Binding of Tetracycline to Human Serum Albumin Unfolded by Urea

Deena Paul^{1*,2}

^{1*} Assistant Professor, Dept. of Chemistry, St. Joseph's College, Moolamattom and

² Research Scholar, Department of Polymer Science & Rubber Technology, Cochin University of Science & Technology

Introduction

Human serum albumin (HSA) is the most abundant circulatory protein having 585 amino acid residues.¹ Under physiological conditions, HSA adopts a heart-shaped three-dimensional structure having three homologous domains I-III.¹⁻² Each of these three domains is further subdivided into two subdomains A and B.² The principal regions of ligand binding to HSA are located in hydrophobic cavities in subdomains IIA and IIIA.³⁻⁴ These binding sites are known as Sudlow I and Sudlow II, respectively⁵ and the sole tryptophan residue (Trp214) in HSA is located in Sudlow I.⁵ Despite the complexity in shape and size, the single Trp residue makes it very convenient to study the structure and dynamics of the protein using intrinsic fluorescence.² In general, more than 90% of the drugs used in humans are bound to this specific protein. A conformation alteration of serum albumin can result in weaker drug-protein interaction and consequently increases the drug concentration in the blood. Sometimes this effect can cause toxic poisoning or even lead to death. Therefore, studies on the binding of drug(s) with HSA in the absence and presence of chemical denaturants (like urea) can improve our interpretation regarding the metabolism and transporting process of drugs inside the human body.⁵

Tetracycline (TC) molecule is a four-ring system as shown in Scheme 1 to which a variety of functional groups are attached. TCs are a group of broad-spectrum polyketide antibiotics that act as protein synthesis inhibitors. These drugs after ingestion are solubilized inside the gut and are subsequently transported to the target sites through blood, bound to serum proteins.²

Scheme 1: Structure of a) Human Serum Albumin and b) Tetracycline

In the present work, we have investigated the interaction of TC with HSA which has been subjected to denaturation induced by various concentrations of urea. For this purpose, we have used steady-state emission spectroscopy measurements to characterize the effect of the added TC to the HSA in the presence of urea. Modified Stern-Volmer plots have been used to determine the binding constant of TC to the protein

Experimental Section:

a. Materials: HSA was purchased from Sigma-Aldrich, USA. Tetracycline hydrochloride (TC, molecular weight = 480.9) was purchased from HIMEDIA, and urea from SPECTROCHEM. For the steady-state experiments, the concentration of HSA was 5 μM which was ascertained spectrophotometrically. The pH of the Tris buffer solution (10 mM) was adjusted to 7.4. For the denaturation of HSA, solutions of different concentrations of urea were prepared in a buffer solution which was added to 5 μM HSA and incubated overnight.

b. Steady-State Measurements: The absorption and fluorescence emission spectra were recorded on a Cary 100 UV-vis spectrophotometer and Fluorolog 3-111 fluorometer, respectively with appropriate background corrections using freshly prepared solutions. The stock solution of TC (3 mM) was prepared in anhydrous methanol. A 2 mL solution, containing an appropriate concentration of native or denatured HSA, was titrated by successive additions of a 3 mM solution of TC. Titrations were done manually by using a micropipette. The fluorescence spectra were measured with a 10 mm path-length quartz cuvette. HSA was excited at 295 nm to minimize the contribution from tyrosine. The fluorescence emission was collected from 300 to 550 nm. The emission and the excitation slits were kept at 1 and 2 nm, respectively.

RESULTS:

The intrinsic fluorescence of HSA is mainly contributed by the Trp residue alone in the hydrophobic cavity of subdomain IIA (Sudlow I) because the Phe residue has a very low quantum yield and the fluorescence of Tyr is almost totally quenched when it is ionized or nearby an amino group, a carboxyl group, or a Trp.⁶ Fig. 1 shows the fluorescence emission spectra of native HSA (in the absence of urea) with varying concentrations of TC following an excitation at 295 nm. It could be observed that the fluorescence intensity of HSA dropped regularly with the increase in TC concentration, indicating that the drug may bind in Sudlow site I in subdomain IIA. The degree of quenching depends on the interaction between Trp214 and the drug⁶ or the degree of overlap between the fluorescence of the donor (Trp214) and absorption of the acceptor (TC).

A valuable feature of intrinsic protein fluorescence is the high sensitivity of Trp to its local environment. When HSA was subjected to chemical denaturation by urea, a distinct red shift was observed in the fluorescence emission maxima of Trp214 due to increased exposure of Trp214 to a more hydrophilic environment. The variation of emission maxima of Trp214 with increasing concentrations of urea has been pictorially represented in Fig. 2.

Fig 1: Fluorescence emission spectra of native HSA in the presence of various concentrations of TC

Fig 2: Variation of the emission wavelength maxima of Trp214 as a function of [Urea]

Binding of TC to HSA at Various Concentrations of Urea:

A quantitative assessment of the drug-protein binding interaction at various concentrations of HSA can be derived in terms of evaluation of the binding constant (K) for the HSA-TC interaction process. For the quenching process, the equilibrium between free and bound molecules is given by the modified Stern-Volmer equation:

$$\log\left(\frac{F_0 - F}{F}\right) = \log K + n \log [Q] \quad (1)$$

where, F and F₀ are respectively, the fluorescence intensities of HSA in the presence and absence of varying concentrations of TC, K is the binding constant, n is the binding affinity and [Q] is the quencher concentration (here TC).⁵ Fig. 3 represents a plot of log (F₀-F)/F versus log [Q] based on Eq. (1) in the absence and presence of 8 M urea and having various

concentrations of TC. The various binding parameters obtained from the intercepts and slopes of such plots are summarized in Table 1.

Fig 3: Modified Stern-Volmer plots for (a) 0M b) 8M [urea]

[Urea] (M)	$K \times 10^{-4} (M^{-1})$	n
0	0.84	1.72
2	1.7	1.55
4	0.79	1.86
6 Table 1: Binding parameters of HSA denatured by different concentrations of urea and TC		
8		

From the values of K as seen in Table 1, we can infer that the binding of TC to HSA is not affected to a large extent due to the presence of lower concentrations of urea. Up to 4 M urea, the environment in and around Trp214 seems to be almost the same which has also been supported by our steady-state results, whereby the emission maxima shift only by ~ 2 nm. However, beyond 4 M urea, there is a drastic red shift of the emission maxima of Trp214 and the values of K change significantly. It has been documented⁷ that subdomain IIA of HSA gets unfolded beyond 4 M urea and hence the addition of TC gets more facile as seen from our results.

Conclusions

From our studies, we can conclude that the binding of TC to HSA which has been subjected to denaturation induced by various concentrations of urea was not affected greatly by the latter up to 4 M urea concentration. Beyond 4 M urea, the microenvironment of Trp214 gets altered and the binding of TC to HSA gets affected.

2D Nanomaterials: Graphene and Beyond

Deena Paul^{1*, 2}

^{1*} Assistant Professor, Dept. of Chemistry, St. Joseph's College, Moolamattom and

² Research Scholar, Department of Polymer Science & Rubber Technology, Cochin University of Science & Technology

Introduction

Material science is an interdisciplinary field where scientists study existing materials and create new ones. It is a dynamic and ever-evolving field that continuously discovers new materials with unique properties and potential applications. Two-dimensional (2D) nanomaterials have fascinated material scientists since it is highly versatile and suitable for a wide range of applications in electronics, photonics, energy storage, catalysis, sensing, and beyond. 2D nanomaterials are composed of thin layers that may have a thickness of at least one atomic layer. Contrary to bulk materials, these nanomaterials have a high aspect ratio (surface-area-to-volume ratio) and therefore have many atoms on their surface. The first material in this new class is Graphene. Graphene is one of the most widely used and most important 2D materials, and has unique properties that result in its widespread use in various industries. Over time several other 2D nanomaterials with exceptional properties and applications have been added to this list. This article discusses a few important of them.

Graphene

Graphene consists of a single layer of carbon packed in a hexagonal lattice with a C–C distance of 0.142 nm.[1] Being the building block of graphite, graphene may not appear like a “new” material. But before 2004, the isolation of stable graphene sheets was considered impossible. So it was a surprise when Andre K. Geim and Konstantin S. Novoselov of Manchester University did it through mechanical exfoliation of graphite crystal using scotch tape.[1] They were awarded the Nobel Prize in Physics in 2010 for this. Several methods have been identified to produce graphene since then which include mechanical and liquid phase exfoliation, chemical vapor deposition, chemical reduction of graphene oxide, chemical synthesis from organic precursors etc.

Graphene is an incredibly strong material; 100 times stronger than steel. At the same time, it is flexible. Graphene exhibits extremely high electrical conductivity, even surpassing that of copper. Its unique electronic structure allows electrons to move through the material virtually without resistance. Graphene also possesses exceptional thermal conductivity. It can efficiently conduct heat, making it valuable in applications like thermal management and heat dissipation. Regarding transparency, graphene is nearly transparent across a broad range of the electromagnetic spectrum, including visible light. This property makes it suitable for transparent conductive films in electronic devices, such as touchscreens and displays. Graphene is also chemically stable and can withstand a wide range of chemical environments.

Being impermeable to gases and liquids, it is used to create gas barriers and membranes. [2, 3] Because of its exceptional qualities, graphene is widely employed in electronics, materials science, energy storage, sensors, medicine, water purification and more.[4]

Transition Metal Dichalcogenides (TMDs)

Transition metal dichalcogenides (TMDs) are a class of two-dimensional materials that have the chemical formula MX_2 , where M represents transition metals from groups VI, V and VI, and X represents a chalcogen such as sulfur, selenium or tellurium. Common examples of TMDs include molybdenum disulfide (MoS_2), tungsten disulfide (WS_2), molybdenum

diselenide (MoSe_2), and tungsten diselenide (WSe_2). TMDs have a layered crystal structure, similar to graphene. Single-layer TMDs often exhibit different electronic properties compared to bulk TMDs. Unlike graphene, which is a zero-band-gap material, TMDs exhibit a tuneable band gap that depends on factors such as the type of transition metal, the number of layers, and strain.[5] They are mechanically robust and flexible at the same time. Their unique properties make them suitable for applications in various fields, including electronics, photonics, energy, and catalysis.

Hexagonal Boron Nitride (h-BN)

h-BN has a similar structure to graphene with alternating boron (B) and nitrogen (N) atoms arranged in a hexagonal lattice. h-BN is often referred to as "white graphene" due to its similar hexagonal structure and its white colour in its bulk form. h-BN is a wide bandgap material with an intrinsic band gap (E_g) of 5.9 eV when compared to the highly conductive graphene. It does not conduct electricity and can be used as an insulating material in electronic applications. But at the same time it is thermally conductive and thermally stable.[6] Being chemically inert, it can withstand extreme conditions, making it useful in high-temperature and corrosive environments. It is a versatile material with applications in electronics, optics, thermal management, biomedical solid lubrication etc.

MXene

MXenes are two-dimensional (2D) transition metal carbides, nitrides and carbonitrides reported in 2011. MXenes have the general structure of $\text{M}_{n+1}\text{X}_n\text{T}_x$, where M is an early transition metal (Sc, Y, Ti, Zr, Hf, V, Nb, Ta, Cr, Mo, W), X is a carbon and/or nitrogen and T_x stands for surface terminations, such as O, OH, F or Cl, and $n = 1-4$. Since MXenes are typically synthesized topochemical from their parent MAX phases via selective etching of the A element (Al, Si or Ga), the chemical composition and preparation protocol of the MAX affects the chemistry of the resultant MXene.[7] Furthermore, the surface chemistry (which depends on etching conditions), intercalated species and even the flake size significantly affect MXene properties. MXenes find applications in various fields like energy, storage, electronics, photocatalysis, sensing, medicine and more.

Graphitic carbon nitride (g- C_3N_4)

Graphitic carbon nitride consists of carbon and nitrogen atoms arranged in a planar, layered structure. It forms a network of hexagonal units similar to graphene but with alternating carbon and nitrogen atoms. These layers are held together by van der Waals forces and can be peeled apart to create individual g- C_3N_4 sheets.

g- C_3N_4 is a semiconductor material with a band gap in the visible light range. This property makes it suitable for various optoelectronic and photocatalytic applications. However, the band gap of g- C_3N_4 can be modified by adjusting the synthesis conditions or by introducing functional groups. g- C_3N_4 has gained attention for its photocatalytic properties, which make it useful in water splitting, pollutant degradation, and solar energy conversion.[8] It has a nanoporous structure, providing a large surface area for catalytic reactions and adsorption processes.

Conclusion

With fast advancements in novel exfoliation processes, the development of 2D framework materials is seeing a highly dynamic expansion. In addition to the above 2D materials there exists others like Borophene, Phosphorene, Silicene, Germanene, Stanene and so

forth with Molybdenene introduced very recently.[9] While the future of 2D materials is promising, it is not without challenges. Issues with stability, production scalability, and integration into existing technologies must be addressed. However, these challenges also present opportunities for innovation and discovery. As researchers and engineers worldwide continue to explore the potential of 2D materials, the coming years will undoubtedly bring exciting developments.

Introduction

Curcumin is a bright yellow chemical produced by plants of the *Curcuma longa* species. It is the principal curcuminoid of turmeric, a member of the ginger family. Chemically, curcumin is a diarylheptanoid, belonging to the group of curcuminoids, which are phenolic pigments responsible for the yellow color of turmeric. Curcumin is extracted from fresh turmeric. Fresh turmeric contains up to 5% curcumin. Curcumin is the active substance of turmeric and curcumin is known as C.I 75300 or natural yellow. Systematic chemical name is (1E,6E)-1,7-Bis(4-hydroxy-3-methoxyphenyl)-1,6-heptadiene-3,5-dione. It is extracted by dissolving in methanol and refluxing it for 3-4 hours. Curcumin can exist in tautomeric forms, keto and enol. The keto form is preferred in the solid phase and the enol form is in solution. Curcumin is a pH indicator. In acid solutions (pH<7.4) it turns yellow, whereas in basic solutions (pH8.6) it turns bright red.

Results and Discussion

Curcumin is a p^H indicator. In acidic solution it turns yellow and in basic solution it turns bright orange red. Curcumin can be used as a p^H indicator in acidimetry titrations. Also, colorimetry can be used to make this a qualitative test. The turmeric indicator changes color between roughly a P^H of 7.4 and 8.6. If turmeric is exposed to neutral or acidic substances it will retain its yellow coloration. If turmeric is exposed to a more alkaline substance it becomes a dark pink/red. Because turmeric contains a yellow pigment called curcumin, which is P^H sensitive.

- Curcumin in an acidic solution (pH 3.5)
- curcumin in a neutral solution (pH 7.4);
- Curcumin in a basic solution

- The colour of curcumin remains yellow in neutral and acidic medium
- Colour changes in basic medium
- So basic medium affects colour of curcumin
- So basic medium affects structure of curcumin

TLC using Curcumin

Turmeric powder is used for the preparation of many curries. Turmeric powder is used for cosmetics. Since they have great demand in the market, there is a possibility of adulteration in these samples. This can be checked by thin-layer chromatography. We can use con. HCL, dil. HCL, dil. H₂SO₄, 1% diphenylcarbazide in ethanol. We use natural homemade curcumin, Curcuma aromatic and commercially prepared curcumin. From the R_f value, we can determine the quality or adulteration.

Curcumin is almost insoluble in water and readily soluble in polar solvents like methanol, ethanol, acetonitrile, chloroform, and ethyl acetate. It is sparingly soluble in hydrocarbon solvents like cyclohexane and hexane.

The above-mentioned are the properties or applications of curcumin. The main advantage is that it is cheaper and it is also pollution free and can be obtained naturally.

50 grams of fresh turmeric is taken. It is then chopped into small pieces and kept aside. This turmeric is added with 250ml of methanol taken in a beaker. Then it is kept in methanol for 2-3 days in a 1000ml RB flask. This is refluxed for 3-4 hours. Then the solution is cooled and filtered using filter paper.

Results and Discussion

Curcumin which is used as an indicator is found to be very effective in strong acid - strong base titration and weak acid - strong base titration. It can be used as an indicator instead of phenolphthalein. Phenolphthalein shows its endpoint with a color change from pink to colorless. Curcumin shows its color change from orange-red to yellow. Phenolphthalein is a costly indicator but curcumin can be prepared very cheaply.

In strong acid - strong base titration, the endpoint in both the titration based on phenolphthalein and curcumin is the same.

Conclusion

From this project we can conclude that curcumin can be used as an indicator instead of phenolphthalein. It is an effective indicator used in strong acid - strong base titrations and weak acid-strong base titrations. Curcumin which shows a color change from orange to yellow can be used in titrations that show a color change from pink to colorless. Curcumin is a cheap indicator that can be prepared from turmeric and methanol.

Introduction

Electroanalytical chemistry is that branch of chemical analysis that employs electrochemical methods to obtain information related to the amounts, properties and environments of chemical species¹. Electroanalytical methods are a class of techniques in analytical chemistry that study an analyte by measuring the potential (volts) and/or current (amperes) in an electrochemical cell containing the analyte¹. Battery is an electrochemical cell collection where electrons flow by the chemical reaction in the circuit. Batteries provide a way to store electric potential in a portable container. The Sodium-ion batteries (SIBs) and potassium-ion batteries (KIBs) are then considered as the next possible alternative to LIBs due to their advantage of the abundance and relatively cheap availability of sodium and they have the same chemical properties as lithium. The main disadvantage of using them was that they had low energy density, used highly toxic and flammable electrolytes and had high operation cost and security issues². To overcome these limitations in non-aqueous batteries a new promising class of Aqueous rechargeable batteries has come into operation. They being more environmentally benign, low cost, high operational safety, and aqueous electrolytes offer 2 orders of magnitude higher ionic conductivities ($\sim 1 \text{Scm}^{-1}$) than non-aqueous electrolytes²

Synthesis and characterization of the cathode

All chemicals were of analytical grade and were used directly without any further purification. Cryptomelane-type $\text{KMn}_8\text{O}_{16}$ was synthesized by a Combustion method. The $\text{KMn}_8\text{O}_{16}$ was synthesized by using KMnO_4 and $\text{Mn}(\text{CH}_3\text{COO})_2 \cdot 4\text{H}_2\text{O}$ as reactants. KMnO_4 and $\text{Mn}(\text{CH}_3\text{COO})_2 \cdot 4\text{H}_2\text{O}$ were mechanically mixed in the molar ratio of 2:3 in an agate mortar and an appropriate amount of water was added to obtain a rheological phase. This rheological phase mixture was heated at 150°C and an appropriate amount of water was added to obtain a rheological phase. This rheological phase mixture was heated at 150°C for 12 hours in a muffle furnace. The mixture was cooled down to room temperature then it was again mixed in an agate mortar for about 30 minutes. Mixing the mixture is very much necessary as it will help in the intercalation of ions into it. Then a precursor was obtained which was heated at 500°C for 5 hours in the furnace. Thus $\text{KMn}_8\text{O}_{16}$ was obtained.

The structure and crystallinity of $\text{KMn}_8\text{O}_{16}$ were characterized using an X-ray diffractometer (XRD, PANalytical X-ray diffractometer). The cryptomelane-type $\text{KMn}_8\text{O}_{16}$ has lattice parameters $a=b=9.815 \text{ \AA}$, $c=2.847 \text{ \AA}$ and $\alpha=\beta=\gamma=90^\circ$.

Results and Discussion

Rheological Phase reaction method

The rheological phase reaction method is a process of preparing compounds or materials from solid-liquid rheological mixture. That is, the solid reactants are fully mixed in a proper molar ratio, made up by adding a proper amount of water or other solvents to a solid-liquid rheological body, in which the solid particles and liquid substance are uniformly distributed. Then after reaction under suitable conditions, the products are obtained. Under the solid-liquid rheological state, many substances will have new reaction properties. A typical rheological phase reaction must go through the following five steps: dissolution, diffusion,

reaction, nucleation, and growth. For the rheological phase reaction, reaction steps may be expressed in (1).

The crystalline structure of as-obtained products after heat treated at 500°C in air for 5 hr was analyzed by XRD. It can be observed from Fig. 4 that all the diffraction peaks of the sample at $2\theta = 12.745^\circ$, 25.651° , 37.62° , and 42.029° can be readily indexed to (110), (220), (310), and (211) which are in good agreement with the pure tetragonal cryptomelane structures of KMn_8O_{16} (JCPDS card No. 29-1020; space group: $I4/m(87)$, $a = b = 9.815 \text{ \AA}$, $c = 2.847 \text{ \AA}$, and $\alpha = \beta = \gamma = 90^\circ$).

Conclusion

KMn_8O_{16} with a tunnel-type structure is found to be a reversible intercalation cathode for aqueous magnesium batteries. The solid-state synthesised KMn_8O_{16} compound facilitates reversible magnesium intercalation with discharge and charge capacity of 81 and 73 mAh/g respectively during the initial cycle. Even though the first cycle is promising, extended cycling only can show the performance of the material. Further studies may include xrd characterization of cycled electrodes to explore structural changes in the pristine electrode. Moreover, manganese dissolution as well as plating also could be a potential problem for real applications

Extraction and Thin Layer Chromatography of Curcumin

Namitha Babu*, Jobi Kodyan Varghese^{1*}, Dr. Jose James,^{1*} & Dr. Anu Antony^{1*}

*Student, Dept. of Chemistry, St. Joseph's College, Moolamattam,

^{1*}Assist. Prof. Dept. of Chemistry, St. Joseph's College, Moolamattam

Introduction

Curcumin is extracted from fresh turmeric. Fresh turmeric contains up to 5% curcumin. Curcumin is the active substance of turmeric and curcumin is known as natural yellow. Systematic chemical name is (1E, 6E)-1, 7-bis (4-hydroxy-3-methoxyphenyl)-1, 6-heptadiene-3, 5-dione. It is extracted by dissolving in methanol and refluxing it for 3-4 hr. Curcumin has the chemical formula C₂₁H₂₀O₆. Curcumin can exist in tautomeric form, keto and enol. The keto form is preferred in the solid phase and the enol form in the solution. Curcumin is a pH indicator. In acid solution (pH < 7.4) it turns yellow, whereas in basic solutions (pH 8.6) it turns bright red. Curcumin contains many functional groups in its structure. The aromatic ring system in curcumin is phenols and these phenols are connected by α,β -unsaturated carbonyl group. These natural group phenols present in curcumin are responsible for the yellow color of turmeric. Along with curcumin the plant extract also contains lesser quantities of 2-demethoxycurcumin and 3-bis-demethoxycurcumin.

Results and Discussion

Extraction of Curcumin

A clean beaker having known weight is taken. The turmeric powder is weighed on electronic balance and it is packed in filter paper like a bag. About 500ml chloroform is taken in Soxhlet apparatus. Turmeric powder which is packed in the hardened filter paper is placed in the extraction tube. The flask is then heated. The vapour rises through the side tube and soaks the minimum amount of solvent that suffices for the extraction. The process is continued for 3 hours, the burner is removed from the flask and the extracted material is transferred into a 250ml beaker.

Preparation of chromatogram

Glass plates of uniform thickness are selected. These are thoroughly cleaned and all greasy matter is removed from its surface. Slurry of silica gel (chromatography grade) in water is prepared. After this, a thin coating of adsorbent is applied to the glass plate. Then it is placed in a microwave oven for 1 hour. Before sample application, mark a starting line at the height of 1-20mm from the bottom of the chromatate plate. It is called the base layer. Also, mark another line called the finish line about 10 cm from base line. Apply the sample on base line with fine capillary. Keep the area of application as small as possible. Immerse the chromatate plate in the tank and make it stand in the solvent leaving against the side of the tank. Apply the lid on the tank and make it stand in the solvent leaving against the side of the tank and allow the chromatogram to remain inside the tank for about 15 minutes. Remove the plate from the tank as soon as the solvent has reached the finishing line at the top end of the chromatate plate. Now let the solvent evaporate. Record the distance moved from the origin by the compound and the distance moved from the origin by the solvent. R_f value can be calculated.

The standard reference value of curcumin in 100% chloroform is 0.61. Sample 2 shows more resemblance in R_f value with standard R_f value and are of better grade than sample 1 and 3. Hence we can conclude that homemade curcumin; naturally occurring is better than the commercial sample.

Conclusion

The project is based on the extraction of curcumin from turmeric powder using the Soxhlets apparatus. By using this apparatus we can extract curcumin from commercial, natural and Kasturi Manjal. As turmeric powder undergoes several adulterations, we conducted several purification tests to find out about the presence of lead oxides in turmeric powder. There are chances of the presence of chalk powder, which increases the weight of turmeric powder. Also, there will be the presence of lead chromate, which is used as a coloring agent in turmeric powder. Thin layer chromatography of curcumin in commercial, natural and Kasturi Manjal is also conducted. It can be concluded that natural curcumin is better than commercial curcumin. From this project, we can conclude that naturally occurring curcumin (homemade) is better than commercial curcumin. The naturally occurring curcumin shows more resemblance in Rf value with standard Rf value.

A Short Study of Electro Chemical Properties of Solgel Synthesized LiMn₂O₄

Mirzana C S*, Jobi Kодиyan Varghese^{1*}, Dr. Jose James^{1*} & Dr. Anu Antony^{1*}

*Student, Dept. of Chemistry, St. Joseph's College, Moolamattam,

^{1*} Assist. Prof. Dept. of Chemistry, St. Joseph's College, Moolamattam,

Introduction

Electrochemistry is the study of electricity and how it relates to chemical reactions. In electrochemistry, electricity can be generated by the movements of electrons from one element to another in a reaction known as redox or oxidation-reduction reaction[1]. The reaction involves the movement of an electric charge between the electrode and an electrolyte. Thus electrochemistry is the interaction between electrical energy and chemical change. Battery is an electrochemical cell collection where electrons flow by the chemical reaction in the circuit, which stores electric potential. A battery consists of an anode a cathode and an electrolyte. The negative terminal is the anode and the positive terminal is the cathode. The electrons flow from the anode to the cathode through an external circuit. An electrolyte is a substance that reacts with anode and cathode. Basically, there are two types of batteries primary batteries and secondary batteries. Primary batteries are designed to be used once and discarded and not recharged with electricity and reused like a secondary cell. Primary batteries are predominantly zinc anode systems and some types of secondary rechargeable batteries are lead-acid, nickel-cadmium, nickel-zinc, silver-cadmium, silver-zinc etc. The increasing energy demand has transferred power generation from nuclear sources and fossil fuels to renewable energy sources. The batteries should be safe to operate ,economically viable and environmentally friendly.

Synthesis and characterization of the cathode

All chemicals were of analytical grade and were used directly without any further purification. The cathode material LiMn₂O₄ was synthesized by the Sol gel method using oxalic acid as a chelating agent. At manganese, acetate was dissolved in de-ionized water to give a salt solution. To this solution, lithium carbonate is added slowly with mild stirring. Then add magnesium carbonate to this solution. A saturated aqueous solution of oxalic acid is added. The pH of the mixed solution was maintained at 7.0 by adding an ammonium hydroxide solution. Then the solution was heated to 80°C for 4hr with vigorous stirring to remove excess ammonia and water. The precipitate formed was dried in an oven for 10 hr at 400°C. After drying the precursors were decomposed at 600°C for 6hr in a muffle furnace.

Electrochemical measurements

The electrochemical performance of LiMn₂O was tested in a test cell system. The working electrode was prepared by mixing of 70 wt% LiMn₂O₄, 10 wt% polyvinylidene fluoride (PVDF) and 20 wt% % acetylene black on agate mortar for about an hour. Then being blended in N-methyl pyrrolidinone (NMP) the mixed slurry was spread uniformly on stainless steel and dried in a vacuum for 8-7 hours at 100°C.

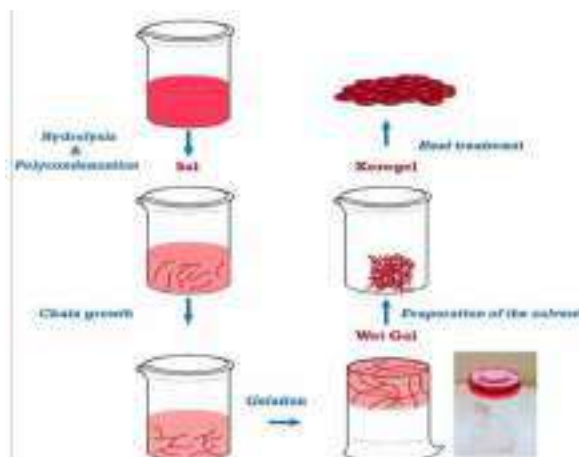

Results and Discussion

Solgel synthesis

The solgel synthesis is a wet chemical technique that use either a chemical solution or colloidal particles to produce an integrated network (gel).This chemical technique involves several steps in order, hydrolysis and poly condensation, gelation, aging, drying,

densification, and crystallisation. It is a good method to prepare novel metal oxide as well as oxide composites. The mixture of LiCO_3 , $\text{Mn}(\text{CH}_3\text{COO})_2 \cdot 4\text{H}_2\text{O}$, MgCO_3 , and were dissolved in deionized water that is the precursor underwent rapid hydrolysis to produce a metal hydroxide solution followed by immediate condensation which led to the formation of the three-dimensional gel. After, the obtained gel is subjected to a drying process around 400 oc more than 10 hr.

Different steps involved in the solgel synthesised LiMn_2O_4

Conclusion

LiMn_2O_4 is found to be a reversible intercalation cathode for aqueous lithium batteries. The sol gel synthesized LiMn_2O_4 compound facilitates reversible lithium intercalation with discharge and charge capacities of 130 mAh/and 55 mAh/g respectively during the initial cycle. Even though the first cycle is promising, extended cycling only can show the performance of the material. Sol gel synthesis is an effective method for the synthesis of LiMn_2O_4 cathode for aqueous lithium ion batteries.

Abstract

A composite material is a combination of two materials with different physical and chemical properties. When they are combined, they create a material that is specialised to do a certain job, for instance to become stronger, lighter or resistant to electricity. They can also improve strength and stiffness. This review chapter discusses the salient features of composites ranging from micro composites to nanocomposites with potential applications.

Keywords: Composites, micro composites, nanocomposites, Carbon black and Carbon nanotubes

1. Introduction

Composites (Composite materials) are natural or synthetic materials fabricated from two or more components with belongings that are different from those of individual constituents. The common day-to-day examples of composites are wood, bone, mud bricks, concrete, fiberglass, etc... Composites are a combination of materials in which one of the materials is called the reinforcing phase, is in the form of fibers, sheets, or particles and is embedded in the other material called the matrix phase. By choosing an appropriate combination of matrix and reinforcing material, a new material can be made that exactly meets the requirements of a particular application. Both components add strength to the composite and their combination often compensates for the weakness in the individual components. The concept of improved performance is broad and includes increased strength or reinforcement of one material by the addition of another material, as well as increased toughness, decreased coefficient of thermal expansion, and increased thermal or electrical conductivity.¹

Composites are generally categorized into three groups based on matrix material; (a) Metal Matrix Composites (MMC), (b) Ceramic Matrix Composites (CMC) and (c) Polymer Matrix Composites (PMC). Polymer composites are further classified into three types based on reinforcing materials (1) particle reinforced, (2) fiber reinforced, and (3) structural reinforced polymer composites.

2. Polymer Composites

The effectiveness of filler in composites depends on characteristics such as particle size, shape, size of the agglomerate, concentration and more significantly surface activity (strength of polymer–filler interaction). Increasing the area of contact between polymer matrix and filler particles seems to be the most important factor for ensuring a strong reinforcing effect and the surface area of the interface is controlled by the size of the filler particles and their volume fraction. The usage of fillers for the enhancement of polymer behaviors especially in the domain of mechanical properties has been extensively studied.² If the polymer matrix is reinforced by traditional filler particles in the micrometer range, we get polymer micro composites.⁶² The common examples of microreinforcing agents are carbon black, talc, glass fiber, calcium carbonate, etc. If at least one of the components in the polymer matrix has nanometer dimensions, these materials are termed Polymer nanocomposites.

Multiphase solid material where one of the phases has one, two or three dimensions of less than 100 nanometers (nm) are generally defined as nanocomposites. Minute amount of nanometer-sized filler with high surface area is the salient feature of a nanocomposite. High

mechanical strength and better aspect ratio are feasible for polymer nanocomposites with the incorporation of reinforcing nanofillers like clay, nanotubes, graphene, etc.

3. Polymer Micro composites and Nano Composites

Among polymer micro composites, carbon black reinforced composites are the most studied and industrially utilized polymer composites.³ Carbon nanotube-polymer nanocomposite has emerged as a hot research topic in material science and is due to its versatile applications. The effectiveness of filler in polymer micro composites and nano-composites depends on its characteristics, such as particle size, shape, size of agglomerate; concentration and most significantly the strength of polymer-filler interaction. As we went through the literature on polymer composites, we found that composites and nanocomposites using carbon black (CB) and carbon nanotube (CNT) occupied a higher position based on citation and application.

“The use of carbon black is as old as the rubber industry itself but still it is evergreen in industry and the research domain. Carbon black (CB) is a versatile reinforcing filler and is the generic term used to indicate a family of materials made up of elementary carbon. It represents a group of finely divided forms of amorphous carbon. It can be produced by the thermal decomposition of hydrocarbons in a shortage of air (pyrolysis). Furnace black and thermal black techniques are the common manufacturing process used for the synthesis of carbon black. The salient features of CB are generally summarized in three headings; particle size (size of spherical particles), structure (size of particle chain), and surface chemistry (composition of groups on the surface of CB). The incorporation of CB in elastomers and plastics not only retards the cost of the end product but also modifies the electrical and optical properties of the polymer matrix. There has been intensive research on the reinforcement of rubber by CB. The entanglement of rubber molecules on the carbon black surface has a dominant role in designing the reinforcement effect of CB in an elastomeric matrix. As the physical adsorption on the surface of CB enhances, the reinforcement effect increases. The rubber-carbon black interaction can be evaluated through bound rubber evaluation, mechanical properties, small angle X-ray scattering, and electrical conductivity measurements. This protocol of characterization supported by morphological analysis helped to fabricate material with tailored properties.

Carbon nanotubes can be visualized as cylinders consisting of a planar hexagonal arrangement of carbon-carbon bonds formed by rolling of graphene layers and as a consequence of this unique bonding arrangement, they show outstanding properties. During growth, depending on the synthesis methods, they can assemble either as concentric tubes (multiwall nanotubes, MWNTs) or as individual cylinders (single-wall nanotubes, SWNTs). The main techniques usually adopted for the synthesis of CNT are arc-discharge,⁴ laser ablation and various catalytic chemical vapour deposition (CCVD) techniques.

Applications

Carbon nanotubes (CNT) with exceptional electrical and mechanical behaviors have been successfully utilized in the fabrication of new-generation nano-composite material with ultra-lightweight, high strength and enhanced electrical conductivity.⁵ Interfacial interaction and filler dispersion are the crucial parameters for enriched properties, especially in the mechanical domain of the corresponding polymer composite. A huge number of articles were published in the field of polymer nano-composites using CNT (either single-walled -SWCNT or multi-walled MWCNT) as the efficient reinforcing agent. Different protocols have been adopted to optimize the CNT dispersion⁹¹ within the polymer matrix. The orientation of CNT in a polymer medium plays a crucial role in mechanical reinforcement. CNT reinforcement is

much more effective for ductile materials than those in brittle matrix.⁶ Poor dispersion and lack of interfacial adhesion between tubes are the major limiting factors for the complete realization of filler capability.⁷ Use of CNT in elastomeric matrix has been extensively reported. Carbon nanotube-polymer composite exhibits percolation behavior,⁸ in which the presence of an inter-connected nanotube network results in a dramatic increase of their electrical conductivity. CNT composite does not show enhancement in thermal conductivity with reference to CNT itself. Up to now, the progress in mechanical properties of the neat polymer by carbon nanotube incorporation remains modest with regard to expectations based on nanometer-scale reinforcement.

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Introspecting the Childhood Self of Amir in <i>The Kite Runner</i> Sunitha Mathew ^{1*} , Roby Mathew ^{1*} , Roopa Jose ^{1*} , Salini L.R ^{1*} , & Alex E.R ^{1*}	1
2.	A Comparative Exploration of Truth and Integrity: Henrik Ibsen's <i>An Enemy of The People</i> and Satyajit Ray's <i>Ganashatru</i> S. Abhilash Mathew ^{1*} , Prince J Mathew ^{1*} , Salini L.R ^{1*} , & Christy Joseph ^{1*}	3
3.	Cultural Integration in 'Brick Lane' By Monica Ali S. Abhilash Mathew ^{1*} , Salini L.R ^{1*} , Alex E.R ^{1*} , & Christy Joseph ^{1*}	5
4.	(M)Otherhood: On The Choices of Being A Woman Deconstructs Modern-Day Motherhood Dr. Aparna Prasad ^{1*} , Christy Joseph ^{1*} , S. Abhilash Mathew ^{1*} , & Roby Mathew ^{1*}	8
5.	Culture in Nadia Hashmi's <i>One Half From The East: A Justifying Voice</i> Fasila Salim*, Dr. Alex E.R ^{1*} , Dr. Salini L.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	11
6.	Depiction of Gender Bias in Nadia Hashmi's <i>One Half From The East</i> Fasila Salim*, Dr. Alex E.R ^{1*} , Dr. Anju E.R ^{2*} , Dr. Salini L.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	13
7.	<i>Samskara</i> as a Text that Raises Subaltern Issues Fathima Salam*, Dr. Salini L.R ^{1*} , Dr. Alex E.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	15
8.	Liberal Feminism in the Novel <i>Daisy Miller</i> Marianne M George*, Dr. Salini L.R ^{1*} , Dr. Alex E.R ^{1*} , Christy Joseph ^{1*} , & Roopa Jose ^{1*}	17
9.	Challenges and Opportunities for Women Working Remotely Tisha Tomy ^{1*}	19
10.	Environmental Sustainability: A Necessity for Survival Tisha Tomy ^{1*}	22
11.	Mechanism of Conflict Management in Business Organizations Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Sharon Lee Jose ^{1*} , Geethu Jose ^{1*} , Mareet Paul ^{1*}	25
12.	Emotional Maturity among Graduate Students in India Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Sharon Lee Jose ^{1*} , Geethu Jose ^{1*} , Mareet Paul ^{1*}	28
13.	Product Mix and Strategies - An Introduction Sharon Lee Jose ^{1*} , Dr. Joseph George ^{1*} , Tisha Tomy ^{1*} , Geethu Jose ^{1*} & Mareet Paul ^{1*}	31
14.	IR Sensor Interfacing using Arduino Mr. Albin Jose*, Mr. Visakh K. S*, Dr. Anju Mathews ^{1*} , Dr. Praveen Joseph ^{1*} , Dr. Robin John ^{1*}	34

15. Persistence of Vision Display	37
Mr. Anandhu Babu*, Mr. Sudhi Jayan*, Dr. Anju Mathews ^{1*} , Dr. Subin Thomas ^{1*} , Dr. Robin John ^{1*}	
16. Arduino-Uno Microcontroller-Driven Irrigation Automation	39
Dr. Praveen Joseph ^{1*} , Dr. Robin John ^{1*} , Dr. Subin Thomas ^{1*} , Sandeep Krishna P S* & Akhil Krishnan*	
17. Comparative Analysis of Viscosity Measurement Techniques: Manual, Poiseuille's Method, and Automated Approach	42
Melvin Mathew*, Sooraj Biju*, Dr. Subin Thomas ^{1*} , Dr. Praveen Joseph ^{1*} & Dr. Robin John ^{1*}	
18. Premarital Life Partner Expectations among Rural Adults	45
Gayathri N Nair*, Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , Mathews Emmanuel ^{1*} & Dr. Justin Joseph ^{1*}	
19. Gender Difference in Premarital Life Partner Expectation and Marital Attitude	47
Gayathri. N Nair*, Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , Mathews Emmanuel ^{1*} & Dr. Justin Joseph ^{1*}	
20. Influence of Gender, Type of Family and Marital Status of Fear of Failure among Performing Artists	49
Sneha C C*, Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} , & Mathews Emmanuel ^{1*}	
21. Performance Failure among Individuals Performing in Traditional Art Forms of Kerala	51
Sneha C C*, Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Manu Kurian ^{1*} & Sijo John ^{1*}	
22. Analysis of the IPL Data Set	53
Steffymol Sunny*, Sneha C S*, Almie Joseph ^{1*} , Jes Mariya Shoji ^{1*} , Silvanose P.Thomas ^{1*}	
23. Students' use of Alcohol	56
Krishnadas Biju*, Sneha C S*, Almie Joseph ^{1*} , Jomon Kottarathil ^{1*} , Mathews Emmanuel ^{1*}	
24. Emotional Competence of Cancer Patients	60
Aby Benny*, Justin Joseph ^{1*} , Mathew Kanamala ^{1*} , Manu Kurian ^{1*} & Jomon Kottarathil ^{1*}	
25. Boston House Forecast Prices	63
Adhila Abdul Karim*, Sruthy Sebastian ^{1*} Sabukkutty M G ^{1*} , Aneesh N ^{1*} & Silvanose P. Thomas ^{1*}	
26. Analysing and Visualizing Weather Data with Tableau	67
Aida Vinoy*, Sruthy Sebastian ^{1*} , Sneha C.S ^{1*} , Jomon Kottarathil ^{1*} , Aneesh N ^{1*}	
27. An Analysis of OTT Platforms' Utilisation of BI	71
Akash Anil*, Jilu Jose ^{1*} , Jomon Kottarathil ^{1*} , Sabukutty M.G ^{1*} & Aneesh N ^{1*}	
28. Business Acumen in Social Media	74
Akash Anil*, Jilu Jose*, Jomon Kottarathil ^{1*} , Sabukkutty M.G ^{1*} & Aneesh N ^{1*}	
29. Early Diagnosis of Diabetes	77
Asby O S*, Jilu Jose ² , Jomon Kottarathil ^{1*} , Sabukkutty M.G ^{1*} , Aneesh N ^{1*}

Abstract

Interpenetrating Polymers (IPNs) are a special type of polymer blends with special features. Their characterization follows special modalities. This chapter summarizes the different characterization protocols in the domain of IPNs.

Keywords: Polymer Blend, Interpenetrating polymer networks, Characterization methods

Introduction

Interpenetrating polymer networks (IPNs) are one of the most rapidly growing areas in multi-component polymeric systems. IUPAC Compendium of chemical terminology defines “IPNs as polymers, comprising two or more networks that are at least partially interlaced on a molecular scale but not covalently bonded to each other and cannot be separated unless chemical bonds are broken”.¹ IPNs are a combination of incompatible polymer networks, at least one of which is synthesized and/or cross-linked in the presence of the other. IPNs are a special class of polymer blends. The two characteristic features of IPNs that distinguish them from the other types of multiphase polymer systems are as follows: (a) IPNs swell but do not dissolve in solvents and (b) creep and flow are suppressed in IPNs.

The term “interpenetrating polymer network” had been assigned before the present interpretation of phase separation and morphology were assumed. Molecular level interpenetration is absent in almost all IPNs and usually they have finely divided domain size of nanometer range with dual phase continuity.² True interpenetration occurs only at phase boundaries and most of them are phase-separated to a certain extent. Molecular level interpenetration occurs in the case of total mutual solubility only. IPN is a polymer alloy with special features.

IPN can show the synergistic effect of their component polymers and consequently avoid their limitations to a considerable extent. Normal mixing of two or more polymers/copolymers does not lead to the creation of an IPN.³ An IPN formation can be schematically represented in Figure 1.1.

Figure 1.1: Schematic representations of component networks and IPN.

1. Characterization

IPNs represent a blend with less extensive phase separation. Reinforcement of IPN by suitable filler leads to the formation of IPN composites.⁴ The properties of IPN and IPN composites are dependent on several factors like distribution of components, filler-polymer interaction, molecular interaction at phase boundaries, phase continuity, kinetic retardation of phase separation, morphology, cross-link density, size and shape of filler, interfacial

interaction, domain size of components etc... A study of mechanical, morphological, viscoelastic, transport and free volume characterization narrates the specific properties of resultant IPN and corresponding composite systems.⁵ The properties of the IPNs fall into two categories.

The first category narrates the approximate simple averages of the properties of constituent polymeric systems. The second class of properties is those which at least in certain IPNs can show maxima or minima in those properties of component systems. In IPN composites, reinforcing effect of filler and IPN framework⁶ behaviors have their contributions. The synergistic effect between reinforcement and IPN formation is the expected outcome in this area. Blend ratio, efficiency of filler, morphological features and localization of fillers have decisive roles in the resultant behaviors of IPN composites.

Modern instrumental methods are used to characterize the interpenetration and ultimate behaviors of IPNs. Various characterization protocols are there to elucidate the morphology, thermal properties, physical properties and other characteristics of IPNs. The interpenetration in IPN may be identified by (1) Comparing the shift of dynamic glass transition temperatures of IPNs with their homo polymers. (2) Comparing the morphologies (micro- or nano-scale) and distribution of phase domains, shape and sizes. The existence of interpenetration is generally better judged through the combination of the aforementioned inferences.¹²⁶ The Reinforcement effect of filler in IPN composites can be evaluated through mechanical, thermo-mechanical and morphological analysis. Its behaviors can be compared with initial polymeric systems, reinforcing agents and also with IPNs.

2. Conclusions

The morphological properties of IPNs are best characterized by using scanning electron microscopy (SEM) and transmission electron microscopy (TEM). Differential scanning calorimetry (DSC), thermal gravimetric analysis (TGA), differential thermal analysis (DTA) and so on have been extensively used to study the thermal properties of IPN. The composition and nature of the constituent polymeric network define the mechanical properties of IPN. Common mechanical properties used to characterize IPN are tensile strength, elongation at break, Young's modulus and hardness. Mechanical properties (tensile stress-strain behavior, tensile stress relaxation and tensile creep) were extensively used to elucidate the composition of IPN. The spectroscopic methods that are widely used in structure elucidation are nuclear magnetic resonance (NMR), infrared (IR), confocal Raman, positron annihilation lifetime spectroscopy (PALS) and electron spin resonance (ESR) techniques. Dynamic mechanical analysis (DMA)⁷ is widely used for the measurement of the viscoelastic behavior of IPNs. DMA is a technique used to characterize IPN properties as a function of temperature, time, frequency, stress or a combination of these parameters.

Abstract

Interpenetrating Polymers (IPNs) are a special type of polymer blends with special features. Their morphological characterization follows special protocols. This chapter summarizes the different morphological characterization protocols in the domain of IPNs.

Keywords

Polymer Blend, Interpenetrating polymer networks, morphology, characterization methods

Introduction

Interpenetrating Polymeric Networks (IPNs), perform a strategic role in contemporary Material science especially in the domain of polymer technology owing to the potential applications and multi-functionalities. Polymer blend (Poly blends) can be broadly defined as a mixture of at least two polymers or copolymers. They are generally categorized into two-miscible and immiscible blends.¹

The golden history of IPN began with its discovery by J.W. Aylsworth in 1914. This was an IPN (based on the language of modern concepts) of natural rubber. An interesting fact is that in 1914, the words polymer, network, IPN etc. had not yet been invented, as a result Aylsworth's patent did not mention these terms. The term interpenetrating polymeric network was introduced by J.R. Millar in 1960. He had designed an IPN consisting of Poly (styrene) as the two phases (homo-IPN) with ion exchange application.²

The morphology of IPNs is governed by chemical compatibility, interfacial tension, cross-link densities, types of components, mode and kinetics of polymerization and domain size of components. In sequential IPNs, the network first formed is most likely to be the continuous network. Its cross-link density is the controlling factor in determining the morphology of the system. Based on morphological pattern, IPNs are classified into three types; (a) with a domain size of a few microns, (b) with a domain size in the range of 1000Å⁰, (c) with no resolvable domain structure.

1. Morphology

The morphological properties of IPNs are best characterized by using scanning electron microscopy (SEM) and transmission electron microscopy (TEM). The micrographs obtained using the SEM and TEM appears to be useful in detecting the interpenetration of phase domains, shape, and structures of the order of magnitude of a micron to a tenth of a micron and the degree of mixing. High-resolution transmission electron microscopy was successfully employed to directly probe the interphase region of IPNs. Hydrogen bonded supra molecular IPN network of 2-ureido-4-[1H]-pyrimidinone (UPy) telechelic poly (ethylene-co-1-butene) (SPEB) with hydroxyl-terminated polybutadiene (HTPB) was reported by T.J. Korely and et al.³ In this highly cited work, they employed TEM images to differentiate the interphase at different blend ratio.

The cross-linking effect in shape memory polymer systems based on the IPN format of cross-linked poly (methyl methacrylate) and poly (ethylene oxide) can be visualized through

SEM micrographs. Atomic force microscopy (AFM) analysis also provides valuable information on the IPN morphology.⁴ It helps to differentiate the continuous phase and dispersed phase in IPN. AFM is also used to identify the domain size of the components in IPN. In the characterization of polyisobutene (PIB) –PMMA IPN. Confocal laser-scanning microscopy (CLSM) also provides some useful insight into IPN morphology. It helps to identify the hydrophilic and hydrophobic regions of hydrogel-type IPN. X-ray scattering experiments are widely used for enlightening the morphology of IPN. It can be used for the visualization of interpenetrating channels in IPN. Energy dispersal X-ray analysis (EDAX) explains the distribution of dispersed phases in the IPN matrix. Raman mapping is an efficient technique to understand the phenomenon of interpenetration in IPN. Diamino-modified Graphene/ Polyaniline (PANI) Semi-interpenetrating system with high thermoelectric performance was reported by Yu-Sheng Hsiao et al.⁵

2. Conclusions

Morphological characterization provides a tool and guide for the distribution and dispersion of components in IPN. In IPN research, different innovative techniques have evolved.

Abstract

Interpenetrating Polymeric composites are a special type of polymer composite with special features. Their characterization follows special protocols. This chapter summarizes the summarizes the concept of IPN composites.

Keywords: Polymer Blend, Interpenetrating polymer networks, IPN composites

Introduction

IPN composite is an emerging field in polymer technology that utilizes the merits of IPN framework¹⁰⁶ and the flexibility of composite formation. In IPN composites, the polymer matrix is interpenetrating polymeric networks. Here materials in micro or nano form are incorporated into this IPN matrix. It utilizes the benefits of both the IPN matrix and its composite formation with improved performance. If the incorporated filler materials exist on the nanoscale, it is called IPN nanocomposite, on the other hand if the filler phase is on a micro-scale, it could be called IPN micro-composite.¹ IPN composite is an emerging field in material science especially in drug delivery systems and in hydrogels.

IPN Composites

The chemical, thermal and often electrical performance of IPN composites are controlled by the IPN matrix² while the mechanical performance is dictated by the effectiveness of the reinforcement. Two general protocols are employed in the fabrication of IPN composite. The first protocol for the synthesis of IPN composite consists of polymer composite formation (by addition of filler into a suitable polymer matrix) followed by the creation of IPN framework (by incorporating a second polymer part). S. Amnuaypanich et al.³ utilize the above-mentioned order of preparation for the fabrication of NR/PVA semi-IPN composite reinforced by zeolite. They dissolved zeolite in a PVA solution to form a composite.⁴ NR latex is added to this composite along with a cross-linker to form an IPN framework and as a result, an IPN composite is prepared.⁵

IPN framework formation followed by reinforcing filler addition is the second protocol for IPN composite synthesis and is commonly adopted for biological IPN composites especially in drug delivery systems. This specific approach had been utilized in the first successful design of semi-IPN hydrogel–silver nanocomposites by Y. Murali Mohan and et al. In that article, acrylamide with initiator and cross-linker along with and polyvinyl pyrrolidone ((PVP) form an IPN framework. To this framework, silver nitrate is added. The reduction of silver nitrate by sodium borohydride (NaBH₄) in the IPN format produces nano-silver in the IPN framework.⁶

Conclusions

Crosslinking sequence and filler incorporation play a major role in the morphology and properties designing of resultant IPN composites. IPN composites have wide applications in the field of damping. It is clear that the range and depth of IPN composite is very high and there is enough room for research in this area.

Abstract

Interpenetrating Polymeric networks (IPN) are a special type of polymer blend with special features. Their characterization follows special modalities. This chapter summarizes the important applications of IPNs.

Keywords: Polymer Blend, Interpenetrating Polymer Networks, Applications

Introduction

The central motive in material science especially in polymer technology is to fabricate a material with effective performance, excellent peculiarities, and an optimum cost-to-benefit ratio. Polymer blend (Poly blends) can be broadly defined as a mixture of at least two polymers or copolymers. Interpenetrating polymer networks (IPNs) are one of the most rapidly growing areas in multi-component polymeric systems. IUPAC Compendium of chemical terminology defines "IPNs as polymers comprising two or more networks that are at least partially interlaced on a molecular scale but not covalently bonded to each other and cannot be separated unless chemical bonds are broken".¹ IPNs are a combination of incompatible polymer networks, at least one of which is synthesized and/or cross-linked in the presence of the other.

Applications of IPNs

IPNs have a variety of applications and they are commercially successful forms of polymer blends, probably owing to the cross-linked structure that provides better thermal stability,² mechanical properties, chemical resistance, and so on. IPNs are traditionally used as damping materials, impact-resistant materials, adhesives, and so on. Their unique properties of specificity, mechanical strength, swelling capacity, nutrient and oxygen permeability, durability in the body, and sensitivity can be identified.

IPN-supported scaffold is one of the growing areas of polymer blends.³ Nanocomposite polymer IPN hydrogels are new-generation materials useful for a wide variety of applications. They are used as responsive hydrogels, medical implants, porous scaffolds or catalyst supports, self-healing materials, thermo-sensitive materials, contact lenses, and so on. The new applications of IPN are controlled drug delivery systems, energy storage materials, corneal transplantation and use in fuel cells.⁴ IPNs have immense scope in tissue engineering and as uterus stents. Thus IPN holds many advancements and future applications that will be of immense help to mankind. The literature survey of the latest works on IPN reveals that the current thrust areas of IPN are hydrogel polymer solar cells, controlled drug release, fuel cell membrane, and thermo-sensitive IPN for wound dressing. IPN hydrogels are called hungry networks or intelligent polymers due to their potential technological application in medicine, industry, biology,¹⁶⁵ and environmental clean-up. One of the shining future aspects of IPN is in the manufacture of solar cells. Here, an incoming photon from the sun creates an exciton (electron-hole pair) that travels to the interface where charge separation occurs, producing useful voltage. IPN has found immense use in various biomedical applications and biochemistry. IPN electrolyte is another thrust area in the polymer research field.⁵ IPN composite usually enhances the properties of parent IPNs. The current trends in IPN composite research include green

composite fabrication, shape-memory materials, drug-releasing agents, fibre reinforcing materials, electrolytes, and cryo composites.

Conclusions

The outlook for IPNs and IPN composites is exceedingly bright and is a hot research area. The data from the ISI Web of Science indicate that China, the United States and India are the leaders in the IPN research area, and currently about 500 papers per year are being published in this research field. Processing techniques for the synthesis of eco-friendly IPN and IPN composites and clear differentiation of physical and chemical interpenetration using characterization techniques are the remaining gaps in this field. Despite many advances, numerous challenges and opportunities remain for making an impact in the field of smart interpenetrating polymeric systems.

Abstract

In Kerala, Vazhakulam is a village in the Muvattupuzha Taluk of the Ernakulam district. This town is known as Pineapple City due to its large-scale pineapple farms. The Vazhakulam pineapple is cultivated in an area that spreads to about 45km north, 40km west, 35km east, and 110km south of Vazhakulam, the heartland of pineapple.

Introduction

Pineapple is one of the most commercially important fruit crops in India. Total annual world production is estimated at 28.65 million metric tons of fruits. India is the fifth-largest pineapple producer in the world, producing 1.2 million metric tons of pineapple annually. 8.2% of the world's total production of pineapple is produced in India. Other leading producers are Thailand, Philippines, Brazil, China, Nigeria, Mexico, Indonesia, Colombia and U.S.A. Pineapple has been commercially grown in the Vazhakulam area for more than 50 years. It is an excellent fruit for fresh consumption. The Vazhakulam area is ideally suited for the production of pineapple. Planting is done in almost all the months. Except during the heavy monsoon days. Vazhakulam is considered the biggest pineapple market in India. From there, the fruits are transported to all the south Indian states and most of the north Indian states.

Statement of The Problem

People in the Vazhakulam area cultivate pineapple along with other crops. Most of them use pineapple cultivation as a way of life. They face many problems in this sector. A pineapple farmer faces many problems through pineapple cultivation. Scarcity of factors of production and the aids, price fluctuations of the pineapple and how this will affect the farmers, etc. The project tried to analyze the main problems faced by the pineapple industry.

Objectives of The Study

- To study the main reasons for crisis mainly faced by the pineapple farmers in workplace
- To study the development of Vazhakulam through pineapple cultivation

Source of Data

In this study, the main source of data is primary data, which is collected using a structured questionnaire. Secondary data was obtained from magazines, websites, etc.

Sampling Techniques

The convenience sampling method is used for collecting data from the population; the convenience sampling method is one of the main types of non-probability sampling methods.

Theoretical Framework

Pineapple (*Ananas comosus*) is an important fruit in India. Pineapple is cultivated in an area of 89 thousand hectares, and the total production is 1415 thousand tons. It is abundantly grown in almost the entire North East region, including West Bengal, Kerala, Karnataka, Bihar, Goa, and Maharashtra states. The major pineapple-growing countries in the world are Brazil, Thailand, the Philippines, Costa Rica, China, and India. The total area under pineapple cultivation in the world is 909.84 thousand Hectar, with production around 19412.91 thousand tons.

Data Analysis and Interpretation

Major problems of cultivators

Sl. No	Major problems	Number of respondents	Percentage
1	Price decline	26	52
2	Deformation	5	10
3	Accumulation of sludge	7	14
4	Natural calamity	12	24
5	If others	-	-
Total		50	100

Source: Primary data

Table showing development occurred in Vazhakualem after it was known as pineapple city

Sl. No	Developments	Number of respondents	Percentage
1	New industries	18	36
2	Employment opportunities	12	24
3	Advanced marketing facilities	9	18
4	Easy availability of funds	7	14
5	More government intervention	4	8
Total		50	100

Source: Primary data

Findings

- 52% of the workers respond that price decline is the major problem for cultivators.
- Through pineapple cultivation, Vazhakualem was developed by new industries, employment opportunities, advanced marketing facilities, easy availability of funds, and more government intervention.

Suggestions

- The government should ensure that providing subsidies for cultivators continues and must ensure that all cultivators are receiving the subsidy.
- Provide floor prices and cell prices for the pineapple products and reduce the problem of price fluctuation.
- The pineapple sector faces many crises during this period, so utilize maximum resources such as land, fertilizers, and government aid to overcome the situation.

Conclusion

The pineapple sector plays an important role in the economy. More than 5 lakh people in Kerala are cultivating pineapple. Most of them have been cultivating pineapple for more than 40 years; they couldn't think of another crop. While cultivators are facing a huge crisis, the government must take adequate measures to protect the pineapple

sector. The government must not hesitate to implement the national pineapple policy, which will help the pineapple sector.

Abstract

Today, our environment faces a series of problems related to plastic. This study has been conducted to analyze customer attitudes towards eco-friendly products. For this, a structured questionnaire has been framed and has been surveyed. Data were collected on the basis of convenient sampling. The main factors that induce people to purchase eco-friendly products are quality and environmental protection.

Introduction

Eco-friendly means that the manufacturer of the particular product took the proper steps to ensure that the environment was not harmed during its manufacturing process. The raw materials used in the product were derived from sustainable sources. And the production should have a low impact on the environment regarding waste, carbon emissions, and energy use. A product is considered earth-friendly if it is biodegradable, meaning that it will pose no threat to the earth and environment when it is released into the air, water, or earth while in use or when disposed of. These types of products usually decompose much quicker in landfills than similar items that are not biodegradable. Products that are manufactured through technology and that cause no environmental hazards are called eco-friendly products. The promotion of products is necessary for the conservation of natural resources. Solar light and solar heaters make use of solar energy. Solar power products are innovative mechanisms that help conserve energy. Solar products are environment-friendly and usually cost-effective as well.

Statement of The Problem

In modern world, people are concerned about the environment. These products have a vital role in the protection of the environment as they do not have a negative impact on nature. A company can increase its competitive position by providing eco-friendly products. This study was conducted to know the attitudes of people towards products like solar power products, paper bags, handy craft items, and clay products.

Objectives of The Study

- To analyze those factors that induce people to purchase eco-friendly products.
- To study the reusable habit of eco-friendly products towards customers.

Sources of Data

The primary data used for the study was obtained from the customers. It was collected through a questionnaire given to the customers. The secondary data was collected from websites, brochures, and reference texts

Sampling Plan

The population of the study consists of customers attitudes towards eco-friendly products. The sample size used for the study is 40. A sampling method has been adopted for the study.

Theoretical Framework

According to Merriam-Webster, the official definition of eco-friendly is “**not environmentally harmful.**” When it comes to products, that means everything from production to packaging needs to be considered safe for the environment. Products that are made of environmentally friendly materials are Eco-friendly products or green products. It has qualities that will protect the environment. It has replaced artificial ingredients with natural ingredients. Green products are:

- energy-efficient, durable, and often have low maintenance requirements.
- They are free of ozone-depleting chemicals and toxic compounds and don't produce toxic by-products.
- Often made of recycled materials or content or from renewable and sustainable sources.
- Biodegradable or easily reused, either in part or as a whole.

Solar products are innovative mechanisms that help conserve energy. Solar products are environmentally friendly and usually cost-effective as well. **Solar lights** have good demand and acceptance in the modern world. There are several companies providing solar lights. **Solar water heaters** have better acceptance because of their benefits and durability. The cheap availability and low cost of plastic bags make them popular among people. But plastic bags cause a lot of problems for our environment.

Data Analysis and Interpretation

Table showing what induces consumers to purchase these products

Interest on the purchase	Number of participants	Percentage
Quality and environmental production	20	48.8
More benefits	4	9.3
Safety	9	23.3
All	7	18.6
TOTAL	40	100

Interpretation:

Out of the total responses, 48% purchased based on quality and environmental production. 23% purchased on the basis of safety, 9% based on more benefits, and 18% of them considered all of the above.

Table showing eco-friendly products that can be reusable

Reusable	Number of participants	Percentage
Yes	32	79.1
No	8	20.9
TOTAL	40	100

Interpretation:

Out of the total responses, 79% of the products can be reusable, and 21% of them are not. Most of the products are derived from nature, so they can be easily recycled and reused without any harmful effects.

Findings

- The main factors that induce people to purchase eco-friendly products are quality and environmental protection, and these are now gaining more popularity in society.
- 65% of people have good opinion about the quality of the product, although 20% of them have excellent opinion about the quality of the product, even though 2% of them have a poor opinion.
- 98% of people believe that green products will contribute to the sustainable future.
- 80% of the purchased products can be reused, while 20% of the products cannot be reused.

Suggestions

- Consumers are to be well educated about importance of eco-friendly products like paper bags, handicraft items, and clay products.
- In order to increase the sale of paper bags, handicraft items and clay products, there is a need to undertake promotional activities
- Provide information about eco-labels to those who are not aware of them.
- Take measures to avoid the problem of unavailability of the products.

Conclusion

Eco-friendly products have a prominent role in conservation of environment. So there is a need to promote green products. From this study, it is clear that most people are in the habit of purchasing eco-friendly products like solar lights, solar heaters, paper bags, handicraft items, and clay products. Most of the customers are willing to pay higher price for these products because of their quality and environmental protection. This study reveals that people have positive opinions about paper bags and solar light. On the other hand, handicraft items, solar heaters, and clay products are not very attractive to the respondents.

Abstract

Nowadays, the most common promotional activity is advertising. The visual advertisement is more effective than other advertisements. The main objective of this study is to measure the effectiveness of different visual media advertisements in generating brand equity and buying motives for FMCG and consumer durables.

Introduction:

Advertising is now not only an information provider but also a factor that increases the psychic value of the product and hence is considered an investment. In terms of business, an investment has to generate income in the future. The impact of advertisements may be in different segments, which start from brand awareness to sales. A good number of studies are being done in this segment to prove the impact of advertisement effectiveness at different levels.

Statement of the problem:

Advertising initially incarnated as a solution for knowledge and information. Initially, advertisement emerged in the form of non-verbal communication, then evolved through print media and now reached visual media. If India is growing at such a pace, print media advertising will become outdated and probably be extinguished, as in developed nations. Hence, the study is only confined to visual media advertisement effectiveness.

Objectives of the study

- To measure the effectiveness of different visual media advertisements in generating brand equity and buying motives for FMCG and consumer durables

Research Methodology

Tools for data collection and analysis

Primary data is collected through questionnaires, and secondary data is collected from books, other documents, websites, etc. The data collected have been classified, sorted, tabulated, and suitably condensed to facilitate ready comprehension. Tables and diagrams are used as tools for the study. Simple statistical tools such as charts, graphs, and percentages have been used to interpret data.

Theoretical Framework

This chapter is divided into three parts, in which the first segment deals with the history of advertising, the second segment pertains to brand management, and the third segment narrates buying motive, the effectiveness of advertisement in building brand equity (considered to be Sookshmastiti), and building buying motive (assumed to be Stoola stiti). Branding helps to ensure the desired quality of the product, as grading is possible through branding.

Data Analysis and Interpretation

TABLE- Classification according to the visual ad which the respondents saw most

Response	No. of Response	Percentage
Television	35	35%
Internet	60	60%
Others	5	5%
Total	100	100

(Source: Primary Data)

Interpretation: Citing the modes of advertisement, 35% of consumers prefer television, 60% prefer internet and 5% prefer other mediums, hinting that internet was the main medium where ad had to make a mark

Findings and Suggestions

- The majority of respondents are seeing advertisements through internet, i.e., 60%; 35% are seen through television; and rest of them through other modes, i.e., 5%.
- a) The majority of the respondents agree that the ad reveals durability and reliability.
- Almost all of the respondents agree that the ad reveals or communicates the safety of buying, and least of the respondents strongly disagree with it.

Suggestions

1. Brand equity is generated by all forms of advertisements on FMCG and Consumer durables in Kerala. But, Advertisement with dialogue is heavily influential in procreating brand equity in Kerala.
2. The advertisers should give due care and more importance in telecasting advertisements with dialogue, both for promoting FMCG and consumer durables.
3. Buying motive and brand equity are affected by all forms of advertisements significantly, it is evidenced that more effectiveness is visible on Consumer durables. The study recommends that heavy budget would be set aside only on consumer durables.

Conclusion

The output of the study concludes that both brand equity and buying motives are significantly generated by all types of visual media advertisements, i.e., advertisements with dialogue, advertisements without dialogue, and animated advertisements on FMCG and consumer durables in Kerala.

Abstract

Today, many companies are facing a conflict over giving their employees rightful bonuses for the hard work they produce for the welfare of the company, so the system would like to make a possible solution to this by evaluating the automation of the performance rate according to what would be stated in their automated performance rating in the system. The higher the rating of performance, the higher the possibility that certain employees would be enlisted first for a promotion that, of course, would be from the higher management of the company. The study, entitled A Study on the Role of Strategic Human Resource Management on Organizational Effectiveness, analyzes the facts relating to it.

Introduction

Human resources are regarded as one of the most important sources for today's firms. Human resource management is more important than other competitive sources because these people use other assets in organizations, create competitiveness, and realize objectives. Thus, firstly, organizations must understand the expectations of employees, which will enable the desired behavior of employees in the organization. Some of the desired outcomes of the organization in managing their workforce are: competence; cooperation of employees with managers; cooperation of employees between them; showing the capabilities of employees; motivation, commitment, and satisfaction; attitude and presence; and employee behavior.

Statement of The Problem

The human resource management system will automate the performance of employees with regard to what is monitored. The study analyzes the role of strategic human resource management practices in the organizational effectiveness of private banks and aims to understand the benefits of strategic human resource management among private banks.

Objectives of The Study

- To study the role of strategic human resources management practices in organizational effectiveness of private banks
- To understand the benefit of Strategic human resources management among private banks in Idukki

Source of Data

- Primary data were collected through questionnaire.
- The secondary data used for the study were collected from magazines and other books related to the study.

Sampling Techniques

Convenient sampling methods were used for the study. A convenience sample is obtained by selecting a convenient population. The sample size selected for the study was 60.

Theoretical Framework

Strategic human resource management (SHRM) is the main concern of managers who are expanding their businesses at a global level. It provides new avenues for the promotion of team

learning in the organization. The main purpose of this article is to explore literary facts pertaining to this key area. On the basis of a review of literature on SHRM, its importance for nurturing team learning behavior among the diverse workforce of global business organizations to develop learning organizations and sustainably intelligent knowledge workers is presented and analyzed.

Keye (1984) studied the relationship between performance appraisal and career development and showed that both performance appraisal and career development have potential for developing human resources, potential that can be increased by linking them together to meet the needs of other individual employees and organizations.

Data Analysis and Interpretation

CLASSIFICATION ON THE BASIS OF INCREASED ORGANIZATIONAL EFFECTIVENESS THROUGH SHRM

OPINION	NO. OF RESPONDENTS	PERCENTAGE
Strongly Agree	25	42%
Agree	25	42%
Neither	3	5%
Disagree	3	5%
Strongly disagree	4	6%
TOTAL	60	100%

Source: Primary Data

Interpretation:

Table 3.19 shows that TQM increased organizational effectiveness. 42% of the respondents strongly agreed. 6% of the respondents strongly disagree. 5% of the respondents are neither agreeing nor disagreeing.

Classification On The Basis Of Performance-Related Benefits

OPINION	NO. OF RESPONDENTS	PERCENTAGE
Highly satisfied	15	25%
Satisfied	36	60%
Neutral	2	3%
Highly dissatisfied	2	3%
Dissatisfied	5	9%
TOTAL	60	100%

Source: Primary Data

Interpretation:

Table 3.26 shows the performance-related benefits of the respondents. Out of the 60 respondents, 60% are satisfied. 25% of the respondents are highly satisfied. 9% of the respondents are dissatisfied. 3% of the respondents are neutral and highly dissatisfied.

Findings

- From the study, it is clear that the majority of the respondents are concerned about the

strategic human resource management effectiveness of the organization.

- The majority of the respondents agree that strategic human resource management affects the performance of the organization.

Suggestions

- To eliminate conflict between management and employees and enhance communication and relationships with them.
- To provide awareness to employees about the objectives and vision of the organization.

Conclusion

In a rapidly changing competitive environment, human resources are an important source of competitive advantage. The human resource system can contribute to sustained competitive advantage by facilitating the development of competencies that are firm-specific. This study investigates the effect of strategic human resource management on various private sector banks in Kattappana municipality. According to this study, the majority of the respondents are aware of the role of strategic sources in then effectiveness of organizations, and they are satisfied with the welfare measures implemented by the organization. The majority of respondents agree that strategic Strategic Human Resource Management effect the performance of the organization.

They clearly understand the objectives and goals of the organization and feel free to express their opinions and suggestions about the organization. This study concluded that strategic human resource management will contribute to the performance of the organization and ensure good working conditions for the employees.

Abstract

This study explores the critical issues of employee morale within the context of Mar Sleeva Medicity, Palai, Kerla. With healthcare institutions facing unique challenges related to employee well-being and job satisfaction, this chapter delves into the factors affecting morale among healthcare professionals.

Introduction

Morale is the attitude, feelings, and emotions of employees that play a vital role in determining their performance and behavior. These, in turn, determine the success and growth of the organization. It is for these reasons that human resources experts as well as line managers are now paying increasing attention to the problems of motivation and morale in industry. Morale is a state of mind or willingness to work which in turn affects the individuals and organizational objectives. Morale resides in the minds, attitudes and emotions of individuals themselves and in the reactions of their group. It affects the employees and executives in their interactions. Ultimately it affects the consumers and the community.

Statement of The Problem

It is said that satisfied employee is a productive employee, any kind of grievance relating to organizational or personal to a great extent influence on the job. So, every organization is giving higher priority to keep their employees with satisfaction by providing several facilities which improves satisfaction and which reduce dissatisfaction. If an employee is not satisfied with job there are chances for absenteeism, job turnover, lower productivity, committing mistakes etc. Purpose of this study is to describe current level of "morale of employees at Mar Sleeva Medicity, Palai."

Objectives of The Study

- To find out the level of employee morale at Mar Sleeva Medicity, Palai
- To know the level of satisfaction of the employees towards the organization.

Sources of Data

- The primary data were collected through questionnaire.
- The secondary data used in the study were collected from books, journals, magazines, articles, websites, and other publications.

Sampling Technique

Convenient sampling methods were used for the study. There are various statistical tools that are used in analyzing data. Such tools are percentage, diagrams, charts, tables etc.

Theoretical Framework

Robert Heller, founding editor of Britain's top management magazine, *'Management Today,'* has come forward with so many managerial skills and ideas on managing employees in an organization by motivating them and thereby creating a positive morale

towards the organization.

About the work place morale, he says that it is important to measure the work place morale on a regular basis to discover if and why staff are experiencing problems. If someone experiences a rise in departures, suspects that motivation is low, or finds absenteeism is increasing, employee attitude surveys give a broad indication of morale. Another method to check employee morale is to take a random opinion poll. After all, the results or findings will help us sort out the risk causing further demotivation.

Data Analysis and Interpretation

Level of Employee Morale

Department	No. of Employees (Sample)	High Morale	Moderate Morale	Low morale
Nursing	40	45%	35%	20%
Administration	10	60%	25%	15%
Physicians	20	58%	26%	16%
Support staff	15	46%	38%	16%
Technicians	15	37%	35%	28%
Total	100			

Source: Primary Data

Level of satisfaction of Employees

Department	No. of Employees	Satisfied	Nuetral	Dissatisfied
Nursing	40	50%	25%	25%
Administration	10	55%	30%	15%
Physicians	20	48%	12%	40%
Support staff	15	36%	27%	37%
Technicians	15	52%	30%	18%
Total	100			

Source: Primary Data

Findings

- The majority of the respondents agree that the institution is working with high morale
- It is observed that most of the employees are satisfied with their job and the working conditions offered to them. Also, they are satisfied to work with Mar Sleeva Medicity in Palai.

Suggestions

- Organizations should take care of the work load of employees.
- Supervisors should show appreciation to employees when they complete the work.
- Organizations should improve their feedback systems to ensure complete satisfaction because it helps to improve worker performance.

Conclusion

The study on employee morale helped to find out the morale of employees working at Mar Sleeva Medicity, Palai. It gives an opportunity to see the daily routine of an organization with mass production and helps to know the conditions of the employees working there. The morale of employees must be boosted to increase their confidence and satisfaction level. A change in the working environment can bring a change in the

attitudes of the employees towards work. Employees play an important role in the efficient management of the organization. If the employees are not efficient, then the organization will not be able to function properly. So, it is needed to motivate the employees through training and development programs and solve their problems. thus making them more competent and increasing their morale.

Abstract

In developing economies like India, there is always a problem of unemployment. There is always a huge shortage of jobs on the job market. To address this issue, the government is making a lot of strategic plans, and one such initiative is boosting entrepreneurial intent among people. 'Entrepreneurship' can be simply defined as the intent among people to start a business. This study intends to understand the perceptions of college students towards entrepreneurship.

Introduction

The ultimate desire and aspiration of the youth in school and of their parents or sponsors is to see them gainfully employed soon after graduation. In the face of the current global economic recession and expanding population, however, opportunities for employment are becoming scarcer. This is more so as industries are shrinking in size or folding, and those that survive continuously downsize their workforce, thereby compounding the already high numbers of the unemployed. Entrepreneurship is timeless. Today, youngsters are exhibiting great intention when setting up an enterprise. It is crucial to identify these youngsters early and cultivate their entrepreneurial energy.

Statement of the Problem

Entrepreneurship is the capacity of individuals to innovate, to bear risk, to foresee the prospects of a project, and to have the confidence and competence to meet unforeseen and adverse conditions. The activities of entrepreneurs are crucial to the economic growth and prosperity of modern society. Hence, the present study attempts to know the perception of college students towards entrepreneurship and the different types of perceived barriers faced by the college students while selecting entrepreneurship as a career.

Objectives of the Study

- To study the general awareness of students regarding entrepreneurship.
- To identify the perception and attitude of students towards entrepreneurship.

Sources of Data

- Primary data is the original data collected by the researcher from the sample respondents. Here, primary data have been collected using questionnaires.
- Secondary data is gathered from published records like website, theses, etc.

Sampling Technique

Simple, convenient random sampling is used for the data analysis. 100 respondents from Nedumkandam Grama Panchayat were selected using convenient sampling.

Theoretical Framework

The framework of entrepreneurship is defined as a dynamic process of creating incremental wealth by entrepreneurs who take responsibility for the major risks in terms of equity, time, and career commitment.

E. Douglas (1999), in his study, investigated that the association between the intention of individuals to start own business and their attitude towards income independence, risk, and work effort is positively related.

Data Analysis and Interpretation

Response regarding consideration of starting own business

Response	No. of Respondents	Percentage
Yes	58	58%
No	42	42%
Total	100	100%

Source: Primary Data

Interpretation: From the above table, we can interpret that 58% of the respondents thought about starting their own business, and 42% of the respondents are not thinking about starting their own business.

Response regarding awareness about procedural formalities and regulations to start a business

Response	No. of respondents	Percentage
Aware	25	25%
Unaware	75	75%
Total	100	100%

Source: Primary Data

Interpretation: From the above table, we can interpret that 75% of the respondents are not aware of the procedural formalities and regulations for starting a business. Only 25% of the respondents are aware of the procedural formalities and regulations for starting a business.

Findings

- Most of the respondents want to start their own business to become independent.
- Most of the respondents say that lack of awareness and lack of finance are also barriers faced by students when selecting entrepreneurship as a career.

Suggestions

- This study suggest that the students need to be updated through entrepreneurial workshop and conferences in various fields to establish new ventures.
- Integrate entrepreneurship-related programs and activities into the established curriculum across different academics so that it may add value to college students.
- Entrepreneurship Development Club should enhance their activities and encourage participation from all departments in their activities.

Conclusion

The study on the perception of college students towards entrepreneurship revealed that there is a change in the attitude toward careers these days. Many of the students feel that entrepreneurship can be considered a career option in today's globalized environment and may feel that entrepreneurship is a rewarding career. The majority of the students are interested in this area. The mode of raising funds is very important in the creation of new ventures. The education system also affects entrepreneurship among students. Lack of awareness, availability of capital, fear of failure, etc. are some of the main barriers faced by students when starting a new venture. The result of the study is mainly related to the perception of college students towards entrepreneurship, and it shows a positive result in the perception of college students towards entrepreneurship. They are highly passionate about becoming entrepreneurs.

Abstract

Employee wellness programs are those approaches taken by companies that aim at an employee's overall well-being. It can include health screenings, seminars on education, exercise, healthy eating habits, stress reduction, etc. Many companies offer a lot of wide-ranging wellness programs to employees. Yet very little research has been done on what types of initiatives have been taken by employers regarding employee wellness programs. Employee wellness programs are helpful for employers and employees to adopt and maintain healthy behaviors. It also comprises benefits like greater productivity, behavior changes, a decrease in labor turnover and absenteeism, and a healthier work environment

Keywords: Employee Wellness Program, Healthy work environment, Employee Retention

Introduction

People are becoming more conscious that health should not be viewed only through the lens of pathogenic illnesses. Individuals' health is substantially influenced by factors such as living habits and lifestyles. This new public fascination with 'Wellness' is taking on a global scale. The content of television shows, ads, popular periodicals, and daily newspapers exemplifies this. Thousands of projects and programs have been launched worldwide by governmental and non-governmental organizations and private individuals to emphasize the importance of community members adopting healthy lifestyles.

Wellness programs are designed to support employees in understanding their health risks and adopting healthy behaviors to decrease these risks. These programs can include health risk management (screening for elevated cardiovascular disease risk factors such as elevated cholesterol and blood pressure), behavioral health like smoking cessation, substance abuse, and psychological counseling, and primary care promotion and lifestyle management, especially on weight loss, fitness, and nutrition. Such programs aim for decreases in more costly health care utilization, including emergency room visits, hospitalizations, surgeries, and specialist visits, as well as reductions in absenteeism, increases in productivity, and a better quality of life.

Objectives of the study

1. To establish the factors that influence the adoption of employee wellness programs in the IT sector.
2. The study's goal is to learn more about the employee wellness initiatives that IT companies are doing.

Outcome of the Study

Employee happiness is usually a sign of a good workplace

1. Consider introducing some entertaining workplace wellness challenges if you desire this for your firm. These will motivate your staff to develop healthy habits, socialize, and become more productive and engaged as a result of them.
2. The mental health of the workers declined during the period of COVID-19 pandemic. Following its inception, it ushered in the work-from-home era, which caused a significant amount of stress among employees due to a sense of isolation.
3. The pandemic wreaked havoc on the economy, resulting in a financial crisis for many people, which had a negative impact on their mental health.

4. Wellness service providers are using virtual methods to provide services, such as sessions with psychologists and health coaches, to combat the problem.
5. Corporate wellness programs are a collection of policies, programs, and perks that target a variety of risk factors and conditions while influencing both employees and the firm as a whole.
6. According to the National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), corporate wellness and health initiatives, as well as disease prevention plans, have the potential to influence more than 150 million employees in the United States, lowering healthcare costs significantly.
7. Employees are encouraged to live a healthy lifestyle, which helps businesses increase productivity and cut costs by boosting employee wellness. In the future, the overall costs of missed productivity owing to illness-related absenteeism are predicted to exceed USD 150 billion.
8. Increased insurance costs result from the rise in obese and overweight people, putting financial strain on companies.
9. Businesses have discovered strategies to safeguard and prioritize their employees physically as a result of the COVID-19 epidemic by giving tech assistance to promote social distancing in the adoption of new leave rules.
10. Employers' priorities have switched to preventive and constructive management, which includes assisting employees in adapting to new requirements.

Conclusion

The pressing need of the hour is to primarily raise awareness about wellness in corporates, especially among the highly stressed workforce in the information technology industry. Wellness is a grossly misunderstood term and is usually perceived as a periodic master health check. Wellness goes beyond medical laboratory reports. Wellness should rather be considered a way of life where all dimensions relating to the body are held as important to foster a balanced state. This means that one should constantly monitor the mental (cognitive and intellectual), the physical, and the spiritual being in order to coexist peacefully with fellow workers, thereby establishing synergy and unity of work to eventually achieve prescribed goals.

It must be understood that the absence or indifference of any element will disturb the wellness of the employee and may lead to disastrous consequences, including conflicts, unruly behavior, digression of focus, and loss of property and life well-being, which can also contribute to their happiness

Introduction

A payment system is any system used to settle financial transactions through the transfer of monetary value. This includes the institutions, instruments, people, rules, procedures, standards, and technologies that make its exchange possible. Payment systems are used in lieu of tendering cash in domestic and international transactions. This consists of a major service provided by banks and other financial institutions. Traditional payment systems include negotiable instruments such as drafts and documentary credits such as letters of credit. The term electronic payment refers to a payment made from one bank account to another using electronic methods; electronic payment refers to e-commerce, a payment for buying and selling goods or services offered through the Internet, or broadly to any type of electronic funds transfer

Statement of the Problem

Electronic payment systems are highly expensive because they include set-up costs, machine costs, management costs, etc., and this mode of payment will take more time than the physical mode of payment. This study has been conducted in order to understand how online payments have found their way into the world. It also analysis the security and safety of different payment systems

Objectives of the Study

1. To know about the Purpose of using online transactions.
2. To measure the awareness of electronic payment systems.

Sources of Data

Primary data are those that are collected from a fresh source for the first time and thus happen to be original in character. The primary data for the study was collected from 90 people residing in the Thodupuzha area through structured questionnaire.

Sampling Plan

The population of the study consists of people in Thodupuzha Taluk. The sample size used for the study is 100. A convenient sampling method has been adopted for the study.

Theoretical Framework

The 'payments system' refers to arrangements that allow consumers, businesses, and other organizations to transfer funds usually held in an account at a financial institution to one another. This includes debit cards, credit cards, electronic funds transfers, direct credits, direct debits, internet banking, and e-commerce payment systems. Payment systems may be physical or electronic, and each has its own procedures and protocols. E-payment systems have become increasingly popular due to the widespread use of internet-based shopping and banking.

Data Analysis and Interpretation

Awareness about online payment systems

Particulars	No. of respondents	Percentage
Yes	45	90%
No	5	10%
Total	50	100%

Source: primary data

Interpretation: The table shows awareness about online payment systems. 90% of respondents were aware of online payment systems, while 5% of respondents were not aware of online payment systems.

Purpose of using online transactions

Particulars	No. of respondents	percentage
Money transfer	13	20%
The utility of bill payment	6	9%
Recharge	6	9%
All of the above	41	62%
Total	50	100%

Source: primary data

INTERPRETATION: The table shows the purpose of using online transaction. 62% were using it for money transfers, bill payments, and recharge. 20% were using it for money transfer only and 9% were using it for bill payment and recharge

Findings

1. From the survey, we know that 90% of the respondents have knowledge about online payments.
2. The majority of respondents were interested in digital payments.
3. The time-saving feature of digital payment is the reason for using it
4. Majority 4. The majority says that modern payment is not so risky.
5. The most attractive feature of online payment is its easy accessibility.

Suggestions

1. In the study, whenever people use digital payment, they look for new features like premium offers and discounts; therefore, new features can be introduced among them, and more people will switch to digital payment.
2. In order to make the transactions more safe, fast, and flexible, the connection of banks with these e-payments needs to be improved a lot.

3. Increase the speed of network to avoid hindrances during online payment. Many people face network issues while making urgent payments. In rural areas, the strength of network is very weak, which will make people not use E-payment.
4. Provide purposeful guidance about usability of online payment system so that it can attract more digital payment users. Now, people are also aware of the safety and security of online payments. So they avoid digital payments.
5. Introduce online payment system for public transportation like buses, autorickshaws, and taxis, which will avoid the hassle of making liquid payments.

Conclusion

The adoption of e-payment, or digital payment, was much more than what we had anticipated at our initial assumption. Many E-payments, programs, and semesters like Paytm, Phonepe, Amazon Pay, and Google Pay were introduced and gained wide acceptance. Everyone who uses digital payment providers is satisfied with their services. From the data collected, it is clear that majority is satisfied with online payment, and people find it the easiest way of making payment. But still, many others prefer direct banking transactions due to fear of losing money, safety issues, and a lack of knowledge about internet. This study was focused on all categories of generation and therefore, the response that we had received was an overall opinion about E-payment

CASE STUDY ON BREAKUP OF HERO HONDA AND ITS CURRENT CHALLENGES

Dr. Joseph George

Department of Management Studies, St. Joseph's College, Moolamattom

Introduction

Hero Honda Motors Limited, based in Delhi, is the world's third largest manufacturer of motorcycles. Hero Honda is a joint venture that begins in 1984 between the Hero Group of India and Honda of Japan. It has been the world's largest manufacturer of two-wheeled motorized vehicles since 2001, when it produced 1.3 billion motorbikes in a single year.

Hero Honda's *splendor* was the world's largest selling motorcycle that time. Its two plants are in Dharuhera and Gurgaon, both in India. Third plant is at Haridwar, Uttaranchal has also started production by April 2018. It will have production facilities such as lean manufacturing concept, more flexible lines and stream line material flow, within and proximity to achieve Just-In-Time manufacturing. It specializes in dual use of motorcycles that are low powered but very fuel efficient.

Hero Honda Motors is one of the most prominent company of India and it is also one of the constituent of NIFTY. The company is the largest two-wheeler manufacturer in the world and also in India, where it has

a market share of about 37.1% in the two wheeler industry. Hero Honda Motorcycles where popular in the market because of their fuel economy and low cost.

History of Hero Honda Motors Ltd.

Before the HERO and HONDA come together as a joint venture, HERO was a brand name used by Munjal Brothers to manufacture HERO motorcycles in 1956. HONDA on the other hand was the last Japanese two-wheeler giant to enter Indian Motorcycle Industry after Yamaha, Suzuki and Kawasaki.

There was a rule in India that any foreign company wants to start a business in India, they need to start a joint venture with Indian company. So in 1984, HONDA and HERO came together as a joint venture to manufacture motorcycles under the brand name HERO HONDA and formed HERO HONDA MOTORS LIMITED.

HERO HONDA is world's third largest two-wheeler maker. India has the largest number of two-wheelers in the world with 41.6 million vehicles. India has a mix of 30% automobiles and 70% two-wheelers in the country. India was the second largest manu-

INTELLECTUAL PROPERTY RIGHTS: AN OVERVIEW

Mrs. Droupathy Devi C.G.

Librarian UGC (Stage II), St. Joseph's College Moolamattom

ABSTRACT

Intellectual property rights (IPR) have been defined as ideas, inventions, and creative expressions based on which there is a public willingness to bestow the status of property. IPR provide certain exclusive rights to the inventors or creators of that property, in order to enable them to reap commercial benefits from their creative efforts. There are several types of intellectual property protection like patent, copyright, trademark, etc. Patent is recognition for an invention. IPR is prerequisite for better identification, planning, commercialization, rendering, and thereby protection of invention or creativity. Each industry should evolve its own IPR policies, management style, strategies, and so on depending on its area of specialty.

Keywords: Intellectual Property, Patents, copyright, trademarks

Introduction

IPR plays vital role today. Intellectual property rights (IPR) refers to the legal rights given to the inventor or creator to protect his invention or creation for a certain period of time. IPR refers to any original creation of the human intellect such as artistic, literary, technical, or scientific creation. IPR grants the inventor/creator an exclusive right for a certain period of time for use of his invention/creation.

The laws and administrative procedures relating to IPR have their roots in Europe. The trend of granting patents started in the four-

teenth century. The first known copyrights appeared in Italy. Patent act in India is more than 150 years old. The inaugural one is the 1856 Act, which is based on the British patent system and it has provided the patent term of 14 years followed by numerous acts and amendments.

Types of IP Protection

A variety of Intellectual efforts including:

1. Patents
2. Trademarks
3. Copyright
4. Geographical Indications

DESIRE FOR SOCIAL FREEDOM AMONG MARRIED WOMEN

Varada Gireesh R¹, Dr. Justine Joseph², and Dr. Mathew Kanamala³

¹Professional social worker. ²Assistant professor in Psychology, St. Joseph's College, Moolamattom, Mahatma Gandhi University, Kerala. ³Head, Department of Social Work, St. Joseph's College, Moolamattom, Mahatma Gandhi University, Kerala.

ABSTRACT:

The major objective of the study was to evaluate the perspectives on desire of social freedom in accordance with marital status. Questionnaire method was used to collect data from 327 participants including Females (N=251) and Males (N=76) in the age group of 18-40 from southern Kerala. Convenient sampling method was used to select participants. The study revealed that, marital status influenced the perspective on desire for women's social freedom. The unmarried people showed more desire for women's social freedom than the married people. Further, the perspectives on desire for women's social freedom significantly varied among different age groups.

Keywords: Women's Social freedom, marital status, Age group

Introduction

Marriage is an institution that admits man and woman to family life. It is a stable relationship in which a man and a woman are socially permitted to live together without losing their status in the community. Marriage is not merely concerned with the couple; rather it affects the whole society and future generations. The responsibilities it entrusts a couple with are thus both heavy and delicate. In Hindu view, marriage is not a concession to human weakness, but a means for spiritual growth. Man and woman are soul mates who, through the institution of marriage, can direct the energy associ-

ated with their individual instincts and passion into the progress of their souls. The institution of marriage has been regarded as the central feature of all forms of human society. It lays down the nucleus of society. It is one of the most important social institutions of all the societies of the world. There is no greater event in a family than a wedding, dramatically evoking every possible social obligation, kinship bond, traditional value, impassioned Sentiment, and economic resource (Jain, 2019). Marriage in India is considered as an important social event and is supposed to transmit traditional values across generations. Hence, in orthodox so-

MACHIAVELLIANISM AND SELF – ESTEEM IN ADOLESCENTS

Beevimol Assis & Manu Kurian

1. Assistant Professor, Sree Sabareesa College, Murikkumvayal Mahatma Gandhi University, Kerala
2. Assistant Professor, St. Joseph's College, Moolamattom Mahatma Gandhi University, Kerala

ABSTRACT

The study aims to explore machiavellianism and Self-esteem in Adolescents. machiavellianism in adolescents has been found to be risk factors for a variety of antisocial behaviours, from entitlement and exploitation to self-absorption and defensive egotism to violent psychopathology. Researcher suggests that machiavellianism lacks empathy and emotion. Adolescents have varying levels of self-esteem, which appears to be influenced by such factors as gender, ethnicity, and social class. The current study expands how the personality trait is associated with anti-social and manipulated behaviours in adolescents and how it is affecting their self-esteem. The sample consisted of 450 adolescents including girls (N=229) and boys (N=221) aged between 12–18. The Children's Machiavellian Scale developed by Mach and Nachame (1969) was used in the study. The Self-esteem inventory developed by Immanuel Thomas and Sam Sananda Raj (1985) was used to assess the self-esteem of Adolescence developed. The results suggested machiavellianism related with age, but no relationship was observed with self-esteem. machiavellianism is negatively related to age but not related with self-esteem. Further, the study revealed that religion influenced machiavellianism. The obtained data were analysed using 't' test, ANOVA and correlation.

Key words: machiavellianism, self-esteem, adolescents

Introduction

Machiavellianism is “the employment of cunning and duplicity in statecraft or in general conduct”. The word comes from the Italian Renaissance diplomat and writer Niccolò Machiavelli, born in 1469, who wrote *Il Principe* (The Prince), among other works. In modern psychology, machiavellianism is

one of the dark triad personalities, characterized by a duplicitous interpersonal style, a cynical disregard for morality, and a focus on self-interest and personal gain. The 1992 review by Fehr and colleagues described Machiavellian motivation as one of cold selfishness or pure instrumentality. Rather than having a unique set of goals, individu-

IMPACT OF COVID-19 PANDEMIC IN ONLINE SHOPPING

Joice Mary Vincent

(Assistant Professor on Contract, Department of Commerce
St. Joseph's College, Moolamattom)

ABSTRACT

With the spread of COVID-19 pandemic the importance of e-commerce had a tremendous growth. COVID-19 outbreak has turned the purchasing of necessary things from physical shops miserable. It was serious issue affecting everyone across the world. It's mostly caused by the fear of spreading virus. The goal of the study is to examine how the COVID-19 has affected the internet buying habits of people. For this a constructed questionnaire has been framed and surveyed on the basis of convenient sampling. And the results showed that COVID-19 played a major role in online shopping and 90% of respondents were recommend online shopping during COVID-19 as a safety measure.

Introduction

Online shopping is method of buying products and services through electronic devices such as mobile or computers by using internet. E-Commerce platforms have transformed the retail scene due to the advancement of internet and digital technologies. In online shopping consumers can monitor price changes, compare functionality of identical items, can see the opinion of others who purchased the product etc...

As the COVID-19 pandemic continues to influence the world, online shopping, online food deliveries etc... have increased in demand. Consumers shopping habits have been dramatically changed as a result of

lockdown. The global spread of COVID-19 has been accompanied by a lot of uncertainty and the humans respond to this crisis in different ways. Anyway no one can left behind without any resource. This pandemic were made changes in shopping behavior of the people all over the world. This study concentrates on investigating how the COVID-19 outbreak influenced the online shopping behavior of rural consumers and their satisfaction level.

AN ANALYSIS OF CHALLENGES FACED BY WOMEN ENTREPRENEURS

Anu Saju

(Assistant Professor on contract
Department of Commerce, St. Joseph's College, Moolamattom)

ABSTRACT

Women entrepreneurs face a series of problems right from the beginning till the enterprise functions. Women in rural areas have to suffer still further. This study has been conducted to analyze the major challenges faced by women entrepreneurs with special reference to Thodupuzha Taluk. For this a structured questionnaire has been framed and has been surveyed. Data collected on the basis of convenient sampling. And the results, challenges are always there but majority of respondents get enough support from family, government and financial institutions.

Introduction

Women constitute around half of the world population. India. In traditional societies women were confined to the four walls of the houses, performing household activities. In the modern societies women have participation in all sorts of activities. Women have been performing exceedingly well in different spheres of activities like education, politics, administration, space, social work and so on. Women entrepreneurs occupy a critical in the process of economic development of a country. The entry of women into business is a recent phenomenon in India. It is found that women enter in business as an extension of their household activities. In certain businesses, women entrepreneurs are

doing exceedingly well and excelling their male encounters. This study attempts to find out the challenges faced by women entrepreneurs in Thodupuzha Taluk and to analyze their role in the economic development of our nation.

Statement of the Problem

This study attempts to analyze the challenges faced by women entrepreneurs Thodupuzha taluk and to analyze their role in the economic development of our nation. It is a study conducted with special reference to Thodupuzha Taluk. There are lot of problems faced by women entrepreneurs regarding raising of funds ,marketing their products, competition, male domination and so on. Also this study attempts to analyze the

A STUDY ON THE IMPACT OF FIIS ON INDIAN STOCK MARKET

Steffy Tom

Guest Lecturer at St. Joseph's College, Moolamattom

ABSTRACT

FII inflows and control have emerged as important policy issue in India. Among the Indian policy makers, FII flows are believed to have a positive impact on the country's development. FII inflows, to the equity market increase stock prices, lower cost of equity capital and encourage the investment by Indian firms and lead to improvements in securities market design and corporate governance. The FII inflows have the potential of influencing the process of economic development of India through the positive impacts on macro-economic fundamentals of the country. Present study is very broader and covers capital market indices and its comparison with FII. But, study is only going to cover foreign investments in form of equity. The time period is from 2008 to 2018 as it will give exact impact in both the bullish and bearish trend. The study will provide a very clear picture of the impact of foreign institutional investors on Indian stock indices. In order to analyse the collected data statistical tools such as correlation and regression have been used.

Keywords: FIIs, NIFTY, SENSEX

Introduction

Since 1990-91, the Government of India embarked on liberalization and economic reforms with a view of bringing about rapid and substantial economic growth and move towards globalization of the economy. As a part of the reforms process, the Government under its New Industrial Policy revamped its foreign investment policy recognizing the growing importance of foreign direct investment as an instrument of technology transfer,

augmentation of foreign exchange reserves and globalization of the Indian economy. Simultaneously, the Government, for the first time, permitted portfolio investments from abroad by foreign institutional investors in the Indian capital market. The entry of FIIs seems to be a follow up of the recommendation of the Narasimhan Committee Report on Financial System. While recommending their entry, the Committee, however did not elaborate on the objectives of the suggested policy.

B. SCIENCE & MATHEMATICS**GREEN APPROACHES
IN NANOPARTICLE SYNTHESIS****Dr. Sr. Sijo Francis¹, Prof. Ebey P. Koshy¹, and Prof. Beena Mathew²**¹Department of Chemistry, St. Joseph's College, Moolamattom, Arakulam PO, Kerala, India²School of Chemical Sciences, Mahatma Gandhi University, Kottayam, Kerala, India**Introduction**

Nanotechnology is a dynamic branch of science which encompasses rapid innovations and continuous changes. Although different physical, chemical and biological preparation strategies were invented to fabricate nanostructures with specific functions, novel methods of production of nanoparticles are called for. As a result, we have many protocols adopted in the synthesis of nanoparticles. This chapter is an attempt to review different methods of the preparation of the various noble metal nanoparticles. This chapter also looks into the general synthesis of noble metal nanoparticles.

Synthesis of nanoparticles

The beauty of miniature science is brought into reality by nanotechnology. Nano size attributes remarkable properties of the noble metals which can be tailored according to our provision [1]. Nanoscience and technology provide the research and developmental activities that have been grown explosively worldwide during the past few years. It has revolutionized the world by making the life of common man more comfortable.

The secondary process on the surface of nanomaterials makes them useful as low-cost catalysts, value-added products, pollution-controlling systems etc. Nanomaterials are also important in health-care, cosmetic, food, paint, and drug industries.

Nanoscale architecting generally follows, the 'bottom-up' and 'top-down' approaches. The stitching together of the individual building blocks (atoms/molecules) and the cutting down of large structures are the respective processes involved. By controlling the surface features and surface chemistry, novel functionalities can be incorporated into the nanostructures. The physical methods of nanofabrication follow the 'top-down' approach whereas the chemical and biological techniques follow the 'bottom-up' procedures. Each method has its own merits and demerits.

Physical methods

The physical methods for the preparation of nanoparticles include UV-irradiation, electric discharge, ball milling, spray pyrolysis, lithographic techniques, sputter deposition, diffusion, and decomposition techniques. The

TOUGHENED COMPOSITE OF SBR AND CARBON BLACK (N660)

Jose James^{1,3*}, George V. Thomas¹, Sabu Thomas^{2,3}

¹Research and Post-Graduate Department of Chemistry,
St: Joseph's College, Moolamattom, Kerala, India

²School of Energy Materials and International and Interuniversity Centre for Nanoscience
and Nanotechnology, Mahatma Gandhi University, Kottayam - 686 560, Kerala, India

³School of Chemical Sciences, Mahatma Gandhi University, Kottayam, 686560, Kerala, India

ABSTRACT

A classic set of polymeric micro-composites has been fabricated using an elastomer - styrene butadiene rubber [SBR] and with carbon black (CB)-N220 as a filler and reinforcing agent. This synthesized composite can be promisingly employed as a toughened material in a wide service range with excellent thermal stability, optimum storage modulus, and excellent morphological pattern. TEM, SEM, AFM, and Raman imaging are successfully employed for the morphological characterization. Mechanical and thermal features of composites have been carefully studied in detail. The fabrication and characterization adopted in this work can definitely act as a platform for the design of new toughened material with excellent performance and cost-effectiveness.

Key words: Rubber composites, Toughened composites, composite, carbon black

Introduction

Composites or composite materials are available in nature or engineered fusing two or more materials with considerably different chemical and physical properties which remain distinct at microscopic or macroscopic level within the finished structure. Polymer composite are the most abundantly used matrix material ^[1]. Generally, the mechanical properties of polymers are inadequate for many structural purposes, particularly their low strength and stiffness as com-

pared to metals and ceramics. These difficulties are overcome by reinforcing other materials with polymers. Secondly processing of this type of matrix composites does not demand high pressure and high temperature ^[2]. Simpler equipment's are required for manufacturing polymer matrix composites ^[3]. For this reason, polymer composites developed rapidly and soon became popular for structural applications ^[4]. Polymer composites ^[5-11] are used because overall properties of these composites are superior to those

A REVIEW ON THE ADVANCEMENT OF TENSEGRITY AND DEVELOPMENT OF A TENSEGRITY STRUCTURE

Aparna Raju, Sneha Mohan, Anju P Mathews, Praveen Joseph*

Department of Physics, St. Joseph's College
Moolamattom, Arakulam, Idukki, Kerala - 685 591
*Corresponding author: E-mail: vkattil@yahoo.com

ABSTRACT

Tensegrity is a kind of architecture and design principle that applies when a discontinuous set of compression elements is opposed and balanced by a continuous tensile force. Tensegrity structures consist of strings (in tension) and bars (in compression). Strings are strong, light, and foldable, so tensegrity structures have the potential to be light but strong and deployable. The article describes principles, construction, research and development in the field of tensegrity and applications of tensegrity.

Introduction

Tensegrity is a design principle that applies when a discontinuous set of compression elements is opposed and balanced by a continuous tensile force, thereby creating an internal prestress that stabilizes the entire structure. Tensegrity structures maintain their stability, or integrity, through a persistent tensional force, hence the term tensegrity. It is a kind of architecture, that looked like it was built by nature instead of by humans. (Donald E. Ingber and Misia Landau, 2012)

Fig.1: First tensegrity structure developed in 1949.

A BRIEF STUDY ON KOROVKIAN'S FIRST THEOREM AND APPROXIMATION OF CONTINUOUS FUNCTIONS BY POSITIVE LINEAR OPERATORS

Aneesh N.

Department of Mathematics St. Joseph's College
Moolamattom, Kerala - 685 591, aneeshnsjcm@gmail.com

ABSTRACT

This survey paper contains an introduction to Korovkin-type theorems, especially, the first theorem on Korovkin and to some of their applications concerning the approximation of continuous functions by positive linear operators.

1. Introduction

Korovkin-type theorems provide simple and useful tools for determining, if a given sequence of positive linear operators, on a function space is an approximation process or converges strongly to the identity operator.

These theorems present a varieties of subsets of functions which guarantee that the approximation holds on the whole space provided it holds on them. The custom of calling these kinds of results are known as Korovkin-type theorems, refers to P. P. Korovkin who in 1953 discovered such a property for the functions $1, x$ and x^2 in the space $C([0,1])$ of all continuous functions on the real interval $[0,1]$ as well as for the

functions $1, \cos$ and \sin in the space of all continuous 2π -periodic functions on the real line.

After this discovery, several mathematicians have undertaken the program of extending Korovkin's theorems in many ways to several settings, including function spaces, abstract Banach lattices, Banach algebras, Banach spaces and so on. Such developments described a theory which is nowadays referred to as Korovkin-type approximation theory. This theory has fruitful connections with real analysis, functional analysis, harmonic analysis, measure theory, probability theory and partial differential equations. The leading applications are concerned with approximation theory, where it appear as a significant tool.

1.1 Introduction

Energy and environment are two of the most important issues in this century. More than 80 % of our energy comes from the combustion of fossil fuels and it is agreed that carbon dioxide produced from the combustion process to be the most important anthropogenic gas leading to global warming. The linear warming trend over the 50 years from 1956 to 2005 (0.10 to 0.16° C per decade) is nearly twice that for the 100 years from 1906 to 2005¹. As a result, there is an urgent

need to reduce global carbon dioxide emissions in the short term through technical advancement and legislation, physical or chemical storage and conversion to other useful products. The key issue is how to achieve a reduction without compromising our economic growth, national security and living standards. Carbon capture and sequestration (CCS) at large emission sources such as power plants has been proposed as a strategy to decrease the accumulation of CO₂ in the atmosphere².

CHROMATIC M-POLYNOMIAL OF ROOTED PRODUCT OF PATHS AND CYCLES

Jomon Kottarathil

Department of Mathematics St. Joseph's College
Moolamattom, Kerala - 685 591, jomoncmi@gmail.com

Abstract

The concept of chromatic M -polynomial is studied in relation to topological indices in recent literature. In this paper, the notion of chromatic M -polynomial is determined for the rooted product of paths and cycles.

Keywords: chromatic M -polynomial, χ^- -chromatic M -polynomial, χ^+ -chromatic M -polynomial, rooted product, path, cycle.

MSC 2020: 05C15, 05C31.

1 Introduction

The *chromatic number* of a graph G , denoted by $\chi(G)$, is the cardinality of the minimum set of colors which allows a proper coloring of G . The set of all vertices of G which have the color c_i is called the *color class* of that color c_i in G . The cardinality of the color class of the color c_i , denoted by $\theta(c_i)$, is the *strength* of that color in G . We can define a function $\zeta : V(G) \rightarrow \{1, 2, 3, \dots, \ell\}$ such that $\zeta(v_i) = s$ if and only if $\varphi(v_i) = c_s; c_s \in \mathcal{C}$.

The scheme of coloring the vertices of G , where c_1 is assigned to maximum possible number of vertices, then c_2 is assigned to maximum possible number of remaining uncolored vertices and proceed in this manner until all vertices are colored, is called a χ^- -coloring of G . In a similar manner, if c_ℓ is assigned to maximum possible number of vertices, then $c_{\ell-1}$ is assigned to maximum possible number of remaining uncolored vertices and proceed in this manner until all vertices are colored, then such a coloring is called a χ^+ -coloring of G .

A *topological index* of a graph G is a real number which is preserved or invariant under isomorphism. The chromatic versions of certain topological indices have been introduced in [5]. In this paper, we discuss the chromatic analogue of certain polynomials related to the topological indices of a graph G . For graph coloring and for all terms and definitions, not defined specifically in this paper, we refer to [2]. Unless mentioned otherwise, all graphs considered here are undirected, simple, finite and connected.

AGGREGATION AND INTERFACIAL LAYER ASPECTS IN NANOFLUID MODELLING

Joby Mackolil

Department of Mathematics, St. Joseph's College, Moolamattom
Email: jobymackolil@gmail.com

ABSTRACT

This chapter discusses two salient features of nanoparticles which often are neglected from nanofluid modelling. Experimental studies have reported that the aggregation of nanoparticles augments the thermo-physical properties of a nanofluid. In the same manner, interfacial layer of nanoparticles also plays a significant role in the thermal aspects of nanofluids. Therefore, this chapter aims at discussing the models pertaining the nanofluid modelling involving these aspects which is useful to researchers for accurate nanofluid modelling.

Keywords:

Nanofluid, nanoparticle aggregation, interfacial layer, thermophysical properties.

1 Introduction

A nanofluid is an engineered colloidal mixture of a base fluid like water (H_2O), ethylene glycol ($C_2H_6O_2$), engine oil, blood, glycerin etc. and nanoparticles like Copper (Cu), Alumina (Al_2O_3), aluminium, titania (TiO_2), magnesium oxide (MgO_2) whose dimension lies between 1-100 nm. The common nanoparticles used in nanofluids are typically made up of metals, oxides, carbides, or carbon nanotubes. Nanofluids are thermal transport fluids which possess better thermo-physical properties like density (ρ), thermal conductivity (k), electrical conductivity (σ_e), specific heat capacity (c_p) and dynamic viscosity (μ) in comparison with the base fluid. The concept of using 1-100 nm sized nanoparticles to enhance heat transport in working liquids was first

A DFT STUDY ON THE EFFECT OF ELECTRON DONOR AND ACCEPTOR SUBSTITUTION ON QUINOLINE RING

Anu Varghese, Dr. Rajeev T. Ulahannan

Department of Physics, Pavanatma College, Murickassery, Kerala, India

ABSTRACT

Computational chemistry is a branch of chemistry that uses computer simulations to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids. These are also called molecular modeling, is a set of technique for investigating chemical problems using a computer or application of computational methods and algorithms in chemistry.

In this thesis The geometry optimization of the title compounds were carried out using DFT using B3LYP/SDD. The frontier molecular orbital (FMO) energies of the compounds were calculated by using the DFT/B3LYP/SDD level. The Molecular electrostatic potential of the compound were found. The donor and acceptor substitution effect on the vibrational spectra of the compounds were also studied.

Introduction

Computational studies are used to find a starting point for a laboratory synthesis or to assist in understanding experimental data, such as the position and source of spectroscopic peaks. Branch of chemistry that uses computer simulation to assist in solving chemical problems. Two broad areas within computational chemistry: molecular mechanics and electronic structure theory. Two different aspects of computational chemistry used to find a starting point for a laboratory

synthesis and used to predict possibility of so far entirely unknown molecules. Density functional theory is a quantum-mechanical method used in chemistry and physics to calculate electronic structure of atoms, molecules and solids. In DFT, one doesn't attempt to calculate molecular wave function. Instead one works with the electron probability density.

The ground state energy can be obtained by minimization of the energy functional $E[n]$.

$$E=E[n(r)]$$

COEXISTENCE AND COMPETENCE IN THE DEEP WATERS: A DEEP ECOLOGICAL READING OF HERMAN MELVILLE'S *MOBY DICK*

Roby Mathew

Assistant Professor in English

ABSTRACT

The sea is deemed to be a vast space hidden in mysteries with mighty and awe-inspiring aquatic beings and unpredictable inclement weather. The sea was also a historical battlefield where horrendous wars were fought between nations of enmity. Identical with the disastrous wars fought in this watery world, Herman Melville scripted a novel which etched out the saga of a monomaniac captain fighting an unsuccessful battle against a dump brute. This mythical war between Captain Ahab and Moby Dick takes a mythical and historical development of whale hunting by stressing the transition from a deep ecological to shallow ecological standpoint. This paper takes a look into this transition from deep ecological to shallow ecological perspective of marine environment in the popular American nautical fiction Moby Dick

Key words: Deep ecology, shallow ecology, anthropocentric, zoomorphic

About 172 Summers ago Herman Melville, one of the notable American nautical wordsmiths and a Transcendentalist writer who deemed that “A whale ship was my Yale College and my Harward”, sketched an allegory of a monomaniac captain in a whaling ship who takes revenge upon a white whale which in turn devastates the entire crew except the narrator to recount the story. The sea and the creatures in it are the marvelous entities in nautical fiction. While some people marvel the sea as an invincible part of the earth, some people deem it to be a

space to prove their mettle and exploit it for fun or freedom as Alfred Lord Tennyson’s Ulysses deems it to be.

Herman Melville, who predominantly set the locale of his fiction in the sea and in esoteric islands, through Ahab, the monomaniac protagonist in *Moby Dick* gazed at the sea with awe and the master of the deep sea, the white whale with enmity. Ishmael at the very outset reminds the readers of his sea lust as he generalizes, “almost all men in their degree, some time or other, cherish very nearly the same feelings towards the ocean with

POST HUMANISM AND SOME CONCERNS: AN INTROSPECTION INTO THE FILM AVATAR

Dr. Salini L.R.

Assistant Professor in English, St. Joseph's College, Moolamattom

ABSTRACT:

*Twenty first century is marked as the post human face. We all are caught up in a technological bubble. The losing **prominence** of man as an autonomous entity has become an everyday scenario. Man has turned out to be highly depended on technology. James Cameroons Avatar serves as one of the best examples of a critic of post humanism. The protagonist of the story Jake uses machine to give his intelligence to another man made creature. He heavily depends on the machine for survival. The machines and artificial intelligence use human beings as tools. They dominate the living forms. In the movie also the protagonist is kept in a machine and the other creature gets life only when Jake is in machine. The moment jake comes out of the machine, that creature remains dead. The movie also shows the unavoidable part machines play in the life of human beings. The intelligence of human beings is the only thing required to machines. Avatar took us to a post human turn of the millenia. The interesting part of the movie is that the post human creature created by the scientists, ultimately turned out to be the terminator. The movie explicitly can be a read as a critic of the post human turn. The sophisticated creation of the scientist eventually destroys the creators and machines associated with them. Human beings are reduced to small existence who always have a questionable existence in the absence of technology. The film demystifies the concept of a powerful, unbeatable human being to a vulnerable being in the absence of machine. The film also looks forward to a possible evolution that can happen to human beings in this era of advancing technology. The changing colors and long hairs of the avatars can be a possible image of a new evolved human form.*

Keywords: Evolution, Machines, Post Human, Artificial intelligence

Critical post humanism vehemently questions the idea of human beings as sovereign souls. They regard human beings as entities depend on other machines for survival. The non human elements play a significant role in com-

pleting the concept of being human. So post humanism is also supposed to bring an evolutionary face of human beings. It actually questions the idea of uniqueness as presented in humanism. Post humanism tries to bring a

CYBERDRAMA: THE FUTURE OF POPULAR LITERATURE

Dr. Aparna Prasad

Guest Lecturer Post Graduate Dept. of English
St. Joseph's College, Moolamattom

ABSTRACT:

In this digital age, the story world in digital video games has become the most glorified form of popular literature. The giants of the popular literature market, like Netflix and Amazon, have declared that they will increase their investment in narrative-based video games. Though video games are entirely digital, they create literary spaces shaped by the player's decisions. The study of video games as a major literary form brings more scope to the area of narratology. Today, the very structure of video games can be seen as conscious attempts to mark the change with downloadable content. The gaming industry have its own set of stars who act as marketing icons for video games, similar to those in movies. No other literary form can claim such a politically progressive possibility to experience the same story as the identity we want. In the future, the technology of video games will be modified to look as close as possible to real-world situations instead of animated graphic visuals.

Keywords: Video games, digital age, popular literature, identity, graphic visuals, visual interactive narrative

Video games occupy a similar place in society due to the often-constructed media narratives. The tendency to blame video games comes mostly from literary-intellect circles. This may be why video games are not studied academically for their literariness. But the time has come for video games to be recognized as a literary form. Video games are a form of literature not only because they are used to express stories, but also in light

of the emergence. It is true that narratives can be driven by the decisions of the person playing the video game. But the more sobering fact is that video games, like other forms of literature, are facilitated by communities that read them with interest and sincerity. The study of literary forms in virtual worlds assesses 'literary enjoyment communities' as playing a central role in the popularization of video games.

ABSTRACT:

Research in contemporary times is undergoing a paradigmatic shift, traversing the unexplored territories in the literary paradigms. In the current literary discourses, Research Research undergoes many ramifications, and the outcome is that literature has become interdisciplinary and multidisciplinary. Documentation of facts and also citation plays a vital role in the ResearchResearch. Usage of Plagiarism Software has become the order of the day in all educational institutions and research centres all over the country. Turnitin is a renowned plagiarism Software which has got databases of millions. The academic circle considers the Turnitin Software a threat because it has got more databases, and also, at the same time, this Software checks every document word by word. Every plagiarism software has an interesting mechanism to be followed, and the academic fraternity fails to master that; owing to this, they blame the Software. Turnitin Software has a unique mechanism, and people need help understanding it. This research article, on the whole, talks about the mechanism of Turnitin Software and also makes the academic fraternity understand that Turnitin Software is user-friendly Software and also makes the academic community excel in their research pursuits.

Keywords: Paradigmatic Shift, Literary Paradigms, Plagiarism Software, Mechanism, Databases.

Research in the Heyman world of Post Modernism has become a predominant factor in the academic discourse. Also, at the same time, it strengthens the faculty profile in terms of their professional endeavours. Research Aptitude has become an essential trait in the current academic ambience, and also it showcases the need for research integrity, which

encompasses the uniqueness of a researcher. Terms like Research Gap, Review of Literature, and Scope for Further Research play a predominant role in social science research, and the term 'paradigm' plays a vital role in the social sciences. The term 'paradigm' was coined by Thomas Kuhn. In the initial stage, it was associated with

मन्नू भंडारी की कहानियों में दाम्पत्य

Dr. Shemi John

Assistant Professor, St. Thomas College (Autonomous) Thrissur

मन्नू भंडारी स्वातंत्र्योत्तर हिन्दी कथा साहित्य की ख्याति प्राप्त लेखिका हैं। स्वातंत्र्योत्तर कालीन नवीन परिस्थितियों की गहरी छाप उनकी रचनाओं में दृष्टिगोचर है। नये युग की नयी कहानीकारों में मन्नू भंडारी का अपना अलग ही स्थान है। मन्नू जी का अधिकतर लेखन स्त्री के संघर्षों, स्वप्नों, आकांक्षाओं और पुरुषवादी समाज व्यवस्था में स्त्री की स्वतंत्रता की मांग का लेखन है। मन्नू जी की कहानियाँ जीवन से जुड़ी हुई हैं।

आधुनिक भारतीय जीवन की विसंगतियों का चित्रण मन्नू भंडारी की रचनाओं की एक प्रमुख विशेषता है। तेजस्वी विचार, रुढ़िमुक्त साहस और घरेलू आत्मीयता की सहजता ही मन्नू जी की सबसे बड़ी शक्ति है। डॉ. जान आस्थाना के मतानुसार, "मन्नू भंडारी की कहानियों में भारतीय जीवन की स्वाभाविकता के बीच उत्पन्न नये संदर्भों की गहरी पकड़ है। अनुभव की प्रामाणिकता और आज के इन्जान को उसके परिवेश सहित चित्रित करना ही नई कहानी का आग्रह रहा है। इस दृष्टि से विराट जिन्दगी के जीते जगते टुकड़े को लेखनीय तटस्थता का स्पर्श देकर चित्रण करने में मन्नू भंडारी बड़ी ही कुशल हैं।" (1) उनकी कहानियों में पारिवारिक

can be computed. By using the formalism of Herbatch et al., and Frankel et al., the kinetic energy of long-range alpha particle can be calculated.

Results: The driving potential is calculated for all possible fragment combinations in the alpha accompanied ternary fission of ^{238}U isotope. The relative yield is calculated for the fragment combinations found in the cold reaction valley plot and hence the kinetic energy is calculated using the formalism of Herbatch and Frankel et al.,

Conclusions: The kinetic energy of long-range alpha particle is computed for the fragment combinations with the highest relative yield. The obtained results are found to be in good agreement with the experimental data of ternary fission of various isotopes.

FABRICATION AND CHARACTERIZATION OF 3D PHOTONIC CRYSTAL OPAL FILMS OF DIFFERENT POLYMER SPHERES: A COMPARATIVE STUDY

Sree Sanker S S¹, Subin Thomas², Dhanya P Jacob³, Savitha Nalini⁴ and K N Madhusoodanan¹

Background: Photonic crystals (PCs) have gained much attention because of their numerous applications in optical communication, sensing and optoelectronic devices. Due to their low cost, simple fabrication process, and adaptability for modification and functionalization, the colloidal photonic crystals (CPCs) have emerged as the most promising PCs. In the process of making CPCs, the most important task is the synthesis of size-controlled colloidal spheres. We present a comparative study of the fabrication and characterizations of PC opal films made using monodispersed poly(methyl methacrylate) (PMMA), Polystyrene (PS) and poly(styrene-methyl methacrylate-acrylic acid) (Poly(St-MMA-AA)) spheres.

Method: Monodispersed spheres of different polymer materials were synthesized via emulsifier-free emulsion polymerization and soap-seeded emulsion polymerization. The particle sizes have been controlled by varying the synthesis conditions. These polymer spheres were used in the self-assembly method to create 3D opal photonic crystal films. Various characterizations were performed on the fabricated PC opal films to investigate the morphology, mechanical stability and water affinity.

Results: The polymer sphere's size has been successfully controlled by varying the synthesis conditions. FESEM images showed that the synthesized spheres are of high monodispersity and spheres have self-assembled with proper packing to form opal film. The structural colour was evident for all the CPC opal films. Poly(St-MMA-AA) based opal film showed the best mechanical stability, whereas PMMA had the worst. Contact angle images reveal that the PS is hydrophobic, and the other two are hydrophilic.

Conclusions: This work presents a comparative study of the fabrication and characterization of different polymer spheres-based CPCs. Monodispersed polymer spheres of three various polymers have been fabricated, and their sizes have been successfully varied by changing the polymerization conditions. Several characterizations were carried out to investigate the behavior

Machine Learning Algorithms for Prediction of Mobile Phone Prices

Jinsi Jose , Vinesh Raj, Sweana Vakkayil Seaban, and Deepa V. Jose 

Abstract The drastic growth of technology helps us to reduce the man work in our day-to-day life. Especially mobile technology has a vital role in all areas of our lives today. This work focused on a data-driven method to estimate the price of a new smartphone by utilizing historical data on smartphone pricing, and key feature sets to build a model. Our goal was to forecast the cost of the phone by using a dataset with 21 characteristics related to price prediction. Logistic regression (LR), decision tree (DT), support vector machine (SVM), Naive Bayes algorithm (NB), K-nearest neighbor (KNN) algorithm, XGBoost, and AdaBoost are only a few of the popular machine learning techniques used for the prediction. The support vector machine achieved the highest accuracy (97%) compared to the other four classifiers we tested. K-nearest neighbor's 94% accuracy was close to that of the support vector machine.

Keywords Mobile phone · Phone price prediction · Machine learning · Support vector machine · K-nearest neighbor · Price range

1 Introduction

An electronic gadget that is portable and linked to a cellular network is referred to as a "mobile phone." In 1973, Motorola created the first portable cell phone. According to Cisco Annual Internet Report (2018–2023), over 70% of the global population will have mobile connectivity by 2023. The total number of global mobile subscribers will grow from 5.1 billion (66% of the population) in 2018 to 5.7 billion (71% of the population) by 2023 [1]. Mobile phones are designed to allow people to communicate via phone and email. In addition to making phone calls and sending emails, people

MICROWAVE ASSISTED GREEN SYNTHESIS OF LUMINESCENT GRAPHENE QUANTUM DOT-GOLD (GQD-Au) HYBRID NANOMATERIALS FOR ENVIRONMENTAL APPLICATIONSDr. Sr. Sijo Francis¹¹Department of Chemistry, St. Joseph's College, Moolamattom

Abstract: Carbon dots (C-dots) are a new class of carbon nanomaterials having size of less than 10 nm. C-dots have been emerged as a star in field of fundamental and technical importance due to its alluring properties. The building block of carbon dots is made primarily out of carbon, with some doped heteroatoms, creating a nanoparticle that is more biocompatible and less toxic compared with the quantum dots that commonly contain heavy metals. Among the electronic and physicochemical characteristics of CDs, their optical properties and their fluorescence emissions have attracted increasing interest in recent years. CDs are synthesised by two routes, namely the top-down route and the bottom-up route. They can be easily prepared via various economical and environmentally friendly approaches. The analytical performance of the nanoprobe can be improved significantly due to the large surface to volume ratio of the carbon dots. Graphene quantum dots (GQDs) possess excellent optical and electrical properties that can be used in a wide variety of application. GQD-metal hybrid particles represent functional nanomaterials for wide range of applications. Synthesis of hybrid nanoparticles with GQDs have been known to improve the properties further. Here we have described synthetic routes for fabrication of Graphene quantum dots via microwave method. The GQDs were obtained by microwave assisted hydrothermal treatment of aqueous glucose solution for 3 min at 800 W. The resultant sticky yellow paste of GQDs obtained was extracted with stabilizing agent solution prior to addition of aqueous $\text{HAuCl}_4 \cdot 3\text{H}_2\text{O}$ solution. GQD-Au hybrid particles were formed by addition of aqueous $\text{HAuCl}_4 \cdot 3\text{H}_2\text{O}$ solution to the pre-formed GQD solution at room temperature. Extraction of GQD using stabilizing agents leads to particle size reduction of Au and stability of the colloidal solution. This method provided an ultra-fast, more effective, economical, and easier synthesis. The formed carbon quantum dots were characterized by using UV-vis and optical techniques. The synthesized GQDs has excellent spectral, optical, and catalytic properties.

BETA- CYCLODEXTRIN BASED SURFACE MODIFICATION OF BISMUTH OXIDE NANOPARTICLESJogy Alex^{1*}, Kanchana U S¹, Thomas V Mathew¹

Department of Chemistry, St. Thomas College Palai, Kottayam

E-mail: jogyalex@gmail.com, majothomas@gmail.com

Abstract: Recently, the metal oxide nanoparticles have interesting and large variety of applications in various fields. Even though they have very good physical and chemical properties, the main problem in using such nanoparticles is their high agglomeration behavior. Therefore, it's a must to modify the surface of these nanoparticles, in order to make them apt for a specific use. Thus, the surface modification of nanoparticles is of great importance since this methodology offers excellent stability and compatibility to the whole system. In the present study, we describe a new route to the surface modification of bismuth oxide nanoparticles (Bi_2O_3 NPs) using beta-Cyclodextrin ($\beta\text{-CD}$), a biocompatible system. Bi_2O_3 nanoparticles were synthesized using bismuth nitrate pentahydrate and sodium hypophosphite in the presence of polyvinyl alcohol and conc. HNO_3 . The formation of the expected product was confirmed through different characterization techniques and finally, the Bi_2O_3

Abstract

Alzheimer's is a syndrome characterized by deterioration in thought processing, affecting brain activities and social abilities. It affects memory, thinking, learning capacity, and judgment. A project aims to classify individuals as demented, nondemented, or converted using historical data. Data mining techniques using Python and the tool Orange are employed to determine classification. The project consists of visualization, pre-processing, model building, and evaluation and selection. The dataset is obtained and Orange tool for tasks.

Keywords—Alzheimer's disease, random forest, Classification, preprocessing, prediction, data mining techniques.

Introduction Alzheimer's disease, or dementia, is a severe syndrome affecting memory, thinking, and social abilities. It can result from brain injuries, diseases, and medications. It is a major cause of disability and dependency in older people, impacting their families and caregivers economically, socially, and physically. The project aims to design a model to identify if a person is demented, nondemented, or converted based on various attributes. The data used is from the Alzheimer's features dataset, which predicts a person's dementia, nondementia, or converted based on factors such as mental health examination, socio-economic status, age, years of education, and brain volume. The model uses preprocessing techniques to make predictions easier. Out of 10 variables, two are categorical and eight are numeric.

Data Preprocessing

Missing Value Replacement

Missing data imputation is a process that replaces missing values in a dataset. It is not ideal for large datasets or small ones, as it can reduce the size and affect prediction. Instead, it uses appropriate statistical measures like mean, median, or mode to retain available data. In this project, a 0.4% missing dataset was preprocessed to impute missing values, replacing numerical attributes with their mean and categorical variables with their most frequent value.

Relevant Feature Selection

Identifying important attributes and transforming or creating new attributes is crucial for real-world model development. Adding redundant features reduces model performance and complexity. Feature selection is a key step in machine learning model creation, aiming to find the best set of features for high performance.

Converting Categorical Variables to Numerical Values

Machine learning methods require numerical values for all inputs and outputs, so we need to convert the categorical variables to numerical values. So here assign certain numbers for each category.

Removing Categories

We are removing converted category from the target column because we want to predict whether a person is demented or nondemented. So we don't need the converted category.

Splitting Data

Here, we divide the data into train and test data in the ratio 80:20 for accurate analysis. Here, out of 373 data, we took 299 rows as training data making the remaining data ie.74 rows as test data.

Regression

This project employs four regressors namely Decision Tree Regression, Linear Regression, SVR and Random Forest Regressor

Decision Tree Regression

Decision tree is a supervised learning technique which builds regression or classification models in the form of a tree structure. It breaks down a dataset into smaller and smaller subsets. At the same time a decision tree is developed. The final result is a tree with decision nodes and leaf nodes. The selection of attribute used at each split is found by calculating the entropy or information gain. We chose the attribute which gives the maximum information gain.

```
MAE: 0.009009009009009009
MSE: 0.009009009009009009
RMSE: 0.0949157995752499
```

Figure1: Decision Tree Model Evaluation Parameter

Linear Regression

Inorder to predict the value of a variable based on the value of another variable we use linear regression method. The dependent variable is the variable you want to predict. The independent variable is the variable you are using to predict the other variable's value

```
MAE: 0.2012783603231393
MSE: 0.057298567680201425
RMSE: 0.23937119225212006
```

Figure2: Linear Regression Model Evaluation Parameter

Random Forest Regression

Random Forest is a machine learning algorithm that belongs to the supervised learning technique. It can be used for both Classification and Regression problems in Machine Learning. It is based on the concept of ensemble learning. It is a process of combining multiple classifiers to solve a complex problem and to improve the performance of the model.

```
MAE: 0.01160836002670368
MSE: 0.008537370018221352
RMSE: 0.09239788968489135
```

Figure 3: Random Forest Model Evaluation Parameter

Support Vector Regressor (SVR)

Support Vector Regression (SVR) uses the same principle as SVM, but it is used for regression problems. It is a supervised ML algorithm used for classify different classes as well as predict continuous values using regression.

MAE: 0.42351101942582114
 MSE: 0.3322216509690953
 RMSE: 0.5763867199798198

Figure4: SVR Model Evaluation Parameter

RESULT

In here the dataset contains 373 instances and 10 attributes. To this dataset missing value imputation was performed. Then using information gain we find relevant features and avoided unnecessary features. Classification and regression algorithms were applied. It involved building 4 different classification algorithms and 4 regression algorithms evaluating their performances. These algorithms include; KNN, Naïve Bayes, SVM, Random Forest, Linear Regression, Decision Tree and SVR.

Performance values of all the implemented models.

Model	AUC	CA	FL	Precision	Recall
Naïve Bayes	0.9574	0.8919	0.8919	0.8524	0.8519
Random Forest	0.9893	0.9595	0.9532	0.9612	0.9595
SVM	0.9691	0.9189	0.8801	0.8445	0.9189
Tree	0.8658	0.8784	0.8819	0.8884	0.8784

Figure5: Comparison of Classification Evaluation Matrix

Model	MAE	MSE	RMSE
Linear Regression	0.2013	0.0573	0.2394
Decision Tree Regressor	0.0091	0.0093	0.0949
Random Forest Regressor	0.0116	0.0085	0.0924
SVR	0.4235	0.3323	0.5764

Figure6: Comparison Regression Evaluation Matrix Visualization of the result

Figure7: Classification

Figure8:Regression

As observed from the values it clearly shows that Random Forest gives the highest accuracy 95%, Recall and precision values and lowest mean absolute error, mean squared error and root mean squared error compared to the other models .So we chose Random Forest as our final model.

Conclusion

This paper build a model to predict if a person is affected by dementia or not. Here predictions have been made to check whether a person is demented, nondemented or converted. In this paper, a comparison has been made between four machine learning algorithms. Naïve Bayes results were found to be better compared to the other classification algorithms. The model showed better performance with selected relevent features compared to using all the available

features. This system can help in identifying dementia affected patients and thereby speeding up the treatment process.

Corporate Social Responsibility of Banks

Tisha Tomy^{1*2}

^{1*}Assistant Professor, St. Joseph's College, Moolamattom,

²Research Scholar, Amrita Vishwa Vidyapeetham, Amritapuri

Abstract

Banks play a huge role in our everyday lives and, like other big businesses, influence many areas of society. Financial institutions do not just store your money for your convenience. They put it to work to make themselves money by investing it and lending it out. The investments and loans that banks give out can have big impacts on society, both positive and negative. That's where corporate social responsibility comes into play in the financial sector.

Keywords: Corporate Social Responsibility, Financial Sector, Banking Industry

Introduction

Corporate social responsibility, or CSR, is a term that can be applied to organizations in just about any industry. It is a type of self-regulation in which businesses hold themselves accountable for their corporate actions and try to make a positive impact on society as a whole. There is no single way that organizations can practice social responsibility. It is also important to recognize that some companies take CSR very seriously and it is incorporated throughout the practices of the business while others do the bare minimum for marketing or PR purposes. CSR can also mean not supporting industries and initiatives that have a negative impact on society, such as the big oil and tobacco industries.

Corporate Social Responsibility in the Banking Industry

Big banks have historically not had very good corporate governance in terms of social responsibility. Financial institutions like JPMorgan Chase, Citigroup, Wells Fargo, and Bank of America have time and time again funded fossil fuel expansion over green projects and have directly supported companies contributing to the increasing wealth gap and social inequities. In fact, the world's 60 largest banks invested more than \$3.8 trillion in fossil fuel projects in the 5 years since the Paris Climate Accords on climate change was signed by global governments in 2015 (with Chase investing the most of any bank).

What this means is that, when you deposit your funds into any of these traditional banks, they are using your money to invest in and lend to companies that do not have a positive environmental or social impact. That being said, not all financial institutions are irresponsible. There are increasing numbers of independent banks and credit unions that are taking their corporate social responsibility seriously and implementing business practices that have a positive impact on society, especially on local communities and the environment.

Corporate Social Responsibility VS Socially Responsible Banking

As we mentioned a little earlier, corporate social responsibility is a term that can refer to businesses with socially responsible business practices in a wide variety of industries. Financial companies practicing socially responsible banking activities are often referred to as socially responsible banks or socially conscious banks. So, the term socially responsible banking is just a specific way to talk about CSR as it pertains to financial institutions. A socially responsible bank or other financial institution attempts to manage its banking activities with integrity and holds itself accountable to stakeholders when it comes to issues like sustainability, environmental performance, and other ethical concerns.

Types of Corporate Responsibility that Banks Can Practice

There are lots of CSR practices that banks can implement, from going paperless and issuing eco-friendly debit cards, to investing in non-profit organizations that are fighting climate change and making a difference in local communities. The 4 main types of CSR activities banks can practice are:

- a) **Environmental CSR practices:** Socially responsible banks can demonstrate environmental CSR by being as environmentally friendly as possible in all aspects of their business. This is one of the biggest ways that non-traditional banks are implementing CSR practices today. Banks can start being more environmentally friendly by reducing waste in their everyday operations. This means doing things like reducing the amount of paper wasted (i.e., offering paperless statements and bills), not using single-use plastic or other wasteful goods in their offices, and operating energy-efficient facilities.
- b) **Ethical CSR:** Ethical CSR means the incorporation of ethical labor practices and the equal treatment of all stakeholders, from leadership and employees, to customers and investors. For example, a bank practicing this type of CSR might decide to offer wages significantly higher than the minimum wage to all its employees, especially if it operates in different regions with different labor and wage laws. By doing this, the financial institution ensures that all of its employees are making a liveable wage, rather than just scraping by with the minimum.
- c) **Philanthropic CSR activities:** A financial business can practice philanthropic CSR by donating to charitable causes or nonprofits and giving back to communities in other meaningful ways that make society better for everyone. For example, a bank might practice philanthropy by supporting community partners working to improve affordable housing. Or, they might offer free financial advice to educational institutions, individuals or nonprofit companies.
- d) **Economic CSR:** The final type of corporate social responsibility on this list is economic CSR. This basically means that all of a bank's financial decisions must support its commitment to positively impact society.

How does better Corporate Social Responsibility Benefit both Banks and Customers?

Besides the importance of generating positive social impacts, socially conscious corporate governance in banks also provides benefits for the business and its customers. In marketing for beginners, CSR can be very powerful. A banking business that commits to being socially responsible will have a much better brand image for certain types of people who themselves hold strong convictions when it comes to issues like the environment, sustainability, and fair business practices.

What this translates to, is loyal, lifelong customers. As long as a bank keeps up its good corporate governance and continues to improve its social responsibility, customers who share similar views of what's important for society to improve will continue to sign up and stay. This is a win-win situation because the bank gets access to funds that they can invest in socially responsible projects, and customers know that their funds are being used in ways that would make them proud. This creates a mutually beneficial partnership between banks and their customers. It's easy to claim corporate social responsibility with offering little back it up, so it's important to be careful when selecting a bank if CSR is what you're looking.

How Can Banks Prove Corporate Social Responsibility to their Customers?

Any business committed to CSR also has a responsibility to be transparent about their business practices and measure how successful their CSR efforts are. In order to do this, the business should look for key performance indicators (KPIs) to use for regular CSR reporting. For example, a bank committed to reducing its carbon footprint and having a positive environmental impact should measure things like how much the company is reducing energy waste and other types of waste in their facilities. Or, a bank committed to philanthropic CSR should measure things like how much money it donates to charitable causes like low-income housing, or how many hours of free financial advice it has donated to increase financial literacy in the local community. These types of KPIs can be compiled into annual, bi-annual, or quarterly CSR reports that get distributed to all the bank's customers and other stakeholders.

Conclusion

It might sound strange, but corporate social responsibility isn't just the responsibility of corporations. If you care about social issues, it is up to you to do business with companies that are committed to improving their corporate social responsibility. Without customers activity exerting their preferences towards social and environmental options, companies will not have incentives to shift away from environmentally and socially harmful business practices. By taking actions like switching to a green bank, you're taking away money from big banks like Chase that are supporting fossil fuel extraction and other practices that harm our planet.

Abstract

In this era of global competition, the Banking sector has emerged as a vital service industry. The level of adoption of e-banking services varies across different regions and populations, and there is a need to understand the factors that influence the adoption of e-banking services. This study has been conducted to analyze the awareness and utilization of internet-based banking services. For this, a structured questionnaire has been framed and has been surveyed. Data collected on the basis of convenient sampling The study indicates that there is a significant awareness and preference for internet-based banking services, particularly mobile banking.

Introduction

However, the level of adoption of e-banking services varies across different regions and populations, and there is a need to understand the factors that influence the adoption of e-banking services. This topic aims to explore the development of e-banking services and their impact on the financial sector. The study will be conducted using a mixed-methods research approach, combining quantitative and qualitative methods to collect and analyze data. The study's findings will provide insights into the development of e-banking services and their impact on the financial sector, which will be useful for banks and policymakers looking to promote financial inclusion and improve access to financial services.

Statement of the Problem

The PDS is a rationing mechanism that entitles households to specify selected commodity at subsidized price. Eligible households are given a ration card that entitles them to buy fixed rations or selected commodities. Supplies through PDS nationally are rice, wheat, sugar, edible oil, kerosene, and coal Additional commodities like pulses, salt, and tea are supplied selectively. The commodities are made available through a network of fair-priced shops. To certain extent, PDS helps to bridge the gap between have and have not. It is an attempt to study the effectiveness of functioning of PDS after the implementation of the E-POS machine. The introduction of E-POS machine in Ration Shop to avoid malpractices in getting the commodities at the prescribed price.

Objectives of the Study

- To assess the level of awareness among the population of Thodupuzha taluk regarding internet-based banking services
- To determine the level of utilization of internet-based banking services by the population of Thodupuzha taluk

Sources of Data

Primary data are those that are collected from a fresh source for the first time and thus happen to be original in character. The primary data for the study has been collected from 90 people residing in the Thodupuzha area through structured questionnaire.

Sampling Plan

The sample size used for the study is 90. A convenient sampling method has been adopted for the study.

Theoretical Framework

Information technology development has revolutionized the way of doing business by creating a virtual marketplace around the globe through the internet. Internet is not only used for sharing information but is increasingly used as a distribution channel, advertising channel, and a flexible, user-friendly mode for payments. Servicing through the technology-based channel is more cost-effective than traditional branch banking for banking industry. Hence, Indian banking industry is heavily investing in technology-based channels, and these channels are expected to be utilized by customers for their day-to-day activities like fund transfers, bill payment, ticket booking, shopping, and mobile recharge.

Data Analysis and Interpretation

Table showing the awareness of internet-based banking

Particulars	No. of respondents	Percentage
Mobile Banking	70	78
Internet Banking	15	17
Others	5	5
Total	90	100

Interpretation: Among 90 samples, 78% of respondents are aware of mobile banking, 17% are aware of internet banking, and 5% are aware of others.

Table showing how often people use internet-based banking in one month.

Particulars	No. of respondents	Percentage
5-10 times	18	20
10-15 times	20	22
15-20 times	15	17
More than 20 times	37	41
Total	90	100

Interpretation: The above table reveals how often people use internet-based banking in one month. Among the 90 samples, 41% of respondents have used it more than 20 times, 22% have used it 10–15 times, 20% of respondents have used it 10 times, and 17% of respondents have used it 15–20 times.

Findings

- Most of the respondents are aware of mobile banking services. Usually, they prefer mobile banking, and they are also regular users of internet banking. □
- The majority of respondents prefer UPI platform for internet-based banking. Because they lack awareness about other platforms. □
- The majority of respondents used e-banking for recharge, and only few people are using e-banking for fund transfers and bill payments. □

Suggestions

Based on the findings drawn from the study, the following suggestions will make the operation of ration shop more effective and successful:

- Provide comprehensive training programs, video tutorials, and step-by-step guides to help users navigate the platform efficiently. □

- Improve security and educate users about security features and precautions to build trust and confidence.□
- Provide awareness about other internet banking platforms available to provide them with more options.□

Conclusion

However, this preference seems to be driven by a lack of awareness about alternative platforms rather than an informed choice. While the majority of respondents use e-banking for recharges, there is a need to promote other services, such as fund transfers and bill payments, to provide users with a more comprehensive banking experience. Comprehensive training programs, tutorials, and guides should be provided to empower users and help them navigate the platforms effectively. Finally, accessibility is an essential consideration for a significant portion of respondents. Internet banking platforms should be designed to be inclusive, catering to the needs of all users, including those with disabilities.

The Transformative Teaching of Swami Vivekananda

Dr. Jose James^{1*}, Mr. Roby Mathew^{1*}, Sr.Sijo Francis^{1*}, Ms. Meera R Nair^{1*}

^{1*} Assistant Professor, St. Joseph's College, Moolamattom

Abstract:

Through his teachings, Swami Vivekananda, a well-known Indian philosopher and spiritual figure who was instrumental in introducing the Vedic and Yoga ideas to the West, left a lasting impression. Self-realization, universalism, and devotion to humanity were key components of his ideology. This article examines Swami Vivekananda's profound teachings, their applicability in the contemporary world, and their transformational influence on people and society.

Introduction

Swami Vivekananda, also known by his birth name Narendranath Datta, was Sri Ramakrishna Paramahansa's most important follower. Millions of people all throughout the world are still being inspired by his timeless teachings. The three pillars of Swami Vivekananda's philosophy are service to humanity, universalism, and self-realization. This article delves into the transformative teachings of Swami Vivekananda, their pertinence in the contemporary world, and their profound impact on individuals and society.

It is essential to comprehend the backdrop of Swami Vivekananda's life in order to appreciate the breadth of his teachings. He was raised in a pious Bengali family and had an early interest in spirituality and academic endeavors. His encounter with Sri Ramakrishna Paramahansa in 1881 was a turning point in his life that led him along the road of spirituality. Narendranath Datta changed into Swami Vivekananda when Sri Ramakrishna passed away, serving as a traveling monk and a representative of Indian spirituality abroad. The Vedanta school of thought is essential to Swami Vivekananda's teachings. Indian philosophy's Vedanta school clarifies the essential oneness of all things. It asserts that every individual soul (Atman) is a manifestation of the ultimate truth, Brahman, which is one and indivisible.

In Vivekananda's interpretation of Vedanta, the emphasis is placed on the process of realizing one's actual nature as divine and overcoming ego-based restrictions. His teachings are founded on this idea, which encourages personal development, self-awareness, and the quest for spiritual enlightenment. The teachings of Swami Vivekananda emphasize the inherent divinity present in every person. He encourages self-discovery and self-actualization by giving people the tools they need to reach their inner potential. Those looking for personal and spiritual development might relate to his message of self-assurance, inner strength, and unrelenting pursuit of one's goals. People can change their lives, develop resilience, and discover their true purpose by internalizing Vivekananda's teachings. For those aiming for excellence, his admonition to "Arise, awake, and stop not until the goal is reached" serves as a motto.

Universalism and Interfaith Harmony

His support of universalism and interfaith cooperation is among Swami Vivekananda's most important accomplishments. He held that all religions include a portion of heavenly knowledge and that all religious paths ultimately lead to the same reality. The teachings of Vivekananda encourage communication, comprehension, and respect between individuals of many faiths, establishing a sense of the universal community and common spiritual principles. Vivekananda's message of harmony and tolerance is still very important in a society riven by religious conflict and division. His teachings encourage followers to look past differences in religion and embrace the fundamental similarity that unites all people.

Service to Humanity and Social Responsibility

Swami Vivekananda highlighted that true spirituality ought to result in altruistic behavior and empathy for others. Numerous people and organizations have been motivated to participate in charitable and humanitarian activity by his call to "Serve man as God." He thought that helping the less poor was both a moral duty and a path to spiritual enlightenment. The Ramakrishna Mission and other institutions devoted to alleviating human suffering are examples of how Vivekananda's teachings on serving humanity are put into practice. His worldview exhorts people to actively engage in social advancement and advance the welfare of society.

Impact on Modern Education

Swami Vivekananda acknowledged the ability of education to transform. He held that education should include character development and the growth of ethical principles in addition to academic knowledge. His understanding of education as a whole is consistent with current debates over the value of a well-rounded education. Education institutions are still influenced by Vivekananda's teachings, which help to create a climate that encourages not just intellectual progress but also moral and spiritual growth. His advice to kids is to pursue knowledge with a purpose and a dedication to helping others.

Relevance of Swami Vivekananda's Teachings Today

In the contemporary world, Swami Vivekananda's lessons are still applicable. His worldview offers a timeless manual for living a meaningful and fulfilled life in a time of uncertainty, stress, and spiritual hunger. People searching for meaning, inner serenity, and a connection with something more than themselves might relate to his emphasis on self-realization, universalism, and service to humanity. We are aware of the teachings of Swami Vivekananda's ability to transform lives, promote harmony, and motivate social change as we consider their lasting influence. His vision of a society in which people recognize their divine essence, value variety, and serve humanity is a powerful source of motivation for creating a more peaceful and better world.

Conclusion

The teachings of Swami Vivekananda serve as a guiding light in a world that is sometimes shrouded by ambiguity and disagreement. His Vedanta-based philosophy places a strong emphasis on self-realization, universalism, and service to others. Swami Vivekananda continues to inspire people to go on a journey of self-discovery, accept the diversity of religious traditions, and dedicate themselves to the benefit of society through his ageless wisdom. As we examine Swami Vivekananda's revolutionary teachings, we discover that their influence has lasted well beyond his era. They continue to be a source of inspiration for people looking for meaning, purpose, and unity in a constantly evolving world, proving the timeless value of this spiritual giant's profound insight.

Abstract

In this era of global competition, the Banking sector has emerged as a vital service industry. The level of adoption of e-banking services varies across different regions and populations, and there is a need to understand the factors that influence the adoption of e-banking services. This study has been conducted to analyze the awareness and utilization of internet-based banking services. For this, a structured questionnaire has been framed and has been surveyed. Data collected on the basis of convenient sampling The study indicates that there is a significant awareness and preference for internet-based banking services, particularly mobile banking.

Introduction

However, the level of adoption of e-banking services varies across different regions and populations, and there is a need to understand the factors that influence the adoption of e-banking services. This topic aims to explore the development of e-banking services and their impact on the financial sector. The study will be conducted using a mixed-methods research approach, combining quantitative and qualitative methods to collect and analyze data. The study's findings will provide insights into the development of e-banking services and their impact on the financial sector, which will be useful for banks and policymakers looking to promote financial inclusion and improve access to financial services.

Statement of the Problem

The PDS is a rationing mechanism that entitles households to specify selected commodity at subsidized price. Eligible households are given a ration card that entitles them to buy fixed rations or selected commodities. Supplies through PDS nationally are rice, wheat, sugar, edible oil, kerosene, and coal Additional commodities like pulses, salt, and tea are supplied selectively. The commodities are made available through a network of fair-priced shops. To certain extent, PDS helps to bridge the gap between have and have not. It is an attempt to study the effectiveness of functioning of PDS after the implementation of the E-POS machine. The introduction of E-POS machine in Ration Shop to avoid malpractices in getting the commodities at the prescribed price.

Objectives of the Study

- To assess the level of awareness among the population of Thodupuzha taluk regarding internet-based banking services
- To determine the level of utilization of internet-based banking services by the population of Thodupuzha taluk

Sources of Data

Primary data are those that are collected from a fresh source for the first time and thus happen to be original in character. The primary data for the study has been collected from 90 people residing in the Thodupuzha area through structured questionnaire.

Sampling Plan

The sample size used for the study is 90. A convenient sampling method has been adopted for the study.

Theoretical Framework

Information technology development has revolutionized the way of doing business by creating a virtual marketplace around the globe through the internet. Internet is not only used for sharing information but is increasingly used as a distribution channel, advertising channel, and a flexible, user-friendly mode for payments. Servicing through the technology-based channel is more cost-effective than traditional branch banking for banking industry. Hence, Indian banking industry is heavily investing in technology-based channels, and these channels are expected to be utilized by customers for their day-to-day activities like fund transfers, bill payment, ticket booking, shopping, and mobile recharge.

Data Analysis and Interpretation

Table showing the awareness of internet-based banking

Particulars	No. of respondents	Percentage
Mobile Banking	70	78
Internet Banking	15	17
Others	5	5
Total	90	100

Interpretation: Among 90 samples, 78% of respondents are aware of mobile banking, 17% are aware of internet banking, and 5% are aware of others.

Table showing how often people use internet-based banking in one month.

Particulars	No. of respondents	Percentage
5-10 times	18	20
10-15 times	20	22
15-20 times	15	17
More than 20 times	37	41
Total	90	100

Interpretation: The above table reveals how often people use internet-based banking in one month. Among the 90 samples, 41% of respondents have used it more than 20 times, 22% have used it 10–15 times, 20% of respondents have used it 10 times, and 17% of respondents have used it 15–20 times.

Findings

- Most of the respondents are aware of mobile banking services. Usually, they prefer mobile banking, and they are also regular users of internet banking. □
- The majority of respondents prefer UPI platform for internet-based banking. Because they lack awareness about other platforms. □
- The majority of respondents used e-banking for recharge, and only few people are using e-banking for fund transfers and bill payments. □

Suggestions

Based on the findings drawn from the study, the following suggestions will make the operation of ration shop more effective and successful:

- Provide comprehensive training programs, video tutorials, and step-by-step guides to help users navigate the platform efficiently. □

- Improve security and educate users about security features and precautions to build trust and confidence.□
- Provide awareness about other internet banking platforms available to provide them with more options.□

Conclusion

However, this preference seems to be driven by a lack of awareness about alternative platforms rather than an informed choice. While the majority of respondents use e-banking for recharges, there is a need to promote other services, such as fund transfers and bill payments, to provide users with a more comprehensive banking experience. Comprehensive training programs, tutorials, and guides should be provided to empower users and help them navigate the platforms effectively. Finally, accessibility is an essential consideration for a significant portion of respondents. Internet banking platforms should be designed to be inclusive, catering to the needs of all users, including those with disabilities.

Abstract

The study entitled "Customer Satisfaction and Services in SBI Bank" was undertaken to analyze the satisfaction of customers in SBI Bank. The study was based on primary data collected through a survey with a structured questionnaire from 50 customers. Percentages and indices were used for analyzing survey results, and the study are as follows.

Introduction

Customer satisfaction simply means a measurement that determines how happy customers are with a company's products, services, and capabilities. It includes surveys and ratings, and a company can determine how to improve or change its products and services. A study on customer satisfaction helps the bank know how satisfied customers are with their services and also helps in making corrective measures if needed.

Statement of the Problem

The level of expectation differs from person to person, but everyone wants the bank to provide services that can satisfy their needs up to their expected level or to a higher level so as to offer them higher satisfaction. The level of satisfaction of customers is affected by some other attributes also other than the quality of service, such as their experience with the bank employees, etc. The study is being conducted to analyse the satisfaction of customers in SBI bank

Objectives of the Study

- To identify the financial transaction with SBI Bank
- To identify the attitude of customers towards interest rates provided by SBI Bank for gold loans.

Source of data

Primary data will be collected through a structured questionnaire and secondary data will come from website and publications

Sampling Plan

A sample is drawn from an accessible population. The convenience sampling method is used for the selection of sample units based on the relative ease of access. The sample size is 50. The data was collected by administering a structured questionnaire among customers of SBI.

Theoretical Framework

The Indian Banking companies Act 1949 defines Banking as "the acceptance for the purpose of leading or investing a deposit of money from the public repayable on demand or otherwise and the withdrawal by cheque, draft, order or otherwise."

John Mathai was the first chairman of SBI. The State Bank of India is the country's largest public sector bank.

SBI Bank History

The roots of the State Bank of India lie in the 19th century, when the Bank of Calcutta (later renamed the Bank of Bengal) was established on June 2, 1806. The Bank of Bengal was one of three Presidency banks, the other two being the Bank of Bombay and the Bank of Madras. These three Presidency banks were incorporated as joint-stock companies. They had the exclusive right to issue paper currency until 1861, when the right was taken over by the

Government of India. The three Presidency banks amalgamated on January 27, 1921 and were named Imperial

Bank of India. The Imperial Bank of India remained a joint-stock company without government participation. All in all, the SBI was formed after the merger of approximately twenty banks.

Data Analysis and Interpretation

The satisfaction of customers at SBI is tested using questionnaires. It's analyzed on the basis of the following factors.

SATISFACTION OF INTEREST RATE PROVIDED FOR GOLD LOANS IN SBI BANK

SL.NO	OPINIONS	NO OF RESPONSES	PERCENTAGE
1	Highly Satisfied	6	12%
2	Moderately Satisfied	32	64%
3	Somewhat Satisfied	10	20%
4	Not Satisfied	2	4%
	Total	50	100%

Interpretation:

From the above graph, it is clear that 76 percent of people are satisfied with the gold loan interest rate.

SATISFACTION OF FINANCIAL TRANSACTION WITH SBI BANK

Sl. No	Opinions	No of responses	Percentage
1	Highly Satisfied	14	28%
2	Moderately Satisfied	30	60%
3	Somewhat Satisfied	6	12%
4	Dissatisfied	0	0%
	Total	50	100%

Interpretation:

From the above graph, it is clear that 28 percent of people are highly satisfied with financial transactions with SBI Bank 0 percent of the people are moderately satisfied, 12 percent are somewhat satisfied, and none of them are dissatisfied with financial transactions with SBI Bank.

Findings

- There are majority of customers who are satisfied with interest rate on gold loans at SBI.
- Out of 50 respondents, 88% are satisfied in financial transaction with SBI

- Out of 14 respondents, 28% of people highly depend on SBI for regular transactions.

Suggestions

- Conduct customer awareness and training program in order to make them aware of Yono app, internet, mobile banking, etc.
- Make necessary steps to attract customers to take long term loans.
- SBI should increase a small percentage of interest rate on savings deposits in order to satisfy more customers.

Conclusion

For the smooth running of any enterprise, customer satisfaction plays an important role. We also try to find customers at SBI Bank. The customer is satisfied with the overall service of SBI Bank. The performance of SBI loans, ATMs, and other financial transactions is satisfied by customers. Services of SBI like debit card, credit cards, internet banking, and mobile banking are available in India, says Dr. Venkatesh s. Katke

Abstract

In our day-to-day busy lives, we won't be able to cook food daily, and the tiredness after a busy day couldn't make us reach a good restaurant. In these situations, food delivery applications will help us by serving our favorite food from our favorite restaurants as per our needs on our doorstep. This study has been conducted to analyze the satisfaction level of customers with online food ordering, with special reference to Thodupuzha Taluk. This structured questionnaire has been framed and has been surveyed. Data collected through convenient sampling. It is clear from the study that the majority of the respondents are satisfied with online food delivery.

Introduction

Online food delivery actually refers to the process whereby food that was ordered online is prepared and delivered to the consumer. As per this system, the customer visits the restaurant's app or website, browses through the various food items, combos, and cuisines available there and those ahead, and selects and purchases the items he or she needs. These items will then be delivered to the customer at his or her doorstep at the time they choose by a delivery person.

Statement of the Problem

Online food delivery applications will help us by serving our favorite food from our favorite restaurants as per our needs on our doorstep. This study, entitled "A STUDY ON THE CUSTOMER SATISFACTION OF FOOD DELIVERY APPLICATIONS WITH SPECIAL REFERENCE TO THODUPUZHA TALUK," is being conducted to evaluate the satisfaction of consumers towards online food delivery applications.

Objectives

- To know the satisfaction level of customers with online food delivery applications.
- To analyze the problems faced by customers while using the food delivery apps.

Sources of Data

Primary data is collected from customers leaving Thodupuzha Taluk through structural questionnaires, and secondary data is collected from various sources like books, journals, newspapers, and the internet.

Sampling Plan

The population of the study consists of customers of online food delivery applications. The sample size used for the study is 60. Convenient sampling has been used for the study.

Theoretical Framework

Online food ordering is a process that delivers food or takeout from home chefs, local restaurants, and other food cooperatives through a mobile application or a website. Customers prefer using the food ordering app over ordering food online. The customer can generate an order without having to explain it to another human being and have the food delivered to his doorstep.

Advantages of Food Delivery

1. It gives customers more freedom and choice to place an order virtually at anytime and

- anywhere.
2. Convenience.
 3. Saving the time and resources spent on traveling to pick up the meal.
 4. Avoid the annoying experience of waiting in a long line.
 5. Various payment options
 6. You do not have to cook
 7. Easy clean-up
 8. It attracts more customers.

Disadvantages

1. Disguised Increased Expense
2. Juggling With Your Health
3. Compromise With the Food Quality
4. Food may get cold

Online Food Delivery Sites

1. Zomato, 2.UberEats, 3.FoodPanda, 4.Swiggy, 5.Grubhub, 6.Deliveroo, 7. Domino's Pizza,
8. Just Eat Takeaway, 9.DoorDash, 10.Postmates

Data Analysis and Interpretation

Table showing customer satisfaction with online food delivery applications

Satisfaction level	Number of students	Percentage
Highly satisfied	22	37
Satisfied	24	40
Neutral	6	10
Dissatisfied	8	13
Highly dissatisfied	0	0

Interpretation

Out of total respondents, the majority (37%) were satisfied with online food delivery applications. 37% of respondents are highly satisfied, 10% have a neutral opinion, and 13% are dissatisfied with that.

Table showing the major problems faced by the customers

Satisfaction level	Number of students	Percentage
Delay delivery	14	23.33
Misbehavior of deliverymen	9	15
Receiving wrong orders	11	18
Network and payment issues	20	33.33
Receiving stale food	6	10

Interpretation

Out of total respondents, 33.33% agreed that network and payment issues are the major problems faced during online food ordering. 23.33% of them face delayed delivery, 18% face receiving wrong orders, 15% face the misbehavior of delivery men, and 10% of them mainly face receiving stale food.

Findings

- Even if there are many problems faced during online food ordering, majority of respondents

(40%) are satisfied with the online food delivery applications.

- Network and payment issues are the main problems faced during online food ordering.

Suggestions

- Network issues might be minimized for the proper functioning of delivery apps.
- Food delivery services may reach every small village, but they should cover a wider range of areas.
- The delivery person might make sure that the quality and quantity of the food ordered and the address to be delivered are correct.

Conclusion

As the customers' needs and wants for the services are increasing, coupled with changing mindsets that encourage customers to go shopping online, it is the responsibility of the online food delivery apps to cater to these customers satisfaction through service quality assurance. As per the study, most of the customers are satisfied with online food ordering. Delay delivery, misbehavior of deliverymen receiving wrong orders, network and payment issues, and receiving stale food are the main problems faced during online food delivery.

Abstract

The study “Effect of Labor Welfare Measures on Employee Morale” has shed light on the welfare measures provided to employees. The study covers the whole district, with the objective of analyzing the various welfare measures given and the level of satisfaction among the employees with the welfare schemes provided. In this study, an attempt has been made to study the opinion and level of satisfaction of employees regarding the various welfare measures. The survey helped in evaluating the various welfare schemes in the organization and suggesting improvements to the existing labor welfare measures.

Introduction

Labor welfare is an important dimension of industrial relations, which includes overall welfare facilities designed to care for the well-being of employees and increase their living standards. Welfare includes anything that is done for the comfort and improvement of employees and is provided over and above their wages. Welfare helps in keeping the morale and motivation of the employees high to retain them for a longer duration. Employee welfare includes monitoring working conditions and creating industrial harmony through infrastructure for health, industrial relations, and insurance against disease, accidents, and unemployment for the workers and their families.

Statement of the Problem

Labor welfare occupies a place of significance in industrial development and the economy. It is an important facet of industrial relations—the extra dimension—giving satisfaction to the worker in a way that even a good wage cannot. The thesis, entitled “The Effect of Welfare Measures on Employee Morale, analyses the various welfare measures existing in companies and the satisfaction level of employees towards them.

Objectives of the Study

1. To understand various welfare measures adopted by companies.
2. To find out the level of satisfaction of employees on various welfare measures given by firms

Sources of Data

The primary data were collected through a well-structured questionnaire.

The secondary data used in the study were collected from books, journals, magazines, articles, websites, and other publications.

Sampling Technique

Convenient sampling methods were used for the study. The sample size selected for the study was 60. There are various statistical tools that are used in analyzing data. Such tools are percentage, diagrams, charts, tables, etc.

Theoretical Framework

The present study is an attempt to identify the employee welfare schemes and employee morale adopted in various firms in Idukki district. Employees spend at least half of their time at work, getting to it, or leaving it. People are entitled to be treated as full human beings with personal needs, hopes, and anxieties. In the words of **Arthur James Todd** Labour, “welfare means

anything done for the comfort and improvement, intellectual or social, of the employees over and above the wages paid, which is not a necessity of the industry.”

Data Analysis and Interpretation

Welfare measures existing in company

Facility	Available	Unavailable	Total
First Aid Appliances	40	20	60
Lighting & Ventilation	50	10	60
Rest room	49	11	60
Accommodation	35	25	60
Transportation Facility	30	30	60
Medical Facility	37	23	60
Canteen Facility	38	22	60
Provident Fund	41	19	60
Bonus	45	15	60
Shift	25	35	60

Source: Primary Data

Interpretation: First aid appliances are available to 40 respondents, lighting facilities are available to 50 respondents, restrooms are available to 49 respondents, education facilities for their children are available to 24 respondents, accommodation facilities are available to 35 respondents, transportation facilities are available to 30 respondents, medical facilities are available to 37 respondents, canteen facilities are available to 38 respondents, provident funds are available to 41 respondents, bonuses are available to 45 respondents, and shift facilities are available to 25 respondents.

Level of Satisfaction

Facility	Satisfied	Dissatisfied	Total
First Aid Appliances	50	10	60
Lighting & Ventilation	40	20	60
Rest room	45	15	60
Education Facility for Children	25	35	60
Accommodation	47	13	60
Transportation Facility	32	28	60
Medical Facility	35	25	60
Canteen Facility	39	21	60
Provident Fund	43	17	60
Bonus	46	14	60

Source: Primary Data

Interpretation: out of the 60 respondents, 50 employees are satisfied with first aid appliances, 40 respondents are okay with lighting and ventilation, 45 respondents are satisfied with rest room facility, 25 employees are happy with the education facility available for their children, majority of people are satisfied with the accommodation, like 47 respondents, transportation facility is satisfactory to 32 employees, 35 people are satisfied with the medical facility, 39 respondents and 43 respondents are satisfied with the canteen facility and provident fund

accordingly and 46 employees are satisfied with the bonus system available to them

Findings

- There are various welfare measures available in every company
- A large majority of respondents agree that welfare measures create efficiency towards work
- The majority of the respondents are satisfied with the welfare measures available for them, except for the option of providing educational facilities to their children

Suggestions

- Management can encourage social group activities by the workers. This will help to develop greater group cohesiveness, which can be used by the management to improve quality of labor welfare measures.
- The management can give more awareness about various incentive measures to workers.
- The management can encourage the workers to give suitable suggestions for improving work efficiency, and they must be rewarded for the best suggestions.

Conclusion

Labor welfare includes various services, benefits, and facilities that are offered to employees. Through such generous fringe benefits, employers seek to make life worth living for employees. The welfare amenities are extended in addition to normal wages and other economic rewards available to employees as per the legal provisions. Thus, labor welfare covers all the efforts that employers make for the benefit of their employees over and above the minimum standards of working conditions fixed by the legislation.

Abstract

E-POS machine is a revolutionary step by government in the field. This study has been conducted to analyze the effectiveness of public distribution system after implementation of E-POS machine. For this, a structured questionnaire has been framed and has been surveyed. Data were collected on the basis of convenient sampling. The study reveals that the implementation of E-POS machine has a great impact on the PDS.

Introduction

The Public Distribution System is a government-sponsored chain of shops entrusted with the work of distributing basic food and non-food commodities to the needy sections of society at affordable prices. PDS is an Indian food security system. Established by the government of India under the ministry of consumer affairs, food, and public distribution. PDS is operated under the joint responsibility of the Central and state governments. The Central Government, through Food Corporation of India (FCI), has assumed the responsibility for procurement, storage, transportation, and bulk allocation of food grains to the State Governments.

Statement of the Problem

The PDS is a rationing mechanism that entitles households to specify selected commodity at subsidized price. Eligible households are given a ration card that entitles them to buy fixed rations or selected commodities. To certain extent, PDS helps to bridge the gap between have and have not. It is an attempt to study the effectiveness of functioning of PDS after the implementation of the E-POS machine. The introduction of E-POS machine in Ration Shop to avoid malpractices in getting the commodities at prescribed price.

Objectives of the Study

- To examine whether the E-POS system helps to reduce malpractice in PDS.
- To analyze how public Distribution System helps reduce price hikes.

Sources of Data

The primary data used for the study were obtained from the public. It was collected by means of a questionnaire. The secondary data was collected from websites, brochures, and reference texts.

Sampling Plan

The sample size used for the study is 40. A convenient sampling method has been adopted for the study.

Theoretical Framework

PDS is primarily a social welfare and antipoverty program of the Government of India. Essential commodities like rice, wheat, sugar, kerosene, etc. are supplied to the people under the PDS at subsidized prices. It has been one of the most important elements in India's safety system for almost a year and the most far-reaching in terms of coverage as well as public expenditure on subsidies. The System serves three objectives: protecting the poor, enhancing nutritional status, and generating a moderating influence on market prices. Thus, the main objectives of the PDS can be summarized as follows:

Data Analysis and Interpretation

TABLE OUTLINING HOW AN E-POS MACHINE CAN AVOID MALPRACTICES

Basis	No. of respondents	Percentage
Yes	63	74
No	22	26
total	85	100

Interpretation:

Table 1 shows that majority of the respondents (74%) have the opinion that E-POS machines help to avoid malpractice, and remaining (26%) do not agree with this statement. The following graph reveals clear data.

E-POS MACHINE HELP TO REDUCE PRICE HIKES

basis	No. of respondents	Percentage
Yes	67	79
No	18	21
Total	85	100

Interpretation:

The table reveals that 79% of respondents have the opinion that E-POS machines help to reduce price hikes, and remaining 21% do not agree with this statement. The following graph gives a clear image of it.

Findings

- Respondents have the opinion that E-POS machines help reduce price hikes.
- The E-POS-POShine helps reduce poverty through the effective distribution of rations to the common people. It can reduce malpractices in the field of rationing.
- Only a few of the respondents are dissatisfied with PDS through the E-POS system.

Suggestions

Based on the findings drawn from the study, the following suggestions will make the operation of ration shop more effective and successful:

- The technical problems with the machine need to be solved.
- It is better to reduce malpractice in PDS by conducting proper auditing and supervision.
- Improve areas like proper supply and more quality and quantity of commodities.

Conclusion

In the study entitled "A study on the effectiveness of public distribution system after implementation of E-POS machine with special reference to Thodupuzha thaluk," it can be concluded that most of the respondents residing in Thodupuzha taluk are Satisfied with the Implementation of E-POS machine in Ration Shop. After the Implementation of E-POS system, it ensures proper supply of items as prescribed by the government, reduces malpractice

like adulteration and reselling, and also helps to reduce price hikes. So, government should take necessary actions to increase the quantity of food items given through ration shops and also ensure the quality of food grain supplied to customers. The strong intervention from the government to ensure adequate supply for every poor person in society helps to eradicate poverty by attaining food security. Also, E-POS machine in ration shops helps in transparent working of ration shops.

Abstract

Agricultural credit has increased consistently over the years. This study has been conducted to analyze the perceptions of farmers towards agricultural loans, with special reference to Thodupuzha Taluk. This structured questionnaire has been framed and has been surveyed. Data collected through convenient sampling. And it is understood from the study that the majority of the respondents consider agricultural loans helpful to them.

Introduction

Agriculture is a vibrant part of India's economy. 54.6% of the population is involved in agriculture and allied activities. The government has taken many policy initiatives to strengthen the farm credit delivery system by providing credit at lower rates of interest to support the resource requirements of the agricultural sector. The emphasis of these policies has been on providing timely and adequate credit support to farmers, with particular focus on small and marginal farmers and weaker sections of society, to enable them to adopt modern technology and improved agricultural practices for increasing agricultural production and productivity. Farmers in general are not well educated and aware of the opportunities given to them by the banks to improve their farming. Many times they do not reach the banks at the proper time, and sometimes they are ignorant about the schemes of the banks.

Statement of the Problem

The agriculture sector is important for food security, employment generation, and economic growth. Farmers are to depend on moneylenders, and their indebtedness leads them to sell their products below the production cost. So, they are not in a position to repay the loan on time. This study, titled "A STUDY ON FARMERS PERCEPTION TOWARDS AGRICULTURAL LOAN WITH SPECIAL REFERENCE TO THODUPUZHA TALUK," is conducted to understand the farmers' perceptions towards agricultural loans.

Objectives

- To identify farmers' perceptions towards agricultural loans.
- To find out the various sources of finance for the agriculture activities of the farmers.

Sources of Data

Primary Data: The primary data used for the study were collected from the farmers using a questionnaire. Secondary Data: Secondary data were obtained from published sources such as websites and reference texts.

Sampling Plan

The population of the study consists of farmers. The sample size used for the study is 60. Convenient sampling has been used for the study.

Theoretical Framework

A farmer is a person engaged in agriculture, raising living organisms for food or raw materials. Agricultural loans are availed of by a farmer to fund seasonal agricultural operations or related activities like animal farming or the purchase of land or agricultural tools. This type of loan also buy inputs such as fertilizer seeds, insecticides, etc. There are many financial institutions

and banks in India that provide farm loans so that farmers can run their agriculture more efficiently. It helps to cover costs associated with running a farm, such as the purchase of seeds, pesticides, and irrigation.

Purposes of Agricultural Loan

- You can avail of agricultural loans for farming equipment and tools.
- Individuals can avail of the loan for the purchase of land.
- Horticulture projects can also be one of the purposes of the agricultural loan.
- Running day-to-day operations
- Buying farm machinery such as tractors, harvesters, etc.;
- Storage purposes

Data Analysis and Interpretation

Table showing sources of agricultural loans

SOURCE OF LOAN	NO.OF RESPONDENTS	PERCENTAGE
Public sector banks	20	33
Private sector banks	12	20
Co-operative Societies	10	18
Private Money lenders	18	29
Total	60	100

INTERPRETATION

Out of total respondents, 33% of respondents take loans from public sector banks, 20% of respondents take loans from private sector banks, 18% of respondents take loans from cooperative societies, and 29% of respondents take loans from private money lenders.

Table showing perception towards agricultural loan

PERCEPTIONS TOWARDS AGRICULTURAL LOAN	NO.OF RESPONDENTS	PERCENTAGE
Agricultural loan help farmers	9	33
Agricultural loan are easily accessible	5	20
An agricultural loan is a burden	17	18
The rate of interest is high in agricultural loan system	30	29
Total	60	100

INTERPRETATION

Out of total respondents, 49% of respondents are of the opinion that the rate of interest of agricultural finance are high, 28% of respondents are of the opinion that Agricultural loan are a burden, 8% of respondents are of the opinion that agricultural loan are easily accessible, and 15% of respondents are of the opinion that agricultural loan help farmers

Findings

- The majority of respondents (33%) take loans from public sector banks.
- The majority of respondents are of the opinion that agricultural loans are very helpful to them for farming activities, while 18% of them consider agricultural loans a burden.
- Labor costs are the main cost involved in farming, according to the opinions of respondents.

Suggestions

- Improve access to credit, technology, and markets.
- Increase agricultural productivity and household income for smallholder farmers.
- Add value to agricultural produce.
- Expand the outreach of the formal credit system to reach the really poor and needy.
- Reduce rate of interest on crop loans.

Conclusion

A study was undertaken to identify farmers' perceptions towards agricultural loans. Most of the respondents are of the opinion that the rate of interest is high in the agricultural loan system. This study helps identify the various sources of finance for the agricultural activities of farmers. The main source of finance is public sector banks. Agricultural loans helped the majority of respondents in many ways. Insufficient revenue is the major problem they face in repaying the loan. A high interest rate is the major problem faced by farmers in receiving agricultural finance.

Abstract

In the present financial market, a mutual fund is an innovative financial investment. In this situation, we study investors' perceptions of mutual funds with a special reference to Thodupuzha Taluk. The objectives of this study are to check awareness level of people about mutual funds and analyze investors' perceptions regarding investing in mutual funds. In this study, both primary and secondary data were used for data collection. On the basis of primary data, most of the respondents would like to invest in private

Introduction

A mutual fund is an innovative financial instrument and investment vehicle for investors who pool their savings to invest in diversified portfolio of securities with the aim of attractive yields and appreciation in their value. A mutual fund is a mechanism for pooling money by issuing bonds to investors and investing funds in securities in accordance with objectives as disclosed in offer document. A mutual fund is a trust that pools the savings of a number of investors who share common financial goal. The investors buy units of mutual fund schemes that meet their investment objectives.

Statement of the Problem

In India, the Mutual Fund industry has been in existence since the establishment of UTI and has evolved to be a product since 1964. The term product is used because Mutual funds (MF) are not merely to park investor's savings; they are tailor made to cater to investor's needs, whatever their age, financial position, risk tolerance, and expectations. This issue of combining service and product is an important aspect of mutual fund industry. MFs are looked upon by individual investors as financial intermediaries/ portfolio managers who process information, identify investment opportunities, formulate investment strategies, invest funds, and monitor progress at a very low cost. Individual investors' decision-making often relies on observable socio-demographic variables to proxy for inherent psychological processes that drive investment choices.

Objectives of the Study

To check awareness level of people about mutual funds.

To analyze the risk perception of mutual fund investors

Sources of Data

Primary data are those that are collected from a fresh source for the first time and thus happen to be original in character. The primary data for the study has been collected from 90 people residing in the Thodupuzha area through structured questionnaire.

Sampling Plan

The sample size used for the study is 100. Sampling method has been adopted for the study.

Theoretical Framework

A mutual fund is a common pool of money into which investors place their contributions that are to be invested in accordance with a stated objective. The ownership of the fund is thus joint or "mutual"; the fund belongs to all investors. A single investor's ownership of the fund is in the same proportion as the amount of the contribution made by him or her to the total amount

of the fund. A mutual fund is a special type of investment institution which pools the savings of the community and invests them in the capital market, i.e., in shares, debentures and other securities. The income earned from these investments and the capital appreciations are shared by the unit holders in proportion to the number of shares owned. It is a new tool in the kit of capital market mechanisms; all investors could now participate in corporate activities by subscribing to the units of the mutual funds. "Mutual funds are collective savings and investment vehicles where savings of small (or sometimes big) investors are pooled together to invest for their mutual benefit and returns distributed proportionately". "A mutual fund is an investment that pools your money with the money of an unlimited number of other investors. In return, you and the other investors each own shares of the fund.

Data Analysis and Interpretation

Classification on the basis of awareness of mutual fund

Market risk	No. of respondents	Percentage
Fully aware	27	45
Partially aware	15	25
Neutral	9	15
Not aware	6	10
Not at all aware	3	5
Total	60	100

(Source: Primary data)

Interpretation: 45% of the respondents are fully aware of Asset management company, 25% of respondents are partially aware of Asset management companies, 15% are neutral about Asset management companies, and 1% are not aware of Asset management companies, 5% are not at all aware of set management companies.

Classification on the basis of Risk

RISK	No. of respondents	Percentage
Strongly Agree	36	60
Agree	9	15
Neutral	6	10
Disagree	6	10
Strongly Disagree	3	5
Total	60	100

(Source: Primary data)

Interpretation: 60% of the respondents strongly agree risk is the factor guiding their mutual fund investment decision; 15% of the respondents agree risk is the factor guiding their mutual fund investment decision; and 10% of the respondents are neutral. Risk is the factor guiding their mutual fund investment decision.

Findings

- The majority of the respondents are invested in mutual funds (80%), and least number of respondents are not invested in mutual funds (20%).
- The majority of the respondents (60%) are fully aware about market risk related with mutual funds, and least number of respondents (5%) are not at all aware about market

risk

- The majority of the respondents (45%) are partially aware about types of funds and schemes related with mutual funds, and least number of respondents (5%) are not at all aware about types of funds and schemes
- The majority of the respondents (30%) are fully aware of the systematic investment plan (SIP) related with mutual funds, and least number of respondents (10%) are not at all aware of the systematic investment plan

Suggestions

- Investors should have proper knowledge about several aspects of the mutual fund, especially the systematic investment plan, Net asset value, and maturity period.
- AMCs can design mutual fund products by combining the motives of mutual fund investors, such as long-term growth and excellent returns.
- The study reveals that investors are considering key factors such as liquidity, risk, tax benefits, and safety when investing in mutual fund products. A prudent product design, by adding the features expected by investors, will make the new mutual fund products attract new investors.
- The study observed that strong customer orientation is necessary in a market where the market is becoming competitive due to large number of players with varied financial muscle powers and expertise in investment.

Conclusion

In the past few years, Mutual Funds have emerged as a tool for ensuring one's financial well-being. Mutual Funds have not only contributed to India's growth story but have also helped families tap into success of Indian industry. As information and awareness rise, more and more people are enjoying the benefits of investing in Mutual Funds. Demographic features such as educational status, occupational status, and economic status of the investor influence the preferences of investors towards mutual fund products. Highly educated investors, businesses, and middle-income groups have been showing mutual funds for the sake of tax benefits. Demographic features such as educational status, occupational status, and economic status of the investor influence the preferences of investors towards mutual fund products.

Abstract

The advent of the internet has transformed the retail landscape, giving rise to a digital shopping revolution that has significantly altered the way consumers browse, purchase, and interact with products and brands. This project, titled "Perception towards Online Shopping among College Students," delves into the multifaceted world of online shopping, aiming to provide a comprehensive understanding of the trends, dynamics, and consumer behaviors that shape this rapidly evolving industry.

Introduction

The Internet is changing the way consumers shop and buy goods and services and has rapidly evolved into a global phenomenon. Since the emergence of the World Wide Web (WWW), merchants have sought to sell their products to people who surf the internet. Buyers can visit the web stores from the comfort of their homes and shop as they sit in front of the computer. Essentially, the idea of online shopping is to lead customers to a convenient way of shopping. So, purchasing can be done from anywhere and anytime according to the customer's preferences.

Statement of The Problem

Nowadays, the widespread application of the internet results in increased use of online shopping. Compared to consumption groups, 'students' basic conditions enable them to choose online shopping. In addition to this, their leisure, curiosity, hyperactivity, and unlimited internet access are probably their driving forces towards it. This study is intended to analyze awareness regarding online shopping. So, the present study is titled as "perception towards online shopping among college students".

Objectives

1. To know the influential factors behind online shopping among students.
2. To identify the most preferred online shopping site among students.

Sampling Plan

A convenient sampling method is being adopted for the study. The respondents, accessible at ease at the right time and place, were selected. The total sample size is taken as 50.

Source of Data

Primary data and secondary data are used. A questionnaire is used to collect primary data only after pretesting and making corrections; the questionnaire was printed and distributed for data collection. Secondary data is collected from journals and websites.

Theoretical Framework

Online shopping, or e-shopping, is a form of electronic commerce that allows consumers to directly buy goods or services from a seller over the Internet using a web browser. Webstore, online store, online storefront, and virtual store are alternative names for online shopping. Mobile commerce (or m-m-cm-commerce) is a mobile-optimized site or app.

An online shop evokes the physical analogy of buying products or services at a bricks-and-mortar retailer or shopping center (traditional, physical companies); the process is called business-to-consumer (B2C) online shopping. In the case where a business buys from another business, the process is called business-to-business (B2B) online shopping. The largest of these online retailing corporations are Alibaba, Amazon.com, and eBay.

Data Analysis and Interpretation

Table showing Preferred online shopping site

Online site	No. of respondents	Percentage
Flipkart	35	70%
Amazon	13	26%
Ebay	2	4%
Myntra	0	0%
Snapdeal	0	0%
Total	50	100%

Source: Primary Data

Interpretation

From the above table, a majority (70%) of respondents prefer to buy products from Flipkart. 26% and 4% of the respondents prefer Amazon and eBay, respectively. None of them prefers Myntra or Snapdeal.

Table showing Influential Factors

Factors	No. of respondent	Percentage
Convenience	8	16%
Transaction security	3	6%
Price benefits	25	50%
Save time	7	14%
Home delivery	7	14%
Total	50	100%

Source: Primary Data

Interpretation

The above table shows that 50% of the respondents are influenced by the price benefit, 16% by convenience, 14% by time savings, 14% by home delivery, and 6% by transaction security.

Findings

- The most preferred online shopping site is Flipkart and the least preferred are Myntra and Snapdeal

- The respondents are highly influenced by the price benefits available in online shopping sites and they are concerned about their insecurities relating to transactions

Suggestions

- Ensure to have a user-friendly and mobile-friendly website interface which will be easily navigated
- To attract more customers, provide detailed and accurate product descriptions, including specifications, size, materials and usage instructions

Conclusion

Consumers use the internet not only to buy the product but also to compare the price, product features, and after-sale facilities they receive if they purchase from a particular seller or online shopping site. Many experts are optimistic about the prospects of online business. In addition to the tremendous potential of the e-commerce market, the internet provides a unique opportunity for companies to reach their existing and potential customers more efficiently. Essentially, the idea of online shopping is to lead customers to a convenient way of shopping. Customers will be able to save time and money, and it also helps to retrieve all the product information with just a few clicks in a few seconds. So, purchasing can be done from anywhere and anytime according to the customer's preference.

Quality of Work Life and Occupational Stress of Self-Financing College Teachers

Anu Saju^{1*}, Achu Abraham^{1*}, Aleena K.S^{1*}, Ashly Jose^{1*}, Jovana Pramod^{1*}

^{1*} Assistant Professor, St. Joseph's College, Moolamattom

Introduction

The quality of work life (QWL) has been described in various ways since its inception in the 1960s. It has been defined as the level to which the employees and workers of any given firm can improve their own lives and their level of satisfaction through their work experiences and environment. QWL is a subcomponent of life, "the broader and wider concept of "quality of life, which impacts on work performance and its quality, in addition to QWL. The concept of QWL involves four major aspects: (i) a safe work environment; (ii) occupational healthcare; (iii) suitable working time; and (iv) an appropriate salary.

Statement of Problem

The quality of work life represents the overall satisfaction derived by people from their work. It depends upon various factors like nature of job, working conditions, occupational stress, etc. A term commonly used in the professional business industry, occupational stress refers to the ongoing or progressing stress an employee experiences due to the responsibilities, conditions, environment, or other pressure of the workplace. All of the aforementioned factors prompted the researcher to conduct a study titled "QUALITY OF WORK LIFE AND OCCUPATIONAL STRESS OF SELF-FINANCING TEACHERS."

Objective of the Study

1. To measure the quality of work life of teachers in self-financing college

Source of data: For the study, primary data is mainly used. The secondary data are collected from published journals, various websites connected to this topic, books, and articles.

Sampling Plan: Sampling was employed to select 70 respondents from selected self-financing colleges. The convenience sampling method was used for the study. Simple average tools like percentages, graphs, ranking methods, etc. are used for the purpose of analyzing data.

Theoretical Framework: Quality of Work Life (QWL) is concept which means overall quality ones working life. Quality of life constitutes income, health, social relationships, and other factors such as happiness and fulfillment. QWL is determined by the individual's favorable and unfavorable situation at work places. An individual's commitment towards work, efficiency in performance, motive to work more is depended upon the QWL. It is the degree of satisfaction the members of a work organization are able to provide to meet the needs through their experiences in the organization.

Data Analysis and Interpretation

The Quality of work life was tested by using a questionnaire. It is analyzed on the basis of following factors.

Ranking and Classification of Respondents

On The Basis Acceptance on the Following Response Weightage

STRONGLY AGREE	5
AGREE	4
NEUTRAL	3
DISAGREE	2
STRONGLY DISAGREE	1

NO	STATEMENT	SA (5)	A (4)	N (3)	DA (2)	SDA (1)	TOTAL FREQUENCY	AVG	RANK
1	I am satisfied with the growth opportunities available for me in present job	200	80	15	10	0	305	4.36	3
2	When I have done a good job it is acknowledged by my higher authorities and colleagues.	175	120	15	0	0	310	4.43	2
3	Everyone have an equal chance to get ahead in the organization based on performance regardless of sex, age, racial or ethnic background.	185	80	30	6	0	301	4.3	4
4	I am satisfied with the extension activities available in our organization	175	80	30	10	0	295	4.21	6
5	There are numerous opportunities for individual creativity and self-improvement in our institution.	200	80	30	0	0	310	4.43	2
6	My higher authorities understand my family or personal life needs.	175	60	60	0	0	295	4.21	6
7	I feel satisfied within fulfilling my family role regardless of work pressures.	185	60	45	6	0	296	4.22	5
8	The grievance redress system in my college is satisfactorily performed.	150	40	45	20	5	265	3.78	8
9	If I wish, I can easily take leave to attend to any family emergency.	250	60	15	0	0	325	4.64	1
10	The management has attempted to understand stress	175	40	30	20	5	270	3.85	7
11	My working environment is stressful for my physical and health and mental health.	100	40	60	30	5	235	3.35	9

Interpretation: The above table shows the teacher's attitude towards the nature of job. The grievance mechanism is not satisfactory in institutions. They are not satisfied in the extension activities available in their institution. Only 4.3% of respondents are agreed with the statement there is equal chance in the institution.

Findings

- ☐ The study reveals that mainly eight factors affects QWL of teachers working in the institutions, they are nature of job ,compensation of teachers, working conditions ,opportunity for growth and development, work and total life space, occupational stress and participation in management .
- ☐ It is found from the study that teachers respond rate about their compensation is very low.
- ☐ This study found that the wages are paying fair and adequate.
- ☐ It shows that teachers are dissatisfied with the efficiency of the management.

Suggestions

- ☐ If the institution concentrates, gives more importance to the working environment, andmeetst personal requirements, the level of stress will be reduced compared with the present level.
- ☐ The establishment should improve interpersonal relationships among teachers and management.
- ☐ Institutions can concentrate on providing more opportunities to teachers to enrich their skills.

Conclusion

The teachers studied under this project are not satisfied with the overall QWL in their institutions. The reasons for such dissatisfaction are due to the limitations of various factors that affect the QWL. Some awareness, capacity-building, and meditation programs must be carried out by the institution to reduce the occupational stress of the teachers.

Abstract

For the last few years, one can see the emergence of a large number of intelligent products and services, their commercial availability and the socioeconomic impact, this raises the question if the present emergence of AI is just hype or does it really have the capability of transforming the world. The paper investigates the wide range of implications of artificial intelligence (AI), and delves deeper into both positive and negative impacts on governments, communities, companies, and individuals. This paper investigates the overall impact of AI - from research and innovation to deployment. The paper addresses the influential academic achievements and innovations in the field of AI; their impact on the entrepreneurial activities and thus on the global market.

Keywords: Artificial Intelligence; Fourth Industrial Revolution; Business Analytics; Machine Learning; Deep Learning; Business Intelligence

1. Introduction

Innovation has always been the main engine of an improved standard of living throughout history. However, the process of innovation can be highly disruptive as it makes conventional technologies obsolete. Cloud computing, Internet of things (IoT), big data, data science, artificial intelligence (AI), and blockchain are the rising technologies that may create winners as well as losers across the world. Some of these technologies are at least two and a half decades old but were neither in the mainstream nor were viable for commercial applications. However, in the last few years, the situation has changed dramatically, today, almost every field employs one or more of these technologies. There are many factors responsible for this, including advancements in computer technology and a large number of open source software. At present, the enormous uses of these technologies in every field including healthcare, automobiles, finance, gaming, environmental monitoring, agriculture, sports, energy management, security, etc are changing the way, human beings, live, work and amuse themselves.

Statement of the problem

The advancement in AI is the heart of the enhanced performance of all other technologies and the evolution of Industry .There are sufficient pieces of evidence available in the literature that proves that the AI technology offers new opportunities that can lead to notable transformation in businesses and the overall economic system. At the business level, some of the benefits of AI are: the quick unveiling of patterns in big data, speedy visualization and analytics, improved product design, delivering meticulous insights, and many more. . The novel points of the paper are summarized below:

- Recognition of the factors which are resulting in today's AI exponential growth
- Identification of academic achievements in AI which are advancing the commercially available intelligent products.
- Determination of the top AI industries and investment trends in AI.
- Exploration of geographically strong AI locations.
- The data analysis done proves that AI is not hype.

2. Research Objectives and Data Collection

The major objectives of the study are:

1. To find out the various sectors and industries initiated AI startup's
2. To study total funding to AI start-up's across the world

Through this paper, the intention is to answer the above questions. The research was initiated by scanning a number of business newsletters, AI magazines, journal papers, conference articles, machine learning posts, annual reports of the companies, press releases, stock market websites, online forums, and many other platforms to gather the data required to help us in the investigation. The answers to these questions will help the human society to get prepared for the future challenges. This will also aid in accepting the transformations occurring as a result of the infusion of AI in human life and business.

Sectors and Industries

AI start-ups initiated all over the world are categorized in 22 different fields including autonomous vehicles, business intelligence, healthcare, etc. Fig. 1. depicts the percentage of 200 AI start-ups in different lines of business which majorly covers all the fields where AI is showing its impact. It can be seen clearly that the spread of AI is all pervasive, from education to healthcare, from home to industry; there is no place where AI is not being used or explored.

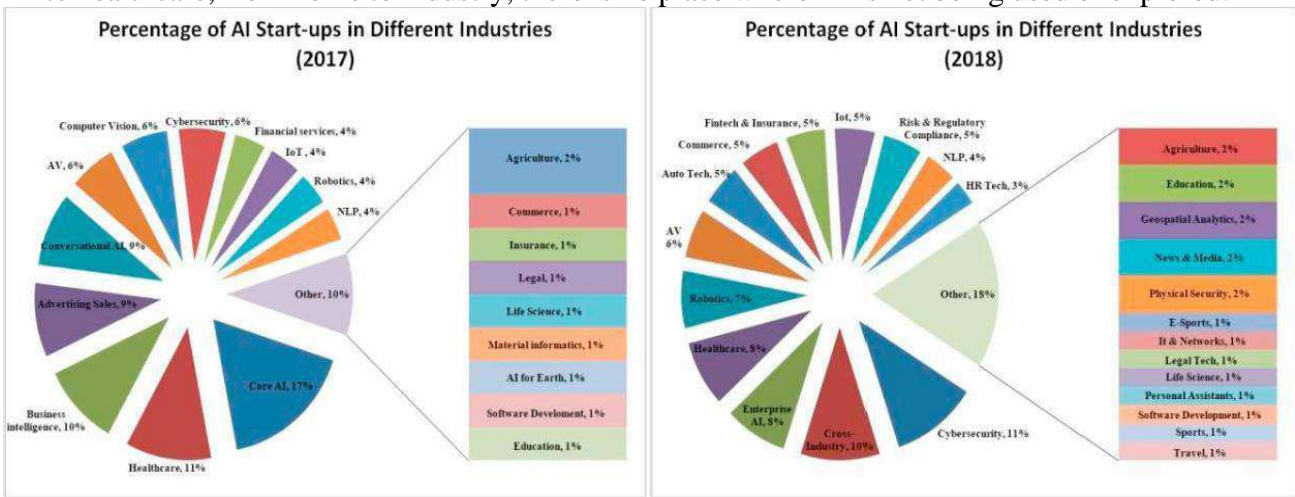

Fig. 1 Percentage of AI start-ups in different industries for (a) 2017 (b) 2018

Funding

In 2011 the total investment in these AI start-ups across the world was \$25.88 million (in 7 start-ups) which increased exponentially to \$1866.6 million (in 64 start-ups) in 6 years (2011 to 2016). Fig. 2. depicts a 71.13% increase in investment in these AI start-ups . Across the world, the U.S. is leading this revolution with maximum investment.

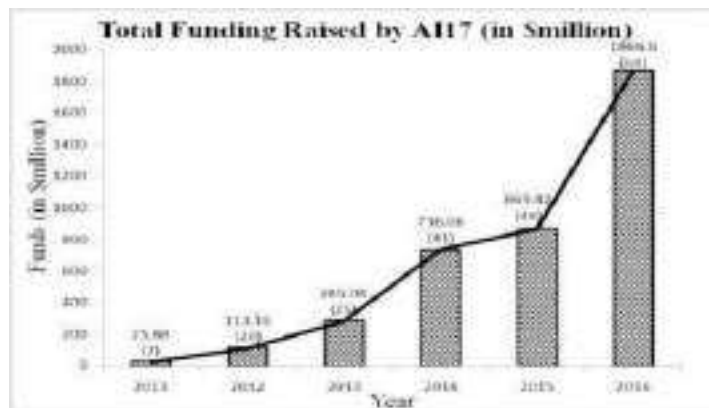

Fig. 2 Year-wise investment (in \$ Million) in 100 AI start-ups

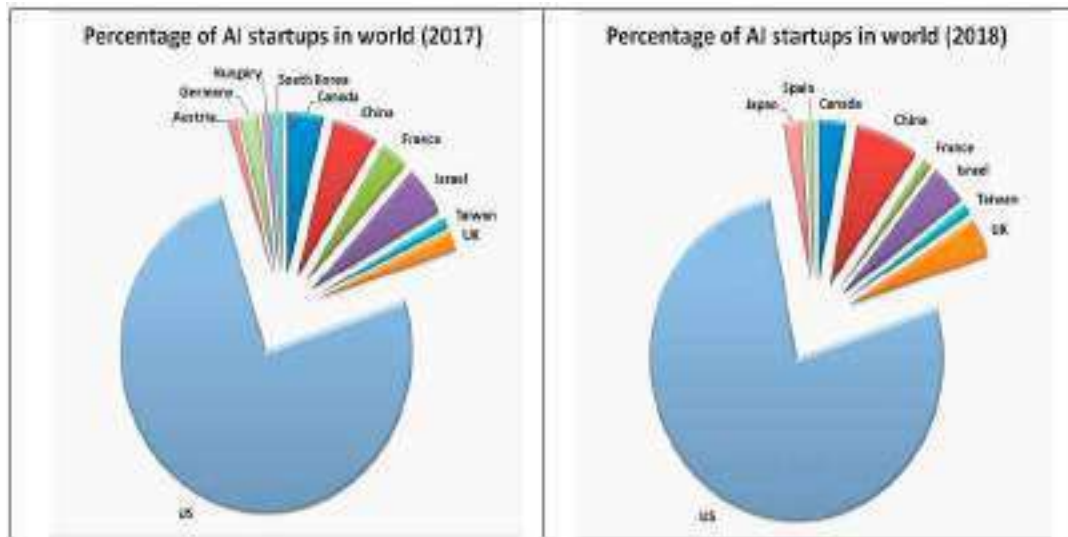

Fig. 3 Percentage of AI in different parts of the world

Conclusion

The study shows that the AI technology is confined only in a few regions in the world. This is creating an “AI divide”. This divide, like the digital divide, would strengthen the inequality in social, economic and cultural sectors; would create a chasm. Moreover, AI is software dominant and software is prone to vulnerabilities. Some of the deep learning algorithms/methods are the backbone of AI; these require passing through multiple factors to be used for real-time applications. Identifiable systemic failure modes, repeatability, transparency, explainable, path tracing, penetrability, etc. are some of the major factors established at the time of assessment of software; even after passing through these factors, there exist cases where DL algorithms have produced unreliable results. Apart from these, challenges like trust, ethics, bias, and shortage of AI talent also needs attention for commercial usage of AI applications.

Abstract

A bank is a financial intermediary for the safeguarding, transferring, exchanging, or lending of money. Banks distribute “money” - the medium of exchange. A bank is a business and banks sell their services to earn money, and they need to market and manage those services in a competitive field. “The study on the awareness of banking services among college students”, insights the awareness of customers regarding banking services and the satisfaction of them towards the same

Introduction

A bank is a financial institution which accepts deposits from the general public and creates a demand deposit while concurrently making loans. Banks also provide related services like an individual's retirement accounts, certificates of deposits, currency exchange, and safe deposit boxes. Banks perform lending activities directly whereas capital markets perform lending activities indirectly. People earn money to meet their day-to-day expenses on food, clothing, education of children, etc. People also need money to meet certain expenses on the marriage and higher education of children. These types of expenses can be met only if some part of money is saved from the present income.

Statement of the Problem

This study is undertaken to understand the different services provided by the banks and also to check the awareness of college students. Hence the study is entitled “The study on the awareness of banking services among college students”

Objectives of the Study

- To study the awareness of banking services among the college students.
- To measure the satisfaction level of students.

Source of Data

The primary data are collected by using questionnaire method among the college students of Thodupuzha Municipality. The secondary data are collected from published journals, various websites, books, articles, etc. It saves the time and is the cheapest source of data collection. It is also known as external source of data.

Sampling Method

Convenient sampling method is used for the study. The sample size selected for the research is 50

Theoretical Framework

Banks are such places where people can deposit their savings with the assurance that they will be able to withdraw money from the deposits whenever required. A financial institution that is licensed to accept checking and savings deposits and make loans. A bank is a person or corporation which holds itself out to receive from the public deposits payable on demand by cheque. An institution which creates cash with the aid of cash only. A commercial bank collects money from those who have it to spare or who are saving it out of their income and lends the money to those who require it. A bank is a financial intermediary, a dealer in loans and debts.

An establishment for custody of money, which it pays out on customer's order.

Data Analysis and Interpretation

Table showing the classification of respondents the basis of awareness of different banking services.

Particulars	No of Respondents	Percentage
Yes	63	90
No	7	10
Total	70	100

(Sources: Survey Data)

Shows the classification of respondents on the basis of satisfaction level of the respondents from different banking services.

Particulars	No of Respondents	Percentage
Highly Satisfied	10	14.3
Satisfied	39	57.1
Neutral	18	27.1
Dissatisfied	3	1.5
Highly Dissatisfied	0	0
Total	70	100

(Sources: Survey Data)

Findings

From the data collection it is clear that 90% of respondents are aware of different types of banking services and only 10% respondents are not aware of it.

Majority of respondents get to know about the different banking services from their friends.

In this study most of the respondents are highly satisfied with the different banking services and no respondent is highly dissatisfied with the banking services of different banks.

Suggestions

Make it easier for new customers to open a bank account as opening a bank account is a complex and lengthy process.

Banks should become a trusted advisor to small business customers to attract customers and make profit from customers.

Embrace innovative technologies such as artificial intelligence, machine learning and block chain to streamline banking processes.

Conclusion

A study on the awareness of banking services among the college students with special reference to Thodupuzha Municipality was done with the primary objective of assessing the level of awareness of banking services. Based on the findings of the study and the suggested improvements, we can draw the possible following conclusions. To protect money from electronic theft, identity theft and other forms of fraud. It is important to implement basic precautions such as shredding account statements, having complex passwords and only doing

online banking through secure internet connections.

Abstract

This book chapter delves into a study focused on examining dyadic adjustment and resilience among spouses of individuals living with chronic diseases. A convenient sample of 200 participants was selected for this research, utilizing self-prepared socio-demographic data sheets and established measurement tools such as the Revised Dyadic Adjustment Scale and a resilience scale. Statistical analysis using SPSS, including t'-tests, ANOVA, and correlation, revealed significant differences in dyadic adjustment and resilience based on various demographic factors, including gender, family type, occupation, and economic status.

Introduction

In our modern world, with the advances in science and technology and the hustle and bustle of daily life, there has also been an increase in lifestyle and stress-related illnesses. Chronic diseases are categorized based on biomedical disease classification, whereas chronic illnesses are subjective experiences of living with those diseases. According to the World Health Organization, the main chronic illnesses include diabetes, coronary heart disease, and cancerⁱ. Health behavior refers to any activity undertaken to prevent or detect diseases and/or improve well-beingⁱⁱ. Smoking, an improper diet, lack of exercise, and other similar factors can adversely affect the overall health of individualsⁱⁱⁱ.

Dyadic Adjustment

The overall mental and physical well-being of individuals is significantly influenced by their close relationships. Dyadic adjustment refers to the level of satisfaction and happiness within a romantic relationship between two partners. It measures how well a couple is adapting to each other's needs and functioning together in their relationship.

Dyadic adjustment and resilience

Resilience is a complex concept that involves an individual's ability to adapt to new situations, manage stress, and avoid significant problems. Understanding how resilience works is vital, especially when studying couples where one partner has a chronic disease^{iv}. Chronic illnesses can strain relationships, and it's crucial to know how spouses cope^v. By studying resilience in these couples, we can identify what helps them deal with challenges better. This knowledge can lead to strategies that improve the well-being of both spouses in such situations. The study on dyadic adjustment and resilience among spouses of individuals with chronic diseases is significant because it can help better understand the challenges faced by these couples and identify strategies to support them. By examining the role of resilience in the dyadic adjustment process, it can identify factors that promote adaptive coping strategies and improve the overall well-being of both spouses. This study can also help healthcare professionals develop interventions to support spouses and improve their quality of life. It can help us identify the factors that contribute to a successful relationship despite the challenges of chronic illness. By better understanding of the dyadic adjustment process and the role of resilience, can promote positive outcomes for both spouses and support them in maintaining a strong and healthy relationship.

Method

A descriptive research design was used in this study. The sample consists of 200 spouses with chronic diseases in Kerala through a convenient sampling method. The researcher administrated a questionnaire method for collecting data. Demographic Data Collection and

Revised Dyadic Adjustment Scale (RDAS) were used. The Bharathiar University Resilience Scale (BURS), developed by Annalakshmi (2009) was used to measure resilience. Mean, standard deviation, t-test and ANOVA were used as a part of statistical procedures.

Objectives

- 1.To find out whether there is any significant difference in dyadic adjustment and resilience among spouse of individuals having chronic disease based on their age group
- 2.To find out whether there is any significant difference in dyadic adjustment and resilience among spouse of individuals having chronic disease based on their family types.
- 3.To find out whether there is any significant difference in dyadic adjustment and resilience among spouse of individuals having chronic disease based on their education qualification
- 4.To find out whether there is any significant difference in dyadic adjustment and resilience among spouse of individuals having chronic disease based on their occupation

Hypotheses

- 1.There will be a significant difference in dyadic adjustment and resilience among spouse of individuals having Chronic disease based on age.
- 2.There will be a significant difference in dyadic adjustment and resilience among spouse of individuals having Chronic disease based on family type.
- 3.There will be a significant difference in dyadic adjustment and resilience among spouse of individuals having Chronic disease on the basis of education qualification.
- 4.There will be a significant difference in dyadic adjustment and resilience among spouse of individuals having Chronic disease on the basis of occupation.

Result and Discussions

Table No.1 Distribution of sample based on age

Age	Frequencies	Percentages
40-50 years	58	29.00
50 years above	142	71.00
Total	200	100.00

Table No.2 Distribution of sample based on qualification

Qualification	Frequencies	Percentages
Upto 10th	112	56.0
12th	45	22.5
UG	33	16.5
PG	10	5.6
Total	200	100.0

Table No.3 Distribution of sample based on occupation

Occupation	Frequencies	Percentages
Public sector	23	11.5
Private Sector	29	14.5
Self-employed	28	14.0
Daily wages	16	8.0
Agriculture	23	11.5
Housewives	75	37.5
Business	6	3.0
Total	200	100.0

Table No.4 Distribution of sample based on Family types

Family types	Frequencies	Percentages
Nuclear	169	84.5
Joint	31	15.5
Total	200	100.0

Major findings

1. Dyadic Adjustment is higher among females but resilience was similar among male and female spouses of individuals having Chronic disease.
2. Dyadic Adjustment and resilience were similar among the 40-50 years and above 50 years of age group having Chronic illness in their spouse.
3. Dyadic Adjustment is higher among nuclear families but resilience was similar among nuclear families and joint families of spouse of individuals having Chronic disease.
4. Dyadic Adjustment and resilience were more or less similar among education qualifications of spouse having Chronic disease.
5. Daily wage occupation has higher resilience than other types of occupation.

Conclusion

Based on the research it was found that female spouses in nuclear families exhibited higher levels of dyadic adjustment, while individuals with lower economic status and income, particularly those in daily wage occupations, displayed greater resilience. Surprisingly, age did not emerge as a significant factor affecting dyadic adjustment or resilience among spouses of individuals with chronic diseases. These findings provide valuable insights into the dynamics of marital relationships and coping mechanisms within the context of chronic illnesses, offering potential avenues for further research and support interventions.

In conclusion, while dealing with chronic illness can be challenging for couples, interventions that target dyadic adjustment and resilience may be effective in promoting better relationship outcomes and reducing psychological distress. Further research is led to determine the most effective interventions for promoting dyadic adjustment and resilience in couples dealing with chronic illness.

Abstract

Fillers are commonly added to commercial elastomers for economic reasons and to beneficially modify properties such as stiffness, tensile strength, heat distortion, moldability, and other crucial attributes like impact resistance and elongation at break. Conventional fillers such as carbon black and mineral fillers present inherent challenges, including an increased carbon footprint, poor compatibility with rubber matrices, and high density. Consequently, there is a growing demand for sustainable and environmentally friendly fillers with a low or zero carbon footprint.

Rice husk, an abundant agricultural waste, holds the potential to serve as a sustainable and cost-effective filler in rubber composites. This study aims to investigate the synergistic impact of finely powdered rice husk reinforcement on the curing process and mechanical properties of natural rubber vulcanizates. In this study, rice husk fine powder is incorporated into natural rubber formulations at various concentrations, and these formulations are subjected to rigorous scientific analysis using sophisticated equipment.

Introduction

Natural rubber is a polymer derived from the latex of rubber trees, primarily *Hevea Brasiliensis*. It is known for its exceptional properties, including elasticity, high tensile strength, and abrasion resistance, tear resistance, excellent adhesion, and electrical insulation. The RSS (Ribbed Smoked Sheet) and TSR (Technically Specified Rubber) grading systems are used to categorize natural rubber based on quality, cleanliness, and specific properties.

Experimental Methods

In this experiment, natural rubber is combined with a filler, specifically rice husk ash, through mastication in two roll lab mixing mills. Mastication involves the kneading and thorough blending of these materials to create a homogenous mixture. Subsequently, compounding ingredients, including stearic acid, zinc oxide, accelerators, and sulfur, are added in a precise sequence to the masticated rubber. Each of these ingredients plays a crucial role in formulating the rubber compound to meet specific requirements.

Following the compounding phase, the resulting rubber compound is sheeted out from the mixing mill, flattening it into sheets or rolls. These sheets are then further processed using a lab hydraulic press, with molds designed according to industry standards. This step allows for the precise shaping of the rubber compound into five distinct test samples.

These test samples serve as the basis for character studies, where various properties and characteristics of the rubber compound can be evaluated. Whether it's mechanical properties, durability, or other relevant attributes, this systematic process ensures that the rubber compound is thoroughly tested and analyzed to meet the desired standards and specifications.

Result

The curing time properties of the samples were measured, and the results indicate that an increase in the amount of filler leads to a decrease in the curing time of the sample. Additionally, the tear strength also decreases with a higher amount of filler. Moreover, an increase in filler content causes a decrease in Young's modulus. The tensile strength properties

exhibit variations when the amount of filler is altered, while the hardness increases with an increase in filler content.

Conclusion

Blending multiple types of polymers presents a valuable approach to crafting materials that surpass the properties of their individual components. This method offers the opportunity to achieve desired characteristics and advantages that would be challenging to attain otherwise. Natural rubber (NR), for instance, is inherently soft, tacky, and can be difficult to work with, which limits its practical utility. Additionally, products crafted solely from NR tend to degrade over time, rendering them unsuitable for various applications.

However, by incorporating appropriate fillers in varying proportions, it becomes possible to significantly enhance the properties of NR. These fillers can include materials such as silica, carbon black, or even rice husk ash, as mentioned in the previous context. When blended with NR, these fillers can modify its mechanical, thermal, and chemical properties. As a result, the incorporation of fillers into rubber mixtures yields high-quality products with improved characteristics, making them more durable, resilient, and suitable for a broader range of applications. This approach enables the transformation of a relatively challenging material like NR into a versatile and valuable resource in industries where its unique properties can shine.

Abstract

This book chapter provides an in-depth exploration of the versatile and widely used Raney Nickel catalyst in the field of catalysis. The chapter begins with an overview of the historical development of Raney Nickel and its unique properties that make it a valuable tool in chemical synthesis. It then delves into the various applications of Raney Nickel in hydrogenation, dehydrogenation, and reductive processes, highlighting its role in green and sustainable chemistry. Finally, the chapter discusses recent advancements, challenges, and prospects in the utilization of Raney Nickel catalysts, offering valuable insights for researchers and practitioners in the field of catalysis.

Raney Nickel

Raney catalysts, such as Raney nickel, Raney cobalt, and Raney copper, are crucial catalysts widely employed in the chemical industry¹. They offer a distinct advantage over conventionally supported metal catalysts due to their high specific surface area, which results in enhanced catalytic activity at low temperatures. Raney nickel is indeed a binary alloy of aluminum and nickel, typically composed within the range of 30 to 50 weight percent nickel. Under ambient conditions, most grades of Raney nickel appear as grey solids. The term "Raney Nickel" derives its name from the American mechanical engineer Murray Raney. Its physical appearance is that of fine powder, and each pore within Raney Nickel takes on a distinct 3-D shape. It is also commonly referred to as 'Skeletal Catalyst' or 'Spongy Nickel'.

Raney nickel's remarkable catalytic activity, combined with its ability to absorb hydrogen within its pores during activation, renders it highly valuable for a wide range of hydrogenation reactions. Furthermore, its structural and thermal stability permits its use across diverse reaction conditions. It is worth noting that Raney nickel exhibits negligible solubility in most common laboratory solvents, except for mineral acids such as HCl. Additionally, its relatively high density facilitates easy separation from a liquid phase after the completion of a reaction.

It is crucial to emphasize that Raney nickel possesses an exceedingly low ignition temperature; it can spontaneously ignite, even at room temperature, when exposed to air. Therefore, proper storage and handling of Raney nickel require an inert atmosphere to ensure safety and prevent unintended ignition.

CATALYTIC APPLICATION/USES OF RANEY NICKEL

A. Hydrogenation reactions

1. Hydrogenation of alkenes to alkanes,
 $-C=C- \longrightarrow -C-C-$
2. Hydrogenation of nitriles to amines,
 $-C-N- \longrightarrow -C-NH_2$
3. Hydrogenation of aldehydes to alcohols,
 $-C=O \longrightarrow -C-OH$
4. Reduction of nitro group to amines,
 $NO_2 \longrightarrow -NH_2$

B. Reductive amination reactions

1. A carbonyl group can be converted to a primary (R-CH-NH-CH, R) or tertiary amine (R-(CH)_sN) by the reductive addition of ammonia, primary amine, or a secondary amine respectively.

These reactions are a useful method to synthesize amines. A condensing agent such as sodium acetate added to the reaction mixture.

2. Instead of using ammonia or amines, nitro and azo compounds can be used. Reduction in the presence of an aldehyde will produce a secondary or tertiary amine.

3. Reductive amination of alpha keto carboxylic acids to amino acids.

C. Displacement reactions

1. Dehalogenation

2. Desulfurization,

3. Displacement of methoxy group,

Ar stands for an aryl group. The halide, sulfide, and sulfite can poison the catalyst if not removed from the reaction mixture¹.

D. Oxidation/reduction reaction

1. Disproportionation of an aldehyde to a carboxylic acid and alcohol,

This reaction is called Cannizzaro reaction.

2. Raney nickel can catalyze the transfer of hydrogen from a donor molecule to an acceptor molecule. The donor molecule becomes oxidized while the acceptor molecule becomes reduced

Hydrogenation of Impurities in Caprolactam

Caprolactam (C₆H₁₁NO) serves as a critical monomer in the production of nylon-6, a fundamental material used in various industrial applications such as tires, cords, textiles, fibers, and engineering plastics¹.

In the hydrogenation unit, the lactam solution is subjected to hydrogenation treatment to enhance the efficiency of the process. A small quantity of catalyst, typically Raney nickel, is introduced into the solution. Through this treatment, undesired compounds are altered in a way that modifies their boiling points, causing them to differ from the lactam solution. As a result, these undesired compounds are carried away either with the lactam residue or in the ejector condensate during the distillation process. This step significantly improves the overall quality of the lactam product.

The hydrogenation process occurs at an elevated temperature of approximately 90 degrees Celsius, and it takes place under high pressure conditions. Simultaneously, a small amount of catalyst is added, which is subsequently removed from the reaction mixture through a filtration process after the reaction has concluded. This filtration step ensures the separation of the catalyst from the purified lactam solution, allowing to produce high-quality caprolactam.

Abstract

This study provides a comprehensive review of the iron content in various leafy vegetables, focusing on the iron levels within their leafy parts. To assess the iron content, a method involving the extraction of iron from both vegetables and iron tablets is employed, resulting in a solution containing Fe³⁺ ions (ferric ions). The quantification of iron is achieved through a colorimetric analysis, where a thiocyanate solution is added to the solution. This addition leads to a reaction with the Fe³⁺ ions, resulting in the formation of a distinctive blood-red colored complex, facilitating the precise determination of iron levels in the samples.

Introduction

Iron has been recognized as an essential mineral for our bodies for well over a century¹. This vital mineral plays a crucial role primarily as an oxygen carrier within the body, functioning both as a component of hemoglobin in the bloodstream and myoglobin in muscle tissues¹. Beyond its oxygen-carrying capacity, iron serves various other important roles in our health, including support for immune function, cognitive development, temperature regulation, energy metabolism, and overall work performance.

One of the most natural and healthful ways to boost iron intake is through dietary sources, particularly vegetables. Iron deficiency is a global concern, affecting around 400 million women worldwide and impacting over a billion women who experience low iron levels¹. Low iron levels can lead to symptoms such as fatigue, muscle weakness, poor concentration, and restless legs, often without individuals being aware of their iron status. Therefore, it is imperative for women to incorporate iron-rich foods into their diets to ensure they meet their nutritional needs and maintain optimal health¹.

Materials and Methods

1. Preparation of 0.001M Ferric Ammonium Sulphate, FeNH₄ (SO₄)₂.12H₂O standard solution:

It is prepared by dissolving about 0.482g of ferric alum in one liter of water. From this 2,4,6,8,10,12,16,18,20,22,24,26, & 28×10⁻⁵ mol L⁻¹ solution are prepared by pipetting 10, 20, 30,40, 50,60,70,80,90,100.110,120,130, & 140 ml of Fe³⁺ solution in a 500ml standard flask & made up to the mark with distilled water.

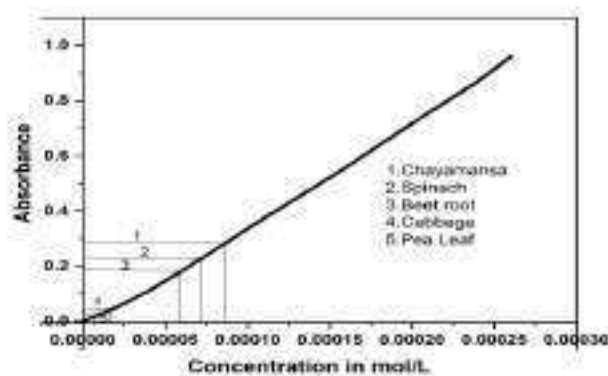

2. Sample of iron containing leafy vegetables: (a) Spinach-red leaf (b) Cabbage (c) Pea leaf (d) Chaya mansa leaf (e) Beet root

3. Preparation of 1 mol L⁻¹ ammonium thiocyanate solution: Prepared by dissolving 38g of solid ammonium thiocyanate in to 500 ml volumetric flask and made up to the mark with distilled water.

4. Colorimeter: It comprises the following parts: Light source, Filter (the device that selects the desired wavelength), Cuvette chamber (the transmitted light passes through a compartment wherein the solution containing the colored solution is kept in the cuvette, made of glass or disposable plastic), Detector (this is a photosensitive element that converts light into electrical signals).

Results and Discussions

The graph between concentrations of Fe³⁺ ions in mol L⁻¹ with absorbance and the amount of Iron in 1 gram of each food sample & iron tablet is listed below

Food sample	Amount of Iron in mg
Chayamansa	0.9333
Spinach –Red	1.8347
Beetroot	0.6582
Cabbage	0.1449
Pea leaf	0.0877

Based on the study conducted on the determination of iron content in some leafy vegetables, we can understand that among the selected leafy vegetables spinach red has the highest amount of iron. Intake of a sufficient quantity of leafy vegetables can avoid the consumption of iron tablets.

Conclusion

Easily available and cheap leafy vegetables around our premises are of high value with regard to iron content. The amount of iron is greater in red spinach leaves. The order is spinach red > Chayamansa > Beet root > Cabbage > Pea leaf. The Consumption of a sufficient quantity of these leafy vegetables is economically feasible and good for health.

Amritapuri, India

Abstract

Human assets are very important and vital among all other assets and resources. Right from the beginning of the globalization of business and services, human resources have become more important and decisive input for the success of any organisation. HR accounting refers to accounting for people as an organisational resource. It includes measuring the costs incurred by business firms and other organisations towards their HR investment and its very return in the form of output for the organisation.

Keywords: Human assets, success, accounting, measuring, score

Introduction

Human resources is a special resource featured with both natural and technical elements. Since the last four decades organisations have started believing that human assets are very important and vital among all other assets and resources. All the resources and processes of the organisation are operated by human resources, hence it has become obvious that the changes in the HR cost and benefits must be considered on prime line. HR accounting according to Flamholtz is “accounting for people as an organisational resource. It includes measuring the costs incurred by business firms and other organisations to recruit, select, hire, train, and develop human assets. It also involves measuring the economic value of people to the organisation”.

Different Approaches for Human Resource Accounting

Different authors have determined different approaches and concepts for Human Resources Accounting, the gist of a few important ones is given hereunder.

- 1) **Historical Cost Approach:** This approach was founded on the concept that there are certain costs incurred by the organisation regarding human resources. Cost is a sacrifice aspect incurred to obtain some anticipated benefits or services. In this approach the actual cost incurred on recruiting, selecting, hiring, training and developing human resources, of the organisation is maintained and a proportion of it is written off to the income of the next and expected useful life of human resources.
- 2) **Replacement Cost Approach:** This approach was developed on the concept Human resources of an organisation are to be valued on the assumption that a new similar organisation has to be created from cut down and what would be the cost to the firm if the existing resources were required to be replaced with other persons of equivalent talents and experience. There are two costs, individual replacement cost and positional replacement cost. The cost of recruiting, selecting, training and development, and familiarisation costs are accounted for in individual replacement costs. When an employee changes the present position to another or leaves the organisation then the cost of moving, vacancy, carrying,

and other relevant costs are reflected in individual replacement costs. Positional replacement cost refers to the cost of filling different position in an organisation.

- 3) **Opportunity Cost Approach:** This approach analyses the alternative earning sources from the productive capacity of human resources by putting some alternative use. Opportunity cost is the value of an asset (HR) when there is an alternative use of it. The perspective chances of opportunity cost are declined for those employees that are not scarce. Here, only the scarce people may be comprised of the value of human resources.
- 4) **Standard Cost Approach:** This approach is based on the line and staff as well as the functional relationship of employees in an organisation. The employees of an organisation are categorized and divided into different groups with hierarchical levels or positions. Standard cost is fixed for each category of employees and their worthwhile role may be calculated.

HRA Objectives

- 1) **Better decisions:** It helps the management in making better decisions keeping in view the monetary intervention about procurement, allocation, development, compensating and maintaining human resources. It enables the control of human resource costs.
- 2) **Organised focus on performance appraisal, training, development, and performance management:** The chief effort towards yielding better results depends on better performance of individuals, owing to performance management techniques. Better performance will be the outcome of better training and development activities.
- 3) **Effective utilisation of human resources:** Owing to the cost perspective it always makes us cautious in utilizing human resources through apt monitoring and supervision, which in turn the extracting and channelizing of the resources will be taken more care of, considering the monetary aspects.
- 4) **Valuation of outcome and results from individuals:** Human resources accounting enables the organisation to check whether the human resources are producing a return on the investment, and whether the individuals are interested in the organisation or not. Hence it is useful to make comparisons between cost and returns.
- 5) **Information for Manpower Planning - Basis for HR planning:** Human Resource Planning anticipates not only the required kind and number of employees but also determines the action plan. It provides scope for the advancement and development of employees through effective training and development.
- 6) **Basis for making HRM Policies:** HRA provides useful information for making suitable personnel policies about promotion, favorable working environment, job satisfaction of employees, etc. It checks the corporate plan of the organisation.
- 7) **Right Placements:** It aims to see that human involvement in the organisation is not wasted and brings high returns to the organisation. It offsets uncertainty and changes that enable the organisation to have the right person for the right job at the right time and place.

Human Resource Accounting – Limitations

- 1) **Uncertain Assumptions:** The valuation of human assets is based on the assumption that the employees are going to remain with the organisation for a specific period. However, the assumption is wrong because employee mobility cannot be predicted.
- 2) **May lead to Dehumanization:** Human resource accounting may lead to dehumanization in the organisation. If the valuation is not done perfectly or the results of the valuation are not used properly.
- 3) **Lack of Uniform Standards:** In the case of financial accounting, there are certain specified accounting standards that every organisation must follow. However, there are no uniform standards for HRA as each organisation has its standards. Therefore the HRA of no two organisations can be compared.
- 4) **No clear-cut guidelines for Cost and Value:** There are no specific and clear-cut guidelines for the computation of the 'cost' and 'value' of human resources of an organisation. The present valuation systems have many limitations in this aspect.
- 5) **Complexity in calculation of Human variables:** Calculation of the value of human resources is not so easy because it is most difficult to calculate the value of the quality of any person.
- 6)

Conclusion

Men, materials, machines, money, and markets are the important elements focussed by any organisation. Manpower resources are considered to be the chief and most vital among the other four resources. The very strength and growth potency of any organisation are indicated by human behavioral variables such as knowledge, individual integrity, team play, group norms, loyalty, ability, motivation, capacity for effective communication, interaction, critical thinking skills, decision skills, performance competencies etc. But still, critical evaluation of HR contribution is not being adapted and undertaken by the majority of organisations. As a matter, such organisations may be far from properly achieving objectives and deriving benefits as well.

Abstract:

Patricia McCormick's analysis of the novel *Sold* reveals the visceral reality of human trafficking that combines trauma and resilience. Through the empathy, survival, social determinants and literary subtlety of the story, the novel illuminates the power of storytelling to raise awareness and inspire change, encouraging us to break the chains of exploitation and win a world of compassion and justice.

Keywords: Exploitation, Discrimination, Human trafficking

Trauma in literature often explores the aftermath of events such as violence, abuse, war, loss of a loved one, or other significant life-altering experiences. Writers use trauma as a thematic element to delve into the complexities of human emotions, resilience, coping mechanisms, and the process of healing. Characters who have experienced trauma may exhibit symptoms like anxiety, depression, flashbacks, avoidance, or even dissociation.

Authors may portray how trauma shapes characters relationships, worldviews, and decisions, adding layers of depth to the narrative. Trauma in literature can serve as a vehicle for exploring the human condition, empathy, and societal issues. Through storytelling, literature provides a platform to examine the intricacies of trauma, contributing to a broader understanding of the human experience. The enduring applicability of trauma proposition in literature lies in its capacity to illuminate the multifaceted confines of mortal suffering, adaptability, and memory. As societal mindfulness of trauma's far-reaching consequences continues to grow, literature serves as a reflective space where compendiums engage with narratives that navigate the complications of trauma.

In an increasingly globalized world marked by ongoing conflicts, relegation, and social bouleversement, trauma proposition provides a lens through which scholars and artists can critically examine and address the lasting impacts of collaborative traumas. It offers a frame for fostering empathy, understanding, and dialogue, promoting a more nuanced appreciation of the mortal experience in all its complexity. The elaboration of trauma proposition in literature has been marked by its transformative power to reshape how we approach and engage with narratives of trauma. From its origins in the fate of World War I to its contemporary operations across disciplines, trauma proposition remains a critical tool for unraveling the intricate relationship between trauma, memory, and narrative. As literature continues to evolve and respond to the changing landscapes of human experience, trauma theory stands as a testament to the enduring significance of exploring the depths of human suffering and resilience through the written word.

In *Sold* characters like Lakshmi and other characters are exploited. The reality of young girls like Lakshmi who having lived and are still living through exploitation discrimination, oppression and dehumanizing conditions is heart rending. Though the novel is a fictionalized account of what may be the life of some of such children forced to sex-trade, it truly represents the fate of hundreds of thousands of girls and women in Nepal as well as around the world. Lakshmi is sold and she is forced to involve in the sexual-activities for the payment of her familial debt. Mumtaz, the owner of the brothel, forcefully uses her

as the sexual slave. In return Lakshmi gets a meagre sum as her monthly remuneration. Mumtaz treats Lakshmi as a subhuman being no less than robots that are designed and programmed to work restlessly. In the context, the book mainly concentrates on exploration of the complications faced by the working-class people like Lakshmi and other characters who are subjugated and exploited in the world governed by monetary rational.

Sold is a powerful and emotionally impactful novel that follows the story of Lakshmi, a young Nepali girl who is trafficked into prostitution in India. The book sheds light on the horrifying realities faced by girls and women who are victimized by human trafficking and sexual exploitation. The novel portrays the trauma, hardships, and injustices that these young girls endure, highlighting the physical, emotional, and psychological toll of their experiences. Patricia McCormick's *Sold* addresses important themes such as human trafficking, gender inequality, and the exploitation of young girls, while also exploring the resilience and strength of its characters. The relevance of the trauma experienced by young girls and women in the context of human trafficking is central to the narrative, and the book raises awareness about this critical issue through its storytelling.

Abstract:

Cultural studies aid in comprehending the complexity of everyday life and the way that habits and beliefs are socially patterned and laden with values and meaning. A range of tools will be provided to analyse the production, circulation, and exchange of cultural practices and meanings. In Afghanistan's traditional and conservative society, superstitious beliefs are common, particularly in remote rural areas. The validity of their culture is maintained by the novelist through the use of magical and supernatural elements. The significance of her Afghan culture is being highlighted by the author. This research paper tries to analyse the feasibility of myth and superstitious beliefs in building culture.

Keywords: Myth, Ghursai game, Superstitious and Feminine

Cultural studies introduce you to critical approaches used in the study of a wide variety of cultural forms and practices. It aids in our comprehension of the complexity of daily life as well as the socialisation and value-laden socialisation of habits and beliefs. It will offer a variety of techniques to examine the production, transmission, and exchange of cultural practises and meanings. "Culture is a system by which meanings and ideas are expressed, not only in "art and learning," but also in "everyday behaviour," according to Raymond Williams. Cultural practises differ in every society. No one has the authority to determine the precise culture that must be adhered to by everyone. Cultures vary from one another.

Nadia Hashmi also tried to incorporate myths in Afghanistan. Superstitious beliefs are common in Afghanistan's traditional and conservative society, particularly in more remote rural areas. Here the novelist uses magical and supernatural elements to sustain the validity of their culture. She is stressing the importance of her Afghan culture. Through this, novel these cultural elements are passed on to the entire world. If it is not recorded by a literary person, it will be lost forever from the cultural history of Afghanistan.

Nadia incorporated mythology into this novel *One Half from the East*. It is a fascinating exploration of Afghan culture that is quite different from the rest. Every culture has its fables and myths. It has a lot of importance because research based on any subject always ends in these types of fables and myths.

Rostam or Rustom is a legendary hero in Persian mythology, the son of Zal and Rubada. His life and work were immortalized by the 10th-century Persian poet Ferdowsi in a book that contains pre-Islamic Iranian folklore and history. Rostam is best known for his tragic fight and killing of his son, without knowing who his opponent was. "I remember my mother telling us about a legend once—about Rostam's bow. The legend says that passing under a rainbow changes boys to girls and girls to boys. Even if a pregnant woman walks under the rainbow, the baby in her belly changes" (93).

I know I've been told that the myth about passing under a rainbow changing girls to boys is nothing but superstition. Still, a small part of me thinks that ever since I clung to those rocks for dear life and let the waterfall cascade over me, something has changed. (193)

The author presents superstitions and myths and cultural beliefs in the form of fables. She is not claiming that it is true but she is stressing the importance of her Afghan culture. It is left to the consciousness of the readers. In the middle of the novel, it is found that Obayda's father narrates their traditional fable about the magical rainbow that transforms one's gender while crossing it. Being an agricultural society, these fables are transferred from one generation

to another orally. Obayda was not ready to accept that the legend her father told her was not true. Her doubt can be understood by her dialogue with her mother. Obayda asks: “How do you know, Mother Have you ever passed under a rainbow why would everyone keep telling the legend if it weren’t at least a little true? And besides, I know it worked. I can already feel it” (156).

Obayd discusses his failed attempt to believe in the legend. It is clear from their conversation that they believe in the legend. Her sister even points out the possible mistake Obayd had made. “Maybe it did work. You were Obayd when you went there. The legend says it changes boys to girls and girls to boys. So maybe it changed you from a boy to a girl” (163).

The statement given by her sister even convinces the readers to believe in these superstitions. The condition of Obayd’s father also improved after getting his walking stick. But the family members want to believe that it happened because of the bacha posh tradition they followed. It is found that Obayd’s mother gave birth to a boy child. Therefore, the intention of turning Obayda into a bacha posh is fulfilled. They believe that it is the bacha posh that brought boy energy into the family with no sons. Here culture is providing solutions to their problems. Towards the end of the novel, it is identified, that Obayda realizes that it is only a superstition. Still, half of her doesn’t want to believe it. History, culture, and reality are entangled in this. Some amount of superstition is also associated with the Wizard hat in the novel. After the first failed attempt to reach the rainbow, Obayd told Rahim about the hat. He says “You’re not wearing your Wizard hat” (104). Rahim also admits that and believes in the superpower of the hat by saying “Yeah, wrong day to forget my hat. You know I got it right after I changed. I wear it almost every day” (104).

Obayd strongly believes that it is the Wizard hat that saved her from the scorpio stung on the journey to the camel's head. She also believes that it is the magical hat that saves her from the security of the tribal warlord. “And then it hits me. My hand touches Rahim’s hat, fitting so snugly on my head that it doesn’t fly off even as I race down the dirt road. It was magic” (137). Obayd considers that wizard hat as something special. “I knew there was something special about this hat. It made Rahim the way he was, tall and strong. What I didn’t know was that the Wizards hat could share some of that with me, too” (138).

The novel is set in modern-day Afghanistan. The setting of Afghanistan is particularly important to the arc of the novel. The playing of ghursai is also mentioned in the novel. It is one of the traditional games in Afghanistan. It is played in the countryside. In a ghursai game, children hold one foot in one hand and then try to knock their opponent. It is familiar to Afghans but not to people outside.

From analysing the cultural practices of Afghanistan, the researcher understood that the cultural practices in every society are unique. Nobody can judge that by attributing an inferior status to any of the cultures. Every cultural practise has its historical, socio-political and economic background. In this aspect, to criticise any cultural practise, one must know about all these factors.

Hashmi wins in proving that the bacha posh tradition is not dampening but it is a tradition that empowers young girls to understand their potential fully. Getting the right to speak, the right to get an education, and the right to work to earn money must be for everyone in society, no matter what. Women should also have the power to demand autonomy in decision-making. For all these, one must build self-consciousness. It is the self-consciousness of Obayda that made her climb the tall tree and build a walking stick for her maimed father, it is how she managed to go to the mountains all by herself. She did something that her sisters can’t. They can’t do all of these because they are confined to their biological gender and act feminine.

Abstract:

This chapter explores "Island of a Thousand Mirrors," a novel by Nayomi Munaweera, as a profound statement on the Sri Lankan Civil War. The author's personal background as a Sri Lankan-American, her creative writing expertise, and her intimate connection to the novel's themes add authenticity and depth to the narrative. The chapter delves into the novel's themes, including identity, belonging, resilience, and reconciliation, while also examining its narrative techniques and the impact of its symbolism and metaphors. A brief historical overview of the Sri Lankan Civil War provides context, highlighting its complex causes and key players. The chapter underscores the novel's role in humanizing the conflict, raising awareness, and fostering discussions about conflict literature and the enduring impact of war on individuals and societies. Ultimately, "Island of a Thousand Mirrors" stands as a testament to the enduring human spirit's capacity to heal, reconcile, and find hope amidst the darkest of times, making it a significant contribution to contemporary literature and a powerful witness to history and humanity.

Keywords: Civil war, identity, belonging, women, ethnic violence

Nayomi Munaweera's novel, "Island of a Thousand Mirrors," is a poignant and evocative exploration of one of the world's most protracted and devastating civil conflicts—the Sri Lankan Civil War. Munaweera, herself a Sri Lankan-American author, brings a deeply personal connection to the narrative, offering readers a hauntingly beautiful portrayal of the conflict's impact on the lives of its people. This chapter delves into the novel's themes, characters, and narrative techniques to gain a deeper understanding of the profound statement it makes about human resilience, healing, and the enduring quest for reconciliation in the face of profound tragedy.

Nayomi Munaweera's personal background-- born in Colombo, Sri Lanka, and later immigrating to the United States -- infuses her writing with a profound sense of cultural and emotional depth. Her journey as a Sri Lankan expatriate uniquely positions her to convey the complexities of identity, displacement, and trauma. Munaweera's academic background in creative writing and her master's degree from the University of Michigan further enhance her storytelling prowess. These aspects contribute to the authenticity and emotional resonance of "Island of a Thousand Mirrors."

The novel is set against the tumultuous backdrop of Sri Lanka's history, primarily the civil conflict. It weaves together the lives of two young women, Saraswathi and Yasodhara, representing opposing sides of the ethnic divide. These characters serve as lenses through which readers gain insight into universal themes such as love, loss, family, and resilience. We explore how Munaweera's lyrical prose captures the tapestry of Sri Lankan life, its landscapes, traditions, and the profound impact of the civil war on its people.

One of the central themes of "Island of a Thousand Mirrors" is the intricate interplay between identity and belonging. Through the characters' experiences, we analyze how they grapple with questions of who they are and where they fit in, particularly in a context of ethnic conflict. This theme underscores the human desire for a sense of home and belonging even in the midst of upheaval.

Munaweera employs a narrative technique that shifts between the perspectives of Saraswathi and Yasodhara. This narrative strategy provides readers with multifaceted views of the civil war, enabling a deeper understanding of the personal and emotional dimensions of the conflict. We examine how the characters' viewpoints offer unique insights into their experiences.

"Island of a Thousand Mirrors" portrays the remarkable resilience and strength of its characters as they confront adversity. We explore how both Saraswathi and Yasodhara navigate the profound losses and challenges brought on by the conflict. Their stories become a testament to the indomitable human spirit, highlighting the capacity to endure and heal in the face of tragedy.

In the latter part of the novel, themes of reconciliation and hope emerge. Munaweera invites readers to contemplate the possibilities of healing and understanding even in the aftermath of immense suffering. We discuss how the characters' stories intersect, demonstrating the potential for reconciliation and the enduring human yearning for a better future.

To contextualize the novel's themes, a brief historical overview of the Sri Lankan Civil War is essential. The Sri Lankan Civil War, which lasted from 1983 to 2009, was a brutal conflict between the government and the Liberation Tigers of Tamil Eelam (LTTE), a separatist Tamil militant group. The war was primarily rooted in ethnic tensions between the Sinhalese majority and the Tamil minority. It involved a series of violent clashes, including bombings, assassinations, and large-scale military operations. The conflict ended in 2009 with the defeat of the LTTE by the Sri Lankan government. However, it left a legacy of profound social and political divisions, human rights abuses, and significant loss of life, making it one of the most protracted and devastating civil wars in modern history.

"Island of a Thousand Mirrors" incorporates rich symbolism and metaphors to convey the impact of the civil war. Readers delve into the significance of symbols such as mirrors, glass bangles, birds, the sea, mangoes, and rain. These symbols add layers of meaning to the narrative, offering insights into the emotional and psychological toll of the conflict on both individuals and the nation.

The chapter concludes by emphasizing the role of "Island of a Thousand Mirrors" in raising awareness of the Sri Lankan Civil War and its consequences. The novel humanizes the conflict by presenting the personal stories of individuals and families affected by war. It encourages readers to explore the complexities of the conflict and its ongoing relevance. Furthermore, the novel's critical acclaim and recognition on the international stage have contributed to discussions about conflict literature and the impact of war on societies.

"Island of a Thousand Mirrors" is a compelling work of literature that transcends the confines of a civil conflict to explore profound human themes. Through Nayomi Munaweera's insightful storytelling, readers gain a deeper understanding of the enduring capacity of individuals and societies to heal, reconcile, and find hope in the face of adversity. The novel serves as both a literary masterpiece and a testament to the power of literature to bear witness to the truths of history and humanity.

Abstract

V.S. Naipaul's "A House for Mr. Biswas" explores postcolonial cultural complexities as the protagonist seeks identity and stability in Trinidad. Displaced and homeless, characters adopt colonizer norms, eroding their language and customs. This cultural assimilation blurs their religious beliefs, resulting in an ambivalent, conflicted sense of self. This article tries to explore the intricate challenges and nuances of postcolonial cultural dynamics that surround the protagonist in V.S. Naipaul's *A House for Mr. Biswas*. This enduring tension serves as a pivotal lens through which a complex web of cultural elements, identities, and conflicts are viewed.

Keywords: Postcolonial Cultural Conflict, fragmentation, integration

Introduction

In V.S. Naipaul's novel *A House for Mr. Biswas*, published in 1961, cultural conflict plays a central role in the life of the protagonist, Mohun Biswas. Set in Trinidad in 1950s, the novel explores the clash between the Indian cultural heritage of Mr. Biswas and the Westernized, colonial society in which he lives. Mr. Biswas is born into an Indian family in Trinidad, and from a young age, he is exposed to the traditions and customs of his Indian heritage. However, as he grows up and interacts with the colonial society, he finds himself torn between his roots and the allure of modernity. This cultural conflict is evident in his struggle to find his identity and his place in the world.

Postcolonial Cultural Conflict, Fragmentation and Integration

One of the most prominent symbols of this conflict is Mr. Biswas's quest to own a house of his own. In Indian culture, owning property is seen as a symbol of success and stability. However, in the colonial Trinidadian society, this is a challenging endeavor for someone like Mr. Biswas, who lacks the financial means and social status to easily acquire property. His efforts to build a house become a metaphor for his broader struggle to reconcile his Indian heritage with the demands and expectations of the Westernized world around him. Throughout the novel, Mr. Biswas faces discrimination and cultural misunderstandings as he navigates the complex terrain of Trinidadian society. He is often seen as an outsider due to his Indian background, and this sense of otherness exacerbates his cultural conflict. The tension and conflicts arise when an individual is caught between two different cultural worlds. Mr. Biswas's journey is a poignant exploration of the challenges of cultural identity and the desire for self-determination in a changing and sometimes unforgiving world.

Fragmentation serves as a lens through which the author explores the challenges of identity, cultural change, and the search for stability in a rapidly evolving world. Through the life of its protagonist, the novel paints a vivid picture of the complexities and disintegrations inherent in the human experience. At the heart of the novel is Mr. Biswas's relentless pursuit of a house to call his own. This desire for a home represents his longing for stability and a sense of belonging in a fragmented world. However, throughout his life, Mr. Biswas faces numerous obstacles and setbacks in achieving this goal. His quest for a house is marked by financial struggles, family conflicts, and cultural clashes, all of which contribute to a sense of fragmentation in his life. The fragmentation of Mr. Biswas's identity is another central theme. Born into a Trinidadian Indian family, he grapples with the clash of his Indian cultural heritage and the Westernized society in which he lives. This cultural disintegration leaves him feeling like an outsider, torn between two worlds. His attempts to reconcile these conflicting identities add depth to the theme of fragmentation.

The broader societal context in the novel also highlights fragmentation. Trinidad is depicted as a society undergoing rapid modernization and urbanization. Traditional customs and values are giving way to Western influences, resulting in a fractured cultural landscape. This transformation is seen in the decline of traditional Indian customs within Mr. Biswas's family and the rise of a more materialistic and consumer-driven culture. Family relationships in the novel are marked by fragmentation as well. Mr. Biswas's interactions with his extended family are often characterized by conflict and disunity, further emphasizing the theme of fragmentation within the family unit.

While the story primarily revolves around the struggles of the protagonist, Mohun Biswas, it also presents a nuanced exploration of integration, highlighting the complexities of reconciling one's cultural heritage with the dominant society's expectations. Through Mr. Biswas's journey, the novel underscores the challenges and aspirations of individuals seeking to find their place in a rapidly changing world. One significant aspect of integration in the novel is Mr. Biswas's desire to integrate into the societal norms and expectations of Trinidad, where he was born and raised. Despite his Indian heritage, he yearns to assimilate into the Westernized culture that dominates Trinidadian society during the colonial era. This desire is exemplified by his ambition to own a house—a symbol of success and integration into the Western middle-class lifestyle. At the same time, Mr. Biswas faces challenges to his integration from both the Indian community and the colonial authorities. He is often seen as an outsider within the Indian community due to his Westernized education and aspirations. Additionally, the colonial bureaucracy, represented by characters like Mr. Green and Owad, is a constant impediment to his integration into the broader society. Another layer of integration is Mr. Biswas's attempt to integrate into his own family. His relationship with his wife, Shama, and his children is marked by struggles, but it also reflects his desire for a sense of belonging within his own home. Despite the difficulties, he seeks to be a responsible father and husband and, in doing so, strives for integration into the domestic sphere. Biswas was indifferent to the customs. When Mr. Biswas's sister has escaped with Tara's worker, Tara swears not to mention her name forever since she has caused disgrace for the family, escaping with a yard boy and when Mr. Biswas is expected to get angry, "he felt no anger or shame." His sister, Dehuti that runs with a yard boy, disgraces Tara since "the yard boy is the lowest of the low" (p. 25). Throughout the novel, the house itself becomes a symbol of Mr. Biswas's quest for integration. He views it as the key to his integration into both society and his family, as owning a house represents financial stability and social status. His relentless pursuit of a house underscores his determination to achieve integration on his own terms.

Conclusion

In the novel, the central character Biswas embarks on a lifelong quest to acquire a home, symbolizing the broader plight of displaced individuals in Trinidad who lack a sense of belonging due to their displacement from their native land. This new environment leaves them feeling uncertain and unsettled. Consequently, they must forge a new sense of identity.

Abstract

This study on Padma Venkatraman's novel *A Time to Dance* (2014) analyses how resilience leads the protagonist to transcend the stereotypical limits attributed to disability, through the lens of disability studies. The novel clearly exhibits the protagonist Veda's struggles to regain her passion through her mental strength and hope. It portrays the themes of loss of identity, the resilience of people to overcome tragedy and the power of art to transform lives. It is a stunning novel about spiritual awakening where the power of art and above all the courage and resilience of human spirit succeeds in breaking all barriers created for disabled people.

Keywords: A Time to Dance, Padma Venkatraman, Disability, Performing Arts

According to Harvard Political Review website: "Disability should be considered an important perspective in the artwork, but also recognize that the disabled individuals have more to give than their disability." However, with the emergence of medical interventions, technology and disability activism, the status of disability and handicapped people in society have altered and transformed over time.

A Time to Dance (2014) is a captivating novel written by Padma Venkatraman. Veda is a classical dancer who gets injured in a bus accident, and her right leg had to be amputated below the knee, thus turning into a disabled person. Her dance teacher does not believe that she will ever dance again. However, Veda is passionate and is unwilling to abandon her dream and finds a new teacher who shares her hope. Though she must relearn even the most basic steps, his faith in her allows her to reclaim the art form that has brought her so much joy and ultimately breaking the stereotypes of the ableist world. Told through lyrical, evocative language, this is a powerful novel of loss, recovery, and resilience of the human spirit.

Disability Study: A Bibliography compiled by Anju Sosan George, Archana Sukumaran and Sruthylacshmi B Bhat gives a detailed definition of disability theory.

Disability Theory, also known as Critical Disability Theory examines, interprets and redefines 'disability' from multidisciplinary- medical, ontological, philosophical and cultural vantage points. This methodology interrogates ideologies connected to it, such as impairments, normativity, disability politics, stigma, and stereotypes. Disability theory attempts at a paradigm shift by de-pathologizing disability, interrogating assumptions and advocating inclusion. This includes challenging the traditional notions attributed to persons with disability and by deconstructing ableism, sexism, and racism. (13)

Once a person is disabled, the ableist society tends to define the human being based on his/her disability. After the accident, Veda's dance teacher believes that she will never dance again. "Veda, so many of us blessed with able bodies can't meet the demands of a professional dancer's life. May be for you it's time for a new dream" (Venkatraman 118).

The discrimination against disability is clearly visible in Uday Anna's attitude because while 'Disability' should actually make people realize the concept of social inclusion. Disability inclusion means understanding the relationship between the way people function and how they participate in the society and making sure everybody has the same opportunities to participate in every aspect of life to the best of their abilities and desires.

Author Padma Venkatraman makes use of philosophical and non-secular narratives in *A Time to Dance* to tell the story of Veda's conflict to repossess her passion for dancing. "Interestingly, an underlying theme of disability perspectives is that the lived experience of disability is always

already performative; indeed, many of us with disabilities understand our disabilities as per theoretical sense, but as an actual mode of living in the world.” (Sandahl) Performing Arts attain a new dimension when they are performed by disabled artist. This inspiring novel evolves through verses that sees the aesthetic beauty of India spirituality. The novel is also about a spiritual awakening and the bravery of unyielding human spirit.

Veda is an optimist person. She believes that she can rebuild her dance career. Also, she tried very hard to make it happen. The down sides to disability are not overloaded in the novel. Veda faces ableism from people around her, from strangers rudely asking her what took place to her leg to taunts from friends that are laced with slurs and horrible jokes to her dance teacher believing that she will no longer being a position to dance over again. Moreover, Veda must overcome ableist views that she has internalized: that she is useless, or lesser, or incomplete because of her disability.

At the same time, there are plenty of counterexamples to balance the ableist bits: Veda’s grandmother loves her unconditionally, the bus driver who drives the route to her school welcomes her back without drawing attention to her disability, her new teachers focus on what she can do and don’t act condescending toward her, she is shown professional dancers with prosthetic limbs who serve as role models to her, she meets other people who are disabled and living their lives, and she is reminded that the god Shiva dances in everyone and everything, so there is no one right way to exist or to dance.

Veda's first dance teacher will not teach the newly 'disabled' girl. But dancer Dhanam akka sees her as 'differently abled'. ‘Allow yourself to feel lost’, akka encourages Veda, because she has a lot of courage. Veda gets assigned as a student to Govinda, a young dance teacher who believes that meditation isn't about pushing yours body, it's about honouring the way you respect any other area within which god exists. Veda learns to dance spiritually as she falls in love with Govinda.

Veda refuses to let her disability rob her of her dreams, and she starts all over again, taking beginner classes with the youngest dancers. Then Veda meets Govinda, a young man who approaches dance as a spiritual pursuit. As their relationship deepens, Veda reconnects with the world around her, and begins to discover who she is and what dance truly means to her.

Veda finds a balance between her disability, her identity and dance, the art form through which she rediscovers herself. Society needs to acknowledge the elusive boundary between having impairment and being able-bodied. It should acknowledge that very few of us qualify as fully able-bodied along all dimensions of functioning throughout all of our lives. This is a stunning novel about the power of art and above all courage and resilience of human spirit. This novel proves that disability is not inability which stand in the way to success.

Abstract

This paper is an attempt to read Louisa May Alcott's novel *Little Women* (1868) from a liberal feminist perspective. The narrative plot follows the lives of the four March sisters and the details their lives from childhood to womanhood. The four sisters bloom into their youth with their own unique and dynamic talents. The stereotypical gender roles attributed to the girls along with a life of poverty puts them within the chains of social circumstances. The plot follows the sisters as they mature, fall in love, and find their place in the world. The four March sisters, Meg, Jo, Beth, and Amy, who all feel so real, allow readers to recognize themselves in them. The novel is a compelling narrative that proves that women can be heroes in their own stories, and that they can be bold, tenacious, and self-assured in who they are and what they want for their present and future.

Little Women, published in 1868, is a coming of age novel written by American novelist Louisa May Alcott. The novel is partially based on Alcott's own upbringing and is set in 1860s Massachusetts during the Civil War. Writing and sharing their stories is a way in which the female writers discovered their own voices, feminism advocates for equal rights and opportunities for men and women. It is about honoring the different experiences, identities, expertise, and strengths of women, and seeking to enable all women to realize their full potential.

Jo March is a central character in the novel. She is an aspiring author who strives to publish and have authorship of her writing in newspapers. She also wants to publish her novel. Jo is a fiery and outspoken lady who is determined to defy the expectations and gender roles imposed on her as a woman in the 1860s.

"Feminism is the place where in the most natural, organic way subjectivity and politics have to come together." says Adrienne Rich (Nagarajan, 206) Feminism with a liberal bent -Liberal Feminism - is simply the treatment of women and men on an equal footing. Women's legal rights, job opportunities, and education should be equal to men's. Liberalism is a set of ideologies that emphasize the importance of liberty and believe that a just state ensures individual liberty. Liberal feminists support this ideal and they function for the state, as well as women's freedom.

The children of the March family worked hard to meet their necessities and assist their mother; they plan to donate their hard-earned money to buy something for their mother as a Christmas present.

'Mother didn't say anything about our money,
and she won't wish us to give up everything.
Let's each buy what we want, and have a little fun;
I'm sure we grub hard enough to earn it,'
cried Jo, examining the heels of her boots in
a gentlemanly manner. (Alcott 6-7)

As indicated in the quotation above, this is a narrative of representation liberal feminism. It is defined as gender equality that liberates women from repressive gender norms. Liberal feminism resulted in advancements in the fields of Economics, civil rights, and self-fulfillment. The above context depicts how a woman who can meet her own wants by working hard and using the ability to her independence.

Geraldine Brooks reveals in Nancy Porter's video titled "Louisa May Alcott: The Woman Behind Little Women", "Louisa really was an early feminist. It is underappreciated how she was able to use her success to make her really a megaphone for feminist issues" (Porter). Gender is significant, and it does play a role in defining a person. Alcott does not ask the audience to overlook gender, but rather to see beyond the preconceptions that have kept the genders separated. Gender expectations and preconceptions in society, not biological sex, are what constrain a person. The novel's themes of female evolution and freedom are still valued, and the narrative has been rediscovered numerous times through its countless adaptations. Reading this novel allows one to engage with modern concepts about female authority, critical institutions, and the American literary canon, as well as nineteenth-century conceptions about patriarchal culture and women's culture, as Elaine Showalter puts it.

Abstract:

Jawan is a quintessential mass entertainer with no cliches spared but manages to convey sincerity to the audience. A high-octane action thriller which outlines the emotional journey of a man who is set to rectify the wrongs in society. Social messaging has become a defining characteristic of Tamil cinema and we see the same kind of messaging in Jawan. The film narrative is nothing new with its father-son revenge plot, vigilante trope and mother sentiments but in the current Hindi cinema landscape, it does come off as deeply political.

Keywords: Film, Entertainer, Narrative, Vigilante, Mother Sentiments

Jawan, directed by Tamil film director Atlee, where Shah Rukh Khan plays a double role as Azad and his army veteran father, Vikram Rathore. Vikram Rathore is falsely accused of being 'anti-national,' when he challenges arms dealer, Kali Gaikwad who supplies malfunctioning guns to the Indian army. He is unfairly killed by Kali and is believed to be dead. Meanwhile, Aishwarya, the wife of Vikram Rathore, is on the line for capital punishment after killing corrupt police officers who aided in ambushing her husband at her house. However, she's saved and given five years to live when it's discovered that she's pregnant with Azad. Azad grows up in the prison with his mother and other female inmates until the age of five. He witnesses his mother heading to the gallows after she extracts a promise from him to help the inmates who were put behind bars unlawfully. Later, Azad returns as a jailer to the same all-female prison and he gathers a team of six women (including Sanya Malhotra, and Priya Mani) to orchestrate elaborate hijackings and heists to tackle issues like farmer suicide, poor public healthcare, etc. Vikram Rathore too, who has been living an obscure life so far, joins his son to exact revenge and helps bring justice to everyone wronged by Kali Gaikwad.

Jawan and the female characters tried to highlight women, but it still misses the mark. However, the best efforts cannot be dismissed so easily because it did give significant space to a powerful female cop and an all-female heist team, at least on the surface. The representation of women prisoners was faulty in many ways (for instance, the fashionable clothes of the inmates), but it's still noteworthy that a mainstream film portrayed female inmates in a positive light. The setting of an all-female jail is very significant in the film because women who are imprisoned typically come from socially and economically underprivileged backgrounds. Thus, forming a heist team with these women is an attempt to give back their autonomy to right the wrongs done to them by themselves.

Shah Rukh Khan emphasised in several tweets in the run-up to the release that the empowerment of women was an important focus in Jawan. He also referred to it as "a film about women made for men," implying that he was knowingly participating in a ruse to use his star power to highlight women's professions and stories in a society and industry that is still struggling to accommodate women substantially. However, the sentimental flashbacks and tragedies of the women in the heist team eventually become another motive for Azad's larger revenge plan. Hence, in the end, all we get is another male saviour that we didn't need. While Shah Rukh Khan does manage to bring a sensitive touch to the male saviour, it's patronising all the same.

Another instance where the female representation lost its mark is Nayanthara's character, Narmada. Initially, her character is shown as a strong and diplomatic woman who is capable of handling a dangerous hostage situation calmly. It's also noteworthy that her character is a single mother by choice and her motherly side is never shown as something that could hold her

back from being a powerful cop. One of the action sequences where she holds her own against male opponents is one of the most memorable in the film. However, her character arc is derailed when she decides to marry Azad despite him being a stranger and like the rest of the heist team, her role is overshadowed by Shah Rukh in the second half of the film. This derailment is through no fault of the actor or the character, but the writer.

After watching the movie we can conclude that though *Jawan* is not doing anything particularly new or meaningful for female representation, “It’s a testament to the fact that any film can stage complex action sequences or massively energetic musical numbers entirely with women — but only if the filmmakers care to try.” The film provides a commentary on farmer suicides, collapsing public health infrastructure, corruption in the law-and-order machinery and the corruption that takes place in the defence industry. Commentary on such topics in a democracy shouldn’t be such a novelty but given our current political scenario, it is bold indeed. It points to the mutually beneficial relationship between private players and the government, which though exaggerated, reminds us of our reality. *Jawan*, in that sense, is also the perfect escapist film because it gives us the invincible vigilante who fights back against all the above-mentioned corrupt institutions and we gain some satisfaction in watching justice being served.

However, one of the things that sets *Jawan* apart from other righteous vigilantism films is the fact that Shah Rukh Khan is playing the vigilante. Shah Rukh Khan, as an individual, has come to mean something larger than life to everyone in India. Furthermore, as a well-known Muslim actor who makes no attempts at hiding his religion, his path has been difficult. In 2015, he alluded to growing intolerance in the country and how “not being secular is the worst kind of crime you can do as a patriot,” and these comments had him likened to an anti-national terrorist by politicians. From then on, Shah Rukh Khan has been fairly silent on all matters in India, probably due to self-preservation and rightly so. However, he finally seems to have broken his silence through the medium of cinema, which is what he knows best. The fact that he took on the role of a vigilante who is labelled as a terrorist within the film is a bold move considering how our audience projects an actor’s role onto the actor himself. On the other hand, it might also be a clever use of that tendency because both, Azad, the character and Shah Rukh Khan, the actor give us the same message: dissent is patriotic, and accountability isn’t anti-national.

In the final rousing monologue by Azad, he urges all citizens to be aware of their voting rights and how to use them to hold the people in power accountable. This is a distinct moment in the film where the sincerity of both Shah Rukh Khan and the makers of *Jawan* shines through. While they did portray an all-powerful hero fighting a corrupt government, at the end of the day, they passed the baton to the normal citizens of India to fight back. In that moment, they ground the audience in reality and ask them to be change-makers themselves. Therefore, in the grand scheme of things, *Jawan* might not be anything new but it’s a necessary wake-up call from the King of Bollywood himself and one could only hope that some of us heed it.

*Student, Postgraduate Dept. of English, St. Joseph's College Moolamattom, Thodupuzha

Abstract:

Dalit theory suggests that unaccepted individuals often outcastes, use politics to resist long-term hegemony, leading to the creation of Dalit literature. Om Prakash Valmiki's *Joothan* is the first Dalit autobiography in Hindi, highlighting the importance of Dalit consciousness in raising socially subjugated individuals' awareness of their oppression and representation in politics and education. The concept of a 'Dissident' is central to Dalit literature, as seen in Valmiki's account of the caste system's miseries and his struggle to survive. The novel emphasizes the importance of rewriting history and a new identity, highlighting the author's struggle to advance Dalits in society through literature and education. This dissertation aims to prove that Dalits are not inferior but deserving of better life and status, encouraging dissidence and resistance towards the caste system.

Keywords: Dalit theory, Dalit literature, Dalit consciousness, Dissidence, Caste system.

Introduction:

Joothan: A Dalit's Life is a significant work in Dalit literature, focusing on the journey of a boy from deplorable socio-economic conditions to prominence as an author and social critic. The dissertation is based on the theory of Dalit literature, which is the product of outcastes who face pressure and discover missile politics to combat long-term hegemony in India. It serves as a discursive addition to the socio-political movement of Dalits for social justice, with expressions like dissidence, Dalit consciousness, and identity serving as relating points for their rights and respect. Omprakash Valmiki is a prominent Hindi-speaking Dalit, known for his autobiography *Joothan: A Dalit's Life*, which chronicles his experiences as a Dalit, his struggles to overcome the social caste system, and his eventual triumph. His work challenges readers to participate in the global mission of human liberation.

The text presents a picture of Indian society, highlighting the economic and moral effects on a significant portion of contemporary India. It proposes to fight discrimination and free previously oppressed castes and classes, making strong arguments against the caste system, which is still in place in most of India. The article aims to prove that Dalits are not inferior but deserving of better life and status. Dalit students suffer humiliation and discrimination by upper caste people in educational and social spheres, and higher-caste people feel superior to themselves and lower-class people feel inferior in marriage affairs.

Dalit consciousness and dissent against social injustice are important, as there are many laws, rights, and organizations for their upliftment. Dalit consciousness is an attempt to raise the consciousness of socially subjugated people in the lowest rung of the varna system, focusing on their oppression and representation in politics and education. It is a notion that comes up regularly when Dalit politics and identity are discussed. The novel *Joothan* details how Valmiki awakened Dalit consciousness through his life, demonstrating how dissent is an opinion, ideology, or sentiment that opposes a community-held belief or directive enacted by a government or political organization. 'Dalit consciousness' is discussed by detailing their marginalized issues, his horrific experiences, and valiant struggles to overcome the social caste system.

The text *Joothan* is absolutely a dissent and Omprakash Valmiki is a dissident to caste-based society. Valmiki shared assertive protest to survive in the caste system and struggle to achieve the new directions for life and new identity. In order to forge a unique, distinct, and dignified identity for himself, Valmiki resolves to do with some of his community's traditions as well as rites of the Hindu faith. He eases to worship pigs after getting married, despite his

father's condemnation of his actions. Joothan is a manifesto for the radical transformation of society and of human awareness.

Joothan, is a multifaceted text that offers solace and criticism to his people, while also contributing to the archive of Dalit history. It highlights the partial fulfillment of the promises made in the constitution of Independent India and the ways Indian democracy has provided escape from the realities it reflects. The author invites Dalit voices to join the chorus of voices clamouring for their status under the sun, highlighting the complex relationship between fanaticism and religious caste structure in India.

Literature plays a crucial role in promoting equal opportunities and eradicating inhumanity based on caste, creed, religion, race, and ethnicity. It is essential to consider the voices of marginalized communities and their reflections in literature, as it offers equal opportunities and eradicates inhumanity. The slave community in America, despite losing their language, history, and culture, created a new culture like jazz, establishing identity. Therefore, it is essential to evaluate Dalit literature using different approaches and standards for a better humanity.

Abstract

The processes which happen in a shorter timescale i.e. less than nanoseconds are called ultrafast processes. There are many processes in nature which happens much faster than human perceptions. We, humans, can imagine things happening at time scales that are of ms or even μ s. The unfolding of a protein happens with a time scale of μ s to ns (10^{-9} s). Some molecules change their conformation at a time scale of ns to ps (10^{-12} s). Molecular vibrations (phonon modes) relax at a time scale (Schall & Jepsen, 2000) shorter than ps to fs (10^{-15} s). Most of the electronic processes happen in the fs time scale (K. T. Kim, 2016). It is in this scenario that scientists have thought about studying magnetic phenomena in the femtosecond time scales.

Since electronic relaxations happen in the fs time scales (J. Kim et al., 2014) scientific world was curious about what can happen to the magnetism and magnetic relaxations in the ultrashort timescales. It is in this wake that Beurepaire and a group in France study the dynamics of magnetisation when excited with a femtosecond laser pulse (Beurepaire et al., 1996). This started a new field of physics called ultrafast magnetism. This study followed several studies from the Radboud University, in the Netherlands giving rise to newer phenomena (Kimel & Zvezdin, 2015)(Kimel et al., 2005).

The French group studied NiO thin films using the femtosecond pump-probe technique. In this method, the material under study is being pumped by a beam of the fs laser and the response of the system was studied using another low-intensity probe beam which was spilt from the earlier mentioned pump beam with a time delay. The typical power ratio of the pump to probe is 19:1. The time delay is induced by a delay stage which introduces a change (increase) in the path length of the probe beam from which the delay at which the probe is measuring the system response can be calculated. The method is a stroboscopic one which resembles the earlier method of movie recording using film. The system response after the excitation with the pump is measured as a function of the time delay between the pump and probe. The magnetic specificity of the measurement can be brought about using the time-resolved magneto-optic Kerr effect (TR-MOKE) setup which measures the polarisation sensitivity of the sample as a function of the time delay.

Magneto-optical Kerr effect ensures that the response of the system is basically due to the change in the magnetic response of the thin film shortly after the femtosecond pulsed laser excitation. The system can be modelled using three reservoir systems in which the short pulse excitation leads to the generation of hot electrons. This system of hot electrons then transfers its energy to the vibrational modes, i.e. phonons of the thin film. Both hot electrons and the phonon reservoir system transfer their energy to the spin system which goes from an ordered state into a disordered state with a reduction in the magnetisation. All these changes happening to the system can be mapped as a function of the time delay between the pump and probe due to the high resolution of the system with an accuracy of up to 30 femtoseconds (characterised by the width of the laser pulse typically <30 fs that can be ensured by taking the autocorrelation of the pulse).

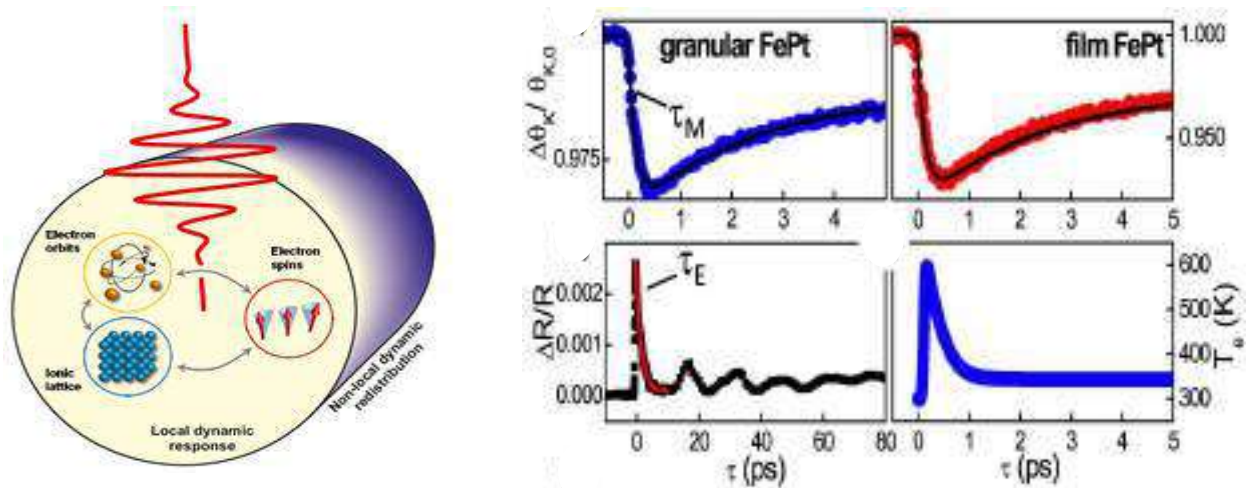

Figure 1 The three systems which take up the energy from the laser pulse and give rise to the magnetisation dynamics (image adapted from reference no.10). The right-hand side of the image shows graphs of the time-resolved magneto-optical Kerr effect (top) from two samples (i) granular FePt and (ii) thin film FePt and time-resolved reflectivity measurements (bottom) of the two samples. (adapted from reference 11)

As one can see from the time-resolved reflectivity measurements the relaxation of the hot electrons into thermalised electrons happens within a few pico-seconds (bottom graphs in figure 1) for both granular FePt sample and FePt thin films. The time-resolved response of the thermalisation of the FePt granular film shows some oscillating behaviour probably due to the creation of some kind of thermal relaxation channels from time to time due to the discontinuities in the sample structure. These sorts of samples are granules with some carbon coating in between them with a perpendicular magnetic anisotropy (typically employed for heat-assisted magnetic recording.).

The time-resolved MOKE measurements (top graphs in figure 1) show that immediately after the laser excitation within 250 fs the system loses its magnetisation (demagnetises) and after 1 ps the system starts regaining its magnetism by remagnetisation. This can be done due to the exchange interactions coming into play rather than the dipole-dipole interactions in the system which could supposedly happen at a much longer time scale. Thus, from the TR-MOKE measurements of the magnetic films of interest one can get an idea of the time scale of exchange interactions in the system. The details of the measurements can give much more insight into the sample which we are not discussing in this chapter. It was observed that the system regains its magnetism almost completely (>90%) by 150 ps.

Abstract

Carbon is in general thought to be black apart from some exceptions such as the case of hard white diamonds (Klein & Cardinale, 1993). Even the ensembles of carbon nanotubes, one of the earliest nanoforms of carbon are black. But interestingly some of the nanotubes with specific rolling (chirality) show different colours when they are in suspension. This interesting optical property originates from their electronic structures as discussed in detail in the chapter.

Carbon is one of the most exciting elements due to its tetra (4 valence electrons) valency. The four valence electrons in carbon can form different types of bonding such as sp , sp^2 and sp^3 depending on how many s and p orbital electrons are involved. One of the most common and cheap forms of carbon, graphite forms sp^2 hybrid bonding whereas diamond is formed by sp^3 hybrid carbon. Graphite is formed by a 2-dimensional sheet of honeycomb structured carbon arranged in a plane namely graphene (John et al., 2011). Nanotubes are made of this graphene layer rolled up into certain tubes which are called carbon nanotubes.

Figure 1 The vector labelled L shows the chiral vector (C_h) whose length gives the circumference of the nanotube (L is perpendicular to the axis of the SWNT) in the graphene lattice. The dashed lines show two of the many possible directions that L can have and the resulting chirality of the nanotube is labelled to each of the dashed lines namely armchair (chiral angle is 30°) and zigzag (chiral angle is 0°). (Image has been taken from the reference (Castro Neto et al., 2009))

Figure 3. The electronic structure of graphene (Novoselov et al., 2005)

To understand this variation in the electronic structure one must look at the electronic structure of graphene itself as given in figure 2a. The energy vs wavevector diagram of graphene shows interesting properties near one of its symmetry points called K point which shows a linear relation between E and K. Usually in semiconductors the E vs k diagram is parabolic. This linear relation is what makes graphene interesting in terms of its electronic property giving rise to a non-negligible population of charge carriers near the Fermi level and their highest electron mobility around these symmetry points. When the graphene gets rolled up into certain angles, not all energy values are permissible due to confinement in one more direction, ie it has turned from a 2D object to a 1D object which has an electronic structure similar to that of a one-dimensional potential well.

Fig. 3 Electronic structure of semiconducting SWNT. The image on the left-hand side shows the energy eigenvalues plotted against the momentum values centered around the K-point. The solid lines show the energy values corresponding to the allowed momentum values of the semiconducting nanotube. The right-hand side of the image shows the representative electron density of states of such a nanotube. (Image is adapted from the source: http://en.wikipedia.org/wiki/Ballistic_conduction_in_single-walled_carbon_nanotubes)

This gives rise to certain specific energy levels which characterise the nanotubes namely van Hove singularities in electronic energies, which are typical for carbon nanotubes. When a nanotube changes its rolling due to the change in the constraints the positions in the energy axis of these singularities (Liao et al., 2018) change and hence the optical property associated with the transition between these energy levels. Some of the van Hove singularities even pass through the Fermi level, and hence those nanotubes fall in the category of metallic nanotubes. So, they can be metallic, semiconducting and with very many colours depending on the wavelength in which they absorb to have an electronic transition between these energy levels. So, in a nutshell, they can have very many colours depending on the rolling once they are isolated which is why they are colourful in suspensions.

Abstract

Attitudes towards drugs and alcohol among middle-aged individuals can vary widely and are influenced by a range of factors, including personal experiences, cultural norms, social influences, and education. Here are some common attitudes and considerations related to drugs and alcohol in the middle-aged population: According to WHO “Stress can be defined as a state of worry or mental tension caused by a difficult situation. Stress is a natural human response that prompts us to address challenges and threats in our lives. Everyone experiences stress to some degree. The way we respond to stress, however, makes a big difference to our overall well-being”.

Keywords: Drugs, Alcohol, Middle aged people

Introduction

Stress is our body's natural physical and mental response to challenges or changes. It may help you overcome obstacles and push yourself to new levels of personal growth. When your body's stress response system starts malfunctioning, though, the same feelings can become barriers and limit your ability to perform at your best. Research has even shown that stress can trigger or aggravate several conditions and impair the functioning of different body systems there are so many things that can trigger the fight-or-flight response, which is your body's natural reaction to stress. When something or someone triggers the stress response, your body goes into immediate action to either confront the threat or flee. Physically, when you feel stressed, what you're feeling is your nervous system signaling a flood of hormones to be released from your adrenal glands, such as cortisol (the stress hormone) and epinephrine (adrenaline). Adrenaline is responsible for the physical symptoms you experience, such as a rapid heartbeat. (Pugle, 2021)

Drug addiction, also called substance use disorder, is a disease that affects a person's brain and behavior and leads to an inability to control the use of a legal or illegal drug or medicine. Substances such as alcohol, marijuana, and nicotine also are considered drugs. When you're addicted, you may continue using the drug despite the harm it causes. Drug addiction can start with experimental use of a recreational drug in social situations, and, for some people, drug use becomes more frequent. For others, particularly with opioids, drug addiction begins when they take prescribed medicines or receive them from others who have prescriptions. The risk of addiction and how fast you become addicted varies by drug. Some drugs, such as opioid painkillers, have a higher risk and cause addiction more quickly than others. As time passes, you may need larger doses of the drug to get high. Soon you may need the drug just to feel good. As your drug use increases, you may find that it's increasingly difficult to go without the drug. Attempts to stop drug use may cause intense cravings and make you feel physically ill. These are called withdrawal symptoms.

1. **Diverse Attitudes:** Middle-aged individuals have diverse attitudes toward drugs and alcohol. Some may have adopted more conservative or abstinent views, while others may maintain more permissive attitudes based on their personal experiences and values.
2. **Cultural and Generational Influences:** The attitudes of middle-aged people can be influenced by the cultural and generational context in which they grew up. For example, individuals who came of age during the counterculture movements of the 1960s and 1970s may have different attitudes toward recreational drug use than those who grew up in different cultural climates.

3. **Health and Well-Being:** Many middle-aged individuals prioritize their health and well-being. As a result, they may be more cautious about substance use and its potential health risks, particularly because they may be more aware of the long-term health consequences.
4. **Parenting Concerns:** Middle-aged individuals who are parents often have concerns about their children's exposure to drugs and alcohol. This concern may influence their attitudes and behaviors, leading them to adopt stricter views on substance use.
5. **Personal Experiences:** Personal experiences with drugs and alcohol, whether positive or negative, can significantly shape middle-aged individuals' attitudes. Those who have experienced addiction or witnessed its effects in their families or communities may have more negative views on substance use.
6. **Changing Social Norms:** Middle-aged individuals may experience changing social norms and attitudes regarding drugs and alcohol. Society's views on these substances have evolved, impacting how they are perceived and used.
7. **Education and Awareness:** Those who are well-informed about the risks and consequences of substance use may be more likely to adopt more cautious attitudes. Education and awareness campaigns can influence these perspectives.
8. **Stress and Coping:** Some middle-aged individuals may turn to substances like alcohol as a means of coping with midlife stressors, such as work-related pressures, family responsibilities, or the challenges of aging. Attitudes may differ based on the role substances play in their coping strategies.
9. **Peer and Social Influences:** Social networks and peer groups can have a substantial impact on middle-aged individuals' attitudes toward drugs and alcohol. Those surrounded by friends or acquaintances who engage in substance use may be more accepting of such behavior.
10. **Legal and Regulatory Factors:** Laws and regulations governing substance use can also influence attitudes. In places with strict regulations, attitudes may be more conservative, while in regions with more permissive laws, attitudes may be more relaxed.
11. **Balancing Recreational Use and Responsibility:** Middle-aged individuals may attempt to balance the desire for recreational enjoyment with their responsibilities as adults, such as work and family obligations. This can lead to more moderate and controlled attitudes toward substance use.
12. **Counseling and Support:** Middle-aged individuals with substance use issues may seek counseling or support groups to address their attitudes and behaviors. Professional guidance and peer support can be pivotal in changing attitudes and promoting recovery.

Conclusion

Attitudes toward drugs and alcohol among middle-aged individuals are influenced by a complex interplay of factors, including personal experiences, cultural and generational norms, health concerns, parenting roles, and social influences. These attitudes can be dynamic and may evolve as individuals encounter new experiences and challenges.

Abstract

The role of libraries and information centers has undergone considerable change in modern society. The library is no longer just a centre for books; it has become a social, cultural, educational, and recreational hub. Libraries play a crucial role in society by serving as hubs of knowledge, information, and culture. They are essential institutions that provide a wide range of services and resources to individuals and communities. Here are some key aspects of the relationship between libraries and society.

Keywords: Library, Information Centre, Society

Introduction

Libraries are a crucial infrastructural pillar for the development of a country and society. It houses treasures of information from the past and present which can be utilized by the readers and members to not only receive the information they seek but also discover newer sources of information. It would not be wrong to call libraries the informational data banks of human culture. Libraries are stocked with both literature of the past and of the present.

'Library' originated from the word "libraria" which denotes a place for books in Latin. The word has evolved from 'liber' which is a Latin word for book. As per the definition of the Oxford Companion to the English Language – "Library is a collection of books, periodicals and/or other materials, primarily written and printed." Harrod's Librarian's Glossary and Reference Book, a directory of more than ten thousand words has provided multiple definitions for the term.

- (a) An assemblage of books and various literary materials that can be used for reference, reading, studying or discussing.
- (b) An assigned space, building or set of rooms allotted for housing books for usage.
- (c) Placement of books provided by a single publisher on varied subjects.
- (d) A space with a collection of movie flicks, pictures and other items like CDs and tapes for games and programming.

A library may be defined as a place that houses material which can be literary or non-literary for borrowing, reference or studying.

Importance of Library

Every society needs to have a library so that the experiences and thoughts of our ancestors can be easily available. The library has many important functions to play:

1. The task of collecting and providing material both books and non-books to the public.
2. The library plays an important role in spreading awareness in society as the material stored in the library is used by people. I
3. It is a source for nurturing and promoting information, education, and values.
4. Helps in self-educating people in society as they have access to varied types of material.
5. The library not only acts as a preserver of cultural and literary legacy for future generations but also becomes a provider of information to research the past.
6. Make available trustworthy material for its users. The information is available to all without any disparity based on age, status or caste.
7. The collected resources help in progressive social conscience and enrich the life of the people of the society.

The library plays an important role in the cultural development of society as it connects the past and present ethos and thus Library became a Social & Cultural Organization.

Library as a Social and Cultural Organization

In the present era, the Role of the Library and Information Centre changed to a Social & Cultural Organization and thus it provides

Access to Information - Libraries are often the primary source of free, accessible information for people. They provide books, periodicals, digital resources, and more, making knowledge available to all, regardless of their socioeconomic status.

Education: Libraries support education by offering a wide range of materials that help people learn and grow. They are essential for students of all ages, from young children learning to read to adults pursuing lifelong learning.

Cultural Preservation: Libraries serve as repositories of cultural heritage. They house rare and historical documents, manuscripts, and records, preserving a society's history and culture for future generations.

Community Centers: Libraries are more than just book depositories. They often function as community centers, hosting events, workshops, and activities that bring people together. They provide a safe and welcoming space for various community groups.

Digital Access: In the digital age, libraries have adapted to provide access to digital resources, including e-books, online databases, and public internet access. This ensures that even those without personal computers or internet connections can access digital information.

Promoting Literacy: Libraries play a vital role in promoting literacy, helping individuals improve their reading and writing skills. They often offer literacy programs for children and adults.

Equal Opportunity: Libraries promote social equity by offering resources and services to everyone. They bridge the digital divide, provide job search assistance, and support those who may not have access to educational resources at home.

Research and Innovation: Libraries support research and innovation by providing resources for academics, students, and professionals. They often offer interlibrary loan services, giving researchers access to materials from around the world.

Freedom of Information: Libraries defend intellectual freedom by providing a platform for free expression and access to a wide range of ideas and perspectives. They often resist censorship and support the freedom to read.

Digital Literacy: In the age of information overload, libraries also teach digital literacy. They help individuals navigate the internet, evaluate information sources, and use technology effectively.

Adapting to Change: Libraries evolve with society. Many have embraced technology and new media to remain relevant and continue to serve the changing needs of their communities.

Environmental Sustainability: Libraries promote sustainability by offering resources on environmental topics, hosting eco-friendly events, and often serving as recycling and information centers for green initiatives.

Conclusion

Libraries are vital components of society that serve as information hubs, educational centers, community spaces, and champions of cultural preservation, literacy, and intellectual freedom. They adapt to changing times, continuing to play a crucial role in modern society.

Abstract

Self-confidence among adolescents is a critical aspect of their development. It plays a fundamental role in shaping their self-esteem, decision-making, social interactions, and overall well-being. Here are some key points to consider when discussing self-confidence in adolescents:

Keywords: Self Confidence, Single, Adolescents

Introduction

Self-confidence is a crucial aspect of an individual's emotional and psychological development, particularly during adolescence a transitional phase between childhood and adulthood. Adolescence is marked by significant physical, cognitive, and social changes, leading to a heightened need for self-assurance and identity formation. During this time, young people may encounter various challenges that can either boost or hinder their self-confidence. Understanding the factors influencing self-confidence in adolescents is essential for fostering a positive self-image and empowering them to navigate life's complexities with resilience and assertiveness. Sohi (1994) Self Confidence is not necessarily a general characteristic that pervades all aspects of a person's life. Typically, individuals will have some areas of their lives where they feel quite confident, e.g. academics, and athletics, while at the same time they do not feel at all confident in other areas, e.g. personal appearance, social relationships. Many factors affect the development of Self-confidence. Parent's attitudes are crucial to children's feelings about themselves, particularly In children's early years. When parents provide acceptance, children receive a solid foundation for good feelings about themselves. If one or both parents are excessively critical or demanding, or if they are overprotective and discourage moves toward independence, children may come to believe they are incapable, inadequate or inferior. However, if parents encourage children to move toward self-reliance and accept and love their children when they make mistakes, children will learn to accept themselves and will be on their way to developing self-confidence.

Factors Influencing Adolescents Self-confidence

Social Support: Positive relationships with family, friends, and mentors can boost confidence and provide emotional support. **Peer Influence:** Adolescents may be influenced by their peers' opinions, which can either enhance or diminish self-confidence. **Academic Achievement:** Success in school and extracurricular activities can positively impact self-confidence. **Physical Appearance:** Body image and physical appearance play a role in how adolescents perceive themselves. **Parenting Style:** Parental encouragement, praise, and guidance can significantly influence self-confidence. **Past Experiences:** Positive experiences and accomplishments can contribute to higher self-confidence, while negative experiences may have the opposite effect. **Personality Traits:** Some personality traits, like optimism and resilience, can contribute to greater self-confidence. **Cultural and Ethnic Background:** Cultural values and experiences may shape how adolescents view themselves. **Mental and Emotional Health:** Mental well-being and emotional stability can impact self-confidence levels. Sohi (1994)

Barriers to Self-Confidence:

1. **Fearness:** It is the obstacle to self-confidence. It can be either fear of failure or fear of Ridicule. Failure should be taken as an initial step toward winning. Success is never ending and failure is never final. It is better to do something imperfectly than do nothing flawlessly.

Fear and ridicule arise because of comparison. Compared with others is to Be avoided. Forgetting and forgiving are more essential.

2. Inferiority complex: It is another obstacle that arises due to unfair comparison. The only way by which one can come out from this barrier is by thinking of one's strengths rather than weaknesses.

3. Worrying: It is a predominant factor that attests to one's self-confidence severely. It is to be understood that worrying will never solve the problem. Worrying would make the problem more complex. Personality would be affected adversely by worrying and if one's Personality is lost everything will be lost.

4. Negative thoughts: These are another kind of barrier to self-confidence. One should try to replace negative thoughts with positive thinking. Negative thoughts generally arise due to the lack of information, lack of familiarity, and lack of recognition.

5. Procrastination: Procrastination robs one's confidence by keeping him/her from being at one's best. Every time one leaves something to be done at the last minute, it will never be as good as it could have been. If one is going to be at one best needs to determine priorities and plan their task accordingly.

6. Indecision: The ability to make decisions is a must for building confidence. Indecision In many situations can paralyze one and render him/her ineffective. One can change this by giving oneself deadlines to make a decision and sticking to it. One can always change one's decision if new information warrants a change, but waiting to decide until everything is perfect will immobilize him/her. The perfect time will never come.

7. Doubt: It is probably the underline problem with certain barriers i.e. fear, worry, Indecisiveness etc. comes from one's doubt in own ability Talniya (1997).

Conclusion

Self-confidence is a critical aspect of adolescent development. It is influenced by various internal and external factors and can have a profound impact on an adolescent's overall well-being and success. Supporting adolescents in building and maintaining healthy self-confidence is essential for their personal and social development.

Abstract

The major objective of the study was to evaluate the farm stress of small-scale farmers in the Idukki district. The study was conducted in the Idukki district. A convenient sampling method was used in the study. Around 200 small-scale farmers of the Idukki district were included in the study as the sample. The researcher used the descriptive research design. Major tools for data collection were a demographic data sheet and, a farm stress inventory (FSI) scale. Statistical procedures such as mean, standard deviation, cross tab, t-test, ANOVA, and correlation were used in the study.

Keyword: Farm Stress

Introduction

During the last 25 years, the agricultural sector has gone through a lot of changes and it has also been found to be one of the potential areas for stress. Greater use of automation technology, more use of organic production, decreased prices for agricultural products and new complicated legislations have made the lives of farmers more stressful. This study is an attempt to find out the potential factors that cause stress and make the life of the farming community more miserable. Internationally agricultural sector is facing a lot of changes due to climate change affecting the future of the farming community leading to significant and unexpected fluctuations in the price of food production in farming.

Small-holder farmers are vital for India's agriculture and rural economy. Small-holder farmers - defined as those marginal and sub-marginal farm households that own or/and cultivate less than 2.0 hectares of land - constitute about 78 percent of the country's farmers (Agricultural Census 1990-91). These small-holders owned only 33 percent of the total cultivated land; their contribution to national grain production was nonetheless 41 percent. Their contribution to household food security and poverty alleviation is thus disproportionately high - and is increasing. Moreover, as the national population increases, so does the number of small holdings. Small-scale/smallholder agriculture is defined in different ways that vary from country to country. The most widely used definition of smallholder refers to those farms of less than 2.0 hectares (HLPE 2013, IFAD 2013). However, in common parlance, the term is often used to refer to any farmer who is not large-scale and not very financially well off. As we will discuss, when it comes to understanding who is producing how much of the global food supply distinguishing between different scales and segments of "small-scale" becomes exceptionally important (Christen and Anderson 2013).

Small-scale farming systems are often more environmentally sustainable. Small-scale farmers often have greater levels of attachment to local landscapes and ecosystems. Sustainable, nature-based practices such as organic agriculture, crop rotation, and integrated pest management permaculture rely on the wealth of localized environmental knowledge that small-scale farmers possess. Small-scale farming also contributes to culture and community. Communities that revolve around small-scale farming represent a rich and diverse cultural heritage, encompassing art, music, history, and architecture. This kind of farming is also a rich

source of traditional knowledge, offering solutions for balancing food production, livelihoods, and the natural world.

Over the past decade, the farming community has been experiencing a high level of uncertainty, frustration, and challenge. Some of the challenges facing farmers include high fluctuation in price, automation, financial problems, etc., today farm families are working in a social and economic environment that is more challenging than ever before, and these pressures can cause a high degree of stress within many farm families. By the very nature of farm work, a lot of our daily lives are not under our control. For instance, humans have no control over the weather, market prices, or interest rates. The equipment can break down at any time. This constant stress that they experience will lead to physical, emotional, and behavioral problems. Some ways have to be identified to reduce or remove the stress of the farm community. Reducing farm stress among farm families is the need of the day. This research explores how stress affects farming communities and analyzes the impact of demographic factors on farm people's perception of stress.

Results & Discussions

The result revealed that there is a significant difference in the farm stress of small-scale farmers based on bank loans. It suggests that farm stress is not uniform among small-scale farmers; it varies depending on their financial situations, specifically whether they have taken a bank loan. Farmers who have taken bank loans may experience more stress due to concerns about loan repayment, interest rates, and financial stability. In contrast, those without bank loans might have less financial pressure, resulting in lower farm-related stress. The research result highlights the potential financial risks and decisions faced by small-scale farmers. Taking a bank loan is often a strategic decision to invest in the farm, but it can also introduce additional financial pressure.

The research suggests that small-scale farmers do not experience uniform levels of farm stress. Instead, the presence of other income sources has a discernible impact on the degree of farm-related stress. The data implies that small-scale farmers who have additional sources of income, such as off-farm employment, investments, or other businesses, experience a different level of farm stress compared to those who rely solely on income generated from farming activities. The research result underscores the potential financial stability and decision-making capacity of farmers with diverse income sources. Those with multiple income streams may be in a better position to make informed decisions, manage risks, and withstand financial setbacks.

There was no influence of farm stress on small-scale farmers based on gender. In the context of the study, gender does not play a significant role in determining the degree of farm-related stress experienced by small-scale farmers. Both male and female farmers reported similar stress levels. The data implies that small-scale farmers, regardless of their gender, face similar stressors and challenges related to farming. This suggests that factors other than gender, such as access to resources, agricultural practices, and external influences, may be more prominent in influencing farm stress.

The research implies that farm stress is not directly tied to the size of the land. Small-scale farmers experience similar levels of stress regardless of whether they have more or fewer acres under cultivation. The data suggests that factors other than land size, such as market conditions, crop choices, weather, access to resources, or personal financial circumstances, may have a more significant impact on farm stress among small-scale farmers. The research

result indicates that the size of the land, whether it increases or decreases, does not significantly influence the farm stress experienced by small-scale farmers. This finding highlights the complexity of farm stress and the importance of considering various factors that contribute to the well-being of small-scale farmers in agricultural policy and support programs.

Conclusions

The research sheds light on the challenges and stressors faced by small-scale farmers in the Idukki District, highlighting the need for comprehensive support mechanisms that address the specific factors affecting their well-being. These findings can serve as a basis for the development of targeted interventions and policies to alleviate farm stress and enhance the resilience of small-scale farming communities in the region.

Abstract

The primary objective of the study was to evaluate peer pressure and emotional expressivity among adolescents. The study was conducted on a group of 300 adolescents, including both boys (N=152) and girls (N=148). A convenient sampling method was used to select the sample. The present study tried to find any significant difference in adolescents' peer pressure and emotional expressivity concerning their demographic details. The researcher used self-prepared questionnaire, the Peer Pressure Scale (2016) developed by Singh and Saini and the Berkley Expressivity questionnaire (1995) developed by Gross and John. The data was collected using the survey method. The statistical procedures used to analyse the acquired data were the 't' test, ANOVA, and correlations.

Keywords: Peer Pressure and Emotional expressivity

Introduction

Adolescence is a critical period of development characterized by numerous social, emotional, and psychological changes. According to the World Health Organization (WHO), adolescence is defined as a phase of life between 10-19 years of age characterized by physical growth, and emotional, psychosocial, and behavioral changes, thus bringing about transformation from childhood to adulthood. The word adolescence is derived from Latin word 'adolescere' meaning "to grow up" or "to mature." During this phase, adolescents strive to establish their identity, navigate complex social interactions, and conform to societal norms. Among the myriad of social influences, peer pressure holds a significant place in shaping adolescent behavior and emotional expressivity. This research focuses specifically on the interplay between peer pressure and emotional expressivity, exploring how adolescents' emotions and expressions are influenced by their peers. Adolescents' emotional expressivity can have profound effects on their well-being, self-esteem, and social interactions. Understanding how peer pressure impacts emotional expressivity is crucial for comprehending the dynamics of adolescent development and designing interventions to support their emotional well-being.

According to Castrogiovanni (2002) a peer group is defined as "a small group of similarly aged, fairly close friends, sharing the same activities". In general peer groups have two to twelve members, with an average of five or six members. Peer group provides a sense of security and they help the adolescent to build a sense of identity. Relationships are resources that buffer one from stress and are instruments for both cooperative and competitive problem-solving. Well-functioning relationships have a bearing on mental and physical health and well-being (Reis & Collins, 2004). One type of such relationship is the relationship with peers. Peer relationship refers to a relationship that involves mutual knowledge, esteem, and affection (Piaget, 1965).

Peer pressure is the feeling that someone of your age is pushing you towards making a certain choice, good or bad. It is a term used to describe how an adolescent behaviour is influenced by

other adolescents. It is the influence that a peer group exerts that encourages others to change their attitudes, values or behavior to conform to the group norms. It is commonly associated with episodes of adolescent risk-taking such as drug abuse, sexual behavior and reckless driving because these activities commonly occur in the company of peers. Adolescence is the time of experimentation during which teenagers start interacting with their age mates and seek sensation in new experiences. Peer pressure has been called a hallmark of adolescents' experience. Goldsmith (2013) says, "Peer pressure is stress or strains you feel from friends and schoolmates to act, behave, think and look a certain way.

The word "emotion" dates back to 1579, when it was adapted from the French word *émouvoir*, which means "to stir up". The term emotion was introduced into academic discussion as a catch-all term for passions, sentiments and affections. The word "emotion" was coined in the early 1800s by Thomas Brown and it was around the 1830s that the modern concept of emotion first emerged in the English language. "No one felt emotions before about 1830. While they felt other things – 'passions', 'accidents of the soul', 'moral sentiments' – and explained them very differently from how we understand emotions today. Emotions are reactions that human beings experience in response to events or situations.

Emotional expressivity is generally defined as various behavioral changes (e.g., facial expression and posture), such as laughter, pouting, crying or slamming doors (Gross & John, 1995). This definition emphasizes observable behavioral responses, and the level of emotional expression is determined by the degree of behavioral impulses of individuals (Gross & John, 1995). Emotional suppression prevents the expression of real emotions. This situation may lead to a feeling of incompatibility between emotions and behaviors and may cause the person to evaluate their emotions in negative terms. Suppression can be a risk factor for social problems, as it prevents the natural expression of emotions from building relationships (Tickle-Degnan & Rosenthal, 1990).

Results & Discussions

Adolescent boys experienced more peer pressure. The research found that "adolescent boys experienced more peer pressure than girls" suggesting that in the context of the study, boys were more likely to be influenced or feel pressure from their peers to conform to certain behaviors or expectations compared to girls. The research indicates a gender-based disparity in the experience of peer pressure during adolescence. It suggests that boys are more susceptible to the influence of their peers, while girls might be less affected or influenced in the same way. Girls might have developed different coping strategies for dealing with peer pressure compared to boys. They may be more resilient or have better mechanisms for resisting negative influences.

Emotional expressivity was more common among girls. This finding highlights a gender-based disparity in the way individuals express their emotions. It indicates that girls, on average, are more open and expressive about their feelings compared to boys. The result may be a reflection of societal and cultural expectations regarding how boys and girls should express their emotions. In many cultures, girls are often encouraged to be more emotionally expressive, while boys may be taught to suppress their emotions or express them differently. The finding also highlights the prevalence of gender stereotypes related to emotional expression. These stereotypes may limit the emotional range of boys and encourage girls to be more open about their emotions.

Peer pressure was higher among the age group of 17 and above compared to the age group 13 and 14 and the age group 15 and 16. The research indicates that there is a variation in the intensity of peer pressure as adolescents grow older. Older adolescents, in this study, were more likely to experience or succumb to peer influence compared to their younger counterparts. This finding may be related to the developmental stages that adolescents go through. Adolescents in the 17 and above age group may be at a stage where they are more concerned about social acceptance and identity formation, making them more susceptible to peer pressure. The findings could be influenced by cultural and contextual factors specific to the study's location.

Adolescents studying in government schools experienced more peer pressure. The difference in peer pressure may be linked to socioeconomic disparities. Adolescents in government schools may come from lower-income backgrounds, and the socioeconomic environment could contribute to increased peer pressure due to a desire to fit in, keep up with peers, or overcome challenges associated with socioeconomic status. The school culture, norms, and environment in government schools may be different from that in private schools. Government schools may have larger class sizes, fewer resources, and different social dynamics that could influence the level of peer pressure experienced by students. The composition of social networks and friendship circles can vary between government and private schools. Differences in these networks can influence the types and levels of peer pressure experienced by students.

Conclusion

This study shows that adolescent boys experienced higher peer pressure when compared to girls. At the same time, emotional expressivity was higher among girls than boys. From the analysis, it is clear that peer pressure is significantly varied among adolescents based on the standard of study, age group, and type of school. The findings of the study show light to the understanding of peer pressure and emotional expressivity among adolescents, especially for professionals working on mental health, educational settings also parents.

^{1*} Assistant Professor, St. Joseph's College, Moolamattom

Abstract:

A college student's life must include fulfilling social contacts and personal friendships. They have a significant impact on a person's general well-being throughout their entire life, not only during their college years when they are contributing to happiness. In the context of college life, this article examines the value of positive social connections, sharing of experiences, and a sense of community and considers how these aspects can favorably affect long-term happiness. This article offers insights into the processes by which friendships and social relationships can result in long-lasting enjoyment by drawing from studies in psychology, sociology, and personal development. We illuminate the long-lasting value of these relationships by looking at the advantages of friendships in college and beyond.

Introduction

A college student's life must include fulfilling social contacts and personal friendships. They have a significant impact on a person's general well-being throughout their entire life, not only during their college years when they are contributing to happiness. In the context of college life, this article examines the value of positive social connections, sharing of experiences, and a sense of community and considers how these aspects can favorably affect long-term happiness. This article offers insights into the processes by which friendships and social relationships can result in long-lasting enjoyment by drawing from studies in psychology, sociology, and personal development. We illuminate the long-lasting value of these relationships by looking at the advantages of friendships in college and beyond.

Positive Social Interactions in College Life

College is a special time in a person's life when they can pursue a variety of academic and extracurricular interests and gain a greater sense of independence. Additionally, it is a time when young adults develop deep relationships with their peers, which molds their social identities and interpersonal abilities. Attending social gatherings, taking part in group activities, and having open talks all foster positive social connections that foster personal development and satisfaction. Through these interactions, children can connect with others, create networks of support, and hone important social skills. Students have the optimal atmosphere at college to grow in their social, empathic, and emotional intelligence. Their viewpoints are expanded, and their capacity to successfully negotiate social situations is improved, by interaction with a wide group of people from various backgrounds. Many friendships made in college have the potential to last a lifetime. The relationships made at this time frequently have an impact on both a person's personal and professional life. Students may spend more time and effort on fostering these connections if they are aware of their importance.

The Power of Close Friendships

Real friendships are more meaningful than passing acquaintances. They are marked by trust, understanding, and a readiness to help one another through happy and difficult times. These connections are frequently highly emotional. A commitment of time and effort is needed for close connections. By listening intently, supporting their peers, and sharing emotional

experiences, students can form close relationships. The emotional support that close friendships offer is among the most important advantages. During trying times, friends can offer support, counsel, and encouragement, fostering emotional strength and happiness. Shared experiences strengthen friendships and produce enduring memories, whether they center on academic difficulties, individual victories, or recreational pursuits.

The Connection between Friendships and Happiness

Strong social ties are consistently associated with better levels of psychological well-being and life satisfaction, according to research. A strong feeling of purpose, better contentment, and a positive self-image are all benefits of close friendships. The support of close friends protects against stress and anxiety. These partnerships' emotional support can lessen the negative consequences of pressures, enhancing both mental and emotional health. Close friendships and constructive social interactions have been associated with better physical health results. People who are socially connected tend to have healthier lives, and the emotional support they receive has a good effect on their immune systems and general well-being. Healthy friendships increase one's sense of value and self-esteem. Friends' affirmation and validation can increase someone's self-confidence and happiness, which can lead to more happiness.

The Long-Term Impact of College Friendships

The friendships made at this time can last long after the college years have ended. The obstacles of life after college are highlighted along with methods for coping with them. In maturity, close friendships still have a big impact. They increase overall life satisfaction and pleasure by offering friendship, support, and a sense of belonging. Positive social contacts benefit people's lives both personally and professionally. Collaboration and networking with friends can improve one's professional life and offer doors to career chances. Technology is incredibly important in the modern day for keeping and growing friendships. People can stay in touch with pals regardless of distance thanks to social media, texting apps, and video calls.

Nurturing and Sustaining College Friendships

College friendships may be strained by difficulties like distance, shifting priorities, and changing interests. We investigate methods for overcoming these difficulties and preserving solid relationships. The foundation of keeping friendships strong is effective communication. There is a discussion of methods for resolving disputes and maintaining open lines of communication. A vital element of strong friendships is empathy. People who have developed empathy are better able to understand and support their friends, which makes friendships stronger. People may develop new connections as their lives go on while preserving their current ones. We look at ways to maintain these relationships in balance and make sure that all ties are strengthened.

Lifelong Happiness and Fulfillment

It can be difficult to make the transition from college to adulthood, but having a network of close friends can offer stability and emotional support. In adulthood, friendship networks continue to expand and change. These networks provide chances for career advancement, social relationships, and a feeling of community that all help people live happier lives. The first line of defense against mental health issues is frequently a close friend. When necessary, friends can offer emotional support and encouragement to seek professional assistance. Having enduring friendships helps one find meaning and purpose in life. Friendships can help people

find fulfillment in their journeys through the emotional relationships and shared experiences they create.

Conclusion:

The various effects of wholesome social interactions and intimate friendships on college students' happiness have been covered in this article. It has emphasized the long-term, psychological, and emotional advantages of these connections. While friendships made in college greatly enhance students' pleasure throughout their academic years, their effects go well beyond that. These relationships have the power to influence a person's entire life, promoting fulfillment, happiness, and personal development. Students must actively participate in pleasant social interactions, cultivate strong friendships, and accept the long-lasting advantages that friendships made in college bring to fully appreciate their value.

Abstract:

The human mind is a vast and intricate landscape, comprising conscious and subconscious realms. While the conscious mind governs our everyday thoughts and decisions, it is the subconscious mind that holds the key to our deepest potential. This article delves into the enigmatic power of the subconscious mind, exploring its influence on our thoughts, behaviors, and overall well-being. Through a comprehensive review of relevant literature, we aim to shed light on the untapped potential hidden within the subconscious and its impact on personal growth and transformation.

Introduction:

One of nature's wonders, the human mind is a nuanced interplay of ideas, feelings, and encounters. The enormous area of the subconscious mind exists below the surface, silently influencing our lives in significant ways as our conscious mind plans our everyday activities and rational thoughts. This article sets out on a quest to discover the mysteries of the subconscious and its amazing power, pulling support for its assertions from a wide variety of studies and sources. The human mind is a sophisticated and intricate organ that is capable of incredible accomplishments and unrestricted creativity. The subconscious mind, a hidden powerhouse that frequently goes unrecognized in our daily lives, is contained within this extraordinary region. We try to delve deep into the mysteries of the subconscious mind, exploring its functions, influence on our thoughts and behaviors, and how we can harness its power to improve our lives.

I. The Subconscious Mind Defined:

The subconscious mind, often known as the "hidden" or "unconscious" mind, functions under the level of conscious awareness. It includes a huge store of knowledge, convictions, sentiments, and emotions that influence our perceptions, responses, and decisions. The subconscious acts simultaneously, as opposed to the conscious mind, which processes information sequentially, making it a potent influence in our daily lives.

II. Behavior and Subconscious Thoughts:

Numerous research have emphasized how the subconscious mind affects how people behave. For instance, psychological studies have demonstrated that unconscious biases can influence our judgment and result in unintentional prejudices and preferences. These biases can be changed with awareness and deliberate effort, demonstrating the adaptability of the subconscious mind.

III. The Subconscious and Memory:

When it comes to storing and recovering memories, the subconscious mind is crucial. Neuroscientific research has shown that memories, particularly those that are emotionally intense, are frequently deeply embedded in the subconscious. These suppressed memories can be accessed through methods like hypnosis and meditation, providing a route to recovery and self-discovery.

IV. The Subconscious and Creativity:

The subconscious mind is a fertile ground for creativity. Many well-known artists, writers, and inventors have said that their breakthrough ideas came from subconscious thoughts. The occurrence of "sleeping on a problem" and waking up with a solution exemplifies the subconscious mind's capacity for creative information processing.

V. The Subconscious and Personal Growth:

An essential part of developing oneself and improving oneself is using the power of the subconscious mind. The subconscious can be reprogrammed through techniques like visualization, affirmations, and meditation, which improves resilience, motivation, and self-assurance.

VI. Healing and The Subconscious:

Studies in the area of psychosomatic medicine have shown how closely the subconscious mind and physical health are related. Unresolved emotional difficulties held in the subconscious mind have been related to ailments like stress, anxiety, and chronic pain. People can encourage healing and well-being by addressing these underlying issues.

Conclusion:

The mysterious subconscious mind has a significant impact on our thoughts, actions, and general well-being. The power of the subconscious mind has been highlighted in this article through a thorough analysis of pertinent material. It influences how we act, preserves our memories, sparks our creativity, and holds the secret to our personal development and recovery. An increased quality of life and a sense of fulfillment can be attained by comprehending and using the power of the subconscious.

Abstract:

Social intelligence is a multifaceted and crucial aspect of human interaction. It encompasses the ability to understand and navigate the complex web of human relationships, emotions, and social dynamics. This article explores the concept of social intelligence, its components, and its significance in various aspects of life, including adolescence and education. Drawing from psychological theories and recent findings in social neuroscience, we delve into the neural mechanisms that underpin social intelligence. We also discuss the importance of social intelligence in leadership, conflict resolution, and personal development. Ultimately, social intelligence plays a pivotal role in fostering positive relationships, effective communication, and a harmonious society.

Introduction:

Social intelligence is the innate ability to comprehend and engage with the intricacies of human society. It involves the capacity to decipher others' feelings, thoughts, and behaviors in interpersonal situations and to respond appropriately. This article aims to provide a comprehensive understanding of social intelligence, from its theoretical foundations to its practical applications. Social intelligence comprises various components, including empathy, attunement, empathic accuracy, social cognition, social facility, synchrony, self-presentation, and influence. These components collectively enable individuals to navigate social interactions effectively and build meaningful connections. Researchers have also identified neural mechanisms, such as mirror neurons and spindle cells, that play a vital role in social intelligence.

Significance of Social Intelligence:

Social intelligence has far-reaching implications for personal and professional success. It is instrumental in leadership, conflict resolution, and teamwork. Leaders who possess high social intelligence can inspire and motivate their teams, fostering a cooperative and positive work environment. Additionally, social intelligence is linked to physical health, as strong social relationships can influence factors such as blood flow, mood, and immune system functioning.

Components of Social Intelligence:

Social intelligence is the ability to understand society and its dynamics, encompassing effective involvement in human relations. It is an aggregate global capacity of an individual to act purposefully, think rationally, and deal effectively in a given situation. Social intelligence is geared towards solving problems of social life, particularly managing life tasks, current concerns, or personal projects. Greenspan (1979) proposed a hierarchical model of social intelligence, consisting of three components: Social Sensitivity, Social Insight, and Social Communication. Highly socially intelligent individuals possess tolerance, cooperation, sympathy, social acceptance, a helping mind, and a spirit of we-feeling in society. Social scientist Ross Honeywill believes that social intelligence is an aggregated measure of self and social awareness, evolved social beliefs and attitudes, and a capacity and appetite to manage complex social change. Recent research in social neuroscience has revealed subtle new truths about what makes a good person, such as the identification of mirror neurons in widely

dispersed areas of the brain, spindle cells with an extra-long branch, and oscillators coordinating people physically. Socially intelligent individuals can carry on conversations with a wide variety of people, have knowledge of social roles, rules, and scripts, and play various social roles. They have effective listening skills, understand what makes others tick, and are great people watchers. They are endowed with empathy, listen well, and easily grasp other's perspectives. They are socially self-confident and effective, allowing others to see their true self. Social intelligent individuals influence others by appealing to others, developing mutual trust, giving constructive feedback, and helping others focus on growth opportunities. They strive to recognize different perspectives and manage conflicting situations, focusing on helping everyone find common ground and directing efforts toward finding common ground. Social intelligence is a crucial skill that helps individuals build a sense of cooperation, helpfulness, and respect, leading to a positive team environment. It involves understanding subtle etiquette, listening to others, and managing interactions effectively. Adolescence is a period of transition marked by physiological changes, identity construction, and abstract thought. It is an emotionally intense and often stressful period, with each individual having unique traits. Adolescents undergo significant psychological imbalances, as they try to understand society, social relations, and social approval. They develop morale, develop morale, and understand taboos and standards. Behavioral disorders and social deviations among school children can lead to aggression, destructive tendencies, alcoholism, drug abuse, violence, emotional instability, and the inability to make decisions and solve problems effectively. Research shows that life skill education has a positive effect on self-confidence, social intelligence, psychological health, assertiveness, self-esteem, and decision-making among students. Learning and practicing life skills about self-confidence and social intelligence promotes psychological health and various dimensions of growth. Educating life skills about self-confidence and social intelligence is essential for preventing behavioral disorders and social deviations among school children. Factors like self-confidence and social intelligence play a role in determining goals, decision-making, problem-solving, and preventing behavioral disorders and social deviations.

Social Intelligence in Adolescence Education

Adolescence is a period marked by significant physical, emotional, and cognitive changes. Social intelligence becomes particularly important during this stage as adolescents seek to understand societal norms, relationships, and their place in the world. Education programs that focus on life skills, including self-confidence and social intelligence, can aid adolescents in making informed decisions and navigating the challenges of this transitional period. Schools worldwide have recognized the importance of incorporating life skills, including social intelligence, into their curricula. These skills empower students to develop self-confidence, effective communication, and problem-solving abilities. By enhancing social intelligence, schools contribute to students' psychological well-being and prepare them for a successful and constructive life in society.

Conclusion

Social intelligence is a critical facet of human existence, influencing our interactions, relationships, and overall well-being. It encompasses a range of components and is rooted in the intricate workings of the brain. Understanding and nurturing social intelligence is essential for effective leadership, conflict resolution, and personal development. Moreover, it plays a

pivotal role in the growth and development of adolescents, helping them navigate the complexities of the world. As colleges worldwide embrace the importance of life skills, including social intelligence, they contribute to a society that is more empathetic, understanding, and harmonious.

Abstract

The OECD's Future of Education and Skills 2030 project aims to address long-term education challenges by identifying students' competencies, teacher profiles, and learning environments. It emphasizes the development of transformative competencies, critical thinking, creativity, responsibility, resilience, and teamwork, to equip the next generation for an unpredictable future, promoting evidence-based curriculum design and systematic exploration of education system design issues.

Introduction:

With globalization and the rapid growth of technology posing new challenges, the demand for transformative education is greater than ever. The world of 2023 is very different from the world of a few years ago, and change is happening at an accelerating rate. Looking ahead to an uncertain future, we have to acknowledge that the children starting school now will be young adults in 2035, navigating an environment full of undiscovered employment, undeveloped technologies, and unanticipated difficulties. This article presents the OECD's Learning Framework 2030, which places a strong emphasis on developing transformative competencies and examines the role that education plays in preparing people for such a future.

Navigating Uncertainty

The Organization for Economic Co-operation and Development (OECD) is a unique forum where the governments of 37 democracies with market-based economies collaborate to develop policy standards to promote sustainable economic growth. The OECD Future of Education and Skills 2030 project aims to address long-term education challenges by identifying students' competencies, teacher profiles, learning environments, and institutional arrangements. It aims to make curriculum design and development evidence-based and systematic, establishing a common language for individual and collective exploration of education system design issues.

Individuals need to have a distinct set of competencies that go beyond conventional knowledge and abilities to prosper in an uncertain future. Among these transforming skills are: Thinking creatively means having the capacity to come up with original concepts and solutions. People must be creative and flexible in an ever-changing world to take advantage of new chances. Analytical Process: Making educated decisions, analyzing and evaluating data, and resolving challenging issues are all components of critical thinking. It is necessary to comprehend and deal with complex issues. Accepting responsibility entails accepting accountability for one's choices and actions. It entails moral thoughts, responsibility, and the capacity to consider the effects of one's acts. Resilience is the capacity to bounce back from adversity and setbacks. It is an essential skill for coping with change, uncertainty, and challenges in the modern world. Collaboration is the ability to work effectively with others, respecting diverse perspectives and ideas. It is crucial in a globally interconnected society. These competencies are not isolated; they are interconnected and mutually reinforcing. Creativity and critical thinking inform responsible decision-making, while resilience and

collaboration support adaptive problem-solving. People are now spending more time on non-routine tasks that call for higher-order, analytical thinking as well as interpersonal skills, which has transformed the nature of employment.

To assist nations in preparing their educational systems for the future, the OECD started the Future of Education and Skills 2030 project in 2015. Starting with secondary school, the project focuses on the competencies that today's students need to build their future and prosper in it. The framework acts as a common language that makes it easier to compare and learn across different educational systems, enabling students to grow as whole people, reach their full potential, and contribute to creating a future that enhances the welfare of people, communities, and the environment.

Although the future is uncertain, we can educate students about careers, societal concerns, and the usage of new technology by keeping an eye on present trends. To successfully navigate an increasingly complex, turbulent, and uncertain environment, students require support in the development of their knowledge, skills, attitudes, values, and creative genius. Access to education has improved with the introduction of universal, mandatory public education, and nations like Germany are revising their economic policies to promote more sustainable and equitable growth. We need to understand the capabilities and limitations of computers to stay up to date with advancements in technology, society, and the economy. Computers excel at routine cognitive, non-routine manual, and routine manual activities; they struggle with abstract tasks or intricate contextual knowledge.

The Role of Education in Fostering Transformative Competencies

The goal of education must shift from merely preparing students for the workforce to equipping them with the knowledge and abilities necessary to contribute to society actively and responsibly. The OECD created the Learning Framework 2030 in response, which lays a lot of focus on acquiring transformative competencies. It emphasizes the importance of individuality while also taking into consideration the bigger interactions that have an impact on learning, such as those with classmates, families, instructors, and communities. It is clearer than ever that transformative education is necessary for today's environment of globalization and rapid technological innovation. The world of 2033 is very different from the one that existed only a few years ago, and change is happening more quickly now, leaving the future more unpredictable. As we peer into the horizon of 2030 and beyond, it becomes abundantly clear that the younger generation, those embarking on their educational journeys today, will face a landscape filled with uncharted opportunities, unprecedented challenges, and unforeseen complexities.

The urgent need for transformative talents to navigate these unpredictable futures has been brought to light in this article. It has highlighted five critical qualities that people need to prosper in a world characterized by unpredictable and continuous change. Not just theoretical ideas, creativity, critical thinking, responsibility, resilience, and teamwork are vital life skills that enable people to seize new opportunities, resolve challenging issues, make wise decisions, endure hardship, and collaborate with a variety of people. It is also impossible to overestimate the importance of education in developing these transforming abilities. Education needs to go from just getting kids ready for the workforce to giving them the tools they need to be active, responsible, and involved citizens. The OECD's Learning Framework 2030 emerges as a pivotal tool in this transformation, recognizing the intricate web of interactions that shape

learning, encompassing teachers, peers, families, and communities while championing the value of individuality.

Conclusion

The 21st century demands transformative competencies in education, including creativity, critical thinking, responsibility, resilience, and collaboration. The OECD's Learning Framework 2030 provides a holistic approach to education, recognizing the interconnected nature of learning and embracing individual uniqueness. As children enter school today, it is our responsibility to equip them with these skills to adapt to challenges and actively shape a world that promotes individual, community, and environmental well-being. Transformative education empowers the next generation to thrive and innovate.

Understanding Empathy and Stress Management: Keys to Emotional Well-Being

Dr.Sr.Sijo Francis^{1*}, Dr. Mathew Kanamala^{1*}, Ms. Neethumol Shaji^{1*} & Mr. Shiju S^{1*}

^{1*}Assistant Professor, St. Joseph's College, Moolamattom

Abstract:

This article explores the concept of empathy and its role in understanding and sharing the experiences of others. It discusses the various facets of empathy, its biological underpinnings, and its relationship with emotional contagion and imitation. The article highlights the distinction between empathy and sympathy and how it is different from related social-emotional processes. Additionally, it touches on the importance of empathy in pro-social behaviour and its impact on human interactions.

Introduction:

Empathy is a fundamental aspect of human social interaction, allowing us to understand and share in the experiences of others. This article delves into the complex nature of empathy, its biological basis, and how it relates to other social-emotional processes like emotional contagion and imitation. Understanding empathy is crucial for promoting compassion and fostering better human connections.

Empathy and Stress Management

Empathy and stress management are essential for emotional well-being. Stress management involves recognizing the source of stress and controlling its effects, such as changing physical environments, life skills, and relaxation techniques. Coping involves spending mental energy on dealing with problems, aiming to overcome or diminish the stress experienced. Good coping skills prevent stress from getting down and help individuals thrive in challenging times. Adolescence can experience stress, but it can also help develop skills for dealing with threatening situations. Providing support and stability can help reduce stressful feelings and symptoms. Children and adolescents often struggle with coping with stress related to traumatic events, such as natural disasters or family loss. Strong emotions like fear, sadness, or depression are normal as long as they don't interfere with daily activities. Stress can be beneficial in managing potentially threatening situations, but it can also be harmful when it is prolonged or severe enough to make you feel overwhelmed and out of control. Physical or emotional tension can be signs of stress, and it can be related to positive or negative events. Stress management articles aim to help individuals find healthy and beneficial ways to deal with stress. Empathy is an essential life skill that helps us understand and accept others' behaviour, even in unfamiliar situations. Empathy is a broad concept that refers to the cognitive and emotional reactions of an individual to the observed experiences of another. It is a building block of morality and a key ingredient of successful relationships. What is empathy and how does it differ from sympathy? There is a clear distinction between empathy and sympathy, as empathy involves understanding another person's experience by imagining oneself in that person's situation, while sympathy involves being moved by or responding in tune with another person.

Stress can be beneficial in managing potentially threatening situations, but it can also be harmful when it is prolonged or severe enough to make you feel overwhelmed and out of control. Physical or emotional tension can be signs of stress, and it can be related to positive or

negative events. Stress management articles aim to help individuals find healthy and beneficial ways to deal with stress. Empathy is an essential life skill that helps us understand and accept others' behaviour, even in unfamiliar situations. The WHO Department of Mental Health identified five basic areas of life skills relevant across cultures: decision-making and problem-solving, creative thinking and critical thinking, communication and interpersonal skills, self-awareness and empathy, and coping with emotions and stress.

Emotional and Cognitive Empathy

Empathy can be categorized as an emotional or cognitive response, particularly in social psychology. Emotional empathy consists of three components: feeling the same emotion as another person, experiencing personal distress in response to perceiving another's plight, and feeling compassion for another person. This type of empathy is particularly relevant in discussions of compassionate human behaviour, as it is associated with feelings of empathy and willingness to help others. Cognitive empathy, also known as empathic accuracy, involves having more complete knowledge about another person's mind and emotions. Empathy is the experience of understanding another person's thoughts, feelings, and conditions from their perspective, facilitating pro-social or helping behaviours. Research suggests that individuals can boost their capacity for empathic understanding through the concept of "mirror neurons," which enhance the ability to display, read, and mimic emotional signals through facial expressions and body language. Definitions of empathy encompass a broad range of emotional states, including caring for others, experiencing emotions that match another person's, discerning thoughts or feelings, and blurring the differences between self and another.

Empathy is a complex concept that involves understanding the emotional states of others, characterized by compassion and sympathy. It is distinct from pity and emotional contagion, which are feelings of pity towards others without recognizing their problems. Empathy is characterized by the ability to recognize emotions, which can be innate or trained. It involves recognizing the significance of another person's actions, emotions, and personal characteristics in a way that the recognized person can tolerate. In positive psychology, empathy has been compared to altruism and egotism, with altruism being behaviour aimed at benefiting another person and egotism being behaviour acted out for personal gain. Empathy can lead to polarization, violence, and dysfunctional behaviour in relationships. It does not entail motivation to be of assistance, but it may turn into sympathy or personal distress, which may result in action. Empathy has deep roots in our brains and bodies, with early forms observed in primate relatives, dogs, and even rats. It has been associated with two different pathways in the brain, with some aspects being traced to mirror neurons. Research has also found evidence of a genetic basis for empathy, though studies suggest that people can enhance or restrict their natural empathic abilities. Having empathy doesn't necessarily mean we will want to help someone in need, but it's often a vital first step toward compassionate action.

Empathy is a social-emotional process that involves understanding and sharing in the experiences of others. It involves observing and imagination of another person's emotional state, experiencing an emotional state that matches that person's, and knowing that the other person's emotional state caused your emotional state. Empathy differs from sympathy, which involves feeling compassion or pity towards someone because of their negative experience.

Researchers often examine the biological bases of empathic processing to understand how we empathize with others. They found that neural regions activated by vicarious and first-hand pain are similar, but more posterior-mid insular activation is found for firsthand experience and more anterior insular regions for vicarious experience. This suggests that when we empathize with others, our emotional state does not exactly match theirs, but we use our mind as a model to simulate their feelings using our own past experiences. When we empathize with others, we use cognitive processes to try to understand their emotional state and imagine ourselves in that state by drawing on our emotional memories. Two potential precursors of empathy are emotional contagion and imitation. Emotional contagion refers to the tendency to "catch" other people's emotions, while imitation involves establishing a correspondence between one's behaviour and that of another person. Both processes support the processing of emotional content in ways that facilitate empathy. The biological and behavioural mechanisms underlying emotional contagion and imitation demonstrate some overlap with empathy, and all three constructs contribute to pro-social behaviour. While emotional contagion and empathy involve a change in emotional state, imitation need not result in such a change. Imitation and emotional contagion are present in non-human animals and infants as potential precursors of empathy, but empathy requires a higher degree of cognitive and emotional processing and seems to emerge only in human development.

Conclusion:

Empathy is a multifaceted concept that plays a crucial role in human interaction. It involves not only emotional responses but also cognitive processes that help us understand and share the experiences of others. While empathy is distinct from related processes like emotional contagion and imitation, these precursors contribute to our ability to empathize. Understanding empathy is vital for fostering compassion, pro-social behaviour, and healthier relationships among individuals.

Abstract

The time spent in college is frequently seen as a turning point in a person's life because of the emphasis placed on academics, personal development, and freedom. While preserving physical health and well-being throughout this time is equally critical, maintaining academic success is unquestionably of utmost importance. This article explores the value of exercise, sports, and a healthy diet in college life and how they affect general happiness and well-being. It looks at the difficulties students experience and provides helpful advice on how to integrate a healthy lifestyle with academic responsibilities.

Introduction

Students have possibilities for academic development, self-discovery, and personal growth during their time in college, which is a singular and transforming experience. However, it is also a time when young adults deal with a variety of difficulties, such as demanding academic requirements and social demands. Maintaining physical health through exercise, sports, and a balanced diet frequently takes a backseat in the midst of this. This essay tries to underline the significance of giving these well-being factors top priority while in college and offers suggestions on how to do so successfully.

The Importance of Physical Health

Mental and physical health are closely related to one another. It has been demonstrated that regular physical activity and a healthy diet help college students deal with typical problems including stress, anxiety, and depression. While a healthy diet supplies the vital minerals needed for proper brain function, exercise produces endorphins, the body's natural mood enhancers. Academic achievement is directly impacted by physical health. Studies have repeatedly demonstrated that students who maintain a healthy diet and routine exercise tend to have superior cognitive function, greater memory, and improved concentration. These elements are essential for achieving success in college.

Physical Health Issues in College

College life is renowned for having hectic schedules. Lack of time for exercise and meal preparation can result from juggling schoolwork, extracurricular activities, and social obligations. Due to their limited financial resources, many college students find it difficult to pay for things like gym memberships, sporting goods, or a wide selection of healthful foods. Students may make unhealthy decisions like overindulging in junk food or skipping physical activity due to the constraints of college life and the desire to fit in socially. Achieving a balance between academics and physical health requires effective time management. Making a calendar that includes time for meal planning and exercise might assist in making sure that these tasks are not forgotten. College students can investigate affordable fitness options like on-campus gyms, cost-free outdoor activities, and routines that only use their bodies as equipment. Learning to prepare quick, wholesome meals can also help you save money and encourage a balanced diet. Students can manage the demands of college life without turning to bad habits by implementing stress management strategies like yoga and mindfulness meditation. Creating

or joining student organizations that emphasize physical exercise or a healthy diet can inspire and support. It can be simpler to maintain a healthy lifestyle with peer support.

The Role of Sports, Recreation and Balanced Diet

Team sports participation not only offers a fantastic workout but also promotes a sense of community and friendship. Students have the chance to participate in competitive and leisure sports through intramural competitions and college sports teams. Running, swimming, or martial arts are examples of individual sports that can be quite relaxing. They allow students to briefly disconnect from the stresses of academic life and offer solitude. Maintaining energy levels, improving focus, and supporting general health all depend on a balanced diet full of fruits, vegetables, lean proteins, and whole grains. It's equally crucial to limit your intake of processed meals, sugary drinks, and caffeine. Making healthier food choices might aid students in planning meals and snacks. Cooking at home not only gives one more control over the ingredients, but it also promotes the acquisition of vital life skills.

Conclusion

Prioritizing physical health through exercise, sports, and a healthy diet is crucial for general well-being and enjoyment in college life since it brings its own set of difficulties and opportunities. It is impossible to overestimate how much these behaviors improve stress management, academic performance, and mental wellness. Although the rigors of college may seem overwhelming, students can achieve a harmonious balance between their academic and health-related goals with good time management, cost-conscious decisions, and peer support. When physical health receives the attention it needs, college may truly be a period of comprehensive growth and fulfillment.

Abstract:

The turbulent waters of adolescence present a critical period of psychological development marked by intense emotions and the quest for identity and intimacy. This article explores the multifaceted dimensions of adolescence, emphasizing the role of family and learning in shaping an individual's personality and adaptability. Adolescence, a time of rapid physical and psychological changes, is characterized by the pursuit of autonomy and the establishment of interpersonal relationships. This phase signifies the transition from childhood to adulthood, where adolescents grapple with shifting values and behaviors. Understanding the complexities of adolescence is essential for parents and society to support these young individuals on their journey toward responsible adulthood.

Introduction

Adolescence emerges as a period of the risk of psychological maladjustment where the physical, psychological, and social formations lead to adolescents experiencing more frequent and intense emotions than younger and older individuals (Larson & Petraitis, 1989). Adolescents are more interpersonally attracted to people with similar attitudes, backgrounds, values, and beliefs. Romantic experiences are not only central in the daily lives of adolescents, but they are also thoughts that shape both intimacy and identity development (Erikson, 1986; Furman & Shaffer, 2003). They may also help adolescents successfully establish autonomy as they explore extra family relationships and come to rely less on one parent (Furman & Shaffer, 2003). They may also help adolescents successfully establish autonomy as they explore extra-familial relationships and rely less on their parents (Furman & Shaffer, 2003).

Family and Learning

The family is important for the origin and development of human personality. Learning plays a vital role in helping a person adjust to the atmosphere. Normally, learning means a change in social interaction. However, the change in all sorts of social interactions is not called learning. In psychology, learning starts with change, which occurs through study or realization. Generally, the objective of the change is to make it possible for a person to adjust and manage their environment. The child observes people working in different situations and follows them; he learns about various objects like a mango, an orange, a cow, a book, a boy or a girl, etc. Gradually, as the child grows in age, he observes many incidents and things and learns about their specific characteristics, dividing the things into various categories like fruits, animals, furniture, liquids, etc. Every person manages one's life and solves various kinds of problems in it because they have acquired the capacity and ability to learn and adjust to new things.

Adolescence

Adolescence is a time when individuals begin to assert themselves as distinct human beings since no two persons have the same experiences or occupy identical positions in the social structure. Each can assert his distinctness, provided he receives at least modest encouragement from his society. During adolescence, as at no other time in life, the individual and his society must come to terms. Every adolescent is expected to learn to participate effectively in society and to acquire the necessary competence to do so, mainly through interpersonal relationships. The important people in his life partially direct and prescribe his behaviour and their censure or approval helps to determine his emotional commitment to

responsible behaviour (Brim, 1965). Adolescence usually starts when an individual attains sexual maturity and ends when he/she becomes legally independent of his or her parents. The onset of puberty is characterized by physiological changes in a child's body, but its end is determined by cultural factors.

Adolescence Development

Adolescence is a period of rapid physical, emotional, social, moral, and intellectual development. It begins with puberty, which starts around the age of eleven for girls and thirteen for boys. Girls start changing before boys, and by age 17, they may be larger and capable of having children. Growth and development use a lot of energy, and teenagers may need more sleep. Later adolescence is more dependent on favorable environments, and disturbances can cause arrest and prevent maturity. The range of variation in growth is increased, and there is a greater liability to reversion.

Psychological development and changes

Adolescence is a period of growth, change, and personal growth. It is a time when children develop their views and opinions, often not shared by their parents. Adolescents spend a lot of time in each other's company, which can be irritating to parents but is essential for independence. They often find excitement in activities like music and sports, but experiment with drugs or smoking with friends. Physical changes during adolescence are due to increased hormone output from the pituitary gland.

Social developments and changes

Adolescence is a transitional period where individuals transition from childhood to adulthood, requiring them to abandon childish behaviors and adopt new values. The psychic structure of adolescents has roots in childhood, and physical changes during this period affect their behavioral level and lead to reevaluations and shifting adjustments of values. The ambiguous status of adolescents allows them to try out different lifestyles and decide what patterns of behaviors, values, and attitudes best meet their needs. Problem-solving tips for adolescents include identifying problems, thinking about why they're problems, problem definition, decision-making on solutions, and evaluating the outcome. Parents of adolescents should be open to their adolescents' ideas, find activities they enjoy, and make regular time for them to discuss issues. They should also be aware of their adolescents' experiences with sex and drugs and try to listen without reacting. In conclusion, adolescence is a time of transition and growth where individuals must navigate their conscience and individual rights to choose their values and behaviors.

Conclusion

In conclusion, adolescence is undeniably a transformative phase that shapes an individual's future. It is a period of exploration, self-discovery, and adaptation, characterized by heightened emotional intensity and the pursuit of independence. The influence of family and the power of learning play pivotal roles in molding adolescents into responsible and well-adjusted adults. During this tumultuous journey, adolescents need the guidance and understanding of their parents and society. Parents need to foster open communication, provide opportunities for personal growth, and be vigilant regarding their adolescents' experiences with issues such as sex and substance use. Ultimately, adolescence is a complex yet pivotal stage in human development, and our collective support and understanding can help young individuals navigate these turbulent waters successfully and emerge as confident, responsible adults.

Abstract

The study emphasizes the significance of social relationships for mental and physical health and recommends clinicians address and prevent social relationship deficits. Life satisfaction and loneliness are identified as key indicators of these deficits, and loneliness should be treated separately from depression treatment. The review covers social relationships, loneliness, its affective, cognitive, and behavioral correlates, and theories related to antecedent and maintenance factors. It concludes with methodological and theoretical considerations and proposes future research directions.

Keywords: Physical health, loneliness, social isolation, life satisfaction.

Introduction

The definition of 'health' in old age is a subject of debate. There is consensus that health in old age cannot meaningfully be defined as the absence of disease because the prevalence of diagnosable disorders in elderly populations is high. Instead, health is considered to be multifaceted: The diagnosis of disease should be complemented by an assessment of discomfort associated with symptoms (e.g., pain), life threat, treatment consequences (e.g., side effects of medication), functional capacity, and subjective health evaluations (Borchelt et al., 1999). Furthermore, Rowe & Khan (1987) suggested that the health of subgroups of older adults be defined in terms of their status relative to age and cohort norms

There is a growing body of evidence that suggests that psychological and sociological factors have a significant influence on how well individuals age. Aging research has demonstrated a positive correlation between someone's religious beliefs, social relationships, perceived health, self-efficacy, socioeconomic status, and coping skills, among others, with their ability to age more successfully.

Depression or the occurrence of depressive symptomatology is a prominent condition amongst older people, with a significant impact on their well-being and quality of life. Many studies have demonstrated that the prevalence of depressive symptoms increases with age (Kennedy, 1996). Depressive symptoms not only have an important place as indicators of psychological well-being but are also recognized as significant predictors of functional health and longevity. Longitudinal studies demonstrate that increased depressive symptoms are significantly associated with increased difficulties with activities of daily living (Penninx et al., 1998). Community-based data indicate that older persons with major depressive disorders are at increased risk of mortality (Bruce, 1994). Some studies suggest that depressive disorders may be associated with a reduction in cognitive functions (Speck et al., 1995).

Result and Discussion

The study shows that old people are having loneliness because of their declining physical health and increasing mental stress. There is a statistically significant relationship between Loneliness which leads to low life satisfaction in the elderly.

The study also found there will be no significant difference in old age loneliness based on their district and it won't influence life satisfaction in the elderly and no significant difference in old age loneliness based on their gender.

The type of living also won't influence loneliness, people who live in their own homes and people who live in institutions are having the same kind of loneliness and life satisfaction. There is no significant difference in old age loneliness and life satisfaction based on religion.

Conclusion

In this study, we focused on what is currently known regarding the health effects of loneliness in later adulthood, emphasizing theoretical predictions, underlying mechanisms, and methodological gaps that currently exist in the literature. Although there is growing interest in studying the prevalence and detrimental effects of loneliness in later life, a full understanding of the phenomenon is far from complete. Questions remain about whether the associations between loneliness and health reflect the effects of loneliness, the effects of objective social isolation, life satisfaction, or the effects of unmeasured variables. Thus, longitudinal and experimental studies addressing the direct, indirect, and moderated effects of social isolation and loneliness on health are urgently needed. More research is also needed to clarify the brain mechanisms underlying the association between loneliness and cognitive decline in old age and the extent to which such decline is reversible through interventions like life satisfaction. To the extent that progress can be made on these issues, efforts to combat loneliness, particularly among older persons, may play an important role in improving well-being, minimizing chronic illness, and prolonging life.

Abstract

The airline industry deals with vast, complex, and unstructured data, often referred to as big data. Business intelligence tools are utilized to analyze this data, providing valuable insights to enhance decision-making and optimize airline operations for increased profits and customer satisfaction. This paper explores the aviation industry's use of business intelligence.

Keywords: Business intelligence, airline industry, big data.

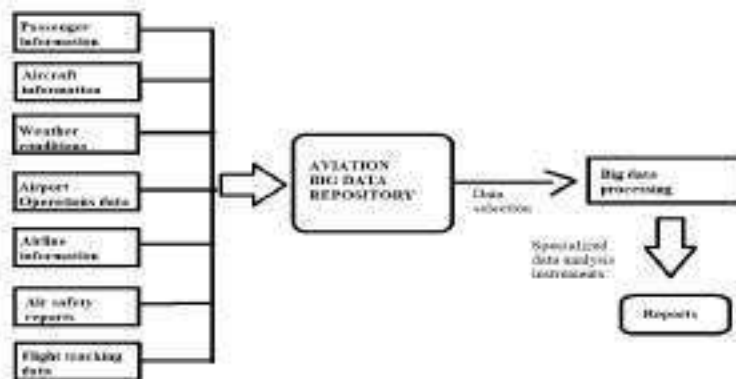

Introduction

Business Intelligence (BI) transforms raw data into valuable insights for strategic and operational decision-making. It employs statistical techniques, predictive analysis, and data exploration in a continuous cycle. BI functions include data mining, reporting, visualization, and more. It boosts profitability by optimizing planning, analyzing market trends, and benchmarking against competitors.

Methodology

The airline industry handles both passenger and cargo transport, generating extensive data known as "Big Data" at every operational stage. This data includes customer interactions, passenger info, flight details, weather data, safety reports, and airport operations. Embracing Business Intelligence (BI) is essential to enhance service and efficiency. The main challenge is optimizing BI for improved operations and service delivery.

Data Sources in the Airline Industry

- Passenger info: Personal details, nationality, travel preferences.
- Aircraft data: Types, service history, related info.
- Meteorological data: Wind, precipitation, temperature over time.
- Airport ops data: Location, layout, gates, capacity.
- Airline info: Company, employee data.
- Air safety reports: Incident details, causes.
- Flight tracking data: Real-time tracking, statuses, delays.

Big Data in the Aviation Industry

Big data emerged with the rapid growth of information and communication technologies in recent years. It's characterized by the 3Vs:

Volume: Big data is vast and requires specialized software and high computational power for analysis. Storage capacity is a limiting factor.

Variety: Big data comes in diverse formats, posing challenges for algorithm development and exploration compared to structured data.

Velocity: It's generated continuously from various processes, such as air traffic data and airplane sensors.

Additionally, there's a fourth aspect called **veracity**, which concerns the poor quality and uncertainty of big data due to unverified sources, like webpages or news. This can lead to contradictory results during analysis, affecting the reliability of big data insights.

Role of Business Intelligence in the Aviation Industry

In the aviation industry, vast amounts of data are generated daily, but it's often disorganized. One major challenge is integrating customer data from various sources, including online transactions, search data, customer service records, reactions to discounts, and past travel history. This integration can create a centralized view of each customer, enabling valuable insights through Big Data Analytics.

1. Centralized Customer View: Combining diverse data sources provides a centralized view of every customer, offering insights detailed in the article.

2. Real-time Flight Route Optimization: Airlines can analyze travel patterns to optimize flight routes, maximize capacity utilization, and increase revenue by flying more planes on profitable routes.

3. Demand Forecasting and Fleet Management: Predictive analytics based on customer travel patterns allows airlines to anticipate demand, adjust the number of aircraft accordingly, optimize fleet management, improve punctuality, and enhance client satisfaction.

4. Differential Pricing and Customer Segmentation: Airlines can cater to diverse customer preferences and sensitivity to prices by offering various deals and setting ticket prices accordingly, maximizing revenue.

5. Fuel Efficiency: Given the significant impact of fuel costs on airline expenses, data analytics can optimize fuel efficiency by considering factors like wind speed, humidity, temperature, aircraft weight, altitude, and air density, potentially saving billions of dollars.

6. Smart maintenance: Absolutely, smart maintenance through Big Data analytics helps prevent flight disruptions and financial losses by monitoring aircraft conditions and predicting maintenance needs. It optimizes asset utilization, enhancing airline profitability.

7. Performance measurement: Performance measurement with Big Data analytics enables airlines to analyze key metrics like profit per passenger, average revenue per flight, passenger load per flight/sector, average flight occupancy, and overbooking. These insights are instrumental in improving operational efficiency and delivering better customer service.

Tableau:

Advantages: Ad-hoc analysis, OLAP, predictive analysis, and trend indicators. Designed for cloud data but handles local data too. User-friendly and fast with mobile compatibility.

Disadvantages: Costly for small to medium-sized enterprises. Some users find OLAP features slow. High sophistication can be challenging for new users.

Microsoft SharePoint:

Advantages: Offers multiple analysis tools, integrates with Microsoft Office, web-based for accessibility, supports ad-hoc and forecasting analysis.

Disadvantages: Not compatible with all mobile devices, requires user tech knowledge, and may need additional internal technical support.

Birst Software:

Advantages: Compatible with various data sources, consolidates heterogeneous data into a unified business data layer, ensures data accuracy and consistency, offers an interactive dashboard, works with local and cloud data, and integrates easily with other products.

Disadvantages: Administration tasks can be challenging, require robust system resources for speedy performance, and some users may find the user interface confusing.

IBM Cognos Business Intelligence Software:

Advantages: Offers diverse analytical techniques, including What-if and trend analysis, supports self-service on mobile and offline, provides interactive dashboards with user-friendly interfaces, and allows multiple users with API integration.

Disadvantages: Has a relatively high entry cost, is not beginner-friendly, lacks informative error messages, and has a larger installation size compared to similar software products.

Conclusion

The airline industry, like other related sectors, generates massive amounts of data, offering both opportunities and challenges. This data can be harnessed through specialized technologies to enhance airline operations. However, before analysis, data from various sources in aviation must be consolidated into a common big-data repository. Business intelligence systems, designed for airline companies, efficiently process this data to optimize operations for maximizing profits while meeting customer needs.

Abstract

Business intelligence transforms the food industry, empowering major players to enhance inventory, boost sales, cut costs, ensure quality, adapt to evolving consumer expectations, improve the customer experience, reduce waste, and conserve resources.

Keywords: Food industry, business intelligence, competitions, online shopping.

Introduction

Business Intelligence (BI) is a crucial tool for businesses to gather data on operations, environment, competitors, and prospects. It helps turn raw data into valuable insights, transforming it into actionable knowledge. Food, a vital part of modern society, is essential for life and involves farms, producers, chefs, and businesses.

Methodology

The food industry in India has experienced significant changes due to the rise of technology, particularly the Internet and smartphones. This shift has impacted e-commerce, shopping, groceries, and finance, leading to a shift in consumer behavior. Online food shopping has become common due to convenience, payment options, busy lifestyles, and discounts offered through delivery apps. Factors such as internet payments, diverse payment options, busy schedules, and unpredictability drive this trend. Customers expect the same easy and clear buying experience online as in physical stores, and apps enhance this by offering various features. Meeting customer expectations is crucial for attracting more customers, regardless of location. The COVID-19 pandemic has significantly impacted businesses, causing financial challenges and prompting major changes in traditional and other business models. Online shopping is popular for its customization, allowing unique orders and offering package tracking. Mobile apps also offer package tracking and various payment methods, such as e-money or cash-on-delivery. The pandemic has led to increased food delivery options, emphasizing the importance of service, food quality, and cost in customer satisfaction. Ensuring customer happiness is vital and positively influencing the restaurant industry.

Result

The food industry is experiencing a digital transformation, leading to the widespread use of smartphone apps for ordering meals online. This sector is rapidly growing, driven by factors such as longer workdays, commutes, and urban Indian lifestyles. Online meal delivery services offer convenience, quick delivery, diverse food choices, multiple payment options, and attractive pricing, catering to the working class and college-bound individuals. The app-based food delivery market holds promising prospects due to competitive pricing, improved literacy rates, and affordable internet access. SWIGGY and ZOMATO dominate India's online food ordering and delivery sector, with only those capable of satisfying customers likely to thrive. Customer retention is crucial, achieved through quality, competitive pricing, efficient technology, and exceptional delivery services. Business intelligence technology and analytics are utilized to understand customer preferences and maintain competitiveness in the food delivery app market. Restaurants and meal delivery apps are innovatively transforming the food sector to ensure consistent taste and on-time delivery. Investments in the food delivery industry

have grown alongside the expansion of online meal delivery. Data generation is prevalent in the food sector, including client orders, delivery locations, GPS data, tweets, photos, reviews, blogs, and more. Growing health consciousness drives demand for fresh, unprocessed foods on restaurant menus. Meal delivery startups leverage business intelligence to gain a competitive edge in the food delivery app market. An online presence is vital for the food industry, offering powerful channels to connect with customers. In today's competitive landscape, restaurants without an internet presence are at a disadvantage, while those with social media profiles have already reaped the benefits.

Advantages

Starting an online marketing business is accessible and cost-effective. It involves affiliating with a marketing company, promoting it online without physical visits and requires minimal time and resources to initiate.

- An online food company offers limitless profit and income potential.
- Free access worldwide: Anyone with a computer and internet connection can run an online business from anywhere on the planet.

Disadvantages

- Loss of control over the company occurs from relying on a third party.
- No direct contact with the customers.
- Compromise in food quality.

Role of Business Intelligence in Online Food Delivery

The food industry faces intense competition, leading to the adoption of technology to improve services and understand customer preferences. Customers expect quality and fair pricing, and food delivery apps have adapted to meet these expectations. A survey shows that 60% of customers base their meal judgments on dish quality. Business intelligence plays a crucial role in meeting user expectations, with accurate food sector analytics enabling businesses to expand, identify trends, and cut costs. This information allows for a clear understanding of customer desires and trends, enabling effective data collection and analysis. Entrepreneurs in the food delivery sector are increasingly relying on technology to gain deeper insights into consumer demand and preferences.

Following are the reasons food delivery start-ups use Business intelligence:

Enhance Delivery Time and Cost- Effective

Food delivery fuels the growth of the food sector by enhancing the customer experience. While it improves efficiency, balancing a positive customer experience with efficient order delivery is crucial. Businesses leverage business information to optimize time and costs, ensuring readiness for various situations and prompt deliveries. This win-win approach benefits both customers and the meal delivery service.

Evaluate Customer Behavior

Business intelligence is valuable for predicting consumer behavior. Meal delivery firms actively use social media to share content and discounts, but they must also pay attention to customer feedback on these platforms. Business information allows them to assess brand perception, food delivery performance, and customer feedback.

Big data analytics software collects and analyzes comments from various social media sites

like Twitter, Instagram, and Facebook. This data serves as the basis for making informed business decisions.

Location-based Promotion

Meal deliveries have geographical limits due to the practicality of ensuring timely deliveries. However, business intelligence leverages real-time location data to target clients effectively and provide benefits through location-based marketing, enhancing industry-leading monitoring.

Following Smart Algorithms for Demand

Meal delivery apps can predict future consumer orders through clever business intelligence. By analyzing a user's browsing history and past orders, these apps can forecast if the client will place another order. Predictive analytics in meal delivery apps accurately estimate the number of customers, their preferences, and locations for orders, providing valuable insights into food delivery trends.

Conclusion

As the demand for food delivery rises, start-ups and food delivery businesses must utilize business intelligence. Business intelligence can address delivery efficiency, meal preparation time, and optimal delivery routes. Entrepreneurs in the online food business use creativity to boost sales, offering easy online ordering and price incentives for various payment methods like cash or card payments.

Abstract

Lung cancer is a leading cause of death worldwide, with poor prognosis and high mortality rates. This research examines the accuracy ratio of four classifiers - Logistic Regression, Random forest, Naive Bayes Model, and Gradient boosting - in classifying lung cancer at an early stage. The Python implementation of classification algorithm accuracy is the primary objective. Logistic Regression and Random forest achieve the highest accuracy at 92.85%, followed by the Naive Bayes Model at 91.07% and Gradient boosting at 89.29%.

Keywords: Lung cancer, logistic regression

1. Introduction

Lung cancer, originating in the lungs, is the leading cause of cancer-related deaths worldwide. It is prevalent in both men and women and manifests through early symptoms. Treatment depends on the histological type, patient's performance level, and cancer stage. Survival depends on developmental stage, general health, and other variables. Symptoms may indicate lung cancer, such as: - Increased heart rate and blood pressure - Increased sensitivity to light and sound - Increased sensitivity to pain and tingling - Increased sensitivity to light and sound. Among the symptoms that may indicate lung cancer are:

- Yellow fingers
- Anxiety
- Peer pressure
- Chronic disease
- Fatigue
- Allergy
- Wheezing
- Coughing
- Shortness of breath
- Chest pain

Lung cancer, primarily affecting individuals aged 55-65, is caused by long-term tobacco use and can affect any part of the respiratory system. It has the highest mortality rate among cancers, and detection accuracy is often lacking. Machine learning and image processing methods are used for identifying and classifying pulmonary cancer, but patient indicators like smoking rates could help in early disease identification. This paper summarizes various reviews and technical studies on lung cancer diagnosis and provides an overview of current research using data mining approaches to improve lung cancer diagnosis and prediction.

3. Materials and Methods

3.1 Dataset

The target is to detect lung cancer by analyzing the following attributes. They are Gender, Age, Smoking, Yellow fingers, Anxiety, Peer pressure, Chronic disease, Fatigue, Allergy, Wheezing, Alcohol Consumption, Coughing, Shortness of breath, Swallowing difficulty, and Chest pain.

3.2 Pre-processing

Data pre-processing is a crucial step in data preparation, converting unprocessed data into a format for efficient processing in data mining, machine learning, and other data science

tasks. It converts the data into binary format for optimal efficiency. For example, replacing Genders and Lung Cancer column values with 1 and 0 is a common practice.

```

3.3 Model Building

In this, we have used four classifiers namely Linear Regression, Random Forest, Naïve Bayes, and Gradient Boosting algorithm which is briefly explained as follows

3.3.1 Logistic Regression

Supervised Learning employs logistic regression, a common machine learning algorithm, to predict categorical dependent variables using a set of independent factors. This method provides probabilistic values between 0 and 1, rather than exact values like 0 or 1. Instead of fitting a regression line, an "S"-shaped logistic function predicts two maximum values (0 or 1), reflecting the probability of something like whether cells are malignant. The accuracy of logistic regression is 92.85%, with linear regression showing the highest accuracy in lung cancer datasets.

```

Accuracy score: 0.9832258064516129
Precision score: 0.9285714285714286
Recall score: 0.9629629629629629
    
```

Figure 3.3.1.a Logistic regression

The figure shown below is the confusion matrix obtained after implementing Logistic regression.

		Predicted		Σ
		NO	YES	
Actual	NO	57.1 %	3.7 %	6
	YES	42.9 %	96.3 %	55
Σ		7	54	61

Figure 3.3.1.b Confusion Matix of Logistic Regression

3.3.2 Random Forest

Random Forest is a machine learning algorithm that uses ensemble learning to solve complex problems and improve model performance. It consists of decision trees on different datasets and takes the average to enhance predictive accuracy. The algorithm predicts the final output based on the majority vote, increasing the number of trees to eliminate overfitting issues. It has a calculated accuracy of 92.85%, matching linear regression in the lung cancer dataset.

```
Accuracy score: 0.9832258064516129
Precision score: 0.9285714285714286
Recall score: 0.9629629629629629
```

Figure. 3.3.2. a Random forest

The figure shown below is the confusion matrix obtained after implementing Random forest

		Predicted		Σ
		NO	YES	
Actual	NO	57.1 %	3.7 %	6
	YES	42.9 %	96.3 %	55
Σ		7	54	61

3.3.2.b confusion matrix of random forest

3.3.3 Naïve Bayes

A naïve Bayes classifier is an algorithm that uses Bayes' theorem to categorize data points, assuming strong or naive independence. Common applications include spam filters, text analysis, and medical diagnosis. These classifiers are often used in machine learning due to their ease of use and statistical independence. As a family of algorithms, they run faster and are simpler to write compared to more complex Bayes algorithms.

Evaluation Results					
Model	AUC	CA	F1	Precision	Recall
Naive Bayes	0.824	0.852	0.865	0.882	0.852

Figure 3.3.3.a Naïve Bayes

The figure shown below shows the evaluation result and confusion matrix obtained after implementing Naïve Bayes

		Predicted		Σ
		NO	YES	
Actual	NO	33.3 %	5.0 %	6
	YES	66.7 %	94.2 %	55
Σ		9	52	61

3.3.3.b Confusion Matrix of Random Forest

3.3.4 Gradient Boosting

Gradient Boosting is a type of classification method that effectively classifies complex datasets by combining weak learning models into a strong predictive model. Decision trees are commonly used in this process, with each predictor correcting its predecessor's error. The technique, known as Gradient Boosted Trees, uses CART (Classification and Regression Trees) as its base learner. This method is known for its prediction speed and accuracy, with an accuracy of 86.9%. The figure below shows the classification report and confusion matrix of Gradient boosting respectively.

Evaluation Results					
Model	AUC	CA	F1	Precision	Recall
Gradient Boosting	0.927	0.869	0.869	0.869	0.869

3.3.4a classification report of gradient boosting

		Predicted		Σ
		NO	YES	
Actual	NO	33.3 %	7.3 %	6
	YES	66.7 %	92.7 %	55
Σ		6	55	61

3.3.4b Confusion matrix of gradient boosting

3.4 Performance Evaluation Criteria

The Confusion Matrix is a deep learning visual assessment technique that displays the actual and predicted class results of a classification model on a specific data set. It represents the actual class and intended class of instances. When working with a binary, the confusion matrix, a 2x2 matrix, shows the number of true positives (TP), true negatives (T N), false positives (FP), and false negatives (F N). The four categories of classified items are true positive (TP), false positive (FP), false negative (FN), and true negative (TN). The matrix helps evaluate a model's accuracy by displaying the actual and predicted class results.. Given the proportion of true positives and false negatives, the recall is calculated using the formula shown below:

$$\text{Recall} = \frac{\text{TP}}{\text{TP}+\text{FN}}$$

The "absolute positive rate" is another term for the recall. The quantity of true positive and false positive graded objects is used to calculate precision as follows:

$$\text{Precision} = \frac{\text{TP}}{\text{TP} + \text{FP}}$$

3.5 Experimental Results and Discussions

This analysis shows that among all techniques used to predict lung cancer, logistic regression, and random forest provide the most accurate results.

The accuracy rating for both random forest and logistic regression is 92.85%..

4. Conclusion

The paper presents a lung cancer prediction system using data mining classification techniques to extract hidden knowledge from a historical lung cancer disease database. The most effective model is logistic regression and random forest, outperforming models like Naïve Bayes and Gradient Boosting. The study reveals that smoking is a major cause of lung cancer, leading to coughing and weakening of the lungs, resulting in carcinogenic growth. Other factors include previous chronic diseases and alcohol consumption. The study reveals that the risk of lung cancer is highest in the 55-65 age group, with males having a 52.5% chance of developing the disease, and females at 47.2%. The study emphasizes the importance of proper health management, and avoiding smoking and alcohol, in sustaining and improving the fight against lung cancer spread.

Abstract

The study investigates the marital attitude of PG students based on their religion using a descriptive method. Convenience sampling was used to gather data from 202 individuals. The research aimed to explore the association between religion and marital attitudes among PG students. The findings showed a significant relationship between religion and marital attitude among the sampled patients, indicating that religion plays a significant role in determining marital attitudes among PG students.

Keywords: Marital attitude, convenient sampling, PG Students, religion.

Introduction

Marital attitudes and expectations form a cognitive schema about relationships brought about by experience (Fletcher & Thomas, 1996). Attitudes and expectations about relationships are important cognitions regarding perceptions of and behaviours in personal relationships (Riggio & Weiser, 2008). One may form attitudes and expectations regarding marital life through personal experiences with a partner, by observing one's parents, or by watching others negotiate the process of courtship and marriage, highly embedded positive marriage attitudes may influence behaviour and highly embedded negative marriage attitudes may also affect beliefs about relationships. Individuals with highly embedded positive attitudes about marriage view their own current and future marriages as happy and successful but those with highly embedded negative attitudes have fewer positive expectations (Riggio & Weiser, 2003 "It is the tendency to respond positively or negatively towards marriage." Marriage is one of the universal social institutions. It involves the union of two individuals who decide to live in an intimate relationship throughout their lives. Marriage is the approved social pattern whereby two or more persons begin a family. The real sense of marriage is the acceptance of a new status, with a new set of privileges and obligations, and the recognition of this new status by others. The universality of marriage within different societies and cultures is accepted to the many basic social and personal roles for which it provides structure such as sexual gratification and regulation, division of labor between the sexes, financial production and consumption and fulfillment of personal needs for affection, status and companionship. Perhaps its strongest purpose concerns procreation, the care of children and their education and socialization and regulation of lines of descent. Through the ages, marriages have taken a countless number of systems. It is said to be one of the earnest and most difficult forms of human relationships. The process of marriage is a social construct or agreement where two people willingly enter into either a religious or civil styled and yet legal contract to become husband and wife Marriage are key structure in most societies. While the two institutions have historically been closely linked in U.S. culture, their connection is becoming more complex. The relationship between marriage and family is an interesting topic of study for sociologists. Different people define it in different ways. Not even sociologists can agree on a single meaning. For our purposes, we'll define marriage as a legally recognized social contract between two people. traditionally based on a sexual relationship and implying the permanence of the union. In practicing cultural relativism., we should also consider variations, such as whether a legal union is required (think of "common law" marriage and its equivalents), or whether more than two people can be involved (consider polygamy). Other variations on the definition of marriage might include whether spouses are of opposite sexes or the same sex and how one of the traditional

expectations of marriage (to produce children) is understood today. Sociologists are interested in the relationship between the institution of marriage and the institution of family because, historically, marriages are what create a family, and families are the most basic social unit upon which society is built. Both marriage and family create status roles that are sanctioned by society.

Results & Discussions

The attitude towards marriage among postgraduate students can vary greatly depending on their religious beliefs. Religion often plays a significant role in shaping an individual's values, ideals, and expectations when it comes to relationships and marriage. For Christian postgraduate students, marriage is considered a sacred institution, with the belief that it is a lifelong commitment between a man and a woman. They often prioritize finding a partner who shares similar religious beliefs and values to establish a strong foundation for their marital union.

On the other hand, Muslim postgraduate students also view marriage as a sacred bond, but with some differences. Islam allows for polygamy, although it is not practiced widely. Muslim students often strive to find a partner who aligns with their religious practices, such as observing daily prayers and fasting during Ramadan. They value the importance of a strong family unit and seek to establish a lasting marriage built on mutual respect, trust, and understanding.

Meanwhile, Hindu postgraduate students hold varying views on marriage, informed by their diverse cultural practices and beliefs. While arranged marriages are still prevalent, there is a growing trend towards love marriages. Hindu students often look for partners who share similar family structures and cultural values, with an emphasis on maintaining traditions and customs within their marital life.

In conclusion, the attitude towards marriage among postgraduate students can be significantly influenced by their religious beliefs. Christian, Muslim, and Hindu postgraduate students approach marriage with differing expectations and priorities. Understanding these differences can foster mutual respect and appreciation for the diverse perspectives on marriage among PG students based on their religion.

Conclusion

This study examined the Marital attitude among PG students. The study is mainly based in their based on religion. The major findings of this study reveal a statistically significant relationship between religion and marital attitude among the sampled patients.

Abstract In the digital age of the 4th Industrial Revolution, data processing has become pivotal in driving advancements across various sectors, including agriculture. This case study explores the integration of business intelligence (BI) into agriculture, highlighting its multifaceted benefits. BI empowers agricultural stakeholders with valuable information, enabling them to make informed decisions and adapt to sector-specific needs. This study underscores the role of BI in sensitizing farmers to adopt tailored methods, ultimately enhancing productivity, sustainability, and cost-efficiency. In essence, it showcases how data-driven insights are shaping the future of agriculture in our technologically driven era.

Keywords: Business intelligence, agrarian sector, farmers, production, technology.

Introduction

The agricultural sector is no exception to the transformative power of big data analytics. Modern operations generate vast volumes of data from sources like satellite monitoring, soil analysis, and yield reports. Business intelligence (BI) systems have revolutionized agriculture by gathering and analyzing critical information, enabling farmers to monitor operations and make data-driven improvements for better yields and productivity. This transformation, aided by the green revolution, has significantly improved Indian agriculture, optimizing production, creating high-quality products, and enhancing supply chains. BI is not limited to traditional businesses but has a profound impact on agriculture, offering valuable insights and data-driven decision-making capabilities to farmers and the industry.

Business Intelligence and Agriculture

Business intelligence (BI) is a set of methodologies and technologies that transform raw data into valuable insights for informed strategic, tactical, and operational decisions within organizations. It enables companies to effectively utilize their data for product development, marketing strategies, and business planning. BI tools enable CIOs to manage and analyze data from various sources, including internal and external databases and financial reports. This process gathers intelligence through market research and provides accessible analytics and data visualization for improved decision-making.

Business intelligence consists of several process:

- Data mining
- Analytical processing
- Querying(obtaining information from databases)
- Reporting

Business intelligence can cover a broad array of technologies, when applied to agriculture:

- Field sensors
- Agricultural apps
- Precision agriculture
- Cloud-based software and computing for real time updates
- Internet of Things-enabled equipment and gadgets (automated field vehicle)

When business intelligence systems are developed carefully and thoughtfully, we can monitor each aspect of the agricultural sector and collect and analyze the data that farmers can use to make improvements.

Benefits of Bi in Agriculture

Business intelligence (BI) systems are crucial in modern farming organizations, enabling them to analyze vast amounts of data effectively. They enable farmers to make data-driven decisions, providing real-time insights across all operations. This intelligence not only optimizes decisions but also opens up opportunities for competitive advantage in a sector with similar products and natural conditions. BI aids in forecasting, market demand, labor availability, and weather conditions, and serves as a unifying point for various smart technologies in agriculture, connecting diverse data sources for deeper insights and driving growth.

Methodology

The project collects data from various sectors, including law firms, private businesses, government entities, non-profit organizations, and universities, to analyze farmers' cultivation practices, market trends, seed quality, plant health, and technological developments. Key assumptions include farmers' awareness of market trends, seed quality, plant health, and technological advancements. Indicators assess support mechanisms for domestic farmers, including seed supply, fertilizer registration, plant health protection, and food trade. Access to finance, particularly through warehouse receipt systems, is also considered. The comprehensive approach aims to improve the agricultural sector and enhance farmers' productivity and sustainability.

Analysis

The following table and graph shows the production in different years in India. This picture represents the agricultural sector result without the application of any technologies or business intelligence. The production is purely based on the domestic farmers and others related to the field.

This table shows the details of crops, fishing and livestock rate during the time when technology was not implemented in this sector. The graph which depicts the above information is given below.

	crops	livestock	fishing
2011-12	0.1	5	4
2012-13	0.2	5.2	4.9
2013-14	5.4	5.6	6.2
2014-15	3.7	7.4	6.4
2015-16	3.2	7.9	8

The following table and graph depicts the production in the years after 2016. The rate of production of crops, fishing and livestock are mentioned here, same as in the above case. Here, it is after the application of business intelligence and analysis. The application of technology in the agricultural field has shown a great improvement in the production rate as well as in many such areas.

Also, a graph is given below the graph. It shows the overall production of crops, livestock and fishing in various states in India after technology was implemented in the agricultural sector.

	crops	livestock	fishing
2016-17	6.9	6.5	6.1
2017-18	6.8	7	7
2018-19	6.7	7	7.2
2019-20	7	7.4	7.6
2020-21	7	8	8.9

The integration of business technologies into agriculture is a key focus, with business intelligence (BI) and analytics playing a significant role. These technologies, including mobile

farming apps, field sensors, cloud-based software, precision agricultural systems, and automated vehicles, improve production planning, financial management, crisis management, and goal alignment. They also streamline recall management, maintain trust in the supply chain, and address waste reduction, leading to increased production efficiency in the agricultural sector.

Conclusion

Agriculture is a global sector with significant implications for nutrition and health. Business intelligence and analytics are crucial in enhancing efficiency, supporting farmers, and strengthening the supply chain. Access to accurate, real-time data is essential for informed decision-making, and technology enables data collection, analysis, and dissemination. Modern tools and technologies enable agricultural managers to gain deeper insights, visualize critical information, and make more effective decisions. Understanding the decision-making processes, biases, and preferences of all industry participants is essential. This information can be used to develop decision support tools, initiate beneficial changes, and secure government or structural support for the betterment of agriculture.

Abstract

The primary objective of the study was to evaluate attitudes towards drugs and alcohol among adolescents. The study was conducted on 300 samples of adolescents (12-18). A random sampling method was used to select samples. The researcher used a questionnaire method for data collection. The main tools for data collection are a socio-demographic sheet and an attitude towards drug and alcohol scale. The researcher used the descriptive research design. The statistical procedure used by the researcher was a mean and standard deviation, t-test and ANOVA. The study revealed that there is a significant difference in attitude towards drugs and alcohol among adolescents about age, residential area and presence of alcohol addicts in families.

Keywords: drug, age group, positive attitude, adolescents, ANOVA.

Introduction

In early childhood, children develop physically and learn things they need to use in daily life. However, in adolescence, teens learn and shape their mindset as they see in family, school, society, and peer groups. Attitude is a settled way of thinking or feeling, characteristically imitated in a person's behaviour. Psychologists say that attitude is a way of evaluating things in a certain way after learning from others and society. Evaluating things may encompass the evaluation of people, objects, issues, and events and it can be either positive or negative contingent upon nurturing by parents. It is also believed that attitude is the outcome of the personal experience of an individual or by observing others such as parents, friends, or celebrities. As stated, before celebrities influence teenagers the most. Teenagers follow their ways as shown on screen and start abusing drugs, driving fast, and drinking alcohol.

Moreover, if parents ignore their children's adolescence years might induce them to ruin their lives unknowingly. The sudden and rapid physical changes that adolescents go through make them very self-conscious, sensitive, and worried about their body changes. They may make painful comparisons about themselves with their peers (Jenkins, 2007). Pursuing this further, observing others or when teenagers compare themselves with someone higher than them in society, makes them feel inferior. To conquer their fear of losing their position in a peer group, sometimes they are compelled to make wrong decisions in life.

The most commonly diagnosed disorders among alcohol abusers were antisocial personality (Harford et al., 1994), Personality disorders), depression and risk-taking behaviour (Lutz & Snow, 1985; Weissman et al., 1977). Despite the reported close association between these psychopathologies and alcohol addiction, it cannot be inferred that all individuals having above reported syndromes become alcohol addicts. However, the co-occurrence of the presence of these mental disorders in alcohol patients is a very important consideration when it comes to the treatment part. (Franken and Hendriks 1999) found that very troubled people showed virtually no improvement in any de-addiction treatment.

Result & Discussion

Age groups of students belonging to the age group 15-16 have a positive attitude towards drugs and alcohol. Females with a positive attitude were 30.66% percent. This means the majority of the students have a positive attitude towards drugs and alcohol. Males are 45.66% of the total and 27.33% have a positive attitude towards drugs and alcohol. Positive attitudes of the rural residents were 35.33%, which means the majority of the students belonging to rural residencies have a positive attitude towards drugs and alcohol. Members from urban residences had a low attitude towards drugs and alcohol.

During adolescence, everyone's attitude will be almost similar towards drugs and alcohol. Age is a factor in determining the attitude towards drugs and alcohol among adolescents. It may be due to peer pressure, influence, family background, and educational level which are the factors that decide their attitude, so the age group 15-16 kept a difference in the other two age groups and it is higher.

Conclusion

The study entitled "Attitude towards drug and alcohol among adolescents" is an attempt to examine the level of attitude based on different demographic details such as age, parental status, presence of addict, number of siblings, religion, economic status...etc. The researcher could find that there is a significant relationship in Attitude towards drugs and alcohol on different socio-demographic details especially with age and presence of the addict. The study also enlightened that Attitudes towards drugs and alcohol and Age correlate.

Abstract

This paper examines the effects of COVID-19 on students who were compelled to stay home due to the pandemic. This situation, unfamiliar to them, has had both positive and negative impacts on their behavior. The study utilizes a dataset sourced from Kaggle, featuring 1,182 students across 17 different dimensions. The objective is to visualize the data to understand how students have responded to this new situation and to assess whether COVID-19 has had any influence on their health.

Keywords: COVID-19, health education, pandemic, well-being, students.

Introduction

The paper examines the impact of the COVID-19 pandemic on students in India, focusing on their academic, physical, mental, and social aspects. The research, centered in Delhi, uses a dataset to gather responses from students, but the findings may apply to other regions due to their comprehensive nature. The paper visually presents the findings, revealing students' time spent during the pandemic, assessing the effectiveness of online academic measures, and examining the pandemic's impact on their health and connections with family and friends. Statistical analyses are also conducted to determine the pandemic's significant impact. Various visualization methods are used to enhance understanding, with detailed explanations provided for the figures presented.

Visualization

This paper uses a dataset from the Kaggle website, consisting of 17 attributes and 1181 instances, to study the impact of the pandemic on 1182 students' academic, personal, physical, and mental health. Figure 1 shows that the Delhi NCR students are the main focus. However, the dataset can be used to infer behavior patterns of students from other regions. Analyzing different dimensions of the attributes can provide valuable insights.

Figure 1. Region of the Students

Figure 2 shows the age of the students. It clearly says that the students belong to different age groups. The majority of the students belong to the age group 12 – 26. The age group varies from 7 to 59. One thing that can be inferred here is that the study was done not only on the school-going students but on the higher education also. The students were forced to enclose themselves in their homes in quarantine. They should have missed many things that also affected them in their integral growth at this time. Figure 3 shows what they might have missed the most. The majority of the students answered that they had missed their college or school; also there were other responses.

Figure 2 Age of the students

The study also observed that there are many positive impacts too. In quarantine, the majority of the students were able to connect with their parents, family, and friends (figure 4). To connect with their family members and their friends they have made use of social media platforms as physical reunions and get-togethers were not possible. Figure 5 shows which platform was most used by the students.

Figure 3 What the Students missed more

Figure 4 Bonding with family and relatives

Figure 5. Social Media Platforms

Materials and Implementation

Development Tools

For visualization, Python language and Tableau are used. Orange is used to analyse the data and model creation. Later the Tableau visualization tool is used for the representation of the models.

Data Collection and Description

The dataset for the visualization and analysis is taken from Kaggle. The dataset has 1182 rows and 17 attributes. The following are the attributes of the dataset

- Region of residence
- Time spent on Online Class
- Rating of Online Class experience
- Medium for online class
- Time spent on self-study
- Time spent on fitness
- Time spent on sleep
- Preferred social media platform
- Time spent on TV
- Number of meals per day
- Change in your weight
- Health issues during the lockdown
- Stress busters
- Time utilized
- Do you find yourself more connected with your family, close friends, relatives?
- What did you miss the most?

Machine Learning Algorithms

Classification of the COVID-19 dataset is performed using three different classification models Random forest, Decision Tree, and Naive Bayes. The dataset is divided into 2. 1) Train data: Train dataset is the general term for the samples used to create the model. 2) Test data: A test dataset is used to qualify the performance.

Random Forest

The Random Forest Classifier is a classification technique consisting of multiple decision trees, promoting uncorrelated forests. The algorithm uses randomization to form individual trees, utilizing the forest's predictive powers for accurate decisions. The higher the number of trees, the higher the accuracy and the prevention of overfitting, resulting in a more accurate final output.

Decision Tree

A decision tree is a non – non-parametric supervised learning algorithm that is used for both classification and regression tasks. The goal of using a Decision Tree is to form a training model that will be used to predict the category or value of the target variable by learning simple decision rules inferred from prior data (training data). In Decision Trees, for predicting a category label for a record we start from the basis of the tree, we compare the values of the foundation attribute with the record's attribute.

Naïve Bayes

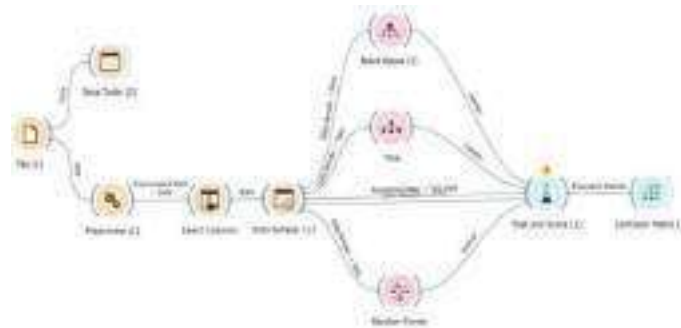

The Naïve Bayes algorithm is a supervised learning algorithm, which is based on the Bayes theorem and used for solving classification problems.

Model Performance and Evaluation Method

Here different methods are used to measure the performance; they are accuracy, precision, recall and AUC $Accuracy = \frac{TP+TN}{TP+FN+FP+TN} \times 100$
 $Precision = \frac{TP}{TP+FP} \times 100\%$ $Recall = \frac{TP}{TP+FN} \times 100\%$ Where,
TP (True Positive) is an outcome where the model correctly predicts the positive class.
TN (True Negative) is an outcome where the model correctly predicts the negative class.
FP (True Positive) is an outcome where the model incorrectly predicts the positive class.
FN (True Positive) is an outcome where the model incorrectly predicts the negative class.

Figure 6 depicts the orange diagram for the model creation. In this study, the model is being built and analysed using the data analytical tool, Orange, which is an open-source data visualization, machine learning, and data mining toolkit.

Figure 6 Orange Connection Diagram

The evaluation results (fig 7) say that the Random forest has more accuracy than the other models. So Random Forest is the apt model for saying whether COVID-19 affected the health of the students or not.

Model	AUC	CA	F1	Precision	Recall
Naive Bayes (1)	0.693	0.706	0.659	0.663	0.706
Tree	0.995	0.959	0.960	0.961	0.959
Random Forest	0.998	0.971	0.971	0.972	0.971

Figure 7 Evaluation Matrix

Further, the result is presented with the help of Tableau where one can easily understand that Random forest is more accurate and gives more precision than the other two models used.

Figure 8

Figure 9

Conclusion

COVID-19 without any argument brought many stressful moments for the students. This paper tried to point out some of the areas to know or evaluate how they could tackle the situation that was imposed on them. When some areas got affected negatively there were some positive outcomes from it like they got more time to connect with others even though it was through social media. Many steps are to be taken to take care of the integral health of the students.

പ്രബന്ധസംഗ്രഹം

സാഹിത്യത്തിനുള്ള നോബൽ സമ്മാനജേതാവായ ഷേമസ് ഹീനീ യുടെ പ്രസിദ്ധ കവിതാ സമാഹാരമായ മനുഷ്യചങ്ങലയുടെ വെളിച്ചത്തിൽ ബൈബിളിലെ വി. മാർക്കോസിന്റെ സുവിശേഷം നോക്കിക്കാണുകയും മനുഷ്യസാഹോദര്യത്തിന്റെ ശക്തി വിളിച്ചോതുകയും ചെയ്യുന്നു. അപരനിലേക്കു ഞാൻ തുറന്നിരിക്കേണ്ടത് നിയമജ്ഞരെപ്പോലെ കുറ്റങ്ങളും കുറവുകളും എണ്ണാനല്ല, മറിച്ച് അവന്റെ ജീവിതത്തിൽ സംഭവിക്കാനിരിക്കുന്ന ഒരു അത്ഭുതത്തിന്റെ മുന്നോടിയായാകാനാണ് എന്ന ചിന്തയെ ഇത് അടിവരയിടുന്നു..

കീലപദങ്ങൾ: തളർവാത രോഗി, അത്ഭുതം, കൂട്ടായ്മയുടെ അനിവാര്യത

വി. മാർക്കോസിന്റെ സുവിശേഷം 2:1-12 ആണ് നമ്മുടെ ഇന്നത്തെ വിചിന്തന വിഷയം. ഒരു തളർവാത രോഗിയെ നാലുപേർ ചേർന്ന് കട്ടിലിൽ ചുമന്ന്, യേശു ഇരുന്നു പഠിപ്പിച്ചിരുന്ന വീടിന്റെ മേൽക്കൂര പൊളിച്ച്, അവനെ യേശുവിന്റെ സമീപത്തെത്തിച്ചു. തളർവാത രോഗിയെ ഈശോയുടെ അടുത്തേക്ക് കൊണ്ടുവന്ന ആ നാൽവർസംഘത്തിന്റെ മനോഭാവങ്ങളിലേക്കു നമുക്ക് കണ്ണോടിക്കാം. അവരുടെ സ്ഥിരോത്സാഹം അവരെ പ്രശംസക്ക് പാത്രീഭൂതരാക്കി: അവരുടെ വിശ്വാസ തീക്ഷ്ണത അവന്റെ സമ്പൂർണ്ണ സൗഖ്യത്തിനു നിദാനമായി: അവരുടെ സാഹോദര്യ മനോഭാവം അവന്റെ ജീവിതത്തിൽ അത്ഭുതം നടക്കാൻ ഇടയാക്കി: അവരുടെ സാമീപ്യം അവന്റെ കാഴ്ചപ്പാടുകളെ മാറ്റിമറിച്ചു.

സാഹിത്യത്തിനുള്ള നോബൽ സമ്മാനജേതാവും ഐറിഷ് കവിയും നാടകകൃത്തുമായ ഷേമസ് ഹീനീ യുടെ പ്രസിദ്ധമായ ഒരു കവിതാ സമാഹാരമാണ് മനുഷ്യചങ്ങല. അതിലെ ചില കവിതകൾ അദ്ദേഹത്തിന്റെ തന്നെ ജീവിതത്തിലെ ചില ഏടുകളാണ്. അവയിൽ വളരെ പ്രാധാന്യമർഹിക്കുന്ന ഒന്നാണ് "അത്ഭുതം" എന്ന കവിത. 2006 ൽ സുഹൃത്തും നാടകകൃത്തുമായ ബ്രയൻ ഫ്രിയലിന്റെ ഭവനത്തിൽ ഒരാഘോഷത്തിൽ പങ്കെടുക്കവെ പെട്ടെന്ന് പക്ഷാഘാതം അനുഭവപ്പെടുകയും ഇടുങ്ങിയ ഗോവണിപ്പടിയിലൂടെ സുഹൃത്തുക്കൾ അദ്ദേഹത്തെ ആംബുലൻസിൽ എത്തിക്കുകയും ചെയ്തതുവഴിയായി തന്റെ ജീവൻ രക്ഷിച്ചതു കൃതജ്ഞതയോടെ അദ്ദേഹം "അത്ഭുതം" എന്ന കവിതയിൽ ഓർക്കുന്നു. അതിനെ വി.ഗ്രന്ഥത്തിലെ തളർവാത രോഗിയെ സുഖപ്പെടുത്തുന്നതിനോട് താദാത്മ്യപ്പെടുത്തിക്കൊണ്ട് തന്നെ

സഹായിച്ചവരെ നന്ദിപൂർവ്വം ഓർക്കുകയാണിവിടെ. ആ കവിതയുടെ ഒരു സ്വതന്ത്ര വിവർത്തനം ഇപ്രകാരമാണ്:

തൻ്റെ കിടക്കയുമെടുത്തു നടന്നവനെയല്ല
 അവനെ കാലങ്ങളായി അറിയുന്നവരെയും
 അവനെ മാറോടുചേർത്ത് വഹിച്ചവരെയും -
 അവരുടെ തോളുകൾ മറച്ചു, കൂനിനടപ്പിൻനോവ്
 നടുവിനാമപ്പൂട്ടിട്ടു . സ്ത്രൈച്ചറിൻ കൈകൾ
 വിയർപ്പാൽ വഴുതുന്നു: എങ്കിലും അവിരാമം,
 അവനെ തോൽവാറിനാൽമുറുക്കി, ചെരിച്ചു
 മേൽക്കൂരമേലുയർത്തി, സൗഖ്യത്തിനായ് താഴ്ത്തുന്നവരെ.
 പ്രതീക്ഷാ നിർഭരമായി കാത്തിരിക്കുന്ന അവരെ ഓർക്കുക:
 കയറുരഞ്ഞ നീറ്റൽ തണുക്കുവാനും
 തങ്ങളുടെ മന്ദതയും ആശങ്കാകുലതകളും
 നൈമിഷികമാകുവാനും, കാലങ്ങളായി അവനെ അറിയുന്നവരെയും.
 തളർവാതം പിടിപെട്ട് ദുരിതക്കയത്തിൽത്താണവനെ മാത്രമല്ല നാം
 സ്മരിക്കേണ്ടത്, പിന്നെയോ അവനെ അറിയുകയും ശുശ്രൂഷിക്കുകയും
 ചെയ്തവരെക്കൂടിയാണ്: അതീവത്യാഗം സഹിച്ചും അവനെ
 സുഖപ്പെടുത്തുന്നവൻ്റെ മുൻപിൽ എത്തിച്ചവരെക്കൂടിയാണ്: തങ്ങൾ
 എത്ര കഷ്ടപ്പെട്ടിട്ടായാലും സുഹൃത്തിൻ്റെ ദുരിതങ്ങൾക്ക്
 അറുതിവരണമെന്നു മനം നിറഞ്ഞു ആഗ്രഹിക്കുന്നവരെക്കൂടിയാണ്.
 അവരാഗ്രഹിച്ചതുപോലെ അവിടെ സംഭവിക്കുകയാണ്: അവനെ
 എടുത്തുകൊണ്ടുവരാൻ അവർ ഉപയോഗിച്ച അതേ കട്ടിൽ അവൻ
 എടുത്തുകൊണ്ടുപോകുന്നു!

ഈ ചിത്രം നമുക്ക് തരുന്ന വലിയ ഉൾക്കാഴ്ചയും അത് തന്നെയാണ്. നമ്മുടെ ജീവിതമൊരു അത്ഭുതമായി മാറണമെങ്കിൽ അപരൻ്റെ ജീവിതത്തിനു ഞാൻ താങ്ങായി മാറണം! ഒരുവശത്തു 'അന്യ ജീവനുതകി സ്വജീവിതം ധന്യമാക്കുമമലേ വിവേകികൾ' എന്ന കവിവചനം സാർത്ഥകമാക്കുന്നവർ. ശയ്യാവലംബിയായ തൻ്റെ ഭാര്യയെ പതിറ്റാണ്ടുകളായി ശുശ്രൂഷിക്കുന്ന ഭർത്താവും തൻ്റെ ആയുസിൻ്റെ സിംഹഭാഗവും ഭർത്താവിൽനിന്നു തിക്താനുഭവങ്ങൾ മാത്രം നേരിട്ടിട്ടും ജീവച്ഛവമായി കഴിയുന്ന ആ മനുഷ്യനുവേണ്ടി പരിഭവങ്ങളും പരാതികളുമില്ലാതെ തൻ്റെ ജീവിതം വ്യയം ചെയ്യുന്ന ഭാര്യയും മാതാപിതാക്കൾ തങ്ങളെ സ്നേഹിച്ചതിൻ്റെ നൂറുമേനിയും ഇരുന്നൂറുമേനിയും അവരുടെ വാർധക്യത്തിൽ തിരികെക്കൊടുക്കുന്ന മക്കളും സെനിബ്രൽ പാഴ്സി ബാധിച്ച ആറ്റുനോറ്റുണ്ടായ ഏകസന്താനത്തിനുവേണ്ടി ജീവിതത്തിൻ്റെ സന്തോഷങ്ങളെല്ലാം മാറ്റിവയ്ക്കേണ്ടിവരുന്ന മാതാപിതാക്കളും നമുക്കുചുറ്റും അത്ഭുതങ്ങൾക്ക് വഴിയൊരുക്കുന്നവരാണ്. മറുവശത്തു ജീവിതത്തിൽ ഒന്നും ചെയ്യാതെ എല്ലാത്തിനെയും വിമർശിക്കാൻ മാത്രമായി

ജീവിക്കുന്നവരെയും നാം ഈ സുവിശേഷഭാഗത്തു കാണുന്നുണ്ട്. അവരെയാണ് സുവിശേഷം നിയമജ്ഞരെന്ന് വിളിക്കുന്നത്. നമ്മുടെ സമൂഹങ്ങളിലും ഇത്തരത്തിലുള്ള ഒത്തിരിപ്പേരെ കണ്ടുമുട്ടാൻ സാധിക്കും.

അത്ഭുതങ്ങൾ ഉണ്ടാകുന്നത് എങ്ങനെയാണ്? എവിടെനിന്നാണ്? എന്തുകൊണ്ടാണ്? എന്നിങ്ങനെയുള്ള ചോദ്യങ്ങൾക്കുള്ള ഉത്തരങ്ങൾ നമുക്കുചുറ്റുമുണ്ട്; നാം തന്നെയാണ് ഉത്തരം! സ്നേഹത്തിന്റെയും സഹവർത്തിത്വത്തിന്റെയും പാതയിൽ ചരിക്കുന്ന ഓരോ മാനവനും! ഫ്രാൻസിസ് പാപ്പായുടെ 'നാം സോദരർ' (Fratelli Tutti) എന്ന ചാക്രികലേഖനം ഇത്തരൂണത്തിൽ സ്മരണീയമാണ്. കൂട്ടായ്മയുടെ അനിവാര്യത മാനവകുലത്തിന്റെ അതിജീവനത്തിന്റെ പുതുമുദ്രയായി പാപ്പാ ഇവിടെ അവതരിപ്പിക്കുന്നു. ഈ ചാക്രികലേഖനത്തിൽനിന്നു പ്രചോദിതമായിട്ടാണ് ഐക്യരാഷ്ട്രസഭ കഴിഞ്ഞവർഷം (2021) മുതൽ ഫെബ്രുവരി 4 ലോക മാനവസഹോദര്യദിനമായി ആചരിക്കുന്നത്. ഈ വർഷത്തെ ലോക മാനവസഹോദര്യദിനാചരണത്തിന്റെ തൊട്ടടുത്ത ദിവസങ്ങളെന്ന നിലയിൽ നാം ശ്രവിച്ച സുവിശേഷഭാഗം നമ്മെ കൂടുതൽ ഉത്തരവാദിത്വങ്ങൾ ഭരമേല്പിക്കുന്നു. രണ്ടോ മൂന്നോ പേർ എന്റെ നാമത്തിൽ ഒന്നിച്ചുകൂടുമ്പോൾ അവരുടെ മദ്ധ്യേ ഞാനുണ്ടായിരിക്കുമെന്ന ക്രിസ്തുവചനത്തിന്റെ അന്തസത്ത അവിടുന്ന് ഈ അത്ഭുതത്തിലൂടെ വെളിവാക്കുന്നു. സുഹൃത്തുക്കൾ ക്രിസ്തുവിൽനിന്നുള്ള നന്മ പ്രതീക്ഷിച്ചു തളർവാതരോഗിയുമായി ക്രിസ്തുവിനെ സമീപിക്കുമ്പോൾ അവിടുന്ന് അവർക്കിടയിൽ അത്ഭുതവുമായി കടന്നുവരുന്നു. 'ദൈവിക സൗന്ദര്യത്തിനുവേണ്ടിയുള്ള അന്വേഷണം, തങ്ങളുടെ സഹോദരീസഹോദരന്മാരുടെ മുഖങ്ങളിൽ ദൈവത്തിന്റെ വികലമാക്കപ്പെട്ട ഛായയെ പരിചരിക്കുവാൻ സമർപ്പിതരായ വ്യക്തികളെ നിർബന്ധിക്കുന്നു' എന്നാണ് വി. ജോൺ പോൾ രണ്ടാമൻ പാപ്പാ 'സമർപ്പിതജീവിതം' എന്ന ശ്ലൈഹീകാഹ്വാനത്തിൽ ലോകത്തെ ഉദ്ബോധിപ്പിക്കുന്നത്. അപരനിലേക്കു ഞാൻ തുറന്നിരിക്കേണ്ടത് നിയമജ്ഞരെപ്പോലെ കുറ്റങ്ങളും കുറവുകളും എണ്ണാനല്ല, മറിച്ച് അവന്റെ ജീവിതത്തിൽ സംഭവിക്കാനിരിക്കുന്ന ഒരു അത്ഭുതത്തിന്റെ മുന്നോടിയായാകാനാണ് എന്ന ചിന്ത നമ്മെ നയിക്കട്ടെ.

ISBN: 978-93-85657-40-5

Sl. No.	TABLE OF CONTENTS	Page. No.
1.	Predicting Alzheimer Disease via Classification and Regression Methods Ann Mariya Rajan ² , Jinsi Jose ² , Jes Maria Shoji ^{1*} , Almie K Joseph ^{1*} & Sneha C.S ^{1*}	01
2.	Corporate Social Responsibility of Banks Tisha Tomy ^{1*}	05
3.	Impact of Emotional Intelligence on Leadership Effectiveness: A Critical Analysis Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Ms. Geethu Jose ^{1*} & Dr. Sharon Lee Jose ^{1*}	08
4.	The Transformative Teaching of Swami Vivekananda Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Sr. Sijo Francis ^{1*} & Ms. Meera R Nair ^{1*}	10
5.	Awareness and Utilization of Internet-Based Banking Services Eswara Sarma S G ^{1*} , Jothilakshmi Baburaj [*] , Anu Saju [*] , Amal Joseph & Shaiju S	12
6.	Customer Satisfaction and Services of SBI Bank Albin Francis [*] , Akhilesh R [*] , Shibu K R ^{1*} , Mr. Shaiju S ^{1*} & Eswara Srama S.G ^{1*}	15
7.	Satisfaction with Online Food Delivery Applications among Customers Neethumol Shaji ^{1*} , Kanjana K P [*] , Sreekutty M M [*] , Mr. Shaiju S ^{1*} & Shibu K.R ^{1*}	18
8.	Effect of Labor Welfare Measures on Employee Morale Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Shoniya V.V ^{1*} , Abin Jose ^{1*} & Jovana Pramod ^{1*}	21
9.	Effectiveness of Public Distribution System after Implementation of E-POS Machine Eswara Sarma S G ^{1*} , Grincy M Kurian ^{1*} , Ashly Jose ^{1*} , Anu Saju ^{1*} & Shaiju S ^{1*}	24
10.	Farmers Perceptions towards Agricultural Loans Neethumol Shaji ^{1*} , Haritha Rajeev [*] , Sincy Siby [*] , Mr. Shaiju S ^{1*} & Abin Jose ^{1*}	27
11.	Investors Perception towards Mutual Funds as an Investment Option Sunitha M. T ^{1*} , Athira Balachandran ^{1*} , Amal Joseph ^{1*} , Abin Jose ^{1*} & Eswarasarma S.G ^{1*}	30
12.	Perceptions towards Online Shopping among College Students Elizabeth Joseph [*] , Anu Saju ^{1*} , Amal Joseph ^{1*} , Shoniya V.V ^{1*} & Ashly Jose ^{1*}	33
13.	Quality of Work Life and Occupational Stress of Self-Financing College Teachers Anu Saju ^{1*} , Achu Abraham ^{1*} , Aleena K.S ^{1*} , Ashly Jose ^{1*} & Jovana Pramod ^{1*}	36
14.	Scope of Artificial Intelligence in Business Abin Jose ^{1*} , Grincy M. Kurian ^{1*} , Ashly Kurian ^{1*} , Neethumol Shaji ^{1*} & Eswara Sarma S.G ^{1*}	39
15.	The Study on the Awareness of Banking Services among College Students Athul Vinay [*] , Arun Rajesh [*] , Shibu K R ^{1*} , Neethumol Shaji ^{1*} & Abin Jose ^{1*}	42

16. Dyadic Adjustment and Resilience among Spouses of Individuals Having Chronic Diseases **45**
Sijo Francis^{1*}, Juliet P Thomas^{*}, Manu Kurian^{1*}, Anu Antony^{1*} & Dr. Mathew Kanamala^{1*}
17. Exploring the Synergistic Influence of Rice Husk Reinforcement on the Curing Process and Mechanical Characteristics of Natural Rubber Vulcanizates **48**
Sijo Francis^{1*}, Amala Abraham^{1*}, Jayafar T², Jose James^{1*} & Anu Antony^{1*}
18. A Study of Raney Nickel Catalyst and its use in the Hydrogenation Reactions **50**
Sijo Francis^{1*}, Ebin Raphael E S^{1*}, M.D. Sreekumar², Jose James^{1*} & Anu Antony^{1*}
19. Determination of Iron Content in Vegetables **53**
Dhanusree Dhaneesh^{1*}, Sheena Kuriakose², Sijo Francis^{1*}, Anu Antony^{1*} & Jose James^{1*}
20. Need of the Hour for Knowledge HumanResource Accounting for Success of an Organisation **55**
Tisha Tomy^{1*2}
21. Words of Survival: Delving into Trauma, Resilience and Identity in *Sold* **58**
Blessy Boban^{*}, Dr. Salini L R^{1*}, Mr. Roby Mathew^{1*}, Ms. Roopa Jose^{1*} & Dr. Aparna Prasad^{1*}
22. Myth in Nadia Hashmi's *One Half from the East*: On a Cultural Perspective **60**
Alex E.R^{1*}, Sherlin Suji S^{*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
23. Ethnic Violence in Nayomi Munaweera's *Island of a Thousand Mirrors*: A Statement on the Sri Lankan Civil War **63**
S. Abhilash Mathew^{1*}, Prince J Mathew^{1*}, Roby Mathew^{1*}, Dr. Alex E.R^{1*} & Salini L.R^{1*}
24. Navigating Cultural Complexities in V.S. Naipaul's *A House for Mr. Biswas* **65**
Sunitha Mathew^{1*}, Roopa Jose^{1*}, Salini L.R^{1*}, Shintu Dennis^{1*} & Christy Joseph^{1*}
25. Disability and Performing Arts: A Study on Padma Venkatraman's *A Time to Dance* **67**
Divya Chandran^{*}, Dr. Shintu Dennis^{1*}, Dr. Salini L.R^{1*}, Ms. Sunitha Mathew^{1*} & Ms. Christy Joseph^{1*}
26. Liberal Feminism in Louisa May Alcott's *Little Women*: A Feminist Reading **69**
Minnu Thomas^{*}, Dr. Shintu Dennis^{1*}, Dr. Alex E.R^{1*}, Dr. Salini L.R^{1*}, Ms. Christy Joseph^{1*} & Ms. Roopa Jose^{1*}
27. A Review on the Politics in *Jawan*, and its Invisible Vigilante **71**
Dr. Aparna Prasad^{1*}, Sethulekshmi P.S.^{1*}, Christy Joseph^{1*}, Roopa Jose^{1*} & S. Abhilash Mathew^{1*}
28. The Representation of Dalit Self: Valkmiki's *Joothan* in a Dissident Space **73**
Stephena Fredy^{*}, Dr. Aparna Prasad^{1*}, Sethulekshmi P. S.^{1*}, Christy Joseph^{1*} & Roopa Jose^{1*}
29. Ultrafast Magnetisation Dynamics for Studying Fast Processes in Magnetism **75**
Robin John^{1*}, Mevin Mathew², Anju P Mathews^{1*} & Praveen Joseph^{1*}
30. Colourful Carbon Nanotubes **78**
Robin John^{1*}, Sijo Francis², Subin Thomas^{1*} & Ms. Deena Paul^{1*}
31. Attitude towards Drugs and Alcohol among Middle People **80**
Alan Jorly^{*}, Dr. Mathew Kanamala^{1*}, Ms. Droupathy Devi C G^{1*} & Dr. Jobi K V^{1*}

32. Library & Information Centers in the Society	82
Ms. Droupathy Devi C G ^{1*} , Dr. Jose James ^{1*} , Dr. Robin John ^{1*} & Ms. Anu Saju ^{1*}	
33. Self-confidence among Single Adolescents	84
Mr. Shiyon Sebastian ^{1*} , Dr. Justin Joseph ^{1*} , Ms. Droupathy Devi C G ^{1*} & Ms. Joice Mary Vincent ^{1*}	
34. Farm Stress of Small-Scale Farmers in Idukki District	86
Teenu Shaji ² , Dr. Praveen Joseph ^{1*} , Mr. Pramod Joseph ^{1*} , Manu Kurian ^{1*} & Dr. Justin Joseph	
35. Peer Pressure and Emotional Expressivity among Adolescents	89
Amitha Alex [*] , Manu Kurian ^{1*} , Dr. Joseph George ^{1*} , Mr. Kuriachan Jose ^{1*} & Dr. Mathew Kanamala ^{1*}	
36. The Lifelong Benefits of Positive Social Interactions and Close Friendships for College Students' Happiness	92
Dr. Jose James ^{1*} , Jimmy George ^{1*} , Amal Joseph ^{1*} & Shibu K R ^{1*}	
37. Unveiling the Enigma: The Power of the Subconscious Mind	95
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} & Mr. Biju Scaria ^{1*}	
38. Social Intelligence: Understanding and Navigating Human Relations	97
Dr.Sabukkutty M G ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Roby Mathew ^{1*} , Mr. Biju Scaria ^{1*} & Sijo John	
39. Navigating Uncertain Futures: Transformative Competencies for Education 2030	100
Dr. Sr.Sijo Francis ^{1*} , Dr. Thomas George Vengaluvakkel ^{1*} , Mr. Abin Jose ^{1*} & Mr. Eswarasarma ^{1*}	
40. Understanding Empathy and Stress Management: Keys to Emotional Well-Being	103
Dr. Sr.Sijo Francis ^{1*} , Dr. Mathew Kanamala ^{1*} , Ms. Neethumol Shaji ^{1*} & Mr. Shiju S ^{1*}	
41. College Life: A Journey to Well-Being and Happiness through Exercise, Sports, and Balanced Diet	106
Dr. Jose James ^{1*} , Mr. Roby Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Mathews Emmanuel	
42. Turbulent Waters of Adolescence: A Comprehensive Exploration	108
Dr.Jose James ^{1*} , Mr.Roby Mathew ^{1*} , Mr. Michael Mathew ^{1*} , Mr.Biju Scaria ^{1*} & Mr. Silvanos P Thomas	
43. Life Satisfaction and Loneliness in Elderly: Exploration of the Connection	111
Alwin Jose Alex [*] , Dr. Mathew Kanamala ^{1*} , Dr. Jomon Kottarathil ^{1*} , Ms. Anu Saju ^{1*} & Mr. Eswarasarma ^{1*}	
44. Business Intelligence in the Aviation Sector	113
Asby O S [*] , Aneesh N ^{1*} , Sneha C S ^{1*} , Dr, Sharon Lee Jose ^{1*} & Ms. Geethu Jose ^{1*}	
45. Case Study on Online Food Delivery in Business Intelligence	116
Krishnadas Biju [*] , Jilu Jose ² , Dr. Jomon Kottarathil ^{1*} , Dr. Joseph George ^{1*} & Mr, Shiju S	

46. An Analysis and Prediction of Lung Cancer 119
 Haritha H*, Dr. Sabukkutty MG^{1*}, Jinsi Jose², Aneesh N^{1*}, Ms. Neethumol Shaji & Ms Meera R Nair^{1*}

47. Marital Attitude among PG Students based on their Religion 124
 Albin Binoy*, Dr. Justin Joseph^{1*}, Dr. Jomon Kottarathil^{1*}, Mr. Manu Kurian^{1*} & Ms. Anu Saju^{1*}

48. Business Analytics in the Agrarian Field 126
 Merin Shibu*, Aneesh N^{1*}, Almie Joseph K^{1*}, Ms. Sneha C S^{1*} & Mr. Pramod Joseph^{1*}

49. Attitude towards Drugs among Adolescents 130
 Sachin Jose*, Manu Kurian^{1*}, Dr. Jomon Kottarathil^{1*}, Dr. Mathew Kanamala^{1*} & Mr. Paul. C. Abraham^{1*}

50. Covid-19's Effect on Students 132
 Varsha B Mariya*, Dr. Sabukkutty M G^{1*}, Sruthy Sebastian^{1*}, Mr. Jimmy George^{1*} & Pramod Joseph^{1*}

68. Decision Tree-Based Prediction of Heart Failure	191
Augustine Shaji [*] , Jomon K Sebastian [*] , Jinsi Jose ² , Aneesh N ^{1*} , Sneha C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	
69. The COVID-19 Impact on Airport Traffic	195
Joeyal Kurian [*] , Almie Joseph K ^{1*} , Jomon K Sebastian [*] Aneesh N ^{1*} , Snehaa C S ^{1*} , & Dr. Jomon Kottarathil ^{1*}	
70. Prediction and Visualisation of Used Car Price	200
Joeyal Kurian [*] , Jinsi Jose ² , Jomon K Sebastian [*] Aneesh N ^{1*} , Snehaa C S ^{1*} , Almie Joseph ^{1*} & Dr. Jomon Kottarathil ^{1*}	

71. Multi-Dimensional Health Locus of Control in Cancer Patients	204
Aby Benny [*] , Dr. Justin Joseph ^{1*} , Dr. Jomon K Sebastian ^{1*} , Dr. Mathew Kanamala ^{1*} & Manau Kurian ^{1*}	
72. Business Analytics for Rail and Metro Services	207
Ann Mariya Rajan ² , Ance Denny [*] , Jinsi Jose ² , Aneesh N ^{1*} , Ms. Meera R Nair ^{1*} & Ms. Sneha C S ^{1*}	
73. A Predictive Study of Vehicle Insurance Purchases	211
Thejus T Reji [*] , Jilu Jose ² , Almie Joseph K ^{1*} , Ms. Sneha C S ^{1*} , Dr. Jomon Kottarathil ^{1*}	
74. Academic Effect on Students' Mental Health	216
Nandana Unni [*] , Jomon K Sebastian ^{1*} , Sruthy Sebastian ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Jose James ^{1*}	
75. Predicting the Status of Cirrhosis Disease through Logistic Regression	220
Jisny Johnson [*] , Jes Maria Shoji ^{1*} , Jinsi Jose ² , Ms. Almie Joseph ^{1*} , Dr. Joby Makolil ^{1*}	
76. Loan Eligibility Category	224
Steffymol Sunny ^{1*} , Jomon K Sebastian ^{1*} , Sneha C S ^{1*} & Aneesh N ^{1*}	
77. Reducing Staff Attrition using Gradient Boosting	228
Jilu Jose ² , Aneesh N ^{1*} , Sruthy Sebastian ^{1*} , Dr. Sabukkutty M G ^{1*} & Ms. Meera R Nair ^{1*}	
78. Healthcare Business Intelligence	232
Sona Binu [*] , Jomon K Sebastian [*] , Almie Joseph ^{1*} , Dr. Alex E R ^{1*} , Mr. Shiju ^{1*} & Shibu K R ^{1*}	
79. Wind Speed Prediction using Machine Learning Algorithms	235
Aida Vinoy [*] , Jomon K Sebastian ^{1*} , Jinsi Jose ² , Ms. Almie Joseph ^{1*} & Aneesh N ^{1*}	
80. Synthesis and Characterization of Thermoplastic	239
Pooja Parvathy P [*] , Dr. Jose James ^{1*} , Dr. Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} & Dr. Joby K V ^{1*}	
81. Enhancing Green Chemistry Learning Through Art	241
Kavitha Jacob ² , Sijo Francis ^{1*} & Dr. Jose James ^{1*}	
82. Nanotechnology in Cancer Diagnosis	243
Manasy KS [*] , Sijo Francis ^{1*} , Dr. Jose James ^{1*} , Dr. Anu Antony ^{1*} & Dr. Joby K V ^{1*}	
83. Cancer Treatment through Nano science	245
Manasy KS [*] , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*} ,	
84. Preparation and Characterisation of Potassium Tris (Oxalato) Chromate (III)	247
Mirsana C S [*] , Ebey P. Koshy ^{1*} , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
85. Preparation of Zinc Oxide Nanoparticles and Synthesis of Zinc Oxide Nano Composites by Green Routes	249
Athmitha K Jiji [*] and Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
86. Timing and Spectral Analysis of Thermonuclear X-ray Burst from Atoll Source 4U 1636-536	251
Marykutty James ² , Juris N.J ² , Riya ² , Fathima K ² & Sr. Sijo Francis ^{1*}	

87. Study of Oxalate Content in Tomato	255
Remya Vijayan [*] , Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
88. Impact of National Education Policy on Brain Drain in India	257
Ebby Joseph Idicula ² & Sijo Francis ^{1*}	
89. Recycling of PET Bottles	260
Sijo Francis ^{1*} , Dr. Anu Antony ^{1*} , Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
90. Examining the Impact of Number of Children on Teacher's Social Emotional Competency	263
Akhil Thankachan [*] , Mr Manu Kurian ^{1*} , Blessy Devasia Jacob ² , Dr Mathew Kanamala ^{1*} , Mr. Roby Mathew ^{1*} & Dr. Justine Joseph ^{1*}	
91. Attitude of College Lectures towards Educational Administration	266
Jerin Joseph [*] , Dr. Mathew Kanamala ^{1*} , Dr. Rickey Sara Kurian ² , Jomon K Sebastian ^{1*} , Sneha C S ^{1*} & Aneesh N ^{1*}	
92. Career Conflict among Adolescents	268
Sandra Mol Augustine [*] , Renjitha E [*] , Mr. Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} Dr. Joby K V ^{1*} & Dr. Jose James ^{1*}	
93. Emotional Maturity among Young Adults	271
Swetha Joy [*] , Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} , Dr. Justin Joseph ^{1*} & Aneesh N ^{1*}	
94. Maximizing Team Performance through Effective Management	273
Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Dr. Sharon Lee Jose ^{1*} , Ms. Geethu Jose ^{1*}	
95. Resilience in Management: Thriving in Challenging Times	276
Dr. Joseph George ^{1*} , Ms. Tisha Tomy ^{1*} , Dr. Sharon Lee Jose ^{1*} , Ms. Geethu Jose ^{1*}	
96. Influencing Factors of Stress Vulnerability among Middle-Aged People	278
Alan Jorly [*] , Dr. Mathew Kanamala ^{1*} , Sneha Santhosh [*] , Dr. Justin Joseph ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Sabukkutty M G ^{1*}	
97. Social Relationship among Young Adults	280
Swetha Joy [*] , Manu Kurian ^{1*} , Dr. Mathew Kanamala ^{1*} , Dr. Justin Joseph ^{1*} , Mr. Manu Kurian ^{1*} & Mr. Prince J Mathew	
98. Self-confidence among Single Adolescents	282
Shiyon Sebastian [*] , Swetha Joy [*] , Dr. Justin Joseph ^{1*} , Dr. Mathew Kanamala ^{1*} , Mr. Manu Kurian ^{1*} & Dr. Sr. Sijo Francis ^{1*}

പരിശുദ്ധാത്മാവിനെക്കുറിച്ചു ജോൺ പോൾ രണ്ടാമൻ മാർപാപ്പ പുറപ്പെടുവിച്ച ജീവൻ്റെ കർത്താവും ദാതാവും എന്ന ചാക്രികലേഖനത്തിൽ സെഹിയോൻ ഊട്ടുശാലയിലെ നാലു രംഗങ്ങളുടെ ചട്ടക്കൂട്ടിൽനിന്നാണ് ഈ ചാക്രികലേഖനം അവതരിപ്പിക്കപ്പെടുന്നത്. ഈ രംഗങ്ങളെക്കുറിച്ചുള്ള ഒരു വിചിന്തനമാണ് ഈ ലേഖനം.

കീലപദങ്ങൾ: ഈസ്റ്റർ, പരിശുദ്ധാത്മാവ്, പന്തക്കുസ്ത, സെഹിയോൻ ഊട്ടുശാല

പരിശുദ്ധാത്മാവിനെക്കുറിച്ചു 1986 മെയ് 18-ആം തീയതി പന്തക്കുസ്താനാളിൽ വി. ജോൺ പോൾ രണ്ടാമൻ മാർപാപ്പ പുറപ്പെടുവിച്ച ചാക്രികലേഖനമാണ് Dominum et vivificantem (ജീവൻ്റെ കർത്താവും ദാതാവും). സെഹിയോൻ ഊട്ടുശാലയിലെ (Upper Room) നാലു രംഗങ്ങളുടെ ചട്ടക്കൂട്ടിൽനിന്നാണ് ഈ ചാക്രികലേഖനം അവതരിപ്പിക്കപ്പെടുന്നത്. ഈ രംഗങ്ങളെ നമുക്കിന്ന് ധ്യാനവിഷയമാക്കാം.

അന്ത്യ അത്താഴവേളയിൽ ശിഷ്യരോട് നടത്തുന്ന വിടവാങ്ങൽ പ്രഭാഷണമാണ് ഇവയിൽ ആദ്യത്തേത് (യോഹ.14-17). പരിശുദ്ധത്രിത്വത്തെക്കുറിച്ചുള്ള വെളിപ്പെടുത്തലുകളുടെ ഉച്ചസ്ഥായിയായിട്ടാണ് പാപ്പാ ഇതിനെ വിശേഷിപ്പിക്കുന്നത് (D V 9). ഏലിയാ പ്രവാചകൻ ഹോറെബ് മലയിൽ കർത്താവിൻ്റെ ആഗമനം പ്രതീക്ഷിച്ചിരിക്കുമ്പോൾ കടന്നുവന്ന കൊടുങ്കാറ്റിലും ഭൂകമ്പത്തിലും അഗ്നിയിലും കർത്താവില്ലായിരുന്നു, അതിനുശേഷം കേട്ട മൃദുസ്വരമായിരുന്നു അവിടുത്തേത് (1 രാജാ.19: 11-13). അവിടെവെച്ചു ദൈവം ഏലിയയോട് ചോദിക്കുന്ന ആദ്യചോദ്യം ഇതാണ് : "ഏലിയാ, നീ ഇവിടെ എന്ത് ചെയ്യുന്നു?" ഒരു സ്നേഹഭാഷണമാണത്. ഏലിയായുടെ വ്യാകുലതകൾ കേട്ട അവിടുന്നു സഹായിയായി എലീഷായെ നൽകുന്നു. ക്രിസ്തുവിൻ്റെ വിടവാങ്ങൽ പ്രഭാഷണവും ഇതുപോലെ മൃദുലവും ആർദ്രവുമായിരുന്നു. പ്രിയപ്പെട്ടവരെ വേർപിരിയുമ്പോൾ അനുഭവപ്പെടുന്ന വിങ്ങലിച്ച ഹൃദയത്തോടെയാണ് അവിടുത്തെ സംസാരം. അതിനിടയിലാണ് അവിടുന്നു അവർക്കു സഹായകനെ വാഗ്ദാനം ചെയ്യുന്നത്. തനിക്ക് കിട്ടിയ ആത്മാവിൻ്റെ ഇരട്ടി പങ്ക് ഏലിയ, എലീഷാക്കു വാഗ്ദാനം ചെയ്യുന്നതുപോലെ, ക്രിസ്തുവും തൻ്റെ സന്തതസഹചാരികൾക്കു തൻ്റെ തന്നെ ആത്മാവിനെ അതിൻ്റെ

പൂർണ്ണതയിൽ ലഭിക്കുമെന്ന് ഉറപ്പു നൽകുന്നു. സ്നേഹം ദീപ്തമാകുമ്പോൾ അത് വാചാലമാകുന്നു; നിശബ്ദതയുടെ ആഴങ്ങളിൽ മൃദുസ്വരമായി നമ്മെ തഴുകുന്നു. ശാന്തതയിൽ, ശ്വാസനിശ്വാസങ്ങളോളം മൃദുലമായ നിശ്ശബ്ദതയിലാണ് ദൈവസ്വരം നാം ശ്രവിക്കുക. ആധ്യാത്മികതയുടെ ആഴങ്ങൾ നാം കണ്ടെത്തുന്നതും അവിടെയാണ് എന്ന് ഇത് നമ്മെ ഓർമ്മിപ്പിക്കുന്നു.

ആദ്യ ഈസ്റ്റർ ഞായറാഴ്ച വൈകിട്ടാണ് രണ്ടാം രംഗം നടക്കുന്നത് (യോഹ.20 -19-22). ഈശോ ശിഷ്യരുടെമേൽ നിശ്ചയിച്ചുകൊണ്ടു അവരോട് അരുളിച്ചെയ്തു: "നിങ്ങൾ പരിശുദ്ധാത്മാവിനെ സ്വീകരിക്കുവിൻ". വീട് വാങ്ങൽ പ്രഭാഷണത്തിൽ വാഗ്ദാനം ചെയ്യപ്പെട്ട ആത്മാവിനെ ക്രിസ്തു അവർക്കു നൽകുകയാണിവിടെ (D V 24). പരിശുദ്ധാത്മാവിനെ സ്വീകരിച്ച ശിഷ്യന്മാർ പിന്നീട് മീൻപിടിക്കാൻ പോകുന്നത് യോഹന്നാന്റെ സുവിശേഷത്തിൽ നാം കാണുന്നുണ്ട്. ക്രിസ്തുശിഷ്യർ മീൻ പിടിക്കാൻ പോകുന്നതിനെക്കുറിച്ചു കെ പി അപ്പൻ ഇപ്രകാരമാണ് പറയുന്നത്: "മീൻപിടുത്തം മതദർശനങ്ങളിൽ പ്രതീകാത്മകമായൊരു പ്രവൃത്തിയാണ്. ആഴങ്ങളിലെ പരാമർത്ഥങ്ങളെക്കുറിച്ചുള്ള അതിജീജ്ഞാസയുടെ പ്രതീകമാണത്. ഇനിയും കണ്ടെത്താത്ത മതപരമായ ജ്ഞാനത്തെക്കുറിച്ചുള്ള അബോധപരമായ ആഗ്രഹത്തിന്റെ ചിഹ്നമാണത്. പ്രതീകപഠനങ്ങളിൽ മീൻ തെന്നിമാറുന്ന അമൂല്യവസ്തുവാണ്. വിലയേറിയ അധ്യാത്മികാനുഭവങ്ങളും മനുഷ്യനിൽനിന്നു തെന്നി മാറുന്നു. ഈ അനുഭവത്തെ പ്രാപിക്കാനുള്ള അബോധപരമായ ആഗ്രഹത്തിന്റെ പ്രതീകാത്മകമായ ആവിഷ്കരണമാണ് മീൻ പിടുത്തം" (ബൈബിൾ: വെളിച്ചത്തിന്റെ കവചം). തീർച്ചയായും ആത്മാവിനെ സ്വീകരിച്ച ശിഷ്യർ ആത്മീയാനുഭവം തേടുന്നതിന്റെ പ്രതീകമായി നമുക്കിതിനെ കാണാനാകും. തുടർന്ന് അവരുടെ ഭീരുത്വവും സങ്കോചവും മാറി അവർ കൊടിയ പീഡകൾക്കിടയിലും സുവിശേഷത്തിനു സാക്ഷ്യമാകുന്നു. ദൗത്യം ആരംഭിച്ചശേഷം പത്രോസിന്റെ അമ്മായിയമ്മയെ സുഖപ്പെടുത്തുകയും മറ്റനവധി രോഗസൗഖ്യങ്ങൾ നൽകുകയും ചെയ്തശേഷം ക്രിസ്തുനാഥൻ പത്രോസിനോട് പറയുന്നത് ആഴത്തിലേക്ക് വലവീശുക എന്നതാണ്. അതിനുശേഷം അവരെല്ലാവരും അവിടുത്തെ അനുഗമിച്ചു (ലൂക്ക. 5:1-11). ഉത്ഥാനശേഷം ക്രിസ്തു കൂടെയില്ലാതെ മീൻ പിടിക്കാൻ പോയ അവർക്ക് ഒന്നും കിട്ടിയില്ല എന്നും ക്രിസ്തുവിന്റെ സാന്നിധ്യം വലനിറച്ചു എന്നും തുടർന്ന് അതേ ശിഷ്യർ സഭയുടെ നെടുംതൂണുകളായെന്നും നാം കാണുന്നു. അത് നമുക്കുള്ള ഒരു ഓർമ്മപ്പെടുത്തലാണ്; ക്രിസ്തു കൂടെയില്ലെങ്കിൽ ക്രിസ്തുവിന്റെ ആത്മാവും നമ്മെ വിട്ടുപോകും.

പന്തക്കുസ്ത തിരുനാളിലാണ് മൂന്നാം രംഗം നടക്കുക. ദൈവാത്മാവിനെ മനുഷ്യകുലത്തിനു മുഴുവൻ ദൈവം പ്രദാനം ചെയ്യുന്നു. ഉത്ഥാനഞായറാഴ്ച നിവൃത്തിയായ ദാനത്തിന്റെ മുർത്തമായ

വെളിപ്പെടുത്തലാണിവിടെ നടക്കുന്നത് (DV 25). "ആദിയിൽ ദൈവം ആകാശവും ഭൂമിയും സൃഷ്ടിച്ചു. ദൈവാത്മാവ് വെള്ളത്തിന് മീതെ ചലിച്ചുകൊണ്ടിരുന്നു" (ഉൽ. 1:1-2). ഭൂമിയുടെ ആരംഭം മുതലുള്ള പരിശുദ്ധാത്മാവിന്റെ സാന്നിധ്യവും ഇടപെടലുകളും നമ്മെ ഓർമ്മപ്പെടുത്തുന്നതാണ് ഈ തിരുവചനം. ദൈവാത്മാവ് പ്രപഞ്ചത്തിന്മേൽ അടയിരുന്നതിനുശേഷമാണ് 'ഉണ്ടാകട്ടെ' എന്ന ദൈവവചനത്തിന്റെ ആഗമനം. തുടർന്ന് പ്രപഞ്ചസൃഷ്ടി നടക്കുന്നു. ഇതുപോലെ, ദൈവാത്മാവ് ശിഷ്യരിൽ ആവസിച്ചതിനുശേഷമാണ് നവീനലോകത്തിന്റെയും തിരുസഭയുടെയും സൃഷ്ടി നാം കാണുക. ബിഷപ്പ് ഫുൾട്ടൻ ജെ ഷീൻ "ക്രിസ്തുവിന്റെ ജീവിതം" എന്ന കൃതിയിൽ പരിശുദ്ധാത്മാവിനെ സൂചിപ്പിക്കുന്ന മൂന്നു അടയാളങ്ങളെക്കുറിച്ചു പറയുന്നുണ്ട്. പ്രാവിന്റെ രൂപം ധരിച്ചുകൊണ്ടു അവിടുത്തെ ദൈവപുത്രസ്ഥാനവും നൈർമല്യവും വെളിവാക്കുവാനായി ക്രിസ്തുവിന്റെ ജ്ഞാനസ്നാനസമയത്തു കടന്നുവന്നതും തീനാവിന്റെ രൂപത്തിൽ ലോകത്തെ പരിവർത്തനം ചെയ്യുന്ന ആത്മാവിന്റെ ശക്തി പന്തക്കുസ്താനാളിൽ ശിഷ്യരുടെമേൽ ആവസിച്ചതും ഉത്ഥിതനായ ക്രിസ്തുവിന്റെ ശ്വാസമായി പുനരുജീവനശക്തിയെ അതിന്റെ പൂർണ്ണതയിൽ ആവിഷ്കരിച്ചതുമാണവ. "ദൈവമായ കർത്താവ് ഭൂമിയിലെ പൂഴികൊണ്ട് മനുഷ്യനെ രൂപപ്പെടുത്തുകയും ജീവന്റെ ശ്വാസം അവന്റെ നാസാരന്ധ്രങ്ങളിലേക്കു നിശ്ചയിക്കുകയും ചെയ്തു" (ഉൽ. 2: 7). ആദിമനുഷ്യന്റെ അധഃപതനത്തിനു കാൽവരിയിൽ വിലയേകിയവൻ, അന്ധന്റെ കണ്ണുകളിൽ ചെളിയുണ്ടാക്കി പൂശിക്കൊണ്ടു (യോഹ. 9:6) താൻ തന്നെയാണ് സൃഷ്ടിതാവെന്നു അർത്ഥശങ്കക്കിടയില്ലാത്തവിധം വെളിപ്പെടുത്തുന്നു. അതുപോലെതന്നെ തന്റെ ശിഷ്യരുടെമേൽ ദൈവാത്മാവിനെ നിശ്ചയിച്ചുകൊണ്ടു പുനരുദ്ധരിക്കപ്പെട്ട മനുഷ്യകുലത്തിന് നവാത്മാവിനെ പകരുന്നവനും താൻ തന്നെയാണെന്ന് പ്രഖ്യാപിക്കുന്നു (യോഹ.20:22). അവിടുന്നു ആദത്തിന് ജീവശ്വാസം നൽകിക്കൊണ്ട് മനുഷ്യവംശത്തിനു അടിസ്ഥാനമിട്ടുകിൽ തന്റെ ശിഷ്യർക്ക് ആത്മശ്വാസം നൽകിക്കൊണ്ട് സഭാതരുവിനു നാനദികുറിച്ചു. അങ്ങനെ സഭയുടെ യുഗം ആരംഭിക്കുകയാണ്. ഓർക്കുക; ദൈവാത്മാവ് തന്നെയാണ് ഈ പുതിയ ശരീരത്തിന്റെ ആത്മാവും.

സെഹിയോൻ ഊട്ടുശാലയെ സംബന്ധിച്ച നാലാമത്തെ ഉദ്ബോധനം സഭയുടെ പ്രാരംഭസാഹചര്യങ്ങളിൽ ശ്രദ്ധാലുവായിരുന്നുകൊണ്ടുതന്നെ അതിന്റെ ദൗത്യത്തോടുള്ള വിശ്വസ്തതയാണ്. ചരിത്രപരമായി പന്തക്കുസ്താതിരുന്നാളിൽ സെഹിയോൻ ഊട്ടുശാലയിൽ സഭ സ്ഥാപിതമായെങ്കിലും ഒരുവിധത്തിൽ സഭ ഇന്നും അവിടെത്തന്നെ തുടരുകയാണ്. ആത്മീയമായ അർത്ഥത്തിൽ പന്തക്കുസ്ത ഒരു ഭൂതകാലവസ്തുതയല്ല; സഭ എപ്പോഴും സെഹിയോൻ അനുഭവത്തെ

ഹൃദയാ വഹിക്കുന്നു (D V 66). ഫ്രാൻസിസ് പാപ്പ 2013 ഏപ്രിൽ 28 നു വത്തിക്കാനിലെ വി.പത്രോസിന്റെ ചത്വരത്തിൽ സൈന്യലേപന കൂദാശ നൽകുന്നതിനിടയിൽ പരിശുദ്ധാത്മനിറവിലേക്കു നയിക്കുന്ന മൂന്നു കാര്യങ്ങളെക്കുറിച്ചു അർത്ഥികളെ ഉദ്ബോധിപ്പിക്കുകയുണ്ടായി. ഒന്നാമത്, പരി. ആത്മാവ് ദൈവത്തിൽനിന്നുള്ള അതിനൂതനമായവയെല്ലാം നമുക്ക് തരും. നമ്മിലേക്ക് കടന്നുവന്നു എല്ലാം പുതുതാക്കും; നമ്മെത്തന്നെ രൂപാന്തരപ്പെടുത്തും! ലോകത്തിലുള്ള നൈമിഷികവസ്തുക്കൾപോലെയല്ല, പിന്നെയോ സുസ്ഥിരമാണത്. പിന്നീട് ലഭിക്കുന്നതല്ല, ഇപ്പോൾ ഇവിടെവെച്ചു അവിടുന്ന് നമുക്കായി തരുന്നവയാണ്. പരി. ആത്മാവിനായി ഹൃദയം തുറന്നുകൊടുത്താൽ അവിടുന്ന് നമ്മിലൂടെ ലോകത്തെ പരിവർത്തനം ചെയ്യും. എന്റെ മാതാപിതാക്കളോട്, മക്കളോട്, കൂട്ടുകാരോട് ഒക്കെയുള്ള സ്നേഹത്തിന്റെ പ്രകരണങ്ങളിലൂടെ ദൈവാത്മാവ് കർമ്മനിരതനാകുന്നു എന്ന ബോധ്യം എനിക്കുണ്ടാകണം. . സഭയുടെ പൊതുവായും സഭാതനയരുടെ വ്യക്തിപരമായുമുള്ള ജീവിതയാത്ര വളരെ ദുർഘടങ്ങൾ നിറഞ്ഞതാണല്ലോ. കല്ലും മുള്ളും നിറഞ്ഞ ഈ പന്മാവിലൂടെ കടന്നുപോകുമ്പോൾ നാം നഷ്ടയെര്യരാകരുതെന്നും ക്രിസ്തുവിനെപ്പോലെയും ക്രിസ്തുവിനോടൊത്തും ഇവയെ അതിജീവിക്കാൻ പരിശുദ്ധാത്മശക്തി നമ്മോടൊപ്പമുണ്ടെന്നുമുള്ള തിരിച്ചറിവിലേക്ക് നാം നയിക്കപ്പെടുക എന്നതാണ് നമ്മിലുണ്ടാകേണ്ട രണ്ടാമത്തെ ചിന്ത. കർത്താവിൽ പ്രത്യാശയർപ്പിച്ചുകൊണ്ടു വിശ്വാസയാത്രയിൽ സ്ഥിരോത്സാഹികളാകുക എന്നതാണ് മൂന്നാമതായി നമുക്കുണ്ടാകേണ്ട മനോഭാവം. നമ്മുടെ യാത്രയുടെ മർമ്മവും അതുതന്നെയാണ്! ഒഴുക്കിനെതിരെ നീന്തേണ്ടിവരുമ്പോൾ അതിനുള്ള ശക്തിയും അവിടുന്ന് തന്നെ പ്രദാനം ചെയ്യും. നമുക്കും സെഹിയോൻ ഊട്ടുശാലയിലേക്കു പോകാം: അവിടുത്തെ പുതിയ അന്തേവാസികളാകാം; ആത്മാവിനായി ദാഹിക്കുന്നവരാകാം. ആത്മവർഷത്തിന്റെ അനുഭവം പേറുന്നവരാകാം!

പ്രബന്ധസംഗ്രഹം

തന്നിലെ തീ കെടാതെ സൂക്ഷിക്കുക മാത്രമല്ല ആ തീപ്പൊരി തങ്ങളുടെ ദേഹത്തു വിഴുന്ന്വരെല്ലാം അതിനെ തീജ്വാലയാക്കുമാറ് അസാധാരണമാംവിധം ആത്മീയ തേജസ്സ് തുളുമ്പി നിന്നിരുന്ന ഷാജി ബ്രദർ, വിക്ടർ ബ്രദർ എന്നിവരെ അനുസ്മരിക്കുന്ന ഒരു ലേഖനമാണിത്.

കീലപദങ്ങൾ: ചെമ്പകപ്പാറ, ഷാജി ബ്രദർ, വിക്ടർ ബ്രദർ, ആത്മീയ തേജസ്സ്

കുറച്ചുനാൾ മുൻപ് എൻ്റെ സുഹൃത്തായ ഒരു വൈദികനൊപ്പം ഒരു ചെറുപ്പക്കാരൻ്റെ മരണവാർഷിക ചടങ്ങിൽ പങ്കെടുക്കാനായി ഇടുക്കി ജില്ലയിലെ ചെമ്പകപ്പാറ എന്ന ഗ്രാമത്തിൽ പോകാനിടയായി. തൻ്റെ 27-ആം വയസ്സിൽ വാഹനാപകടത്തിൽ മരിച്ചതാണോ ചെറുപ്പക്കാരൻ. 27 വർഷം മുൻപ് മരണമടഞ്ഞ ആ ചെറുപ്പക്കാരനെ അനുസ്മരിച്ച വൈദികൻ ഇന്നും ഗദ്ഗദകണ്ഠനായാണ് തൻ്റെ ഓർമ്മകൾ അയവിറക്കിയത്. കേരളത്തിൻ്റെ വിവിധ ഭാഗങ്ങളിൽനിന്നെത്തിയ ആളുകൾ വികാരാധീനരായാണ് വിശുദ്ധബലിയിൽ പങ്കെടുത്തത്. ദേവാലയത്തിലെ കർമ്മങ്ങൾക്കുശേഷം ആ വ്യക്തിയുടെ ഭവനത്തിൽ പോയപ്പോൾ അദ്ദേഹം താമസിച്ചിരുന്ന മുറിയിൽ പ്രാർത്ഥനാനിമഗ്നരായിരിക്കുന്നവരെയും കാണാനിടയായി. വൈവിധ്യങ്ങളായ ഒത്തിരിയേറെ കഴിവുകളുണ്ടായിരുന്ന അദ്ദേഹത്തിൻ്റെ ഓരോ കഴിവുകൾവീതം മരണശേഷം തങ്ങൾക്കും പകർന്നുകിട്ടി എന്ന് അഭിമാനിക്കുന്ന ശിഷ്യസമൂഹത്തെയും കാണാൻ സാധിച്ചു. ക്രിസ്താനുഭവത്തിലേക്ക് കടന്നുവന്നശേഷം വെറും 4 വർഷങ്ങൾമാത്രമാണ് ആ ചെറുപ്പക്കാരൻ ഭൂമിയിൽ ജീവിച്ചത്. ബ്ര. ഷാജി ജോർജ്ജ് എന്ന ആ യുവാവ് മരിക്കുന്നതിനുമുൻപ് വെറും ഒരു തവണ മാത്രം കണ്ടുമുട്ടുകയോ സഹവസിക്കുകയോ ചെയ്തവരും ഓർമ്മയാചരണത്തിനു അവിടെ സന്നിഹിതരായിരുന്നു എന്നതിൽനിന്നുതന്നെ ആ വ്യക്തിയുടെ പ്രാഭവം എത്രയായിരുന്നു എന്ന് നമുക്ക് ഊഹിക്കാം. വെറും നാലു വർഷങ്ങൾകൊണ്ട് സുവിശേഷത്തിനു ഇത്രമാത്രം സുദീപ്ത സാക്ഷ്യം വഹിക്കാൻ ബ്ര. ഷാജി പ്രാപ്തനായതെങ്ങനെ എന്ന ചോദ്യത്തിനുത്തരം കൊച്ചിയിലെ കത്തോലിക്കാ പ്രാർത്ഥന കൂട്ടായ്മയുടെ (Cochin Catholic Prayer Group) സ്ഥാപകനായിരുന്ന ബ്ര. ഒ.ജെ. വിക്ടറിലാണ് കാണാൻ സാധിച്ചത്. കേൾക്കുന്നോരും കേൾവിക്കാരിൽ വിസ്മയം

വർദ്ധിപ്പിക്കുന്നവിധമായിരുന്നു അദ്ദേഹത്തിന്റെയും ആത്മീയ തീക്ഷ്ണത. ലോകമെങ്ങും സുവിശേഷം പ്രഘോഷിക്കുവാൻ അഗ്നിപോലെ ജ്വലിക്കുന്ന ഒരു ആത്മാവ് സ്വന്തമായുള്ള ഒരു വ്യക്തി. തന്നിലെ തീ കെടാതെ സൂക്ഷിക്കുക മാത്രമല്ല ആ തീപ്പൊരി തങ്ങളുടെ ദേഹത്തു വീഴുന്നവരെല്ലാം അതിനെ തീജ്വാലയാക്കുമാറ് അസാധാരണമാംവിധം ആത്മാവിന്റെ അഭിഷേകം അദ്ദേഹത്തിൽ തുളുമ്പി നിന്നിരുന്നു. അദ്ദേഹത്തിന്റെ ദൈവവചനപ്രഘോഷണങ്ങൾ ശ്രോതാക്കളുടെമേൽ ആഗേയാസ്ത്രങ്ങൾപോലെ പതിക്കുകയും അവരുടെ ഹൃദയങ്ങളെ മമനം ചെയ്തു ക്രിസ്തുവിൽ പുതുവ്യക്തിത്വങ്ങളെ രൂപപ്പെടുത്തുകയും ചെയ്യുമാറ് അതിതീവ്രമായിരുന്നു. അദ്ദേഹത്തിന്റെ 25-ആം ചരമവാർഷികം ഇക്കഴിഞ്ഞ ജൂണിലായിരുന്നു. നിരവധി ആളുകൾ കൊച്ചിയിലെ സൗദി ഇടവകപ്പള്ളിയിലെ അദ്ദേഹത്തിന്റെ കബറിടത്തിൽ പ്രാർത്ഥിക്കാനായി ഇപ്പോഴും കടന്നുചെല്ലുന്നു. ഒരു സമർപ്പിത സമൂഹത്തിന്റെ സ്ഥാപകനായി ഒരു അത്മായനെ പരിഗണിക്കുന്നത് പലപ്പോഴും നമുക്ക് അചിന്തനീയമാണ്. എന്നാൽ മധ്യപൂർവ്വദേശത്തു സ്ഥാപിതമായി അമേരിക്കൻ ഐക്യനാടുകളിലും കർമ്മോത്സുകരായിരിക്കുന്ന വൈദികരും സന്യസ്തരും അത്മായരുമടങ്ങുന്ന കൃപയുടെ സമൂഹം (Community of Grace) എന്ന അപ്പസ്തോലിക സമർപ്പിത സമൂഹം തങ്ങളുടെ സ്ഥാപകനായി കാണുന്നത് ബ്ര. ഒ.ജെ. വിക്ടറിനെയാണ്. ഒരാൾ ദൈവത്തിനായി തന്നെത്തന്നെ സമർപ്പിക്കുമ്പോൾ ദൈവം അവനിലൂടെ മനുഷ്യന്റെ കണക്കുകൂട്ടലുകൾക്കതീതമായി എന്തെല്ലാം അത്ഭുതങ്ങളാണ് പ്രവർത്തിക്കുന്നത്! ഒരു സമൂഹത്തിലോ ഒരു ദേശത്തോ മാത്രമല്ല, ലോകം മുഴുവനിലും വിശുദ്ധിയുടെ പരിമളം പരത്താൻ ദൈവം അവരെ ഉപകരണങ്ങളാക്കി.

ഇന്നത്തെ ലോകത്തിൽ വിശുദ്ധിയിലേക്കുള്ള വിളിയെക്കുറിച്ചു ഫ്രാൻസിസ് പാപ്പാ പുറപ്പെടുവിച്ച അപ്പസ്തോലിക ഉദ്ബോധനം "ആനന്ദിച്ച് ആഹ്ലാദിക്കുവിൻ (Rejoice and Be Glad)" ഇപ്രകാരം പറയുന്നു: " പരിശുദ്ധാത്മാവ് ദൈവത്തിന്റെ വിശുദ്ധരും വിശ്വസ്തരുമായ ജനങ്ങളുടെ ഇടയിൽ സമൃദ്ധമായി വിശുദ്ധി പ്രദാനം ചെയ്യുന്നു"(No.6). കാഴ്ചയിൽ വളരെ നിസ്വരെന്നു തോന്നിച്ചിരുന്ന, സാധാരണക്കാരിൽ സാധാരണക്കാരായി ജീവിച്ച മുൻപറഞ്ഞ രണ്ടു മഹത് വ്യക്തിത്വങ്ങളും ഇതിനു മകുടോദാഹരണങ്ങളാണ്. ദൈവാത്മാവിനോട് വിശ്വസ്തരാകാൻ സാധിച്ചാൽ നമ്മുടെ ജീവിതവും വിശുദ്ധിയുടെ പരിമളം പരത്തുന്നതാവുമെന്ന് ഇവർ നമ്മെ പഠിപ്പിക്കുന്നു. ഒന്ന് മനസുവെച്ചാൽ നമുക്കും വിശുദ്ധരാകാം; നിന്റെ സഹോദരൻ എവിടെ എന്ന് ദൈവം ചോദിക്കുമ്പോൾ ഞാൻ എന്റെ സഹോദരന്റെ കാവൽക്കാരനാണോ എന്ന മറുചോദ്യം ചോദിച്ച കായേന്റെ മനോഭാവം ഒഴിവാക്കിയാൽ മാത്രം മതി. ക്രിസ്തു പഠിപ്പിച്ചതുപോലെ

എന്നെപ്പോലെ എൻ്റെ അയൽക്കാരനെയും സ്നേഹിക്കാൻ എന്ന് ഞാൻ തുടങ്ങുന്നുവോ അന്നുമുതൽ ഞാനും വിശുദ്ധിയുടെ പടവുകൾ ചവിട്ടിത്തുടങ്ങുന്നു. നമ്മുടെ അടുത്ത വാതിലിലെ അയൽക്കാരിലും നമ്മുടെ മധ്യത്തിലും ജീവിച്ചുകൊണ്ട് ദൈവസാന്നിധ്യത്തെക്കുറിച്ചു വിചിന്തനം ചെയ്യുന്നവരെ പാപ്പാ അഭിസംബോധന ചെയ്യുന്നത് "വിശുദ്ധിയുടെ മധ്യവർഗം" എന്നാണ് (No.7).

"അവനും അവൾക്കും വിശുദ്ധനാകാമെങ്കിൽ എനിക്ക് എന്തുകൊണ്ട് ആയിക്കൂടാ" എന്ന് സ്വയം ചോദിച്ചുകൊണ്ട് ആത്മീയതയിലേക്ക് കടന്നുവന്ന ഈശോസഭാസ്ഥാപകനായ വി. ഇഗ്നേഷ്യസ് ലയോളയുടെ ചോദ്യം ഇന്നും നമ്മുടെ മുൻപിൽ പ്രസക്തമാണ്. ഈ ചോദ്യത്തിനുള്ളതരം തേടുമ്പോൾ എടുക്കേണ്ട ഒരു മുൻകരുതലിനെക്കുറിച്ചും പാപ്പാ പ്രതിപാദിക്കുന്നുണ്ട്. "അവരവർക്കുവേണ്ടി ഉദ്ദേശിച്ചിട്ടില്ലാത്ത ചിലതു അനുകരിക്കാനല്ല, പ്രത്യുത ഓരോരുത്തരും അവരവരുടെ സ്വന്തം മാർഗ്ഗത്തിലാണ് വിശുദ്ധരാകേണ്ടത്" (No.11). 24 കാരറ്റ്

തനിത്തകമാകണമെങ്കിൽ അതിൽ മറ്റു ലോഹങ്ങളുടെ അംശങ്ങൾ ഉണ്ടാകാൻ പറ്റില്ല. ഇതുപോലെ, വിശുദ്ധിയിലേക്കുള്ള എൻ്റെ പ്രയാണം ഞാൻ ഞാനായിക്കൊണ്ടുതന്നെയാണ് പൂർത്തിയാക്കേണ്ടത്. വിശുദ്ധിയുണ്ടാകുവാൻ ഒരു മെത്രാനോ വൈദികനോ സന്യാസിയോ ആകണമെന്നില്ല. സ്നേഹത്തിലധിഷ്ഠിതമായി ജീവിക്കുന്നവരെല്ലാം വിശുദ്ധരാകാൻ വിളിക്കപ്പെട്ടവരാണ് (No.14). മുകളിൽ സൂചിപ്പിച്ച ആ അത്മായരത്നങ്ങളെപ്പോലെ നാമോരോരുത്തരും ഓരോ അഗ്നിസ്ഫുലിംഗങ്ങൾ ആയാൽ മതി. ചുറ്റുമുള്ള ചാരംപുരണ്ട ജീവിതങ്ങളെ ജ്വലിപ്പിക്കുന്നവരാകുക: അവരിലെ ഒരു തരി കനലിനെ ഒരഗ്നിഗോളമാക്കാൻ സാധിച്ചാൽ നമ്മുടെ ദൗത്യം സഫലമായി. അത് പലവിധത്തിലാണ് നമുക്ക് നിർവഹിക്കാനാവുക. കാരണം, ഓരോ വിശുദ്ധനും ഓരോ ദൗത്യമാണ് (No.19).

മനുഷ്യരായ നാം ബലഹീനരാണ് എന്നത് നിസ്തർക്കമാണ്. അതുകൊണ്ടുതന്നെ ഏതൊരു വിശുദ്ധൻ്റെയും ജീവിതത്തിലും തെറ്റുകളും പരാജയങ്ങളുമുണ്ടാകാം: പക്ഷെ, നാം ധ്യാനിക്കേണ്ടത് അവരുടെ ജീവിതത്തിൻ്റെ സമഗ്രതയാണ് (No. 22). വിശുദ്ധരായിരിക്കുക എന്നത് ഒരിക്കലും നമ്മുടെ മാനുഷികത കുറയ്ക്കുന്നില്ല; അത് നമ്മുടെ ബലഹീനതയും ദൈവകൃപയുടെ ശക്തിയും തമ്മിലുള്ള ഒരു നേർക്കാഴ്ചയാണ് (No.34). പ്രശസ്ത ഐറിഷ് സാഹിത്യകാരനായ ഓസ്കാർ വെൽഡ് തൻ്റെ "വെറും അപ്രധാനിയായ ഒരു സ്ത്രീ (A Woman of No Importance)" എന്ന നാടകത്തിൽ പറയുന്ന ഒരു വാചകമിപ്രകാരമാണ്: "ഒരു വിശുദ്ധനും പാപിയും തമ്മിലുള്ള ഏകവ്യത്യാസം ഇതാണ്; എല്ലാ വിശുദ്ധർക്കും ഒരു ഭൂതകാലമുണ്ട്, എല്ലാ പാപികൾക്കും ഒരു ഭാവിക്കാലവും".

ഫ്രഞ്ച് സാഹിത്യകാരനായ ലിയോൺ ബ്ലോയ് തൻ്റെ "ഒരു പാവം സ്ത്രീ (La Femme Pauvre)" എന്ന നോവലിൽ ഇപ്രകാരം പറയുന്നു; "ജീവിതത്തിലെ

ഒരേ ഒരു വലിയ ദുരന്തം ഒരു വിശുദ്ധനാകാത്തതാണ്". (ബ്ര. വിക്ടറിനെപ്പോലെയും ബ്ര. ഷാജിയെപ്പോലെയുമെല്ലാം വിശുദ്ധിയുടെ ഉറവിടങ്ങളാകാൻ നമുക്കും പരിശ്രമിക്കാം. നാമും ദൈവത്തിന്റെ കൃപയുടെ നീർച്ചാലുകളായി മാറുന്ന ദിനത്തിനായ് കാത്തിരിക്കാം. അബ്രാഹത്തോട് ദൈവം പറഞ്ഞതുപോലെ നാം ഓരോരുത്തരും സമൂഹത്തിൽ അനുഗ്രഹങ്ങളായിമാറട്ടെ (ഉത്പത്തി 12:2).

മണൽത്തരികളെ സ്നേഹിച്ച കുഞ്ഞുനക്ഷത്രം

ജോമോൻ കൊട്ടാരത്തിൽ^{1*}, ഡോ. തോമസ് ജോർജ് വെങ്ങോലുവക്കൽ

സി.എം.ഐ^{1*}, ഡോ. സി. സിജോ ഫ്രാൻസിസ്^{1*}, സി. ബെറ്റ്സി

കളപ്പുരയ്ക്കൽ^{1*}

^{1*}സെൻറ്. ജോസഫ്സ് കോളേജ്, മൂലമറ്റം

പ്രബന്ധസംഗ്രഹം

ക്രിസ്തുമസ് രാവിലെ ഭൂമിയിലേക്കിറങ്ങിവന്ന കുഞ്ഞുനക്ഷത്രം ഭൂമിയിലെ മണൽത്തരികളുമായി സംവദിക്കുകയും മണൽത്തരികൾക്കിടയിൽപ്പെട്ടു തെരുങ്ങപ്പെടുകയും ചെയ്തശേഷം തിരിച്ചു വാനവിഹായസ്സിലേക്കുയർന്നുപൊങ്ങുന്നതിനു സമാനമാണ് ക്രിസ്തുചരിതമെന്നു ഇവിടെ നിരീക്ഷിക്കപ്പെടുന്നു.

കീലപദങ്ങൾ: ആകാശം, ഭൂമി, നക്ഷത്രം, മണൽത്തരി.

ആകാശങ്ങൾ വിട്ടിറങ്ങി ഭൂമിയിൽ കുടിയേറിയ ഒരു നക്ഷത്രമുണ്ട്. എല്ലാവരും സീമാതീതമായ ആകാശങ്ങൾ സ്വപ്നം കാണാൻ ആഗ്രഹിക്കുമ്പോൾ ഭൂമിയുടെ അതിരുകൾ അതിർവരമ്പുകളാകാൻ മോഹിച്ച ഒരു താരകം. ഭൗമികർ ആകാശത്തെ താരകങ്ങൾ നോക്കി അന്തം വിടുമ്പോൾ ഭൂമിയിലെ മണൽത്തരികളിൽ സ്വർഗ്ഗത്തിന്റെ പ്രതിബിംബം തേടിയ സ്വർഗീയ നക്ഷത്രം. ആദിപാപക്കറകൾ തന്റെ ആയാസപൂർണ്ണമായ ഹ്രസ്വജീവിതം കൊണ്ട് കഴുകിയെടുത്തവൻ. താനാകുന്ന വർഷപാതം കൊണ്ട് പാപക്കറകളാകുന്ന ഉപ്പുരസത്തെ നീക്കി കാനനച്ചോലപോലെ തേന്മധുരമായ തെളിനീരുറവ നമുക്കായി ഒരുക്കിയവൻ. ഭൂമിയിലെ മണൽത്തരികളെയും ആകാശനീലിമയിലെ നക്ഷത്രങ്ങളാക്കി മാറ്റാൻ അവനു കഴിഞ്ഞു.

ആകാശത്തിലെ നക്ഷത്രങ്ങൾപോലെയാക്കാമെന്നു നക്ഷത്രദേവൻ മണൽത്തരികളോട് വാഗ്ദാനം ചെയ്തിരുന്നെങ്കിലും (ഉൽ.26:4), കുഞ്ഞുനക്ഷത്രത്തെ തങ്ങൾക്കരികിലേക്കു അയക്കുമെന്ന് അവ സ്വപ്നേപി വിചാരിച്ചില്ല. നക്ഷത്രങ്ങളെ എത്തിപ്പിടിക്കാമെന്നു വിചാരിച്ചിരുന്ന അന്തിയോക്കസ് എന്ന മണൽത്തരി അവസാനം നക്ഷത്രദേവന്റെ മുന്നിൽ മുട്ടുമടക്കിയത് (2 മക്ക.9) അവർക്കിടയിൽ പ്രചുരപ്രചാരം നേടിയിരുന്നു. തങ്ങൾക്കിടയിൽനിന്നു ഒരു നക്ഷത്രം ഭൂമിയിലേക്കിറങ്ങി അവിടെയുള്ള മണൽത്തരികളെപ്പോലും നക്ഷത്രങ്ങളാക്കുവാൻ തയ്യാറെടുക്കുന്നതായറിഞ്ഞ നക്ഷത്രങ്ങൾ അവന്റെ ജനനത്തിനു സാക്ഷിയാകാനായി തങ്ങളിലൊരുവനായ പങ്കാളി നക്ഷത്രത്തെ അയച്ചു. നക്ഷത്രാചാര്യൻ വഴി ഇതിനെക്കുറിച്ചറിഞ്ഞ ദീർഘദർശികളാകട്ടെ മണ്ണും മഞ്ഞും ഋതുക്കളും താണ്ടി മണൽപ്പരപ്പിലൂടെ യാക്കോബിൽനിന്നുദിച്ച ആ കുഞ്ഞു നക്ഷത്രത്തെ (സംഖ്യ 24:17) കാണാൻ പങ്കാളി നക്ഷത്രത്തോടൊപ്പം

സുദീർഘമായ യാത്ര പുറപ്പെട്ടു. ദൈവികനഗരത്തിൽ തന്നെ വസിക്കുന്ന ധൂമകേതുക്കളും അവന്റെ കിങ്കരന്മാരും ദുശാന്യക്കാരുമായ ചില പാറക്ഷണങ്ങളും ഇക്കാര്യം അറിഞ്ഞു. തങ്ങളുടെ അപ്രമാദിത്വം നഷ്ടപ്പെടുമെന്ന ഭീതി അവർക്കുണ്ടായി. അവരുടെ ഹിംസാത്മക മനോഭാവങ്ങൾ തിരിച്ചറിഞ്ഞ പങ്കാളിനക്ഷത്രം ഭൂമിയിൽ പിറന്ന കുഞ്ഞുനക്ഷത്രത്തെ ധൂമകേതുക്കളുടെയും അവന്റെ അനുചരരുടെയും ദൃഷ്ടിയിൽനിന്നു ഒളിപ്പിച്ചു നിർത്തി. ഇതറിയാതെ ദീർഘദർശികൾ ധൂമകേതുവിനോട് പങ്കാളിനക്ഷത്രത്തെക്കുറിച്ചു തിരക്കി. എന്നാൽ പിന്നീട് ധൂമകേതുവിന്റെ കയ്യിലിരിപ്പ് മനസിലാക്കിയ ദീർഘദർശികൾ പങ്കാളിനക്ഷത്രത്തെ കണ്ടെത്തി കുഞ്ഞുനക്ഷത്രത്തിന്റെ സമീപത്തെത്തി. തന്റെ ഇര കൈയ്യിൽനിന്നു പോയെന്നറിഞ്ഞ ധൂമകേതു കട്ടക്കലിപ്പിലായി. തന്റെ അഹങ്കാരചിഹ്നമായ ധൂമപടലങ്ങളെ വിതറിക്കൊണ്ട് നാടുമുഴുവൻ പൊടിപടലങ്ങൾ പടർത്തി അതിനെ വികൃതമാക്കി. താൻനക്ഷത്രശോഭ നൽകി തോട്ടം നോക്കാൻ ഏൽപ്പിച്ച കുഞ്ഞുനക്ഷത്രത്തിന്റെ കുടികിടപ്പുകാരാകട്ടെ മുന്തിരിത്തോട്ടത്തിന്റെ ഉപമയിൽ കാണുന്നപോലെ തോട്ടവും സത്രവും കൈയ്യടക്കി അവനെ പെരുവഴിയിൽ തള്ളാൻ നോക്കുകയാണ് ചെയ്തത്. എന്നാൽ ആകാശത്തിലെ നക്ഷത്രഗണങ്ങളാകട്ടെ കുഞ്ഞുനക്ഷത്രത്തിന്റെ ഈ എളിമയോർത്തു ആനന്ദപുളകിതരായി. 'അത്യുന്നതങ്ങളിൽ ദൈവത്തിനു മഹത്വം, ഭൂമിയിൽ ദൈവകൃപ ലഭിച്ചവർക്ക് സമാധാനം' എന്ന് അത്യുച്ചത്തിൽ ആർപ്പുവിളിച്ചുകൊണ്ട് അവർ കുഞ്ഞുനക്ഷത്രത്തിന്റെ മഹിമയെ വാനോളം വാഴ്ത്തി. കുഞ്ഞുനക്ഷത്രം മണൽത്തരികളെ തേടിയിറങ്ങിയതറിഞ്ഞു മണ്ണിന്റെ മണവും ഭൂമിയോളം താഴ്ന്ന ഹൃദയവുമുള്ള ആട്ടിടയർ അവനെ കാണാനെത്തി. തങ്ങൾക്കു സ്വന്തമെന്നു പറയാനാകെയുള്ള കീറത്തുണികളും ആട്ടിൻപാലും കുഞ്ഞുമ്മകളും നൽകി അവർ അവനെ എതിരേറ്റു. ഭൂമിയുടെ തോഴരും പ്രതിനിധികളുമായ ജീവജാലങ്ങളും കുഞ്ഞുനക്ഷത്രത്തെ കാണാനെത്തി. തങ്ങൾക്കു ചോരയും ചൂരും നൽകിയ കുഞ്ഞുനക്ഷത്രത്തിനു തങ്ങളുടെ ശ്വാസനിശ്വാസത്തിന്റെ ചൂടുനൽകി തണുപ്പുകറ്റികൊടുത്ത് അവ നന്ദി പ്രകാശിപ്പിച്ചു. എന്നും മണൽത്തരികളെ സന്ദേഹിച്ച കുഞ്ഞുനക്ഷത്രമാകട്ടെ മണൽത്തരികളുടെ കൂടെയായിരിക്കുന്നതു ജീവിതസാഹചര്യമായി കരുതി.

വഴിയേ പോകുന്നവരെല്ലാം തങ്ങളെ ചവിട്ടിയരക്കുന്നതും തങ്ങളുടെ മേൽ കുതിരകയറുന്നതുമാത്രം കണ്ടും അനുഭവിച്ചും ശീലിച്ച മണൽത്തരികൾക്കു കുഞ്ഞുനക്ഷത്രത്തിനെ സാമീപ്യം ഒരു പുതിയ അനുഭവമായിരുന്നു. നക്ഷത്രരാജ്യത്തെ വിശേഷങ്ങളും കൊച്ചുകൊച്ചു കഥകളും പറഞ്ഞും അവയെ താലോലിച്ചും സമാശ്വസിപ്പിച്ചും ആ കുഞ്ഞുനക്ഷത്രം അവയിലൊരാളായി മാറി. അവയുടെമേൽ

ഏൽക്കപ്പെടുന്ന ചവിട്ടുകൾ തൻ്റേയും വേദനകളായി കുഞ്ഞുനക്ഷത്രത്തിനു തോന്നി. കടൽതീരത്തിരുന്ന് അവൻ മണിക്കൂറുകളോളം അവയെ എടുത്തു ചുംബിക്കുകയും തലോടുകയും ചെയ്തിരുന്നു. കടലോളം ആഴത്തിൽ അവൻ അവരെ സ്നേഹിച്ചു. ഇതിനിടയിലും ചില ചെറുമണൽത്തരികൾ അവനെ തങ്ങളുടെ മുർച്ചയുള്ള ചെറുമുനകളാൽ കുത്തി നോവിക്കാൻ ശ്രമിച്ചു. കുഞ്ഞുനക്ഷത്രമാകട്ടെ മുത്തുചിപ്പിയുടെ തോടിനുള്ളിൽ കയറുന്ന മണൽത്തരിയെ ചിപ്പി സ്വീകരിക്കുന്നപോലെ ആ നോവുകൾ സ്വീകരിച്ചു. ആ മണൽത്തരികളെയും മുത്തുകളായി പരിണമിപ്പിച്ചു. ധൂമകേതുവിൻറെ കിങ്കരന്മാരായ പാറക്കുഷണങ്ങൾ കുഞ്ഞുനക്ഷത്രത്തെ ക്രൂരമായി വേദനിപ്പിച്ചപ്പോൾ അത്കണ്ടു സഹിക്കാൻവയ്യാതെ ആകാശത്തിലെ നക്ഷത്രങ്ങൾ തങ്ങളെത്തന്നെ മറച്ചു. അപ്പോൾ മണൽത്തരികൾ പകൽസമയത്ത് പോലും ഇരുട്ടിലായി. എന്നാൽ കുഞ്ഞുനക്ഷത്രത്തിൻ്റെ നന്മയിൽ പ്രസാദിച്ച നക്ഷത്രദേവൻ നീതിസൂര്യനായി അവനെ അവരോധിച്ചു. അവനോടൊപ്പം അവൻ്റെ പ്രിയപ്പെട്ട മണൽത്തരികളെയും അവൻ ആകാശത്തിലെ മറ്റുനക്ഷത്രങ്ങളോടൊപ്പം പ്രതിഷ്ഠിച്ചു. അവൻ അവരിൽനിന്നു 12 പേരെ തിരഞ്ഞെടുക്കുകയും 12 രാശി നക്ഷത്രങ്ങളുടെ അധിപരാക്കുകയും ചെയ്തു. കുഞ്ഞുനക്ഷത്രം ഭൂമിയിലേക്കിറങ്ങിയപ്പോൾ അവനോടൊപ്പം പോകാൻ സാധിക്കാതിരുന്ന മറ്റു നക്ഷത്രങ്ങളാവട്ടെ അതീവ സന്തുഷ്ടരായി. അങ്ങനെ ആകാശത്തിലെ നക്ഷത്രങ്ങളും കടൽതീരത്തെ മണൽത്തരികളും കുഞ്ഞുനക്ഷത്രത്തിൻ്റെ സ്നേഹത്തിൽ ഒന്നായിത്തീർന്നു.
