or she should treat himself or herself as a minion of the other inhabitants of this mother earth. We are not the focal point anymore. The paradigm is changed, if not, it should be changed. The poems clearly depict the evildoings of humans upon animal lives and nature and the need to save and conserve it. It is to the poets' outcry that we must lend our ears. It is high time we shifted our paradigm from an anthropocentric to a more ecocentric one.

ONENESS AND BOUNDARIES OUT OF THIN AIR: CULTURAL IMAGINATION AND ITS RELEVANCE (OR IMPACT?)

Arun Sebastian

Guest Lecturer, St. Aloysius College, Edathua,
Kerala, India

Abstract

The purpose of this paper is to share ideas regarding the concept of Cultural imagination and its impact. The term 'imaginary' implies a set of morals, rules, signs and institutions using which people try to belong to the fantasised social community they have created for themselves. This idea can be traced back to the book 'The Imaginary: A Phenomenological Psychology of Imagination' by Jean Paul Sartre in 1940. The theoretical term Cultural Imaginary is a product of different hypothesis that prevailed in Latin American and Hispanic countries. Cultural Imaginary is comprised of the findings of Stuart Hall about culture and Benedict Anderson's concept of 'imaginary'. Cultural Imaginary is the act of the migrant community imagining a culture of their own, in a dimension neither here nor there. Some argue that nations themselves are imagined communities, because most of the people living in a nation will never interact with each other, still they have the sentiment of oneness. It is this nationalistic feeling that produces culture, along with the notion that it should be used as a medium to share the feeling of collectiveness. The

influence of such an imagined community is to be explored using relevant works like 'Imagined Communities', 'The World of Lucha Libre' and many more.

Keywords: cultural imagination, nationalism, Jean Paul Sartre, Stuart Hall, Benedict Anderson

Content

Albert Einstein called the intuitive or metaphoric mind a sacred gift. He added that the rational mind was a faithful servant. It is paradoxical that in the context of modern life we have begun to worship the servant and defile the divine. (Bob Samples 1976 p.26)

It is generally believed that Einstein said these words because intuition paves way to the fluidity of thoughts and imaginative capacity is the main factor in brewing self-confidence in individuals. Max Haiven explains the connection between imagination and value as follow:

We rely on our imaginations to give us a coherent sense of experience, of reproductive cooperation, of the world around us. How a person imagines their relations shape what and who they value. Meanwhile, their values, in effect, shape

their imaginations. In other words, their cultural values determine what they think is important and the types of behaviors and attitudes that they believe will allow them to achieve their desires; how they ascribe meaning to the world. (Haiven 2014, loc. 963)

But imagination can be used to manipulate others who never had the privilege or resource to think for themselves from external invasion of any sort. This is the exact reason why European colonization was a tremendous success in the past centuries. The 'Whites' who valued their 'own kind' as superior to the oriental, were able to set foot on the lands of the 'coloured', and they were able to convince the natives that their culture, language and literacy level was far below the required quality, an invisible measuring scale set up by the Europeans to make them look like gods in front of the non-whites. Thus the soon to be colonized people valued themselves as inferior to their new 'liberators'. This is where it all began. In the novel *The Brief Wondrous Life of Oscar Wao* by the Dominican American writer Junot Díaz, there is a motif of destruction and death, which the narrator terms 'fukú'. It is a curse that was unleashed on the Caribbean by the colonizers without intention:

They say it came first from Africa, carried in the screams of the enslaved; that it was the death bane of the Tainos, uttered just as one world perished and another began; that it was a demon drawn into creation through the nightmare door that was cracked open in the Antilles. Fukú americanus, more colloquially, fukú—generally a curse or doom of first kind, specifically the Curse and Doom of the New World (OW1).

It is also explained in the novel that zafa is the "one way to prevent disaster from coiling around you, only one surefire counterspell that would keep you and your family safe." (OW2). This could be understood as the necessity for decolonization for 'curing' their land from the curse of pseudo-liberation by the colonizers. In order to achieve that, it was mandatory for the natives, not just of Latin America, but of all the colonies that existed to give themselves a value as equals to the Europeans, so that they could conjure the bravery and determination to rebel for their freedom. We all know what happened next.

Post –Independence era for the former colonies brought forward new challenges which were quite unexpected. Different post colonial nations had different obstacles to come across depending upon the category they belonged to. It would be fair to say that it is the people of the Latin American countries and the Caribbean Islands who had to endure new traumas even after the reign of the Europeans, as if invisible threads were still being tied upon them like a puppet. Initially Caribbean Islands were populated by Amerindians from different groups of Kalinago and Taino. But after the islands regained their freedom it was possible to witness a hybrid society which could be roughly classified as Afro-Caribbean, who were the descendants of the African slaves, White Caribbean, whose ancestry had its roots from Europe, and Indo-Caribbean. Their hybrid nature along with the mixture of multiple languages and cultures forced upon them a sense of rootlessness, since they are not able to identify themselves to a particular nation. This is where the role of imagination comes in again.

During pre-colonial times, if imagination was used to feel superior about oneself (like the Europeans) or to discover the value of oneself to strive against injustice (like the colonized), now the purpose of imagination is to create a virtual sense of belonging with the piece of land the hybrid post colonial mass are currently residing. Professor Hector Pearla of University of California stated about Latin American as a community that is imagined, one that is “socially constructed through narratives, myths of origins, symbols, rituals, and collective memory, imagined by people who see themselves as a part of that group” (Pearla 45). It is this sense of identity and how culture is able to reinforce it that contributes to the imaginary.

There are several instances of how these hybrid nations pick up or adopt a cultural activity that originally belongs to their native place of one of their ancestors. Heather Levi, an American anthropologist, in her book *The World of Lucha Libre: Secrets, Revelations, and Mexican National Identity* explains how the use of mask by a Luchador is a means to establish a cultural tie to the Mexican indigeneity. Luchadores use masks to create an imaginary with the masks used for certain ceremonies by the native people of Latin America:

The Luchadore's appeal to mainstream audiences in Latin America resulted in the creation of an imaginary through which, both high and low cultures were able to relate to one another. This reproduction of the indigenous culture and the identification with the Mexican identity create a cultural imaginary. (Levi 66)

Alicia Camacho, a prominent professor in American Studies, observes that the migrant workers from Latin America to

the U.S are always in a desperate attempt to cling on to this sense of nationality. She believes this is Cultural Imaginary in its epitome. They claim to do this so that they do not lose their identity as Latinos. According to her culture is: merely a detached set of ideas but rather the means by which people work through their connections, and create a sense of relatedness to a particular time, place and condition. Because of the loss of sense of belonging, the cultural imaginary is one that helps define identity and meaning in a setting of neither belonging here or there. (Camacho 29).

Coming back to *The Brief Wondrous Life of Oscar Wao*, we can see Yunior, one of the narrators, saying:

It might have been a consequence of our being Antillean (who more sci-fi than us?) or of living in the DR.. and then abruptly wrenchingly relocating to New Jersey.. You really want to know what being an x-man feels like? Just be a smart bookish boy of color in a contemporary U.S. ghetto. Mamma mia! Like having bat wings or a pair of tentacles growing out of your chest. (Díaz 83)

Here Yunior is talking about a factual historic event, where people migrated from Antilles to the U.S. Sci-fi characters from cartoons and comic books are mentioned here because these fictional characters have super human abilities and hence, they always stand out from the crowd. Yunior is facing the same problem because he is coloured and he stands out from the whites in the U.S. But unlike the adoration the superheroes receive, Yunior is of the opinion that the Americans treat them with contempt. In such scenarios where the new home is very un-homely,

diasporic migrants have to choose but to take up the culture of their new land. That is the only way they can blend in. This is where the ability to imagine and prepare oneself to embrace the new circumstances become prominent.

We could see ideas of similar sentiment in the poem *The Schooner Flight* by Derek Walcott:

I had a sound colonial education
 I Dutch, nigger, and English in me
 And either I'm nobody or I'm a nation.
 I had no nation now but the imagination.

Cultural imaginaries are created in a social realm in order to quench the thirst for the sense of belonging of certain sects. Cloths, dance form, food, be it anything, are constructions of the society to identify what it means to be an element of a group. These constructs and the associated imaginaries help to establish the sense of oneness and meaning to a community. Since a thought is given meaning that only makes sense inside particular cultural restrictions, it is the product of imagination and hence applicable only to that group.

Benedict Anderson, an Irish Political scientist, on the other hand sheds light from a different angle on cultural imaginary; an important aspect which actually answers the basis of different kinds of political conflicts. For Anderson, a nation itself, whether or not it has a colonial background as the land of the colonizer or the land of the colonized, is an imagined community. "It is imagined because most members of said community will never meet or hear from other members of this community, yet each has in their minds the image of their communion."

(Anderson 49). It is this idea of nation as a community that provides and produces culture, and therefore the oneness. The situation in India is a suitable example to showcase the virtual or hollow nature of nationalism of any nations for that matter. India is a country with diverse culture and language. Even the slogan of India is "unity in diversity". But this is something that is achieved using force or artificial means. There is no logical sense in feeling united with the millions of people that we do not know. But this is achieved to a large extent through different means like hereditary, majestic historical evidences etc. Everyone forgets the fact, or the political powers invisibly hanging over us makes us forget, that the boundaries that a nation share is man-made and it has nothing but political agendas. If a section of China becomes part of India, then should we start feeling the same sense of oneness with the new arrivals? This is where the reality of the situation strikes. People imagine that they have some sort of tie with their land, and they are trained to believe that every other nation and its people are somehow not as good as them.

Chris Kyle is professional Navy sniper who got famous after his success in a combat in Iraq where he killed 160 terrorists (he claims that he killed 95 more, but the data is not confirmed). In 2012, he published a memoir titled *American Sniper: The Autobiography of the Most Lethal Soldier in U.S. Military History*. He says:

I loved what I did. I'm not lying or exaggerating to say it was fun. On the front of my arm I had a crusader cross inked in. I wanted everyone to know that I was a Christian. I had it put in red for blood. I

hated the damn savages I'd been fighting. I always will. (Kyle 9)

A movie American Sniper (2014) was made based on this book and it was a huge success. But the fact is disturbing because the movie spread islamophobic message that everyone involved with Muslim religion or Arab nations are terrorists. Thus this is what imagination can do to human civilization if not used properly.

But we could conclude on an optimistic note because by now it is clear cultural imaginary is a psychological product of the people. Thus it could be deconstructed and a brand new structure could be erected eradicating all these problems. After an abundance of reworking on what we consider as our culture and why we cling on to it, nation leaders can actually enlighten their people about a global sense of belonging rather than a national one. Thus people all over the world would feel united with no political boundaries to separate them. Thus culture then could be perceived as different ways of living, wearing cloths and eating. A united world with so many options for everything!

AN INTRODUCTION TO ROBERT M. PRISIG'S ZEN AND THE ART OF MOTORCYCLE MAINTENANCE

Melvin Shaji Mathew
.....

Zen and the Art of Motorcycle Maintenance is a philosophical novel written by American philosopher Robert M. Pirsig. Philosophical fiction has become very popular. Works like *Sophie's World*, *Wittgenstein's Mistress*, *Infinite Jest*, *The Monk Who Sold His Ferrari* have become international best sellers. *Zen and the Art of Motorcycle Maintenance* set the precedence of this trend in the 70s when it became an international bestseller and the most popular philosophical book of all time. What is the reason behind the popularity of philosophical fiction? The primary reason is that fiction is the best medium for teaching philosophy, which is infamous for being dull and formidable. Another reason for the popularity of philosophical fiction is that when teen fiction and soap operas flood the market, philosophical fiction provides insight into the process of existence in a lucid form. But renowned Oxford philosopher and author Iris Murdoch refutes this idea. According to her, philosophy calls on the analytical mind to solve conceptual problems in an austere, unselfish, and candid language whereas literature with the help of imagination shows something mysterious, ambiguous, and particular about the world. For her the appearance

of philosophy in her works is purely an inconsequential appearance of what she happened to know. She remarked:

If I knew about sailing ships I would put in sailing ships,". And in a way, as a novelist, I would rather know about sailing ships than about philosophy. (http://www.nytimes.com/2011/01/23/books/review/Ryerson-t.html?_r=0)

The relation between philosophy and literature is not a cordial one. Philosophy always distrusted literature and the quintessential example of this hostility is that of Plato who was fearful of the ability of literature which he termed as the greatest falsehoods to disrupt an individual's quest for truth. Hence, he proposed the banishment of artists from his model state. The reason for this conflict is :

Philosophy is written for the few; literature for the many. Philosophy is concerned with the general and abstract; literature with the specific and particular. Philosophy dispels illusions; literature creates them. Most philosophers are wary of the aesthetic urge in themselves. It says something about philosophy that two of its greatest practitioners, Aristotle and Kant, were pretty terrible writers. (<http://>

www.nytimes.com/2011/01/23/books/review/Ryerson-t.html?_r=0)

Novelists with a philosophical background like Rebecca Newberger Goldstein and David Foster Wallace have different views. For Wallace, fiction offered a way to capture the emotional mood of a philosophical work. According to him, the goal of a philosophical text is not to make an abstract philosophy accessible by simplifying ideas for the lay audience, but “to figure out how to recreate a reader’s more subjective reactions to a philosophical text”. Fiction is subjective and novelists like Iris Murdoch wish to keep the subjectivity of the novel from the influence of philosophy’s objective search for truth. Rebecca Newberger Goldstein says that the way we tackle intellectual problems depend upon who we are as individuals and embedding a philosophical debate in imagined human stories can convey key aspects of intellectual life. It makes one not only understand a conceptual problem but also “feel” the problem.

He was born in Minneapolis, Minnesota. He skipped several grades -due to his IQ of 170- and enrolled at the Blake School in Minneapolis and finally entered the University of Minnesota at the age of fifteen to study biochemistry. Pirsig thought of arriving a unified theory, which explain everything in the universe. While working on experiments, Pirsig realised the existence of numerous tenable hypotheses. His attempt to tone them down resulted in the generation of an unlimited number of workable hypotheses. This made him question the entire scientific practice, which he concluded as an inherent limitation. Eventually, Pirsig lost interest in his studies and was expelled from the university. He enlisted in the US army and was stationed in South Korea. After

his discharge from the army, he earned a Bachelor of Arts in Eastern Philosophy and then joined the Banaras Hindu University in India for a Master’s in Eastern Philosophy. He studied philosophy and journalism at the University of Chicago. In 1958, he joined the Montana State University and taught creative writing. He suffered a nervous breakdown and was institutionalised between 1961 and 1963. He was diagnosed with schizophrenia and was treated with electroconvulsive therapy.

One might not understand the dilemma Pirsig faced while conducting experiments. It is a philosophical problem, which is described by Jules Henri Poincare. Jules Henri Poincare, was a French philosopher of science and mathematics as well as a distinguished scientist and mathematician. Poincare believed in the role of intuition in a proper constrictive foundation for mathematics. He believed that logic is a system of truth and mathematicians can use it to check a proof, but they must use intuition to create a proof. According to Poincare the aim of science is to predict or to create hypotheses, which has to be continually tested. For Poincare, a scientific hypothesis which was proved untenable can still be very useful for it implies the fact that we have neglected or misunderstood some element, thus gives us an opportunity to discover the existence of an unforeseen aspect of reality. He suggests that a scientist can make any number of hypotheses for which he must choose a suitable few. Pirsig failed to formulate a criterion according to which he can select few hypotheses for serious experimentation.

Zen and the Art of Motorcycle Maintenance is a philosophical novel first published in 1974. According to Guinness Book of Records 121 publishers rejected it more than any other bestselling book.

It is about Pirsig's trip on his bike with his son Chris and his friends John and Sylvia, from Minnesota to California. On his way, Pirsig ponders about his past—his philosophical journey and calls his past self 'Phaedrus', who is a character in Plato's dialogues.

Pirsig wanted the idea of Quality he formulated to become a topic of metaphysical study but it did not. Philosophers simply ignored it. Most of the people who read Pirsig's books claimed that they did not understand his idea of Quality.

For someone who doesn't have any training in Philosophy reading *Zen and the Art of Motorcycle Maintenance* is a difficult task. Hence it required multiple readings of the primary source to fully understand it. The book is divided into four sections, in each of which Pirsig discusses many heterogeneous concepts to formulate Quality, which is a concoction of all these concepts. The in-congruency one might feel while reading the dissertation is due to the form the primary source. The first four chapters of the dissertation is the analysis of the four chapters of the book and the final one is the conclusion the researcher has arrived at.

The first section of *Zen and the Art of Motorcycle Maintenance* is about the conflict between romanticism and classicism. Pirsig did not want to cut any new channels of consciousness, he wanted to dig deeper in to the old ones. He portrays John and Sylvia as romantics who distance themselves from technology. Pirsig considers himself a proper classicist because he loves technology— he takes care of the motorcycle all by himself. Whereas, John and Sylvia hate it. They love the joy of bike riding but possess deep aversion to the technology that makes it possible. Pirsig considers this kind romanticism as

ingratitude towards technology. There has been many anti-technologists known by the name "beatnik" and "hippie" and these kind of anti-system people will continue to emerge but they won't become a popular movement. Pirsig considers John and Sylvia's attitude as self-defeating and feels sorry for them. They were living with technology without having anything to do with it. Pirsig is trying to explore the duality between what man is, from what man does. The aversion of technology or the present system is an unfulfilling response according to Pirsig. His attempt is to formulate an idea, which incorporates all dualities into a positive whole.

For Pirsig:

Buddha, the Godhead, resides quite as comfortably in the circuits of a digital computer or the gears of a cycle transmission as he does at the top of a mountain or in the petals "flower. To think otherwise is to demean the Buddha, which is to demean oneself. (Pirsig 17)

Pirsig questions the objective existence of scientific laws. He equates the law of gravity proposed by Isaac Newton with the idea of ghosts— a belief Native Americans still maintain. Every scientific concept like mass, energy, etc. reside in one's mind so does theories. The problem scientists are stuck with is that of the 'mind'; they cannot escape its predominance over everything they do.

Like ghosts logic and numbers exist in the mind but that doesn't make it bad but, it is the way everything works. Most people fail to understand this truth and condemn others with different belief system as unscientific. Laws of logic and mathematics are human inventions, like the idea of ghosts.

Pirsig divides the human understanding into the classical and the romantic. A

classical understanding views the world in terms of the underlying form whereas the romantic one sees it in terms of immediate appearance. If one shows a romantic a diagram of a machine it is unlikely that he would show any interest. Romantics value what they perceive. But if the same blue print is shown to a classical person the diagrams, shapes and the complexities of the underlying form would fascinate her.

Romantic mode is imaginative, creative, inspirational and intuitive. Feelings or emotions get primacy. According to Pirsig:

“Art” when it is opposed to “Science” is often romantic. It does not proceed by reason or by laws. It proceeds by feeling, intuition and esthetic conscience. In the northern European cultures the romantic mode is usually associated with femininity, but this is certainly not a necessary association.” (Pirsig 63)

Romanticism was manifested in many ways such as Sentimental Romanticism, Philosophical Romanticism, Individualistic Romanticism and Nationalistic Romanticism. Leon Rosenthal in his book *Romanticism* describes who who a romantic person is:

A Romantic person was first of all sensitive and someone on whom logic and pure ideas has little impact. It was a knowledge person whose actions were based on intuition: as a statesman, he would obey a generous or imaginary impetus; as a writer or poet his thinking was taking shape in images. (Rosenthal 37)

The classic mode proceeds by reason. Pirsig opines that in European cultures it is associated with a “masculine”. Motorcycle riding is romantic but maintenance is purely classic. Although superficial ugliness is associated with classic mode it is not necessarily so. Classic aesthetic is often too subtle hence the romantics often fail to notice it.

ssarily so. Classic aesthetic is often too subtle hence the romantics often fail to notice it.

The classic style is straightforward, unadorned, unemotional, economical and carefully proportioned. Its purpose is not to inspire emotionally, but to bring order out of chaos and make the unknown known. It is not an esthetically free and natural style. It is esthetically restrained. Everything is under control. Its value is measured in terms of the skill with which this control is maintained. (Pirsig 64)

To a romantic the classic mode appears dull, awkward and boring for the priority is given not to the immediate appearance but to the harmonies function of the whole. But for a classical person the romantic appears frivolous, irrational, erratic, untrustworthy, interested primarily in pleasure-seeking and shallow. Everybody belongs to either of these two modes. No one is willing to see and understand the other. This attitude resulted in the huge split between classical culture and romantic counter-culture.

One of the reasons for the popularity of *Zen and the Art of Motorcycle Maintenance* is due to its unique form. After its success many philosophical texts with varying levels of complexity were published. What sets *Zen and the Art of Motorcycle Maintenance* apart from those works is that it marked the inception of a new philosophical school. One can equate it with Lyrical Ballads of Wordsworth and Coleridge, which was a radical break from the prevalent forms of literature and perception of art. It is true that though *Zen and the Art of Motorcycle Maintenance* became the ‘most popular’ philosophical book it did not result in a cardinal change in the branch of philosophy. This paradox is due to the fact that like every avant-garde work, academicians were and still are

critical of *Zen and the Art of Motorcycle Maintenance* but, due to its lucid form, it gained immense popularity among the public. It is one of the first philosophical books which a lay person can read and understand by him/herself. The radicalness of the form is just a foreshadow of the content which attempted to formulate a philosophical melting point of the west and the East.

In the traditional Western thought there is a duality in objectivity, reason, logic, dialectic and subjectivity, emotion, imagination, intuition, rhetoric. The former terms are considered as scientific or empirical while the latter are assumed to be artistic devoid of rationality.

Pirsig's philosophical endeavour begins with the identification of the one of the most pronounced duality that exists in the society namely-classicism and romanticism. Classicism understands the world in terms of the underlying form whereas romanticism is concerned with the immediate appearance. Classic mode is rational, logical and hence scientific whereas the romantic mode is imaginative, creative, inspirational, and intuitive. When the classic mode functions on reason the romantic mode works on the basis of immediate feelings or emotions. According to Pirsig, riding a motorcycle is a romantic idea but maintaining it is a classic one. Throughout history, there existed a conflict between classicism and romanticism. To a romantic, the classic mode appears dull and awkward for the priority is given to harmony instead of the immediate appearance. For a classic person, romantic appears erratic, irrational, untrustworthy, and shallow. This conflict led to the split between classic culture and romantic counter cultures. To resolve this conflict Pirsig formulated the concept of quality.

The idea of Quality is also similar to the concept of Tao, which cannot be

understood, in a conceptual form but, only through living experiences of everyday life. Tao is the primordial essence and the underlying natural order of the cosmos whose presence is testified by the existence of the universe. Quality is the immediate experience, which is in a continual changing flux. This is why it is impossible to define Quality.

Quality is not a thing. It is an event. It is the event at which the subject becomes aware of the object... The Quality event is the cause of the subjects and objects, which are then mistakenly presumed to be the cause of the Quality! (Pirsig 226)

Quality is a perception of the world, which accepts both the romantic and the rational. Thus, unifies irrational sources of wisdom like intuition and creativity with rational sources such as science, reason and technology. Intuition and creativity are rationally inexplicable. According to Pirsig the combination of rationality and romanticism can enhance the quality of life.

ആമുഖം

മലയാളസാഹിത്യചരിത്രത്തിൽ ആദ്യ ഖണ്ഡകാവ്യമായി രേഖപ്പെടുത്തിയിരിക്കുന്നത് ഏ.ആർ.രാജരാജവർമ്മയുടെ മലയാളിലാസമാണ്. അതിനും 33 വർഷങ്ങൾക്കു മുമ്പുള്ള കൃതിയായ അനസ്താസ്യായുടെ രക്തസാക്ഷിത്വം, ആദ്യഖണ്ഡകാവ്യം എന്ന സ്ഥാനത്തിനു യോഗ്യമാണോ എന്നും, എന്തുകൊണ്ട് സാഹിത്യചരിത്രത്തിൽ നിന്നും പ്രസ്തുത കൃതി തഴയപ്പെട്ടു എന്നുമുള്ള അന്വേഷണമാണ് ഈ പ്രബന്ധം.

സാഹിത്യചരിത്രങ്ങളെല്ലാം ഖണ്ഡകാവ്യ പ്രസ്ഥാനങ്ങളുടെ ഉത്ഭവ-വികാസങ്ങളെ പത്തൊൻപതാം നൂറ്റാണ്ടിൽ സാമൂഹിക-സാംസ്കാരിക- ധൈഷണിക രംഗങ്ങളിലുണ്ടായ ഉണർച്ചിനോടു ബന്ധപ്പെടുത്തിയാണ് ചർച്ച ചെയ്യുന്നത്. മലയാളഖണ്ഡകാവ്യങ്ങളെപ്പൊതുവെ പ്രാചീന ഖണ്ഡകാവ്യമെന്നും ആധുനിക ഖണ്ഡകാവ്യമെന്നും രണ്ടായി തരംതിരിക്കാറുണ്ട്. സംസ്കൃത കാവ്യ നിർമ്മാണരീതി അനുകരിച്ചുകൊണ്ട് രൂപംകൊണ്ട ഖണ്ഡകാവ്യങ്ങളെ പ്രാചീന ഖണ്ഡകാവ്യം എന്നു പറയുന്നു. എന്നാൽ 20-ാം നൂറ്റാണ്ടിന്റെ ഉദയത്തോടുകൂടി രൂപപ്പെട്ട ആധുനിക ഖണ്ഡകാവ്യങ്ങൾ മാതൃകയാക്കുന്നത് ആംഗലഭാഷാ കാവ്യങ്ങളെയാണ്. നവോത്ഥാനപ്രവണതകളോടു ബന്ധപ്പെട്ടു വളർന്നുവന്ന കാല്പനിക പ്രസ്ഥാനത്തിന്റെ ഭാഗമാണ് മലയാളത്തിലെ ആധുനിക ഖണ്ഡകാവ്യങ്ങൾ. ഭാവതീവ്രത,

ആത്മനിഷ്ഠത, വികാരപരത, വ്യക്തിപരത, ആദർശാത്മകത, ആവിഷ്കരണത്തിലെ ആർജവം തുടങ്ങി ഇന്നു ഖണ്ഡകാവ്യങ്ങളുടെ ലക്ഷണമായി വിവക്ഷിക്കപ്പെടുന്നവ ആധുനിക ഖണ്ഡകാവ്യങ്ങൾക്കു മാത്രം യോജിച്ചവയാണ്.

സാമാന്യലക്ഷണം: ഖണ്ഡകാവ്യത്തെ പൗരസ്ത്യസാഹിത്യത്തിൽ നിർവ്വചിക്കുന്നത് ഇപ്രകാരമാണ്.

അല്പാക്ഷരമസന്ദിഗ്ദ്ധം
സംസാരം സർവതോന്മുഖം
സ്തോഭക്ഷോഭകരം വാക്യം
ഖണ്ഡകാവ്യം പ്രചക്ഷതേ

പഴയകാല ഖണ്ഡകാവ്യങ്ങൾ മഹാകാവ്യത്തിന്റെ ഒരു സംക്ഷിപ്തരൂപമായിരുന്നു. അതിനാൽ, ആധുനിക ഖണ്ഡകാവ്യങ്ങൾക്ക് ഈ നിർവചനം പൂർണ്ണമായി ചേരില്ല. സാഹിത്യമേന്മയുള്ള ആധുനിക ഖണ്ഡകാവ്യങ്ങളെ കണക്കിലെടുത്ത്, അവയുടെ സാമാന്യ സ്വഭാവം വ്യക്തമാക്കേണ്ടതുണ്ട്.

ആധുനിക ഖണ്ഡകാവ്യങ്ങളുടെ ഇതിവൃത്തം പുരാണകഥയോ, ചരിത്ര സംഭവമോ, കല്പിതമോ ആകാം. കഥാപാത്രത്തിന്റെ വൈകാരിക അനുഭൂതികൾക്ക് ഇവിടെ ഏറെ പ്രാധാന്യമുണ്ട്. ഔചിത്യപൂർവ്വം ആവിഷ്കരിക്കുന്നതാണ് ഖണ്ഡകാവ്യങ്ങളുടെ സംവിധാന ക്രമം. വർണ്ണനകളും അലങ്കാരപ്രയോഗങ്ങളുമുണ്ടാകും. അവ അനുഭൂതികൾ ഉള്ള

വാക്കുന്ന വിധത്തിലാണ് ക്രമീകരിക്കുന്നത്. എൻ.പി. പണിക്കർ ആധുനിക ഖണ്ഡകാവ്യങ്ങളെ നിർവചിക്കുന്നത് ഇപ്രകാരമാണ് 'നാതിദീർഘവും നാടകീയവും അഥവാ കാവ്യാത്മകവുമായ പ്രതിപാദ്യം, ഭാവതീവ്രതയും ഭാവനാത്മകതയും രൂപസരളതയുമാർന്ന പ്രതിപാദനം, ഔചിത്യഭാസുരമായ അലങ്കാര പ്രയോഗവും വർണനയും, പൊതുവെ കാല്പനിക പ്രഭാവലയിതമായ അന്തരീക്ഷം എന്നിവയെല്ലാമാണ് ലഘുകാവ്യങ്ങളെ ആധുനിക ഖണ്ഡകാവ്യങ്ങളുടെ മുൻനിരയിൽ എത്തിക്കുന്നതിന് സഹായിക്കുന്ന സവിശേഷതകൾ.'¹

മലയവിലാസം: മലയാളസാഹിത്യത്തിൽ പൊതുവേ ആദ്യഖണ്ഡകാവ്യമായി പരിഗണിക്കുന്നത് ഏ.ഡി. 1895 (കൊല്ലവർഷം 1070) -ൽ ഏ.ആർ രാജരാജവർമ്മ രചിച്ച മലയവിലാസത്തെയാണ്. അതിനാൽ, ഖണ്ഡകാവ്യങ്ങളുടെ മാർഗദർശകനായി അദ്ദേഹത്തെ പരിഗണിച്ചു കാണുന്നു. 24 ശ്ലോകങ്ങളുള്ള ഒരു ലഘുകാവ്യമാണ് മലയവിലാസം. മദിരാശിയിൽനിന്നും തിരുവനന്തപുരത്തേക്ക് യാത്ര ചെയ്യുന്നതിനിടയിൽ കണ്ട സഹ്യപർവ്വതം കവി മനസ്സിൽ ഉളവാക്കിയ അനുഭൂതികളുടെ ആവിഷ്കരണമാണ് മലയവിലാസം. വിവിധ സാഹിത്യ ചരിത്രങ്ങൾ മലയവിലാസത്തെ പ്രതിഷ്ഠിക്കുന്നത് എപ്രകാരമാണെന്നു വിലയിരുത്തേണ്ടത് അനിവാര്യമാണ്.

കേരളസാഹിത്യചരിത്രത്തിൽ ഉള്ളൂർ, ഏ.ആറിനെ അവതരിപ്പിക്കുന്ന ഭാഗത്ത് മലയവിലാസം എന്ന കൃതിയെക്കുറിച്ച് പറഞ്ഞു പോരുക മാത്രമാണ് ഉള്ളൂർ ചെയ്യുന്നത്. ഉള്ളൂർ സാഹിത്യചരിത്രം എഴുതിയ കാലഘട്ടത്തിൽ ഏ.ആറിന്റെ കൃതി പുതിയതായതിനാലാകാം ഇങ്ങനെ പ്രതിപാദിച്ചു പോരുക മാത്രം ചെയ്തിരിക്കുന്നത്. മലയവിലാസം എന്ന കൃതിയിലൂടെയാണ് മലയാള ഖണ്ഡകാവ്യപ്രസ്ഥാനങ്ങളുടെ ആരംഭം എന്നു സമർത്ഥിച്ചുകൊണ്ടാണ് 'കൈരളിയുടെ കഥ'യിൽ എൻ.കൃഷ്ണൻപിള്ള എഴുതുന്നത്. '1895-മാണ്ട് അദ്ദേഹം എഴുതിയ മലയവിലാസം എന്ന കൃതിയാണ്, കഴിഞ്ഞ അറുപതു

കൊല്ലമായി വളർന്നു പുഷ്പിച്ചു ഫലിച്ച ആധുനിക കാവ്യവല്ലരിക്ക് വിത്തു പാകിയത്. പർവ്വതവും നദിയും കടലും കായലുമൊക്കെ വർണ്ണിക്കുന്ന കവിതകൾ നമുക്ക് മുൻപും ഉണ്ടായിട്ടില്ലേ? പിന്നെ എന്താണ് ഈ കവനത്തിനു പുതുമ? ഒരു വസ്തുവിനെ കാണുമ്പോൾ കവി ഹൃദയത്തിൽ ഉളവാകുന്ന അനുഭൂതികളുടെ ആവിഷ്കാരമാണത്"².

'മലയാള സാഹിത്യചരിത്രം കാലഘട്ടങ്ങളിലൂടെ' എന്ന എരുമേലി പരമേശ്വരൻപിള്ളയുടെ ഗ്രന്ഥത്തിൽ 'എ.ആർ രചിച്ച മലയവിലാസം ഖണ്ഡകാവ്യപ്രസ്ഥാനത്തിൽപ്പെട്ട ആദ്യകൃതിയായി പരിഗണിക്കാം'³ എന്നു ചേർത്തിരിക്കുന്നു. പത്മന രാമചന്ദ്രൻ നായർ എഡിറ്റു ചെയ്ത സമ്പൂർണ്ണ മലയാള സാഹിത്യചരിത്രത്തിൽ കവിതയുടെ ഭാഗം കൈകാര്യം ചെയ്തിരിക്കുന്നത് ഡോ. ഡി. ബഞ്ചമിനാണ്. 'കാല്പനികതയുടെ ആരംഭകാലത്ത് ചെറുതെങ്കിലും ശ്രദ്ധേയമായ രണ്ടു കൃതികൾ പരാമർശിക്കേണ്ടതുണ്ട്. ഏ.ആർ. രാജരാജവർമ്മയുടെ മലയവിലാസവും വി.സി.ബാലകൃഷ്ണപണിക്കരുടെ വിശ്വരൂപവും'⁴. ഇങ്ങനെ മലയവിലാസത്തെ കാല്പനികതയുടെ ആരംഭദശയിലുണ്ടായ കൃതിയായി പരിഗണിക്കുന്നതു കാണാം. ഖണ്ഡകാവ്യങ്ങളെക്കുറിച്ച് സമഗ്രമായി അന്വേഷിക്കുന്ന പ്രൊഫ. എം.പി.പണിക്കരുടെ മലയാള ഖണ്ഡകാവ്യങ്ങൾ ഒരു പഠനം എന്ന പുസ്തകത്തിൽ, മലയവിലാസത്തിന് സാഹിത്യചരിത്രങ്ങൾ പൊതുവെ നൽകി പോരുന്ന സ്ഥാനത്തെ വിമർശിക്കുന്നുണ്ട്. ഏ.ആർ. വിരചിച്ച 'മലയവിലാസം' ആധുനിക ഖണ്ഡകാവ്യങ്ങൾക്ക് നാദികുറിച്ചു എന്നൊരു ധാരണയുണ്ട്. എന്നാൽ ഇതു മുഴുവൻ ശരിയാണോ എന്നാണ് സംശയം.⁵ ആത്മനിഷ്ഠമായ ആവിഷ്കരണമാണെങ്കിൽ കൂടി ആധുനിക ഖണ്ഡകാവ്യത്തിന്റെ പ്രത്യേകതകളിൽ പലതും ആ കാവ്യത്തിനവകാശപ്പെടാനില്ല. തീവണ്ടിയിൽ സഞ്ചരിക്കുമ്പോൾ അദ്ദേഹം കണ്ട കാഴ്ചകളെയാണ് മലയവിലാസത്തിൽ പകർത്തിയിരിക്കുന്നത്.

'കുതിച്ചുപായും കടുവാക്കിടാങ്ങളും മദിച്ചുമണ്ടും കളഭപ്രവീരരും

കളിച്ചു വാഴുന്നൊരു കാനനങ്ങളോ-
ലസഹ്യനാം നീ സഹ്യനാണു പോൽ⁶

എന്നു സഹ്യപർവതത്തെ നോക്കി പാടുന്ന കവി പാരമ്പര്യരീതിയിൽനിന്നും വേറിട്ടുനിൽക്കുന്നു. ഇതിവൃത്തത്തിന്റെ പ്രധാനഭാഗത്തിനു കൂടുതൽ പ്രാധാന്യം നൽകി ഭാവതീവ്രതയോടെ അവതരിപ്പിക്കുവാൻ ഏ.ആറിനു സാധിച്ചിട്ടില്ല. അതുകൊണ്ടാണ് ലക്ഷണമൊത്ത ഖണ്ഡകാവ്യം എന്ന സ്ഥാനം മലയവിലാസത്തിന്റെ സ്ഥാനത്ത് കുമാരനാശാന്റെ വീണപൂവിനു നൽകപ്പെടുന്നത്.

അനസ്താസ്യായുടെ രക്തസാക്ഷിത്വം

കാവ്യരചനാപശ്ചാത്തലം: ചാവറയച്ചൻ അനസ്താസ്യായുടെ രക്തസാക്ഷിത്വം രചിക്കുന്നത് 1862-ലാണ്. അതായത് കേരളപാണിനി മലയവിലാസം രചിക്കുന്നതിനു 33 വർഷം മുൻപ്. 150 വർഷങ്ങൾക്കുമുമ്പ് മലയാള ഭാഷയിൽ ഒരു ഖണ്ഡകാവ്യം നിർമ്മിക്കുവാൻ ചാവറയച്ചനെ പ്രേരിപ്പിച്ച ഘടകങ്ങൾ സാമൂഹികവും ആദ്ധ്യാത്മികവുമാണ്. ശുദ്ധമായ ഭാഷ അപ്രാപ്യമായിരുന്ന കാലത്ത്, സംസ്കൃതാതിപ്രസരമില്ലാതെ സാധാരണക്കാർക്ക് സ്വീകാര്യമായ ഒരു സാഹിത്യസംസ്കാരം വളർത്തുക എന്നത് ഈ കാവ്യരചനയുടെ പ്രഥമോദ്ദേശ്യമാണ്. അതിനാലാണ് തികച്ചും ലളിതമായ ഭാഷയിൽ കാവ്യം രചിക്കപ്പെട്ടിരിക്കുന്നത്.

ഇതിവൃത്തസ്വീകരണം: പുരാണകഥകളും ഇതിഹാസങ്ങളും സാഹിത്യകൃതികളുടെ രചനക്ക് ഇതിവൃത്തമായി സ്വീകരിച്ചുപോന്ന ഒരു കാലഘട്ടത്തിലാണ് ഈ കൃതിയുടെ രചന. ഇതിവൃത്തവും, ഭാഷയും സാധാരണക്കാർക്ക് സുഗ്രാഹ്യമായിരിക്കണം എന്ന് ചാവറയച്ചൻ നിർബന്ധമുണ്ടായിരുന്നു. അതിനാലാണ് പാശ്ചാത്യസാഹിത്യ-മതഭാഗത്തുനിന്നും ലളിതമായ ഒരു ഇതിവൃത്തം അദ്ദേഹം സ്വീകരിച്ചത്.

ഇതിവൃത്തത്തെ ഇങ്ങനെ സംഗ്രഹിക്കാം. എ.ഡി. മൂന്നാം നൂറ്റാണ്ടിൽ വലേറിയൻ ചക്രവർത്തി റോമിൽ ഭരണം കൈയേറ്റു ക്രൈസ്

തവരെ നിഹനിക്കുവാനും ജനങ്ങളെയെല്ലാം ജൂപ്പീറ്റർ ദേവന്റെ ആരാധകരാക്കുവാനും പരിശ്രമിച്ചു. ചക്രവർത്തിയുടെ മതമർദ്ദനത്തിനും വിഗ്രഹപൂജയ്ക്കും സഹായം ചെയ്തത് പ്രോബാ എന്ന മന്ത്രിപുംഗുവനായിരുന്നു. അക്കാലഘട്ടത്തിൽ സോഫിയാ എന്ന ഒരു കന്യാസ്ത്രീ ഒരു മഠം നടത്തിയിരുന്നു. സുന്ദരിയായ അനസ്താസ്യ എന്ന പെൺകുട്ടി മഠത്തിൽ അംഗമായി. അവളെ മന്ത്രി കൊട്ടാരത്തിലേക്കു പിടിച്ചുകൊണ്ടുപോയി. ഈശ്വരവിശ്വാസം ഉപേക്ഷിക്കണമെന്നും ജൂപ്പീറ്റർ ദേവനെ ആരാധിക്കണമെന്നും മന്ത്രി ആവശ്യപ്പെട്ടു. അതിനു പ്രതിഫലമായി സമ്പത്തും രാജ്ഞിപദവും നൽകാമെന്നും മന്ത്രി വാഗ്ദാനം ചെയ്തു. പക്ഷേ അനസ്താസ്യ അതെല്ലാം തള്ളി കളഞ്ഞു. ക്രിസ്തുവിനു വേണ്ടി ആത്മാർപ്പണം ചെയ്യുവാൻ അവൾ തയ്യാറായി. മന്ത്രി അവളെ ക്രൂരമായി ഉപദ്രവിച്ചു. തടവറയിൽ നിന്നും ദൈവസ്തുതി പാടിയ അവളുടെ നാവ് മന്ത്രി അറുത്തു കളഞ്ഞു. മരണം മൂന്നിൽ കണ്ടുനിന്ന അനസ്താസ്യ സമീപം നിന്നിരുന്ന സിറിലോസ് എന്ന ചെറുപ്പക്കാരനോട് ദാഹജലം ആംഗ്യഭാഷയിൽ ആവശ്യപ്പെട്ടു. അയാൾ ജലം പകർന്നു നൽകി. അനസ്താസ്യയേയും അവൾക്കു ജലം നൽകിയ യുവാവിനേയും പ്രോബാ നിർദ്ദയം വധിച്ചു. തനിക്കുവേണ്ടി വീരചരമം വരിച്ച ആ രണ്ടു പേരുടേയും ആത്മാക്കളെ ദൈവം മോക്ഷത്തിലേക്കു നയിച്ചു.

ഭാഷാപരമായ സവിശേഷതകൾ: കവിത സാധാരണക്കാരനു കൂടി ആസ്വദിക്കുവാൻ പര്യാപ്തമാകണം എന്ന പക്ഷക്കാരനാണ് ചാവറയച്ചൻ. 19-ാം നൂറ്റാണ്ടിൽ ഉടലെടുത്ത കവിതകളെ സംബന്ധിച്ചിടത്തോളം അവ പലതും സാധാരണക്കാരനു അപ്രാപ്യമായിരുന്നു. ലളിതവും എളുപ്പത്തിൽ ഗ്രഹിക്കുവാൻ കഴിയുന്നതുമാണ് ചാവറയച്ചന്റെ ഭാഷ. സംസ്കൃതഭാഷ അദ്ദേഹത്തിനു വശമുണ്ടായിരുന്നു. എന്നാൽ, കൂടുതൽ ദുർഗ്രഹമായ സംസ്കൃതപദങ്ങളെ ഒഴിവാക്കി സാധാരണക്കാരന് ഒറ്റവായനയിൽ മനസ്സിലാക്കുവാൻ പര്യാപ്തമായ ഭാഷയിലാണ് അദ്ദേഹത്തിന്റെ കാവ്യ

രചന. 'അനസ്താസ്യായുടെ രക്തസാക്ഷിത്വം' എന്ന ഖണ്ഡകാവ്യത്തിൽ ഈ സവിശേഷത ഏറെ പ്രകടമാണ്. എദുക്കനാത്ത്, സെനാത്തുമാർ, നായകജാതന്ത്രിയുഗം തുടങ്ങിയ ചുരുക്കം ചില ദുർഗ്രഹപദങ്ങൾ മാത്രമെ ഈ കൃതിയിൽ ഉപയോഗിച്ചിട്ടുള്ളൂ.

ശൈലി: മനുഷ്യമനസ്സിന്റെ ആദർശശുദ്ധി, അർപ്പണ ബോധം, ഈശ്വരവിശ്വാസം, സഹവർത്തിത്വം ഇവയെല്ലാമാണ് കാവ്യം മുൻപോട്ടു വെക്കുന്ന സന്ദേശധാരകൾ. അത് ഉജ്ജ്വലമായി പ്രതിപാദിക്കുവാനും പരിപാലിക്കുവാനും പര്യാപ്തമായ ഭാഷയും ശൈലിയുമാണ് ചാവറയച്ചൻ ഉപയോഗിച്ചിരിക്കുന്നത്.

കന്നി തന്റെ ദേഹമൊക്കെ ചീന്തിയവർ പൊളിച്ചിട്ടു ചിന്നിവീഴും ചോരകൊണ്ടു കുതിർത്തു ഭൂമി വെള്ളിപ്പോലെ വെളുത്തുള്ള കന്നി തന്റെ പല്ലുകളെ വല്ലിയൊരു ചുറ്റികയാൽ തല്ലി വീഴിച്ചു'

ചക്രവർത്തിയുടെ ആജ്ഞ അനുസരിപ്പിക്കുവാൻ ശ്രമിക്കുന്ന മന്ത്രിയോടുള്ള അനസ്താസ്യായുടെ മറുപടി ഇപ്രകാരമാണ്.

നിന്റെ ദാനം ത്യജിക്കുംപോൽ നിന്റെ ക്രൗര്യം ക്ഷമിപ്പാനായ്

എന്റെ നാഥൻ സർവ്വശക്തി തന്നിടും ദയാൽ⁸

രചനാരീതി: മന്ത്രി പുംഗുവൻ മുന്നിൽ നിൽക്കേ, പ്രശാന്തമായി മകൾക്ക് അന്ത്യോപദേശം നൽകുന്ന സോഫിയായെ അവതരിപ്പിക്കുന്നത് ശ്രദ്ധേയമായ ഒരു വാങ്മയചിത്രമാണ്. എത്രയും വേഗം രാജാവിന്റെ പക്കലേക്ക് നീ ചെല്ലുക എന്നു സോഫിയാ പറയുമ്പോൾ അത് ചക്രവർത്തിയെക്കുറിച്ചാകുമെന്ന് മന്ത്രി കരുതുന്നു. എന്നാൽ മണവാളനായ രാജാവായി സോഫിയ പറയുന്നത് ക്രിസ്തുവിനെയാണ്. ചക്രവർത്തിയുടെ ആജ്ഞപ്രകാരം അനസ്താസ്യായോടു പോകുവാൻ പറയുന്ന ഈ രംഗം വളരെ നാടകീയമായിട്ടാണ് കവി അവതരിപ്പിച്ചിരിക്കുന്നത്.

'സ്നേഹമേറും മകളേ നിൻ ഭാഗ്യമേറും മണവാളൻ

ദാഹമോടെ വിളിക്കുന്നു വേഗമായ്പ്പോക

പൂർവ്വകാലേ നിൻകരത്തെ നീട്ടി ദിവ്യദാഹമോടെ

മാറിടത്തിലണച്ചൊരു രാജനെ ഓർക്ക നിൻമണത്തെ മുടിപ്പാനായ് വെൺമയോടെ ധരിത്രിയിൽ

ഭംഗിയേറും കൊടി ഏന്തി വൻഗിരിയേറി മെച്ചമേറും കിരീടത്തെ വച്ചുചൂടി ശിരസിനെ അർച്ചനയായണച്ചു തൻ ജീവനും കൂടെ'⁹

ഈശ്വരവിശ്വാസം ഉപേക്ഷിച്ച് ചക്രവർത്തിയുടെ ഇംഗിതം നിറവേറ്റിയാൽ രാജ്യത്തെ സമ്പത്തു മുഴുവൻ സ്വന്തമാക്കാമെന്നുള്ള ചടുലവാക്കുകൾ കൊണ്ട് മന്ത്രി അവളെ പ്രലോഭിപ്പിക്കുന്നു. ഈയവസരത്തിൽ വളരെ തന്മയത്വത്തോടെയാണ് അനസ്താസ്യ മറുപടി പറയുന്നത്.

'ലോകഭാഗ്യം സമർപ്പിക്കാൻ ദാഹമില്ല മമ ചിത്തേ

കോലഹലമായ ശിക്ഷാ ഭീതിയുമില്ല'¹⁰

വിവിധ മുഹൂർത്തങ്ങളിലെ വൈകാരിക ഭാവങ്ങളെ അവതരിപ്പിക്കുവാൻ ചാവറയച്ചൻ സവിശേഷമായ സിദ്ധിയുണ്ടായിരുന്നു. മന്ത്രിയുടെ ക്രൂരഭാവം അവതരിപ്പിക്കുന്നത് ശ്രദ്ധിക്കുക.

'ക്രൂരഭാവം നടിച്ചവൻ ചുണ്ടു രണ്ടും ചുമപ്പിച്ചു ക്രോധവീര്യാൽ മുഖം സൂര്യമേഘമായ് മുടി' ¹¹

ചുരുങ്ങിയ വാക്കുകളിലാണ് കവി ഇത് അവതരിപ്പിച്ചിരിക്കുന്നത്. പക്ഷേ, മന്ത്രിയുടെ രൗദ്രഭാവം വായനക്കാരനു പകർന്നു നൽകുവാൻ കവിക്ക് സാധിച്ചിട്ടുണ്ട്. ആസ്വാദക മനസ്സുകളിൽ വേദന ഉളവാക്കും വിധത്തിലാണ് അനസ്താസ്യ നേരിടേണ്ടി വന്ന ദുരന്തങ്ങളേയും പീഡനങ്ങളേയും അവതരിപ്പിച്ചിരിക്കുന്നത്.

'കന്നി തന്റെ ദേഹമൊക്കെ ചീന്തിയവർ പൊളിച്ചിട്ടു

ചിന്നിവീഴും ചോരകൊണ്ടു കുതിർന്നു ഭൂമി'

'മാതൃതന്റെ മാറിൽനിന്നും പാൽകുടിച്ച തോർത്തിടാതെ

മാനഹീനാൽ അറുപ്പിച്ചു മുലകളെയും¹²
വേദനയിലും ഈശ്വരന്റെ അപദാനങ്ങൾ വാ
ഴ്ത്തിയ അനസ്താസ്യയുടെ നാവ് അറുത്തു
മാറ്റി;

‘കഷ്ടമയ്യോ ശിഷ്ട നാവു പിഴുതു വേരാൽ
ശുദ്ധവായിൽ നിന്നുടനേ കൊച്ചൊരാറെന്ന
തുപോലെ

രക്തധാര പുറപ്പെട്ടു, നനച്ചു സർവ്വം¹³

വ്യത്നം: നതോന്നതവൃത്തത്തിലാണ് ഖണ്ഡ
കാവ്യം രചിച്ചിട്ടുള്ളത്. കൂട്ടനാട്ടിൽ ജനിച്ചുവള
ർന്ന ചാവറയച്ചൻ വഞ്ചിപ്പാട്ടിന്റെ താളം പ്രിയ
ങ്കരമാണ്. സംസ്കൃത വൃത്തങ്ങൾ സുപരിചി
തമായിരുന്നിട്ടും ദ്രാവിഡവൃത്തമാണ് തിക
ഞ്ഞ ഒരു മാതൃഭാഷാഭിമാനിയായ അദ്ദേഹം
സ്വീകരിച്ചിരിക്കുന്നത്. കാവ്യത്തിന്റെ വൃത്ത
ഭംഗി ശ്രദ്ധിക്കുക. നതോന്നതയുടെ ലക്ഷണം
താഴെ ചേർക്കുന്നു.

‘ഗണം ദ്വ്യക്ഷരമെട്ടെണ്ണമൊന്നാം പാദത്തിൽ,
മറ്റതിൽ

ഗണമാറര, നില്ക്കേണം

രണ്ടുമെട്ടാമതക്ഷരേ ഗുരുതന്നെയെഴുത്തെല്ലാ
മിശ്രീലിൻ പേർ നതോന്നത’

‘പാപി/കൾക്കു/രക്ഷ/ചെയ്വാൻ/
നിന്നു/നീ പൂ/ജിച്ച/പോലേ/ (എട്ടു ഗണം,
സർവ്വ ഗുരു)

പാപി/യാമെൻ/ജീവ/പൂജ/
പൂർത്തി/യാൽ ഏൽ/ക്ക/’ (ആറര ഗണം,
സർവ്വ ഗുരു)

‘അനസ്താസ്യയുടെ രക്തസാക്ഷിത്വ’
ത്തിന്റെ രചനാസവിശേഷതകളെ ഇത്തര
ത്തിൽ പരിശോധിക്കുമ്പോൾ ഈ ഖണ്ഡ
ഡകാവ്യം ഉത്തമമായ ഒരു കാവ്യമാണെന്ന്
വ്യക്തമാകുന്നു. ഖണ്ഡകാവ്യങ്ങളുടെ നിർ
വചനങ്ങളും ലക്ഷണങ്ങളും ഈ കൃതിയിൽ മ
നോഹരമായാണ് സമ്മേളിച്ചിരിക്കുന്നത്. ആറു
സർഗ്ഗങ്ങളിൽ കുറവുള്ള കാവ്യങ്ങളെ ഖണ്ഡ
ഡകാവ്യങ്ങളെന്ന് സംസ്കൃതത്തിൽ നിർ
വചിക്കാറുണ്ട്. ചാവറയച്ചന്റെ ഖണ്ഡകാവ്യം
ഇതുമായി പൊരുത്തപ്പെട്ടു പോകുന്നു. 91

ഈരടികൾ മാത്രമുള്ള ഒരു ലഘുകാവ്യമാ
ണിത്. സോഫിയായുടെ കന്യകാലയം, രാജ
കൽപന, യാത്രാ മംഗളം നേരുന്നൂ, അനസ്
താസ്യയുടെ മറുപടി, പീഡനങ്ങൾ തുടങ്ങു
ന്നു, കന്യകയുടെ ധീരത എന്നിങ്ങനെ ആറു
ഭാഗങ്ങളായി ചാവറയച്ചൻ ഈ ഖണ്ഡകാ
വ്യത്തെ വിഭജിച്ചിരിക്കുന്നു.

ആധുനിക ഖണ്ഡകാവ്യത്തിൽ ഇതിവൃ
ത്തം പുരാണകഥയോ കൽപ്പിതമോ ആകാം.
അതുമല്ലെങ്കിൽ അവയുടെ മിശ്രമാകാം. ഉദാ
ഹരണമായി വള്ളത്തോളിന്റെ ‘അച്ഛനും മക
ളും’ എന്ന ഖണ്ഡകാവ്യത്തിൽ ‘മിശ്ര’രൂപം
കാണാം. ശകുന്തളയുടെ കഥ പുരാണ പ്രസി
ദ്ധമാണ്. എന്നാൽ വിശ്വാമിത്രൻ ശകുന്തളയെ
കാണുവാൻ ആശ്രമത്തിലെത്തുന്നത് കവി
ഭാവനയും. ചാവറയച്ചന്റെ ഇതിവൃത്തം പു
രാണകഥയാണ്. ഗ്രീക്ക്, ലത്തീൻ തുടങ്ങിയ
ഭാഷകളിൽ പ്രചരിച്ചിരുന്ന കഥകൾ വിഭിന്ന
മാണ്. ഈ കഥകളുടെ ചരിത്രപരമായ പ്രാ
ധാന്യം തെളിയിക്കുവാനോ നിഷേധിക്കുവാ
നോ മതിയായ രേഖകളില്ല. ഒരു പുരാണകഥ
എന്ന മട്ടിൽ പ്രചരിച്ചിരുന്ന കഥ വിദേശഭാ
ഷാപണ്ഡിതൻ കൂടിയായിരുന്ന കവി തിരി
ച്ചറിഞ്ഞ് കവിധർമ്മം ചേർത്താണ് കാവ്യം
ചിത്രപ്പെടുത്തിയിരിക്കുന്നത്.

ഇതിവൃത്തത്തിലെ സുപ്രധാനഭാഗത്തിന്
മിഴിവു നൽകി അപ്രധാന ഭാഗങ്ങൾ ചുരു
ക്കി ആവിഷ്കരിക്കുന്നവയാണ് ആധുനിക
ഖണ്ഡകാവ്യങ്ങൾ. ‘സമഗ്രമായ ജീവിതത്തി
ന്റെ എല്ലാ ഭാഗങ്ങളിലുമായി ചിതറുന്നതിനു
പകരം അതിന്റെ ഒരു ഭാഗത്ത് കവിപ്രതിഭ
ഉറച്ചു നിൽക്കുമ്പോൾ ഒരു ഖണ്ഡകാവ്യം
രൂപമെടുക്കുന്നു.’¹⁴ കാവ്യത്തിൽ അനസ്താ
സ്യ എന്ന തരുണീമണിയുടെ ജീവിതകഥ
മുഴുവനും അവതരിപ്പിക്കുന്നുണ്ടെങ്കിലും അ
വളുടെ ജീവിതത്തിലെ സുപ്രധാന ഭാഗങ്ങൾ
ക്ക് മിഴിവ് നൽകിക്കൊണ്ടാണ് കാവ്യരചന.
ചക്രവർത്തിയുടെ ആജ്ഞാപാലിക്കാതെ നില
കൊള്ളുന്ന അനസ്താസ്യയ്ക്ക് നേരിടേണ്ടി
വരുന്ന ക്രൂരമർദ്ദനങ്ങളും അവളുടെ മരണവു
മാണ് സുപ്രധാനമായി അവതരിപ്പിക്കുന്നത്.
എന്നാൽ അവളുടെ ജീവിതകഥ - സോ

ഫിയയുടെ ആശ്രമത്തിൽ പ്രവേശിക്കുന്ന തൊക്കെ കവി സൂചിപ്പിച്ചു പോരുന്നുമുണ്ട്.

ഉപസംഹാരം

ഭാഷാപരമായും ഇതിവൃത്തപരമായും ലക്ഷണാപരമായും പരിശോധിക്കുമ്പോൾ, രൂപത്തിലും ഭാവത്തിലും ഒരു ഉത്തമ ഖണ്ഡകാവ്യമാണ് അനന്താസ്യായുടെ രക്തസാക്ഷിത്വം എന്നത് വ്യക്തമാണ്. എങ്കിൽപ്പിന്നെ, എന്തുകൊണ്ട് സാഹിത്യചരിത്രങ്ങളുടെ നവീകരിച്ച പതിപ്പുകളിൽ ഈ തിരുത്തൽ രേഖപ്പെടുത്തുന്നില്ല എന്നത് പ്രായോഗികചോദ്യമായി ബാക്കി നിൽക്കുന്നു. മറ്റു പലരെയും പോലെ സാഹിത്യചരിത്രത്തിൽനിന്നും ചാവറയച്ചൻ ഒഴിവാക്കപ്പെട്ടു എന്നത്, പലവിധകാരണങ്ങളാൽ സംഭവിച്ചുപോയ ദുർഭാഗ്യകരമായ ഒരവസ്ഥ മാത്രമാണ്. സാഹിത്യചരിത്രങ്ങളിലെ ഇടമോ, കാവ്യപാരമ്പര്യത്തിലെ സ്ഥാനമോ, കാവ്യലോകത്തേക്കുള്ള പ്രവേശനമോ അദ്ദേഹത്തിന്റെ വിദൂരലക്ഷ്യങ്ങളിൽപോലും ഉണ്ടാകാതിരുന്നതിനാൽ അതിനായുള്ള ശ്രമവും ഉണ്ടായില്ല; മറ്റാരും അക്കാലത്ത് അതിനായി മുനിട്ടിറങ്ങിയതു മില്ല. 1987 ൽ അന്നത്തെ രാഷ്ട്രപതി ആർ. വെങ്കട്ടരാമൻ ചാവറ തപാൽ സ്റ്റാമ്പ് പുറത്തിറങ്ങിയതും, 2006 ൽ ചാവറയച്ചന്റെ സാഹിത്യസംഭാവനകളെ ആദരിച്ച് അദ്ദേഹത്തിന്റെ ഛായാചിത്രം കേരള സാഹിത്യ അക്കാദമി ഹാളിൽ അനാച്ഛാദനം ചെയ്തതും 2014-ൽ കേരളസാഹിത്യ അക്കാദമി, ഇടയനാടകങ്ങൾ എന്ന കൃതി പ്രസിദ്ധീകരിച്ചതും, 2015 ൽ അക്കാദമികതലത്തിൽ നവോത്ഥാന നായകനിരയിൽ ചാവറയച്ചനെ ഉൾപ്പെടുത്തിയതു മൊക്കെ ചരിത്രത്തോട് നീതി പുലർത്തുന്നതിന്റെ ശുഭോദർക്കകരമായ സൂചനകളായി കരുതാം.

പക്ഷിയുടെ മണം സൃഷ്ടിക്കുന്ന സ്ത്രീ

Alphonse P. Parackal
Department of Malayalam
St. Joseph's College Moolamattam

അവർണനീയമായ ശക്തി സ്വരൂപത്തിന്റെ മുർത്തിഭാവമാണ് സ്ത്രീ. എല്ലാ പ്രകൃതി ശക്തികൾക്കും സ്ത്രീരൂപം കല്പിച്ചു ആരാധിക്കുന്നവരാണ് ഭാരതീയർ. 'സ്ത്രീ' മഹത്തായ ശക്തിയുള്ള മഹിളയായും എല്ലാവർക്കും ആശ്രയവും അഭയവും നല്കുന്നവനിതയായും ഈ പ്രപഞ്ചം മുഴുവൻ നിറഞ്ഞു നിൽക്കുന്നു

ലോകപ്രശസ്ത കവയത്രിയും മലയാളത്തിന്റെ പ്രമുഖ കഥാകാരിയുമാണ് മാധവിക്കുട്ടി. സ്ത്രീയുടെ ശക്തിയെ തിരിച്ചറിയാനും അംഗീകരിക്കാനും തയ്യാറായ ഒരു സമൂഹത്തിനു മുൻപിൽ ഈ കഥാകാരി അവതരിപ്പിക്കുന്ന സ്ത്രീ കഥാപാത്രങ്ങൾ വളരെയധികം സവിശേഷത അർഹിക്കുന്നതാണ്. മാധവിക്കുട്ടിയുടെ കഥാപാത്രങ്ങൾ പീഡനങ്ങൾ അർഹിക്കുന്നവരും ഉള്ളിന്റെയുള്ളിൽ അതിനെതിരെ ശക്തമായി പ്രതികരിക്കുന്നവരുമുണ്ട്. 'പക്ഷിയുടെ മണം' എന്ന കഥയിലൂടെ ലൈംഗികതയുടെയും മരണത്തിന്റെയും മുന്നിൽ ഒറ്റപ്പെട്ടുപോയ സ്ത്രീയുടെ അവസ്ഥയാണ് കഥാകാരി അവതരിപ്പിക്കുന്നത്. മൃത്യുവും, രതിയും അടിച്ചേല്പിക്കുന്ന പീഡനങ്ങളിൽ തളർന്നു വീഴുന്ന നായികയിലൂടെ ആധുനിക ഇന്ത്യൻ സ്ത്രീത്വത്തിന്റെ ദൈന്യവും, നിസഹായതയുമാണ് പ്രകടിപ്പിക്കുന്നത്.

കൊൽക്കത്ത നഗരത്തിലെ ഒരു വ്യവസാ

യ സ്ഥാപനത്തിൽ ജോലി തേടിയെത്തിയ ഒരു സ്ത്രീക്കുണ്ടായ അനുഭവമാണ് ഈ കഥ. ടെക്സ്റ്റൈൽ ഇൻഡസ്ട്രീസിന്റെ ഓഫീസ് അന്വേഷിച്ചു നടന്ന നായിക അവസാനം dying (മരണം ഏർപ്പാടാക്കി കൊടുക്കുന്ന സ്ഥലം) എന്ന ബോർഡ് തൂക്കിയ ഒരു വലിയ മുറിയിൽ എത്തിച്ചേരുന്നു. അവിടെ അവൾ കണ്ടത് കുതിരയുടെ മുഖം പോലെ, നീണ്ട മുഖമുള്ള കനത്ത രോമങ്ങൾ വളർന്നു നില്ക്കുന്ന ശക്തമായ കൈകളുള്ള, മരിക്കുവാൻ ഏർപ്പാടാക്കിക്കൊടുക്കുന്ന ഒരു മനുഷ്യനെയാണ്. അവിടെ നിന്നും രക്ഷപ്പെടാനാവാതെ അവൾ വീർപ്പുമുട്ടുന്നു.; അസ്വസ്ഥയാകുന്നു; ഒടുവിൽ അടഞ്ഞ വാതിലിനു പിന്നിൽ തളർന്നു വീഴുന്നു.

'അവൾ വാതില്ക്കൽ മുട്ടി തുടങ്ങി; അയ്യോ എന്ന് ചതിക്കുകയാണോ?

അവൾ ഉറക്കെവിളിച്ചു ചോദിച്ചു; ഞാനെന്തു കുറ്റമാണ് ചെയ്തിട്ടുള്ളത്? അവളുടെ തേങ്ങൽ കുറച്ചു നിമിഷങ്ങൾക്കു ശേഷം അവസാനിച്ചു. അവൾ ക്ഷീണിച്ചു തളർന്ന്, വാതിലിന്റെ അടുത്ത് വെറും നിലത്ത് വീണു''

സ്ത്രീ പാരതന്ത്ര്യത്തെ സൂചിപ്പിക്കുകയാണ് നായികയുടെ മുന്നിൽ അടഞ്ഞ വാതിൽ. വിലക്കുകൾക്കും വിലങ്ങുകൾക്കും മുന്നിൽ നിസഹായയാകാൻ വിധിക്കപ്പെടുകയാണ് ഇവിടെ. സ്ത്രീത്വം നിരപരാധിയും നിഷ്കള

കമെങ്കിലും സ്ത്രീ എന്നും പുരുഷനിർമ്മിത സാമൂഹ്യ വ്യവസ്ഥിതിൽ വഞ്ചനയ്ക്കും പീഡനങ്ങൾക്കും വിധേയയാകുന്നു. 'പക്ഷിയുടെ മണം' എന്ന കഥയിലെ സ്ത്രീ കഥാപാത്രത്തിലൂടെ പുരുഷമേധാവിത്ത സമൂഹത്തിൽ സ്ത്രീയുടെ ദാരുണവും, നിന്ദ്യവുമായ അവസ്ഥയാണ് മാധവിക്കുട്ടി വ്യക്തമാക്കുന്നത്. വാതിലിനു സമീപം വെറും നിലത്തു വീഴുന്ന നായിക നിസഹായവും നിരാലംബവുമായ സ്ത്രീത്വത്തിന്റെ പ്രതീകമാണ്. കീഴടങ്ങലും വിധേയത്വവും മാത്രമേ അവൾക്ക് കരണീയമായുള്ളൂ. കൈവിരലുകളിൽ നീണ്ട രോമങ്ങളുള്ള കുതിരയുടെ മുഖമുള്ള ചെറുപ്പക്കാരൻ മരണത്തിന്റെ പ്രതീകമാണ്.

'അതെ സ്നേഹത്തിന്റെ പരിപൂർണ്ണത കാണിച്ചു തരുവാൻ എനിക്കു മാത്രമേ കഴിയുകയുള്ളൂ. എനിക്കു നീ ഓരോന്നോരോന്നായി കാഴ്ച വയ്ക്കും "ചുവന്ന ചുണ്ടുകൾ, ചാഞ്ചാടുന്ന കണ്ണുകൾ, അവയവ ഭംഗിയുള്ള ദേഹം" എല്ലാം ഓരോ രോമകുപങ്ങൾ കൂടി നീ കാഴ്ചവയ്ക്കും, ഒന്നും നിന്റെ തല്ലാതാവു. പക്ഷെ എല്ലാമായിത്തീരും'2

മഞ്ഞ നിറവും പക്ഷിയുടെ മണവും മരണത്തിന്റെ പ്രതീകമാണ്. മരണത്തിന്റെ മുന്നിൽ ചെന്നുപെടുമ്പോൾ പുരുഷനിലുള്ള വിശ്വാസം അവൾ ഉപേക്ഷിക്കുന്നില്ല.

മുറിയുടെ വാതിൽ തുറക്കുന്നതിൽ പരാജയപ്പെടുന്ന അവൾ മുനിലിരിക്കുന്ന

ചെറുപ്പക്കാരനിൽ പ്രതീക്ഷയർപ്പിക്കുന്നു.

'ദയവു ചെയ്ത് ഇതൊന്നു തുറന്നു തരു' അവൾ പറഞ്ഞു; 'എനിക്ക് വീട്ടിലേക്ക് പോവണം എന്റെ കുട്ടികൾ കാത്തിരിക്കുന്നുണ്ടാവും, അയാൾ തന്റെ വാക്കുകൾ കേട്ട്, ക്രൂരചിന്തകൾ ഉപേക്ഷിച്ച് തന്നെ സഹായിക്കുവാൻ വരുമെന്ന് അവൾ ആശിച്ചു.'3

'എന്നാൽ അയാൾ വീണ്ടും വീണ്ടും വിസ്മയിപ്പിക്കുകയും ചെയ്യും. വീണ്ടും വീണ്ടും അവളെ നോക്കി ചിരിച്ചു'4 പുരുഷരൂപത്തിൽ മരണത്തെ ചിത്രീകരിക്കുന്ന കഥാകാരി പുരുഷനിർമ്മിത സാമൂഹ്യവ്യവസ്ഥകൾക്കെതിരെയുള്ള വിധിയെഴുതുകയാണ് ചെയ്യുന്നത് .

കഥാകാരി സ്ത്രീ മനസിന്റെ സങ്കീർണ്ണതകളെ സൂക്ഷ്മമായി ചിത്രീകരിക്കുകയാണ് ഈ കഥയിലൂടെ. പുരുഷന്റെ പരിലാളനയും, സ്നേഹവും, ആശ്രയവും ആഗ്രഹിക്കുന്ന സ്ത്രീ കഥാപാത്രങ്ങൾ മാധവിക്കുട്ടിയുടെ കഥകളിൽ നിറഞ്ഞു നില്ക്കുന്നു. മരണത്തിന്റെ മുന്നിൽപ്പെടുമ്പോഴും പ്രതിഷേധത്തിന്റെ ശബ്ദങ്ങളൊന്നും കേൾപ്പിക്കാതെ കുട്ടികളെയും കുടുംബത്തെയും കുറിച്ച് വിലപിക്കുന്ന നായികയെയാണ് ഈ കഥയിൽ കാണാൻ സാധിക്കുന്നത്. 'പക്ഷിയുടെ മണം' എന്ന കഥയിലെ നായിക കഥാപാത്രം ഫെമിനിസ്റ്റുവാദികളുടെ ചിന്താധാരയുമായി ഒരിക്കലും പൊരുത്തപ്പെടുന്നില്ല. അവബോധ മനസിലൂടെ മരണത്തെ കാണുകയും, ബോധമനസിൽ അവൾ പ്രകടിപ്പിക്കുന്ന മാതൃത്വവും മാധവിക്കുട്ടിയുടെ സ്ത്രീ സങ്കല്പത്തെയാണ് സൂചിപ്പിക്കുന്നത്.

‘अक्षयवट’: एक विश्लेषणात्मक अध्ययन

Dr.Sobhitha Sebastian
Assistant Professor
St.Joseph's College, Moolamattom

समकालीन हिन्दी साहित्य में आज की ज़िन्दगी को संपूर्ण रूप में देख सकते हैं। आधुनिक काल की लोकप्रिय और सर्वाधिक शक्तिशाली विधा हैं उपन्यास। समय के अनुसार उपन्यास का स्वरूप बदलता रहा है। प्रारंभिक उपन्यास का लक्ष्य शुद्ध मनोरंजन था। लेकिन आधुनिक उपन्यास में मानव जीवन के विराट संघर्ष और स्वप्न को रूपायित करने की क्षमता पायी जाती है।

नासिरा शर्मा

नासिरा शर्मा हिन्दी गद्य साहित्य की विभिन्न शाखाओं पर हस्ताक्षर डालनेवाली प्रतिभाधनी लेखिका हैं। निम्न मध्य वर्ग झेलनेवाले दलित समस्या, भूख की तीव्रता, बेरोज़गारी, जल समस्या आदि सब समस्याओं को अपने उपन्यासों में चित्रित करने का सफल प्रयास नासिरा जी ने किया है। उन्होंने न केवल समस्याओं का वर्णन किया है, अपितु उनका समाधान भी प्रस्तुत किया है। सामाजिक, राजनैतिक, धार्मिक क्षेत्रों पर उनकी लेखनी कार्यरत है। उनके व्यक्तित्व और कृतित्व में आधुनिकता और परंपरा का सामंजस्य मौजूद है।

अक्षयवट

सन् २००३ में इलाहाबाद की पृष्ठभूमि पर लिखा गया उपन्यास है अक्षयवट। नासिरा शर्मा ने इस उपन्यास में इलाहाबाद शहर की सांस्कृतिक घरोहर, पुलिस द्वारा होनेवाले अत्याचार, भ्रष्टाचार, बेरोज़गारी, युवा आक्रोश आदि मुद्दों को विशेष रूप से उजागर किया है। इलाहाबाद में जन्मी नासिरा जी ने उस शहर के आज के पतन को देखकर बहुत दुखी हैं। “अक्षयवट का जो मामला था वो कई सालों से बह रहा था। बारह सालों में वो नॉविल.... इन बारह सालों में क्या गाँव, क्या अमेरिका, क्या एशिया... सब जगह की जवान नस्लों को बड़ा परेशान देखा मैंने, तो ‘अक्षयवट’ तो था मेरे जेहन में”^१।

अक्षयवट उपन्यास का मुख्य पात्र है ज़हीर। जब ज़हीर चार माह का था तब इलाहाबाद के सांप्रदायिक दंगों में उनके पिता की मृत्यु हुई। दादी और माँ ने उनका पालन पोषण किया। ज़हीर पढाई में निपुण और होशियार लडका था। जब एक दिन वह कॉलेज में आता है तब कॉलेज की एक घटना से उसकी ज़िन्दगी बदल आती है। विश्वविद्यालय की परीक्षा में नकल करने के झूठे आरोप में उसे दो वर्ष के लिए निष्कासित कर दिया जाता है। उस कॉलेज के अध्यापक लोग उसकी सच्चाई और ईमानदारी से परिचित हैं। लेकिन नकल करनेवाला छात्र अन्य प्रोफेसर का संबन्धी है। इसलिए उसे बचाने के लिए ज़हीर को बलिवेदी पर चढा दिया है। इस घटना से निराश होकर ज़हीर पढाई छोड़कर छोटे-मोटे काम में लग जाता है। अंत में एक दूकान खोलकर वह अपनी दादी और माँ की देखभाल करता है।

इलाहाबाद शहर के समाज में फैली विभिन्न विकृतियों और प्रशासन की भ्रष्टता को ज़हीर और उसके मित्र गण - रमेश, वसंत, मुरली, जगन्नाथ और सलमान दूर करने का प्रयास करते हैं। फलतः इनको अनेक समस्याओं और कष्टताओं को सामना करना पड़ता है। ज़हीर अपनी अधूरी पढाई को पूरा करके अध्यापक बन जाता है। इसके अलावा लोक कल्याण के लिए काम भी करते हैं।

अक्षयवट में चित्रित समस्याएँ

यौन शोषण

वर्तमान समय में स्त्री का अनेक रूपों में यौन शोषण होता है। महानगरों में युवतियों को अपने जाल में फँसाकर उन्हें शोषण करनेवालों की संख्या बढ़ते जा रहे हैं। युवतियों की अश्लील फोटो लेकर उन्हें ब्लैकमेल किया जाता है। प्रस्तुत उपन्यास में इस घृणित कार्य का पर्दाफाश हुआ है। एक पुलिस वाला इस संबन्ध में कहते हैं, ‘इन बातों ने तो इलाहाबाद जैसे शहर की लड़कियों को लगभग बर्बाद कर डाला है। अभी साल पहले हमने दो ब्यूटी पार्लर्स पर

छापे मारकर लड़कियों को बर्बाद की थी। फैशन शो के नाम पर लड़कियों को पकड़कर जबरदस्ती ब्लू फिल्मों बनायी जाती है।”२

भ्रष्टाचार

भ्रष्टाचार ऐसी समस्या है जिसके कारण हमारे देश की प्रगति अवरूद्ध होती है। अब जीवन के हर एक क्षेत्र में भ्रष्टाचार व्याप्त है। सी. पी. श्रीवास्तव जी के अनुसार “भ्रष्टाचार का प्रवाह उद्दाम वेग के साथ बह रहा है और इसने लोगों को स्वच्छ प्रशासन से वंचित तथा विकास के मार्ग को अवरूद्ध कर दिया है। ...भ्रष्टाचार ने वास्तव में एक महामारी का रूप ले लिया है और अधिकांश नौकरशाही, पुलिस, न्यायपालिका और राजनीतिक सत्ता सब इसकी लपेट में हैं।”३

अक्षयवट उपन्यास में इस समस्या की सटीक अभिव्यक्ति हुई है। उपन्यास का एक पात्र है रामस्वरूप सिंह। वह पुलिस विभाग में होनेवाले भ्रष्टाचार के बारे में ऐसे कहते हैं, “पुलिस की जात का तो तुम जानते हो, दरोगा हरपाल सिंह हरामी है। खाये - पिये के आगे ओका कुछ और सूझत नाही है। टाकुर का लौण्डा बोटल-बोटल देय - दिलाय के और मुट्ठी गर्म कर सच्चाई दवाय दीस।”४ पुलिस का कर्तव्य समाज की रक्षा करना है। यही पुलिस जब अपना कर्तव्य भूल गया तो जनता का जीवन दूभर हो जाता है। अक्षयवट उपन्यास का इन्स्पेक्टर त्रिपाठी अच्छे- अच्छे शरीफ लोगों को वह घण्टे भर में देश का सबसे नामी गुण्डा करार दे सकता था। यही नहीं, उस आदमी को स्वयं यह अहसास दिला देता कि वह एक मुजरिम है। उसकी मामूली हरकत कानून की नज़र में आती है और धारा जल, जुर्माना और घर की कुर्की तक पहुंच सकती है। वह कहता भी था, कि जब नाव पर बैठकर हमारी विरासत वाले इस शहर में जिसको चाहते थे, पकड़ बुलाते थे। हम तो थाने में बैठे हैं। अच्छे- अच्छों की पुलपुली ढीली कर देते हैं।”५

पुलिस व्यवस्था का चित्रण करते हुए नासिरा जी लिखती हैं कि, “इलाहाबाद शहर में ही नहीं बल्कि पूरे हिन्दुस्तान में पुलिस दो फाक हो चुकी है। एक वह जो अपनी सत्ता का गलत इस्तेमाल करती है और भोले, सीधे, शरीफ नागरिकों की जीना हराम कर देती है। दूसरी वह जो कानून की रखवाली करती है, जनता की सेवा में अपनी जान गँवा देने में गर्व का अनुभव करती है।”६

बेरोजगारी

नासिरा शर्मा के उपन्यासों में आर्थिक बोध के विविध आयाम परिलक्षित हैं। वर्तमान समय में बेरोजगारी युवाओं के समक्ष बड़ी समस्या बनकर खड़ी है। कई युवक ऐसे हैं जो अपने देश में रोजगार न मिलने के कारण विदेश जाकर नौकरी करते हैं। जब वे विदेश से लौटते हैं तब भी यहाँ कुछ करने योग्य नहीं रहते। ऐसा त्रासद जीवन व्यतीत करनेवाला एक युवक का चित्रण अक्षयवट

उपन्यास में नासिरा ने जी बखूबी किया है। वह ‘पराए देश नहीं जाना चहता, मगर मजबूर है। जब आया था तब भरी थी। ...मगर पिछले तीन महीनों में घर और घरवालों की ज़रूरत पूरी करते-करते पहले घड़ियें एक - एक कर बिकी, ट्रांज़िस्टर, थरमस कंवल और अब बुलेट भी बिक गई। खाली हाथ विदेश गया था भरे हाथ देश लौटा था। अब सब कुछ खर्च कर फिर वही खाली हाथ वापस जा रहा है।”७ प्रस्तुत उपन्यास का और एक पात्र है रमेश। वह सुशिक्षित है किन्तु बेरोजगार। उसकी माँ को यही चिंता है कि कब उसे नौकरी मिलेगी? रमेश की नौकरी के लिए माँ ज्योतिषी, टोने - टोटेक, तावीज़ आदी बातों अन्जाम देती है।

बालमज़दूरी

जब किसी कारणवश बच्चा परिश्रम कर धनोपार्जन करता है, उसे बाल मज़दूरी कहते हैं। सरकार ने बालमज़दूरी रोकने के लिए कई कड़े कानून बनाए हैं। कारगर सिद्ध नहीं हुए हैं। आज भी होटलों, दूकानों, मिलों में बालक बालिकाएँ मज़दूरी करते हैं।

अक्षयवट उपन्यास का जगन्नाद भी ऐसा एक पात्र है जो पिता की मृत्यु के बाद घर की ज़म्मेदारी अपने कंधे पर उठाते हैं। वह खुद कहते हैं, “नौ लोगों का भोजन जुटाने के लिए मैं उसी स्कूल के सामने छोले, मूंगफली भी बेचता था, जहाँ पढता था फिर होटल में काम भी किया। मार खायी, गाली सुनी, रात को रोया भी मगर हार हार नहीं मानी। मेरी इस दौड़ में कुछ वर्षों बाद बहन भाई भी शामिल हो गये।”८

उपसंहार

नासिरा शर्मा जी ने सामाजिक बोध से युक्त उत्तरशती की प्रभावी लेखिका हैं। सामाजिक, आर्थिक एवं राजनीतिक बोध से संबंधित तमाम पहलुओं को नासिरा जी ने निरभयता से अभिव्यक्ति की है। वे अपने साहित्य के माध्यम से समाज की अनेक ज्वलंत समस्याओं को उजागर करने में सक्षम दीखती हैं।

प्राचीन काल से ही समाज में सामूहिक परिवार का अस्तित्व रहा है। भारतीय संस्कृति में सदैव परिवार को महत्वपूर्ण स्थान मिला है। व्यक्ति के निर्माण का प्राथमिक दायित्व परिवार पर होता है इसलिए दूसरे किसी समूह की अपेक्षा परिवार का प्रभाव सामाजिक जीवन पर अधिक पड़ता है। व्यक्ति के निर्माण का प्राथमिक दायित्व परिवार पर होता है। परिवार सगे संबंधियों से पूरित एक ऐसी संस्था है जिसके रीति-रिवाज़, सभ्यता एवं संस्कृति, आचरण एवं व्यवहार लगभग समान होते हैं। परिवार मानव समूह की आधारभूत इकाई है। कहा जा सकता है कि परिवार एक ऐसी सामाजिक संस्था है जहाँ से मनुष्य अपने सामाजिक जीवन की शुरुआत करता है सामाजिक जीवन का मूल परिवार में ही निहित होता है।

मानव विकास के साथ-साथ पारिवारिक जीवन में भी परिवर्तन लक्षित होने लगे हैं, नवीन आवश्यकताओं नवीन परिस्थितियों एवं सामाजिक संबंधों का प्रभाव परिवार पर पड़ा है। डॉ शंकर शेष के नाटकों में इसी समकालीन पारिवारिक जीवन हमें दिखाई देते हैं। उनके नाटक साहित्य में अंकित पारिवारिक संबंधों, उनमें उपस्थिति तनावों एवं विघटन आदि को निम्नलिखित शीर्षकों के अन्तर्गत विश्लेषित किया जा सकता है

1. स्त्री-पुरुष संबंधों में तनाव

रत्नगर्भा में डॉ.शंकर शेष ने इला और सुनील के जीवन संघर्ष को प्रस्तुत किया है। सुनील एक प्रसिद्ध डाक्टर है। यश और नाम पाने की उसकी प्रबल आशा है। उसकी पत्नी इला अपने जेवर भेजकर सुनील को हार्ट स्पेशलिस्ट और सर्जन बनाने के लिए विदेश भेजती है। अपने पति के लिए कुछ भी त्याग करने में इला को दूसरी बार सोचने की ज़रूरत नहीं है। सुनील विदेश में पत्नी के प्रेम से एकनिष्ठ रहकर शिक्षा प्राप्त करता है। इला भी सुनील के न होते हुए भी उसे अपने आस-पास महसूस करती है। इसके बीच घर में स्टोव फटकर इला का चेहरा जल जाता है। वह कुरूप हो जाती है। इला नहीं चाहती कि सुनील की पढ़ाई में किसी प्रकार की बाधा उत्पन्न हो इसलिए वह सुनील से इस दुर्घटना के बारे में नहीं कहती है। सुनील

विदेश से आता है तो इला को देखकर घबरा जाता है लेकिन वह इला के प्यार के प्रति वह फिर से आकृष्ट हो जाता है। वह सोचता है इला ने सुनील को विदेश भेजने के लिए अपना सब कुछ त्याग दिया है। इसलिए उसे इला की ख्याल करना चाहिए। लेकिन बाद में वह जगदीश जैसे खल नायक के चाल में पड़कर इला से घृणा करने लगता है। इला के प्रति सुनील के प्रेम, विश्वास, प्रणय आदि उसके प्रति घोर विरोध में बदल जाता है वह शराब पीने, हुआ खेलने तथा वेश्यालय जाने लगता है सुनील का व्यक्तित्व नष्ट हो जाता है। उसकी आर्थिक स्थिति भी बुरी हो जाती है। कर्ज वापस माँगने के लिए लोग घर आते जाते हैं। जगदीश बताता है कि संकटों से बचने के लिए उसे इला की हत्या करनी होगी बीमा के पचास हजार रुपये के लिए सुनील इला की हत्या करने तैयार हो जाता है लेकिन इला की बहन माया सचेत होकर इला की रक्षा करती है। इतना होने पर भी इला सुनील को क्षमा करती है। आखिर इला और सुनील के जीवन पर निर्णय लेने के काम नाटककार प्रेक्षक पर छोड़ देता है।

रत्नगर्भा नाटक का पूरा कार्यव्यापार एक उच्च-मध्यवर्गीय परिवार के ड्राइंगरूम में ही घटता है। इस नाटक में आज की भौतिकवादी जीवन दृष्टि और आदर्श के संघर्ष की पृष्ठभूमि में नर-नारी के संबंधों को रूपायित करने का प्रयास किया गया है। अर्थ और आदर्श के बीच संघर्ष और इस पृष्ठभूमि में पति-पत्नी के परस्पर संबंधों का विश्लेषण करना ही इस नाटक का मूल स्वर है। व्यक्तिगत अहं की तुष्टि एवं सुखोपभोग ही सुनील के जीवन को बर्बाद करनेवाली स्थिति का कारण है। सुनील पूँजीपती न होकर सुविधानुसार प्राप्त हो गई पूँजी और भोगविलास की सब-संस्कृति के दो स्तरों में संक्रमित रहने वाला दयनीय उच्च मध्यवर्गीय चरित्र है।

दुर्घटना के कारण विकृत चेहरा बन गयी इला की दयनीय अवस्था का चित्रण इसमें हुआ है। आधुनिक पति सुनील अपनी पत्नी इला के बाह्य सौंदर्य से ही आकर्षित होता है बाह्य सौंदर्य नष्ट हो जाने पर वह इला की आंतरिक सौंदर्य को भी नकार देता है। अमानवीय और अनैतिक होना उसके लिए कोई अर्थ नहीं रखता शंकर शेष 'इला' के माध्यम से यह बताना चाहता है कि आधुनिक

युग में नारी भले ही कितनी आधुनिक और सुशिक्षित क्यों न हो, परंतु आज भी उसपर पति का अंकुश है। इला विवश है उनका दांपत्य जीवन केवल बाह्य सौंदर्य की कमी के कारण बिगड़ गई है, नीरस और अशांति फैल गई है। इला की बहन माया सुनील को शंका की दृष्टि के देखती है और उसके विरोध में आवाज उठाती है क्योंकि वह जानती है कि कमजोर जब चरित्रवान होने का ढोंग करता है तो खतरनाक हो सकता है।

रत्नगर्भा में शंकर शेष ने बनावटी जीवन भोगने वाले प्रतिष्ठित लोगों पर कहकर व्यंग्य किया है 'जीवन की वास्तविकता से दूर नारी के बाह्य सौंदर्य पर रझने वाले इस वर्ग की नियति अभिशाप है जो कभी अपनी अलग पहचान नहीं बना पाती।' ¹ बनावटी जिंदगी जीने-भोगने वालों द्वारा घटित समस्याओं का चित्रण प्रस्तुत नाटक में हुआ है।

श्रीमती सुनीता मंजनबैल ने इस नाटक के बारे में कहा है कि 'आलोच्य नाटक में पति-पत्नी संबंधों के टूटने के सभी प्रमुख कारण, जैसे-आपसी अविश्वास, काम-वासना की अपूर्ति अर्थ की हवस और तीसरे व्यक्ति का आगमन की ओर संकेत करते हुए इस समस्या का चित्रण किया है। नाटक के अंत में 'भ्रमभंग' होने के पश्चात् दुखी और असमंजस से घिरी इला को दिखाकर नाटककार १ समस्या को और गहन बनाता है।' ² इला अपने पति को मनुष्य बनाने के लिए अपनी जान तक कुर्बान करने के लिए तैयार हो जाती है। यही तो भारतीय नारी की विडंबना है कि वह अपने आदर्श चरित्र के कारण पति को समर्पित हो जाती है।

डॉ.शंकर शेष के सर्वप्रथम प्रकाशित नाटक बिन-बाती के दीप में उन्होंने स्त्री पुंश्रु संबंधों को नए धरातल पर रखकर दांपत्य जीवन को अधिक असली रूप में अंकित करने का प्रयास किया है। नाटककार ने इस नाटक के द्वारा इस तथ्या का उद्घाटन किया है कि नैतिक-अनैतिक मान्यता काल-सापेक्ष और व्यक्ति सापेक्ष होता है। जीवन में अतिरिक्त महत्वाकांक्षा की धुन सवार होनेवाले व्यक्ति के चारित्रिक पतन के साथ भारतीय नारी का आदर्श रूप भी शंकर शेष ने इस नाटक में उजागर किया है।

शिवराज औसत श्रेणी का कवि तथा लेखक है। लेकिन वे कविताएँ अच्छे कंठ से गाते थे, कवि सम्मेलनों में बुलाए जाते थे। उसके कंठ ने ही विशाखा को उसकी ओर खींच लाया था उसने विशाखा से विवाह करने का निश्चय किया लेकिन उसके परिवार के सदस्य और दोस्त उसके विरोध में खड़े हो गए प्रश्न यह था कि विशाखा की माँ के आँखों की रोशनी नहीं थी। 'सारा समाज जानता था। सब यही सोचते थे कि धतूरे के पेड़ पर धतूरे का फूल उगेगा, लडकी माँ पर जाएगी।' ³ पर शिवराज विचलित नहीं हुआ, वहतो ऐसे हिंदुस्तानी आदमी है जो निडर है। उनका प्रेम सूर्य के प्रकाश की भाँति शादी में परिणत हुआ।

विशाखा भी साहित्यिक है, लेखिका है। उसकी कहानियाँ श्रेष्ठ

पत्रिकाओं में छपती थी। वह अपना प्रथम उपन्यास लिखकर पूरा करती है कि वह अंधी हो जाती है। शिवराज को स्वप्न में भी अनुमान नहीं था कि ऐसा हो जाएगा। उसके स्वप्न अंधकार की कड़ में समा गए, उसकी कविता की निर्झरणी सूख गई। आदर्श और सत्ते प्रेमी शिवराज को मोह का क्षण ग्रस ही लेता है। बचपन से पालित पोषित शिवराज की महत्वाकांक्षा का सर्प अपना फन निकालकर फूत्कारने लगता है। ⁴ उसने विशाखा के उपन्यास को अपने नाम से छपवाया। रातों रात वह हिंदी साहित्य जगत का श्रेष्ठ लेखक बन जाता है। यश की भूख ने उसे बेईमान बना करवाता है। विशाखा द्वारा लिखे गये सारे उपन्यासों को अपने नाम नाम के साथ उसे रूपया भी बहुत मिला। मकान, गाड़ी, टेलीफोन, टाइपिस्ट सब मिल गया। अंधी विशाखा उसके लिए सोने का अंडा देनेवाली मुर्गी बन गई।

टाइपिस्ट के रूप में आयी मंजू को शिवराज ने धन और विवाह का प्रलोभन दिखाकर अपने वश कर लेता है। दोनों मिलकर विशाखा के सामने एक बनावटी दुनिया बना देते हैं। झूठी प्रशंसा सुनवाकर विशाखा को और लिखने की प्रेरणा देता है। शिवराज विशाखा के अंधेपन से ऊबे हुए थे लेकिन विशाखा समझती है कि अंधी की लाठी बन गया है। वह शिवराज के बचपन के मित्र आनंद को शिवराज के घिनौने कृत्य और साजिश का पता चलता है। उसने विशाखा के सामने सब सत्य खोलता है। लेकिन विशाखा शिवराज के अपराध की क्षमा करती है। शिवराज आत्मग्लानि से चीख उठता है।

प्रतिभाशून्य शिवराज स्वार्थी तथा अतिरिक्त महत्वाकांक्षी है। यही कारण से उसके चारित्रिक अधःपतन हो जाता है। टाइपिस्ट मंजू का कहना है कि शिवराज सबसे खतरनाक अदमी है। उसमें रूपयों के साथ नाम कमाने की धुन भी सवार हो गई है। इसलिए आदर्शवान, निडर हिंदुस्तानी होते हुए भी शिवराज की वर्तमान दुरवस्था हो गया है। शिवराज खुद बोलता है कि 'मेरी इस यश की भूख ने मुझे बेईमान बना दिया।' ⁵ शिवराज ने एक क्षण के मोह में, प्रसिद्धि की भूख में अपना स्वर्ग खो दिया। उसकी दुर्घटना की साथी है मंजू। जब शिवराज गलती कर चुके थे तभी मंजू उसके जीवन में आयी थी उसे भी अपनी गलतियों का एहसास है लेकिन वह आर्थिक विवशता में गिरी हुई थी। अपने परिवार को उठाने के लिए ही वह शिवराज की साथ दिया था शिवराज विशाखा के उपन्यास चुराते रहे और मंजू उसका विश्वास चुराती रही। विशाखा और शिवराज के बीच तनाव को पैदा करने में मंजू भी एक कारण है

नटवर शिवराज की हरकत के समान बातों को अनजाने में अपने नाटक कथावस्तु के रूप में कहता है तो वह उसे बकवास कथावस्तु कहता है। की 'शिव सुनी है, पर जो अपनी पत्नी को धोखा दे वह नीच है, पापी है।' ⁶ नटवर द्वारा नाटककार ने जीवन के कड़वे, मिठे सत्य को अभिव्यक्त करता है।

आनंद द्वारा ही विशाखा के सामने शिवराज के कारनामों का

पर्दाफाश होता है और वह विशाखा को सत्य से परिचित होने का एक अंतर्दृष्टि प्रदान करता है। डॉ. प्रकाश जाधव ने लिखा है 'शिवराज द्वारा विशाखा के उपन्यास अपने नाम पर छापना उसे अनैतिक एवं अन्यायकारी लगता है। मंजु को चाहकर भी, उसकी अंधी महत्वाकांक्षा के कारण वह उसे ठुकरा देता है'¹⁷ उसका व्यक्तित्व अस्वाभाविक रूप से आकर्षक दिखाई देता है।

'बिन बाती के दीप' नाटक में शंकर शेष ने अंधेपन की समस्या के मुद्दों पर वर्तमान पति-पत्नी के बीच की संघर्ष तथा मध्यम वर्गीय नारी की लाचारी और आर्थिक विषमता को चित्रित किया है। नैतिकता और अनैतिकता के बीच पैर फिसल गये अतिरिक्त महत्वाकांक्षी लोगों की विसंगतियों पर प्रकाश डालने वाला नाटक है बिन बाती के दीप।

घरौंदा नाटक की शुरुआत मोदी एण्ड मोदी कंपनी के दफ्तर के माहौल से होता है। सुदीप जो इस नाटक का नायक है कंपनी के क्लर्क है और बड़े बाबू, मिश्रा, सोडावाला आदि उसके साथ दफ्तर में काम करता है। कंपनी के मालिक है मोदी, जो अर्धे उम्र के है। छाया जो नायिका है टाइपिस्ट के पद पर नई नियुक्ति हुई है। उसकी शक्ल मोदी की स्वर्गीय पत्नी से मिलती जुलती है। इसी कारण ही मोदी ने उसको नौकरी दी थी।

बड़े बाबू पहले ही दिन छाया को कागज़ का पुलिंदा देकर शाम तक टाइप करने को कहता है। सुदीप छाया की मदद करता है। मोदी छाया के प्रति आकर्षित है और मोदी द्वारा उसकी तारीफ दिन-ब-दिन बढ़ती गयी। लेकिन छाया सुदीप से प्यार करती है।

सुदीप चोपड़ा, अब्दुल और गुहा के साथ एक लृज में रहता है। यह छाया से कहता है कि वह शादी इसलिए नहीं कि क्योंकि बीवी को रखने के लिए जगह नहीं है। उसका अपना घर नहीं है। छाया कहती है कि हर महीने थोड़ा थोड़ा बचाकर मकान थरादेंगे। लेकिन सुदीप उसको समझाता है कि उनकी समस्या गरीबी है और वे कभी मकान के लिए पचास हजार नहीं इकट्ठा कर सकता। चाल में ही रहने पड़ेगा। लेकिन छाया सुदीप को धीरे धीरे बँधाता है कि एक-एक पैसे बचाकर फ्लैट खरीदेंगे। सुदीप भी इसका साथ देने को राजी हो जाता है।

महीनों बाद सुदीप का ग्रेड प्रमोशन हो जाता है। वह बड़ा क्लर्क बन जाता है। मकान के लिए प्रयत्न जारी रखता है। लेकिन उनके सब प्रयत्न बेकार हो जाता है। मकान लेने के सब रास्ते खत्म हो देते हैं। छाया ने एक एक बूंद खून जलाकर मकान के लिए प्रयत्न किया। पहलीबार बिल्डर रूपये लेकर भाग गया। दूसरी बार उसका भाई। वह अमरिका जाने के लिए छाया की भावना पर खेला। उसके बाद मकान मालिक उनके आठ हजार रूपये हड़प कर ले गये। इसी बीच छाया के सामने मोदी ने विवाह का प्रस्ताव रखा। लेकिन छाया इस प्रस्ताव को अस्वीकार करते हुए नौकरी छोड़ने के लिए तैयार हो जाती है। लेकिन सुदीप कहता है कि खान की कर्ज देने के लिए उसे नौकरी करना ही पड़ेगा। सुदीप षड्यंत्र रचाता है कि छाया मोदी

से शादी करके उसकी मौत का इंजाम करेंगे। चूँकि मोदी दिल का मरीज है। छाया अनमना शादी के लिए तैयार हो जाती है।

छाया मोदी की खूब देखभाल करती है। उसकी तबीयत दिन-ब-दिन अच्छा होता रहा। मोदी कहता है कि छाया की पैर पड़ते ही उसके बिज़नेस में फायदा हुआ है। सुदीप अक्सर छाया से कुछ-कुछ कारण बताकर रूपए हड़प कर ले जाता है। वह खान का कर्ज चुकाता भी नहीं और छाया से उससे भी अधिक रूपये ले जाता है। आखिर जब वह छाया से मोदी की हत्या करने को कहता है तो छाया उसके लिए राजी नहीं होती उसके प्यार भरे व्यवहार से मोदी की जीने की इच्छा फिर से करवट ले रही थी। फिर भी उसे डर है कि कहीं छाया ने उसकी जायदाद के मोह में तो उससे शादी की है लेकिन धीरे-धीरे छाया और मोदी के बीच की तनाव प्यार में बदल जाता है।

2. विवाहोपरान्त प्रेम

आधुनिक युग में हम देख सकते हैं कि विवाह के उपरान्त भी स्त्री पुरुष नए प्रेम बंधन आरंभ करते हैं। आज पति-पत्नी के बीच प्रेम के बदले शारीरिक संबंध ही अधिक है संबंधों की इस नवीनता का रूप शिक्षित वर्गों में अधिक दिखाई पड़ता है। 'रत्नगर्भा' नाटक का सुनील उसके लिये अपना सब कुछ खोया पत्नि इला नियति के क्रूर हाथों का खिलौना बनने पर उसको छोड़कर उसकी बहन के साथ प्रेम का रिश्ता जोड़ना चाहता है।

'सुनील : हलो माया, यू लुकचामिंग माया, तुम स्वर्ग की परी हो. नहीं तो यह तुम्हारी बहन. (इला एकदम रुआंसी हो जाती है)'⁸

किसी अपघात में इला की सूरत विकृत हो जाने पर सुनील अन्य स्त्रियों के साथ स्वच्छंद व्यवहार करने लगता है। विलास का आनंद उठाने के लिए उसने अपनी पतिव्रता पत्नी इला के साथ मनमानी करता है।

विवाहोपरान्त प्रेम संबंध का एक और दृश्य डॉ. शंकर शेष का नाटक बिन बाती के दीप में भी उपस्थित है। प्रस्तुत नाटक का नायक शिवराज साधारण स्तर का कवि है। राष्ट्रीय स्तर के शिखर पर पहुँचने की उसकी महत्वाकांक्षा है। अपनी महत्वाकांक्षा की पूर्ति के लिए शिवराज प्रतिभासंपन्न और अंधी युवती विशाखा से विवाह कर लेता है। वह शिवराज के लिए वरदान बन जाती है।

शिवराज विशाखा के उपन्यास को अपने नाम से छपवाकर रातोंरात हिंदी साहित्य जगत का श्रेष्ठ लेखक बन जाता है। शिवराज के इस रहस्य को केवल टाइपिस्ट मंजु जानती है। इसलिए वह उसको प्यार के जाल में फँसाता है।

'शिव : मंजू, मैं तुमसे प्रेम करता हूँ मैं चाहता हूँ कि अब तुम मेरे जीवन में.....'⁹

इससे विशाखा और शिवराज के जीवन में तनाव उत्पन्न हो जाता है। उसके साथ पारिवारिक जीवन में जो अनुशासन कायम रह गया था उसका विघटन होने लगा।

3. सुविधाभोगी मनोवृत्ति

सुविधाभोगी मनोवृत्ति का विकृतरूप 'रक्तबीज नाटक' में देखा जा सकता है। नाटककार ने छोटे पुरुष को केंद्र में रखते हैं, जो बड़ा बनना चाहता है। वह अपने वर्ग से घृणा करता है और अपनी वर्गीय पहचान छुपाने की कोशिश उसमें हिंसक और अपराधीपन भरती है वह अपनी पत्नी के माध्यम से अपने बाँस का इस्तेमाल करता है और बड़ा पुरुष अपने हितों के लिए छोटे पुरुष को इस्तेमाल करता है। यथार्थ विडंबना यह है कि छोटा पुरुष बड़े पुरुष द्वारा शोषित होने को तैयार है। क्योंकि वह सुविधाओं और स्वत्व की अपनी भूख किसी भी कीमत पर शांत करना चाहता है। उसके सामने समझौते की विवशता का हथियार उसकी निश्चित नियति है और उनके लिए नीति, मूल्य नियम के कोई मायने नहीं है।

डॉ.शंकर शेष ने रक्तबीज के माध्यम से सुविधा की पूर्ति के लिए प्रयुक्त इस्तेमाल के दुनिया का चित्रण किया है समस्याओं से छुटकारा पाने के लिए व्यक्ति कुछ भी करने को तैयार है। वह अपनी जिंदगी से संतुष्ट नहीं है 'छोटा पुरुष बस इन्हीं बातों से तो छुटकारा पाने की कोशिश कर रहा हूँ, सुजाता। ये भी साली कोई जिंदगी है। पैसे-पैसे के लिए तरसो हमेशा अपने अपाहिजपन का एहसास। केवल तमाशाई भीड़ की तुच्छ सदस्यता। एक पत्ता भी कहीं न हिला सकने की विवशता की घुटना।'¹⁰ योग्यता और मेहनत से कोई काम नहीं चलता।

एक और द्रोणाचार्य नामक नाटक में लीला और कृपी के चरित्र से भी सुविधाभोगी मनोवृत्ति का पता लग जाता है। सुरक्षा और सुविधा के मोह में पढ़कर ही लीला ने अरविंद को अन्याय के रास्ते पर चलने के लिए मजबूर करता हुआ दिखाई देता है। कृपी भी सुरक्षा और सुविधा की प्रेमी है। उसने भी द्रोणाचार्य को अन्याय के विरुद्ध आवाज़ उठाने से रोका। कृपी की सुविधा भोगी मनोवृत्ति ही द्रोणाचार्य को ऋषि परंपरा से गिराकर रजपुत्रों की दासता में धकेल दिया था।

4. मध्यमवर्गीय परिवार और गरीबी

मध्यमवर्गीय परिवार का पहचानपत्र के रूप में गरीबी दिखाई दे रहा है। मध्यवर्ग की महत्वाकांक्षाएँ उच्चवर्ग के समान हैं लेकिन उनकी गरीबी के कारण वे अपनी महत्वाकांक्षा की पूर्ति करने में असफल दिखाई पड़ता है। उनको मज़दूरों से भी कम तनख्वाह मिलते हैं। 'घरौंदा' नाटक के सुदीप और छाया का भी यही हाल है। छाया की परिवार की हालत भी उनकी गरीबी के कारण पूरी तरह से विकल हो गया है। सुदीप के परिवार का विघटन इसी गरीबी के कारण हुए है। छाया और सुदीप गरीबी में उलझकर अपनी माँ को भी नकारते हैं। गरीबी के कारण निकट संबंधों को भी बोझ समझने लगा है जटिल अर्थ व्यवस्था मध्यवर्गीय परिवार को संघर्षपूर्ण मोड़ पर खड़ा कर देता है।

मोदी ने छाया के सामने शादी का प्रस्ताव इसलिए पेश किया

क्योंकि वह गरीब परिवार की लड़की है। सुदीप कहता है- 'अगर किसी लखपति की जवान लड़की उसकी औरत जैसी ही दिखाई देती तो क्या वह उस प्रकार का प्रस्ताव रखने की हिम्मत कर सकता था ? तुम्हारे सामने उसने प्रस्ताव इसलिए रखा क्योंकि तुन गरीब हो। क्या यह साजिश नहीं हो ?'¹¹ गरीबी के कारण छाया मोदी के यहां की नौकरी न ही छोड़ पाती है और न ही सुदीप से क्रसकी प्यार को शादी तक जा सकती है। अपनी इच्छा के अनुसार शादी करने के लिए परिवार को गरीबी से दूर बसाना पड़ता है। मध्यवर्गीय परिवार कभी इस गरीबी की पकड़ से मुक्त नहीं हो पाते।

डॉ.शंकर शेष के नाटकों में जहाँ भी मध्यवर्गीय परिवार का चित्रण है हुआ वहाँ मध्यवर्गीय विकराल आर्थिक व्यवस्था का ही चित्रण हुआ है। नयी सभ्यता नो नमूने नाटक में जो मध्यवर्गीय परिवार चित्र उभरता है उसका भी आर्थिक व्यवस्था संघर्षपूर्ण दिखाई देता है। इस नाटक का मुख्य पात्र कृष्ण मध्यवर्ग का प्रतिनिधि है। उसके परिवार में भी धन की अभाव है। यही मध्यवर्ग की विडंबना है। प्रथम श्रेणी में ग्रेज्युट होने पर भी कृष्ण को नौकरी नहीं मिलती धन के अभाव के कारण कृष्ण की माँ को समय पर इलाज नहीं दे सकता है और उसकी मृत्यु हो जाता है। जब उच्चवर्ग के लोग आडंबर की आड में विलासिता का जीवन बिताते हैं तो मध्यवर्गीय परिवार गरीबी के तप में चूर-चूर हो रहा है।

शंकर शेष का नाटक 'मूर्तिकार' में भी मध्यवर्ग का यही हालत है। अर्थ के अभाव में अनादी की माँ बेमौत मर जाती है। हम सकते हैं कि अर्थ के अभाव में मध्यवर्गीय परिवार का भविष्य खतरे में पड़ गया है।

5. प्रेम की नयी मान्यताएँ

प्रेम का मानवजीवन में अत्यन्त प्रमुख स्थान है पुराने जमाने में भारत में प्रेम को अत्यंत पवित्र माना है। मूल्य विघटन की इस आधुनिक युग में प्रेम संबंधी मान्यताओं में कई परिवर्तन आया है डॉ. शंकर शेष का नाटक घरौंदा में सुदीप और छाया के प्रेम का आधार भावना और भावुकता न होकर बौद्धिकता तथा जैविक आवश्यकता पर निर्भर होता दिखाई देता है। आर्थिक चक्रव्यूह में पैसा सुदीप छाया को मोदी से विवाह करने के लिए मजबूर कर देता है। लेकिन उसका इरादा यह है कि दिल का मरीज मोदी कब भी मर सकता है, उसके बाद उसका सारा जायदाद छाया के नाम पर आ जायगा और दोनों मिलकर खुशी से जीवन बिताएँगे। सुदीप अपने स्वार्थ के लिए मोदी के खिलाफ षडयंत्र रचाने के लिए अपनी प्रेमिका छाया का ही इस्तेमाल करता है। छाया जब मोदी के साथ विवाह करने से इनकार करता है तो सुदीप प्रेम की नयी मान्यता प्रस्तुत कर छाया को मोदी के साथ विवाह करने के लिए मजबूर करता है।

'छाया : लेकिन मैं तुम्हारे अलावा किसी के बारे में सोच भी नहीं सकती।

और यह पाप.....

सुदीप : पाप केवल एक धारणा है, छाया । उसकी कभी कोई स्थायी व्याख्या नहीं है। सामर्थ्य और प्रसंग ही उसके होने न होने का फैसला करते हैं । अगर मैं तुम्हें पापी नहीं समझता तो चुम फिर किसी दूसरे के प्रति जवाबदेह नहीं हो शायद । हम थोड़ा अलग होकर ही एक-दूसरे को पा सकते हैं । बस, यही एक रास्ता है । मोदी से हाँ कह दो, मैं कह रहा हूँ, जाओ हाँ कह दो । जाओ, हाँ कह दो ।¹²

आधुनिक युग में प्रेमी प्रेमिकाएँ अपने प्रेम की पूर्ति के लिए शार्टकर्ट का रास्ता अपनाता है नयी सभ्यता नये नमूने नाटक में प्रेम स्वार्थ पूर्ति का साधन मात्र दिखाई देता है प्रस्तुत नाटक का नायक कृष्ण कन्हैया मध्यवर्ग का प्रतिनिधित्व करनेवाला है कालाबाजार से पैसा कमाने वाले लखपति व्यापारी की बेटी है स्मृति कृष्ण उससे प्यार का नाटक करता है । वह स्मृति को बताता है कि वह लखपति चाचा का भतीजा है । मैं ही उसका असली वारिस हूँ । उसकी मृत्यु के बाद मुझे पाँच लाख रुपये मिलने वाले हैं फिलहाल मेरे पास फूटी कौड़ी नहीं है । कृष्ण स्मृति से पैसा लूटने के लिए उसके प्यार में लिखा हुआ नाटक दिखाया है । लेकिन भुलकृप्रसाद जो अमीर बाप का बेटा है स्मृति से प्रेम करता है मगर स्मृति उससे घृणा करती है । स्मृति को वश में करने के लिए भुलकृप्रसाद कृष्ण को स्पया देता है ।

पाश्चात्य संस्कृति की उपासित और मुक्त जीवन भोगी धरणी जो एक अमीर बाप की बेटी है कृष्ण के प्यार करता है कृष्ण भी अपने स्वार्थ पूर्ती के लिए धरणी से प्रेम का नाटक रचता है । अत्याधुनिक सभ्यता का प्रतीक धरणी अपने रूप अंगार पर अधिक ध्यान देती है । उसकी इसी कमजोरी का फायदा उठाकर कृष्ण उससे फिल्म बनाने के लिए पंद्रह हजार रुपये पाता है । धरणी से प्रेम करने वाला दूसरा पात्र है गगनबिहारी । लेकिन धरणी उससे प्यार नहीं करती है । लेकिन कृष्ण स्पयों के लिए गगनबिहारी से भी सौदा करता है । इस प्रकार सभी पात्र स्वार्थ की पूर्ति के लिए प्रेम को एक साधन के रूप में स्वीकृति करते दिखाई देते हैं ।

उपर्युक्त विवेचन के आधार पर हम कह सकते हैं कि डॉ शंकर शेष ने पारिवारिक यथार्थ को अत्यंत व्यापक फलक पर चित्रित करने का प्रयास किया है। पारिवारिक यथार्थों में विशेषतः स्त्री-पुरुष संबंधों के सकारात्मक एवं नकारात्मक दोनों अंशों का तथा मध्यमवर्गीय परिवार का डॉ शंकर शेष ने अपने नाटकों में विशिष्टता से चर्चा किए हैं । सुविधा भोगी मनोवृत्ति तथा प्रेम की नई मान्यताएँ वर्तमान परिवार का एक बड़ा अभिशाप है जिसका मूल कारण उनके नाटकों में चित्रित हुआ है । अतः कहा जा सकता है कि डॉ.शंकर शेष के नाटक अनेक पारिवारिक यथातथ्यों से ओतप्रोत है ।

समकालीन हिन्दी साहित्य में नई प्रवृत्तियाँ एवं समस्याएँ

डॉ. षिजा ग्रेस

सहायक आचार्या, सी.एम.एस कॉलेज, कोट्टयम

संस्कृतियों की जननी भारत की समकालीन साहित्य में सामाजिक समस्याएँ, चुनौतियाँ, विसंगतियाँ, जटिलताएँ, यंत्रणाएँ आदि दृष्टिगत है। इसमें अनुभव तथा जीवन-यथार्थ प्रस्तुत है। बदलते हुए सामाजिक, आर्थिक एवं नैतिक संबंध इसका मुख्य विषय रहा है। समाज के बदलने के साथ-साथ साहित्य में भी परिवर्तन आ जाते हैं। समकालीन हिन्दी साहित्य में भी नई प्रवृत्तियाँ एवं समस्याएँ द्रष्टव्य है।

समकालीन साहित्य में विशेषकर हिन्दी साहित्य में बदलते हुए पारिवारिक, वैयक्तिक संबंधों को दर्शाया है। समकालीन साहित्यकारों ने व्यक्ति के माध्यम से समाज की हालत को सामने लाया है। इन रचनाओं में नर-नारी संबंधों में आए बदलाव, कामकाजी नारी की समस्याएँ, महानगरीय जीवन की यंत्रणा और खोखलेपन, व्यक्ति की मानसिक व्यथा, बोझिलता आदि चित्रित है।

हिन्दी साहित्य की समकालीन कहानियों में सामाजिक, आर्थिक, नैतिक संबंधों में आए बदलाव का चित्रण मिलते हैं। मानव ही इसका केंद्र-बिंदु है। डॉ. मंजुलता सिंह की राय में, “समकालीन कहानी में जीवन-सापेक्ष समस्याओं, आदर्शों की निरुद्देश्यता, मूल्यहीनता और प्रदर्शनहीनता स्वभाव और क्रियाहीन स्वभाव वाले मनुष्य का चित्रण है।”^१ इन कहानियों में यथार्थबोध अधिक झलकती है।

समकालीन हिन्दी कहानियों में सामाजिक, पारिवारिक, वैयक्तिक संबंधों में आए हुए बदलाव अत्यंत रोचक ढंग से दर्शाया है। कमलेश्वर जी की कहानी ‘मैं’ का साहब अपने घर में घुसते वक्त पुलिस ने उसे चोर समझकर पकड़ लिया। वे अपने स्वत्व को दूसरों के सामने साबित करने में असफल हो जाते हैं। अजनबी कहानी में व्यक्ति का अजनबीपन एवं अकेलापन का उल्लेख हुआ है। ‘अच्छा थीक है’ कहानी में आर्थिक तनाव में बिगड़ते पति-पत्नी संबंध को दर्शाया है।

नारी विमर्श समकालीन हिन्दी साहित्य का उल्लेखनीय मुख्य प्रवृत्ति है। साहित्य में नारी का चित्रण सर्वप्रथम पुरुष द्वारा किया गया था। महिला लेखिकाओं के उदय के संबंध में डॉ. इंदिरा गोस्वामी ने यों लिखा है, “केवल १९-वीं शती में उनकी स्थिति कुछ सीमा तक सुधरी। तब तक स्त्री का चित्रण भारतीय साहित्य में पुरुष लेखकों के द्वारा ही हो रहा था। अतः हम कह सकते हैं कि ये पुरुष लेखक ही थे जिन्होंने स्त्रियों को अपने अधिकारों के लिए संघर्ष करने एवं उन्हें समाज में समानता का स्थान दिलवाने के लिए द्वार खोले। समय के साथ-साथ महिला लेखकों ने शक्ति प्राप्त की तथा भारतीय साहित्य में अपना स्थान पाया।”^२ पुरुषप्रधान समाज में आर्थिक सत्ता का केंद्र पुरुष ही है। पितृसत्तात्मक आर्थिक व्यवस्था के कारण पिता की संपूर्ण संपत्ति का कानूनन अधिकारी पुत्र ही होता है। ‘एक स्त्री’ कविता में मंगलेश डबराल ने नारी - पीडा के हर पहलुओं को प्रस्तुत किया है:-

“सारा दिन काम करने के बाद

एक स्त्री याद करती है

अगले दिन का काम

एक आदमी के पीछे

चुपचाप एक स्त्री चलती है

उसके पैरों के निशान पर

अपने पैर रखती हुई

रास्ते भर नहीं उठाती निगाह”^३

नारी-उत्थान की बातें तो सब कहीं होते हैं, लेकिन व्यवहार के स्तर पर वह कहाँ तक पहुँचता है, इस बात पर उन्होंने जोर दिया है।

दलित साहित्य समकालीन हिन्दी साहित्य के केंद्र में प्रतिष्ठित है। दलित-चेतना का आविर्भाव नाथों और सिद्धों के साहित्य से ही

माना जाता है। कबीरदास जी दलित मुक्ति आन्दोलन के प्रारंभिक उल्लेख्य कवि है। समाज के उत्पीडित, दरिद्र शूद्र को ही दलित माना जाता है। समकालीन हिन्दी साहित्य दलित, पीडित, शोषित वर्ग को उनकी शक्तियों एवं अधिकारों से परिचित कराते हैं। पवन करण जी की कविता 'कहना नहीं आता' दलित वर्गों का प्रतिनिधित्व करती है। इसमें कवि ने यों लिखा है:-

“तुम्हें कहना नहीं आता

कहने क्यों चले आए

पहले कहना सीखो

फिर अपनी बात कहना

जिनके पास कहने को है

जो कहना चाहते हैं

जिन्हें कहना नहीं आता

मैं उनमें से एक हूँ।”

वास्तव में दलित -पीडित वर्ग को समाज के केंद्र में लाने के लिए दलित साहित्य ने अपना योगदान दिया है।

आदिवासी साहित्य भी समकालीन मुख्य प्रवृत्ति है। आदिवासी समाज व्यापक शोषण का शिकार है। शिक्षित, सभ्य समाज उनका शोषण करते हैं, आज भी आदिवासी स्त्रियों की खरीद-बिक्री जारी है, उनके साथ सामूहिक बलात्कार जैसे जघन्य अपराध होते रहते हैं। आदिवासियों की दुर्दशा को कवयित्री निर्मला पुतुल अपनी कविता में यों प्रस्तुत करती है:-

“मैं अपने इलाके के सूखे और

अकाल की चर्चा करना चाहती

हूँ आपसे-

भूख बिमारी से लडते-मरते मंगरू, बुधवा और

इलाज के लिए राशन कार्ड गिरवी रखने वाले समरू
पहाडिया की

बात करना चाहती हूँ

जड खाकर जिंदा संतालों

और चूहे पकाकर खा रहे भूखे-नंगे-पहाडियों की

बात करना चाहती हूँ

उत्तर प्रदेश के एक जनपद में पाँच हजार में बिकी

सत्रह वर्षीय सोनामुखी हासदा की बात करना चाहती हूँ मैं

मैं बात करना चाहती हूँ हिजला मेला देखकर वापस घर लौट
रही

मेलचे मूर्मु के साथ हुए सामूहिक बलात्कार की”

डॉ.मोहन जी ने व्यक्त किया है, “कवयित्री निर्मला पुतुल का अनुभव जिस सच्चाई को बयान कर रहा है, वह आदिवासी समाज के व्यापक शोषण का है। यहाँ पर स्त्री समाज पर छाये दोहरे अमानवीय खतरों पर भी निगाह रखी गई है। कवयित्री पूरे अंचल में फैले भूख और बेरोजगारी की चर्चा तो करती ही है, उसमें मरे मँगरू और बुधवा की शिनाख्त करना नहीं भीलती है।”^४ आदिवासी स्त्रियों की खरीद-बिक्री तथा बलात्कार जैसे अपराध को समाज के सम्मुख प्रस्तुत करने में समकालीन साहित्य सफल हुए हैं।

भूमंडलीकरण समकालीन हिन्दी साहित्य की मुख्य प्रवृत्ति है। इसका सबसे बड़ा खतरा आम जनता तथा उनकी अभिव्यक्तियों को अर्थहीन बना लेना है। वास्तव में भूमंडलीकरण ने हमारे स्वत्व का हनन किया है। भूमंडलीकृत समाज में विकास केवल समाज के अभिजात वर्ग तक सीमित रह गया। भूमंडलीकरण ने बाहरी परिस्थिति को परिवर्तित किया होगा, परंतु व्यक्ति की भीतरी स्थिति में कोई बदलाव नहीं आया है। डॉ.ए.अरविंदाक्षन जी के मत में, “आज की भूमंडलीकृत संस्कृति में यह एक सरल -सी सदिच्छा नहीं है। यह एक शूद्र दृष्टि है, जिसको बचाये रखने का मतलब है अमानवीय संस्कृति का प्रतिरोध।”^५ कुमार अंबुज की कविता में लिखा है:-

“यों तो मैं खुश हूँ

परन्तु मुझे शर्म आती है

अपनी समकालीन कायरता पर

मैं शब्दों से काम चलाता हूँ

परन्तु मुझे अब कुछ दूसरे हथियार भी लगेंगे” (अतिक्रमण संग्रह)

समकालीन हिन्दी साहित्य में जीवन-यथार्थ, मानवीयता, समानुभूति, सामाजिक प्रतिबद्धता आदि दृष्टिगत है। यह आने वाले पीढ़ी के लिए एक महत्त्वपूर्ण विरासत है। समकालीन साहित्य में मानवीय संसक्तियों की बहुवर्णी छवियाँ द्रष्टव्य हैं। वास्तव में समकालीन हिन्दी साहित्य निरंतर गतिशील है तथा इसकी समकालीनता मनुष्य के यथार्थ पर केंद्रित है।

THE ROLE OF COMMUNITY BASED ORGANIZATIONS IN RURAL DEVELOPMENT

¹Jobins Joseph & Manu Kurian²

¹Research Scholar, Gandhigram Rural Institute, Dindigul

²Faculty, Department of Social Work, St. Joseph's College, Moolamattom.

Community Based Organisations (CBOs) have the requisite potential for bringing sustainable development to local communities in rural areas. Institutions of state and other development agencies are increasingly seeking the involvement of CBOs in conceiving, planning and implementation of rural development programmes. CBOs are generally established with the motivation and support from outside agencies such as state or other development agencies or even large NGOs. Some CBOs have also emerged independently from within local communities with the motivation and missionary zeal of indigenous community leaders. The approaches to rural development have evolved from state's 'top-down' approach through 'passive participation' to 'interactive and contributory participation' of people in the process of rural development. The approach, which strives to institutionalize people's participation through mobilization of communities, is characteristic of CBOs.

Significance and Emergence of CBO

The ultimate aim of rural development programmes have been the mitigation

of poverty, eradication of illiteracy, development in health and the consequent enhancement of the standard of living of rural population. Most of the rural development programmes in the past were exclusively conceived and designed by the ministries and departments of the government. The needs of the 'rural people' were assessed and programmes were formulated by the higher institutions of the state. There was hardly any consultation, let alone meaningful participation of rural communities. The rural development schemes/programmes were then implemented by various functionaries of the state. Most implementing agencies and their functionaries had little knowledge of the local conditions in rural areas. Above all, they usually remained less interested in the outcome of development projects or programmes. Not surprisingly, many of the earlier rural development programmes failed to achieve their objectives despite the immense investments made by the Indian state.

Later on, it was realized that people's participation is the key element for the success of rural development programmes.

Efforts were made to encourage participation but such efforts failed to bring about meaningful and sustained participation of rural people. People participated in various state sponsored rural development schemes and projects but in a very limited way, i.e., nominally and formally only. They lacked enthusiasm to participate in a sustained manner in such rural development programmes. The reason being, that people did not develop a sense of belongingness to rural development programmes. They had a feeling that ultimately they will not be the owners of the assets created by various rural development programmes. Therefore, for all practical purposes, rural development programmes mainly remained government programmes and they did not become people's programmes.

By 1980s the development practitioners realized that 'top-down' approach had failed to encourage people's participation in rural development. They realized that it was not sufficient to ask rural communities to implement such development projects as were planned by ministries or other institutions of the state. It was further realized that rural communities must be involved in local level planning for the successful implementation of rural development programmes. It made a sound sense, since having lived in the area for many generations; a rural community usually has a direct knowledge of the local conditions. Even the technically and theoretically well versed, well intentioned and sincere development functionaries of state may not have intimate knowledge of the socio-cultural and economic conditions prevalent in rural areas. It was realized within the development paradigm, that role and participation of

communities need not remain limited to the activities related to the implementation of rural development programmes. Rather, such participation must be extended beyond implementation stage whereby local communities must be assigned the responsibility-(or ownership) to maintain the assets created in the course of rural development programmes. A vast number of assets created through development efforts in rural areas usually get decaying because of neglect or subsequent lack of continuance by the development agencies. Since the local community is the direct or indirect beneficiary of rural development programmes, it is in the best interest of the community to look after assets created by such programmes.

The local community is the first to notice any faults or become aware of any damage inflicted on assets in rural areas. Thus the assets created by any development project are likely to be much better maintained by the community rather than outside development agencies or institutions of state. For such a situation to materialize, it is necessary to have an interactive participation between local communities and development agencies even during the post implementation stage of rural development programmes. The whole process involving participation of local communities during all stages of rural development programmes, viz., conception, designing, formulation, implementation and post-implementation (maintenance of assets) lays the foundations of community based approach to rural development. For institutions of state, have large NGOs and other development agencies, community based organisations have turned out to be the most suitable 'medium for bringing sustainable development in rural areas.

CBO-Approach in the- Concept of 'Ladder of Participation'

In order to understand and appreciate how the CBO-approach is different from other 1 participatory approaches. Robert Chambers (2002) has employed the concept of 'ladder of participation' as follows:

Ladder of Participation

- i) **Passive Participation:** The process of participation starts with the passive participation of the community. The villagers remain mere recipients of benefits and do not play any role. The planning and implementation of programme strictly remains in the hands of Development Agencies (DAs).
- ii) **Consultative Participation:** Villagers are consulted to obtain their opinions, but decision making remains with development agencies. Information received from communities may or may not be used in designing and implementation of the programme.
- iii) **Contributory Participation:** Beneficiaries share the cost of the projects. Contribution may be in cash or kind or in the form of labour. Sometimes this contribution is saved for the future maintenance of the assets created by the project.
- iv) **Functional Participation:** Institutionalization of community participation in the form of collective action. Institutions such as Gram Vikas Mandal, Self-Help Groups, User Groups, Forest Project Committees, etc. are formed for effective and transparent implementation of the project. Development Agencies share

all information about the project with the villagers.

- v) **Interactive Participation:** Development Agencies interact with the community intensely and build capacity of the community to take decisions about the projects. Roles and responsibilities of stakeholders such as Development Agencies (DAs) and village institutions are decided during this stage. The DAs act as facilitators and the community becomes the implementer of the programme.
- vi) **Self-Mobilization:** In this stage, the community generates awareness about its resources, problems and possible solutions. The community starts realizing its development needs. The Development Agencies provide support to the village community to link up with other agencies.

Formation of CBOs

Communitybased organisations (CBOs) are small, informal organisations based within the local communities they serve. This makes it difficult for them to interface with other stakeholders in the development sector such as donors or government agencies. Many CBOs run development programmes, sometimes through intermediary NGOs.

The process of forming a CBO may begin with a Participatory Rural Appraisal (PRA). The aim of this exercise is to understand the status of the village with reference to a particular development project and the needs and demands of the rural community. The objectives of the project may be explained, especially how its provisions will meet needs and demands of the community. A Gramsabha

meeting may be an appropriate venue for such a discussion. Considerable time needs to be invested at the motivation and mobilization stage to ensure participation which is necessary for the sustainability of development project. Whether the community agrees to form a CBO may depend on the motivating effort of a development agency. An “inspirational visit” may be arranged to the community that has successfully implemented the project. For all meetings, including the very first meeting, both the time and venue of the meeting are chosen with care. The time chosen should be convenient to all the members of the community and the venue should be a public place where everyone feels free to walk in. The CBO has to develop its rules and regulations and procedures for carrying out the activities and for conducting meetings, appointing office bearers, etc. The CBO has to be registered under the appropriate law - as a cooperative, as a society, or as public trust. To do so, it will have to have a constitution. This would require interacting with bureaucracy and preparing or obtaining the required set of documents. An agreement or a Memorandum of Understanding (MoU) is usually signed between the CBO and the Ministry or the Development Agency, which owns, controls, or manages the resource. .

Providing technical and administrative/managerial training to the CBO is an extremely important responsibility of the external agent. The training may be in the form of classroom training or hands-on practical training. It may comprise visiting another community which has successfully implemented the project. Technical training may include gauging the quality of materials to be used in

repairs or construction, ascertaining the quality of the finished structures, and taking accurate measurements etc. Administrative/managerial training may be given for writing the constitution, dealing with bureaucracy, keeping minutes of the meetings, writing the agenda of the meeting, conducting a meeting, holding elections of the executive committee or other office bearers, maintaining project bank account and keeping accounts of the CBO.

Relevance of Community Organisation for Community/rural Development

Community organisation and community/rural development are interrelated. To achieve the goals of community/rural development the community organisation method is used. According to United Nations, community development deals with total development of a developing country that is their economic, physical, and social aspects. For achieving total development community organisation is used. In community development the following aspects are considered as important. The same aspects are also considered important by community organisation. They are;

- **Democratic procedures** deal with allowing all the community members to participate in decision-making. It is possible to achieve this by community organisation. The selected or elected members or representatives are helped to take decisions. Democratic procedures help people to take part in achieving community development goals. Community organisation method permits democratic procedures for people's participation.

- **Voluntary cooperation** means that the people volunteer for their participation. For this they are convinced. They should feel that they should involve themselves in the process of development without hesitation. This attitude is supported by community organisation method. People's emotional involvement is necessary to make success of the community organisation method. If discontentment about their conditions is created, then people will volunteer for participation. Community organisation emphasizes the discontentment aspect only to make them initiate people's participation.
- **Self-help** is the basis for community development. Self-help deals with the capacity of mobilizing internal resources. Self-help is the basis for self-sufficiency and sustainable development. In community organisation self-help is emphasized. Community organisation is relevant to community development because both emphasizes the self-help concepts.
- **Development of leadership** is an important aspect in community development. Leadership deals with influencing and enabling people to achieve the goals. Community organisation also emphasizes leadership. With the help of leaders the people are motivated to participate in action. Community organisation is a relevant method to develop and use leadership. This is applicable for community development also.
- **Educational aspects** in community development means helping people to know, learn, and accept concepts of democracy, cooperation, unity, skill development, effective functioning

etc. In community organisation also the above mentioned aspects are considered very important. The process of community organisation emphasizes education of the community. Thus both are emphasizing the educational aspects for the progress of the community. Thus community organisation and community development are interrelated and mutually supportive. There are no opposing aspects in between community organisation and community development as both emphasize democratic method and self-help principles. Thus they are relevant. So in all community development programmes community organisation method is used as implementing method.

Community Organization as a Problem Solving Method

In community organisation method the community is the client. Community organisation solves the community problems and fulfills the needs of the community. Many of the community problems like social injustice, poverty, inadequate housing, poor nutrition, lack of health, lack of medical services, unemployment, pollution, exploitation, bonded labour system, illicit arrack, dowry, female infanticide, women and children trafficking, drug trafficking etc. Being solved by using community organization method. In problem solving generally there are three basic aspects. These are study, diagnosis, and treatment. First the problem has to be studied. For this, information is collected regarding the problem. From the information collected the main causes are identified. This is called diagnosis. Based on the findings, or diagnosis, a solution is evolved

that is called treatment. Problems can be solved only with involvement of people due to which resources are mobilized to solve the problems. This method is specially applicable in Indian situations, because in India a large number of people are affected by poverty or other poverty related problems which need speedy solutions.

Conclusion

Community Based Organisations (CBOs) have acquired a critical relevance in the field of rural development. Institutions of state and other development agencies are increasingly motivating and supporting local communities to form community based organisations. They impart technical and administrative skills to CBOs for their effective contribution to the process of rural development. CBOs are further encouraged to become owners/managers of assets created through rural development programmes. In fact, CBOs are seen as the most effective medium for bringing sustainable development in rural areas such as to meet the needs and bring about and maintain adjustment between needs and resources in a community, helping people effectively to work with their problems and plan to realize their objectives by helping them to develop, strengthen, and maintain qualities of participation, self-direction and cooperation and bringing about changes in community and group relationships and in the distribution of decision-making power.

CHAPTER 16

EFFECT OF MALTHUSIAN VIEW AND THE RURAL POPULATION IN THE COVID-19 SCENARIO

Jovana Pramod

Guest Lecturer,
Department of Economics
St. Joseph's college, Moolamattom

ABSTRACT

Pandemic had affected the human life dating from 1350 BC. It caused high mortality rates, sweeping away millions of life. The recent Pandemic, Covid 19 has swept away 3.5 million plus (reported), and is continuing its death toll. Reverend Thomas Robert Malthus, proposed that there are two checks that limit the growth of population, i.e., Preventive check and Positive check. The paper tries to analyse, if there is any relation between the sayings of Malthus i.e., particularly, positive checks and the pandemics in the context of Covid 19 Pandemic.

Keywords: Pandemic, Preventive check, Positive check, Mortality rates, Population

INTRODUCTION

Pandemic can be defined as a form of epidemic, that affects people all around the world in a wide scale, within a small span of time. They are contagious, and affects the life of people and even surroundings. The world has experienced various forms and type of these epidemics during centuries. The most fatal epidemic that was ever recorded in history was Black death, which recorded a death toll between 75-200 million people during the 14th century.

There are several theories that states about the population growth. One of the oldest and prominent theory that establishes a point on population is made by Thomas Robert Malthus. In his book titled, "An Essay on the Principle of the Population" published in the year 1798, he explains about exponential population growth and arithemtical food supply growth.

Judith Butler critically addresses the concerns related to the social appropriation of the subject meticulously when she traces the psychic networks of power. The bodily will of feminine subjectivity suspends itself to be deceptively resistive. The true centre of Chandra's internal distortion is against the masked masculine morality. But when it comes to performative rupture Chandra's rebellion too becomes a subtly lost frame of subjective spatiality. The masculine fantasy of sensual strangeness infects the body of feminine facelessness here. That body of signification with the face of erasure becomes masked to be deceptive like the masculine morality.

Chandra as the performative site of subjection disowns her body of feminine free will and locks herself as the playfully aggressive exterior soul of masculine morality. "The soul is the effect and instrument of a political anatomy; the soul is the prison of the body" (Foucault 30) Foucault's well-known observation can be taken to conclude this argument related to the problematic loss of Chandra's feminine free will with her paradigmatic dependence on the masked quest of masculine will. The soul and body face critical distortion in different ways when they establish a critical relationship between each other to design a subject's space of performative confinement. Chandra's bodily will of sexual identity is attacked by the deceptive tool of masked (masculine) fantasy which becomes her soul's moral facelessness. The political anatomy of the soul's victimhood which also becomes the spectrum of loss for body stays at the centre of *Freedom at Midnight*, where freedom inevitably and ironically becomes a critical suspension of subjective will which enlivens the normative fantasy of institutionalized body.

DISMANTLING UTOPIA TO DYSTOPIA: THE ANTHROPOCENTRIC GREED AND ENVIRONMENTAL CATASTROPHE IN J. G. BALLARD'S THE DROUGHT

Lismin P. Samuel⁽¹⁾ & Roopa Jose⁽²⁾

Al-Azhar College, Thodupuzha,
St. Joseph's College, Moolamattom

ABSTRACT

James Graham Ballard's climate fiction *The Drought* opens with a dystopic world that exposes the aftermath of an environmental cataclysm marked by anthropocentric greed. J. G. Ballard is a British writer who is considered the pioneer of climate fiction or cli-fi that challenged the existing trend of Western science fiction of the 1950s. Climate fiction or cli-fi, a term coined by an American environmentalist Dan Bloom in 2007, illustrates climatic changes and ecological threats from a fictional point of view to make the people aware of the seriousness of the issue and thereby enable them to find remedies for these problems. Ballard's novel *The Drought*, which is also known as *The Burning World*, is an open ending climate fiction. It visualizes through the perspective of the protagonist Dr Charles Ransom, how a year-long drought has dried out the planet due to humankind's uncontrollable exploitation. This paper studies the relationship between literature and physical environment and how anthropocentrism leads to dystopia.

Keywords: J.G. Ballard, *The Drought*, Cli-fi, Ecocriticism, Anthropocentrism, Dystopia.

Spirituality of Action: Reading O. V. Vijayan's *Khasakkinte Ithihasam* and *Gurusagaram* Through William James' Concept of Religion

Vinod Balakrishnan and Shintu Dennis

INTRODUCTION: THE CONCEPT SPIRITUALITY THROUGH JAMES AND VIJAYAN

Dale Riepe's "A Note on William James and Indian Philosophy" must count as one of the most convincing assessments of James' encounter with Indian philosophy (Riepe 1968). While many have rightly located James' encounter with the London Lectures of Swami Vivekananda (1897) and Max Muller's account of Sri Ramakrishna (1899) in *The Varieties of Religious Experience* (1902) and *Pragmatism* (1907), not many have methodically addressed James' intellectual wrestle with a new found interest that required of him the committed involvement which he was reluctant to give.

* E-mail : nsavitha01@gmail.com

Abstract

Graphene quantum dots (GQDs) have drawn great interest due to their low toxicity and ease of synthesis. In the present work, GQDs are synthesized using the carbonization of citric acid and by dispersing carbonized products in water. The formation of GQDs was confirmed by Raman spectroscopy and X-ray diffraction (XRD). The Raman spectrum of GQDs has characteristic peaks at ~1392 cm⁻¹ (D peak) and 1597 cm⁻¹ (G peak). The relative intensity of the D to G peak is 0.87, which is similar to that of other high-quality GQDs, and it indicates the dominance of armchair edges over zigzag edges. The absence of the D' band which appears at slightly higher frequencies than the G peak also supports the quality of the particles. The XRD profile is consistent with previous reports. GQDs show strong blue luminescence with excitation dependence and a good response to ferric ions. Figure: (a) GQD under day light (left) and UV light (right), (b) Raman spectrum of GQD, (c) Excitation dependent PL emission from GQD, (d) PL detection of ferric ion

Key Words: GQD, Citric Acid, Photoluminescence, Fe Sensing

Gas Leakage Detection System using Arduino

Anila S & Sr. Morris Marieli Antoinette*

Department of Physics, St Joseph's College for Women, Alappuzha, Kerala-688001, India.

*E mail: marieli.fdcc@gmail.com, anilasudhababu@gmail.com

Abstract

In today's world, due to the busy schedule people rarely take care of utilizing the resources effectively. We know that gas is a useful component in the environment. Some gases do not cause any harm even if they are emitted in excess amounts but some do. Gas like LPG is used not only for cooking food in houses, but also in hotels, restaurants, and hospitals where there is human interaction. Also, we can see CNG operated vehicles. If there is any amount of leakage of these types of gases, it can cause huge destruction to life and property. Nowadays, home security has become a major issue because of the increasing leakage of gas. One of the preventive methods to stop accidents associated with the gas leakage is to install a gas leakage detection kit at vulnerable places. So to be safe from such situations, I have designed this project based on the ATmega328P microcontroller. The system makes use of an MQ-6 gas sensor. This sensor is used to detect any harmful smoke that is released in the atmosphere. I have programmed it in such a way that as soon as the smoke is detected, an alarm will be automatically switched on. This can alert the people when any gas that can cause great harm to living organisms is released so that they can take necessary precautions and steps to either prevent the smoke from spreading or evacuate the place quickly. The aim of this work is to propose and discuss a design of a gas leakage

| Summary: "Renewable Materials and Green Technology Products: Environmental and Safety Aspects looks at the design, manufacture, and use of efficient, effective, safe, and more environmentally benign chemical products and processes. It includes a broad range of application-based solutions to the development of renewable materials and green technology. The latest trends in the green synthesis and properties of CNs are presented in the first chapter of this book for generating social awareness about sustainable developments. The book goes on to highlight the naissance and progressive trail of microwave-assisted synthesis of metal oxide nanoparticles, for a clean and green technology tool. Chapters discuss green technological alternatives for the global abatement of air pollution, effective use and treatment of water and wastewater, renewable power generation from solar PV cells, carbon-based nanomaterials synthesized using green protocol for sustainable development, green technologies that help to achieve economic development without harming the environment, technical solutions to cut down the quantum of N losses, conventional processing techniques in developing the bionanocomposites as the biocatalyst, and more"-- Provided by publisher.

ABSTRACT

Air pollution seems to be the major unsolved problem of the modern era. This chapter deals with different causes of air pollutions and proposes some possible remedies. The green technological alternatives for the global abatement of air pollution are also suggested. The health problems associated with air contamination were also discussed.

3.1 INTRODUCTION

Environment pollution is a fruit of industrialization which shaped the modern lifestyle with the so-called use and throw culture. Nowadays the technological progress without effecting pollution is a risky game. Pollutants are substances emitted by industrial structures and products which are harmful to human beings and animals in particular and the environment

ABSTRACT

Wastewater originated from various industries like textile, agriculture, food, petrochemical, polymer, pharmaceutical, etc. and contains a large number of contaminants of oil and salt of inorganic and organic compounds. When this wastewater released into the ecosystem without any appropriate treatments causes major ecological issues with high environmental impacts. Also, the natural fresh water resources are getting depleted because of the increased demand for fresh water supply. There are different physical, chemical, and biological methods are developed for the treatment of water but these methods cannot abolish the contaminants. And also most of these conventional methods are very expensive. The development of green technology for water treatments has received enormous interest over recent years due to its significant advantages to the environment, society, and economy. In this chapter, we discuss the various green technologies for the treatment of water and wastewater.

4.1 INTRODUCTION

The world's population has increased to more than seven billion people. Each year world population continues to increase with a 1.2% growth rate.

ABSTRACT

In recent times, environmental and climate problems are one of the daunting issues across the world. Economic development without considering the environmental concerns causes the depletion of natural resources particularly water resources and air. This results in extensive ecological, financial, and social impairment on a global level. Therefore, it is very essential to enhance the usage of renewable resources and reduce the usage of nonrenewable resources to protect the environment for future generations. This reiterates the need to develop green technologies, which are required to achieve economic development without harming the environment. In this chapter, we discussed the synthesis of renewable and sustainable materials by different methods and their application in the development of green technology.

ABSTRACT

Environmental contamination by heavy metals, pesticide residues, dye stuffs, and other hazardous chemicals is a serious threat to public health. Carbon nanotubes are allotropic forms of carbon which are used for the pollution remediation mission. Carbon nanotubes (CNTs), CNT-nanocomposite, CNT–bimetallic hybrid nanocomposites, etc. can be used to detect and estimate these environment polluting chemicals. CNT-based electrochemical sensors are well known for their sensing applications. Voltammetric detections of heavy metals are done to sense the presence of poisonous chemicals in air, soil, and water. Electrochemical biosensors with various interfaces like nanoparticles, CNTs, and metal oxides are found in the literature. Polymer-based CNT composites are efficient candidates for environmental remediation. This chapter briefly narrates the role of carbon nanotubes in sensing environmentally hazardous chemicals.

9.1 INTRODUCTION

Chemicals that cause physical or biological harm are called hazardous chemicals. They include acids, phenolics, polyaromatic hydrocarbons,

Abstract

Bacterial cellulose (BC) is a multipurpose biopolymer with superior material properties, such as purity, high degree of porosity, relative high permeability to liquid and gases, high water-uptake capacity, tensile strength, and ultrafine network. This chapter explores the extraction and applications of BC from different sources. There are two main methods to produce BNC by bacterial strains. One is the static culture, which results in the accumulation of a gelatinous membrane of BNC is formed at the gas-liquid junction with the shape of the culture vessel. Applications of BC in immobilization of enzymes and cells, applications in cosmetics include facial mask, facial scrub, personal cleansing formulations, and contact lenses. BC for controlled drug delivery, transdermal drug delivery, dental drug delivery, protein delivery, tissue engineering drug delivery, macromolecular prodrug delivery, and molecularly imprinted polymer-based enantioselective drug delivery are also discussed in this chapter.

1. Bacterial nanocellulose (BNC)

Cellulose is the fundamental unit of the most plant substances. Cellulose has a large commercial use in paper, textile, cellulose nanofibrous mats, and pulp production units (Alemdar & Sain, 2008; Chirayil, Mathew, & Thomas, 2014; Geng, Yao, Zhou, & Oksman, 2018; Hoeng, Denneulin, & Bras, 2016; Lee, Hamid, & Zain, 2014; Mondal, 2017; Qiu & Hu, 2013; Sakurada & Kaji, 1969; Zhu et al., 2016). Plant cell walls are the major sources of cellulose. However, this type of cellulose contains several impurities, including lignin, pectin, hemicelluloses, etc. (Jarvis, 2018; Liu et al., 2016; Liu et al., 2017; Ravindran, Sreekala, & Thomas, 2019; Terrett & Dupree, 2019). Apart from plants, cellulose is also found in many microorganisms such as fungi, bacteria, and algae. Recent studies have revealed that cellulose can be produced by

Abstract—Due to the wide availability of IoT devices at affordable cost and the ease of use has increased IoT devices increased usage. Due to the enormous usage of the Internet of Things (IoT) devices, the security aspects related to the data are also a significant concern in this data-driven world. Negligence of security measures from users can result in severe data falsification or data thefts. In this scenario, the Intrusion Detection System has a pivotal role in IoT security. Incorporating the deep learning techniques is an effective way to predict various attacks, either known or unknown. This paper highlights the various security threats associated with IoT, the importance of deep learning in IoT intrusion detection, and various IoT intrusion detection systems using deep learning. Comparative analysis of the different deep learning techniques was performed. The results have shown Convolution Neural Networks gave high accuracy in prediction based on various evaluation metrics.

Keywords—deep learning, IoT, decision tree classifier, convolution neural network, deep neural network.

I. INTRODUCTION

In this era, the growth of the Internet of things (IoT) technology made possible the machine to machine communication and man-to-machine communication in a very effective and intelligent manner. Thus smart objects made human life more comfortable than a traditional lifestyle enabling us to control everything. According to CISCO, by 2021, the amount of associated devices will reach 50 billion, more than the world population [1]. This is evidence of the wide acceptability of this technology.

IoT is a technology that helps objects communicate with each other with internet[2][3] as the backbone. Computational intelligence and internet connectivity have a pivot role in IoT, as it is the combination of physical objects or things, controller or intelligence, networks or Internet, sensors, actuators, etc. The diagrammatical representation of IoT is portrayed in Fig.1.

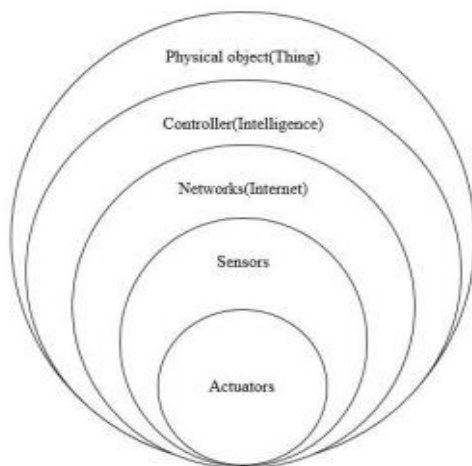

Fig. 1. Overview of Internet of Things (IoT)

This powerful and pervasive technology finds applications in all walks of life: home automation, health care, transportation, inventory management, agriculture, surveillance and monitoring, medical and engineering fields, and many more[4]. IoT devices are unique and dedicated to particular purposes. As it is intended to collect data from various sources, segregate it and make smart decisions, utmost importance must be given to the data collected. This is due to the nature of the highly private and confidential data the IoT devices handle. If proper care is not taken, serious concerns arise, which can lead to unexpected damages.

The privacy and security issues may be because of various reasons like threats, attacks, and other vulnerabilities. Risk is the net effect of threats and vulnerabilities. Risk is the inability to overcome the damage or destruction of a system or information because of threats exploiting the vulnerability. It is the outcome of threats and vulnerabilities. If there are threats and vulnerabilities in a system, then it is at risk. A threat is an action mechanism that takes the benefits of the system's security weakness and makes a security breach or negative impact on the system, which may be intentional or through natural hazards [5][6].

Similarly, attacks can also severely impact the system's security as it prevents normal operations by exploiting vulnerabilities using different techniques and tools. It is a security threat to destroy, remove, or change the information without authorized permission. There are different types of attacks, such as physical attacks, Denial-of-service, access attacks, and privacy attacks, etc. [5]. Vulnerabilities are a weakness of the system, which can be found in hardware and software, or liability is in the system's policies or system users themselves. Hardware weakness is related to hardware compatibility and interoperability, and it isn't effortless to identify and fix. Software weakness is related to operating systems, application software, and control software [5]. This paper is organized as follows; Section II explains the concept of Intrusion Detection Systems. Section III mentions the latest related works. Section IV presents the work done, followed by the conclusions in Section V.

II. INTRUSION DETECTION SYSTEMS

Effective mechanisms to handle numerous data security concerns such as confidentiality, integrity, and availability are essential [7] in any communication network. Intrusion detection systems (IDS) are tools or mechanisms to intercept pirated ingress and detect attacks. From 1980 onwards, the conceptualization of IDS was introduced by Jim Anderson and Heberlein [8]. Sensors, an analysis engine, and a reporting system are the major components of every IDSs. The IoT IDS can broadly be categorized based on placement strategy, detection methods, and security threats [9]. Based on placement strategy, IDS can be divided into centralized, distributed, and hybrid. The categories concerning detection methods are; anomaly-based, signature-based, and

Abstract—The importance of security aspects is increased recently due to the enormous usage of IoT devices. Securing the system from all sorts of vulnerabilities is inevitable to use IoT applications. Intrusion detection systems are power mechanism which provides this service. The introduction of artificial intelligence into intrusion detection systems can further enhance its power. This paper is an attempt to understand the impact of machine learning algorithms in attack detection. Using the UNSW-NB 15 dataset, the impact of different machine learning algorithms is assessed.

Keywords—Internet of Things, Intrusion Detection System, Machine Learning.

I. INTRODUCTION

The Internet of Things (IoT) has become a viable technology of the recent days as it has proved to assist us in many ways. As the technology is progressing and the technology literates' are also increasing, an enormous usage of IoT devices is evident in various scenarios of surveillance and monitoring, medical and engineering, business and inventory applications and many more. As the acceptance of such devices are more, the inherent security issues also has be thought of seriously, as these IoT devices are quite resource constrained to have stringent security measures to be embedded within. Intrusion Detection Systems (IDSs) are used to monitor the network for any sort of malicious activities that can harm the system and immediately inform the administrator to take remedial actions. Traditional networks can use IDS either in the network or in the host. In IoT perspective, a newer approach is required due to its resource limitations. The use of machine learning (ML) techniques can further strengthen this security mechanism especially in the case of heterogeneous IoT devices.

Security concerns can be either intentional or unintentional[1]. Either of these can cause unpredictable damages to the system. Moreover it is quite easy to manipulate the IoT devices as they can be easily accessed and majority of these devices are of plug and play nature. The data collected and transferred by these devices are quite confidential and private data which has to be protected from thefts. Main threats often faced by IoT applications are the various attacks like DDoS, Botnet, Mirai and the system vulnerabilities. Different approaches for intrusion detection exists each with its own merits and demerits. They mainly differ in the method of

identifying the attacks. The signature based approach checks for pattern matches from the database in the system. Any new attack will not be identified with this approach. An up gradation of this called specification based approach is also used which requires an expert to create guidelines and specifications of the expected behaviour of the network. Both these approaches may not be able to identify novel attacks. Hence another approach called anomaly based approach which uses machine learning algorithms have proved to identify many more attacks. Recent trend is to use a hybrid approach which incorporates various above mentioned approaches and machine learning algorithms.

This paper is an attempt to understand the performance of various machine learning algorithms so that they can be used in the IDS for IoT devices. A short description of the recent works in the area is given in Section II followed by the various machine learning algorithms selected for this study in Section III. Section IV mentions the methodology used, Section V specifies the experimental setup, Section VI details the results and discussions, Section VII states the conclusions and future scope followed by the references used.

II. LITERATURE REVIEW

The introduction of artificial intelligence in improving security has proved to be very efficient and hence many researches are happening in this area. Xiao et al. had done a detailed study on the ML based IoT security techniques wherein they point out that even though many machine learning algorithms exists, the computational cost, requirement of large training datasets and complicated feature extractions [2].

Liang et al. had done an interesting study in this area mentioning the merits and demerits and the vulnerabilities that can happen when using machine learning for security aspects in IoT[3]. More than the issues, the authors had highlighted the benefits achieved through ML like the speed of attack detection and better accuracy. They also gave an awareness of how adversarial networks can fool the system. According to Yao et al. the major problems that is faced by any ML based IDS is the non-identical distribution and class imbalance problems which affects the robustness of the model. In order to solve these issues, the authors had proposed semi-supervised multi-level algorithm.

When reviewing the literature it is seen that the most commonly used dataset is the KDD cup dataset. The main reason

EFFECT OF TA BATA TRAINING ON ENDURANCE AND SPEED OF COLLEGE LEVEL HANDBALL PLAYERS

***Dr. Thomas George Vengaluvakkel C.M.I.**, Assistant Professor

St. Joseph's College, Moolamattom Arakulam P.O., Idukki - 685 591, Kerala, India

****Mr. Gopu M Vijayan**, Assistant Professor, Department of Physical Education

St. Academy of Higher Education and Research Moolamattom Arakulam P.O., Idukki - 685 591, Kerala, India

ABSTRACT

The objective of the study was to analyse the benefit of Tabata training on college level handball players. The experimental design of this study was random group design. For this purpose (N=30) thirty college handball players were selected (male), of age group 18 to 21 years from Idukki Handball association, Idukki, Kerala. The subjects were split into two groups of fifteen (n=15) each namely experimental group (EG) and control group (CG). The experimental group underwent eight weeks of Tabata training programme on alternate days pre week (Monday, Wednesday and Friday).

The dependent variables selected for the study were speed, and endurance and the independent variable selected for the study was Tabata Programme. The dependent variables selected were tested before and after the training programme for both the groups using standardised tests. After the data collection, the data were statistically examined by applying descriptive statistics, paired 't' test and analysis of covariance. All the data were analysed by using statistical package for social sciences (SPSS). The level of significance was fixed at 0.05 level. The result of the study indicated that there was a significant differences in endurance and there was no significant difference in invariable speed.

INTRODUCTION

The Sports training is understood as a process of systematic development of each component, which leads to achieving maximum efficiency within the selected sports discipline. In the broad sense, sport training is the entire process of systematic preparation of athletes for highest levels of athletic performance. Besides, it is the organized process of scientific preparation of athletes

for uppermost levels of athletic performance. Performance is understood as an extent to which motor task is accomplished. In the case of the athlete, performance is evaluated following rules of the sports discipline which were set in advance, which is expressed by the merit of the motor activity and is understood as a sports performance. An ability to achieve a given performance repeatedly is referred to as efficiency. Sports'

A CASE STUDY ON VODAFONE INDIA MERGER WITH IDEA CELLULAR

Dr. Joseph George

St. Joseph's College, Moolamattom

ABSTRACT

The case discusses the merger between India's third largest mobile telephony company Idea Cellular and the second largest mobile operator in the country, Vodafone India Limited. The deal announced in March 2017 was valued at around US\$ 23 billion. The merger came in the aftermath of an unprecedented change that the Indian telecom landscape had undergone after launch of Reliance Jio Infocom Ltd. in September 2016. The leading players in the industry who were already facing financial challenges due to huge infrastructure costs and a high debt burden, faced more problems with the exodus of customers to Jio. To face the onslaught from Jio, the telecom operators went into consolidation mode, acquiring spectrum, small players, infrastructures, etc. With Jio growing stronger by the day with offers like free mobile headsets, and another competitor Airtel also looking at consolidation through acquisitions, Idea-Vodafone faced a tough road ahead. It remains to be seen whether the biggest ever merger in the history of Indian telecom would prove to be a game changer in the world's second largest telecom market.

Keywords: Merger, debt, consolidation

History

On 20 March 2017, Idea and Vodafone India announced that their respective Boards had approved a merger of the two companies. The merger got approval from Department of Telecommunication in July 2018. On August 30, 2018, National Company Law Tribunal gave the final nod to the Vodafone-Idea merger. The merger was completed on 31 August 2018 and the newly merged entity is named Vodafone Idea Limited. The merger created largest telecom

company in India by subscribers and by revenue. Under the terms of the deal, the Vodafone group holds a 45.2% stake in the combined entity, the Aditya Birla Group holds 26% and the remaining shares held by the public.

Idea previously brought Spice Communications Ltd, operating as Spice Telecom, for over Rs. 2,700 crores. Idea Cellular Limited was an Indian mobile network operator based at Mumbai, Vodafone Group is a British multinational telecommunication com-

NAAC & ACADEMIC LIBRARY PERFORMANCE INDICATORS

Droupathy Devi C G

UGC Librarian Stage II, St Joseph's College Moolamattom

ABSTRACT

National Assessment and Accreditation Council (NAAC) was established in 1994 as an autonomous institution of the University Grants Commission (UGC) with its Head Quarter in Bengaluru. Every 5 years, NAAC assesses the quality of the institution through a well-structured format. Annual Quality Assurance Report – (AQAR) is a yearly report, which should be submitted to NAAC every year by all Accredited Institutions as per the format prescribed online. Changes in society and education demand, the restructuring of performance indicators for academic libraries. COVID 19 pandemic situation, the new Education Policy, changes in technologies, and the mode of learning have redefined the role of the Libraries. It's high time to develop a new framework for assessing the performance of academic libraries.

Keywords: NAAC, UGC, AQAR, Covid 19, Academic Library

Introduction

National Assessment and Accreditation Council (NAAC) is the only Assessment procedure for assessing the quality of academic institutions in India. The NATIONAL ASSESSMENT AND ACCREDITATION COUNCIL (NAAC) conducts assessment and accreditation of Higher Educational Institutions (HEI) such as colleges, universities or other recognized institutions to derive an understanding of the 'Quality Status' of the institution. NAAC evaluates the institutions for its conformance to the standards of quality in terms of its performance related

to the educational processes and outcomes, curriculum coverage, teaching-learning processes, faculty, research, infrastructure, learning resources, organization, governance, financial well being and student services. (<http://naac.gov.in/index.php/en/about-us#vision>)

Every 5 years, NAAC evaluates each HEI's through a well structured format that is, SELF STUDY REPORT (SSR), which was divided in to 7 criteria. Every year NAAC collects the data through AQAR (Annual Quality Assurance Report). For both, the criteria's are the same. They are,

SIGNIFICANCE OF COMMUNITY BASED REHABILITATION (CBR) STRATEGIES IN HOLISTIC DEVELOPMENT OF PEOPLE WITH DISABILITIES

Jobins Joseph

Research Scholar, Gandhigram Rural Institute, Dindigul

Manu Kurian

Assistant Professor, St. Joseph's College, Moolamattom

Introduction

The World report on disability (WRD) is the first document to give an **extensive** global picture of the situation of people with disabilities, their needs, and the barriers they face to participating fully in their societies. The report states that more than 1 billion persons in the world have some form of disability. This corresponds to about 15% of the world's population. Between 110-190 million people have very significant difficulties in functioning. People with disabilities are more likely to be unemployed than non-disabled people. In Organisation for Economic Co-operation and Development countries, the employment rate of people with disabilities (44%) is slightly over half that for people without disabilities (75%). People with disabilities often do not receive needed health care. Half of disabled people cannot afford health care, compared to a third of non-disabled people. People with disabilities are more than twice as likely to find health-care providers' skills inadequate; nearly three times more likely to be denied health care; and four times more likely to

report being treated badly than non-disabled people (WHO 2010).

Children with disabilities are less likely to attend school than non-disabled children. Education completion gaps are found across all age groups in all settings, with the pattern more pronounced in poorer countries. Even in countries where most non-disabled children go to school, many children with disabilities do not go to school. For example in Bolivia about 98% of non-disabled children go to school, but fewer than 40% of disabled children attend school. In Indonesia, over 80% of non-disabled children go to school, but less than 25% of children with disabilities go to school. People with disabilities experience increased dependency and restricted participation in their societies. Even in high-income countries, 20-40% of people with disabilities lack the help they require to engage in everyday activities. In the United States of America, 70% of adults with disabilities rely on family and friends for assistance with daily activities (WHO 2011).

CREATIVITY AMONG RURAL ADULTS

Arathy M.S.

Resource person of Our Responsibility to Children (ORC)
Department of Women and Child Development
arathyms25@gmail.com

Dr. Justin Joseph

Assistant Professor in Psychology, St Joseph's college, Moolamattom

ABSTRACT

Creativity studied in various dimensions, but a few studies were conducted among rural population. Present study focused the creativity of rural young adults. The size of the sample was 100 (N=100) selected by using convenient sampling method from Idukki district. The creativity style scale of Kumar & Holman (1997) was used to collect the data. Data was analysed by using SPSS. The study revealed rural adult had higher level of creativity. Further, it revealed that young adults having lower level education had higher level of creativity than their counter part.

Key Words: Creativity, Rural adults, Rural area

Introduction

Creativity is arguably our most uniquely human trait. It enables us to escape the present, reconstruct the past, and fantasize about the future, to visualize something that does not exist and change the world with it. Defining creativity presents difficulties; for example, not all creative works are useful, and not all are aesthetically pleasing. Both usefulness and aesthetic value capture, in some sense, what creativity is about. Nevertheless, psychologists have almost universally converged on the definition originally

proposed by Guilford over sixty years ago (Liane Gabora, 2013). Creativity is a topic of interest across numerous disciplines and areas of study.

Numerous studies and interventions exist on the topic of creativity in the domains of education, work, art, science, and in society in general (Artola et al., 2012, Garaigordobil & Pérez, 2004). This thriving development exists side by side with an open debate on how to measure, apply, and develop creativity (Garaigordobil, 2003).

Tomsy Mani

Counsellor, Childline Collaborative Agency, Idukki

ABSTRACT

Menopause triggers familial, economical and career related discomforts among middle aged women. Present study focused on middle aged rural women. Because they were marginalised and side-lined with their problems. The study was conducted on a sample of 120 rural women aged in between 44 to 55. Results showed that menopause problems spouse support and type of family did not influence menopause problems of rural women. Further it revealed that types of occupation did not make any influence upon menopause and related problems. The mean cores of each group were slightly differed, but the difference is not statistically significant.

Key words: *Menopause, rural women, spouse support.*

Introduction

When a women's spring's ends, the other side prepares for her another time. She enters into another effective and illusory lifestyle. A woman's cultural and family circumstances, her education and her work affect her and her menopause. When her body, which is compatible with menstruation is slowly saying goodbye to it, she suffers from many kinds of hardships, both physically and mentally. According to Singh (2014) most prevalent symptoms identified include sleep disturbances, muscle or joint pain, hot

shes and night sweats. Menopause also increases the risk for certain conditions such as osteopenia, osteoporosis, decreased lung capacity and cardiovascular problems etc.

Menopausal women confront with various difficulties. Despite menopause being a natural part of the ageing process, there is a general lack of awareness of its symptoms and effects, often resulting in menopausal women experiencing a lack of support, as well as discrimination and harassment. The effects of menopause are most likely to manifest in sickness absence and perfor-

A CASE STUDY ON PETROLEUM PRICE HIKE IN INDIA

Dr. Joseph George

St. Joseph's College, Moolamattom, Idukki, Kerala

ABSTRACT

Petrol and diesel prices have been rising to record high levels recently in India. The government ended the practice of changing petrol and diesel prices, allowing oil marketing companies to revise fuel rates daily. Crude oil prices crashed in 2020 during the seventh phase of the covid-19 pandemic. But the petroleum prices did not come down in India. Petrol products are not brought under GST and it is an unfair practice from part of the government.

The reasons given by government about the price hike are covid-19 pandemic and reduced fuel production in international market. Fluctuation in the price of petroleum impacts the production and transportation costs of essential and various items.

The prices of petroleum would come down under the ambit of GST. Finance minister told that, it's a call that the GST Council has to take. If Council decides to bring petroleum under the ambit of GST, it will have to ensure that governments continue to earn the kind of money through petroleum taxes that they have been in the past. Another solution is that switching to electric vehicles. These vehicles offer better running realization. The demand and price of petroleum will be decreased by the increased use of alternatives.

Key words: Price hike, GST Council, Electric vehicle

Petroleum

Petroleum or mineral oil is India's next biggest source of energy after coal. It supplies heat and lighting power, machinery lubricants and raw materials for a variety of manufacturing industries. Petroleum refineries for synthetic textiles, fertilizers and numerous chemical industries act as a "nodal industry". Most of India's petroleum occur-

rences are associated with anticlines and fault traps in tertiary age rock formations. It occurs in folding regions, anticlines, or domes, where oil is trapped in the unfold crest.

In the petroleum industry, petroleum companies are divided into upstream, mid-stream and downstream. This refers to oil and gas Company's position in the supply

B. SCIENCE**MORE ON CHARACTERISTIC POLYNOMIALS
OF CHEMICAL TREES****Sabukkutty M G**Associate Professor in Mathematics
St. Joseph's College, Moolamattom, Idukki (Dist.) Kerala, India
mgsk474149@gmail.com**ABSTRACT**

The characteristic polynomials of graphs obtained from the structural diagrams of alkanes play a vital role in the study of their physical / chemical properties [2, 3, 7, 8, 11, 12, 15, 16]. The roots of these polynomials form their spectrum and the indices derived from these polynomials and the spectrum are found to be well correlated with their properties. In this paper we discuss some methods for an easy computation of the characteristic polynomials of chemical trees.

1. Introduction

Let G be a simple graph with vertices v_1, v_2, \dots, v_n . The adjacency matrix [6] of G in the

$$n \times n \text{ matrix } A(G) = \begin{cases} 0 & \text{if } i = j \\ 1 & \text{if } i \neq j \text{ and } v_i \text{ and } v_j \text{ are adjacent} \\ 0 & \text{if } v_i \text{ and } v_j \text{ are not adjacent} \end{cases}$$

A single numerical value characteristic of a graph is described as a topological index [6]. Topological indices are extremely useful in drug designing that saves time, money and lives of living beings contrary to the traditional trial and error method, many of these indices are constructed using the characteristic polynomials of graphs representing a chemical molecule. These indices are systematically tried out in the investigation of drugs in the treatment of COVID-19 [5]. Here we consider some methods which help in an easy computation of such polynomials.

We denote a path of length 'n' by P_n and its characteristic polynomial by L_n . The kenograms (hydrogen depleted diagram) of alkanes are trees (also called chemical trees) and we denote them by 'T'. For any chemical tree, the characteristic polynomial is given by $\varphi(T, \lambda) = |\lambda I - A|$ where ' λ ' is an indeterminate and 'I' is the identity matrix of the order of 'A' [14].

BIOLOGICAL APPLICATIONS OF NOVEL METAL-SCHIFF BASE COMPLEX FROM O-VANILLIN AND FURFURYL AMINE AND ITS PHYSICOCHEMICAL, SPECTROSCOPIC, CRYSTALLOGRAPHIC CHARACTERIZATION

Sijo Francis, Sreevidhya K.B. and Ann Rose Sebastian

Department of Chemistry, St. Joseph's College, Moolamattom

ABSTRACT

Schiff bases are condensation products of primary amines with carbonyl compounds. Schiff base-coordination complexes gain importance day by day in the present scenario because of their interesting applications in the catalytic, magnetic, and biological fields. Schiff's base formed from o-vanillin and furfuryl amine and their Co (II) and Ni (II) complexes were prepared herein. We employed FT-IR spectroscopy, TGA-DSC analysis, Magnetic susceptibility measurements, Single crystal XRD, Elemental (CHN) analysis etc. We also carried out the biological applications of the prepared complexes in the fields of antibacterial activity.

1. Introduction

Co-ordination chemistry is the study of metal complexes. The transition metals form many complex compounds in which a central metal ion and is surrounded by several ligands which are attached to it by co-ordinate covalent bonds. It is essential that the central ion should have vacant orbitals to accommodate lone pairs of electrons donated by the ligands. The atom in the ligand which may donate the electron pair is named donor atom or co-coordinating atom. The first systematic attempt at explaining the formation, structure, isomerism, bonding, and reactions of a coordination compound was made by Alfred Werner and is known

as the father of co-ordination chemistry. Diverse properties (physical and chemical) and structural aspects of coordination compounds which helps to understand the fundamentals of many bio-chemical processes. Co-ordination compounds have several applications which depend on their unusual stability. They play a significant role in industry, functioning of critical components of biological systems and life process. A few important compounds are porphyrin, chlorophyll, haemoglobin etc. Co-ordination compounds have several applications including separation of specific metal ions and catalysis.

Schiff bases are one of the extensively studied classes of ligands in metal coordi-

POSITRON ANNIHILATION SPECTROSCOPIC CHARACTERIZATION OF FREE-VOLUME DEFECTS IN POLYMERIC BLENDS

Jose James¹, Sabu Thomas²

¹Research and Post-Graduate Department of Chemistry

ABSTRACT

The size and the concentration of free volume defects in polymeric systems are monitored and their variations accurately traced using positron annihilation lifetime (PALS). The motivation behind the adoption of this particular protocol of characterization is that the polymeric blends like IPN (Interpenetrating networks) can act as platforms for designing cost effective toughened plastic with controlled morphology and mechanical properties. Thus, the correlation between PALS results with mechanical properties is given special emphasis in this work. This new modality of characterization versus composition uplifts and widens the application prospects of elastomer-thermoplastic blends.

Key words: Interpenetrating networks (IPN); positron annihilation; free volume defects; mechanical properties.

1. Introduction

Multi-component polymeric materials facilitate a new fabrication route to combine the properties of different polymers into one tailor-made material.¹ Homogeneous distribution of one polymeric component in another polymeric system is the necessary and sufficient condition for the design of multi-component polymeric systems with excellent performance characteristics.² The synthesis of an interpenetrating polymeric network (IPN) provides a promising path in this direction. IPNs are a combination of incompatible polymer networks in which at least

one of the polymers is synthesized and / or cross-linked in the presence of the other.³

Amorphous materials like rubber and plastic are characterized by a rich concentration of free volume defects, which are the unoccupied regions available for segmental motion within the polymer material. In addition to the intra- and intermolecular interactions and the segment and chain motions, the size, concentration and distribution of atomic-scale free volume holes often play important roles to control the macroscopic properties of polymers.⁴ The free volume defects arise due to the inefficient chain

REVIEW OF MICROWAVE FILTERS EMPLOYING SPLIT RING RESONATORS(SRR) AND COMPLEMENTARY SPLIT RING RESONATORS (CSRR)

Anju P Mathews

Assistant Professor, Dept. Of Physics, St. Joseph's College, Moolamattom

1. Microwave filters

Microwave communication links are an important practical application of the microwave technology and are used to carry data, voice and video over distances ranging from intercity links to deep – space spacecraft. Filters find applications virtually in any type of communication, radar or test and measurement system. In some applications such as communication satellite and mobile communication devices, it is critical that filters be devised with small size, light weight, and lower cost along with stringent electrical characteristics. Planar filter geometries are well suited for meeting these requirements.

The recent advances in novel materials and fabrication technologies, including monolithic microwave integrated circuit (MMIC), microelectro mechanical systems (MEMS), micromachining, high-temperature superconductor (HTS) and low temperature co-fired ceramic (LTCC) technology stimulated the development of new types of filters. The substrate integrated waveguide (SIW) is a promising technology considering its advantages as a new micro-

wave transmission media with the advantages of both the rectangular waveguides and planar transmission line. The upcoming filter realizations utilize SIW to a large extent for microwave as well as millimetre wave communications.

A survey of the major techniques used in the design of microwave filters is presented by Ralph Levy et al. [1]. It is shown that the basis for much fundamental microwave filter theory lies in the realm of lumped –element filters, which indeed are actually used directly for many applications at microwave frequencies as high as 18 GHz. Many types of microwave filters are discussed with the objective of pointing out the most useful ones, especially for the newcomer to this area.

1.1 Microstrip filters employing split ring resonators (SRRs)/complementary split ring resonators (CSRRs)

The electromagnetic behaviour of split ring resonator (SRR) and complementary split ring resonator (CSRR) coupled to planar transmission lines are analysed in litera-

ABSTRACT

A topological index of a graph G is a real number which is preserved under isomorphism. Extensive studies on certain polynomials related to these topological indices have also been done recently. In a similar way, chromatic variations of certain topological indices and the related polynomials have also been discussed in the recent literature. In this paper, the notion of chromatic M -polynomial is introduced and determined this polynomial for certain fundamental graph classes.

Keywords: Graph colouring, M -polynomial, chromatic M -polynomial, χ^- -chromatic M -polynomial, χ^+ -chromatic M -polynomial.

MSC2020: 05C15, 05C31.

1. Introduction

For all terms and definitions, not defined specifically in this paper, we refer to [10]. Further, for graph colouring, see [2]. Unless mentioned otherwise, all graphs considered here are undirected, simple, finite and connected.

A *proper vertex colouring* of a graph G is an assignment $\varphi: V(G) \rightarrow \mathcal{C}$ of the vertices of G , where $\mathcal{C} = \{c_1, c_2, c_3, \dots, c_\ell\}$ is a set of colours such that adjacent vertices of G have different colours. The cardinality of the minimum set of colours which allows a proper colouring of G is called the *chromatic number* of G and is denoted $\chi(G)$. The set of all vertices of G which have the colour c_i is called the *colour class* of that colour c_i in G . The cardinality of the colour class of a colour c_i is said to be the *strength* of that colour in G and is denoted by $\theta(c_i)$. We can also define a function $\zeta: V(G) \rightarrow \{1, 2, 3, \dots, \ell\}$ such that $\zeta(v_i) = s$ if and only if $\varphi(v_i) = c_s; c_s \in \mathcal{C}$.

Correspondence should be addressed to *robinjohn7@gmail.com

ABSTRACT

Since its discovery in 2004, graphene is being visualised as the miracle material whose realm spans into many fields, including the most awaited electronics industry which is already nearing a bottleneck due to the consequences suggested by Moore's Law. This article is an attempt to critically examine the realities of graphene research with a viewpoint that it could be a silicon killer. At first, a review of the exotic physical, chemical and mechanical properties of the two-dimensional material is conducted keeping in mind 100 % purity of the material. This follows a discussion on several device prototypes in which graphene overshadowed many other materials but with certain pragmatic flaws in terms of real-life execution and economy of those proposed plans. And the last section of this article showcases some of the promises graphene has already fulfilled and some others which are at the end of the tunnel waiting for the light. This includes products in the sports and lifestyle industry that offer lightweight high strength materials for various applications and a few other energy solutions based on graphene. The article is concluded with a remark on the growing graphene economy.

Keywords: Graphene, Graphene Super Capacitors, Graphene Batteries, Graphene Coatings, Graphene Bullet Proof Vests.

Introduction

It has been more than a decade since the term 'graphene' is associated with the future direction of science and technology. We think it is high time to critically evaluate the 'fact vs. fantasy' in this highly active area of research. It was silicon that had a long period of reign as the 'all in one material'

until recent developments in the nanocarbon world. Though fullerenes and carbon nanotubes took the attraction for a decade or so, graphene took the centre stage as a challenge to the throne of silicon from the year 2004 due to a number of exciting results from the Manchester group led by Prof. Andrei Geim and Prof. Konstantin

A REVIEW OF LIQUID/SUPERCRITICAL CARBON DIOXIDE AND ITS APPLICATIONS

Anu Antony

Department of Chemistry, St. Joseph's College, Moolamattom
anupalaparambil@gmail.com

ABSTRACT

Utilization of liquid and supercritical CO₂ as an environmentally benign alternative solvent platform has been one of the major thoughts of green chemistry. Over the years, many novel and innovative industrial strategies using this solvent system have developed by the inherent capabilities of this solvent system such as ease of solvent removal and tunability of solvent parameters. Despite its limitations in terms of understanding its full solvent capabilities, it has made inroads into several important areas such as fluoropolymer synthesis, dry cleaning, chemical separations and processing, microelectronic cleaning, pharmaceutical industry, textiles industry, extraction of natural products and synthetic organic chemistry. This review gives a summary of the evolution of green chemistry,

Keywords: Carbon dioxide, Supercritical, Green chemistry

Introduction

Over the past century, we are highly benefited by the advances in science. At the same time, we have paid an environmental price for this development. Reports from “United States Environmental Protection Agency” show that annual levels of toxic waste from the chemical industries are increasing every year. With the increasing population, non-renewable raw materials such as petroleum, natural gas etc., are disappearing very fast. The only tactical way to overcome this challenge is to switch on to renewable resources. This led researches

to move on to alternative sustainable technologies also known as green chemistry.

The term Green Chemistry was initially proposed by Paul Anastas in 1991.

Green chemistry is the utilization of a set of principles that reduces or eliminates the use or generation of hazardous substances in the design, manufacture and application of chemical products.¹⁻³ Paul Anastas and John C. Warner developed 12 principles of green chemistry.

Solvents have become an inevitable part in the field of chemistry. They are being

NUMERICAL SOLUTIONS FOR THE BOUNDARY LAYER FLOW OF A NANOFUID PAST A SEMI-INFINITE FLAT PLATE WITH THERMAL RADIATION

Joby Mackolil

Department of Mathematics, St. Joseph's College, Moolamattom
jobymackolil@gmail.com

ABSTRACT

The chapter discusses the mathematical modelling and numerical solutions for the nanofluid flow past a semi-infinite vertical plate. The thermal phenomenon is studied in the presence of thermal radiative heat flux which is modelled based on the Rosseland approximation. Two flow cases (stationary plate and moving plate) are compared. The governing equations are solved by using apt similarity variables and then are solved using finite-difference-based solver (bvp5c) in MATLAB. The flow and thermal profiles are analysed. Nanoparticle loading favours the thermal profile and the heat transfer rate in the Blasius flow case (stationary plate). On the other hand, it decreases the heat transport in the Sakiadis flow case (moving plate). The thermal radiative heat flux is observed to enhance the thermal profile due to the additional energy gained by the nanofluid. The findings suggest that the use of nanofluids instead of conventional working fluids will improve the performance and efficiency of heat exchangers, drying processes and solar collectors.

Keywords: Nanofluid; Flat plate; thermal radiation; Blasius flow; Sakiadis flow.

1. Introduction

Nanofluids have led to revolutionary changes in thermal applications due to the improvised thermal performance. Nanofluids are widely used in heat exchangers, solar collectors, nuclear reactors, stellar cells, smart coatings, and electronic cooling systems. The dispersion of nano-sized particles has led to better thermophysical properties, as first noted by Choi and Eastman [1]. Apart from experimental studies, mathematical modelling of nanofluid flows are cost-effective and time-saving procedures to draw information regarding the thermal efficiency. The enhanced thermophysical properties were initially incorporated in mathematical modelling by using the single-phase model, where the liquid is

A LOG BRIDGE TO LINGUISTIC LIBERATION: A PSYCHOLINGUISTIC READING OF CUSS WORDS IN *CHURULI*

Roby Mathew

Assistant Professor, Department of English

Churuli, a 2021 feature film which initiated heated arguments among political parties and orthodox cinema lovers, is observed as a film with ‘an overdose of foul language’ by the Kerala High Court in response to the petition filed by Sri. Peggy Fen regarding the excessive use of cuss words in the film. But on the contrary to the expectation of the petitioner and the conservative cinema lovers, the same court rejected the petition considering the report of a team headed by the Director General of Police which stated that nothing illegal was observable in the cinema and the court observed that, “Language in cinema is director’s call. Cinema is the artistic creation of the director and it is his discretion to choose the language”. It was in 2017, when the college magazine *Viswa Vikyatha Theri* released by the college union of Zamorin’s Guruvayurappan College which won accolades, awards and disapprovals, the readership in Kerala debated much about the cuss words in Malayalam and their etymology. When the wave of protest initiated by the college magazine was about to die out, Pellissery fanned it with his *Churuli* to perpetuate the

controversy affirming the hitherto obstructed linguistic freedom.

Churuli, the Malayalam film named after a small village in Idukki, captured the minds of the progressive lot and made the conservatives to frown due to the abundance of cuss words which has now become the vogue of the new generation cinema. *Churuli*, the Malayalam psychological thriller, celebrates the freedom of informal language in the guise of cuss words after *Joji*, yet another 2021 film with a difference. Lijo Jose Pellissery, the avant garde film director who gave visual form to the story of Vnoy Thomas scripted by S. Hareesh, narrated the story of human evolution from the primitive man to the ultra-modern man in a time frame of about two hours. Like a classical drama which has prologue and epilogue, *Churuli* opens with an animated narrative of a Namboothiri who attempted to trap a phantom that misleads travelers. In spite of the confidence of the Namboothiri to chain the phantom, the phantom misleads him in the guise of an ant eater which the Namboothiri met on the way. The predominance of spiral image throughout the film

‘मैं वो शंख महा शंख’ समस्याओं पर एक नजर

Ms. Vishnumaya C.P.

Guest Lecturer, St. Joseph's College, Moolamattom

Dr. Sobhitha Sebastian

Asst. Professor, St. Joseph's College, Moolamattom

हमारे देश में ऐसे अनेक व्यक्ति हैं जो समाज के केंद्र या मुख्यधारा में नहीं रहते। वे समूह जो आम जनता की तुलना में अधिक गरीबी और सामाजिक बहिष्कार के शिकार होते हैं, उन्हीं लोगों की ओर हम संग्रह में कवि ने पाठकों का ध्यान आकृष्ट करने दिखाई देते हैं। अल्प संख्यक समूह के अंतर्गत आनेवाले वे 'हाशियेकृत जनवर्ग' सामाजिक जीवन में सहभागिता हेतु संघर्षरत रहते हैं। लिंग, प्रजाति, जन्म, धर्म आदि के आधार पर पक्षपात का सामना कर रहे लोगों को हाशियेकृत जनवर्ग में शामिल किया जाता है। सामाजिक, सांस्कृतिक, आर्थिक दशाओं के परिप्रेष्य में हाशियेकृत जन की परिभाषा बदलती रहती है। हाशियेकृत जनवर्ग के अंतर्गत महिलाएं और बालिका शिशु, वधु, प्रवासी, धर्मिक, शरणार्थी, राष्ट्रीय अल्पसंख्यक, निशक्तजन, वृद्ध, आदिवासी लोग, आंतरिक रूप से विस्थापित लोग, एलजीबीटी, अनुसूचित जाति और जनजाति, वेश्यावृत्ति में सम्मिलित महिलाएं, एड्स संक्रमित और खानाबदोश या यायावर जैसे अनेक वर्ग आते हैं। हाशियेकृत जनवर्ग विभिन्न प्रकार के भेदभाव का सामना करते हैं जैसे रोजगार के अवसरों का अभाव, शिक्षा का अभाव, राष्ट्रीय संसाधनों तक पहुंच का अभाव, स्वास्थ्य साधनों का अभाव, निर्धनता की स्थिति,

मानवाधिकारों का उल्लंघन, सामाजिक सुरक्षा का अभाव, पौष्टिक भोजन और स्वास्थ्य सुविधाओं का अभाव। मैला होने वाले, कूड़ा उठाने वाले, झुग्गी में रहने वाले, सफाई कर्मचारी, एकल अभिभावक, शरणार्थी, सजा काट चुके व्यक्ति आदि भी हाशिये पर स्थित समुदाय में शामिल हैं। दुनिया भर में होने वाले तमाम प्रकार के मुख्य विघटन एवं मानवीय त्रासदी के कारण आज हाशिये पर खड़े मानव के प्रति पक्षधरता प्रकट करने का विचार अधिक मूल्यवान हो गया है। यह एक जागरूक चेतना है। मानव भविष्य के प्रति पक्षधरता प्रकट करना समकालीन कविता की घुरी मानी जा सकती है। आम आदमी के प्रति हमदर्दी प्रकट करने वाली समकालीन हिंदी कविता की एक व्यापक पृष्ठभूमि है और वह भारत की राजनैतिक एवं सामाजिक विसंगतियों से एकदम जुड़ी हुई है। अरुण कमल जैसे कवि केवल अपना प्रवक्ता नहीं है, वह समस्त जन एवं समस्त जीवों के एवं ब्रह्मांड की आवाज़ है। वह केवल एक खंड या कोटी की ओर से नहीं बल्कि सब की ओर से बोलता है। 'मैं वो शंख महाशंख' शीर्षक का अर्थवत्ता भी यह है। इस संकलन में कवि ने शंख महाशंख के तरह गणना से बाहर कर दी गई निर्बल किंतु संघर्षशील लोगों की कविताएं शामिल किया है।

साठोत्तरी कहानियों में चित्रित दाम्पत्य जीवन में पति का स्वरूप

Dr. Shemi John

Assistant Professor, St. Thomas College (Autonomous), Thrissur

विवाह समाज व्यवस्था का एक अत्यंत आवश्यक अंग है। विभिन्न प्रकार के परंपरागत रस्मों तथा विश्वासों के प्रतिमान विवाह-पद्धति के साथ जुड़े हुए हैं। राधाकृष्णन के मतानुसार, "विवाह एक परिपाटी ही नहीं बल्कि मानव-समाज का एक अंतर्निहित लक्षण है। वह प्रकृति के जैविकीय प्रयोजनों तथा मनुष्य के सामाजिक प्रयोजनों के बीच एक समायोजन है।" (1) विवाह का संबंध एक बहुत घनिष्ठ संबंध है। विवाहित जोड़े को सदा एक दूसरे के साथ रहना तथा एक दूसरे के लिए जीना है। दाम्पत्य जीवन की सफलता के लिए पति-पत्नी के बीच प्रेम, संयम, सेवा, उदारता की भावना होना आवश्यक है। प्राचीन काल से ही पुरुष को ही समाज और परिवार में उच्च स्थान दिया गया और आज भी यह परंपरा चली आ रही है। पुरुष ही घर का मालिक है। घर के मुखिया होने के कारण घर के सभी कार्यों का निर्वाह पुरुष को ही संभालना पड़ता है। शादी के बाद पुरुष पति बन जाता है।

पत्नी घर की देवी है तो पति घर का देवता है, घर का स्वामी है। स्वामी होने के नाते पति पर पूरे परिवार का दायित्व रहता है। उसके आचरण एवं व्यवहार का परिवार पर बहुत गहरा एवं दूरगामी प्रभाव पड़ता है। अतएव पति को चरित्रवान विवेक शील, सहनशील, धैर्यवान एवं सहृदय होना चाहिए। उसके आचरण एवं व्यवहार का परिवार पर बहुत गहरा एवं दूरगामी प्रभाव पड़ता है। पति घर के मुखिया है। पति के विचार, चिंतन एवं चरित्र का प्रभाव पूरे परिवार पर पड़ता है। पुरुष को अपने परिश्रम, कर्तव्य से कभी पीछे नहीं हटना चाहिए। घर की कर्ताधर्ता पुरुष है। यदि पुरुष अपने कर्तव्य अच्छी तरह न निभाया तो दाम्पत्य जीवन में दरार पड़ जाने की संभावना है। पति घर का दायित्व अच्छी तरह निभाया तो पत्नी के मन में पति के प्रति प्रेम की भावना बढ़ जाती है। ममता कालिया की 'काली साड़ी', श्रेह ठाकुर की

Influence of Work from Home on Employee Absenteeism in Post Covid 19 Era: Focus on it Sector Employees in Infopark, Kochi

ISBN: 978-1-943295-20-3

Tisha Tomy

Sheeja R

Amrita Vishwa Vidyapeetham

(tishatomy1@gmail.com)

(sheejar@am.amrita.edu)

COVID-19 has not just distressed the people's health. However, the world economy was paused. In response to the COVID-19 pandemic, government guidelines have forced many employers to allow their employees to WFH, greatly reducing number of staff working in an office. 100% of Information Technology sector employees totally worked from their homes at times of pandemic period. Employee absenteeism is a complex issue that can be caused by various factors. The present study will evaluate the influence of Work from Home on Employee Absenteeism during post COVID 19: focusing on IT Sector employees in Infopark, Kochi.

Keywords: COVID-19 Work from Home Employee Absenteeism IT Sector

1. Introduction

1.1 Work from Home

It was in Wuhan, China, the weird novel virus was initially discovered in 2019, November. It quickly escalated to different parts of the globe and in a very short period the World Health Organization proclaimed it as a pandemic, with the phraseology, 'Coronavirus Disease 2019' or 'COVID-19' (WHO, 2020). The name COVID-19 is a combination of 'CO' means 'crown,' 'VI' for 'infection,' and 'D' for illness, and 19 representing the year of infection (2019). Within very few weeks many nations including India announced bans in traveling and social spacing mandatory (De, 2020). Almost one- third of the globe was subject to lockdown at the behest of their respective authorities (Koh, 2020).

However, due to the COVID-19 outbreak, most organizations were forced to opt Work From Home (WFH) in early 2020 for a major portion of the human resources in various countries all over the world. Organizations in India have moved workplaces into the residence of their personnel, with majority companies catering the employees with required infrastructures like hardware and Wi-Fi facilities that are necessary for WFH (Gartner, 2020). But they often fail to equip their employees with the skills they need in order to work remotely (Molino et. al., 2020).

Work From Home is now the dream of many. Especially for today's millennials, you don't have to get up early, take a bath, dress up for the office and crash the long traffic jams that consume plenty of time. Enough to use makeshift clothes, then open the laptop from home and work. Compared to Working from the Office [WFO], WFH has the option to avoid traveling, offer comfortable working hours and accessible job atmosphere, and thus positively influence the satisfaction in job and work-life harmony of the employees. In general, the introduction of these flexible ways of working appears to be a planned decision that requires the organization to develop, prepare and adapt steps to constructively hold up employee productivity and achieve a stronger work-life harmony. (Allen et. al., 2015).

Like all other organizational changes, Work From Home has a number of advantages and disadvantages (Konradt et. al., 2003). WFH provides its employees with flexible working hours as well as the job for the employer is done efficiently and comfortably. It is desirable and feasible in offering work life harmony to the staff, and also simultaneously enables the company to complete the work and get it achieved. Nowadays, most employers offer this opportunity to their employees. It is also known as remote work or virtual work which signifies that the employee is working from a convenient and accessible location usually home. Work From Home may be particularly agreeable to workers with elder care responsibilities, and also to men who wish to partake in home care pursuits.

Work at home tends to increase employee's level of autonomy when moving from the office setting to the home. The employee who is working from his/her home is less exposed to control and surveillance measures, close supervision and therefore can enjoy more freedom in selecting the working hours and work patterns (Schaufeli & Bakker, 2004). However, despite the obvious attractions of WFH for both employee and employer, many challenges arise (Crandall & Longge, 2005) as the productive introduction of Work From Home measures poses greater challenges in the area of human resource management (Hall & Liddicoat, 2005).

Research reports both benefits and ill effects related to Work From Home. Its effects, therefore, have been quite explored. It is important to investigate how the "new manner of working", WFH, has impacted the performance, productiveness and output of workers without previous experience of telecommuting, and to pin point those distinct work environments impacting remote work in the course of COVID-19 crisis.(Vander et.al., 2020).

Difficulties in reconciling personal and work responsibilities are reported in studies as a conflict between family and work, a situation in which workers find it increasingly difficult to fulfill work responsibilities as they are involved in family activities (Weer and Greenhaus, 2014). Family-work conflict is very often perceived as a gender-dependent aspect. The reason is that, in all most all cultures, women are primarily responsible for caregiving and housework tasks (Atkinson & Hall 2009) and it is the women category who are more burdened over men during the times of emergency (Galanti & Cortini, 2019). However, COVID-19 has left millions at home, blurring the lines between personal and professional lives, nevertheless of age or sex, and thus assert that conflict between work and family can be a concern that matters both men and women in Work From Home. On the contrary, previous research has shown that teleworking can negate the benefits of Work From Home (Hilbrecht et. al., 2008) by simultaneously reducing and increasing work-family conflicts (Toscano & Zappala, 2020).

The residence of spouses and kids who are busy with their job and schools, the interruption of crèches and schools happened due to pandemic, and the need to involve in domestic work all have a significant impact on teleworkers (Xiao et. al., 2021). For example, employees routinely cook meals for the entire family (breakfast, lunch, and dinner) three times a day, help children connect to online classes in the morning, helping them to complete the home- work in the afternoon, and also for spending some fruitful time with the children.

Feeling isolated at the workplace is an important key feature of Work From Home at times of pandemic. Even if researchers propounded that loneliness and being isolated at the workplace as the major demerit of remote work, (Cooper & Kurland, 2002) its negative impact and influence had greatly affected the people. This pandemic has been a major reason for higher levels of loneliness of the people (Ellis, 2020) that lead to reduced job satisfaction and productivity, as well as increased stress. In addition, time spent working from home and the level of face-to-face interaction were found to negatively and positively moderate the association between occupational isolation and work productivity, respectively (Golden et. al., 2008).

Another characteristic of Work From Home during the COVID curse is that human resources must share their workspaces with other members in the family too, such as their spouses and/or school-age children, who are primarily involved in distance education. The residences were not adequate to equip people involved in their routine activities, thus creating an intrusive and chaotic atmosphere. Studies put forward that a productive full-time Work From Home is highly related with the standard of the work place, such as adequate lighting, noise reduction and peaceful environment (Raguseo et. al., 2016) and a workplace that is adequately delineated from the abode (Mello, 2007). If such an atmosphere is impossible to create, working in a distracting environment with that detracts from the environment may constitute an additional and appropriate job demand and a corresponding job search.

On the basis of available literature, remote work is delineated by two important aspects. Firstly, employees work exterior to their normal workstation. Secondly, a relationship between home and office prevails. Information and communication technologies can be used to share information and communicate with colleagues (Bélanger, 1999; Bailey and Kurland, 2002). Also the literature brings forth that remote workers should have appropriate working conditions and workplaces. Number of studies concentrate on examining the pros and cons of WFH (Baruch, 2000; Gajendran and Harrison, 2007) or inspect the influence of WFH on work-family harmony (Sullivan and Lewis, 2001; Hill, Ferris and Mårtinson, 2003; Golden et. al., 2006). Against this, performance out-turn of working from home has received only neglectful recognition.

Numerous studies are paying great attention on Work From Home. Initially it is the rising trend towards the achievement of a good work life balance (Perry-Smith & Blum, 2000). Second, there is growing evidence that the provision of work from home paves way for better organizational performance and results in reduced absenteeism (Stavrou, 2005).

1.2 Employee Absenteeism

Absenteeism is the pattern of being erratic in the work field. An absentee is a person who is repeatedly going on leave. Absenteeism is mostly caused by lack of employee dedication and devotion. Absenteeism at the operative level is a crucial problem in some industries. As per Webster's Dictionary, "absenteeism is the practice or habit of being an absentee and an absentee is one who habitually stays away."

Studies tells that few major reasons for absenteeism include workplace mobbing, family-related issues, unhealthy working conditions, absence of adequate welfare facilities, inadequate leave Facilities and related policies, alcoholism, illness, and job hunting. Absenteeism of staff from work results in logjam, work pile and thus work delay or even work stoppage. Johns and Nicholson (1982) opined that absenteeism is an issue that happens at workplace which has to be resolved.

The result of high rate of absenteeism has got a significant negative impact on the organizations well-being and revenue generation, which results in low level performance and even disorganization (Nicholson and Martocchio, 1995). Cole and Kleiner (1992) noted that employee absenteeism is a problem that not only results in low level productiveness but also mislaying of the organization that continue to incur costs due to the benefits offered to employees even if they are absent. Absenteeism directly affects the turnover rates of labors, thus absenteeism has to be treated as a consequential issue and carefully monitored to regulate the same. At the same time labor turnover is the major criterion, that determine the industrial growth, and which in turn has a direct impact over the economic growth.

Studies have focused on demographic features, work attitude, occupational status, work situation, and non-work contexts as predictors of absenteeism (Porter & Steers, 1973, Steers & Rhodes, 1978). Demographic aspects like age, length of service are inversely correlated with absenteeism (Nicholson et al., 1977, Watson, 1981). Absenteeism rate was higher in the case of female category (Flanagan et. al., 1974, Johns, 1978), and lower in case of married personnel (Garrison & Muchinsky, 1977, Watson, 1981). In particular, for female employees, the number of children was also correlated (Isambert-Jamati, 1962, Nicholson &

Goodge, 1976) also the employees who occupied top positions in the organisation are less likely to remain absent in work (Hrebimak & Roteman, 1973, Yolles et. al., 1975).

March and Simon (1958) have differentiated between two main types of absenteeism: involuntary absenteeism (e.g., taking leaves for attending funerals, due to sickness that are been medically confirmed and certified) and voluntary absenteeism (e.g., leisure purposes, sickness that are uncertified). Latter is under the immediate control of the employee and are often availed for self-purposes (Miller, 1981). On the other hand, involuntary absences are far away from the close control of the employee. Thus, voluntary absences, rather than forced absences from work, may result in job discontent and disloyalty to the employer and allegiance to the organization associated with.

It should be noted that there is no single effective measure to control absenteeism. However, a skillful combination of various measures and different behavior models would definitely lead to the desired results (Muchinsky, 1977) and thus combat absenteeism. Significant effort on measures like ensuring healthy and disinfected working conditions, providing adequate wages and benefits and job security for workers, adoption of a well- defined recruitment procedure, liberal grant of leave, improved communication and prompt redressal of grievances, genial relations between supervisors and workers, offering workers education etc must be taken care of in order to control and thereby reduce employee absenteeism.

The author Haswell (2003) gives us the clear idea on how employee absenteeism affects the efficiency, performance and financial well-being of an organization. The author explains that in order to adopt a new work culture, employers has to implement a structured programme and strategy. The employers can take several precautions to cut down and curtail absenteeism rate like proper supervision and surveillance by top level managers or Human Resource managers other than the line managers. The study done by Tadros & Wotton (2020) reveals that employees working from home at Australia feels loneliness and miss their routine office environment. Still they Work from Home in order to support themselves and their family.

There is remarkable argument about to what extent Work From Home can be productive, how successfully it can be executed, and how far organizations will continue using Work From Home. Initial experiences led to optimism, but later on many companies have initiated to examine the viability and feasibility of the prolonged option of Work From Home. (WSJ, 2020; Financial Times, 2021b). One of the salient query in this context is, as to what extent Work From Home influences employee absenteeism. In this study an analysis of the influence of work from home on employee absenteeism among the employees from IT Sector, Infopark, Kochi is conducted.

1.3 Objectives

Objectives of the present study are

- To find the influence of work from home on employee absenteeism
- To identify the benefits and ill-effects in Work from home employment option

1.4 Hypothesis

The following hypothesis were formulated for the study.

Hypothesis 1

Ho: WFH employment option has no significant influence on employee absenteeism

H1: WFH employment option has a significant influence on employee absenteeism

Hypothesis 2

Ho: There is no significant relationship between employees work-life balance and WFH

H1: There is significant relationship between employees work-life balance and WFH

2. Research Methodology

To know the influence of WFH on employee absenteeism, a study was conducted among the IT Sector employees. For this study both Primary data and secondary data are used. Primary data is collected through a well - structured questionnaire. The population will be the IT sector employees working at Infopark, Kochi. For the purpose of this study, sampling technique chosen was the non-probability sampling designs of convenience sampling. The total of sample size is 135 IT sector employees working at Infopark, Kochi. All the employees started to work from their respective homes from lockdown period onwards, which was the only thing common for all the respondents.

The questionnaire was devised to analyze even the basic demographic data and also questions on the various aspects that are been hypothesized for the study. The Likert scaling technique was adopted with 5 for Strongly Agree and 1 for Strongly Disagree.

The main sources of secondary data were government records regarding COVID-19 Pandemic, as well as the policies and actions adopted by different agencies to control the spread of it. Apart from that, several other sources are also referred including national and international journals, newspapers, research articles and magazines too.

SPSS version 25.0 was adopted for conducting the statistical analysis.

3. Data Analysis and Interpretation

Data analysis is the method of applying the most appropriate statistical or logical technique so that the raw research data makes sense and the critical questions are answered through data interpretation.

Table 1 Demographic Variables

Variables	Classification	Frequency	Percentage
GENDER	Male	53	39
	Female	82	61
	TOTAL	135	100
MARITAL STATUS	Single	38	28
	Married	97	72
	TOTAL	135	100
AGE	Below 25	15	11
	25-30	52	39
	30-35	54	40
	35-40	9	7
	Above 40	5	4
	TOTAL	135	100
INCOME	Less than 50,000	36	27
	50,000-1,00,000	55	41
	1,00,000-1,50,000	26	19
	Above 1,50,000	18	13
	TOTAL	135	100

Source: Primary Survey

While analyzing the demographic variables it can be found that 82 out of 135 (61 percent) respondents were female and the rest 53 (38 percent) were male. 72 percent of the total employees were married. Out of the total respondents, only 5 employees belonged to the age group of Above 40 and majority of them belonged to age group of 30-35 (40 percent). The classification of sample units on the basis of income shows majority of the respondents have a monthly income of 50,000 – 1,00,000 i.e., 41 percent.

Table 2 Cross Tabulation of Gender & Marital Status with Preference towards WFH

WFH Preference	Gender			Marital Status		
	Female	Male	Total	Married	Single	Total
Agree	50	26	76	72	23	95
Neutral	23	10	33	11	15	26
Disagree	2	24	26	14	00	14
TOTAL	75	60	135	97	38	135

Source: Primary Survey

Table 2 shows the gender wise preference of respondents towards the Work From Home employment option. When compared to male category, it is female respondents (66 percent) who prefers Work From Home. Table 2 also shows the preference towards WFH on the basis of marital status. Married respondents (74 percent) shows more preference to Work From Home option over the unmarried respondents.

Table 3 Correlation Analysis

Sl. No	Variables	Correlation Coefficient	p-value	N
1.	WFH and Employee Absenteeism	0.725	0.000	135
2.	WFH and Work Life Balance	0.493	0.001	135

Source: Primary Survey

Table 3 represents the correlation coefficient and p-value after Spearman's Rank Correlation analysis:

1. The correlation coefficient of 0.725 indicates that there is a strong positive correlation between work from home and employee absenteeism. Since the significance value is less than 0.05, we reject the null hypothesis and conclude that WFH employment option has a significant influence on employee absenteeism (Hypothesis 1).
2. The correlation coefficient of 0.493 implies that there is only a moderate positive correlation between work from home and work life balance of employees. With a significance value of 0.001 which is less than 0.05, we reject the null hypothesis and conclude that there is significant relationship between employees work-life balance and WFH (Hypothesis 2).

Table 4 Descriptive statistics of attractions in WFH Employment Option

Factors	N	Minimum	Maximum	Mean	Standard Deviation
Flexible working Hours	135	1	5	4.11	1.238
Saves a lot of money	135	1	5	4.27	1.087
No need to take leaves for personal works	135	1	5	3.67	1.177
Work satisfaction and work life balance	135	1	5	3.81	1.147
Very feasible and not much hectic	135	1	5	3.66	1.288

Source: Primary Survey

Table 4 represents the mean and SD of factors attracting employees in work from home option. From this table, it is clear that, the major attractiveness that employees found in work from home option is that it saves a lot of money. The maximum possible score as per the scale is 5 indicating the most attractive factor and the minimum score is 1 indicating the least attractive factor. The actual maximum score and minimum score of ‘Saves a lot of money’ are 5 and 1 respectively with an average of 4.27. Since the average score is close to 5 with a standard deviation (1.087), WFH option saves a lot of money which was otherwise spent on commuting, clothing, food etc.

The average score in respect of the factor ‘very feasible and not much hectic’ the work is 3.66 with a standard deviation of 1.288 indicates the least attraction in WFH option. Since the standard deviation is very high, there is greater variability in the score assigned by different employees. Thus WFH increases the work load and employees do not consider it to be a feasible option.

Table 5 Descriptive Statistics of Difficulties in WFH Employment Option

Factors	N	Minimum	Maximum	Mean	Standard Deviation
Lack of socializing and gathering with colleagues	135	2	5	3.98	.902
Lack of adequate work space at home	135	1	5	3.16	1.269
Increased work load and working hours	135	1	5	3.67	.985
Health issues	135	1	5	3.32	1.104
Lack of required support and fear of committing mistakes	135	1	5	3.31	1.379

Source: Primary Survey

Table 5 represents the mean and standard deviation in respect of the difficulties faced by employees in work from home employment option. From this table, it is clear that, the major difficulty that employees face in work from home option is the lack of socializing and gathering with colleagues. The maximum possible score as per the scale is 5 indicating the major difficulty and the minimum score is 1 indicating the least difficult factor. The actual maximum score and minimum score of ‘Lack of socializing and gathering with colleagues’ are 5 and 2 respectively with an average of 3.98. Since the average score is close to 5 with a standard deviation (0.902), lack of socializing and gathering with colleagues is the major ill-effect associated with WFH and employees use to miss the daily office club environment.

The average score in respect of the factor ‘Lack of adequate work space at home’ is 3.16 with a standard deviation of 1.269 indicates the least difficult factor associated with WFH option. To a great extent employees have adequate workspace at home with required infrastructure and technical support for WFH facility.

4. Findings

Apart from the above analysis made, the following observations were also made

- 72% employees opines that it is for the first time that they work-from- their respective homes and are not very comfortable with the infrastructural facilities at home to work during the introduction of Work from Home employment option but now they consider it as a very flexible and easy choice
- Majority of the employees are satisfied with their workspace at home and have already established a good work routine at home.
- 70% of employees prefer to continue with the work from home employment option.
- For majority of the employees the new WFH option has reduced the number of days being absent in work.
- 98% of employees are aware about the leave policy of the company they are working with.
- Only 13% employees opines that they are not assigned with overtime work and majority does overtime work for one hour on an average in a day.
- Most employees are absent for personal reasons and are of the opinion that working hours have increased under the new Work from Home option.
- The major attraction in WFH employment option is that it saves a lot of money which was otherwise spent on commuting, clothing, food etc.
- Employees in WFH have no opportunity to socialize and gather with their colleagues and thus they miss the clubbed environment of routine office.

5. Recommendation and Conclusion

Based on the study conducted, the following few recommendations are put forward. Team-working must be encouraged which would help to network better and overcome the feeling of loneliness. To overcome the monotonous feeling in WFH, Hybrid models could be implemented were people can come to office once or twice a week. No overtime and unrelated works must be assigned to employees which leads to job dissatisfaction. Working hours and wok routine must be fixed in such a manner that it allows employees to maintain a good work life balance.

According to the study, Work From Home turned out to be one of the best options for the employees in IT Sector as it reduced the employee absenteeism. Even though WFH reduced the communication and interaction between employees and increased the work load, the arrangement has helped employees in not taking leaves for their personal reasons and can easily take care of their family responsibilities too. There are a good number of attractions associated with WFH employment option like flexible

working hours, saves a lot of money, work from the comfort of homes, no need to travel, feasible and not much hectic. For proper control and implementation of WFH, better government rules and regulations are needed. Major bottlenecks in connection with new WFH employment option includes lack of employee interaction in a simulated environment, lack of adequate work space at home, high control and surveillance measures, lack of required infrastructure and technical support for WFH facility. In order to control the employee absenteeism, suitable measures must be adopted. Job rotation, incentives/wage hike, change in management styles, individual attention to employees, encouragement and appreciation for the good work done, suitable working conditions etc. helps to control employee absenteeism to a great extent. Thus the versatile choice of modern work culture, WFH may be stepped up to hybrid model where people can come to office once or twice a week, employee interaction can be improved and job satisfaction can be won.

The Pendant Number of Line Graphs and Total Graphs

Jomon Kottarathil , Sudev Naduvath , and Joseph Varghese Kureethara 

Abstract The parameter, pendant number of a graph G , is defined as the least number of end vertices of paths in a path decomposition of the given graph and is denoted as $\Pi_p(G)$. This paper determines the pendant number of regular graphs, complete r -partite graphs, line graphs, total graphs and line graphs of total graphs. We explore the bougainvillea graphs, e -pendant graphs and v -pendant graphs. If the pendant number is 2, then the number of paths in the path decomposition of the given graph is at most $\Delta(G)$, the maximum degree of the graph. Hence, a large class of graphs give a more reasonable solution to Gallai's conjecture on number of paths in the given path decomposition.

Keywords Path decomposition · e -pendant graph · v -pendant graph · Gallai conjecture

1 Introduction

The decomposition of a graph G is the partition of the edge set of G , $E(G)$, into the desired collection of subgraphs. The decomposition of graphs is a much sought after area of research in graph theory due to its vast reaching effects which touches almost every walks of life. The path decomposition of the graph G is the partition of $E(G)$ into paths. It is trivial that every graph can be decomposed into paths. There are a lot of studies on path decomposition of graphs are available in the literature. Based on these studies, a new parameter on graphs, namely pendant number of graphs, is introduced in [6]. The pendant number of a graph G is the minimum cardinality of the collection of end vertices of paths in the path decomposition of G and is denoted

ABSTRACT

This chapter gives a detailed overview of the structure and some functional characterization of carbon nanotubes (CNTs) in a nutshell. CNTs are a type of carbon-based nanoparticles with an elongated tubular structure of diameter ranging 1–2 nm with the carbon atoms arranged in coaxial cylinders of graphitic sheets. Based on the number of graphite layers, CNTs are classified into single-walled CNTs, double-walled CNTs, and multiwalled CNTs. The structure of CNTs is unique and it provides unbreakable hexagonal structure which offers unique mechanical, electrical, and thermal properties to the CNTs. Advanced research in the field of CNTs synthesis paved the way for the betterment of synthesis strategies with the high-temperature techniques, such as arc discharge, laser ablation, and chemical vapor deposition have been replaced by low-temperature methods. It is known that the chemical, electrical, and physical properties of CNTs can be altered by inducing change in the structural parameters. This chapter also deals with the fascinating properties of CNTs in the electronic display applications. CNTs are versatile in application since their surface can be chemically modified using various specific functional groups to make it more soluble and biocompatible. CNT offers a platform for the study of intrinsic properties of nanoparticles. The strength and flexibility of CNTs have been widely acclaimed and it makes the CNTs to play a significant role in nanotechnology engineering.

ABSTRACT

Nonlinear optical materials have a wide range of applications in industry and electronics because of their versatile mechanical properties. Inorganic polymers are macromolecules having noncarbon skeletal structure and inorganic or organic side chain. Coordination polymers, cross-linked polymers, metal-organic frameworks, thin films, and hybrid materials have additional optoelectronic qualities.

12.1 INTRODUCTION

Polymers are chains compounds composed of repeating monomer units interlinked by covalent bonds. Inorganic polymers are macromolecules have noncarbon skeletal structure and inorganic or organic side chain. The major repeating atoms include oxygen, nitrogen, phosphorous, and silicon. These polymers have multifaceted characteristics and some of them are described briefly here. Polyphosphazenes have phosphorus and nitrogen in their backbone and their major applications are as flame-resistant materials and in the medical field. Conjugated phosphole materials that are derived

ABSTRACT

The optical properties of metal nanoparticles (MNPs) have a huge significance in physical chemistry from Faraday's explorations of colloidal gold in the mid-1800s. It is possible to change the electronic and optical properties of the MNPs during material design, hence the MNPs possess an immense technological significance. Different methods have been used to synthesize MNPs with a broad collection of sizes, shapes, and dielectric environments. In this chapter, the nonlinear optical characteristics of different nanoparticles have been discussed and we have summarized several processes for the preparation of their composite materials. The nonlinear optical properties of these materials were studied by the Z-scan method.

13.1 INTRODUCTION

Nonlinear optics is a branch of modern optics and it has a good resemblance with the laser physics. The nonlinear optics explains different nonlinear effects that arise during the interaction between laser and matter [1, 2]. The

1. Introduction

Electroanalytical chemistry is the branch of chemical analysis that employs electrochemical methods to obtain information related to amounts and characteristics of chemical species. In these techniques, an electrode probe is used for the qualitative and the quantitative analysis of compounds under investigation. In quantitative electrochemical measurements, potential of the cell is being measured, which in turn is related to their respective chemical properties. The method is highly selective as they are able to control the potential of an electrode, which makes it possible to determine the electrochemical spectrum of electroactive species in the solution.

2. Electrochemical techniques

In classical electrochemical analysis (amperometric and potentiometric) the information on the electrode response of the analyte when the electrolyte, solvent, or surface is modified is studied [1]. For potentiometric and potentiostatic types of analysis require at least two electrodes, which together constitute an electrochemical cell. One of the two electrodes responds to target analyte and is termed as indicator (working) electrode. The second one is termed as a reference electrode, which is of constant potential and is independent of the properties of the solution. Potentiometry is a static technique in which the information about the sample composition is obtained from the measurement of the potential established across as membrane materials. In potentiometric titrations, the variation in cell potential is monitored as a function of the volume of reagent added, whereas in direct potentiometry, the cell potential is determined and related to the activity of concentration of individual species.

Electrochemical sensors use an electrochemical cell consisting minimum of two electrodes: a working electrode and a reference electrode. Current flowing in a reduction/oxidation processes at the working electrode surface in connection with a counterelectrode is measured. It includes cyclic voltammetry, stripping voltammetry, differential pulse voltammetry, linear sweep voltammetry, and so forth. Measurement based on current-potential response, current for a specific period, concentration of analyte on stripping etc are named as voltammetry, amperometry, and stripping techniques. Nature of the analyte, type, morphology and size of electrode used are the main influential factors determine the response of the analysis.

2.1 Coulometry

Coulometry is an electroanalytical method which involves the measurement of the quantity of electricity (coulombs) needed to convert the analyte quantitatively to a different oxidation state. Coulometric analysis is an application of Faraday's law of electrolysis.

^{1*} Assistant Professor

Department of English, St. Joseph's College, Moolamattom.

Abstract

The Kite Runner is the debut novel of Afghan-American writer Khaled Hosseini. The novel revolves around the betrayal, mental conflicts and the redemption of Amir. This study aims to explore the childhood experiences of Amir that formed the basis of his mature self. Studies in the field of child psychology states that the events that occur in the lives of children deeply impacts on their later lives. Children construct an understanding of the world around them, and experience discrepancies between what they already know and what they discover in their environment. By applying psychoanalytical reading to Khaled Hosseini's *The Kite Runner*, the paper explores the relationship between the protagonist Amir's childhood experiences and his internal conflict.

Keywords: Childhood, Psychology, Trauma, Self

Introduction

Khaled Hosseini's novel *The Kite Runner* (2003) depicts the internal conflicts of Amir. He is never free from the traumatic childhood event that he had met with at 1975 when he was twelve years old. The complex relations in his childhood have a significant impact up on his judgments and actions. Jean Piaget, the Swiss clinical psychologist known for his pioneering work in child development regarded cognitive development as a process which occurs due to biological maturation and interaction with the environment.

Children are in great need of protection while they are growing up. Being a single-parent child as he lost his mother on his birth, Amir finds his early years very tough on him. Amir adores his father but lacks a relationship with him. Baba is a smart and good man at heart but he is just unable to come to terms with his son's interests, and ultimately neglects him because there is a lack of connection. Baba negatively shapes Amir's attitudes towards his sense of self from a young age. Amir never stood up for himself and he was different. He liked poetry, something that Baba believed was not normal for a young boy. Baba speaks to Rahim Khan, his best friend and business partner, about his confusion with Amir that he does not understand why his son's interests are not similar to his own. "He's always buried in those books or shuffling around the house like he's lost in some dream...I wasn't like that." Baba sounded frustrated, almost angry" (23). Amir fails to rise according to the wishes of his father. Baba's indifference inculcates in him low self esteem and insecure. He craves to get loved. He tries in vain to attract the attention of his father and longs to spend his time with him. But his father callously dismisses him and asked to be with Hassan. He thinks that his father loved Hassan more than him.

The early years of childhood is great disappointment for Amir, as he is not well received by his father. Amir spends most of the first twelve years of his life with Hassan, the son of the family's servant Ali. The early years of Amir and Hassan's friendship is filled with innocent joy. There is adoration, loyalty, and genuine affection between the boys. Later, with the comments and attitudes of the people around him, his attitude to Hassan changes. Hassan is the one who helped Amir choose the path of his future career. Since he is jealous of Hassan as he feels Baba has special concerns for him, Amir takes advantage of the friendship between Hassan and him. He made fun of him whenever he had the chance, but Hassan never took it to heart and still perceived Amir as his best friend. Throughout the entire story, Amir felt that Baba was not giving him the attention he needed. Anytime Amir wanted to be alone with his father, Baba asked Hassan to join him and that made him jealous of Hassan.

The cultural values and customs of his land contributed greatly to the thought process of Amir. Racial politics prevalent in the Afghan society influences Amir in his perspectives. Although Amir and Hassan spent all their formative childhood moments together, Amir internalizes the social hierarchy in the socioeconomic culture of Afghanistan. Amir and Hassan have different ethnic groups: Amir is Pashtun and Hassan is Hazara.

All these tensions come to a breaking point during the kite-fighting tournament. Amir sees the kite-fighting tournament as a way to finally win Baba's love. Amir's desire to feel appreciated and loved becomes the most prominent thing on his mind, and as a result, he disregards other relationships. Amir does nothing to save Hassan when he is raped by Assef.

Conclusion

Different stages in a person's life is closely inter related. Relationships with parents, friends, and other institution have great effect on how children think, learn and develop. Amir is evolved out of his childhood experiences. His self is deeply entangled in the trauma and despair extended by the circumstances of his early years. The guilt that he carried for years found its redemption only when he come back and save Hassan's son from Assef.

A Comparative Exploration of Truth and Integrity: Henrik Ibsen's *An Enemy of the People* and Satyajit Ray's *Ganashatru*

S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Salini L.R^{1*}, & Christy Joseph^{1*}

^{1*}Assistant Professor, Department of English, St. Joseph's College Moolamattom.

Abstract

This chapter provides a comparative exploration of truth and integrity in Henrik Ibsen's *An Enemy of the People* and Satyajit Ray's *Ganashatru*. It delves into the universality of themes, emphasizing how both works, despite distinct cultural contexts, resonate with audiences globally. The chapter examines character transformations, the role of irony, and the significance of film as a medium for adaptation. It underscores the timeless relevance of themes such as morality and the consequences of challenging societal norms. Ultimately, this analysis offers insights into human nature, ethics, and the pursuit of truth, whether through Ibsen's classic play or Ray's cinematic reinterpretation.

Keywords: society, adaptation, morality, individual, disillusionment

Henrik Ibsen's *An Enemy of the People* and Satyajit Ray's *Ganashatru* offer two distinct yet interconnected narratives that delve into themes of truth, morality, and the consequences of challenging a corrupt majority. While Ibsen's classic play serves as the source material, Ray's adaptation transplants the story into the cultural and temporal context of 20th-century India. This chapter explores the universality of the themes within both works, their cultural adaptations, character transformations, and the role of irony and social critique. It also examines the significance of the film medium in adapting a classic play and the broader cultural relevance and social commentary provided by both Ibsen and Ray.

At the core of both *An Enemy of the People* and *Ganashatru* lies a profound exploration of universal themes. Ibsen's original work, set in 19th-century Norway, and Ray's adaptation, rooted in 20th-century India, reveal the timeless nature of themes such as truth, morality, and the clash between individual integrity and collective interests. Regardless of their cultural and historical contexts, the central themes remain relevant to audiences around the world.

Satyajit Ray's adaptation demonstrates the malleability of classic literature when transplanted into different cultural landscapes. By setting the story in India and infusing it with Indian cultural elements, Ray successfully makes the narrative relatable to Indian audiences while preserving the essence of Ibsen's original themes. The contrast between the Western and Indian contexts underscores how universal themes can manifest differently in various cultural settings.

Both Dr. Thomas Stockmann in *An Enemy of the People* and Dr. Ashoke Gupta in *Ganashatru* undergo similar transformations throughout their respective journeys. Their arcs trace a path from initial optimism and dedication to eventual disillusionment in the face of opposition. These character transformations serve as poignant reminders of the personal and emotional costs associated with speaking truth to power.

Both Ibsen and Ray employ irony as a powerful narrative tool to critique societal norms and human behavior. The irony of individuals seeking to protect public welfare being vilified as enemies of the people resonates deeply with audiences. It highlights society's tendency to prioritize short-term economic interests over ethical considerations and the consequences of challenging the status quo.

Satyajit Ray's *Ganashatru* showcases the potential of cinema as a medium for adapting classic plays. The visual storytelling, cinematography, and carefully chosen settings add depth

to the narrative and enhance its impact on the audience. Ray's adaptation demonstrates the transformative power of film in translating a literary work into a new cultural and visual context.

Ibsen's *An Enemy of the People* reflects 19th-century European concerns about individualism and morality. In contrast, *Ganashatru* addresses issues that were pertinent to India in the late 20th century, including faith, tradition, and societal values. Both works serve as powerful commentaries on their respective societies, offering insights into the complexities of human nature and the dynamics of societal change.

The comparative analysis of Ibsen's *An Enemy of the People* and Ray's *Ganashatru* reveals the enduring relevance and adaptability of the play's themes across different cultural and temporal contexts. These works stand as testaments to the universal truths about truth, morality, and the consequences of challenging the prevailing norms of society. Whether through Ibsen's original masterpiece or Ray's cinematic reinterpretation, these narratives continue to captivate audiences and provoke contemplation on the nature of integrity, societal pressures, and the pursuit of truth.

Cultural Integration in 'Brick Lane' by Monica Ali

S. Abhilash Mathew^{1*}, Salini L.R^{1*}, Alex E.R^{1*}, & Christy Joseph^{1*}

^{1*}Assistant Professor, Department of English, St. Joseph's College Moolamattom

Abstract

"Brick Lane" by Monica Ali delves into the complexities of cultural integration in the multicultural neighborhood of Brick Lane, London. The novel portrays characters like Nazneen, who left their homelands to seek new lives in London, offering a rich exploration of their experiences. Through these characters, the story navigates the delicate balance between preserving cultural heritage and embracing the unfamiliar, shedding light on identity, family, love, and the profound impact of cultural integration. Monica Ali's work serves as a window into the immigrant experience, emphasizing the intricate interplay of cultural adaptation, generational conflicts, and self-discovery in a diverse and ever-changing world. The novel's exploration of relationships showcases how individuals from different cultural backgrounds navigate challenges and opportunities in a multicultural society, highlighting the fluidity of cultural identity and the potential for meaningful connections across cultural boundaries.

Keywords: Culture, integration, diaspora, family, social life, identity

In the heart of London's East End lies the enchanting neighborhood of Brick Lane, a melting pot where cultures collide and intertwine. Monica Ali's novel, "Brick Lane," serves as a guide into this vibrant world, where diverse cuisines perfume the air, and myriad languages fill the streets. This captivating narrative takes readers on a journey through the lives of its characters, exploring the intricacies of cultural integration amidst the backdrop of this multicultural tapestry.

"Brick Lane" is not a simple story of assimilation but a complex exploration of the negotiations, tensions, and adaptations that occur when diverse cultures converge in a shared urban space. It delves into the lives of immigrants like Nazneen, who left their homelands to seek new lives in London. Through Monica Ali's prose, the novel examines the delicate balance between preserving cultural heritage and embracing the unfamiliar.

Set against the bustling markets and quiet kitchens of Brick Lane, the novel paints a vivid picture of the challenges and choices faced by characters striving to weave their unique narratives into the neighborhood's fabric. At its core, "Brick Lane" is a poignant exploration of identity, family, love, and the profound impact of cultural integration.

Monica Ali's novel is a critically acclaimed work that provides a window into the immigrant experience in a multicultural urban setting. It navigates the complexities of cultural adaptation, the clash of generations, and the quest for self-discovery in a world marked by diversity and change.

Monica Ali, the author, was born in Bangladesh but raised in England. Her debut novel, "Brick Lane," catapulted her into literary prominence and ignited discussions on multiculturalism, immigration, and the immigrant experience in the UK. Her lyrical prose and exploration of human relationships, identity, and cultural diversity continue to resonate with readers, cementing her as a significant voice in contemporary literature.

In "Brick Lane" by Monica Ali, the characters' relationships and interactions provide a nuanced exploration of the complexities of cultural integration. These relationships highlight the diverse ways in which individuals from different cultural backgrounds navigate the

challenges and opportunities of living in a multicultural society. Here's an analysis of key relationships and their impact on cultural integration in the novel:

Nazneen and Chanu's Marriage:

Nazneen's arranged marriage to Chanu represents a traditional aspect of Bengali culture. Their relationship reflects the dynamics of a first-generation immigrant couple adjusting to life in London. While initially, Nazneen is submissive and deferential to her husband, her growing independence and interactions with others in the neighborhood lead to changes in their relationship dynamics. The marriage also demonstrates the tension between preserving cultural traditions (arranged marriages) and adapting to new cultural norms (individual choice in marriage).

Nazneen and Karim's Romantic Relationship:

Nazneen's relationship with Karim, a younger man and political activist, symbolizes her journey of self-discovery and empowerment. Their romantic involvement crosses cultural and generational boundaries, reflecting the evolving nature of cultural integration in immigrant communities. The relationship represents a fusion of cultures and the breaking of traditional expectations, as Nazneen explores her desires and independence.

Shahana's Friendship with Razia:

Shahana's friendship with Razia, a non-Bengali girl from school, highlights the potential for cross-cultural friendships among the younger generation. Their relationship symbolizes the willingness of young immigrants to engage with and learn from other cultures, challenging stereotypes and fostering integration. Shahana's friendship with Razia is a source of support and connection outside her Bengali community, emphasizing the importance of diverse friendships in the process of integration.

Karim's Activism and Community Connections:

Karim's involvement in political activism and his relationships within the immigrant community underline the role of community engagement in cultural integration. His interactions with various characters, regardless of their cultural backgrounds, emphasize the importance of solidarity and shared goals in transcending cultural differences. Karim serves as a bridge between cultures, advocating for immigrant rights while maintaining a strong connection to his Bengali heritage.

Chanu's Professional Aspirations:

Chanu's interactions with colleagues and superiors in his workplace highlight his aspiration for success in British society. His determination to pursue education and career advancement is emblematic of the immigrant experience of seeking opportunities in the host culture while preserving aspects of one's cultural identity. Chanu's interactions at work illustrate the challenges and opportunities faced by immigrants as they strive for economic integration.

Mosque and Religious Community:

The mosque and religious gatherings serve as focal points for characters to connect with their cultural and religious heritage. These communal spaces foster a sense of belonging and provide opportunities for immigrants to share their experiences and support one another.

Religious communities represent a form of cultural integration as individuals come together to practice their faith while living in a multicultural society.

In "Brick Lane," the relationships between characters are instrumental in portraying the multifaceted nature of cultural integration. These relationships underscore the fluidity of cultural identity, the impact of generational differences, and the potential for individuals to bridge cultural gaps through meaningful connections. The novel's characters navigate these relationships as they grapple with questions of identity, belonging, and the challenges of adapting to a new cultural environment.

(M)otherhood: On the Choices of Being a Woman Deconstructs Modern-Day Motherhood

Dr. Aparna Prasad^{1*}, Christy Joseph^{1*}, S. Abhilash Mathew^{1*}, & Roby Mathew^{1*}

^{1*} Assistant. Professor

Post Graduate Dept. of English, St. Joseph's College, Moolamattom

Abstract:

In *(M)otherhood: On the Choices of Being a Woman*, Pragya Agarwal deconstructs modern-day motherhood, highlighting the cultural gender roles that pressure women to prioritize raising children over careers and the normative images and fertility advertisements they face. The role of motherhood has been deemed the ultimate realization of womanhood since time immemorial, and the paper argues for tackling society's obsession with women's bodies and fertility. Agarwal points out that women are victims of a system that makes them feel worthless if they are not mothers. The text also discusses personal dilemmas and societal pressures surrounding the concept of motherhood, highlighting the incomplete image of a mother always being a selfless caregiver. The literary archetype of the "mother" persona is commonly used, but maternal personalities can also reflect traits like neglect, insensitivity, and selfishness. The text also explores the image of a "New Woman" who is not satisfied only by being a mother, as seen in literature and artistic genres.

Keywords: Motherhood, Archetype, identity, women's body, new woman, gender relations

Introduction:

The Old Testament Book of 1 Kings tells the story of two prostitutes who give birth to sons. One dies, and the other's mother switches the dead baby. Solomon, King of Israel, decides to cut the live child in two, but the first woman is given the child. The grateful mother goes forth with the infant. This story highlights the extremes of motherhood, revealing the complexities of love and self-sacrifice. In literature, mothers have been depicted in various ways, from being revered to obnoxious and controlling. Classical literature often portrays good mothers as immoral, while Shakespeare's *Romeo and Juliet* portrays surrogate mothers as helpful. Later, mothers are often portrayed as gullible or inept, like Mrs. Bennet in Jane Austen's *Pride and Prejudice*. In Victorian and modern eras, mothers faced issues like poverty, globalization, and war, challenging preconceived notions about relationships and parenthood. Examples include Tolstoy's *Anna Karenina*, Flaubert's *Emma Bovary*, and Wharton's *Undine Spragg*, who marries and divorces frequently, often abandoning her children. The Victorian fin de siècle saw significant changes in art, politics, science, and society, particularly in the role of women. With improved educational and employment prospects, marriage and motherhood were no longer seen as the only path to financial security, transforming the male-dominated world. The fin de siècle saw a shift in societal norms, with sex and sexuality playing a significant role in seeking new experiences. The New Woman and Dandy, both fashionable at the time, challenged traditional gender roles and masculinity, sparking outrage from critics like Max Nordau. Punch magazine mocked the New Woman as an embittered spinster. **The New Woman** was viewed differently by men and women as the woman who remained a force for change throughout the late Victorian and Edwardian periods. Some men found women's emancipation desirable, while others, like novelist Mary Augusta Ward, opposed it.

The term 'New Woman' was first used in 1894 by novelist Sarah Grand in her article, 'The New Aspect of the Woman Question', which addressed the double standards in Victorian marriages, emphasizing the importance of the wife's sexual virtue over the husband's. 'The New

Woman' became a popular shorthand to describe independent, educated women, but the qualities and characteristics that defined it had already been present in 1880s literature. The term's origins are disputed, but it became popular in the early 20th century. The New Woman was a feminist, social reformer, poet, and playwright who addressed female suffrage. In literature, she often mirrored societal attitudes, reflecting her aspirations and desires. Early examples include Nora in Hans Ibsen's *A Doll's House*, Lyndall in Schreiner's *The Story of an African Farm*, and Grace Melbury in Hardy's *The Woodlanders*. The new woman, associated with suffrage, fought for women's rights, education, and political participation, challenging traditional gender roles and promoting independence and self-reliance.

The New Woman, a feminist icon, is controversial due to its portrayal of women in media as radical cartoons and its fictional origin. However, the movement was valid and led to a new generation of active women in public life. Pragma Agarwal's book, *(M)otherhood: On the Choices of Being a Woman*, is a pro-motherhood memoir that explores themes of infertility, childbirth, and reproductive justice. It calls for addressing society's obsession with women's bodies and fertility, highlighting the importance of motherhood in shaping our lives. This book explores the stigma and pressures faced by women in the past, focusing on the shapes and choices they face in motherhood.

“(M)otherhood: On the Choices of Being a Woman,” by Dr. Pragma Agarwal, is a deeply fascinating book, both for its contents and for its literary personality. Its identity as a book reflects the identity of diaspora women of colour; varied chapter by chapter, difficult to define, ticking many boxes but fitting into none. The title itself is a nod to the whole world of “otherment” that mothers experience, a role which is viewed as completely biological and instinctual but can be extremely complicated for many. Dr. Agarwal explores gendered language in textbooks, highlighting the negative impact of gender norms on our understanding of sex, menstruation, and conception. She highlights the pressure on women to have children, which can affect their self-esteem and social worth. She emphasizes the importance of personal accountability and the role of women in perpetuating this toxic phenomenon. The book highlights the complexities of human reproduction and the multifaceted nature of privilege and oppression. It highlights that women from different countries may have different experiences and access to abortion, highlighting the interconnectedness of these institutions.

The New Woman, a literary figure in turn-of-the-century Britain, sought equality and sexual freedom in various forms, including education, marriage, and sexual freedom. Despite their identities, they all aimed to challenge an alternative to the Victorian model. The 1880s saw an economic boom and a rise in consumer culture, leading to the emergence of the New Woman. However, the literary representation of this woman was flawed, with Grand's New Woman struggling with a loveless marriage and Schreiner's New Woman dying in childbirth. Victorian society must change to accommodate this.

The New Woman, a figure in Victorian literature and media, was a professional woman who worked outside the home and contributed to public education through various roles. She also aided her husband and contributed to the empire and political issues through single-issue groups. The New Woman model provided women with direct entry into politics through single-issue groups promoting education and the empire. Middle-class women working in professional careers were a new type of woman, challenging Victorian gender roles and becoming valid contributors to feminist movements and British society. Despite their challenges, these women became their own New Women and valid contributors to feminist movements.

Abstract

Cultural study is a field of study in which culture is understood as a complexly patterned way of life. Every society is different in its cultural practices. No one can decide, which is the exact culture that is to be followed by everyone uniformly. Culture differs across cultures. Afghan society has a strict adherence to its traditions and customs. It is rich in traditions and customs because of its geographical position. Bacha posh is a cultural practice that has been followed by many families since ancient times. The main character in the novel, Obayda had to undergo this tradition. This article highlights the significance of tradition and its impact on strengthening its roots.

Keywords: Culture studies, Bacha Posh, Resilience and Patriarchy

Culture is a means of expressing creativity, forging an individual identity, and enhancing or preserving a community's sense of pride. Culture and literature are in harmony with each other. Culture includes the practices, beliefs, and values of a society and literature expresses them in different literature shapes. Cultural Studies is a field of study in which culture is understood as a complexly patterned way of life.

Cultural studies introduce you to critical approaches used in the study of a wide variety of cultural forms and practices. It helps us to understand the complexity of everyday life and the way that habits and beliefs are socially patterned and laden with values and meaning. It will provide a range of tools to analyse how cultural practices and meanings are produced, circulated, and exchanged. According to Raymond Williams, "culture is a system by which meanings and ideas are expressed, not only in 'art and learning', but also in 'ordinary behaviour'". Every society is different in its cultural practices. No one can decide, which is the exact culture that is to be followed by everyone uniformly. Culture differs across cultures.

Cultural practices are traditional practices developed within a specific ethnic-cultural group. Literature can be described as the medium to popularise forms of culture. Nadia Hashmi uses her Afghan roots to craft fiction that reveals the cultural practices and beliefs in Afghanistan. Afghani's life is affected by constant political conflict. Resilience is now an essential trait that has become instilled within the Afghan character as a result of these experiences.

Afghan society has a strict adherence to its traditions and customs. It is rich in traditions and customs because of its geographical position. Afghanistan is positioned at the meeting point of four major cultural areas, the Middle East, Central Asia, the Indian subcontinent, and the Far East. Islam is the official religion of Afghanistan. Religion also played a major role in shaping the culture of Afghanistan.

Bacha posh is a gender-twisting custom, fairly common in Afghanistan and parts of Pakistan. Bacha posh is a Persian name that literally means dressed up as a boy. Even though this practice is against a background of rigid gender norms and the male-centric nature of Afghan families. It is known that individuals who raise girls as boys have less conservative gender norms, apparent from their acknowledgment that bacha posh can be experienced as gender-liberating for girls who are able to experience the privileged side of a patriarchal society.

It is a cultural practice that has been followed by many families since ancient times. The main character in the novel, Obayda had to undergo this tradition. People outside the

Afghan culture came to know about this after it was portrayed in a literary work like that of *One Half from the East*. Nadia Hashmi recorded real-life experiences of Afghan women by converting them into a fictional work. In a bacha posh system, the younger daughter of the family had to undergo a gender change for many reasons just like Obayda. Obayda's aunt in the novel speaks about the reasons for changing her into a bacha posh.

It's very simple dear. Make Obayda into a boy. With her as a son, she will bring good luck to your home. You'll see your husband cheer up. Then you plan for another baby in the family. Having a bacha posh at home brings boy energy into your household. The next baby that comes will be a boy. And once you have a real son, watch what happens. Your husband will come back to life. I have seen this work in the families around us. It's not magic- it's just how it is. And that's when Obayda can go back to being a girl. Everyone wins. (17)

According to the belief of Afghan society, boys will bring good luck to the family. The family needed some good fortune to escape from their financial struggle. They also believe that making their daughter into a bacha posh will make the subsequent child to be born a boy. They are desperate for a boy child due to the socio-political rules in rural Afghanistan. Only a boy child can inherit his father's property under the traditional system that prevailed in Afghanistan.

The research article aims to study the cultural practices of Afghanistan and their justification. Culture is different in each society. One can't attribute an inferior status to any cultural practice. Because it is the culture that determines the identity of a person. It is through literature the practice of bacha posh becomes popular. Nadia Hashmi wins by bringing the attention of the reader who is out of the Afghan culture to the traditional practices and beliefs. Bacha posh is the gender-twisting custom that has been practiced by Afghans even for a century. It is to adapt to the patriarchal nature of the tribal society without deconstructing the rules of the society. Hashmi also touches slightly on the political condition that prevailed in Afghanistan. The power asserted by the Taliban on the Afghan people remains unquestionable. There exists gender apartheid in society. It is not the family that supports gender equality. Indeed, bacha poshes come from more gender-equitable families. They consider it gender-liberating and want their children to perform every possible thing in life.

Abstract

Literature is influenced by the diversity of culture. Enhancing the identity and individuality of families in society is achieved by it. Afghan culture is characterized by a collective mindset where individuals prioritize their family's interests above their own. This implies that family responsibilities tend to be more important than personal needs. Being loyal to one's family is more important than being loyal to one's tribe or ethnicity. Having a bacha posh in the family is associated with better gender norms. Their status in Afghan society is equal to that of a boy. This research article aims to explore the relevance of culture and its optimistic attitude toward gender bias.

Keywords: Ethnicity, terrorism, Gender studies, and Purdah system

Culture can include everything that gives a family its identity. Culture represents the beliefs and practices of a group that shares those beliefs and practices. Neither family nor culture could exist without the other. Diversity in culture is essential for the difference in literature. It enhances the identity as well as the individuality of the families in the society.

Afghanistan is known for its unique ethnicity. They give paramount importance to their culture. Afghans value their ancestral practices and continue to observe them. Afghan culture is very collective and people generally put their family's interests before their own. This means that family responsibilities tend to hold greater importance than personal needs. Loyalty to one's family supersedes any obligations to one's tribe or ethnicity.

Obayda's parents do not show any kind of discrimination based on their feminine gender when they are residing in the city. Only a male child can work outside the house and earn money. The poverty of families made families send their children to work at an early age. As there is vast inequality between the sexes, bacha posh injects cultural flexibility. Also, the females of a family must have a male escort to travel in the rural parts of Afghanistan. Women's mobility was tightly controlled by the Taliban regime enforcing women not to leave their house without a male companion. If there is no boy to escort women, it will limit their mobility which in turn results in limiting their public access. So, to overcome this issue, Afghan tradition found another tradition called bacha posh.

A bacha posh in the family is linked to more equitable gender norms. They enjoy equal status to that of a boy in Afghan society. A bacha posh child can behave more freely. Not having a boy child is considered a social disgrace in the archaic patriarchal setting. Women in Afghan society are mocked by calling them "dokhtar zai", which means she only brings daughters, and husbands are called "mada posht", which means whose women will only deliver girls. There is constant pressure on families to have at least one boy child. To raise their social standing, the parents convert their daughters into bacha posh. This gender-changing custom will provide social relief to families having no boy child. It is clear from the dialogue with Obayda's aunt that this practice is very common in Afghanistan. Obayda came to see another bacha posh in the Afghan society later.

This custom is documented at least one century ago. It is a much older practice, practiced still today in modern-day Afghanistan. However, it received very little attention in the literature. Turning a child into a bacha posh is somewhat of a public secret in society as it

does not have the approval of religion. Families have several reasons to change their child to a bacha posh. One main reason is the poverty the family faces. Women's mobility, particularly in rural settings, is often highly constrained and a purdah system is imposed upon them. One can escape from all these restrictions by changing into a bacha posh.

Nevertheless, bacha posh may be a practical response to navigating the gender terrain in Afghanistan. Interestingly, bacha posh could be used as a way to resist the strict societal codes that dictate how women should and should not behave. Bacha posh is linked to less patriarchal gender norms and can be a way for girls and women to acquire education, mobility, and engagement in income-generating activities. This practice supports their family economically by making the girl child work in a patriarchal society. Moreover, according to a study conducted by an international journal, women reporting bacha posh in Kabul had higher monthly savings, suggesting that girls raised as boys may be making important economic contributions to household savings, either through their own work or else through enabling women to work. In order to erase patriarchy, every household must have a bacha posh in the family. It will result in less patriarchal individual gender attitudes. Many people outside this cultural practice will think that this practice is victimizing girls. But it actually changes the position from victims to a stage where they can realise their real strength and innate potentialities.

People of Afghanistan express disappointment or dismay at the fact that most Western perceptions of their country are formulated around the news of terrorism and turmoil without insight into the geographical factors that caused such conflicts. Such perceptions overlook many of the positive aspects of the culture. Embellishment is also noticeable in the language, with poetry being one of the most admired art forms.

The researcher concluded that gender is performative rather than innate. It can be proved by the novel *One Half from the East*, in which the researcher sees the subversion of the gender identity of a preteen girl to a boy. Our biological gender is not what we perform. The performance of our gender is decided by the type of performance. If one is performing masculinity, he or she can be considered male. In the same way, one who is performing feminine attributes can be called a female. The binary is not decided by traditional gender analysis. Gender is a broad spectrum and is fluid. There can be a gender change based on performance. Transvestism and cross-dressing are so common in many societies and countries. It is not unique to Afghan society. If one's biological gender is restricting them from doing certain things, it is ok to change to a wished identity and do everything they wish. The researcher came to the conclusion that gender is an objective natural thing, that does not exist. The novel *One Half from the East* proves that gender is real only when it is performed.

Abstract:

The caste system has existed in India for at least 3,000 years. It is a social hierarchy, passed down through families, and it can dictate the professions, social status etc. But the evilness of the caste system disrupts the lives of million people in India year by year. Superstitious beliefs, discrimination, marginalisation, untouchability, greed, exploitation, selfishness takes a major role in caste system for the distraction of the society

Keywords: Discrimination, marginalisation, untouchability.

Samskara A rite of dead man, a classic of modern literature, is an intense exploration of subaltern issues such as the caste system, inequality, untouchability, patriarchy, Orthodoxy of Brahminism and marginalisation. As an insider's account of life in a community that practised these issues, the novel assumes even greater significance. The book offers a scathing critique of the caste system. U R Ananthamurthy lived in a society in which the caste system was very critical. So his experience and intense opposition are visible in the novel.

Ananthamurthy is unafraid to criticise the style of life of the Brahmins. The stupid insistence on adhering to religious commandments is what causes Naranappa's body to decay. Rats and vultures are drawn in by the nauseating odour, making life in the agrahara intolerable. The community values ceremony above a dead man's entitlement to a good funeral. Naranappa, the anti-Brahmin against the most-Brahmin Praneshacharya and Brahmanism itself, is the book's most intriguing figure. Although Naranappa dies in the first scene, he is constantly present throughout the entire book. He is honest despite his coarse behaviour. As compared to the Brahmins' false behaviour, this honesty causes Praneshacharya to question whether Naranappa will reach God first. In short, even a dead man becomes the victim of marginalisation because of casteism. The depiction of women and lower castes is real and miserable. Women were treated as mere sexual objects. The crucial point of the novel is when the protagonist made a sexual relationship with Chandri It brings a change in the novel. It's led to a dilemma in one own identity.

Ananthamurthy's brilliant depiction of characters can be seen throughout the novel. It really presents the aftermath of the caste system and social inequalities through the career of a limited hero. Each of the characters are the representative of the social system. Through their traits and ideologies author put a question to think and transform

Samskara celebrated three major themes, the caste system, self-discovery and transformation and greed. In connection with the dogma of Brahminism, greed is silent sarcasm upon their blind beliefs. Because Chandra's gold changed the attitude of Brahmins regarding the cremation of Naranappa. The people who rejected to do the cremation themselves come forward to do cremation in front of the gold. That means the rules caste system is merely for subordination and suppression of the lower caste.

To sum up, the act of uniting binary opposites by embracing the non-traditional side of the separation, *Samskara* seems to promote a new paradigm. It focuses on the social questions of the caste system and highlights the cognitive dissonance created in the minds of its followers. *Samskara* means the funeral that is given to a dead person but in another sense it is

transformation and purification of mind-set. So we can assure that samsKara can do a purification in the mind of society by realizing the dogma of the caste system. I believe that this Novel should be explored more by readers today and drive forward the impeding social change built on the foundations of equality.

Abstract:

Liberal feminism is one of the earliest forms of feminism stating that women's secondary status in society is based on unequal opportunities and segregation from men. Emerging out of the abolitionist and women's movement in the U.S, This body of feminism focuses on eliminating gender inequality. The basic beliefs are grounded in liberalist philosophical traditions, as well as French and British feminist theory. The novel *Daisy Miller* discusses the concept of liberal feminism.

Keywords: Empowerment, Liberation, feminism

European and American women in the nineteenth century lived in an age characterized by gender inequality. At the beginning of the century, women were not allowed to enjoy legal, social, or political rights that are now taken for granted in western countries. They could not vote, could not testify in court, had very much limited control over personal property after marriage, they were rarely granted with legal custody of their children in cases of divorce, they were denied the right for higher education. They were under the control of their fathers and husbands.

Women's occupational choices were also extremely limited. The women from upper – class and middle – class generally remained home, to take care of their children, and for the household work. Lower – class women worked outside the home, usually as poorly – paid domestic servants in factories and mills. Many of the scholars supports the point that the Victorian age was a time of especially gender polarization as women were expected to adhere to a rigidity defined sphere of domestic and moral duties, restrictions that women increasingly resisted in the last two – thirds of the century. *Daisy Miller* represents the society of America of the early 19 th century and woman's status in the very society. It draws a portrait of an American girl from Schneckedy offends the delicate social sense of various so – called patriarchal norms and values and how she is misunderstood. Daisy is hounded for her actions by the other two women present in the novel, Mrs. Costello and Mrs. Walker. Mrs. Costello represents the ideal and respectable woman of late 1800's Europe. She is aunt of Daisy. She is shown in the novel as a refined, proper, and properly opposite all that Daisy embodies. Mrs. Costello is continuously interfere in the severe criticism of Daisy's behaviour, thinking of anyone could behave so vulgarly, she is baffled. Society accepts that Mrs. Costello is right, and her opposite, Daisy is wrong. Without a trial, Daisy's behaviour is condemned, and is met with death.

The huge difference between the behaviours of two young, single Americans abroad, Daisy and Winterbourne, has one clear explanation apart from the divergent personalities: as a man, Winterbourne is free to act as he likes and to lead an independent lifestyle without any restriction, while Daisy is not. The novel *Daisy Miller* implicitly if not explicitly developsthis unjust difference based on gender norms. Daisy is a representative of a generation of American woman who have more options than ever were open – movements on women's rights were beginning in earnest, and the Grand Tour to Europe, which had earlier been open to men only, could now be enjoyed as well as women. However, it's meaning is not women were fully independent. At Daisy's desire to walk alone, Mrs. Costello, Mrs. Walker, and others grow so

shoked. The word allow usually meaning with one man, unaccompanied by a Chaperone – underlines these drawbacks. In many ways, The novel mentions just how frustrating these drawbacks and lack of freedom can be for intelligent, curious, young women. At this historical moment, still James is seemingly very ambivalent about the position of young American women. The book does not agree to Daisy's behaviour as a model for young women, because her death at the end, and is also shown as stemming from her own mistakes and rash choices. As the place of the woman in American and European culture was rapidly changing, Henry James painted some of society's own ambivalent views on what paths the New woman could take, and what dangers she still faces, especially in the older, more established European culture. Women have been lowered to the status of signs in society – especially 19th century society and have had to secure as carriers of meaning for men. James was straightly concerned with this signifying process and treated the sign versus conscious self - contradiction of women's lives through his fiction

Abstract

When we talk about remote work, we never realize how different it can mean for men and women. The challenges and opportunities women working remotely have, are quite distinct from those of men. Reports suggest that 80% of women are unwilling to return to work as compared to 60% of men. This article sheds light on the challenges and opportunities for women working remotely. Women consider remote work an advantage due to the freedom to work from the convenience of home and better integration of career and personal life.

Keywords: Remote Working, Gender Disparity, Work-Life balance

Introduction

The challenges and opportunities women working remotely have are quite distinct from those of men. Women consider remote work an advantage due to the freedom to work from the convenience of home and better integration of career and personal life. Despite all the benefits of working remotely, women report a sense of insecurity and the fear of losing out on growth opportunities. In a way, working remotely is widening gender disparity for women. Despite women's empowerment and advancement, men are still preferred for significant roles, and women are still the primary caregivers. Then why do women still prefer working remotely? This study will elaborate on how remote working has affected women and how can they decide if working remotely is right for them.

Challenges and opportunities for women working remotely

Women are always expected to take care of children and do household chores. It can be quite daunting for women to focus on work in the hustle and bustle of household responsibilities and simultaneously move up the corporate ladder. Let's take a look at all challenges woman face while working remotely.

1. **Feeling Burnout:** Working from home, taking care of kids, preparing meals, and doing other housework at the same time can be pretty challenging. Remote work blurs the line between work and personal responsibilities. Even the family members expect a woman to cater to their needs when she's at home. It causes distraction and diverts focus. Women work extra hours to accomplish tasks and deliver work before deadlines. This can lead to over-exhaustion and burnout. Working remotely can be rather stressful and deplete motivation.
2. **Stagnant career growth:** Working virtually can take away significant growth opportunities from women as they might miss being part of important discussions and decisions. Women have been struggling to be heard and get equal opportunities for a very long time and now working behind the scenes might make it even harder for them to get access to those opportunities. Although organizations set up performance metrics in virtual work environments, forming associations and networking is a massive part of getting recognized and promoted. Women might miss establishing corporate bonds while working from home.
3. **Feeling lonely:** Watercooler chats, friendly conversations, and connecting with like-minded colleagues are a part of the in-office work environment. Women feel intellectually satisfied when they make these bonds and form meaningful friendships that foster a growth mindset. Working alone from home while entangled in household chores might make women feel lonely and dissatisfied. Staying at home and working in your pajamas is indeed very comfortable, but it can take away the drive, motivation,

and slower work speed. It gives confidence and motivation to work when you dress up for the job and work in a facilitative office environment.

4. **Lack of optimum resources:** Some women might face the challenge of inadequate resources like a lack of comfortable office furniture, an undistracted work environment, and supportive family members. Even if they have adequate resources, it might cost them extra to set up the optimum work environment. In such situations, women should work from their work location or the company must compensate them for office equipment and internet bills, etc.

Despite the various challenges of working remotely, the majority of women are willing to work from home. Let's take a look: why?

1. **Better work-life balance:** Saving time and money by avoiding traveling time and extra unproductive office hours enables women to spend quality time on their children, health, and hobbies. A mother wants to spend quality time with her children, especially during their growing up years, and not miss any personal milestone. Remote work can give women the flexibility to enjoy the best of both worlds.
2. **Safety and comfort:** The biggest benefit women report while working remotely is that they don't have to face the challenge of commuting. Women face harassment and sexual advances using public transport. Even those who own a vehicle avoid traveling alone due to security concerns. It also saves time and money. During menstruation, it is even more comfortable for women to be able to work from the comfort of their homes. Not all companies allow ample maternity leaves and childcare support. Remote work enables them to take care of their health and look after their children while not losing on professional opportunities.
3. **Multiple opportunities:** Women are expected to move and shift careers depending on their husbands' careers. Remote work has allowed them to keep working in their regular jobs while moving from one location to another. Another advantage that women report is, technology has enabled them to voice their opinion without being shut down or interrupted by a male employee. They also have the time and flexibility to work on multiple projects and choose a job irrespective of geographical location. Remote work has given women wings to focus on the work they are passionate about without worrying about personal issues.

Steps organizations can take to minimize challenges for women working remotely

- Organizations must continually review, analyze and modify work-from-home policies to ensure equality and sustainability for women.
- Accurate performance metrics and reward systems must be set in place so that women do not lose out on deserving recognition.
- Appropriate HR training should be mandatory for managers and supervisors to ensure they practice inclusivity and give equal opportunities to women in virtual work environments. They must be aware of the biases and judgments women face at work so that they can keep that behavior in check and follow a zero-tolerance policy for indiscrimination.
- Boundaries, goals, and guidelines must be clearly defined to avoid any confusion. A fair and transparent evaluation system must be set up.

- Along with remote work, flexibility to choose work hours and time off to avoid stress and burnout must be considered by employers too.

Conclusion

There are both challenges and opportunities for women working remotely. It's an individual and organizational responsibility to create gender-neutral and fair working conditions. As a woman, you must set clear priorities and learn to say NO, to avoid burnout and exhaustion. Develop time management skills to seamlessly integrate work and personal life. Make your mental and physical health a priority.

Environmental Sustainability: A Necessity for Survival

Tisha Tomy^{1,2}

^{1*}Assistant Professor, St. Joseph's College, Moolamattom,

²Research Scholar, Amrita Vishwa Vidyapeetham, Amritapuri

Email: tishatomy1@gmail.com

Abstract

Environmental sustainability is one of the biggest issues faced by the mankind at present. Increasing population along with tremendous escalation in anthropogenic activities has raised several questions on the sustainability of natural resources on our planet. No part of the earth is now untouched by the effect of human activities or pollution. In addition to this, urbanization, industrialization and modern agricultural practices have polluted the water resources, air and soil all around the globe. The natural resources are thus not only being over-exploited but also becoming contaminated with toxic chemicals making it difficult for the survival of future generations.

Keywords: Environment Sustainability, Population, Pollution, Future generations

Introduction

Environmental sustainability is the ability to maintain an ecological balance in our planet's natural environment and thus conserve natural resources to support the wellbeing of current and future generations. Environmental sustainability is about ecological balance. For nearly two millennia, human beings have been carbonizing our planet, which has contributed to global climate change.

The three pillars of sustainability

Sustainability is about meeting the needs of present generations without compromising the ability of future generations to meet their own needs. There are three main pillars of sustainability that many organizations strive to achieve:

- **Social sustainability:** For businesses, social sustainability includes crucial issues of the workplace and employees, like health and safety, inclusion, empowerment, professional development opportunities, and work-life balance.
- **Economic sustainability:** While it may seem that this pillar is focused on an organization's ability to remain profitable throughout its lifetime, economic sustainability isn't just about money. An economically sustainable organization is one that can drive revenue and maintain long-term business growth without negatively impacting the community, environment, or health and wellbeing of its employees.
- **Environmental sustainability:** This pillar is all about protecting the environment for future generations. Environmentally sustainable organizations take steps to enhance efficiencies, reduce resource consumption and waste, and measure and monitor carbon emissions across the entire supply chain.

A brief history of environmental sustainability

The United States first made a national commitment to environmental sustainability in 1969, with the enactment of the National Environmental Policy Act (NEPA). According to the United States Environmental Protection Agency (EPA), under NEPA, the U.S. made it a national policy "to create and maintain conditions under which humans and nature can exist in productive harmony, that permit fulfilling the social, economic, and other requirements of present and future generations." In more recent years, many organizations have made environmental sustainability a priority, expanding their efforts to decrease carbon emissions, reduce and eliminate waste, and consume less water.

Why is environmental sustainability important?

Environmental sustainability is important for the wellbeing of current and future generations. Climate change presents a variety of complex environmental, social, and

economic challenges for countries across the globe. In recent decades, the consequences of climate change have become increasingly apparent—from rising global temperatures and more extreme droughts to strengthening tropical storms, destructive wildfires, and devastating floods. As humans and ecosystems across the planet are suffering from the damaging impacts of climate change, many individuals, communities, and organizations worldwide are embracing environmental sustainability and making this critical cause a priority. These efforts will allow us to decarbonize our planet and conserve natural resources to support the health and wellbeing of future generations.

For organizations, environmental sustainability isn't just good for the environment—it's also good for business. By advocating for sustainability and launching programs that support a healthier environment, organizations across all industries can build brand trust, boost customer loyalty, and enhance employee satisfaction. Environmental sustainability is no longer a luxury for organizations—it's now a corporate social responsibility.

Examples for Environmental sustainability: Six ways to reduce your footprint

While organizations across the globe want to accelerate their sustainability efforts, many do not know where to begin. If you're looking for ways to reduce your organization's environmental impact, here are a few environmental sustainability examples and tips to help you get started:

- a) **Switch to renewable energy:** In an effort to reduce their environmental footprint, many organizations are shifting to renewable energy sources like solar, hydro, geothermal, and wind. Projections show that 50 percent of total power generation after 2035 will be renewables—mainly wind, solar, and hydroelectric.
- b) **Commit to a zero-waste future:** Each year, people consume 100 billion tons of materials—and in 2020, only 8.6 percent of those materials were cycled back into the economy after use. To help reduce waste, some organizations are taking an increasingly circular approach to materials management. This not only means increasing the use of recycled content, but also responsibly sourcing materials for operations, products, and packaging.
- c) **Reduce your organization's carbon emissions:** Innovative environmental sustainability solutions allow organizations to measure, record, and report carbon emissions across their supply chain. This allows organizations to reduce their impact, gain efficiencies, and make lasting changes.
- d) **Protect ecosystems:** Healthy ecosystems are essential for a healthy planet. According to research by the United Nations, the health of the world's ecosystem is deteriorating more rapidly than we previously realized. That's why environmentally conscious organizations are looking for ways to manage their impact on ecosystems and taking steps to help preserve natural resources for a climate-stable future.
- e) **Conserve water:** Many organizations that are committed to environmental sustainability are working to reduce their overall water consumption—and some have set goals to be water positive within the next decade. Due to population growth, economic development, and ever-increasing consumption, there's a global increase in water demand. If we don't take action, projections show that there will be a 56 percent deficit in water supply relative to demand by 2030.
- f) **Advocate for sustainability policies:** Another way organizations can increase their sustainability efforts is by advocating for policies that support the cause. This includes policies designed to help reduce carbon emissions, advance zero-carbon energy, effectively manage ecosystems, and increase water access, availability, and quality. By pushing for greater sustainability action across your community, country and the world, your organization can make a substantial difference.

What is ESG?

ESG, which stands for environmental, social, and governance, is a set of standards that organizations follow as they strive to be more socially responsible. ESG is important because this is the criteria investors evaluate as they determine whether or not to invest in a company. Every organization has a direct impact on environmental, social, and governance concerns. Today, the way businesses approach ESG is more important than ever as environmental and social responsibility has become a focus for a wide range of stakeholders—from communities and customers to shareholders and suppliers. Plus, when an organization commits to strong ESG standards, it can help them attract and retain top talent. That's because an increasing number of employees are drawn to companies that care about bigger issues beyond profitability and take steps to address environmental, social, and governance concerns.

Conclusion

Targeting short term gains, humans have destroyed the natural systems at a fast pace. It is very important to assess the impact of human activities on the local ecosystems and the planet as a whole on a regular basis. Use of latest technologies and tools help the assessment of the situation but the need is to find suitable green solutions with the help of technological tools. Biotechnological approaches and green technologies are providing the solutions to these problems. Scientists are in the process of developing green fuels and novel energy sources which could replace petroleum products and provide green energy so as to cut down the emission of green house gases. Similarly, management of pollutants, organic wastes and biodegradation of contaminated sites are being achieved by the help of biotechnological tools.

Mechanism of Conflict Management in Business Organizations

Dr. Joseph George^{1*}, Tisha Tomy^{1*}, Sharon Lee Jose^{1*}, Geethu Jose^{1*} & Mareet Paul^{1*}

^{1*} Assistant Professor, Department of Management Studies, St. Joseph's College, Moolamattom

Abstract

Conflict management is a critical aspect of maintaining a healthy and productive work environment in business organizations. This article explores various mechanisms and strategies that organizations can employ to effectively identify, address and resolve conflicts. It emphasizes the importance of communication, conflict resolution procedures, mediation, negotiation, training, leadership and HR support. By implementing these mechanisms, businesses can foster collaboration, creativity and innovation while preventing conflicts from becoming detrimental to their success.

Keywords: Conflict management, mediation, negotiation, conflict resolution, team building

Introduction

Conflict is an inevitable part of human interaction, and this holds in the context of business organizations. When managed effectively, conflicts can lead to positive outcomes such as improved decision-making, increased creativity, and stronger relationships within teams. However, if conflicts are left unaddressed or mismanaged, they can result in decreased morale, decreased productivity, and even damage to an organization's reputation.

This article explores the mechanisms and strategies that business organizations can employ to manage conflicts successfully. We will delve into the importance of communication, conflict resolution procedures, mediation, negotiation, training, leadership, HR support, team building, codes of conduct, and performance feedback in conflict management. By understanding and implementing these mechanisms, organizations can foster a harmonious work environment and prevent conflicts from hindering their growth and success.

Mechanism of Conflict Management

1. Communication

Effective communication is the cornerstone of conflict management in any organization. It serves as the foundation for understanding, empathy and cooperation among employees. Open and transparent communication channels can prevent conflicts from escalating and help in their resolution.

2. Conflict Resolution Procedures

Establishing clear conflict resolution procedures and policies is crucial. These procedures should outline the steps to be taken when conflicts arise and guide how to address them constructively. Having a documented process in place ensures that everyone in the organization knows what to do when conflicts occur.

3. Mediation

Mediation involves a neutral third party who helps conflicting parties reach a mutually acceptable solution. This mechanism can be internal or external, depending on the nature and severity of the conflict. Mediators facilitate communication, assist in identifying common ground, and guide the parties toward resolution. Mediation is particularly effective when conflicts are deeply rooted or when there is a significant power imbalance between the parties involved.

4. Negotiation

Encouraging parties involved in a conflict to engage in negotiations can lead to a compromise that satisfies all parties. Negotiation skills are essential for both employees and managers. Training employees in negotiation techniques can be beneficial in resolving conflicts at an early stage, before they escalate.

5. Conflict resolution training

It provides employees and managers with the knowledge and skills necessary to manage conflicts effectively. This training covers the causes of conflicts, emotional intelligence, communication skills, and strategies for finding constructive solutions. By investing in conflict resolution training, organizations empower their workforce to handle conflicts more constructively and productively.

6. Leadership and Management

Leadership and management play pivotal roles in preventing and managing conflicts. Effective leaders set a positive example by addressing conflicts in a fair and timely manner. They also promote a culture of respect, collaboration, and open communication within the organization. When leaders demonstrate these qualities, employees are more likely to follow suit, reducing the occurrence of conflicts.

7. Establishing a Code of Conduct

A well-defined code of conduct outlines expected behavior and values within the organization. It sets clear boundaries and expectations for employees and management alike. Ensuring that employees are aware of the code of conduct and its consequences for violations can help prevent conflicts and maintain a harmonious work environment.

8. Team Building

Investing in team-building activities and exercises can enhance team dynamics and reduce the likelihood of conflicts. Strong, cohesive teams are more resilient to conflicts, as members trust and understand each other better. Team-building efforts can improve communication, collaboration, and problem-solving skills, fostering a positive work environment.

9. HR Support

Human resources (HR) departments play a significant role in conflict management. They provide guidance, support, and resources for employees and managers dealing with conflicts. HR can also conduct impartial investigations when necessary to ensure that conflicts are resolved fairly and in compliance with company policies and relevant laws.

10. Performance Feedback

Regular performance feedback mechanisms are essential for addressing issues before they escalate into conflicts. Constructive feedback helps employees understand their strengths and weaknesses and guides improvement. Effective feedback fosters personal and professional development, reducing the likelihood of conflicts arising from misunderstandings or unaddressed issues.

Conclusion

Conflict management is a vital aspect of maintaining a healthy and productive work environment in business organizations. By implementing mechanisms such as communication, conflict resolution procedures, mediation, negotiation, training, leadership, HR support, team building, codes of conduct, and performance feedback, organizations can effectively identify, address, and resolve conflicts.

These mechanisms empower employees and managers to handle conflicts constructively, prevent them from becoming detrimental to the organization's success, and even harness their potential for positive outcomes. As businesses continue to evolve, conflict management will remain a critical skill, ensuring that teams collaborate effectively and contribute to the organization's growth and prosperity.

Emotional Maturity among Graduate Students in India

Dr. Joseph George^{1*}, Tisha Tomy^{1*}, Sharon Lee Jose^{1*}, Geethu Jose^{1*}, Mareet Paul^{1*}

^{1*} Assistant Professor, Department of Management Studies, St. Joseph's College, Moolamattom

Abstract

This article inquires into the concept of emotional maturity among graduate students in educational institutions in the country. Emotional maturity is a crucial aspect of personal development that profoundly impacts academic performance and overall well-being. The article examines key factors influencing emotional maturity, highlights its significance, and presents pertinent facts and figures to shed light on the current state of emotional maturity among graduate students in the country.

Keywords: Emotional maturity, personal development, academic performance

Introduction

Emotional maturity is not only a critical factor but also a defining one in the lives of graduate students in the country. The unique blend of academic pressures, cultural diversity and the pursuit of personal and professional growth in India's educational landscape makes emotional development an essential facet of a graduate student's journey. As they navigate the demanding academic rigors and prepare for the competitive job market, understanding the state of emotional maturity among these students becomes imperative. This article aims to shed light on the emotional maturity landscape, inquire into its complexities, and present compelling statistics that illuminate the current scenario, all while underlining the significance of fostering emotional maturity for the benefit of India's graduate student community.

Significance of Emotional Maturity

Emotional maturity, also known as emotional intelligence, encompasses the ability to recognize, understand, and manage one's own emotions and those of others effectively. It is of paramount importance for graduate students in India due to several reasons:-

Academic Performance: Emotional maturity contributes to improved problem-solving skills, decision-making abilities, and effective time management, which are essential for academic success.

Stress Management: Graduate studies can be demanding and emotionally mature individuals are better equipped to cope with stress and pressure, reducing the risk of burnout.

Interpersonal Relationships: Emotional maturity fosters healthier interpersonal relationships, which are crucial for networking, collaboration and personal well-being.

Mental Health: High emotional maturity is associated with better mental health outcomes, reducing the prevalence of anxiety, depression and other mental health issues.

Factors Influencing Emotional Maturity

The various factors that influence emotional maturity among graduate students in India are:-

Family Background: The family environment plays a significant role in shaping emotional maturity. Supportive and nurturing families tend to promote emotional growth.

Educational System: The structure of the Indian education system, including the pressure to excel in academics, can impact emotional development. High-stakes examinations and competition can either bolster or hinder emotional maturity.

Cultural Norms: India's diverse cultural landscape influences the perception and development of emotional maturity, with varying expectations and norms across regions and communities.

Emotional Maturity in India

The various factors influencing the emotional maturity of graduate students in India are:

Academic Pressure

Academic pressure is a prevalent issue in India, particularly among students. According to a survey conducted by the National Sample Survey Office (NSSO) in 2019, approximately 35% of Indian students in the age group of 5 to 29 years reported experiencing educational stress. This statistic underscores the challenges faced by students in managing academic demands, which can significantly affect their emotional well-being and maturity.

Mental Health Concerns

India grapples with a high burden of mental health issues. The World Health Organization (WHO) reported that India is one of the countries with the highest rates of depression and anxiety. These mental health concerns are closely linked to emotional maturity, as individuals with higher emotional intelligence tend to have better mental health outcomes.

Emotional Intelligence Programs

Some Indian educational institutions are taking proactive measures to enhance emotional maturity among their students. For instance, the Indian Institute of Technology (IIT) Delhi offers a course on Emotional Intelligence and Life Skills. This course aims to equip students with essential emotional intelligence skills, which can improve their emotional maturity and overall well-being.

Career Prospects

Emotional maturity has a significant impact on career success. According to a survey conducted by the National Association of Colleges and Employers (NACE) in India, employers highly value emotional intelligence in job candidates. 71% of employers opined that they consider emotional intelligence more critical than cognitive intelligence when making hiring decisions. This emphasizes the practical relevance of emotional maturity for graduate students in India as they prepare to enter the job market.

Strategies to Foster Emotional Maturity

To promote emotional maturity among graduate students in India, educational institutions and policymakers should consider the following strategies:

Incorporate Emotional Education

Educational institutions should integrate emotional intelligence and coping skills into their curricula. These programs can equip students with the tools they need to manage their emotions effectively.

Mentorship and Counseling

Mechanisms should be installed to provide access to mentors and counselors who can guide students in navigating the emotional challenges of graduate education. Having a trusted support system can significantly contribute to emotional growth.

Peer Support Groups

Encourage the formation of peer support groups where students can share their experiences and learn from one another's coping strategies. Peer support can be invaluable in fostering emotional maturity.

Wellness Programs

Establish wellness programs that prioritize physical and mental health. These programs should emphasize the importance of emotional well-being and provide resources for students to manage stress and build emotional resilience.

Conclusion

Emotional maturity is a critical factor in the lives of graduate students in India, influencing their academic success, career prospects and overall well-being. The statistics presented in this article reveal the prevalence of academic pressure, mental health concerns and the importance of emotional intelligence in the Indian context. Promoting emotional maturity should be a priority for educational institutions and policymakers.

In a rapidly changing world, emotional maturity is an invaluable asset that empowers students to navigate challenges with grace and achieve their full potential. By implementing strategies such as emotional education, mentorship and peer support, India can foster a generation of emotionally mature and resilient graduate students who are better prepared for the challenges and opportunities that stand ahead.

Product Mix and Strategies - An Introduction

Sharon Lee Jose^{1*}, Dr. Joseph George^{1*}, Tisha Tomy^{1*}, Geethu Jose^{1*} & Mareet Paul^{1*}

^{1*} Assistant Professor, Department of Management Studies, St. Joseph's College, Moolamattom.

Abstract

A product mix is the set of all products and items a particular seller offers for sale. Product mix helps determine in which direction your company is heading, and the data accumulated by it helps you determine where you want to lead the company. In this book chapter we will introduce the term product mix and the various strategies of product mix.

Introduction to Product Mix

A product mix is the set of all products and items a particular seller offers for sale. A company's product mix has a certain width, length, depth, and consistency. These concepts are illustrated with the help of selected HUL products.

1. A **product line** is a group of related products sold by the same company, probably under various brand names, often differentiating by price, quality, country, or target demographic, seeking to distinguish them from each other for better usability for consumers.
2. **Product Line length** refers to the number of products/brands that come under a single product category/line.
3. The **width of a product mix** refers to how many different product lines the company carries. The table below shows a product mix width of 11 lines.
4. The **length of a product mix** refers to the total number of items in the mix. In the Table below, it is 42. Length refers to the total number of products in a firm's product mix. The length of the product mix refers to the total number of products in the mix. E.g., That is if a company has 5 product lines and 10 products each under those product lines, the length of the mix will be 50 [5 x 10]. We can also talk about the average length of a line. We obtain this by dividing the total length (here 42) by the number of lines (here 11), for an average product line length of over 3.
5. The **depth of a product mix** refers to how many variants are offered of each product in the line. E.G.1., If LUX comes in four variants (Rose, Lavender, Jasmine, Lotus), and in two sizes, it would have a depth of 8 because there are eight distinct variants. The average depth of HUL's product mix can be calculated by averaging the number of variants within the brand groups

Product Mix Strategies

Companies seeking high market share and market growth will generally carry longer product lines. Companies that emphasize high profitability will carry shorter lines consisting of carefully chosen items. A company lengthens its product line in 5 ways/strategies

1) Line Stretching

Every company's product line covers a certain part of the total possible range. For example, Mercedes automobiles are located in the upper price range of the automobile market. **Line stretching** occurs, when a company lengthens its product line beyond its current range, whether down-market, up-market, or both ways.

		Product Mix Width										
		Personal Care				Home Care			Food			
Product Line Length	Personal Wash	Skin Care and Cosmetics	Hair Care	Deodorants	Oral Care	Fabric Care	Kitchen and Floor Care	Tea	Coffee	Food	Ice Cream	
		Lux	Fair & Lovely	Sunsilk	Axa	Closeup	Surf Excel	Domex	Brooke Bond Red Label	Brooke Bond Bru	Kissan	Kwality Wall's
		Lifebuoy	Pond's	Clinic Plus	Rexona	Pepsodent	Rin	Clf	Lipton		Knorr	
		Life 2000	Vaseline	Clear			Active Wheel	Vim	Brooke Bond 3 Roses		Annapurna	
		Hamam	Aviance				Sunlight		Brooke Bond Taaza		Modern	
		Breeze	Lakme				Comfort		Brooke Bond Taj Mahal			
		Dove	Ayush				Sunlight		Brooke Bond Sehatmand			
		Pears										
		Rexona										

a) Down-Market Stretch A company positioned in the middle market may want to introduce a lower-priced line for any of three reasons:

1. The company may notice strong growth opportunities as mass retailers such as Wal-Mart, Big Bazaar, and others attract a growing number of shoppers who want value-priced goods.
2. The company may wish to tie up lower-end competitors who might otherwise try to move up-market. If the company has been attacked by a low-end competitor, it often decides to counterattack by entering the low end of the market.
3. The company may find that the middle market is stagnating or declining.

A company faces several naming choices in deciding to move down-market:

1. Use the parent brand name on all its offerings. Sony has used its name on products in a variety of price tiers.
2. Introduce lower-priced offerings using a sub-brand name, such as Gillette Vector, the lower-priced version of men's shaving razors.
3. Introduce the lower-priced offerings under a different name, such as Tiger Biscuits. This strategy is expensive to implement and means brand equity will have to be built from scratch, but the equity of the parent brand name is protected.

b) Up-Market Stretch Companies may wish to enter the high end of the market to achieve more growth, realize higher margins, or simply position themselves as full-line manufacturers. Many markets have spawned surprising upscale segments: Toyota's Lexus, Nissan's Infiniti etc. They invented entirely new names, because consumers might not have given the brand "permission" to stretch upward when those lines were first introduced.

c) Two-way stretch Companies serving the middle market might stretch their line in both directions. Titan introduced its first watches in the medium-quality segment of the market. Gradually, it has added watches in the premium segment under brand names such as Titan Edge, Nebula and Xylis, where it competes with European brands. In the economy segment, Titan introduces the Sonata collection. The kind of two-way stretch has helped Titan gain market dominance in the watch category.

2) Line Filling

A firm can also lengthen its product line by adding more items within the present range. Motives for line filling include reaching for incremental profits satisfying dealers who complain about lost sales because of items missing from the line, utilizing excess capacity, trying to become the leading full-line company, and plugging holes to keep out competitors.

Line filling is overdone if it results in self-cannibalization and customer confusion. The company needs to differentiate each item in the consumer's mind with a just-noticeable difference. Good Knight mosquito repellents, have been successful as the brand has been offered in different forms (coils to mats to liquid vaporizer) and variants over time, thus filling consumer need gaps.

3) Line Modernization

In rapidly changing markets, **modernization** is continuous. Companies plan improvements to encourage customer migration to higher-valued, higher-priced items. Microprocessor companies such as Intel and AMD, and software companies such as Microsoft and Oracle continually introduce more advanced versions of their products. It's important to time improvements so they do not appear too early (damaging sales of the current line) or too late (giving the competition time to establish a strong reputation).

4) Featuring

The product line manager typically selects one or a few items in the line to **feature**. Firms will announce a special low-priced washing machine to attract lower-middle/value customers. At other times, managers will feature a high-end item to lend prestige to the product line.

Sometimes a company finds one end of its line selling well and the other end selling poorly. The company may try to boost demand for slower sellers, especially if a factory is idled by a lack of demand, but it could be counter-argued that the firm should promote items that sell well rather than support weak ones.

e.g., Nike's Air Force 1 basketball shoe, introduced in the 1980s, is a billion-dollar brand that is still a consumer and retailer favorite and a moneymaker for the company due to collectible designs and tight supplies. Since their introduction, Air Force 1 shoes have been designed or inspired by many celebrities and athletes are still featured in its product line.

In short firms featuring product line that **protects against economic ups and downs**: We can often see companies offering products under different brand names/variants intended for the discount, middle-market, and premium segments, in part in case the economy moves up or down.

5) Pruning

Using sales and cost analysis, product line managers must periodically review the line for deadwood that depresses profits. In 1999, **Unilever** announced its "Path to Growth" program designed to get the most value from its brand portfolio by **eliminating** three-quarters of its 1,600 distinct brands by 2003. More than 90 percent of its profits came from just 400 brands, prompting Unilever co-chairman Niall FitzGerald to liken the brand reduction to "weeding a garden", so "the light and air get into the blooms/buds which are likely to grow the best."

Multi-brand companies all over the world try to optimize their brand portfolios. This often means focusing on core brand growth and concentrating resources on the biggest and most established brands. **Procter & Gamble's(P&G)** "back to basics strategy" concentrated on brands with over \$1 billion in revenue, such as Tide, Crest(toothpaste), Pampers, and Pringles. Every product in a product line must play a role, as must any brand in the brand portfolio.

IR Sensor Interfacing using Arduino

Albin Jose*, Mr. Visakh K. S*, Dr. Anju Mathews^{1*}, Dr. Praveen Joseph^{1*} & Dr. Robin John^{1*}

*Student, Dept. of Physics, St. Joseph College, Moolamattom

^{1*} Assistant. Professor, Department of Physics, St. Joseph's College, Moolamattom

Abstract

In this study, we explore the integration of infrared (IR) sensors with Arduino microcontrollers for various applications, such as proximity sensing, object detection, and remote control systems. The research focuses on the principles of IR sensor operation, their interfacing techniques with Arduino boards, and the development of practical projects that harness the capabilities of these sensors. Through hands-on experiments and programming, we demonstrate how Arduino can efficiently process IR sensor data, enabling users to create responsive and versatile electronic systems with a wide range of real-world applications. This work underscores the significance of IR sensor and Arduino synergy in the realm of sensor-based technology and serves as a valuable resource for enthusiasts and engineers seeking to leverage these technologies for innovative projects.

Key Words: Arduino Nano, Infra Red (IR) sensor, microcontroller, Integrated Development Environment (IDE)

About the Circuit

The interfacing of IR sensors with Arduino involves a straightforward yet effective process that enables the Arduino to receive and interpret data from the sensor. The working principle of this setup revolves around the transmission and reception of infrared light. When an IR sensor is powered on, it emits infrared light in its active state. When an object comes within the sensor's detection range, it reflects some of this emitted light back to the sensor. The IR sensor then detects this reflected light and generates an analog or digital signal, depending on its type, which indicates the presence or absence of an object.

Arduino, acting as the central controller, receives this signal through one of its digital or analog pins. Depending on the sensor's output, the Arduino can perform various actions, such as displaying information on an LCD, triggering an alarm, or controlling other devices like motors or LEDs. This integration is made possible through Arduino's versatile programming environment, which allows users to define specific threshold values and logic for processing the IR sensor's input. Consequently, the Arduino-IR sensor interface opens up a wide array of applications, from simple object detection in robotics to more complex applications like home automation and remote control systems, making it a valuable tool for electronics enthusiasts and engineers alike.

Circuit Diagram

Fig1: Circuit Diagram

Fig: Circuit Prototype

Components:

1. Arduino board (e.g., Arduino Uno)
2. IR sensor module
3. Breadboard and jumper wires
4. Resistor (typically 10k Ω)
5. LED and current-limiting resistor (optional)

Connections:

1. Connect the VCC (or +) pin of the IR sensor to the 5V output on the Arduino.
2. Connect the GND (or -) pin of the IR sensor to the GND (Ground) on the Arduino.
3. Connect the OUT (or signal) pin of the IR sensor to a digital input pin on the Arduino (e.g., D2).
4. If you want to use an LED as an indicator when the IR sensor detects an object, connect the anode (longer lead) of the LED to a digital output pin (e.g., D7) through a current-limiting resistor (usually around 220-330 Ω). Connect the cathode (shorter lead) of the LED to GND.

Arduino Code

Here's a simple code example for reading the IR sensor's output and controlling an LED:

```
arduino

const int irSensorPin = 2; // Digital pin connected to the IR sensor
const int ledPin = 7;    // Digital pin connected to the LED

void setup() {
  pinMode(irSensorPin, INPUT);
  pinMode(ledPin, OUTPUT);
  Serial.begin(9600); // Initialize serial communication for debugging (optional)
}

void loop() {
  int irValue = digitalRead(irSensorPin); // Read the IR sensor's output

  if (irValue == LOW) { // IR sensor detects an object
    digitalWrite(ledPin, HIGH); // Turn on the LED
    Serial.println("Object detected!");
  } else {
```

```
digitalWrite(ledPin, LOW); // Turn off the LED  
}  
}
```

This code reads the output from the IR sensor and turns on the LED when an object is detected.

Conclusion

In conclusion, the interfacing of IR sensors with Arduino microcontrollers offers a versatile and accessible platform for a wide range of applications. This integration allows for the efficient detection and processing of infrared signals, enabling the creation of responsive electronic systems capable of tasks like object detection, proximity sensing, and remote control. The synergy between IR sensors and Arduino empowers electronics enthusiasts and engineers to develop innovative projects that bridge the physical and digital worlds. Whether used in robotics, home automation, or security systems, the interfacing of IR sensors with Arduino remains a valuable tool in the realm of sensor-based technology, offering limitless opportunities for creative and practical implementations.

^{1*}Assistant Professor Department of Physics, St. Joseph' College, Moolamattom.

Abstract

A Persistence of Vision (POV) display created with Arduino is a captivating and dynamic visual technology that leverages the human eye's inherent persistence of vision to create mesmerizing animations and messages. By rapidly illuminating an array of LEDs in a precise sequence as the display is moved, Arduino-controlled POV displays can craft the illusion of static images or text floating in mid-air. This innovative fusion of hardware and software engineering not only showcases the versatility of Arduino microcontrollers but also offers a captivating medium for artistic expression and communication, as it allows users to project intricate designs that seem to magically hang in space before their eyes, making it a compelling platform for interactive art installations, advertising, and educational demonstrations.

Keywords

Arduino, Persistence of Vision (POV), Microcontroller

Circuit Description and Working

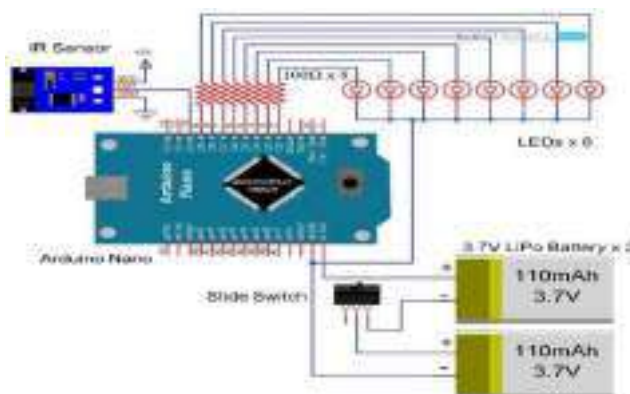

Fig 1: Circuit Prototype

The working of the POV Display can be explained with a simple example. Consider you want to display the alphabet 'B'. In order to display this character, the LEDs get turned on and off in a pattern over 5 steps. Each step is associated with a column of the LEDs and shown in the following image. The delay between the switching of the columns is very less usually in the order of hundreds of microseconds (as you can see in the code). In order to fix a starting point, the Arduino uses the IR Sensor as a reference i.e. whenever a signal from the IR Sensor is received, it starts displaying the text. Components used for the construction are Arduino Nano, LEDs x 8, 100Ω Resistors x 8, 9 V battery, IC 7805, Jumper Wires, IR Sensor Module, Slide Switch, Perf Board, 12V DC Motor, Power Supply for Motor.

A Persistence of Vision (POV) display, implemented with Arduino, operates by capitalizing on the concept of visual persistence in the human eye. This ingenious technology employs an array of LEDs positioned in a linear or rotational configuration. As the display moves, whether through a spinning rotor or linear motion, Arduino's precise timing capabilities come into play. The microcontroller orchestrates the activation of each LED with impeccable timing, ensuring that it lights up precisely when it occupies a particular position within the

display's rotation or movement. This synchronization is crucial as it enables the LEDs to form a coherent image or text when observed by an onlooker.

The illusion of a persistent image emerges because the human eye retains an image for a brief moment even after the LED has moved to the next position. By carefully controlling the timing of the LED activations relative to the display's motion, Arduino creates the perception of a complete and stable image, despite the LEDs individually flashing on and off. This dynamic interplay between precise timing control and the physiological phenomenon of visual persistence results in mesmerizing animations, messages, or patterns that appear to hang in mid-air, making Arduino-powered POV displays a compelling platform for artistic expression, communication, and educational demonstrations.

Fig 2 : POV Clock Display

Persistence of Vision (POV) displays using Arduino find versatile applications in various domains, including Digital Clocks, Advertising and Branding, Educational Demonstrations, Art Installations, Message Boards and Signage

Conclusion

The Persistence of Vision (POV) display powered by Arduino exemplifies the creative synergy between technology and human perception. This ingenious application of microcontroller precision and visual persistence principles results in mesmerizing displays that can convey information, artistry, and innovation in a dynamic and captivating manner. Whether used for crafting digital clocks, conveying messages, or producing stunning animations, Arduino-based POV displays continue to showcase the limitless potential of human ingenuity and engineering. These displays serve as a testament to the power of harnessing scientific principles to create engaging and interactive visual experiences that defy conventional limitations, offering endless opportunities for artistic expression, education, and communication in the digital age.

Arduino-Uno Microcontroller-Driven Irrigation Automation

Dr. Praveen Joseph^{1*}, Dr. Robin John^{1*}, Dr. Subin Thomas^{1*}, Sandeep Krishna P S* & Akhil Krishnan*

^{1*} Assistant Professor, Department of Physics, St Joseph's College, Moolamattom

*Students, Dept. of Physics, St. Joseph College, Moolamattom

Abstract

The experiment's primary objective is to monitor soil moisture levels and automatically administer water to the soil through an Arduino Uno microcontroller-based automation system. This intelligent soil moisture control system effectively manages field moisture and can be adapted to detect methane gas levels in greenhouses. The system, designed for agricultural greenhouses, boasts an impressive man-machine interface, facilitating a high degree of automation. In addition to its water conservation benefits, the system operates as a self-sustaining prototype, drawing water from a reservoir. Furthermore, the integration of solar energy enhances its environmental friendliness.

Keywords: Arduino, microcontroller, moisture control

Introduction

India, where a significant portion of the population relies on agriculture for sustenance, faces challenges in providing technological support to its rural farmers. The "Arduino Uno Microcontroller-Driven Irrigation Automation" project aims to alleviate this issue and enhance greenhouse conditions. The central component of this system is the Arduino Uno microcontroller, which manages water supply based on soil moisture levels. Additionally, the system can be adapted for automatic plant protection against extreme temperatures and methane gas detection in greenhouses. Excess water can be efficiently reused, and the project can be powered by solar cells in this age of non-conventional energy sources. The primary objective is to create a highly reliable greenhouse monitoring system for optimal crop yields, focusing primarily on soil moisture control, with potential for further parameters like temperature and methane levels in advanced iterations.

Experimental

In the hardware implementation of this project, a soil moisture sensor was connected to the ATmega328p microcontroller, coupled with a motor driver module, and powered by a battery. The flowchart for the entire project is illustrated in Figure 9. The soil moisture sensor detects soil moisture levels, and based on these values, the microcontroller initiates the necessary control actions. If the soil's moisture level falls below the desired threshold, the motor is activated, and vice versa.

Soil Moisture Sensor: This sensor gauges soil moisture content, and depending on the readings, it triggers the motor control circuit to pump water. Figure 1 depicts this sensor, which helps determine whether the soil is dry or wet.

DC Motor & Drive Circuit: The DC motor's primary role is to assist in pumping water into the soil when the soil moisture level drops below the predetermined threshold set in the microcontroller program. Figure 2 illustrates the DC motor and the driver circuit used.

Relay Modules: Relay modules depend on the magnetic field generated by the coil, ensuring power isolation between the coil and the switching pins. This allows the coils to be easily powered from Arduino.

Arduino Uno: Arduino Uno microcontroller (Figure 3) boasts 14 digital input-output pins, 6 analog inputs, and a 16 MHz ceramic resonator. It can be connected to a computer via a USB cable or powered through an AC to DC adapter or a battery.

For advanced versions of this project, additional components like the LM35 temperature sensor and MQ2 methane sensor can be incorporated.

FIG. 4 Block diagram of the

Result and Conclusion

The soil moisture sensor plays a pivotal role in the agricultural system by determining soil moisture levels in the root zone. Every minute, the Arduino Microcontroller collects data from the sensor, recording and analyzing it to take appropriate actions. Soil moisture levels are configured based on plant specifications, soil type, and seasonal rainfall patterns. The Arduino microcontroller regularly uploads observed data and adjusts water supply accordingly, ensuring optimal moisture conditions for plants.

Beyond irrigation control, this system offers versatility. It can be adapted to serve as an automatic alarm system to protect plants from excessive atmospheric temperatures or detect methane gas in greenhouses. Moreover, it enables the recycling of excess water in the field.

The applications of a greenhouse monitoring system in agriculture are vast. Automating greenhouse monitoring reduces the workload on humans, ensuring that plants are cultivated under precise conditions with minimal error. The system's ability to control appliances via the internet opens up further possibilities for integration.

In the near future, there's potential for the system to become completely autonomous, capable of autonomously taking all necessary actions to optimize plant growth. By employing a bi-directional motor pump, while retaining the rest of the project setup, cost-effectiveness can be achieved, making this technology even more accessible and beneficial.

^{1*} Assistant Professor, Department of Physics, St. Joseph's College, Moolamattom.

Abstract:

Viscosity measurement is a critical parameter in fluid dynamics, with applications spanning various industries. This paper presents a comparative analysis of three methods for measuring viscosity: the manual method, Poiseuille's method, and an automated approach using flow sensors and Arduino microcontrollers. The study aims to evaluate the accuracy, precision, and feasibility of these methods. While the manual method is cost-effective, it is prone to human errors. Poiseuille's method, utilizing solenoid valves and sensors, faces challenges due to sensor inaccuracies. The automated approach, although more expensive, promises higher accuracy and precision when appropriately calibrated. Our analysis reveals the advantages and limitations of each method.

Keywords: Viscosity, Poiseuille's Methods,

Introduction:

Viscosity, the measure of a fluid's resistance to flow, plays a pivotal role in various industries such as aerospace, automotive, and chemical engineering. Accurate and precise viscosity measurements are essential for quality control, process optimization, and research in fluid dynamics. This paper compares three viscosity measurement methods: the manual method, Poiseuille's method, and an automated approach using flow sensors and Arduino microcontrollers. Our analysis aims to guide researchers and engineers in selecting the most suitable method for their specific requirements.

Methodology:

1. **Manual Method:** The manual method involves measuring the time taken for a fixed volume of liquid to pass through a tube of known dimensions. The flow rate and average velocity of the liquid are calculated, and viscosity is determined using Poiseuille's equation. However, this method is prone to human errors and parallax inaccuracies.
2. **Poiseuille's Method:** Poiseuille's method uses solenoid valves and VL53L0X sensors to measure flow through a capillary tube. While theoretically sound, the method faces challenges due to sensor inaccuracies and calibration difficulties.
3. **Automated Approach:** The automated approach utilizes flow sensors and Arduino microcontrollers to measure flow rate accurately. The program calculates viscosity based on flow frequency, tube dimensions, and the Blasius equation. Proper calibration is crucial for precise results.

Figure: Automated setup for measuring viscosity

Results:

In the manual method, viscosity was calculated as 1.05 ± 1.364 Pa.s, indicating a relatively high level of uncertainty. In contrast, the Poiseuille's method using solenoid valves and VL53L0X sensors resulted in inconclusive outcomes due to sensor inaccuracies.

The automated approach, despite its potential for high precision, yielded unexpected results due to calibration errors and sensor inaccuracies. Viscosity was calculated as 0.01 Pa.s, but this value was likely affected by calibration mistakes and sensor inaccuracies.

Conclusion:

In conclusion, our comparative analysis highlights the strengths and weaknesses of three viscosity measurement methods. The manual method, while cost-effective, is prone to human errors. Poiseuille's method, although theoretically sound, faces challenges with sensor inaccuracies. The automated approach, with proper calibration techniques, promises high accuracy and precision but may be cost-prohibitive and require programming skills.

Ultimately, the choice of method should align with the specific requirements and resources of the experiment or industry. For those seeking high accuracy and precision, the automated approach remains promising, provided calibration challenges are addressed. Meanwhile, the manual and Poiseuille's methods may still find utility in scenarios where cost and ease of use are paramount. Further research and development in sensor technology and calibration techniques could enhance the performance of automated viscosity measurement systems.

Abstract

The major objective of the study was to explore premarital life partner among adults based on their living area. The sample (young adults aged 18 to 30) were selected by using convenient sampling method (N=305, urban N=83 and rural N=222). Questionnaire method was used to collect data. Premarital life partner expectation scale developed by Reeta Kumari and Pushplata, (1971) and marital attitude scale of Pramod Kumar (1988). The study found that premarital life partner expectation is higher among rural than urban. The study also revealed that sample having post-graduation possessed higher level of premarital life partner expectations.

Keywords: premarital life expectation, Rural adults, Education

Introduction

Premarital life partner expectations are the beliefs and desires that people have about their future spouses before they get married. These expectations can vary based on many factors, such as culture, religion, education, personality, and place of birth. Place of birth can influence premarital expectations in different ways, depending on the social and economic conditions of the region, the exposure to different lifestyles and values, and the availability of potential partners. According to a study by Das and Rout¹, (2023) rural youth tend to marry earlier and have lower levels of education and income than urban youth. They also have higher prevalence of premarital sex, especially among females, due to lack of awareness and access to contraception. Urban youth, on the other hand, tend to delay marriage and have higher levels of education and income. They also have more exposure to mass media and western culture, which may influence their preferences and choices of partners. Urban youth may have more autonomy and freedom to select their partners based on love and compatibility, rather than family or community pressure.

Place of birth can affect the norms and values of the society, as well as the opportunities and challenges for finding suitable partners. Therefore, it is important for couples to understand and respect each other's expectations before getting married, and to communicate and compromise when necessary. premarital life partner expectations can differ based on place of birth, as it influences the social and cultural context of the individuals.

Premarital life partner expectations have undergone a profound transformation, significantly influenced by education. In the past, unions were often arranged based on societal norms and familial considerations. However, as education has become more accessible and widespread, individuals are increasingly seeking partners who share their intellectual and emotional compatibility. Education equips individuals with critical thinking skills and a broader perspective on life, leading them to prioritize qualities like shared values, goals, and communication skills over traditional factors like social status or wealth. Furthermore, education fosters independence, encouraging people to be more selective in choosing a partner who aligns with their personal aspirations and ideals. This evolution in partner expectations underscores the profound impact of education on our quest for lifelong companionship

Result and discussion

Premarital life partner expectation was higher among rural than urban young adults. In rural areas have higher expectation to ensure they find the most compatible match. Rural communities often place a strong emphasis on family values, leading individuals to seek partner who align with their cultural and traditional beliefs. In close-knit rural communities, people often rely more on their partner for support, companionship, and livelihood, which could lead to higher expectations in a life partner. Premarital life partner expectation was higher among rural adults than urban adults in India because of the differences in their exposure to alternative forms of intimate relationships, influence from their families and communities, and access to information and education about sexual and reproductive health.

Smith and Johnson (2020) found that urban-born adults showed a significantly higher preference for partners with ambitious career goals, while rural-born adults placed greater importance on shared family values when it came to premarital life partner expectations.

Education qualification is another factor that influenced the premarital life partner expectation. The results showed that life partner expectations comparatively less among lower educational groups and it is higher among individuals having post graduation.

Postgraduate students often have higher premarital life partner expectations due to various factors. Firstly, their extended educational journey provides more time for self-discovery, leading to a clearer understanding of their desires and needs in a partner. Additionally, advanced education fosters intellectual and emotional growth, making them seek partners who can engage in meaningful discussions and provide intellectual stimulation. Economic stability, often associated with postgraduate degrees, can lead to higher expectations in terms of financial security. Lastly, exposure to diverse perspectives in academia may raise their standards for cultural compatibility, further elevating their expectations for a life partner. These factors collectively contribute to the heightened expectations among postgraduate students. Bhandari (2017) explored the family's involvement in pre-marital relationships of young adults aged 24–31 in India. It argues that pre-marital relationships often model themselves on structures and expectations of a marital union, and that the family can influence the course of a relationship by either obstructing or encouraging it. The study of Kumari (2021) found that the students have high expectations of their future spouses in terms of education, occupation, personality, and compatibility, and that they use various methods to search for and evaluate potential partners. Present findings supporting both of these studies.

Conclusion

These findings indicated the significance of socio-cultural factors shaping marital expectations among rural communities and education also influencing partner preferences. It was a time-bounded study, so as to having various limitations. But it provides an idea regarding the expectations of rural adults.

Abstract:

The prime objective of the study was to explore premarital life partner expectations and marital attitude among adults based on gender. The sample (young adults aged 18 to 30) were selected by using convenient sampling method (N=305, males N=142 and female N=163). Questionnaire method was used to collect data. Premarital life partner expectation scale developed by Reeta Kumari and Pushplata, (1971) and marital attitude scale of Pramod Kumar (1988). The study found that premarital life partner expectation is higher among females than males. The study also revealed that marital attitude is more or less similar among males and females. No statistically significant gender difference was observed.

Key words: Gender, Marital Attitude, Premarital Life Expectations

Introduction

Gender difference is one of the factors that may influence the expectations and attitudes of young adults towards marriage. Some studies have suggested that there are significant differences between males and females in their views on various aspects of marriage, such as sexual relationship, type of marriage, criteria for choosing life partner and specific motives for successful marriage. These differences may reflect the different social and cultural norms, values and roles that are assigned to each gender in different societies. Premarital expectations refer to what a person anticipates from married life before to getting married. It is a regular occurrence to sense and anticipate something before really experiencing it. Premarital expectations or wants of a spouse are expected from the other partner and are beyond the individual's control, leaving them feeling vulnerable. In addition, when these expectations are not met, it can be incredibly disheartening and aggravating. Marital contentment is an experience that varies from person to person and can only be measured by the response to the marital satisfaction questionnaire (Deressu & Girma, 2019).

Premarital expectations tend to play a significant effect in the marriage life of a person. Once marriage expectations are met, it is recognised that the individual is more likely to enjoy more happiness and marital satisfaction. Particularly, expectations regarding the spouse are regarded as one of the strongest indicators of marital satisfaction (Rios, 2010). Today's generation values companionship, mutual commitment, familial support, sexual needs, and financial independence more than prior generations. Existing research suggests that reciprocal appreciation and cooperation are factors of marital expectations. In addition, other factors influence spousal expectations, such as the spouse's relationship with children and family, professional life, religion, and physical and emotional health (Villa & Prette, 2013). These marital expectations play an important part in the lives of married individuals by influencing their marital satisfaction and quality. According to research undertaken by Signorielli (1999), television plays a significant impact in the formation of perceptions and ideas towards marriage and intimate relationships.

Marital attitudes and expectations form a cognitive schema about relationships brought about by experience (Fletcher & Thomas, 1996; as cited in Riggio & Weiser, 2008). Attitudes and expectations about relationships are important cognitions regarding perceptions of and behaviors in personal relationships (Riggio & Weiser, 2008). One may form attitudes and expectations regarding marital life through personal experiences with a partner, by observing one's parents, or by watching others negotiate the process of courtship and marriage. Highly embedded positive marriage attitudes may influence behaviour and highly embedded negative marriage attitudes may also affect beliefs about relationships (Riggio & Weiser, 2008). Individuals with highly embedded positive attitudes about

marriage view their own current and future marriages as happy and successful but those with highly embedded negative attitudes have less positive expectations (Riggio & Weiser, 2008).

Results and discussions

Premarital life partner expectations higher among females than males. Some of these reasons could be influenced by societal norms, personal experiences, and evolutionary factors. For example, historically, women may have sought partners who could provide security and support, as they often had primary responsibilities in child-rearing. Additionally, changing gender roles and increased emphasis on equality may have led women to seek partners who are supportive, understanding, and share responsibilities in a more balanced way (Smith & Johnson et al., 2020). The study found that male participants tended to prioritize physical attractiveness and shared interests in a partner, while female participants placed more emphasis on emotional intelligence and financial stability as key factors in their premarital life partner expectations. In another study Lee and, Chen, et al.,(2019) there were significant gender differences in premarital life partner expectations. Additionally, educational and professional opportunities have expanded for women, raising their standards for intellectual compatibility and financial stability in potential partners. Women possessed higher levels of romances in their premarital life than males. The study of Harrison (2011) revealed that women were more romantic and tend to fall in love faster than men. This proved that women have more expectations in premarital life regarding their partner.

Conclusions

Young adults normally having higher level expectations regarding their life partner in premarital life. But gender has a significant role in determining the magnitude of expectations. Females obtained higher scores in expectations in this study. But the study shed a light in premarital life partner expectations and attitude towards marriage among new generation youngsters.

^{1*} Assistant Professor St. Joseph's College, Moolamattam

Abstract

Performance failure means any disruption or failure of service including without interruption or delay or any mistake committed by the performer resulting lower level performance is considered as performance failure. Present study was conducted on 200 artists from different areas of arts. The sample were collected by using convenient sampling method and the researcher used Performance failure appraisal inventory (PFAI) 2003 developed by David. E. Conroy to assess the performance failure. The results showed that performance failure not significantly varied on the basis of gender. It was similar among male and female Performers. Further the study revealed that fear of failure was more or less similar among married and unmarried sample. Type of family also does not influence the fear of failure of performing artists.

Keywords: Gender, Type of family, Marital status, Performing artists.

Introduction

Fear of failure has often been described as a “disposition to avoid failure or a capacity for experiencing shame or humiliation as consequence of failure” (Atkinson, 1966). According to Elliott and Thrash (2004) it is seen as “dispositional tendency to avoid failure in achievement settings” due to overwhelming feeling of humiliation and embarrassment caused by failure. The personality traits have its origin in problems like anxiety, shame, and feelings of inferiority (Birney et al., 1969). The fear of failure may exhibit as perfectionist tendency of some students (Beery, 1975) but for others it could cripple their desire to succeed in academics (Rothblum, 1990). They lack self-confidence and in order to save themselves from shame and Embarrassment caused by failing, they perform poorly as an excuse to protect their self-Worth (Beery, 1975). Conroy (2002) states that fear of failure is an encouragement to avoid failure, especially the negative consequences such as shame, lowered self-concept, and loss of social influence.

The performing arts industry is a realm where creativity meets vulnerability, where artists pour their hearts and souls into their craft. Amidst the spotlight and applause, there exists a shadowy companion – the fear of failure. This fear, which can be both motivating and debilitating, is not uniform across all artists. Rather, it is influenced by many factors, including gender, type of family upbringing, and marital status. These aspects, deeply rooted in an artist's personal life and societal context, play a significant role in shaping their perceptions, expectations, and coping mechanisms in the face of artistic challenges. These factors are not isolated variables but intricate threads woven into the tapestry of an artist's life. Gender, with its societal expectations and cultural nuances, can influence how an artist perceives failure and how they respond to it. The type of family one is raised in, whether nurturing and supportive or laden with expectations, plays a vital role in shaping an Individual's self-belief and resilience. Marital status, whether single, married, or in any other configuration, brings its own set of dynamics that can affect an artist's fear of failure.

In the world of the performing arts, where the pursuit of creative excellence is both a passion and a livelihood, the fear of falling short can be a constant companion. The pressure to succeed, the vulnerability of artistic expression, and the unpredictability of the industry create

fertile ground for this fear to take root. What makes this exploration even more fascinating is the realization that the fear of failure is not a one-size-fits-all emotion. It is shaped, molded, and sometimes intensified by an artist's gender, their family background, and their marital status.

Result and Discussions

Gender, type of family, and marital status do not have a significant impact on the performance failure of performing artists. Both male and female artists can experience performance failure, and the reason behind such failures can vary widely and are not inherently related to gender. Factors such as preparation, experience, mental state, external pressure, and various other aspects can play a role in performance outcomes for all individuals, regardless of their gender. It's essential to avoid generalisations and recognize that each artist's experience is unique and influenced by various personal and situational factors. Performance outcomes are multifaceted and depend on a combination of personal qualities and professional circumstances rather than these demographic characteristics. Performance failure typically should not affect artists based on their gender, marital status, or family type due to several reasons. An artist's ability and creativity are not determined by gender, marital status, or family type. Artistic talent is a personal attribute unrelated to these factors. Art is subjective, and the evaluation of an artist's work should be based on its merit rather than personal characteristics.. And also artists are judged primarily on their professionalism and the quality of their work.

Conclusion

Performance failure among performing artists can be influenced by various factors, including physical and mental exhaustion, stress, and lack of preparation. The expectation of flawless technique and the extraordinary demands performers go through, as well as the judgment and critiques performers get about performance, can contribute to the development of the performance failure (Hays, 2002). Addressing these challenges through proper training, mental health support, and balanced schedules could potentially reduce the occurrence of performance failures in the performing arts.

1.	Introspecting the Childhood Self of Amir in <i>The Kite Runner</i> Sunitha Mathew ^{1*} , Roby Mathew ^{1*} , Roopa Jose ^{1*} , Salini L.R ^{1*} , & Alex E.R ^{1*}	1
2.	A Comparative Exploration of Truth and Integrity: Henrik Ibsen's <i>An Enemy of The People</i> and Satyajit Ray's <i>Ganashatru</i> S. Abhilash Mathew ^{1*} , Prince J Mathew ^{1*} , Salini L.R ^{1*} , & Christy Joseph ^{1*}	3
3.	Cultural Integration in 'Brick Lane' By Monica Ali S. Abhilash Mathew ^{1*} , Salini L.R ^{1*} , Alex E.R ^{1*} , & Christy Joseph ^{1*}	5
4.	(M)Otherhood: On The Choices of Being A Woman Deconstructs Modern-Day Motherhood Dr. Aparna Prasad ^{1*} , Christy Joseph ^{1*} , S. Abhilash Mathew ^{1*} , & Roby Mathew ^{1*}	8
5.	Culture in Nadia Hashmi's <i>One Half From The East: A Justifying Voice</i> Fasila Salim*, Dr. Alex E.R ^{1*} , Dr. Salini L.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	11
6.	Depiction of Gender Bias in Nadia Hashmi's <i>One Half From The East</i> Fasila Salim*, Dr. Alex E.R ^{1*} , Dr. Anju E.R ^{2*} , Dr. Salini L.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	13
7.	<i>Samskara</i> as a Text that Raises Subaltern Issues Fathima Salam*, Dr. Salini L.R ^{1*} , Dr. Alex E.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	15
8.	Liberal Feminism in the Novel <i>Daisy Miller</i> Marianne M George*, Dr. Salini L.R ^{1*} , Dr. Alex E.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	17
9.	Challenges and Opportunities for Women Working Remotely Tisha Tomy ^{1*}	19
10.	Environmental Sustainability: A Necessity for Survival Tisha Tomy ^{1*}	22
11.	Mechanism of Conflict Management in Business Organizations Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Sharon Lee Jose ^{1*} , Geethu Jose ^{1*} , Mareet Paul ^{1*}	25
12.	Emotional Maturity among Graduate Students in India Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Sharon Lee Jose ^{1*} , Geethu Jose ^{1*} , Mareet Paul ^{1*}	28
13.	Product Mix and Strategies - An Introduction Sharon Lee Jose ^{1*} , Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Geethu Jose ^{1*} & Mareet Paul ^{1*}	31
14.	IR Sensor Interfacing using Arduino Mr. Albin Jose*, Mr. Visakh K. S*, Dr. Anju Mathews ^{1*} , Dr. Praveen Joseph ^{1*} , Dr. Robin John ^{1*}	34

15. Persistence of Vision Display	37
Mr. Anandhu Babu*, Mr. Sudhi Jayan*, Dr. Anju Mathews ^{1*} , Dr. Subin Thomas ^{1*} , Dr. Robin John ^{1*}	
16. Arduino-Uno Microcontroller-Driven Irrigation Automation	39
Dr. Praveen Joseph ^{1*} , Dr. Robin John ^{1*} , Dr. Subin Thomas ^{1*} , Sandeep Krishna P S* & Akhil Krishnan*	
17. Comparative Analysis of Viscosity Measurement Techniques: Manual, Poiseuille's Method, and Automated Approach	42
Melvin Mathew*, Sooraj Biju*, Dr. Subin Thomas ^{1*} , Dr. Praveen Joseph ^{1*} & Dr. Robin John ^{1*}	
18. Premarital Life Partner Expectations among Rural Adults	45
Gayathri N Nair*, Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , Mathews Emmanuel ^{1*} & Dr. Justin Joseph ^{1*}	
19. Gender Difference in Premarital Life Partner Expectation and Marital Attitude	47
Gayathri. N Nair*, Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , Mathews Emmanuel ^{1*} & Dr. Justin Joseph ^{1*}	
20. Influence of Gender, Type of Family and Marital Status of Fear of Failure among Performing Artists	49
Sneha C C*, Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , & Mathews Emmanuel ^{1*}	
21. Performance Failure among Individuals Performing in Traditional Art Forms of Kerala	51
Sneha C C*, Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} & Sijo John ^{1*}	
22. Analysis of the IPL Data Set	53
Steffymol Sunny*, Sneha C S*, Almie Joseph ^{1*} , Jes Mariya Shoji ^{1*} , Silvanose P.Thomas ^{1*}	
23. Students' use of Alcohol	56
Krishnadas Biju*, Sneha C S*, Almie Joseph ^{1*} , Jomon Kottarathil ^{1*} , Mathews Emmanuel ^{1*}	
24. Emotional Competence of Cancer Patients	60
Aby Benny*, Justin Joseph ^{1*} , Mathew Kanamala ^{1*} , Manu Kurian ^{1*} & Jomon Kottarathil ^{1*}	
25. Boston House Forecast Prices	63
Adhila Abdul Karim*, Sruthy Sebastian ^{1*} Sabukkutty M G ^{1*} , Aneesh N ^{1*} & Silvanose P. Thomas ^{1*}	
26. Analysing and Visualizing Weather Data with Tableau	67
Aida Vinoy*, Sruthy Sebastian ^{1*} , Sneha C.S ^{1*} , Jomon Kottarathil ^{1*} , Aneesh N ^{1*}	
27. An Analysis of OTT Platforms' Utilisation of BI	71
Akash Anil*, Jilu Jose ^{1*} , Jomon Kottarathil ^{1*} , Sabukutty M.G ^{1*} & Aneesh N ^{1*}	
28. Business Acumen in Social Media	74
Akash Anil*, Jilu Jose*, Jomon Kottarathil ^{1*} , Sabukkutty M.G ^{1*} & Aneesh N ^{1*}	
29. Early Diagnosis of Diabetes	77
Asby O S*, Jilu Jose ² , Jomon Kottarathil ^{1*} , Sabukkutty M.G ^{1*} , Aneesh N ^{1*}

^{1*} Assistant Professor St. Joseph's College, Moolamattam

Abstract

Performance failure means any disruption or failure of service including without interruption or delay or any mistake committed by the performer resulting lower level performance is considered as performance failure. Present study was conducted on 200 artists from different areas of arts. The sample were collected by using convenient sampling method and the researcher used Performance failure appraisal inventory (PFAI) 2003 developed by David. E. Conroy to assess the performance failure. The results showed that performance failure not significantly varied on the basis of gender. It was similar among male and female Performers. Further the study revealed that fear of failure was more or less similar among married and unmarried sample. Type of family also does not influence the fear of failure of performing artists.

Keywords: Gender, Type of family, Marital status, Performing artists.

Introduction

Fear of failure has often been described as a “disposition to avoid failure or a capacity for experiencing shame or humiliation as consequence of failure” (Atkinson, 1966). According to Elliott and Thrash (2004) it is seen as “dispositional tendency to avoid failure in achievement settings” due to overwhelming feeling of humiliation and embarrassment caused by failure. The personality traits have its origin in problems like anxiety, shame, and feelings of inferiority (Birney et al., 1969). The fear of failure may exhibit as perfectionist tendency of some students (Beery, 1975) but for others it could cripple their desire to succeed in academics (Rothblum, 1990). They lack self-confidence and in order to save themselves from shame and Embarrassment caused by failing, they perform poorly as an excuse to protect their self-Worth (Beery, 1975). Conroy (2002) states that fear of failure is an encouragement to avoid failure, especially the negative consequences such as shame, lowered self-concept, and loss of social influence.

The performing arts industry is a realm where creativity meets vulnerability, where artists pour their hearts and souls into their craft. Amidst the spotlight and applause, there exists a shadowy companion – the fear of failure. This fear, which can be both motivating and debilitating, is not uniform across all artists. Rather, it is influenced by many factors, including gender, type of family upbringing, and marital status. These aspects, deeply rooted in an artist's personal life and societal context, play a significant role in shaping their perceptions, expectations, and coping mechanisms in the face of artistic challenges. These factors are not isolated variables but intricate threads woven into the tapestry of an artist's life. Gender, with its societal expectations and cultural nuances, can influence how an artist perceives failure and how they respond to it. The type of family one is raised in, whether nurturing and supportive or laden with expectations, plays a vital role in shaping an Individual's self-belief and resilience. Marital status, whether single, married, or in any other configuration, brings its own set of dynamics that can affect an artist's fear of failure.

In the world of the performing arts, where the pursuit of creative excellence is both a passion and a livelihood, the fear of falling short can be a constant companion. The pressure to succeed, the vulnerability of artistic expression, and the unpredictability of the industry create

fertile ground for this fear to take root. What makes this exploration even more fascinating is the realization that the fear of failure is not a one-size-fits-all emotion. It is shaped, molded, and sometimes intensified by an artist's gender, their family background, and their marital status.

Result and Discussions

Gender, type of family, and marital status do not have a significant impact on the performance failure of performing artists. Both male and female artists can experience performance failure, and the reason behind such failures can vary widely and are not inherently related to gender. Factors such as preparation, experience, mental state, external pressure, and various other aspects can play a role in performance outcomes for all individuals, regardless of their gender. It's essential to avoid generalisations and recognize that each artist's experience is unique and influenced by various personal and situational factors. Performance outcomes are multifaceted and depend on a combination of personal qualities and professional circumstances rather than these demographic characteristics. Performance failure typically should not affect artists based on their gender, marital status, or family type due to several reasons. An artist's ability and creativity are not determined by gender, marital status, or family type. Artistic talent is a personal attribute unrelated to these factors. Art is subjective, and the evaluation of an artist's work should be based on its merit rather than personal characteristics.. And also artists are judged primarily on their professionalism and the quality of their work.

Conclusion

Performance failure among performing artists can be influenced by various factors, including physical and mental exhaustion, stress, and lack of preparation. The expectation of flawless technique and the extraordinary demands performers go through, as well as the judgment and critiques performers get about performance, can contribute to the development of the performance failure (Hays, 2002). Addressing these challenges through proper training, mental health support, and balanced schedules could potentially reduce the occurrence of performance failures in the performing arts.

Abstract:

The prime objective of the study was to explore performance failure among individuals performing in traditional art forms of Kerala. Present study was conducted on 200 artists from different areas of arts. The samples were collected by using convenient sampling method and the researcher used Performance failure appraisal inventory (PFAI) 2003 developed by David. E. Conroy to assess the performance failure. The results showed that performers studying in traditional Art forms (Kathakali) have lower level of performance failure. More over performers living with both parents also having lower performance failure than others.

Key words: Performance failure, Kathakali, Traditional art forms.

Introduction

Performance failure among performing artists is a widespread and complex issue that affects individuals across various artistic disciplines. Performance failure among individuals engaged in traditional art forms of Kerala is a significant concern that warrants attention. Kerala, known for its rich cultural heritage, boasts a wide array of traditional art forms such as Kathakali, Mohiniyattam, koothu all of which hold a special place in the state's cultural fabric. Performance failure among individuals performing in traditional art forms of Kerala is a multifaceted issue with deep cultural and social roots. These types of art forms demands a high degree of skill, precision, and emotional expression, making it a challenging art form to master and perform consistently. The pressure to meet these exacting standards can lead to performance anxiety. There are several factors contributing to performance failure:

Insufficient Training: Inadequate training can leave performers ill-prepared, lacking the necessary skills and understanding of the art forms.

Physical Demands: Many traditional art forms require exceptional physical fitness and stamina, making it challenging for those not in peak condition.

Cultural Context: A lack of cultural understanding can result in performances that lack depth and authenticity, failing to convey the essence of these art forms.

Stage Anxiety: The pressure to honor the legacy of these art forms can lead to stage fright and anxiety, affecting a performer's confidence and execution.

Resource Constraints: Absence of essential costumes, props, and musical accompaniments can hamper the overall impact of the performance.

Audience Expectations: Kerala's audiences hold high expectations for these art forms, and falling short can lead to disappointment and perceived failure.

Competition: Intense competition among performers adds to the stress, making it difficult to deliver outstanding performances.

Overall, Fear of failure has been found across different levels of perceived and actual ability (Covington, 1992, Elliot & Thrash, 2004). On the one hand, Fear of failure may serve as a

motivating factor, in terms of striving for and reaching high levels of performance. However, it can also prevent individuals from actualizing their potential due to high anxiety and perceived incompetence (Conroy et al., 2002; Martin & Marsh, 2003).

Result and Discussions

Traditional art forms like Kathakali are also do not have a significant impact on performance failure. Kathakali performers wear elaborate makeup, mask and costumes. Which can provide a sense of liberation on stage. This physical transformation may help students feel more confident and less worried about personal judgment. In Kathakali, students often perform in groups, which can create a sense of camaraderie and shared responsibility. Traditional art forms often require years of rigorous and structured training. Artists learn from experienced mentors and follow well-established techniques, which can reduce the likelihood of failure due to a strong foundation of skills. These artists are motivated by a deep sense of cultural preservation. This commitment can drive them to uphold the standards and practices of their art, leading to more consistent performances. Traditional art forms like Kathakali places a strong emphasis on facial expressions and body language to communicate emotions and stories. However, it's essential to recognize that artists in traditional art forms can still experience performance challenges and occasional failures. Additionally, the perception of lower failure rates in traditional art forms may be influenced by cultural biases or a preference for preserving and highlighting successful performances.

Conclusion

The research on performance failure among individuals performing in traditional art forms of Kerala reveals a multifaceted landscape. This study has shed light on the factors that contribute to the perceived lower incidence of performance failure in these traditional art forms, including rigorous training, dedication to tradition, mastery of techniques, supportive communities, and the cultural significance of these art forms. What one individual considers a failure, another may see as a valuable opportunity for artistic exploration and development. Ultimately, performance failure, while challenging, is an inherent aspect of the performing arts. It is essential for artists to embrace it as a potential stepping stone toward greater artistic achievement and resilience, recognizing that setbacks can be transformed into valuable experiences that contribute to their growth and evolution as performers.

Abstract

Cricket, a popular outdoor game, generates significant statistical data, particularly in India, with the Indian Premier League (IPL) editions becoming increasingly popular. This article analyzes the IPL cricket match results from 2008-2016, examining factors affecting match outcomes such as team auction, game planning, franchise branding, and fan base accumulation. The data is analyzed using existing data mining algorithms on balanced and imbalanced datasets. Accuracy is used as a performance metric and evaluation criteria, with percentages varying depending on the algorithms used. The article aims to understand the influence of these data on team auction, game planning, franchise branding, and fan base accumulation.

Keywords: IPL, Exploratory Analysis, Batting

Introduction

The Indian Premier League (IPL) is a significant global sports event, and data mining tools and technologies have enabled the prediction of future trends and behaviors based on cricket data. Data mining algorithms have been applied to the IPL dataset, analyzing the knowledge from each algorithm with high accuracy and performance. The dataset includes around 786 matches, with 14 teams participating so far. In today's competitive cricket landscape, teams must prepare from the outside before entering the field. Sports Analytics is crucial for team preparation, as it informs players, coaches, and team management about decision-making on and off the field. On-field analytics helps players make key decisions on the field, while off-field analysis helps prepare and plan for matches. The main objective of this project is to help players make informed decisions based on previous data, using data from 2008 to 2020. The more data available, the better the analyst can assist players in making informed decisions for better results.

Materials And Method

Dataset

The dataset was obtained from the Kaggle. For visualizing and analysing the data of IPL we have used google colab notebook and visualizing tool like Tableau BI. The dataset contains the data of every match that has been played from 2008 to 2020. It has 18 columns and 193468 rows. Each row represents details of a unique match, each column represents a specific attribute. The dataset gives information about id, innings, overs, ball, batsman, non-striker, bowler, batsman runs, extra runs, total runs boundaries, wickets, dismissals, fielders, batting and bowling teams.

Data Pre-processing

Data pre-processing is crucial for obtaining better insights from raw data, as it can be noisy, missing, inconsistent, biased, and have duplicate records. To improve conclusions, data should be cleaned, transformed, and reduced according to requirements. In a dataset with 18 columns and 193468 rows, some columns, such as dismissal type, player dismissed, fielder, extras type, and team won margin, were missing. To streamline analysis, these columns were removed. Additionally, columns like umpire1, umpire2, venue, and neutral venue were removed. The date column was changed from int to date data type, replacing the year with the year of the match.

Data Analysis and Visualization

From 2008 to 2020, 786 matches were played, with 60.69% of teams choosing to field first in 477 matches and 39.31% batting. The winning team won 51.9% of matches, while the chasing team had a higher chance of winning in 55.7% of matches. However, factors such as dew,

batting team scores, player consistency, and the fall of the wicket rate per over can affect the chances of winning. The data can be pre-processed to reveal hidden insights and help make informed decisions. The chasing teams have a higher chance of winning, but this can depend on factors like dew, batting team scores, player consistency, and the wicket rate per over.

Fig 1: Information of the dataset

From 2008 to 2020, 14 teams participated in the IPL, with the Duckworth Lewis method (D/L) used to declare winners in 19 matches. Mumbai Indians played the most matches, with around 200 matches until 2020. KKR, RCB, and Kings XI Punjab played over 175 matches, indicating their success in games to advance to finals and semifinals. Pune Warriors, Gujarat Lions, Delhi Capitals, Rising Pune Supergiants, and Kochi Tuskers Kerala played less than 50 matches until 2020, suggesting they have not participated in all seasons of IPL.

Fig 2: Win over First Batting vs Second Batting

Fig 3: Number of matches played by teams

The Indian Premier League (IPL) has seen a decline in matches since its inception in 2008 to 2010, with fewer than 60 matches played in each season. From 2012 to 2013, the number of matches decreased to 74, and from 2015 to 2020, the number remained below 60 due to widespread rumours of cricket scams and betting. The IPL has been played in 32 cities globally, with Mumbai hosting around 100 matches, Kolkata, Delhi, and Hyderabad hosting over 60 matches. The IPL has played over 40 matches in Chennai, Chandigarh, Jaipur, Abu Dhabi, Dubai, and Sharjah. The visual provides a clear picture of the matches, demonstrating high accuracy in robust and statically significant cases. Ranking lists of rising stars are presented in both domains.

Fig 4: Total runs obtained by the teams

Fig 5: Top 10 Bowlers- Highest number of balls

From 2008 to 2020, it would be exciting to know which team won maximum matches. The data shows that Mumbai Indians has won in about 120 matches followed by Chennai Super Kings winning more than 100 matches. Kolkata Knight Riders won more than 90 matches. The graph gives us a detailed picture regarding the matches won by various teams.

Fig 6:Team Wins over the team played

We got a clear picture regarding which team won the match and how many times. Data also shows the number of times the team won the matches. From the below visual we get the clear picture that Mumbai Indians won close to 100 tosses followed by KKR, CSK, and RR. It seems that Pune Warriors, Delhi Capitals, Gujarat Lions, Rising Pune Supergiant, Kochi Tuskers Kerala have won less than 20 tosses till 2020.

Fig.7. Matches won by various teams over toss

The Indian Premier League (IPL) has seen a significant rise in the number of players who have been awarded man of the match multiple times. C H Gayle and AB de Villiers have been awarded man of the match for 20+ matches, while Rohit Sharma, M S Dhoni, DA Warner, and S R Watson have been awarded man of the match for 15+ matches.

Fig.8 Top Batsman who scored the most runs

Conclusion

This paper explores IPL data and presents insights through graphical representation and comparative analysis. It aims to help Indian Premier League fans make informed decisions on

team performance and predict future trophy winners. The study uses data mining algorithms to analyze the results of IPL matches from 2008-2016, focusing on balanced and imbalanced datasets. The main objective is to pre-process imbalanced data, as classifiers are more sensitive to majority class and less sensitive to minority class. The balanced dataset provides greater accuracy than imbalanced sampling, with higher outcome values and fewer errors.

Students' use of Alcohol

Krishnadas Biju*, Sneha C S*, Almie Joseph^{1*}, Jomon Kottarathil^{1*}, Mathews Emmanuel^{1*}

*Student, Department of Mathematics, Department of Data Science

^{1*} Assistant Professor, St. Joseph's College, Moolamattom, Kerala

Abstract

Alcohol consumption has become widespread, but it can have detrimental effects on individuals, families, and society. This paper zeroes in on the behavior of students and their alcohol consumption during school. It utilizes a dataset from Gabriel Pereira and Mousinho da Silveira schools in Portugal. The analysis includes feature selection, examining how alcohol relates to students' grades, and predicting grades through data visualization.

Keywords -Feature Selection, Prediction, Data Visualization.

Introduction

According to a 2016 survey on drug and health, a concerning 72% of students nationwide engage in daily alcohol consumption, with detrimental effects on their futures and society as a whole. Binge drinking has become a popular and exciting trend, particularly among students aged 15-20. Adolescents often turn to alcohol to cope with life's challenges, leading to an increase in early-age drinking. Binge drinking leads to behavioral changes that harm both individuals and others. The toxic effects of alcohol impair cognitive abilities, hindering innovation and the development of a values-driven society. This paper analyzes alcohol consumption among students and its impact on their academic performance, utilizing publicly available data to shed light on this critical issue.

Methodology

In the implementation phase, we'll utilize three types of data mining tools to analyze our dataset. The goal is to predict the impact of alcohol consumption on students and how it influences their academic grades.

a) Python

We'll employ Python machine learning for data analysis, ensuring concise and readable code. Python excels in managing complex algorithms and providing a human-friendly interface. Its simplicity, versatility, and reliability make it a popular choice, particularly in today's industries seeking efficient solutions..

b) Tableau

Tableau is a rapidly emerging tool with widespread usage in both industry and education. It's primarily employed for data visualization and reporting, offering a fantastic way to understand data comprehensively. What makes Tableau even more appealing is its user-friendly interface, making it accessible to those without prior coding knowledge. We'll use Tableau visualization on our dataset to gain a clearer and more insightful perspective on the data's scope.

c) Orange

The Orange tool is one of the data mining tools used widely over the Weka tool. We do the prediction using the orange tool.

d) Dataset

We've obtained the student alcohol consumption dataset from Kaggle, consisting of approximately 395 instances and 33 attributes. Python will help us understand the dataset, perform necessary pre-processing steps, and then Tableau will assist in visualizing the data, allowing us to extract deeper insights and draw meaningful conclusions.

id	name	gender	age	grade	math	science	english	socialstudies	arts	physicaleducation	health	total
1	John	M	10	5	85	78	92	88	75	80	85	806
2	Jane	F	11	6	78	82	85	79	88	72	80	784
3	Michael	M	12	7	90	85	95	90	80	85	90	885
4	Emily	F	13	8	88	80	92	85	78	82	85	810
5	David	M	14	9	82	75	88	80	75	78	80	768
6	Sarah	F	15	10	75	70	82	75	70	75	75	727
7	James	M	16	11	68	65	75	70	65	70	70	663
8	Olivia	F	17	12	60	58	68	65	60	65	65	611
9	Benjamin	M	18	13	55	52	62	60	55	60	60	574
10	Mia	F	19	14	50	48	58	55	50	55	55	538

e) Pre-processing

In data mining and also in data analysis the first and foremost step is data pre-processing. It will offer a better quality to the data that we deal with. The pre-processing includes appropriate dealing with the missing value, data cleaning and data compression and feature selection if needed in case of in numerous attributes when we consider

```
print("Total missing values: ",sum(data.isnull().sum()))
Total missing values: 0

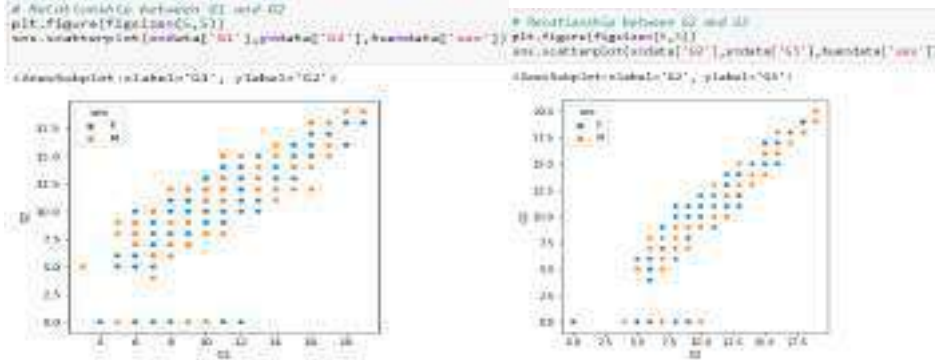

print(data.info())
print(data.describe())

# Basic info:
# int64 (non-null): math: int64(1000), science: int64(1000), english: int64(1000), socialstudies: int64(1000), arts: int64(1000), physicaleducation: int64(1000), health: int64(1000), total: int64(1000)
# float64 (non-null): name: object(1000), gender: object(1000), age: int64(1000), grade: int64(1000)
# object (non-null): name: object(1000), gender: object(1000), age: int64(1000), grade: int64(1000)
```

The dataset contains no missing values.

Both categorical and numerical attributes are present in our data

Correlation among the attribute will easily provide about their relationship.

The graph shows that grades G1 and G2 are correlated.

The graph shows that the grades G1 and G2 are much related.

Result And Discussion

a. Linear Regression (Python)

The features that mainly affects our target when we consider the linear regression would be the following :-

1. *failures* - number of past class failures.
2. *freetime* - free time after school.
3. *Medu* - mother's education.
4. *studytime* - weekly study time.
5. *schoolsup* - extra educational support.
6. *famrel* - quality of family relationships.
7. *Fjob* - father's job (whether father is teacher or not).
8. *Mjob* - mother's job (whether mother is teacher or not).
9. *traveltime* - home to school travel time.
10. *higher* - wants to take higher education.
11. *health* - current health status.
12. *famsup* - family educational support.

Among the dataset we consider only five main factor how they are related to our target.

- Failure

Taking into consideration, let's visualize how failure is affecting the final grade.

We get the inference from here is, 78% of students are not affected by the past class failure. We will separate the dataset according to the number of past class failures and build a distribution of grade for them.

Clearly we can say that the students who did not have any past class failure have better grade.

- Free time

When we consider the free time feature with respect to the target, we get:-

```

sns.histplot(data['freetime'], discrete=True)
plt.title('Distribution of freetime')
plt.show()
data['freetime'].value_counts(normalize=True).to_frame()
    
```

When we consider the graphical representation of free time over the final grade we get as below:-

We can infer from here that only a 10 % of students get more free time. Rest is normally distributed.

So, from these we can identify that our model gives us an accurate value on the target and other features.

Evaluation Matrix

Model	Train Score	Test Score
0 SVM	63.88	43.33

```

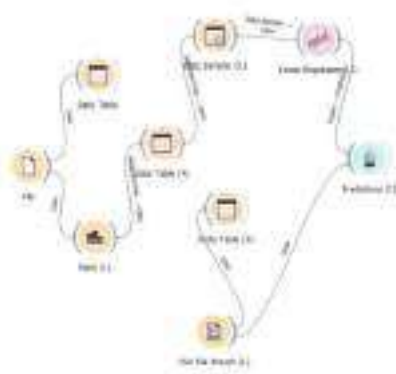

Train Score LR- 64.4776119482985 %
Test Score LR- 45.0 %
Recall score 0.4335499833499833
Precision score 0.3964502164502164
CONFUSION MATRIX [[17 3 1 0 0]
 [ 8 1 5 0 1]
 [ 5 2 3 1 1]
 [ 0 1 4 4 2]
 [ 0 0 0 1 2]]
    
```

In SVM model we get the train score as 63.88% and test score as 43.33%

This shows the confusion matrix for the actual versus predicted.

b. Linear Regression (Orange Tool)

Model	MSE	RMSE	MAE	R2
Linear Regression (1)	0.802	0.896	0.736	0.524

We get the evaluation matrix values as above:-

Conclusion

Based on the findings, it can be inferred that most students who consume alcohol fall within the age range of 15-28. Binge drinking is not prevalent among them. Moreover, students with more free time tend to consume alcohol, and there is a clear correlation between alcohol consumption and failure rates among students.

Abstract

This study employs a descriptive method to investigate the emotional competence among cancer patients in the Idukki district. A convenience sampling method is utilized to gather data from 100 individuals in this specific demographic group. Convenience sampling, a non-probability sampling technique, was chosen to facilitate data collection. The primary objectives of this research were to explore the association between age, gender, and family type with emotional competence in cancer patients. The major findings of this study reveal a statistically significant relationship between age and emotional competence among the sampled patients. Specifically, the research identifies that as individuals within the age group of 51 to 70 advance in age, there is a noticeable change in their emotional competence.

Keywords: Emotional competence, emotional intelligence, physiological change, cancer patients, convenience sampling.

Introduction

Emotion is difficult to define but always consists of feelings, behaviour, physiological change and cognitions and always occurs in a particular context which influences it. Its major function is to give information to the individual about their interaction with the world (Mendes EJ,2003) . According to Saarni (1999) emotional competence as the functional capacity where in a human can reach their goals after an emotion-eliciting encounter. She defined emotion as a building block of self-efficacy. She described the use of emotions as a set of skills achieved which then lead to the development of emotional competence. Attainment of the skills of emotional competence is crucial to self-efficacy. An emotional competence is a learned capacity based on emotional intelligence that results in outstanding performance at work. For superior performance in jobs of all kinds, emotional competence matters twice as much as IQ plus technical skill combined. Emotional Competence is the ability to identify and manage one's emotions. This includes knowing how to nourish your emotional state, take tums, delay gratification, and cope with and loss. It also involves knowing how to control impulses, use failure good judgment and adapt emotions in response to others' emotions and reactions.

Goleman (1989) argued that emotional intelligence underlies emotional competence and that emotional competence is a required antecedent to performance. Emotional intelligence enhances employee potential for learning, and emotional competence translates that potential into task mastering capabilities. Merely displaying high emotional intelligence is insufficient. Emotional intelligence traits only suggest that an employee has the capability for learning task competencies, not that the competencies have actually been learned.

Emotions, or feelings, may be considered to be the ultimate motivator as they fuel a passion for work such that the work becomes enjoyable, effortless, and physically and cognitively rewarding. In such a state, employees give their best in terms of creativity and intuition. Flow may be likened to personal engagement (Kahn, 1990)., in which engaged employees become one with the Job. Motivation and self-awareness give employees a clear sense of whether their personal values fit with those of the organization. If such a fit exists, commitment is strengthened. Emotional literacy is the ability to transcend impulsiveness in favour of a more

rational approach to emotion (Cooper & Sawaf, 1997). Conflicts and frustrations experienced as a rising intensity of constrictive emotions are caught early and suppressed. Setbacks are viewed as learning experiences to be used constructively to spur future growth. Over time, the continuous substitution of positive for negative emotions improves satisfaction and commitment.

Results & Discussions

Most of the cancer patients face problems with Quality of life related issues. The problem can be psychologically approached with a two-step process by addressing the individual's illness representations and resilience abilities. Advances in medical treatments and facilities which are available today are capable of controlling the progression of the disease in many chronic diseases like cancers. However the limitations of the treatment in curing these diseases completely are helping as secondary preventive measures leaving the patient to compromise with many day today issues which ultimately affect their quality of life. Cancer is a disease which is related and restricted to the body of an individual hence any patient can be approached with a similar treatment approach with a subtle variations related to the location of cancer and its severity. Treatment of cancer cannot be done in isolation, it needs to consider the bio psych social model of health and need to consider individual differences. The results we found that there is significant difference in emotional competence based on gender are more among females than males.

When considering the emotional well-being of cancer patients in a specific age group, there are numerous factors that come into play. Firstly, it is crucial to acknowledge that young cancer patients encounter unique obstacles as they navigate their diagnosis and treatment. They often grapple with feelings of fear, isolation, and uncertainty about their future. Moreover, these individuals may have limited life experiences compared to older patients, which can exacerbate the emotional toll of cancer.

However, it is equally important not to underestimate the resilience and strength that many young cancer patients possess. Despite their tender age, they frequently exhibit remarkable emotional competence by discovering ways to cope with their diagnosis, seeking support from friends or siblings who are facing similar challenges, and maintaining a positive outlook on life. Healthcare providers and loved ones must provide tailored support to address the emotional needs of these young individuals, enabling them to navigate this arduous journey with grace and resilience.

Research suggests that cancer patients who receive strong family support tend to exhibit greater emotional competence throughout their journey. This is because a loving and supportive family can enhance their self-esteem, provide a sense of security, and create a safe haven for them to freely express their emotions. Conversely, individuals lacking such support may encounter more difficulties in managing their emotions. Without close family ties, they may struggle to find someone to confide in or seek solace from during challenging moments. It is crucial for healthcare professionals and loved ones to acknowledge the profound influence that various family dynamics can have on a cancer patient's emotional well-being and offer appropriate support accordingly.

Conclusion

This study examined the emotional competence in cancer patients focusing on their emotion, attitude towards their sickness. The study is mainly based in their age, gender, family type. The study was conducted for checking the emotional competence among cancer patients. Hence, the conclusion is that the cancer patients have significant difference in emotional competence and it depends on the demographics.

Abstract

This paper aims to create predictive models for house prices in Boston using historical data from a Kaggle dataset. The primary goal is to build and compare multiple models for accuracy. The dataset contains information on 506 houses with 13 features and a target column for price. The tools used for this project are Python (for implementation) and Tableau (for visualization). The predictive models employed are Linear Regression and Random Forest Regressor. The dataset includes the following attributes: CRIM, ZN, INDUS, CHAS, NOX, RM, AGE, DIS, RAD, TAX, PTRATIO, BLACK, LSTAT, and PRICE.

Keywords: Predictive models, real estate market of Boston, regression.

Introduction

In the dynamic real estate market of Boston, data analysts have a valuable opportunity to analyze and predict property price changes. This is crucial because property prices serve as indicators of the overall market conditions and a country's economic health. The provided data involves a substantial set of property sales records in an unknown format with unknown data quality issues. Purchasing a home in Boston, with its millennial appeal, vibrant culture, favorable climate, and abundant job opportunities, can be challenging. The project's objective is to create a model capable of accurately predicting Boston house prices based on various attributes. The model will be developed and assessed using data collected from Boston houses. Once a robust model is established, it can be used to predict the monetary value of houses in the Boston area. Such a model would be a valuable tool for real estate agents who can use this information for their daily operations.

Implementation

Dataset

This project focuses on predicting housing prices, a key economic factor of interest to both buyers and sellers. It aims to create a regression model that can accurately estimate house prices based on various explanatory variables that encompass multiple aspects of residential properties. The dataset is designed for Boston House Price Prediction and provides individual features for each house, including attributes such as the number of rooms and the crime rate in the house's area.

1. **CRIM** per capital crime rate by town
2. **ZN** proportion of residential land zoned for lots over 25,000 sq.ft.
3. **INDUS** proportion of non-retail business acres per town
4. **CHAS** Charles River dummy variable (= 1 if tract bounds river; 0 otherwise)
5. **NOX** nitric oxides concentration (parts per 10 million)
6. **RM** average number of rooms per dwelling
7. **AGE** proportion of owner-occupied units built prior to 1940
8. **DIS** weighted distances to five Boston employment centers
9. **RAD** index of accessibility to radial highways
10. **TAX** full-value property-tax rate per 10,000 USD
11. **PTRATIO** pupil-teacher ratio by town
12. **Black** $1000(Bk - 0.63)^2$ where Bk is the proportion of blacks by town
13. **LSTAT** % lower status of the population.
14. **MEDV** Median value of owner-occupied homes in \$10,000's.

Preprocess

The Boston dataset had five missing values, which were not dropped due to negative impact on

Random Forest Regressor

Random forest is a supervised machine learning algorithm. It can be used for both regression and classification. It is the most flexible algorithm. We have many decision trees in Random trees. To classify a new object, attributes of each tree are considered, as part of the voting process. Based on the voting result, the forest chooses the classification. Shortly, with Random Forest for small amounts of data, we can train the model and can expect pretty good results. Below Fig represents the workflow of the proposed Random Forest method.

Fig: Flowchart of Random Forest

The result of the random forest regressor is in the form of R^2 , Adjusted R^2 , MAE, MSE, RMSE and it show below

For Train Data:

R^2 : 0.9719677068020771
 Adjusted R^2 : 0.9708958838268624
 MAE: 0.8384282485875705
 MSE: 1.4068282151977416
 RMSE: 1.186097894441155

For Test Data:

R^2 : 0.7051961141916434
 Adjusted R^2 : 0.6774247336444794
 MAE: 2.52337697368421
 MSE: 15.457949175723678
 RMSE: 3.931659849951885

Fig:Train Data of Random Forest Regressor

Fig:Test Data of Random Forest Regressor

RMSE - Root mean square error or root mean square deviation is one of the most commonly used measures for evaluating the quality of predictions. It shows how far predictions fall from measured true values using Euclidean distance.

R^2 - R-squared is a statistical measure that represents the goodness of fit of a regression model. The ideal value for r-square is 1. The closer the value of r-square to 1, the better is the model fitted.

Adjusted R^2 - The Adjusted R-squared takes into account the number of independent variables used for predicting the target variable. In doing so, we can determine whether adding new variables to the model actually increases the model fit.

MSE - The Mean Squared Error (MSE) is perhaps the simplest and most common loss function, often taught in introductory Machine Learning courses. To calculate the MSE, you take the difference between your model's predictions and the ground truth, square it, and average it out across the whole dataset.

MAE - Absolute error refers to the magnitude of difference between the prediction of an observation and the true value of that observation.

Result and Discussion

The Boston house price dataset contains 506 rows with 13 attributes (features) and a target column for price. Python was used for implementation, and Tableau facilitated visualization. The dataset underwent missing value imputation and other preprocessing steps. Following data selection and preprocessing, a Training-Test data split was performed. Predictive experiments

Analysing and Visualizing Weather Data with Tableau

Aida Vinoy*, Sruthy Sebastian^{1*}, Sneha C.S^{1*}, Jomon Kottarathil^{1*}, Aneesh N^{1*}

*Student, Department of Mathematics, Department of Data Science

^{1*}Assistant Professor, St. Joseph's College, Moolamattom.

Abstract

Temperature and precipitation are fundamental measurements for describing the climate and can have wide-ranging effects on human life and ecosystems. Here this case study focuses on analyze how the temperature and precipitation varies over time. Trend analysis is done over six different cities. The study focuses on answering some questions, with visualization. Visualization will help everyone to understand the concepts easily. Tableau is the data visualization tool used for visualizing my case study.

Keywords: Linear regression, prediction, tableau, temperature, precipitation, visualization, dashboard.

Introduction

Tableau is a visual analytics platform transforming the way we use data to solve problems-empowering people and organizations to make the most of their data. As a data analytics student my case study deals with answering some relevant questions about temperature and precipitation changes through visualization. Visualization gives us a clear idea of what the information means by giving it visual context through maps or graphs. We need a creative thought process to visualize the data that we see in rows and columns. To answer a relevant question through visualization, first we need to visualize that concept on our mind. It was the basic challenge that I face during the case study. I created Dashboards in Tableau. Dashboards are very much interesting as they show visualizations dynamically.

Our dataset contains Temperature data (Minimum, Average, Maximum) in degrees Centigrade and Precipitation data in mm. This data is collected from Weather Station across India. Data for the following cities is present:

- Delhi
- Bangalore
- Chennai
- Lucknow
- Rajasthan
- Mumbai

The dataset Consist of 10,000 instances and 5 features. The station Geolocation file will give you the approximate location from where these measurements are taken. Some pre-processing are done on the data at the time of visualization.

Pre-Processing

The data was in the form of 7csv files, where 6csv files contain the data regarding cities and the station geo location file will give you the approximate location from where these measurements are taken. To get a collective inference about the data we need to join these 6 datasets, only then we can compare cities and analyses the effect of temperature and precipitation each city. We have the feature 'Time' as a common feature for these 6 files. Hence a new dataset is created with a union of these 6 cities and a new feature called 'Table Name' is also created.

The other main type of pre-processing is handling the missing values. Here the null values can be avoided while visualizing the plots. In most of the settings by default the null values will be

avoided, also there are options to add the entire data while visualizing.

The data set is a time series data, where the data collected continuously over a time period. The dataset contains 11,894 instances. The last data collected was on July 25 th 2022 so there is only 206 instances in 2022 dataset. Hence when we compare the aggregate of the data based on year, we must exclude the year 2022. These are the 7 months during 2022. Hence during comparisons, we must exclude the year 2022.

After removing the instances, the remaining data can be used to yearly comparison.

ANALYSIS

The aim of this case study is to arrive at certain conclusions regarding how temperature and precipitation are changing by time. Hence through this case study I aim at answering some of the questions that we face today. The answers to each of the questions are explained with corresponding visualizations.

Q1) Find the Hottest and Coldest year in each city.

To Visualize the Hottest and Coldest years of each city I created a dashboard with three different types of visualizations. Two of them are bar graphs for Max Temperature and Avg Temperature.

Lucknow

- The Hottest Year of Lucknow was: 2006
- The Coldest Year of Lucknow was: 2012
- **Mumbai**

- The Hottest Year of Mumbai was: 2016
- The Coldest Year of Mumbai was: 2006

Bengaluru

- The Hottest Year of Bengaluru was: 2012
- The Coldest Year of Bengaluru was: 2006
- **Delhi**

- The Hottest Year of Delhi was: 2016
- The Coldest Year of Delhi was: 2012

Rajasthan

Chennai

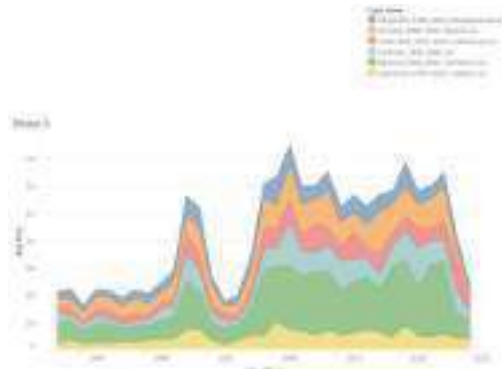

- The Hottest Year of Rajasthan was: 2012
- The Coldest Year of Rajasthan was: 2006

- The Hottest Year of Chennai was: 2012
- The Coldest Year of Chennai was: 2006

Q2) Can you find the precipitation average and tell when rainfall was abnormally less or more?

The graph shows the average of perspiration plotted against year. Here the color helps us to classify the data with respect to city. From the plot Rajasthan is the place having the least amount of precipitation and Bengaluru is the one with the highest value of precipitation. There are scenarios where rainfall was abnormally less and more

During the year 2000 there is a hike in the average precipitation level across all the states and the highest precipitation during 2000 was over Bengaluru.

avg	year	prcp	year
0	23.2	0	0.0
1	22.2	1	0.0
2	21.8	2	0.0
3	25.4	3	0.0
4	26.5	4	0.0

The highest precipitation level was detected during 2008 over Bengaluru.

It was during 2003, the lowest amount of precipitation is recorded. It was affected over all the cities but most affected by Rajasthan. The average precipitation level was only 1.97 millimeters.

Q3) Predict the Future Trends in Temperature and Precipitation

Our dataset consists of 6 cities, in which Delhi and Lucknow are the cities with highest standard deviations. That means the average temperature over these cities varies over a wide range. Hence to predict the future temperature and precipitation we choose Mumbai as the best option.

Because it has the least standard deviation compared to other cities.

Here we build a model to predict the temperature and precipitation of Mumbai.

Created 2 data frames to predict the unknown values of temperature and precipitation from year.

```

: y_pred = model.predict([ [2050]])
  print(f"Predicted Temperature of 2050:\n{y_pred}")

Predicted Temperature of 2050:
[[29.81597504]]

```

```

: y_pred = model.predict([ [2050]])
  print(f"Predicted Precipitation of 2050:\n{y_pred}")

Predicted Precipitation of 2050:
[[23.33742761]]

```

```

: y_pred = model.predict([ [2050]])
  print(f"Predicted Temperature of 2050:\n{y_pred}")

Predicted Temperature of 2050:
[[29.81597504]]

```

Conclusion

The main aim of my project was to get in touch with the visualization tool Tableau. As a data analyst student, we deal with programming languages like python and R programming which also provides visualization techniques. But tableau is a tool for business intelligence and data visualization. It helps to simplify raw data into the form of dashboards and worksheets that make the process of understanding and comprehending them very easy and accurate.

Through this project my dataset was large; it consists of 10,000 instances and 5 features. The data was over seven CSV files. Tableau provides joining options like relationships and joins (inner join, left outer join, right outer join, and full outer join), which helped me join my six of the CSV files together and treat them as a single dataset. Also the other interesting feature of tableau was filters with will help as to filter through data. Filters play a major role in the dynamic visualization of dashboards.

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Introspecting the Childhood Self of Amir in <i>The Kite Runner</i> Sunitha Mathew ^{1*} , Roby Mathew ^{1*} , Roopa Jose ^{1*} , Salini L.R ^{1*} , & Alex E.R ^{1*}	1
2.	A Comparative Exploration of Truth and Integrity: Henrik Ibsen's <i>An Enemy of The People</i> and Satyajit Ray's <i>Ganashatru</i> S. Abhilash Mathew ^{1*} , Prince J Mathew ^{1*} , Salini L.R ^{1*} , & Christy Joseph ^{1*}	3
3.	Cultural Integration in 'Brick Lane' By Monica Ali S. Abhilash Mathew ^{1*} , Salini L.R ^{1*} , Alex E.R ^{1*} , & Christy Joseph ^{1*}	5
4.	(M)Otherhood: On The Choices of Being A Woman Deconstructs Modern-Day Motherhood Dr. Aparna Prasad ^{1*} , Christy Joseph ^{1*} , S. Abhilash Mathew ^{1*} , & Roby Mathew ^{1*}	8
5.	Culture in Nadia Hashmi's <i>One Half From The East: A Justifying Voice</i> Fasila Salim*, Dr. Alex E.R ^{1*} , Dr. Salini L.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	11
6.	Depiction of Gender Bias in Nadia Hashmi's <i>One Half From The East</i> Fasila Salim*, Dr. Alex E.R ^{1*} , Dr. Anju E.R ^{2*} , Dr. Salini L.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	13
7.	<i>Samskara</i> as a Text that Raises Subaltern Issues Fathima Salam*, Dr. Salini L.R ^{1*} , Dr. Alex E.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	15
8.	Liberal Feminism in the Novel <i>Daisy Miller</i> Marianne M George*, Dr. Salini L.R ^{1*} , Dr. Alex E.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	17
9.	Challenges and Opportunities for Women Working Remotely Tisha Tomy ^{1*}	19
10.	Environmental Sustainability: A Necessity for Survival Tisha Tomy ^{1*}	22
11.	Mechanism of Conflict Management in Business Organizations Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Sharon Lee Jose ^{1*} , Geethu Jose ^{1*} , Mareet Paul ^{1*}	25
12.	Emotional Maturity among Graduate Students in India Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Sharon Lee Jose ^{1*} , Geethu Jose ^{1*} , Mareet Paul ^{1*}	28
13.	Product Mix and Strategies - An Introduction Sharon Lee Jose ^{1*} , Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Geethu Jose ^{1*} & Mareet Paul ^{1*}	31
14.	IR Sensor Interfacing using Arduino Mr. Albin Jose*, Mr. Visakh K. S*, Dr. Anju Mathews ^{1*} , Dr. Praveen Joseph ^{1*} , Dr. Robin John ^{1*}	34

15. Persistence of Vision Display	37
Mr. Anandhu Babu*, Mr. Sudhi Jayan*, Dr. Anju Mathews ^{1*} , Dr. Subin Thomas ^{1*} , Dr. Robin John ^{1*}	
16. Arduino-Uno Microcontroller-Driven Irrigation Automation	39
Dr. Praveen Joseph ^{1*} , Dr. Robin John ^{1*} , Dr. Subin Thomas ^{1*} , Sandeep Krishna P S* & Akhil Krishnan*	
17. Comparative Analysis of Viscosity Measurement Techniques: Manual, Poiseuille's Method, and Automated Approach	42
Melvin Mathew*, Sooraj Biju*, Dr. Subin Thomas ^{1*} , Dr. Praveen Joseph ^{1*} & Dr. Robin John ^{1*}	
18. Premarital Life Partner Expectations among Rural Adults	45
Gayathri N Nair*, Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , Mathews Emmanuel ^{1*} & Dr. Justin Joseph ^{1*}	
19. Gender Difference in Premarital Life Partner Expectation and Marital Attitude	47
Gayathri. N Nair*, Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , Mathews Emmanuel ^{1*} & Dr. Justin Joseph ^{1*}	
20. Influence of Gender, Type of Family and Marital Status of Fear of Failure among Performing Artists	49
Sneha C C*, Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , & Mathews Emmanuel ^{1*}	
21. Performance Failure among Individuals Performing in Traditional Art Forms of Kerala	51
Sneha C C*, Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} & Sijo John ^{1*}	
22. Analysis of the IPL Data Set	53
Steffymol Sunny*, Sneha C S*, Almie Joseph ^{1*} , Jes Mariya Shoji ^{1*} , Silvanose P.Thomas ^{1*}	
23. Students' use of Alcohol	56
Krishnadas Biju*, Sneha C S*, Almie Joseph ^{1*} , Jomon Kottarathil ^{1*} , Mathews Emmanuel ^{1*}	
24. Emotional Competence of Cancer Patients	60
Aby Benny*, Justin Joseph ^{1*} , Mathew Kanamala ^{1*} , Manu Kurian ^{1*} & Jomon Kottarathil ^{1*}	
25. Boston House Forecast Prices	63
Adhila Abdul Karim*, Sruthy Sebastian ^{1*} Sabukkutty M G ^{1*} , Aneesh N ^{1*} & Silvanose P. Thomas ^{1*}	
26. Analysing and Visualizing Weather Data with Tableau	67
Aida Vinoy*, Sruthy Sebastian ^{1*} , Sneha C.S ^{1*} , Jomon Kottarathil ^{1*} , Aneesh N ^{1*}	
27. An Analysis of OTT Platforms' Utilisation of BI	71
Akash Anil*, Jilu Jose ^{1*} , Jomon Kottarathil ^{1*} , Sabukutty M.G ^{1*} & Aneesh N ^{1*}	
28. Business Acumen in Social Media	74
Akash Anil*, Jilu Jose*, Jomon Kottarathil ^{1*} , Sabukkutty M.G ^{1*} & Aneesh N ^{1*}	
29. Early Diagnosis of Diabetes	77
Asby O S*, Jilu Jose ² , Jomon Kottarathil ^{1*} , Sabukkutty M.G ^{1*} , Aneesh N ^{1*}	
30. Forecast for Tesla Stock	81
Augustine Shaji*, Sruthy Sebastian ^{1*} , Almie Joseph K ^{1*} , Sneha C.S ^{1*} , Silvanose P. Thomas ^{1*}	

31. Trade Analysis of India **85**
 Dhanya Devasia*, Sabukutty Mg^{1*}, Jes Maria Shoji^{1*}, Almie Joseph K^{1*} & Sruthy Sebastian^{1*}
32. Data Analysis for Air Quality and Pollution **90**
 Gopika Suresh*, Almie Joseph K^{1*}, Sruthy Sebastian^{1*}, Jes Mariya Shoji^{1*} & Silvanose P. Thomas^{1*}
33. A Machine Learning-Based Analysis of Crop Recommendation Systems **93**
 Jinix Chacko*, Almie Joseph K^{1*}, Sruthy Sebastian^{1*}, Sneha C.S^{1*}, & Silvanose P. Thomas^{1*}
34. Song Analysis on Spotify **97**
 Jinix Chacko*, Jes Maria Shoji*, Sneha C.S^{1*} & Almie Joseph^{1*}
35. Analysis of Campus Recruitment **102**
 Liana S*, Sneha Cs^{1*}, Sruthy Sebastian^{1*}, Almie Joseph^{1*} & Silvanose P. Thomas^{1*}
36. Analysis on a Case Study on Traffic Safety and Accidents in India **106**
 Merin Shibu*, Jomon Kottathil^{1*}, Sabukutty Mg^{1*}, Aneesh N^{1*} & Meera R Nair^{1*}
37. Attitude towards Alcohol among Adolescents **109**
 Sachin Jose*, Manu Kurian^{1*}, Jomon Kottathil^{1*}, Sabukutty M.G^{1*} & Justin Joseph^{1*}
38. Building a Foetal Health Model **111**
 Sona Binu*, Almie Joseph K^{1*}, Sneha C.S^{1*}, Aneesh N^{1*} & Sabukutty M.G^{1*}
39. Physical Problems Faced by Transgender Women During the Period of their Hormone Treatment
 Period after Sex Reassigning Surgery **116**
 Bismitha Yoonas², Anu Mol Joy², Dr. Mathew Kanamala^{1*}, Manu Kurian^{1*} & Justine Joseph^{1*}
40. Criminal Propensity among Youth **119**
 Avani K.A*, Manu Kurian^{1*}, Dr. Mathew Kanamala^{1*}, Dr. Justine Joseph^{1*} & Sabukutty M.G^{1*}
41. Cyber Etiquette among Young Adults **121**
 Jismy P J*, Manu Kurian^{1*}, Dr. Mathew Kanamala^{1*}, Dr. Justine Joseph^{1*} & Silvanose P. Thomas^{1*}
42. Dyadic Adjustment and Emotional Intelligence among Middle-Aged Women **124**
 Sneha Santhosh*, Dr. Justine Joseph^{1*}, Dr. Mathew Kanamala^{1*}, Manu Kurian^{1*}, Sabukutty M.G^{1*}
43. Exploring the Relation Between Economic Status and Individuals' Perception of Social Support, and its Impact on Psychological Well-Being. **126**
 Beema U.I.* Dr. Mathew Kanamala^{1*}, Ms. Tolly Thomas², Manu Kurian^{1*} & Dr. Justin Joseph^{1*}
44. Educational Status, Loneliness & Depression: A Study of Older Adults **129**
 Vishnu Rajeev*, Dr. Justine Joseph^{1*}, Manu Kurian^{1*}, Dr. Mathew Kanamala^{1*} & Tolly Thomas²
45. Family Type and its Impact on Social Support & Psychological Dimensions among the Elderly **132**

- Beema U.I*, Dr. Mathew Kanamala^{1*}, Dr. Justine Joseph, Manu Kurian^{1*} & Ms. Tolly Thomas²
46. Feelings of Isolation & Depression in Elderly: Influence of Financial Factors **134**
Vishnu Rajeev*, Dr. Justine Joseph^{1*}, Dr. Mathew Kanamala^{1*}, Dr. Justin Joseph^{1*} & Ms. Tolly Thomas²
47. Does Number of Children Influence Life Satisfaction & Quality of Life? A Study among Elderly **137**
Bhagyasree S*, Manu Kurian^{1*}, Dr. Mathew Kanamala^{1*}, Dr. Justin Joseph^{1*} & Ms. Tolly Thomas²
48. Influencing Factors of Dyadic Adjustment among Middle-Aged Couples **140**
Sneha Santhosh*, Dr. Justin Joseph^{1*}, Dr. Mathew Kanamala^{1*}, ²Manu Kurian^{1*} & Sijo John^{1*}
49. Role of Marital Status in Loneliness & Depression among Elderly **142**
Vishnu Rajeev*, Dr. Justine Joseph^{1*}, Tolly Thomas², Dr. Mathew Kanamala^{1*}, & Manu Kurian^{1*}
50. A Study on Internet Addiction and Psychological Distress among Early Adulthood with Special Reference to Ramankary Grama Panchayath **145**
Renjitha E², V G Harishkumar ², Dr. Mathew Kanamala^{1*}, Manu Kurian^{1*}, Dr. Justin Joseph^{1*}
51. Resilience among Type 2 Diabetic Patients **148**
Abiya Kurian*, Dr. Mathew Kanamala^{1*}, Dr. Justin Joseph^{1*}, Manu Kurian^{1*}, Sabukkutty M.G^{1*}
52. Influence of Gender and Age on Sibling Relationship among Middle-Age **150**
Renjitha E^{**}, V G Harishkumar ², Dr. Mathew Kanamala^{1*}, Manu Kurian^{1*}, & Sijo John^{1*}
53. An Overview about Tax **152**
Dr. Sabukkutty M G^{1*}, Mr. Prince J Mathew^{1*}, Sr. Betsi Paul Kalapuraackal SH^{1*}, Mathews Emmanuel^{1*} & Kuriachan Jose^{1*}
54. An Overview about GST **155**
Dr. Sabukkutty M G, ^{1*} Mr. Prince J Mathew^{1*}, Sr. Betsi Paul Kalapuraackal SH^{1*}, Mathews Emmanuel^{1*} & Kuriachan Jose^{1*}
55. Financial Principles is an Authentic Guide to Budgeting, Investment Strategies, and Risk Management **158**
Dr. Sabukkutty M G^{1*}, Mr. Prince J Mathew^{1*}, Sr. Betsi Paul Kalapuraackal SH^{1*}, Mathews Emmanuel^{1*} & Kuriachan Jose^{1*}
56. Sleep Disorders, Insomnia, Irregular Schedules, and Academic Pressure, Coping Mechanisms and Interventions to Sleep Disorders, and their Impact on the Mental Health of College Students **160**
Dr. Jose James^{1*}, Mr. Roby Mathew^{1*}, Mr. Biju Scaria^{1*} & Kuriachan Jose^{1*}
57. Time Management, A Crucial Skill for College Life **163**
Dr. Jose James^{1*}, Mr. Roby Mathew^{1*}, Mr. Biju Scaria^{1*} & Mr. Sijo John^{1*}
58. Environmental Attitude among Young Adults **166**
Dr. Jose James^{1*}, Mr. Roby Mathew^{1*}, Mr. Biju Scaria^{1*} & Mr. Sijo John^{1*}
59. College Life: The Most Productive and Transformative Period in the Lives of Undergraduate Students **169**
Dr. Jose James^{1*}, Mr. Roby Mathew^{1*}, Manu Kurian^{1*}, & Mr. Sijo John^{1*}

60. New Trends in Accounting and Auditing	172
Dr. Sr. Sijo Francis ^{1*} , Mr. Kuriachan Jose ^{1*} , Mr. Shaiju S ^{1*} & Sr. Betsi Paul ^{1*}	
61. Self Confidence and Mathematical Problem Solving Ability among Adolescents	175
Dr. Sr.Sijo Francis ^{1*} , Mr.Kuriachan Jose ^{1*} , Manu Kurian ^{1*} & Sabukkutty M.G ^{1*}	
62. The Profound Impact of Swami Vivekananda's Philosophy in Human Life	178
Dr. Sr. Sijo Francis ^{1*} , Sri. Kuriachan Jose ^{1*} & Dr. Christy Joseph ^{1*}	
63. College Education: A Unique Opportunity for Intellectual, Spiritual Exploration, and Holistic Growth of Adolescents	180

Abstract

The COVID-19 pandemic significantly altered entertainment habits, driving a surge in Over-The-Top (OTT) platform usage worldwide. OTT platforms, like Amazon Prime and Disney+, harnessed Business Intelligence (BI) to collect user data, adapting to evolving viewer preferences. In India, these platforms gained popularity for their budget-friendly options. This paper explores various OTT platforms and utilizes data analysis to provide personalized movie recommendations, enhancing the user's OTT experience amid the changing landscape of entertainment consumption.

Keywords: Business intelligence, OTT market, pandemic, UI.

Introduction

Business Intelligence (BI) is essential for OTT platforms like Netflix, Amazon, Disney+, and YouTube to analyze data, understand customer behavior, and stay competitive in the dynamic digital entertainment landscape. This allows them to optimize content and enhance user experiences, contributing to their success in the Asia Pacific OTT market, which is projected to generate \$42 billion in revenue from 351 million subscribers.

Methodologies

System development approaches have evolved, emphasizing methodologies like prototyping, Object-Oriented Analysis and Design Methodology (OOADM), and Rapid Application Development (RAD) to transform traditional systems design. In the context of Business Intelligence (BI) systems, the importance of effective implementation methods is highlighted due to past costly issues. The OTT market, valued at \$85.16 billion in 2019 and projected to reach \$194.20 billion by 2025, has seen accelerated growth during the COVID-19 pandemic. To aid users in selecting the right OTT platform among many, personalized recommendation systems are being developed to simplify the decision-making process.

Datasets

This study delved into content listings from Netflix, Amazon Prime, and Disney+ to tackle the challenge of helping users select the right OTT platform, especially with the emphasis on original content. It aimed to go beyond recommending specific shows and considered the hosting platforms themselves. The primary goal was to offer personalized recommendations to simplify the OTT platform decision-making process. Datasets for each platform were thoughtfully curated with relevant columns, underscoring the significance of data in enhancing user experiences within the streaming world.

Data Preprocessing and Exploratory Analysis

Data preparation is crucial in this study, where movie datasets from Amazon underwent preprocessing to ensure reliable analysis. Disney+, HBO, and Netflix compete in India's growing OTT industry, each offering distinct content and subscription options. Smartphone penetration is rising, and the OTT market is expected to grow significantly. Netflix and

Amazon Prime have substantial subscriber bases, while Disney+ focuses primarily on Disney content, catering to specific audiences. Comparing content offerings is advisable to choose the right service. The analysis highlights Disney's success but suggests areas for improvement in Amazon's browser-based streaming. Other platforms like Zee5, Eros Now, and Sony LIV offer diverse content choices.

Analysis Based on the User Interfac

Amazon, Netflix, and Disney+ have gained substantial audiences with diverse content and high-quality User Interface (UI) designs, especially during the COVID-19 pandemic. Their focus on engaging UI experiences is key to captivating viewers and promoting content consumption. While they compete intensely, each has distinct UI strengths and weaknesses. The success of these OTT giants relies on compelling content and effective UI design, essential for attracting and retaining users in a competitive market.

- **Amazon Prime Video**

Amazon Prime Video has achieved success as a competitor to Netflix and Disney+ through a combination of compelling content, Prime benefits, and a user-friendly interface. Its content library includes popular series and successful originals. The user-friendly interface strategically positions controls for easy access, with features like X-ray and content suggestions. However, some users have expressed concerns about the readability of the suggestion box text and the platform's somewhat subdued color scheme. Overall, Amazon Prime Video's success is attributed to its content and UI, with room for further user satisfaction improvements.

- **Netflix**

Netflix stands out in the OTT streaming industry with its extensive content library, user-friendly interface, and versatile playback options. Its well-organized content, stylish design, intuitive controls, and innovative features like playback speed control highlight its excellence in UI design, enhancing the overall user experience.

- **Disney+**

Disney+ Hotstar, despite entering the OTT market later, has gained international prominence with a user-friendly interface, five main categories, and a complementary color scheme. Its straightforward UI enables easy episode switching in full-screen mode. The platform's surge in subscriptions during the pandemic reflects its appeal in a changing OTT landscape, driven by simplicity and compelling content offerings.

Conclusion

The study delved into BI's role in OTT platforms, examining UI, content, and marketing. Age analytics aid users in selecting age-appropriate content platforms. Category stats showcased genre strengths for Netflix, Amazon Prime, and Disney+. Netflix's UI and extensive content make it a standout. The pandemic's impact on subscriptions underscores BI's influence on user preferences in the competitive streaming arena.

Future Scope

The global OTT market is on track to exceed \$194 billion by 2025, with increasing competition as more content providers join the OTT landscape. Providing high-quality, unique content is crucial for attracting and retaining subscribers. The future of OTT belongs to platforms offering personalized user experiences with AI and machine learning integration. Utilizing OTT SaaS solutions like MAZ Systems

can enhance app aesthetics. Consideration of cost-effective membership plans for underserved demographics is essential. This is a prime moment for both established broadcasters and emerging content creators to launch their OTT platforms, capitalizing on the shift from traditional cable TV to on-demand content and the immense potential in the OTT services market.
